Dear Energy Review Comments Interior Department,

Dear Secretary Haaland:

Regarding the BLM's program for Oil and Gas Leasing on federal lands, I urge you to limit any future leasing as much as possible.

The serious and real threat of climate change demands that use of fossil fuels be curtailed. The wise strategy for the US, and the world, is to leave as much fossil fuel in the ground as possible.

Further, there are thousands of leases and drilling permits that have already been issued and are unused.

There is no need to continue leasing public lands for fossil fuel extraction.

Regards,  
Steve johnson  
9737 W Ohio Ave  
Lakewood, CO 80226

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,  
Samuel Morningstar  
2728 N Prospect Ave  
Milwaukee, WI 53211

Secretary Harland - as an individual with an Economics degree might I suggest that we require these industries to internalize their externalities by paying an elevated rate for their leases and permits? How about starting with a to be negotiated \$1,000,000 each?

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Dear Energy Review Comments Interior Department,

Thank you for examining the BLM oil & gas extraction lease program.

The oil & gas industry is a dying industry. In contrast, renewable energy resources are in growing demand. Our public lands need to be preserved into perpetuity. Our air & water quality are greatly degraded by the oil & gas industry

The BLM has given preference to the extraction industries for decades-- this MUST stop! For the sake of our health & the health of the planet stop leasing federal lands to oil & gas!

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

Dear Energy Review Comments Interior Department,

For the last 30 years I have enjoyed the national treasure of our public lands. Just recently, I took my 2 young children to Utah to share it's wonders. And, they let me know they can't wait to return.

As a steward of our public lands, I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. Dear Energy Review Comments Interior Department,

Isn't it time we as a nation learn that corporations are not built, run and maintained for the common good of all Americans? The long-planned land grab envisioned by Utah's greedy, corporatist political leaders and their financial supporters can't wait to get their hands on the public lands that make up Bears Ears and the Grand Staircase. they will drain every stick of natural resources they can get their grubby hands on, all at the profit of a select few corrupt people in the state of Utah and beyond.

Isn't it time that we stop land grabs such as those planned by these two areas in Utah? Plans to develop these lands, if they are not publicly protected, will only benefit a very few people, for a very short time, and will do irreparable harm to the environment that can never be repaired.

Dear Energy Review Comments Interior Department,

Its time to fix BLM's broken gas and oil program on America's public lands. It doesnt matter that I live in MA: this is all of our commonwealth. By far, its greatest value is its undeveloped natural resources. Please keep these lands "wild" and unexploited. I derive great spiritual and recreational benefits from knowing these lands are "unspoiled"; they are not economic resources but intact ecosystems.

For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,  
Tanya Andrew  
4497 Wyndom Ct

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

I was very pleased by your appointment as Sec. of the Interior. I have been very concerned by the use of our public lands as extraction sites. I believe that our public lands must be kept in good condition for current and future generations to enjoy as natural lands.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Dear Energy Review Comments Interior Department,

Dear Secretary Haaland,

The Bureau of Land Management is long overdue for a change in personnel and attitude. BLM has been the handmaiden of oil and gas companies, mining companies and ranchers for too long. The Biden Administration should stop apologizing about ending fracking and leasing of our public lands for oil and gas development. We are in a worldwide biodiversity crisis with a million species in danger of extinction, coupled with the climate crisis. The Interior Department including BLM needs to start focusing on protecting land and wildlife not giving extractive industries a free ride at the public's expense. Please stand up for our land and wildlife.

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,  
Tim Pankowski

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

The use of public lands for recreation is far more sustainable than oil and gas leasing. This is better for local economies and creates more long term jobs. Recreational use does not require the degree of cleanup mining, oil or gas sites do and the companies extracting never commit to.

These are OUR PUBLIC LANDS.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,  
Tom Casacky

Dear Energy Review Comments Interior Department,

My husband and I have spent uncounted days exploring Wild Utah and surrounding public lands. We strongly believe that the best use of these lands is to be left in a wild state to offer peace, solitude and solace to any American that seeks it. These lands are too precious to be wasted for industrial development of any kind. Do not allow the greedy industrialists to steal our public lands.

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

Dear Energy Review Comments Interior Department,

Past administrations have been selling off leases to public lands at dirt cheap prices, cheating the American public of reasonable return that could be directed to useful projects. It is time to turn off the faucet of unfair benefit to the oil and gas industry—they have been babied long enough. We need to leave it in the ground. They are not even using much of the land they have leased. We need to turn full speed to renewables, not continue to shuffle backwards.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,  
Wesley Walker

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,  
Amy Garcia  
8115 N 18th St  
Phoenix, AZ 85020

Dear Energy Review Comments Interior Department,

The review of the BLM's oil and gas leasing program leaves me hopeful -- hopeful that changes will be made to re-align our use of public lands with a commitment to environmental and climate justice.

Please end oil and gas leasing on our public lands. Act for the earth and its wild places and wild creatures. Act for a future of clean air and water. Act for the climate.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

I am particularly worried about the red rock country. It seems like every time we camp in Utah, we see more effects of the oil and gas companies trucks and equipment on the environment. We need to protect all the public land we have, AND THEN SOME!

Dear Energy Review Comments Interior Department,

Hello,

Let me preface this letter by just saying that it's critical and overdue that we move wholeheartedly toward sustainable energy sources. Retraining in this field is obviously essential, and can be implemented as part of the vast infrastructure improvement that needs to take place. To continue land leasing for oil and gas exploration and extraction is all together a suicide mission, considering the status of our planet, and regarding our continuance on it. This is one tugboat against our gigantic ship of survival and existential outcome by helping steer it in the right direction. Really now.

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,

Dear Energy Review Comments Interior Department,

When Ed Abbey referred to the BLM as the “Bureau of livestock and mining” he was certainly correct during the Trump administration. Now you have an opportunity to turn the BLM into an environmentally friendly and earth saving agency. Please do all you can to stop the development of fossil fuel’s on all BLM lands, and stop the chaining/bulldozing of ancient Pinyon juniper Forest to benefit the livestock industry.

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation’s public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. Dear Energy Review Comments Interior Department,

As a Science Teacher/Environmental Educator, Science/STEM Professional, and an Environmental/Energy/Public Lands/Wilderness/Natural World Advocate, I'm extremely pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands!!

For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places!!

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands!!

To avert climate disaster, PLEASE end ALL oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act!!

Besides protecting natural areas, another reason to stop oil and gas leasing on public lands is because the need for fossil fuels is decreasing and will continue to do so into the future!!

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees! These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling!!

The amount of natural land area is decreasing, so we MUST do everything we can to protect these areas from further destruction in order to benefit ALL life on Earth!!

PLEASE keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign!! Thanks!

Regards,

Brad Snyder

Dear Energy Review Comments Interior Department,

Please stop leasing any more land for oil and gas development until most of the existing permits are actually used.

Please create a policy that sets some limit or number of unused permits that has to be reached before more permits will be issued.

Please set a reasonable minimum price on a lease that if not reached, no lease will be given.

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

I hope you will act on this vital issue. Thank you.

Regards,  
Barbara Opie  
53 Ranch Rd  
Willoughby, OH 44094

Dear Energy Review Comments Interior Department,

I had the immense luck and blessing to be able to grow up in the incredible state of Utah with many access points to the undeniable beauty of natural landscapes. Spending time near and around these natural spaces was crucial to my development and mental health as I dealt with epilepsy and the uncertainty of a healthy body. The benefits of protecting these lands are incomparable to whatever profits could arise from their use for fossil fuels.

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,  
CARL CLARK

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Keeping these lands intact is EXACTLY what needs to happen. It will go a long way toward mitigating the terrible effects of the climate disaster that is already upon us. PLEASE protect our public lands.....at least our public lands.

Thank you for your attention to this most important issue.

Regards,  
Charlotte Jones

Dear Energy Review Comments Interior Department,

I've spent many hours enjoying public lands across our country. They hold not only natural wonders but cultural artifacts of significance to so many Americans. I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

Dear Energy Review Comments Interior Department,

Dear Secretary Haalan,

I am so very pleased that you were appointed to this most crucial and important position. Also, that you are by heritage, the best candidate for the job! Congratulations! I have visited Escalante National Monument, and will be camping there in two days time. I have visited the Bears Ears area and have complete regard for those native peoples and support the protection of this heritage site and Escalante NM. As you know, these lands and others are threatened by human greed impacting these fragile places. Fossil fuel development on public lands poses a grave threat to our climate and the very last thing we need to do is make even more lands available for leasing and drilling.

Crucially, these public lands—if left intact and protected from oil and gas leasing—can mitigate the worst effects of climate change.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. Subject: Please protect our climate by protecting our public lands. No more oil & gas leasing on public lands and waters.

Dear Secretary Haaland,

I'm pleased that the Biden administration is conducting a long-overdue review of the Bureau of Land Management's oil and gas leasing program on America's public lands. Thank you for your climate leadership, for pausing oil and gas leasing on public lands, and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge the Biden administration to take further action on climate change by turning this temporary moratorium into a permanent ban.

*"The ultimate test of a moral society is the kind of world that it leaves to its children."*

*-- Dietrich Bonhoeffer*

I value our public lands and waters and I strongly disapprove of how our public lands have been given over by previous administrations to oil companies for gas and oil drilling and hydraulic fracturing and other extreme methods of fossil fuel extraction. For far too long, the Bureau of Land Management (BLM) has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places. I encourage you to undertake a full and rigorous environmental impact study. If done correctly, it will verify the warnings from scientists—there is no more room for new fossil fuel development if we are to have a chance at preserving a planet with a climate anywhere close to that under which human civilization has developed.

Pollution from the world's already-producing oil and gas fields, if fully developed—even without factoring in coal—would push warming well past 1.5 degrees Celsius. Our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Hydraulic fracturing for oil and gas is unsafe, extreme, and dangerous. It causes massive amounts of methane leakage, water contamination, air

pollution, and even earthquakes. It disrupts wildlife, harms people and communities, and it is devastating public lands. According to the U.S. Geological Survey, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. Any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness, such as those under the America's Red Rock Wilderness Act.

*"One hundred years from now, as people look back on our use of this continent, we shall not be praised for our reckless use of its oil, nor the loss of our forests; we shall be heartily damned for all these things. But we may take comfort in the knowledge that we shall certainly be thanked for the National Parks."*  
-- Secretary of the Interior Ray Lyman Wilbur, 1931

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon. Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

The oil and gas leasing system on our public lands and oceans is broken and we're all paying the price. Tribes, local communities, businesses, and bipartisan elected officials near public lands and on our coasts know all too well that this system is rigged to give all the influence to the oil and gas industry.

*"As we peer into society's future, we—you and I, and our government—must avoid the impulse to live only for today, plundering for our own ease and convenience the precious resources of tomorrow. We cannot mortgage the material assets of our grandchildren without risking the loss also of their political and spiritual heritage. We want democracy to survive for all generations to come, not to become the insolvent phantom of tomorrow."*  
-- Dwight D. Eisenhower

I encourage the administration to embrace a number of solutions and reforms, including:

- Develop a comprehensive strategy for addressing and limiting the carbon pollution stemming from federal fossil fuel development, including the adoption of a carbon budget consistent with exceeding the United States' obligations under the Paris Accord.
- Withdraw the most sensitive federal lands and waters from availability for new oil and gas leasing, and require net-zero carbon emissions from any new leasing on other federal lands and waters.
- Immediately reinstate President Obama's coal leasing moratorium. Burning coal

mined from public lands contributes an estimated 10% of U.S. carbon emissions.

- Strengthen health, safety, and environmental protections, such as regulations that limit the amount of methane—a climate super-pollutant—that oil-and-gas operations can release into the air.
- Ensure a fair return to taxpayers by increasing the amount that private corporations pay to lease federal lands and waters for fossil fuel development, including by setting royalty rates that account for the true social and environmental costs of the carbon produced on these leases.

This holistic review of the system is long overdue, and the last four years have only made the problem worse. The broken system rips off the public with giveaways to the oil and gas industry while communities see little in return except for pollution that threatens our health, our clean water, our coasts, and our climate.

From worsening air quality to natural disasters fueled by global warming, the effects of fossil fuel pollution are all too clear. A healthier, safer future is possible—but we have to take swift action on climate change now. Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, the Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production—one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including the costs that may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

*“A thing is right when it tends to preserve the integrity, stability, and beauty of the biotic community. It is wrong when it tends otherwise.”*

*-- Aldo Leopold*

Thank you for taking important action and charting a new path forward so that our public lands, coasts, and waters benefit people and local communities, not corporate polluters. Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign. Thank you for your consideration of my comments and thank you, again, for your climate leadership.

Sincerely,  
Christopher Lish  
San Rafael, CA

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,  
Christina Fritsch

Dear Energy Review Comments Interior Department,

This is my own opinion:

Utah and the entire United States of America, as well as the entire world community need the restoration of the Bears Ears National Monument as well as Grand Staircase Escalante National Monument.

Grand Staircase Escalante has been established for over 20 years. The value to the local community is very important. As a COMPROMISE, the Federal Government should pave the Burr Trail and add more restrooms and amenities to encourage more responsible visitors who value the land.

Bears Ears was negotiated with the five tribes with Congress, who did nothing. As a result the President Declared the National Monument. Establish the boundaries to what the Tribes requested, along with Visitor Centers, restrooms and amenities to ensure responsible visitation.

Please compromise by adding infrastructure benefits that the local community will appreciate. The latest technology in Solar and Wind Power could provide an example for the rest of us.

The following is the autofill remarks, and yes I do agree with them:

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,  
Carleen McNees  
725 Lacey Way

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. Dear Energy Review Comments Interior Department,

We are 75-year-old residents of Utah and avid outdoor recreationists.

For the sake of the planet, we must wean ourselves from our dependence on fossil fuels. We are living like an opiate addict who is destroying his veins looking for more places to inject. We are now starting to scar our most precious landscapes such as the Arctic National Wildlife Refuge and ramping up even more environmentally destructive tar sands extraction. Slowing the progression of this disease starts with our public lands.

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling. It is readily apparent that, if we are seriously intent on addressing the Climate Crisis, changing our Public Lands policy on oil & gas exploitation at the expense of everything else is The Place To Start!!

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,

Dear Energy Review Comments Interior Department,

I support dramatic reform of the federal oil & gas leasing program in order to address climate change and save the biodiversity of natural places.

I support a dramatic about face in priorities for the United States. Emphasize solutions to achieve sustainable renewable energy programs, establish a Civilian Climate Corps, and focus on good paying rural jobs that encourage fossil fuel companies to pay for and help clean up their mess. Turn our country around. Do not subsidize fossil fuels any longer.

Dear Energy Review Comments Interior Department,

There is widespread public support for the idea of keeping fossil fuels in the ground. While Congress may be reluctant to support this idea, ending the BLM's obsession with oil and gas leases is an obvious part of the solution to climate change, environmental justice impacts of extraction, and preserving heritage land and incredible natural beauty.

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

At a time when our country, and much of the rest of the world, are moving decisively away from the burning of fossil fuels and aggressively toward clean renewable energy sources, it makes no sense to allow any further drilling for oil and gas, or mining of coal, on federal lands or waters. Our energy future absolutely must consist of rooftop solar, solar farms, wind turbine farms, industrial and residential battery storage, and electric cars and trucks.

Further, please cease all further leasing of federal lands for uranium mining, and put a halt to all current uranium mining on federal lands. The history of uranium mining in this country, particularly in the Southwest, has been an unmitigated disaster. Please read "Yellow Dirt" by Judy Pasternak and I'm sure you will agree.

Thank you for considering my comments.

Dear Energy Review Comments Interior Department,

Public lands belong to all of us - the public. They are not just a source of profit for private companies. The air we breathe and the planet we share also belong to all of us. These precious resources are not just a private companies waste dump for noxious chemicals that threaten all life on the planet. If the true cost of fossil fuels were reflected in their price, they would be absurdly expensive - many times the price of clean renewables. Please stop using my resources (public lands) to enrich the few who in turn do not have to pay for the devastation they wreak on the rest of us.

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Dear Energy Review Comments Interior Department,

I worked for many years in Utah, Arizona and Wyoming on public lands. Progressively these lands have come under assault from drilling, clearing, mining which have left areas that were once natural and a refuge for wildlife now broken and crisscrossed with roads and erosion. This is no way to treat our public lands by selling it off to private industry that has no care for its value as a refuge for plants, animals, and people. It's destruction also speeds climate change and natural poverty for our future generations. Please save our Public lands.

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

Dear Energy Review Comments Interior Department,

I live near active oil and gas operations and I have seen firsthand the air pollution including high ozone days and haze that obliterates views of nearby peaks. It is clear that these activities compromise the environment and health of residents. It is clear that oil and gas operators routinely fail to operate according to local laws. Because these operators have demonstrated a lack of concern for the law it is more than overdue to carefully review the federal oil and gas leasing regulations.

For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. Dear Energy Review Comments Interior Department,

Our Public land were not intended for exploitation and profit for a few. They must be protected for all the intrinsic values they hold, Native American culture resources, climate protection, recreation, plants and wildlife, and the many other values that we currently may not even understand exist. I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

Dear Energy Review Comments Interior Department,

Public lands need to be protected, not mined or drilled. I'm glad the Biden administration is reviewing the BLM's oil and gas leasing program and sincerely hope the bureau's focus can change.

Instead of elevating oil and gas leasing, elevate conservation and wildlife protection. Especially, Wilderness Areas should be completely off-limits to fossil fuel extraction.

As a nation, we must wean off of polluting energy and leave fossil fuels in the ground. There are more than enough leases already issued. No more.

Please protect our wild places and stop issuing oil and gas leases on BLM land.

Dear Energy Review Comments Interior Department,

Congratulations for choosing Secretary Haaland. I'm pleased that the Biden administration is conducting a review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places. I used to contribute to EISs and EAs for Utah oil and gas projects and they were always destructive to natural systems. The need for this energy source is dying out and there are plenty of undrilled leases to phase us into cleaner sources. The unleased lands, if taken better care of, will barely save the climate if allowed to function naturally. They must be part of Biden's 30 by 30 lands.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. Dear Energy Review Comments Interior Department,

As you begin a much overdue review of gas and oil-leasing policies on DLM lands, please also consider the impacts of alternative options. A big push is under way to build bigger, longer and larger transmission lines, along with utility-scale wind and solar arrays. These energy systems come with enormous environmental, economic, health and social justice impacts that are being disregarded, discredited and ignored.

Like coal in its infancy, utility-scale "renewables" come with a tremendous environmental price tag that will become a burden too much to bear over time. I am watching the destruction of the Mississippi Upper Wildlife Refuge and the lands of the Driftless Areas of Wisconsin and Iowa - all in the name of renewables! The immediate, short-term and long-term cumulative effects of swapping out one bad choice for another bad choice is not acceptable. Thorough environmental reviews, including careful consideration of alternatives - energy efficiency, in particular, should be a part of an overall plan - the new transmission buildout scheme and accompanying monstrous and destructive industrial wind and solar are hastening our earth's destruction - not stopping it. Please, please, please - take time to meet with folks of the midwest who are experiencing first-hand the death of our lands. Stop listening to big corporate dollars and start listening to real people. I am so afraid that the Biden administration may only accelerate a process that will lead us down a road to no where - don't give up oil and gas leases, just to turn them into transmission, wind and solar leases.

Thank you for listening. If you are real people, please let me know.

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,  
Dennis Ledden  
183 Webb Rd  
Sequim, WA 98382

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign. I am asking you to please make NO more of our public lands available to oil and gas leasing and to either phase out or eliminate wherever possible oil and gas leasing currently occurring on our public lands. This should occur not only in the state of Utah but ALL across America as well.

Thank you for your consideration of my views.

Dear Secretary Haaland,

We are at a pivotal moment in the energy history of this country, a moment in which we can truly transition away from fossil fuels and toward a sustainable future. The future cannot be until we take this step and you are the perfect person to lead us taking that step.

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

As a resident of the American west, I love being in the canyon lands of Utah. I cannot think of a more spiritual place for me. I observe that our public lands are being "loved to death." We need to preserve more land; we need to phase out oil and gas if we are going to survive as a species. Protecting these lands in Utah would be an excellent first step.

Thank you

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Dear Energy Review Comments Interior Department,

Our country and the world must change to environmentally friendly fuels and away from oil and gas before our atmosphere is destroyed. Please undertake a long-overdue review of the BLM's oil and gas leasing program on America's public lands. Oil and gas leasing and development threaten our planet, while there are other logical substitutes.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,  
Douglas Cooke  
19 Marine Ave  
Brooklyn, NY 11209

Dear Energy Review Comments Interior Department,

I am grateful that the Biden administration is conducting a review of the BLM's O&G leasing program. The historical effective prioritization of leasing over other uses has been detrimental to my community, and our long term economic interests, as well as the climate.

Approximately 25% of U.S. carbon emissions come from fossil fuels produced from our federal public lands. To help avoid climate catastrophe, I hope the federal government will end oil and gas leasing on these irreplaceable public lands.

Sixty-three percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact, help meet our climate commitments, protect the long term health of the lands surrounding western communities, and make protecting our public lands a central pillar of the administration's climate campaign.

Dear Energy Review Comments Interior Department,

Ms Haaland:

I met you in Salt Lake City almost 2 years ago at our Democratic State Convention for UT.

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

I read recently that GM and Ford are going to stop producing vehicles that use fossil fuels by the mid 2030's. Many other companies are also on this same projection. So why do we need to drill for more oil?

Also, coal is a dying energy source. Therefore, we should stop looking for more places to mine for coal.

We should keep OUR public lands in OUR hands. If anyone has a strong relationship to the land, it would be you.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,  
dale Rood

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

These lands belong to ALL Americans and need to be protected for our future generations. It has seemed like the BLM's goal was to enable Americans to "walk across America" using drill sites as their paths. Please eliminate these eyesores.

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places. Leases should be for a specified period of time, not forever into the future.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

As these agencies take over our lands kickers and other users are kept out. Even as homeowners build on the border of public land they want others in. My access to public land has been significantly blocked in Utah on recent years.

I want this wonderful heritage that we have kept free for future generations. Wildlife is in our trust to keep.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

Dear Energy Review Comments Interior Department,

As an admirer and hiker of the beautiful areas of the southwest, I ask you to end oil and gas leasing on Federal lands, including those administered by BLM.

The environmental affects of past leasing are immense - toxic ponds waiting to overspill their banks, ruined water sources, little water left for tribes and other residents, and methane gas pouring out of the Colorado Plateau.

Please help President Biden move his climate agenda forward by protecting ALL public lands against oil, gas, uranium, and cobalt leases.

Dear Energy Review Comments Interior Department,

I'm so glad that the Biden administration is reviewing these leases. I live in an area surrounded by public land, and the increase in fossil fuel extraction in our area has led to decreased visibility due to loss of protective top soil, light pollution, and dust-on-snow issues in the mountains to our east which provide the water our community and our region depends on.

We need to stop extracting from our national lands and from our future, acknowledge that climate change requires us to think differently, STOP extraction on our federal lands.

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

As a former oil and gas lease broker I COMMEND this review. Hopefully it will result in giving citizens more say in the awarding of oil and gas leases.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Dear Energy Review Comments Interior Department,

I am writing to you to ask that you take this opportunity to consider the role of gas and oil leasing programs on public land. As a teacher and Master Naturalist, I know the value of these lands as wild places, repositories of ancient history (human and animal), and their importance in our ecosystem.

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,  
Elizabeth Cromey  
3839 20th St  
San Francisco, CA 94114

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,  
Gene Dilworth  
2195 Spring Gulch Rd  
Lyons, CO 80540

Dear Energy Review Comments Interior Department,

The simple answer to a large part of our oil/gas issues is building smarter cars. As much as I'd enjoy driving a 400+hp car, they are asinine given the crisis we're in. 90% of vehicles manufactured today should get no less than 75mpg and ATV/ORVs should be banned to all but the aged and handicapped. Keep the oil and gas in the ground underneath some of the most beautiful lands we have left!! No more resource extraction on BLM lands!

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. Dear Energy Review Comments Interior Department,

Please consider this message as our comment on the review of the Interior Department's policies on oil and gas leasing on our public lands. We thank the Biden administration for undertaking this review of BLM's oil and gas leasing program. I (George Alderson) am from the West, and we have seen the impacts of oil/gas leasing against wildlife habitat and wilderness values on BLM-managed lands.

For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please adopt a strong policy favoring permanent protection for our greatest public lands under wilderness designation, national monuments, and other no-leasing designations.

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,  
Grant Sperry  
407 E Emerson Ave  
Salt Lake City, UT 84115

Dear Energy Review Comments Interior Department,

I would like to voice my full support for reviewing and reforming the US Bureau of Land Management's outdated, uneconomical, and environmentally unsound leasing program. BLM has elevated oil and gas extraction above other important concerns such as public health, environmental quality, and economic sustainability. Oil and gas drilling is a contributing factor to anthropogenic climate change, a cost for which companies are rarely held accountable. Even worse, the leasing program represents a corporate handout where leases are offered well below market value, and companies have no incentive to protect human or environmental health. Instead, lack of regulation and economic incentives prioritize a 'ruin and run' strategy where the long-term consequences of environmental degradation are passed on to local residents. I urge the reviewers and BLM to adopt strategies that are equitable and economically sound, benefitting local communities and stopping the federal handouts to corporations and wealthy owners.

Dear Energy Review Comments Interior Department,

The BLM is the largest landholder, public or private, in the USA. As such, it is atrocious how much the BLM has contributed to degradation of the lands it is meant to manage. The BLM's mission statement is "to sustain the health, diversity, and productivity of public lands for the use and enjoyment of present and future generations." Very well, but the history of the agency seems only to focus on the economic productivity of its lands. This review is an important time to redirect the BLM's focus on the health and diversity of our country's landscapes.

Oil and gas drilling is VIOLENCE against the inhabitants of our beautiful country and against the land itself. I understand the benefit of good-paying jobs in rural areas, but the fossil-fuel industry does not help anyone in the long run.

The USGS has found that almost 1/4 of our country's carbon emissions come from fossil fuels extracted from our federal public lands. Continuing to expand leasing and drilling for oil would not only destroy more and more irreplaceable wild landscapes, but also amplify the effects our civilization has on fueling global climate disasters.

The BLM needs to start focusing on preserving and conserving the still-wild places that managed to survive the initial industrialization and expansion of our country's population. Though many previously wild and beautiful places have been paved over by cities, the pieces that remain are wondrous, and vital to our country's future. We must use foresight, and prioritize the lives of our grandchildren over the profit our generation could grab.

The largest remaining tracts of intact wild landscape in the American West are located in the Northern Rocky Mountains (Idaho and Montana) and the Colorado Plateau (Utah, Arizona, New Mexico, Colorado). Escalante and Bear's Ears National Monuments must absolutely be restored to their former sizes, and further protections are needed to ensure this inspirational and spiritual landscape will be there for future generations.

America's Red Rock Wilderness Act would protect thousands or millions of sacred cultural sites, for indigenous people and more recent immigrants alike. Please pass America's Red Rock Wilderness Act.

Two-thirds of the existing leases in Utah aren't even being utilized. There is absolutely no reason to allow more habitat degradation to occur in the name of expanding drilling

operations. This is why I am glad the BLM's leasing practices are being reviewed. I sincerely hope, for the sake of all Americans, great and small, that the shortsighted profit-driven policies are changed. This is our opportunity to turn our attention to protecting and conserving the incredible landscapes that we, as Americans, call home.

Regards,  
Galen Bishop

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is reviewing of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly prioritized oil and gas leasing and development as the primary use of our public lands under BLM responsibility. This approach threatens our climate, wildlife, cultural treasures, and wild places, and is particularly misguided in light of global climate change driven by a reliance on fossil fuels as an energy source.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and to contribute to a sensible national approach to reining in climate change.

Among the public lands harmed and threatened by harm from oil and gas leases are those proposed for wilderness under America's Red Rock Wilderness Act. A recent report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Amylark Lorwood

Dear Haaland,

I urge you to reject all dirty, dangerous, and environment damaging drilling and fracking once and for all. We Americans do not want oil drilling and fracking on our public lands. Energy at the destruction of our environment is not the answer we are looking for. Drilling is simply an oil spill waiting to happen.

Fossil fuels are finite and our environment is fragile. The fouling of our land, water and air in the quest for more and more oil, coal and gas is simply not acceptable. Please help stop Big Fossil from running roughshod over the American people

A long range new energy strategy is vital to reduce America's dependence on fossil fuels. We need to keep fossil fuels in the ground and make sure companies have motivation to look for alternative energy sources.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Paulette Schindele

Dear Secretary Haaland,

I am writing to urge you to phase out fossil fuel development and logging on public lands in the United States. I appreciate that President Biden took the step to pause new oil and gas leasing on public lands as an evaluation is made of the climate effects of energy extraction. I encourage a rigorous review of this science, which I am confident will show that fossil fuel development worsens the climate and extinction crisis.

Public lands and waters belong to the American people. They should provide a safe harbor for species by protecting the ecosystems, and they should be kept safe from destructive oil, gas, and mining extraction.

Further, I encourage the administration to add logging to the list of practices that will be examined during this study (and potentially banned on public land). Timber operations destroy habitats, pollute drinking watersheds, lead to slope instability and erosion, release pesticides and herbicides into soil and water, and increase the risk and severity of wildfires. Additionally, forests are an effective and free carbon sink, as the trees in them capture and store carbon---this is essential and must be protected as we combat climate change.

Thank you for your consideration,  
Regan Fisher

Dear Haaland,

I am writing because I value our public lands and waters. I disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Dear Haaland,

I am writing because I value and appreciate our public lands and waters!! As a Science Teacher/Environmental Educator, Engineering/STEM Professional, and an Environmental/Energy/Climate change/Human Health/Natural World Advocate, I wholeheartedly disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking!!

Fracking for oil and gas is unsafe, extreme and dangerous!! It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes! It disrupts wildlife, harms people and communities, and it's devastating our public lands! And it MUST end NOW!!

In order to combat the climate crisis, we MUST stop the extraction and burning of fossil fuels!! This requires taking a stand against the oil and gas industry directly!!

Besides, the need for fossil fuels is decreasing and will continue to do so into the future! Also, there is only about 50 years of oil and gas left in the world so we will have to switch to other energy sources sometime in the near future! Due to the damage caused by burning fossil fuels to the environment AND human health I strongly suggest we switch sooner than later!!

We MUST keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands!! The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment!!

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Hello- I am proud to be part of America's labor force not only because it provides a high quality of life, but also because my work produces the energy needed by millions of American homes and businesses. But I worry that continuing President Biden's pause on new natural gas and oil leasing on federal lands and waters could put all of this at risk. Labor, and in particular union labor, has helped the U.S. natural gas and oil industry become a world energy leader, and the country be a net energy exporter for the first time in decades. A big reason for this is development on federal lands and waters, which account for 22% of oil production and 12% of natural gas production. Suspending federal development would also be bad for the environment. Without leasing and development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030 because we would slow the transition away from coal. In an Obama Administration Bureau of Ocean Energy Management report analyzing the effects of potential offshore leasing restrictions, experts found that U.S. GHG emissions could increase slightly due to the transportation costs of importing more foreign oil. I encourage the Department of the Interior to take these facts into consideration as you conduct your review under the executive order. The administration said publicly that this pause would only be temporary. It would be a bad policy in normal times, but it could prove to be a devastating action as the country recovers from the pandemic. We cannot risk the more than 1 million jobs and \$9 billion in federal revenue that could be lost by 2030 if there is a permanent leasing and development ban. Thank you. Porchie Grady

To whom it may concern: As a veteran, I am concerned about the impact President Biden's pause on new natural gas and oil leases on federal lands and waters will have on both our national security and our economic recovery, especially if the pause is made permanent. American-made energy provides affordable, reliable power to American families and businesses. This reliability has been even more important during the pandemic. I know that energy demand will continue to rise as the economy recovers. We have two choices on how to meet this demand: produce that energy here in the United States or rely on foreign countries that could be hostile to American interests. I know what my choice is. Federal production provides enormous benefits beyond household energy costs and national security. Without new development on federal lands and waters, our country could stand to lose more than 1 million jobs by 2030 and \$9 billion in government revenue. The Gulf Coast region alone could lose more than \$220 million in revenue. This pause on new federal leasing is the last thing this country needs during these challenging economic times. Thank you. Porchie Grady

To Whom it May Concern: I am proud to be a member of the natural gas and oil industry's workforce. Our industry provides American families and businesses with the affordable and reliable energy they need every day. This was true prior to the pandemic and will certainly be true as we begin to recover. That's why I oppose continuing President Biden's pause on all new natural gas and oil development on federal lands and waters. This executive action to pause new federal leases is a step backwards for our nation's economic recovery and environmental progress. Without new development on federal lands and waters, coal use could increase by 15% and CO2 emissions in the power sector could increase by 5.5% by 2030. An Obama-era Bureau of Ocean Energy Management report analyzing the effects of offshore leasing restrictions found that U.S. GHG emissions could actually increase slightly due to increased foreign imports transported overseas. I do not think a policy that costs jobs and government revenue and provides little, or even negative, environmental benefits is a good idea. If the pause is made into a permanent leasing and development ban, the United States could lose more than 1 million American jobs by 2030 and \$9 billion in government revenue. That's the last thing this country needs in these challenging times. I hope you listen to me, the millions in our industry - and to President Biden's original promise that this was a temporary pause - and change course on the federal pause. Thank you. Porchie Grady

Hello: Why turn away from one of America's strengths, especially as we try to recover from the pandemic? Economic recovery will be made easier because the United States has relatively low household energy costs, in large part because of the domestic energy revolution that has occurred over the last decade. This energy boom has happened in large part due to development on federal lands and waters. But continuation of President Biden's pause on new federal leases puts this all at risk. Restricting development on federal lands and waters is nothing more than an import-more-oil policy. It will send U.S. dollars to foreign countries, whether they are our friends or not. We can meet our energy needs right here in America -- which will employ the US work force at a time when every good job counts. That's something President Biden talks a lot about, but we need him to take action to protect and grow jobs. It's more than just energy jobs at stake. An Obama-era BOEM report analyzing the effects of potential offshore leasing restrictions found that U.S. GHG emissions will be little affected positively, and could very well increase slightly due to increased foreign imports transported from overseas. Fewer jobs and an increase in emissions? If the leasing pause turns into a long-term ban on development America could be facing even more challenging economic times. Please end President Biden's pause on all new natural gas and oil development on federal lands and waters. It's the wrong policy at the wrong time. Thank you. Porchie Grady

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,  
Pat Stow

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Ilene Dillon-Fink  
4124 Hackberry Place, `  
Davis, CA 95618

That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Martha Booz  
3823 Valley Lane  
El Sobrante, CA 94803

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Vic Bostock  
1612 Woodglen Ln  
Altadena, CA 91001

The Honorable,

Dear Secretary Haaland,

Thank you for your continued climate leadership and for undertaking a long-overdue review of the federal fossil fuel programs. I am writing to support you in undertaking a thorough and rigorous environmental impact study. This can exemplify what ongoing scientific research indicates: that new fossil fuel development is not recommended if we are to have a chance at a sustainable, livable planet in our future.

To begin with, it means that our climate, as it relates to our future well-being, can not afford more fossil fuel leasing and/or development within our public lands and waters. Pollution from the world's environmentally obsolete, yet currently-producing oil and gas fields, if ever fully developed--even without factoring in hazardous coal production/use--would push global warming dangerously past 1.5 Celsius. Clearly, any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's crucial climate mitigation goals.

Phasing out the, now obsolete, federal fossil fuel programs will benefit public health, low income communities, and communities of color who already experience disproportionate toxic oil/gas/coal/nuclear production pollution and negative health and climate change impacts. Phasing out fossil fuel programs will help the twin climate change and pollution-based extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species such as polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow. Public lands and wildlife must remain protected, as must all plant and animal life on earth.

I know that you will work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline and phase-out of federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by former federal fossil fuel development.

I ask all agencies, within the context of the forthcoming environmental review, to fully consider the public health, social, economic, and widespread environmental costs of pollution-based climate change inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as must be shown with the phase-out of federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Judy Lukasiewicz  
701 Happy Valley Rd

I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Pol Hermes

It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
David Ramer

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

The Honorable,

Dear Secretary Haaland,

SO GLAD, SO HAPPY, YOU'VE BEEN APPOINTED! AND THANK YOU for your climate leadership AND for undertaking a LONG-overdue review of the federal fossil fuel programs. I'M ASKING FOR a full and rigorous environmental impact study. If done correctly, it WILL show what the scientists have ALREADY said~ THERE IS NO MORE ROOM FOR NEW FOSSIL FUEL development if we WANT A PLANET WE CAN SURVIVE ON HEALTHFULLY.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Elena DuCharme  
4239 Bartleson Road  
SEBASTOPOL, CA 95472

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said: that we can not allow new fossil fuel development if we are to have a chance at a liveable planet.

That means that our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. So, ANY new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out all federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Indigenous Tribes/Nations, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Jessica Lam

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
David Picariello

That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Rodney Hedrick  
1292 E 1st Avenue  
Chico, CA 95926

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Janna Caughron  
9178 Mount Pleasant Drive  
Reno, NV 89523

If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Hank Schlinger  
1755 W Mountain St  
Glendale, CA 91201

It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Esther Gold  
PO Box 77  
Berkeley, CA 94701

The Honorable,

Dear Secretary Haaland,

Thank you for undertaking a long-overdue climate review of the federal fossil fuel programs.

I am informed that you are undertaking a complete and rigorous environmental impact study.

Many assume that the study will show that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

If that is the conclusion, it certainly means our climate future can not afford more fossil fuel leasing and development on our public lands and waters. It will also show that pollution from the world's already-producing oil and gas fields, if fully developed would push warming well past 1.5 Celsius.

Phasing out the federal fossil fuel programs many carry benefit of improved public health, especially those communities which currently experience disproportionate pollution and climate impacts. Reducing climate pollution and destruction of public land and ocean habitat will certainly reduce the U.S. and International extinction crises.

I urge you to work with other federal agencies, Congress, Tribes, and State Governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the United States to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you again for your climate leadership.

Sincerely,

Sincerely,

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

We, the American people, are responsible these public lands and we want to preserve these natural settings in their pristine condition to the advantage of our wildlife, recreation and the inner peace we feel in these natural settings. There is no good reason to allow the unreasonable greed of out of control corporations to further degrade our Grandchildren's natural legacy.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil

fuel programs.

It is time for our forest policy to reflect the understanding that our living forests are a valuable source of scientific knowledge and our greatest source of inner peace and contentedness. We can not conquer nature with our machines and science without destroying ourselves, we must learn once again to live in harmony with our natural world and this is a wonderful challenge.

Thank you for your consideration, and thank you again for your climate leadership.

I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Heather Vollstedt  
95608

It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Holly Hall

The Honorable,

Dear Secretary Haaland,

Thank you for your strong climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
H S Nadler  
Novato, CA 94947

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

At an absolute minimum, end the ridiculous taxpayer subsidies to oil and other mineral companies using federal lands. The rates charged by the government to access resources have not changed in a century! Phase in new access rates to what they would be if controlled by inflation - and then some. The reason oil is still so prevalent despite the immense damage it

causes is that a) it's relatively cheap to use compared to other energy sources, and b) it's still mostly highly profitable. Let's make accessing it, and thus damaging the environment, a lot more costly!

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

**WE ARE SO LUCKY TO HAVE YOU IN THIS ROLE!!**

Sincerely,

Sincerely,  
Joan Combes  
7038 Eveningsong Drive

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Joanne Hoemberg

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
John Crahan  
6641 W. 88th St.  
Los Angeles, CA 90045

That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
John Merrick  
1829 Cornwall Pl  
SLC, UT 84116

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
James Dawson  
1055 Trinita Terrace  
Davis, CA 95618

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Joshua Arthur  
705 Rockfellow Dr

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Climate change, like numerous other issues (gun safety, immigration reform, prison reform, education reform, short-term lending regulation, healthcare reform, banking regulation, opioid regulation) remains a vexing problem primarily due to corporations' ability to curry favor with elected officials. The corrupting influence of money in our political system is undermining our

democratic traditions and discouraging Americans from voting and/or running for office. This ominous development may well end our experiment in representative democracy unless we alter this decades-long trend. For the sake of the republic, we must amend the US Constitution to state that corporations are not people (and do not have constitutional rights) and money is not speech (and thus can be regulated by state and/or federal campaign finance laws). Short of accomplishing this, no other reform of significance will be achieved. The moneyed interests will turn any reform to their benefit, often at the expense of the nation as a whole.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
James Klein

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Julie Diaz  
3864 35th St Apt 15  
San Diego, CA 92104

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

The Honorable,

Congratulations Secretary Harland,

How wonderful it is to see you in the position that has caused my family and I such fright, anxiety and frustration for what seems forever but is mainly the past 4 years. My family and I thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. We can't tell you how many letters we have written to elected officials on behalf of our environment, including quite a few to President Obama on Keystone and the Arctic National Wildlife Refuge, for well more than decade. The battle has always been hard and ongoing with victory frequently reversed but we never saw the blatant deconstruction coming to the degree it did in the Trump administration. We are writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pike minnow.

We urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

We urge your agencies, in the context of this environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil

fuel programs.

Thank you for listening Secretary Harland, and thank you again for your climate leadership. Hope you can convince the powers, without comprehensive vision and forward thinking, that Mother Nature does not adhere to politics and markets and in the end she will have her way. Time is so very short for the future of our children, grandchildren and the planet that we need to survive. Not sure where I read it many years ago, but our mantra should be. "Manage the unavoidable so that we can avoid the unmanageable."

In Our Hands,  
JK & Family  
Anaheim, CA

Sincerely,  
J K  
92808

If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Jan Charvat  
573 Anderson Rd  
Alpine, CA 91901

The Honorable,

Congratulations Secretary Harland,

How wonderful it is to see you in the position that has caused my family and I such fright, anxiety and frustration for what seems forever but is mainly the past 4 years. My family and I thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. We can't tell you how many letters we have written to elected officials on behalf of our environment, including quite a few to President Obama on Keystone and the Arctic National Wildlife Refuge, for well more than decade. The battle has always been hard and ongoing with victory frequently reversed but we never saw the blatant deconstruction coming to the degree it did in the Trump administration. We are writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pike minnow.

We urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

We urge your agencies, in the context of this environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result

globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for listening Secretary Harland, and thank you again for your climate leadership. Hope you can convince the powers, without comprehensive vision and forward thinking, that Mother Nature does not adhere to politics and markets and in the end she will have her way. Time is so very short for the future of our children, grandchildren and the planet that we need to survive. Not sure where I read it many years ago, but our mantra should be. "Manage the unavoidable so that we can avoid the unmanageable."

In Our Hands,  
JK & Family  
Anaheim, CA

Sincerely,  
J K  
92808

I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,

It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Jean Cameron

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Jennifer Tomassi  
3780 Edgehill Dr.  
Los Angeles, CA 90018

That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Jessica Bensberg  
17132 Lynn Lane  
Huntington Beach, CA 92649

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

The Honorable,

Dear Secretary Haaland,

I urge you, through your executive authority over the Department of Interior, terminate the sale of coal, oil, and gas on publicly owned and federally managed lands, a mathematically critical policy for keeping climate change below levels that threaten human civilization. While you have committed to infrastructure improvements that address the ‘demand side’ of our fossil fuel addiction, these efforts are sabotaged and undermined by your own Department of Interior, which is selling publicly owned fossil fuels, prolonging the dependence of America and the world on these suicidal but monetarily cheap fuels.

Scientists have shown with overwhelming and ever-increasing evidence that our emissions of carbon dioxide, if pursued for several more decades, will lead to global warming of 4-5 Celsius or more. This level of climate change would devastate the basic life-support functions of Planet Earth, and place in grave jeopardy the persistence of human civilization. The public land reserves of coal, oil, and gas contain far more carbon than can ever be burned, if we wish our children an atmosphere with a tolerable level of carbon dioxide.

To keep climate change below 2 degrees C, as the US committed in the Paris accord, requires that our carbon emissions decline by at least half by 2030, and continue to decline thereafter, and that 80% of known fossil fuels globally must remain underground. The relevant DOI agencies, particularly the Bureau of Land Management, are obligated by their chartering laws to exercise its judgment and rational analysis to manage public resources in a manner that best maximizes the public interest. While these laws mention fossil fuel production, they were written before our understanding of its effects on our atmosphere, and its existential threat to our civilization. No cost-benefit calculation today exists, by which the DOI may deem the sale of these fossil fuels to be in the public interest.

To issue fossil fuel leases on federal land that extend for decades, effectively subsidizing fossil fuels and distorting the true cost of electricity, renders the Paris Accord target mathematically impossible. These leases swamp all other efforts of your Administration to promote alternative energy, conservation, or efficiency. Coal produced on federal lands accounts for 40% of total American production. Moreover, because American domestic consumption is declining, coal companies are lustfully eyeing Asian markets and a series of sites along the US West Coast for export terminals. This trans-Pacific conveyor belt of carbon would doom our children’s

atmosphere with equal efficiency, and US public lands must not provide the origin for that conveyer belt of death.

Again, please issue a final rule terminating the sale of publicly owned coal, oil, and gas on public lands. We can either love your children, or we can acquiesce to the Earth's thickening blanket of carbon dioxide, but we cannot do both.

Sincerely,  
Jim Steitz

The Honorable,

Dear Secretary Haaland,

I urge you, through your executive authority over the Department of Interior, terminate the sale of coal, oil, and gas on publicly owned and federally managed lands, a mathematically critical policy for keeping climate change below levels that threaten human civilization. While you have committed to infrastructure improvements that address the ‘demand side’ of our fossil fuel addiction, these efforts are sabotaged and undermined by your own Department of Interior, which is selling publicly owned fossil fuels, prolonging the dependence of America and the world on these suicidal but monetarily cheap fuels.

Scientists have shown with overwhelming and ever-increasing evidence that our emissions of carbon dioxide, if pursued for several more decades, will lead to global warming of 4-5 Celsius or more. This level of climate change would devastate the basic life-support functions of Planet Earth, and place in grave jeopardy the persistence of human civilization. The public land reserves of coal, oil, and gas contain far more carbon than can ever be burned, if we wish our children an atmosphere with a tolerable level of carbon dioxide.

To keep climate change below 2 degrees C, as the US committed in the Paris accord, requires that our carbon emissions decline by at least half by 2030, and continue to decline thereafter, and that 80% of known fossil fuels globally must remain underground. The relevant DOI agencies, particularly the Bureau of Land Management, are obligated by their chartering laws to exercise its judgment and rational analysis to manage public resources in a manner that best maximizes the public interest. While these laws mention fossil fuel production, they were written before our understanding of its effects on our atmosphere, and its existential threat to our civilization. No cost-benefit calculation today exists, by which the DOI may deem the sale of these fossil fuels to be in the public interest.

To issue fossil fuel leases on federal land that extend for decades, effectively subsidizing fossil fuels and distorting the true cost of electricity, renders the Paris Accord target mathematically impossible. These leases swamp all other efforts of your Administration to promote alternative energy, conservation, or efficiency. Coal produced on federal lands accounts for 40% of total American production. Moreover, because American domestic consumption is declining, coal companies are lustfully eyeing Asian markets and a series of sites along the US West Coast for export terminals. This trans-Pacific conveyor belt of carbon would doom our children’s

atmosphere with equal efficiency, and US public lands must not provide the origin for that conveyer belt of death.

Again, please issue a final rule terminating the sale of publicly owned coal, oil, and gas on public lands. We can either love your children, or we can acquiesce to the Earth's thickening blanket of carbon dioxide, but we cannot do both. The hellish suffering in store them is directly proportional to the duration of our cult of climate science denial and fossil fuels idolization. While this request stretches the boundaries of political normalcy, it is the only action commensurate with the demands of physics and chemistry, without which there will be no other issues left for our children to worry about. Thank you for your attention to this urgent issue.

Sincerely,  
Jim Steitz  
849 Glades Road #1203  
Gatlinburg, TN 37738

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,

The Honorable,

Dear Secretary Haaland,

Please consider a moratorium on any new oil and gas leases on public lands for at least 5 years. This will give us time to develop alternative energy and work on capping abandoned wells that are releasing methane into the atmosphere, a stronger green house heat trapping gas.

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Karen Olson

The Honorable,

Dear Secretary Haaland,

Thank you so much for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to please undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals and our planet's future.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

Please work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I ask that your agencies, in the context of the forthcoming environmental review, fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your time and the space and thank you again for your climate leadership.

Onwards,

Sincerely,

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Katherine Bohn  
55403

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

The Honorable,

Dear Secretary Haaland,

Please do a full and rigorous environmental impact study on the further development of fossil fuel resources.

If done correctly, it will show what the scientists have previously told us— that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

That means our climate future can't afford more fossil fuel leasing and development on our public lands and waters.

Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

Please work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you very much for your consideration.

Thank you for your climate leadership!

Sincerely,

Sincerely,

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,  
Kathy Carroll

That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Ken Box  
1117 W 9th St  
Austin, TX 78703

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Kevin Ng

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study.

I know that you recognize that phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for endangered species.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

Bottom line, I also need to see all Sacred Lands protected from destructive fossil fuel and mineral extraction practices. I want to end the blight that energy companies inflict on our Nation.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Kristin Truse

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.
