Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Russell Fletcher

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Ruthie Bernaert

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

I am confused about the advertisements saying that states benefit greatly by leasing out our public lands. If that is true perhaps we can find alternative income for our state yet still protect our public lands. Be a problem solver & find other ways to improve state revenue without destroying our beautiful America!!

Sincerely,
Rebecca Hunter
2111 LeConte St
Morristown, TN. 37814

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Rebecca Hunter

Dear Haaland,

Congratulations on being named Secretary of the Interior! I am Rebekah Elowyn. I am writing because I value our public lands and waters from coast to coast. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. I have read about the problems of fracking particularly in Oklahoma. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly. I am grateful that you who have the fullest knowledge of the land and it's importance to all life will be managing this epic task.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

René Flores M.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly. We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands and should require fracking holes to be plugged to prevent methane escape, or have them converted to energy in a few places, if safely possible, similar to how energy is created from methane from superfund waste sites. The inherent danger of fracking on the environment, nature, and generational health deserves our attention.

Thank you for your time and consideration.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Sarah Vickers

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Scott Jung

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Shalomar Loving

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking, and mining. We are running out of clean drinking water. We need to preserve the small bits of clean water left. Everything else is severely polluted hurting us, plants, fish, animals. We are all dependent on our water.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Sharon Rothe

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Shawna Gorman

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Shelagh Garren

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Sherrie Howell

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Shirley Eads

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Sonia Vega

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Stan Kumiega

Dear Haaland,

I live in Utah, surrounded by abundant and incredible public lands and potential reusable energy sources, and I very much value all our public lands and waters. I am also sick of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous, causing massive amounts of methane leakage, water contamination, air pollution and earthquakes. It disrupts wildlife, dirties our air, sickens nearby communities, destroys our climates, and it's devastating public lands. It must end.

To combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Stephanie Laman

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Stephen Dwyer

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Steve Hess

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Steven Belfield

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Steven Sy

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking. Our lands are for our people to use for living, for water, for enjoying!!

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Sue Millar

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Susan Chavez

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Susan Head

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

S. Hellen

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Susan Siniard

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Sandra Kerr

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Sandra Lane

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Sandra Lee

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Sandy Graves

Dear Haaland,

I am writing because I value our public lands and waters, and because I believe those lands should be managed to maximize their use as wildlife habitat, and as recreational areas for the public, and in such a way as to help in combating the climate crisis humans have created. I strongly disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Sarah Mahoney

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Dear Haaland,

It's great to be able to address you as Secretary Haaland!

This is to say that I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

The U.S. must stop burning fossil fuels for energy. Now. We must therefore stop extracting them from the Earth.

Fracking for oil and gas is dangerous. You know this. It causes massive amounts of methane leakage, water contamination, air pollution, and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating the public lands that belong to us all. It must end.

The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Sarah McKee

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

allen price

Dear Haaland,

We must act now to eliminate the decimation of our public lands and the continuance of seeking green house gas sources for energy. I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Afshin Sadeghi

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Alan McElveen

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Thank you. Sincerely,
Alan Messer. 215 W 91st St#104 NYC NY 10024

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Alexander Corrales

Dear Haaland,

The question is not whether or not fracking is harmful...we already have ample evidence of its devastating effect on the environment as on human health issues, just as we do on fossil fuels. The question is whether those who are entrusted with the care of our public lands will fulfill that trust or sacrifice the future of our country and the health of our children for a temporary gain in profits.

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Alice Wieting

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Thomas Reilly

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Tim Oswald

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment. If they improve their extraction methods in the future to a safe degree maybe it is something capable of being revisited at a future date but we can no longer tolerate the abuse and destruction of our vital public land and water resources. The pittance they pay us for the ravaging of our Great United States forests and parks is hardly worth the billions we spend on cleanup amongst other costs.

I am a supporter of all our home grown industries with petroleum engineering being something we are one of the best in the world at but it is inappropriate to ignore its environmental or public health impacts when confronted with a preponderance of evidence. No more Americans can be allowed to suffer cancer or birth defects due to oil and gas exploration on public leased land. PERIOD.

Thank you for your time and service to our Great United States of America. Progress comes at a cost yes... but we cannot destroy our most important resource: our water, our wildlife, our citizenry, and our land for short term dwindling returns. Have a wonderful day and stay safe!

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Tina Beedle

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Tom Key

Dear Haaland,

Congratulations on your historic appointment to head the U.S. Department of Interior.

I am writing to you as a supporter of Food & Water Watch, the Natural Resources Defense Council, Earth Justice, the Environmental Defense Fund, the Sierra Club and other environmental organizations.

I, along with these organizations, value our public lands and waters. I disapprove of how our public lands have been given over to companies for oil/gas drilling and fracking for many years.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, I believe the U.S. should stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Please do all you can to protect our public lands from oil/gas development.

Thank you for considering this critical environmental, climate change and human health issue.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Tom Schwegler

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Tracy Holthaus

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking by Trump.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, destroys our pristine environments with their noise and frenic activity, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Please throw these corporate welfare queens to the curb and allow our public lands to repair themselves (because oil and gas companies sure won't!).

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Tyler Otto

Dear Haaland,

I am writing because I value our public lands and waters. It is a disaster that our public lands have been given over to oil companies for gas and oil drilling and fracking: another massive, anti-democratic transfer of wealth from working people--the huge majority--to profit-mad, anti-Earth, anti-consumer, anti-equality, already obscenely rich welfare corporados.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Teresa Ladd

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

TERRY AKANA
