The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Lynn Wallace  
2388 Birdsong Place  
Manteca, CA 95336

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Laura Tryon

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

The Honorable,

Dear Secretary Haaland,

If we are to phase out fossil fuels and reach carbon neutrality in the next 10-20 years, there can be no further expansion of fossil fuel use and infrastructure. The carrying capacity of the planet for all the living things we hold dear - ourselves included - is at stake.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--will push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Lacey Hicks  
4463 Hyde  
Fremont, CA 94538

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Lisa Bettendorf

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Lore Weber  
52051 Farmington Square Road  
Granger, IN 46530

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

The Honorable,

Dear Secretary Haaland,

It is a great relief to have a capable steward like you managing our public lands. Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I have every confidence that the review will be thorough and rigorous. In general terms, though, we know what any honest review must show: We cannot permit new fossil fuel development and have any chance of keeping our planet liveable.

I urge you to direct your agency to include the full social, economic and environmental costs of fossil fuel policies in their review. Then organize broad cooperation among federal agencies, Congress, Tribes and state governments to manage an orderly decline of federal fossil fuel production and an equitable transition for impacted communities.

Thank you for your consideration, and thank you again for your climate leadership.

If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Lyn Younger

It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Melvin D. Cheitlin

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Locally we are seeing an omnicidal push for the exploitation of pristine wilderness (Tongass and ANWR) being used for resource extraction and discarded for profit, exacerbating the climate crisis and harming the subsistence ways of living that we have relied upon for generations.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure a swift and orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

It will always tend to be more profitable to do bad things than good things: ecocide over preservation, exploitation over equality, war over peace. Humanity remains on a doomed trajectory for as long as its systems maintain profit-seeking as the driving force behind its behavior.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, longer term economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,

If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Michael Wechter

It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Mikki Chalker

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
ma w

That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Marianna Mejia Contact

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, as I am sure you will administerit, this study will show what the scientists have said for a long while: that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

This means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in the horrors of coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals. We are courtingmore danger than ever before unless we put an immediate stop to fossil fuel programs.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Mark Golembiewski

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Martin Bouffard  
Ripon, CA 95366

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Mary McAuliffe  
6051 Selma Ave  
Los Angeles, CA 90028

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Maureen O'Neal

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Nancy Groves  
420 Burntside Dr  
Golden Valley, MN 55422

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Natasha Hoover  
440 S. Van Ness  
San Francisco, CA 94103

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

The Honorable,

Dear Secretary Haaland,

I have a young child and I need the government to make real changes towards a secure carbon free future. Otherwise my son will have no future. We cannot do this through personal action alone. We need systemic change.

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Niel Lambert  
00000

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Norma Jean Romero  
5557 Cabrillo Ct.  
Rocklin, CA 95764

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership. I'm so happy to see you leading our Department of the Interior!!

Sincerely,

Sincerely,  
Patricia Blackwell-Marchant

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Paul Hunrichs  
8360 Carlton Oaks Dr  
Santee, CA 92071

That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Peggy Powell  
5802 Bob Bullock Loop  
Laredo, TX 78041

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Pamela Amundson

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
r tippens

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Richard Kite  
1010 massachusetts riad  
Boston, DC 20001

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Ro Vanstrien  
25 Independence Blvd  
Warren, NJ 07059

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Robert Mendoza  
92708

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Rachel Wolf  
403 Emeline Ave  
Santa Cruz, CA 95060

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

This has been a long time coming--waiting for someone to pay attention to this issue. It is now or never and you are that person. Please do your best to end fossil fuel activity on Public

Lands.

Thanks you for your consideration in this very important matter.

Sincerely,

Sincerely,

Susan Delles

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Susan Von Schmach

If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
S. Nam

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. Please also undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed, even without including coal, would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health as well as low income communities and communities of color who already experience disproportionate pollution and climate effects. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater Sage-Grouse, Ringed Seals, and Colorado Pikeminnow.

Please collaborate with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production; one that ensures a just and equitable transition for communities both economically dependent on and effected by federal fossil fuel development.

I strongly request that your agencies, in the context of the forthcoming environmental review, fully consider the social, economic, and environmental costs of climate inaction, including those that may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration of my concerns, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Sharon Morris

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Stacey Cannon

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Stephen Snyder  
216 West Perkins St., Ste. 105  
Ukiah, CA 95482

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Steven Henderson  
66759 Acoma Ave  
Desert Hot Springs, CA 92240

Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Sandra Smith  
2445 Spring Hill Drive  
Cedarburg, WI 53012

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pike minnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Alan Hughes  
93021

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Alexander Ward

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs.

In addition to halting all new fossil fuel extraction on public lands and waters, please begin phasing out existing extraction activities. GHG emissions from the world's active oil and gas fields, if fully developed--even without factoring in coal--would push warming well past the maximum tolerable temperature rise of 1.5 Celsius.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I trust that you will ensure that DOI fully considers the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you again for your stewardship of our public lands.

Sincerely,

Sincerely,  
alice nguyen

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

My family and I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

We also urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
allen bohnert  
1854 Renoir Ave  
Davis, CA 95618

Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Therese Blake  
3546 Marvin St  
Santa Maria, CA 93455

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Tammy Bullock  
1212 H street #80  
Ramona, CA 92065

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Todd Fisk

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Terri Decker  
8565 Placer Rd.  
Redding, CA 96001

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Virginia Mendez  
1836 Rodman Street, #1

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. The current science should make clear that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters.

Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is hugely incompatible with our country's climate goals. We are simply out of time on the climate clock.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts.

It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

Time is of the essence. Stop "business as usual" fossil fuels today because we only have one chance to rescue this beautiful planet.

Thank you for your consideration, Happy Earth Day, and thank you again for your vision of a liveable climate.

Sincerely,

Sincerely,  
Wendy Chou

If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
William Wallin  
5337 Zara Ave  
Richmond, CA 94805

It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Uma Miller

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Angela Gantos  
344 Blackfield Drive  
TIBURON, CA 94920

Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Anne Galli  
cupertino, CA 95014

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Antoinette Ambrosio  
6517 Deadwood Road  
Las Vegas, NV 89108

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I strongly urge you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is NO more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future CANNOT afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I strongly urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I strongly urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

However, you MUST do MUCH more. We MUST keep ALL climate-changing fossil fuels IN THE GROUND! We MUST achieve 100% clean, renewable energy by 2030.

Thank you for your consideration and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Art Hanson

I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Ashley Ouellette

It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Barbara Sorgeler  
26435 Creekwood Circle

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Bernie Gonzales  
12453 S FRUIT AVE  
Caruthers, CA 93609

Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Beverly Mitchell

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Bonnie Blitzstein

Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Bridgett Heinly  
4440 Brindisi St  
San Diego, CA 92107

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Colleen & Joe - CLCV O'Meara  
2322 Vincent Ave N

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Cristina Amarillas  
3109 Rocklin Drive

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I write now to ask you to undertake a full and rigorous environmental impact study. If done correctly, I am confident that such a review will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

This also means our climate future cannot afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health, and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Carmen Joseph Dello Buono  
5770 Winfield Blvd Spc 166  
San Jose, CA 95123

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a badly needed climate review of the federal fossil fuel programs. Please undertake a rigorous environmental impact study. If done fully, objectively, and scientifically, it will show what atmospheric and climate scientists have said all along: that there is no room or justification for new fossil fuel development if we are to have a chance at a livable planet.

Clearly, we can't afford more fossil fuel leasing and development on public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed, would push warming well past 1.5 Celsius. That means any new petroleum or coal leasing on public lands and waters is incompatible with our country's climate goals and a sustainable, livable future.

Phasing out the federal fossil fuel programs will benefit public health generally as well as low-income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of critical public land and ocean habitat.

Please work with other federal agencies, Congress, Tribes, and state governments to ensure a rapid but orderly end to federal fossil fuel production that ensures an equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

In the context of the forthcoming environmental review, please fully consider the social, economic, and environmental costs of climate inaction, including those that may result globally from the failure of the U.S. to demonstrate strong leadership, such as with the federal fossil fuel programs.

Thank you.

Sincerely,  
Carol Steinhart

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

I read today that climate change is now a climate emergency. The changes in weather and disasters is impossible to ignore any longer.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Carol Valls  
217 Ridgewood Drive  
San Rafael, CA 94901

Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Cathy Sleva  
220 14th St.  
Seal Beach, CA 90740

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Cheri Porter Keisner

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

The Honorable,

Dear Secretary Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study. If done correctly, it will show what the scientists have said, that there is no more room for new fossil fuel development if we are to have a chance at a liveable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pikeminnow.

I urge you to work with other federal agencies, Congress, Tribes, and state governments to ensure an orderly decline to federal fossil fuel production--one that ensures a just and equitable transition for communities both economically dependent on and impacted by federal fossil fuel development.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Christine Badura  
3225 SE Loeffelman Rd  
Portland, OR 97222

**This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.**

The Honorable,

Dear Secretary Haaland,

I was so pleased at your confirmation-one that I'd worked hard to assure.

Now that you're in office, I want to thank you for your climate leadership and for pursuing a long-overdue climate review of the federal fossil fuel programs. I am writing to ask you to undertake a full and rigorous environmental impact study.

I believe that we must rid ourselves of fossil energy sources as soon as humanly possible, if we wish to avoid the worst effects of looming climate changes. If done correctly, the study will likely prove what scientists have long been saying: there is no more room for new fossil fuel development if we are to have a chance at a livable planet.

And that means our climate future can't afford more fossil fuel leasing and development on our public lands and waters. Pollution from the world's already-producing oil and gas fields, if fully developed--even without factoring in coal--would push warming well past 1.5 Celsius. That means any new oil, gas, or coal leasing on public lands and waters is incompatible with our country's climate goals.

Phasing out the federal fossil fuel programs will benefit public health and low income communities and communities of color who already experience disproportionate pollution and climate impacts. It will help the twin climate and extinction crises by cutting climate pollution and stopping destruction of public land and ocean habitat for species like polar bear, Greater sage-grouse, ringed seals, and Colorado pike minnow.

I urge you to work with other federal agencies, Congress, Native governments, and state governments to develop an orderly and measured reduction of federal fossil fuel extraction and production--one that ensures a just and equitable transition for those communities economically dependent on federal fossil fuel development and those most affected by it.

I urge your agencies, in the context of the forthcoming environmental review, to fully consider the social, economic, and environmental costs of climate inaction, including as may result globally from the failure of the U.S. to demonstrate strong leadership, as with the federal fossil fuel programs.

Thank you for your consideration, and thank you again for your climate leadership.

Sincerely,

Sincerely,  
Christopher Hamilton  
1316 Albina Avenue,
