Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Angela Wynn

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Anne Dwight

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Ben Badger

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Barbara Cimmarusti

It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Brian Mashburn

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Bruce Gilman

Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Cindi Seitz

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Conni Vanbilliard

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Curtis Morton

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Carol Lipsky

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Cassandra Treppeda

It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Charles Sexton

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Chris Lange

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Christopher Cogan

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Donna Malatino

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Daniel Callan

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Danny Castori

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

David Dobreski

It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Deann Darling

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Delana Karageorgis

Dear US Department of Interior Oil and Gas Comments,

I body surf and board surf. I see offshore oil wells from my windows and balcony. Much rather not. We often see oil on our beach. Little black pancake size. I put in trash. Gets on my feet and shoes. I do volunteer bird rescue and many birds die from just a small amount on them. It saddens me and many others when we see this. That's one more negative aspect of oil drilling. Lot is natural seepage but not all. I've seen the offshore wells flare large amounts of gas leaving large amounts of smoke trailing as much as approximately 20 miles. I've heard there is over 10,000 abandoned wells in the Gulf of Mexico. One leaked 14 years till recently sealed. Just searching for oil has tremendous negative aspects such as that from the super loud seismic testing and trampling off road. We are wisely winding down the use of fossil fuels and there is enough available on private, state, county and city lands.

We should not allow any new searching for or drilling for oil or gas on federal lands.

Climate change is out of control. It's very questionable whether we will be able to stop it's exponential growth and destruction.

Stopping more extraction on federal lands will help slow this. It will cause the increase in price thus making proper alternatives more competitive and help preserve the beauty of our lands. Fossil fuels have a very large footprint on the lands, our lungs and the beauty of our skies.

Please immediately stop exploration by seismic testing, and stop new leases for and exploration for oil and gas on federal lands and stop extraction especially with fracking.

Sincerely,

Derek McLaughlin

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Diane Bynum

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Elizabeth Fox

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Emily Baker

It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Erik Lorton

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Dear US Department of Interior Oil and Gas Comments,

As a taxpayer and recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development puts our environment and human communities at risk and exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions. It also prevents us from investing in cleaner energy solutions, which will set America back on the global stage.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Eve Grissinger

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Frank Murphy

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Gina Norton

Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Greg Stevens

Subject: [EXTERNAL] Please no more oil & gas leasing on public lands and waters !
Date: Thursday, April 8, 2021 4:45:08 PM

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear Haaland,

Please help !

We are writing because I value our public lands and waters. We disapprove of how our public lands have been given over to oil companies for gas and oil drilling and fracking.

Fracking for oil and gas is unsafe, extreme and dangerous. It causes massive amounts of methane leakage, water contamination, air pollution and even earthquakes. It disrupts wildlife, harms people and communities, and it's devastating public lands. It must end.

In order to combat the climate crisis, we must stop the extraction and burning of fossil fuels. This requires taking a stand against the oil and gas industry directly.

We must keep fossil fuels in the ground — we can't allow any further drilling and fracking on public lands. The inherent danger of fracking means that no set of regulations can ever make it safe for public health or the environment.

Thanks Mark and Patty

Ending fracking on public lands and waters is a no-brainer. I urge you to keep our public lands and waters protected and not in the hands of oil and gas companies.

Sincerely,

Mark Schulze

Subject: [EXTERNAL] Please phase out dirty, destructive energy development on public lands and waters
Date: Wednesday, April 14, 2021 3:30:21 PM

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new federal fossil fuel leasing and implement an orderly, managed decline of production.

If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for states and communities that are economically dependent on and impacted by federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Dear Secretary Haaland,

I am writing to urge you to phase out fossil fuel development and logging on public lands in the United States. I appreciate that President Biden took the step to pause new oil and gas leasing on public lands as an evaluation is made of the climate effects of energy extraction. I encourage a rigorous review of this science, which I am confident will show that fossil fuel development worsens the climate and extinction crisis.

Public lands and waters belong to the American people. They should provide a safe harbor for species by protecting the ecosystems, and they should be kept safe from destructive oil, gas, and mining extraction.

Further, I encourage the administration to add logging to the list of practices that will be examined during this study (and potentially banned on public land). Timber operations destroy habitats, pollute drinking watersheds, lead to slope instability and erosion, release pesticides and herbicides into soil and water, and increase the risk and severity of wildfires. Additionally, forests are an effective and free carbon sink, as the trees in them capture and store carbon--- this is essential and must be protected as we combat climate change.

Thank you for your consideration,
Martin Fisher

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,
Hannah Salvatore

Dear Energy Review Comments Interior Department,

Utah's public lands have served my family for decades as a classroom and spiritual escape from the day-to-day. It provides the requisite experience to understand geography, geology, biography, astronomy, human nature and survival skills. Protecting these precious lands in a balanced long-term manner is and has been of enduring importance to my family.

The U.S. has a chance to engage geostrategic competitors on the world stage. A key differentiator to the U.S. is our conservative approach to over-industrializing the large spaces in the west. This can serve a national narrative while ensuring the true access to wild and natural spaces is unencumbered by unchecked extractive industry. Protecting our public lands and ensuring their larger value to Americans now and in the future is indicative to how we envision our national future. There are two paths forward: the right-now solution which prioritizes access to traditional energy resources; or, the right solution which prioritizes enduring lands for ALL Americans while given measured energy industry access. The lands are seen by the globe as a national treasure and we can not afford to assuage the energy industry at the loss of our great grandchildren forever.

Please prioritize the right solution and protect the enduring access to these lands with a highly measured approach. We only get to manage the value of the land once.

Regards,
H. Hoops

For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

I hike nearly everyday on BLM lands and it is critical that we keep these lands as an important buffer to all the development going on that threatens these peaceful places. Leasing benefits the few at the expense of the many including the planet. I hope your review will lead to a greater appreciation of how critical it is to halt the leasing programs. We need to move to the energy sources of the future and continuing to lease for fossils fuels on our precious public lands only perpetuates a dangerous status quo.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,
Julie Allman

Dear Energy Review Comments Interior Department,

I am thrilled that the Biden administration is conducting a much-needed and long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has cast aside its stated mission and wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

We must act immediately to mitigate climate disaster, I urge you to end oil and gas leasing on our public lands.

As an example of the impact of ending oil and gas leasing on public lands, a recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign. My grandchildren deserve no less.

Regards,
James Riehle

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. Please stop all oil drilling and coal mining on our public lands. I want public lands managed for clean water, clean air and most of all for the full range of all wildlife that evolved and call these lands home. In truth it is the only place left for them to live.

Deb, thank you for reading my comment and carrying out my important requests above.

Sincerely,
James Woods

Dear Energy Review Comments Interior Department,

Please STOP the destruction of my federal lands by BLM's oil and gas leasing program. This activity has led to millions of acres of scarred and decimated public lands, cultural treasures have been looted and robbed, while our wild places are overrun with new roads allowing access for more destructive forces such as OHV recreation. I have been directly impacted by these effects in Utah and I wish for the day to stop all energy leasing and production from our public lands.

We arned recently that the population of Greater Sage Grouse has decreased from an estimated 15,000,000 before European settlement to an estimated 200,000 to 500,000 today (30-75 fold decrease in number). This has got to stop. Although one cannot point the finger at a single activity, gas and oil exploration and drilling is clearly responsible for a large share of negative impact on our sagebrush sea, much of which is withing BLM and other public lands.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,
Jason Rock

Dear Energy Review Comments Interior Department,

Congratulations on your appointment to Interior.
It's about time we have a strong representation of Native American values in the Department!

I strongly support the preservation of both natural and cultural resources and hope you will fight hard to get rid of oil and mineral extraction on public lands.

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

Dear Energy Review Comments Interior Department,

I am writing as an American physician and public health advocate who loves the exploration of our national parks and has visited and explored the Grand Canyon, Mesa Verde, Yosemite and Bear Mountain National Parks. I strongly urge full protection for our national parks, the endangered wildlife, our environment, our waterways and all local communities near our national parks from the public health and environmentally destructive and endangering industrial contamination that results from any invasive oil or gas drilling that has occurred in our national parks and on our public lands.

At this time, I am aware and very much approve of the fact that the Biden administration has begun the process of reviewing and modernizing the Bureau of Land Management's (BLM) outdated and environmentally destructive oil and gas leasing program which must be emergently done now. As President Biden has noted in his January 27th executive order, our country only has a narrow moment to pursue action at home and abroad in order to avoid the most catastrophic impacts of the climate change crisis disaster and our country must seize the opportunity that tackling climate change that this review presents.

I approve of the fact that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

I am disturbed by the previous four long years of the Trump administration's "energy dominance" agenda because it was highlighted by how environmentally destructive the BLM's oil and gas program has become and why significant changes are urgently needed. 0 The first significant problem is that the BLM's oil and gas leasing program contributes a significant role in the worsening of the climate change disaster. According to the most recent data available from the United States Geological Survey, nationwide emissions from fossil fuels produced on federal lands represents 23.7 percent of national emissions for carbon dioxide, 7.3 percent for methane, and 1.5 percent for nitrous oxide over a ten-year period. Please realize that nearly a quarter of all U.S. carbon emissions come from fossil fuels that are extracted by oil or gas drilling from our federal public lands.

It must be remembered that as part of the second problem is that oil and gas operators currently hold thousands of leases across millions of acres of public land that they have not developed. In Utah, for example, 63 percent of the existing leases are sitting idle. Many of the leases were sold by the BLM for as little as \$1.50 per acre. Please realize that oil and gas operators across the West are sitting on almost 10,000 unused drilling permits. In Utah, the pace of new drilling has come to a near standstill and operators only develop approximately

half of the permits that are approved. This slowdown is market-driven and occurred even during the Trump administration.

To avert climate disaster, I very much urge Secretary Haaland to please immediately end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act. Please remember that a recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

At this time, I strongly support and urge Secretary Haaland to please make the protection of our public lands a central pillar of America's campaign to control and reverse our national and international climate change disaster.

Unfortunately, for far too long the BLM has been allowed and wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands. These actions, have and continue to threaten our climate, wildlife, cultural treasures, and wild places. This unbalanced approach must stop now. At this time, I thank you for your consideration of my letter. I strongly urge the Biden administration to please end oil and gas leasing on our public lands, and especially those public lands proposed for wilderness designation under America's Red Rock Wilderness Act.

Sincerely,
Jean Marie Naples, MD-Ph.D.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,
Jennifer Brown

Dear Energy Review Comments Interior Department,

Madame Secretary, please take this opportunity to protect public land as a mitigation to climate change. We cannot continue to kick this problem down the road!

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. Dear Energy Review Comments Interior Department,

The past administration was irresponsible in pushing oil and gas leasing whether it was needed or not. It is appropriated that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

Protecting wilderness quality public lands is an important climate solution. According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. Dear Energy Review Comments Interior Department,

For far too long our public lands have been managed with mineral leasing as the prime objective.

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,
Joel Vignere

Dear Energy Review Comments Interior Department,

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Expansion of oil & gas development on public lands runs counter to the administrations' efforts to mitigate the effects of climate change and pursue a successful "30 x 30" program. As the Secretary is well aware, an additional concern is the use of increasingly scarce water resources in the southwest for extractive development.

The oil & gas and mining industries must develop strategies to deal a more exacting regulatory environment and the Secretary should work with these industries to help them make those adjustments.

Regards,
John Bloch

Dear Energy Review Comments Interior Department,

According to the most recent data available from the United States Geological Survey, nationwide emissions from fossil fuels produced on federal lands represents 23.7 percent of national emissions for carbon dioxide, 7.3 percent for methane, and 1.5 percent for nitrous oxide over a ten-year period. All told, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands.

To avert climate disaster, please end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,
Jonathan Resnick

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly - YES wrongly! - elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle. Oil and gas operators are only developing roughly half of their approved permit, indicating those oil reserves are NOT needed for the American economy. The very last thing we need to do is make even more lands available for leasing and drilling.

To further add to the picture, the US Government obtains only a small percent of the revenue from the fuels extracted from well all across the US. That small percent doesn't even come close to the costs associated with the permit and administration process. And so the American public, whose lands those lands really belong to, suffer from the administrative and permitting costs, the further deterioration of America's climate and natural resources AND the fact that once leased and developed those lands have virtually no further use for the American public to use and enjoy. That is three strikes against the leasing and permitting process. And the American is OUT!

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Dear Energy Review Comments Interior Department,

Thank you for conducting a much-needed review of the BLM's oil and gas leasing program on America's public lands. Almost one-quarter of US carbon emissions come from fossil fuel production on public lands. Therefore the Interior Department is a huge part of the climate emergency -- but that's also why it can and must be a huge part of the climate solution by ending fossil fuel production on public lands.

I agree with SUWA and other conservation groups: For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,
Keller Velez

Dear Energy Review Comments Interior Department,

Where should start with issue of leasing public lands to the energy industry, mining conslorciums, logging industry, cattle and sheep ranching, and other recreation and non-recreation industry concerns. To my knowledge there has been no detailed assessment of damage and over-reach or extending outside legal lease limits to irreplaceable, often times sacred indigenous and archeological sites throughout the western and eastern United States. Important habitats for endangered species, extensive water contamination, destruction of one of a kind land features, significant plant habitat environments destroyed by the construction of un-needed roads, pipelines, and clear-cutting entire sections of historically valuable and aesthetically significant government and tribal lands property has gone on for decades and recently through Trump-led anti-environment pro-fossil fuel fracking consortium corporations have decimated un-realized and unassessed public lands through-out Utah, Arizona, Colorado, Nevada, Idaho, California, Washington. Wyoming, and New Mexico tribal and public lands. An extensive environmental review, analysis, and specific recommendations for all environmental impacts on all public lands, waterways and tribal territories throughout the west must be completed before any lease agreements can be renewed or ratified for any additional construction or ranching, mining or pipelines are approved throughout the entire united states. THIS ENVIRONMENTAL ASSESSMENT AND ANALYSIS NEEDS TO IMPLEMENTED IMMEDIATELY, AND ALL LEASES ON FEDERAL AND TRIBAL LANDS SHOULD BE TERMINATED UNTIL THE RECOMMENDATIONS SECTIONS OF THE REVIEW ARE COMPLETED AND PASSED UPON BY THE FEDERAL HOUSE AND SENATE LEGISLATURE HAS APPROVED THE PROCESS FOR RE-OPENING ANY LEASES OR OPENING ANY NEW LEASES IS IMPLEMENTED!
i WOULD BE MORE THAN HAPPY TO ASSIST IN A PRELIMINARY SCOPE AND PROCESS POLICY DRAFT DOCUMENT FOR THIS PROPOSED ENVIRONMENTAL ANALYSIS AND RECOMMENDATIONS REPORT TO CONGRESS.

Thank You for your attention,

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,
Karma Boyer
302 Mission Serra Terrace
Chico, CA 95926

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Please follow through on this while simultaneously putting a stop to all horse and burro roundups!! At the very least until these plans can be more closely looked at.

Regards,
Linda Granato

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,
Laura Staples
5792 Whistlewood Cir

Dear Energy Review Comments Interior Department,

I'm excited that the Biden administration is finally conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. Coming from Utah, I've seen the damage oil and gas leasing and development have had on our public lands. It threatens our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act. I don't want to see the places I love any more destroyed than they are now. I want them (and the climate) to be preserved for future generations.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

The very LAST thing I would want to see when visiting BLM lands (which I have done) is to see oil and gas drilling and excavation.

I come here for peace and solitude and to see the wildlife and the Red Rock wilderness.

I am for protecting these lands and to help stop global warming by cutting down on emissions. SAVE our BLM lands.

Don't destroy them!!

Thank you

Marsha(a "little guy")

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,
Martha Denniston

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

I believe it is essential that Interior policy shift immediately from further fossil fuel leasing and protect all contiguous public lands for natural qualities and wilderness character as an essential part of reducing release of greenhouse gases and air pollution. Federal policy needs to emphasize renewable energy production and protect endangered plant and animal species, wilderness, and wildness above any extractive or consumptive interest.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Dear Energy Review Comments Interior Department,

The Bureau of Land Management along with the Forest Service as needed lots of changed for many years. As a person who lived in Utah for almost the last 20 years and working with Federal, county, non-profits I was able to see and learn how these agencies and decisions they make affect the area and the people who live there. Example, beetle kill devastated the forests throughout all the West. The timber could have been used if cut within like 7 years, yet the decision makers choose not to allow cutting, which led to acres of downed trees chocking out the vegetation, made fuel for large devastating wildfires, erosion of the land and cost the government millions of dollars in clean-up, replanting, all things that are still going on. Controlled burns were not allowed for years also. Then when they finally allowed they 9 out of 10 times got out of hand. Administrations for years (didn't matter the party in control) issued leases for minerals/oil in the West. Individuals who could drill on their private property were locked out and their wells put in reserve for the future. Leases were issued on federal grounds to mining interests (coal, oil, gas, Tar shale, uranium, etc.) and then such activities were stopped. This on again off again behavior proved devastating to communities. Towns like Vernal, Utah saw huge influx in population and wages for workers and then all of a sudden things were stopped, resulting high unemployment, abandoned homes, etc. Groups have tried to get the Public Lands closed limiting who can come and go affecting those areas and the individuals who use them historically for cattle trails, grazing, mining, recreational and wildlife or environmental protection. Limiting those who can access the areas could also be said to be in violation of the disabilities act preventing those who need some assistance such as a horse or motorized vehicle to access the area, While everyone needs to be good stewards of the land, this can be done better through education and people working together. Fracking is bad for the area because it causes earthquake activity, but drilling/mining can benefit the area as laws are in place holding lease holders accountable for protecting the water, soil erosion, and planting native vegetation and providing protection areas for wildlife. The push for renewable energy sources is good, but it cannot be just one thing over the other. Studies and show the impact of wind farms on the environment -- affecting bird and insect migrations, replacing agricultural areas with turbines affects those communities and places American dependent on food from other countries. Solar panels are great for areas where nothing else can grow (such areas in Emery County where the alkali is so high nothing will grow), but it is does raise the temperature and is often put in places where crops could be planted. Wind and solar alone cannot produce the amount of sustainable power America needs, but they can be used to help support the clean energy that coal produces. Living in Emery County for almost 20 years, there was rarely a day when we didn't have blue clear sky and minimal if any

discharge from the "coal burning power plant" . Yet agencies like the EPA blamed the smoke across the country which was actually coming from wildfires in California, Nevada, and Arizona for smog or bad air in the national parks like Zions and the Grand Canyon. Salt Lake City blamed the coal plants in Eastern Utah with the pollution in the valley, when common sense could show that it was the high volume of vehicle in the valley causing the bad air there.

There are so many things that could be done to protect and help climate control, but it first has to start with people from all interests coming to the table and working together to make it happen. If the pandemic has shown us anything it is that the Earth will heal if we take care of it. The waters of Venice cleaned up and native water species and plants came back when people stopped crowding the water areas, dumping trash in it, etc. I have seen areas in Southern Utah that were clean and pristine and wildlife abundant and then seen it destroyed when people came hiking in and dumping their trash and walking in areas they should not have. Boulderboarding in Emery County has gone on for decades, but as interest in the sport has grown in recent years and more and more people coming in, trash has increased in once pristine areas, their climbing on the rocks has had an impact on the rocks, vegetation, and cleanliness of the water in the area. While economically it helps some in the area, but affects those who have to live there all the time.

Let's put politics and personal interests aside and work together to make not only our country but our world a place we can leave to the future generations.

Listen to all that your decisions will have an impact on and not just for the short-term that you are in power.

Regards,
Mary Kava

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,
Matt DAlessandro

Dear Energy Review Comments Interior Department,

Please don't listen to only the political suits in Utah. There are plenty of us here - maybe even a majority that want to see Bears Ears and GSENM PROTECTED AND EXPANDED. Our leaders will tell you otherwise - but these lands are too special to be drilled. Please protect us from our own non-representative Utah leaders.

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

Many of the major oil and gas companies in the world have acknowledged that demand for oil is likely to peak in the next 10-20 years. Shell has already said that 2019 will be its corporate peak oil production. We have an opportunity to save this lands rather than despoil them just at the moment went worldwide need for oil is beginning to wane.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,
Michael Hardy

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,
Margaret DeLong
10016 Blume St NE

Dear Energy Review Comments Interior Department,

I'm VERY relieved that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places. THIS IS OUR PUBLIC LAND TO BE SAVE FOR ALL TIME, AND SHOULD NOT BE SOLD TO PRIVATE OIL AND GAS COMPANIES. Not to mention how we need to STOP ALL FOSSIL FUEL USE to save the planet. It is a simple truth, but an extremely difficult challenge. But we must think globally, and save the earth and all her inhabitants.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

Dear Energy Review Comments Interior Department,

Thank you for conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

And that says it all: **WRONGLY ELEVATED** extractive leasing....**THREATENING** climate, wildlife, cultural treasures and wild places.

All of my values, and right action as citizens of the planet and stewards of our resources for the health of present and future generations, lie in my plea to do whatever is possible to keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign. The

The first and obvious place to start is to halt oil and gas leasing and other extractive mining in our public lands. Thank you.

Dear Energy Review Comments Interior Department,

Under Trump the BLM prioritized fossil fuel development over recreation and wildlife habitat on BLM lands. Fossil fuel development is causing climate disruption throughout the globe. this is a tremendous cost to human societies and wildlife communities. It is causing wide spread drought, raging fires, ocean rise, flooding expansion of tornado zones, loss of coral reefs and mass extinction of wildlife species.

It is time that the true costs of fossil fuel development is considered in all decisions that effect fossil fuels. It is time to say no to further development of fossil fuels on our public lands. It is time to value those lands for their contribution to maintaining climate balance and providing wild and serene spaces for recreation.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,
Patricia Constable
287 McHenry St
Park City, UT 84060

Dear Energy Review Comments Interior Department,

Please keep oil and gas in the ground. Promote climate change priorities with solar, wind, and other renewable power sources.

Protect our public lands and their wilderness, scenic, cultural, and natural values. The Covid lockdown has shown how much we need them for our sanity. They are being loved to death without being over exploited by extractive industries.

Dear Energy Review Comments Interior Department,

As someone who is familiar with many of these lands, as well as energy policy, I would like to point out that the small output of these fossil fuel extraction sites are of very minor and marginal benefit to America -- and cannot begin to justify the enormous destruction and other costs to our public lands and to us.

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,
Paula McGee

Dear Energy Review Comments Interior Department,

Dear Secretary Haaland:

As you know as well as anyone, the BLM leasing of our public lands to oil and gas companies is not in the interest of Americans and the world at large.

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,
Phyllis Sorter
143 Hart Ave

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,
Rita Auer

Dear Energy Review Comments Interior Department,

Dear Energy Department,

It is time to put fossil fuels back where they belong in managing public lands in the American Southwest. It is time to undo the rapacity of the Trump/Bernhardt Regime.

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. Dear Energy Review Comments Interior Department,

As one who has hiked on many BLM parcels, it really should be Bureau of Land Mismanagement. Instead of being a Bureau looking out for the interests of ALL Americans, it has too often been the Bureau to open up land for industry exploitation. There needs to be a balance.

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,
Robert Rutkowski

Dear Energy Review Comments Interior Department,

Hooray! The Biden Administration is conducting a review, finally, of the BLM's oil and gas leasing program on America's public lands. The BLM has, unfortunately, prioritized oil and gas leasing and development on our nation's public lands- jeopardizing our climate, wildlife, cultural artifacts and places.

According to the USGS, and shockingly, almost a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avoid impending climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 % of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon. This is critical!

Concurrently, 63% of the existing leases in Utah sit unused and oil and gas operators are developing half of their approved permits. We don't need to make even more public lands available for leasing and drilling.

Please keep America's wild landscapes intact. Make protecting our public lands a key part of the Administration's climate campaign.

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,
Russ Abolt

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,
shaun mcgraw

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

Dear Energy Review Comments Interior Department,

Our healthy, thriving future depends on a healthy environment and sustainable energy resources. We have to move away from fossil fuels now, and the best place to start is by reversing the underused and wasteful federal oil/gas leasing programs.

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

Dear Energy Review Comments Interior Department,

I am supportive of President Biden's proposal to conduct a long-overdue review of the BLM's oil and gas leasing program. As a westerner, I have seen decades of faulty Federal policies regarding energy development on federal land. All we've gotten out of it is a lot of irreplaceable scenic country destroyed, a stack of unused leases and drilling rights, and an ever-increasing failure to come to grips with the realities of climate change and damage. I hope you can provide the leadership to mitigate your agency's chronic failure to act as stewards of the public land.

Dear Energy Review Comments Interior Department,

I'm pleased that the Biden administration is conducting a long-overdue review of the BLM's oil and gas leasing program on America's public lands. For far too long, the BLM has wrongly elevated oil and gas leasing and development as the primary use of our nation's public lands, threatening our climate, wildlife, cultural treasures, and wild places.

According to the USGS, nearly a quarter of all U.S. carbon emissions come from fossil fuels extracted from our federal public lands. To avert climate disaster, I hope you will end oil and gas leasing on these irreplaceable public lands, and especially those proposed for wilderness under America's Red Rock Wilderness Act.

A recently released report estimates that passage of America's Red Rock Wilderness Act would permanently keep in the ground greenhouse gas emissions equal to 5.7 percent of the carbon budget necessary to limit global warming to 1.5 degrees. These same lands are estimated to currently sequester and store 247 million metric tons of organic carbon.

Meanwhile, 63 percent of the existing leases in Utah are sitting idle and oil and gas operators are developing roughly half of their approved permits. The very last thing we need to do is make even more lands available for leasing and drilling.

Please keep America's wild landscapes intact and make protecting our public lands a central pillar of the administration's climate campaign.

Regards,
Stephen Snyder
