Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Jayne Cerny

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs.

Would you call your Mother a “resource”?

Of course not!!!! Know that you have the support of many people who want to see the earth respected, shown gratitude, and protected for future generations of All Species.

I know you’ll do the science! Please work toward shifting the destructive & foolish idea that Mother Earth and all of our relations are merely “resources”!

Thank you for taking on this work and the shift in understanding the human responsibility to live with respect and gratitude toward All Our Relations.

Please undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There’s no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Mary Rousseau

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Edward Sykes

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
elena burge

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Shea Santillanes

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Mona CARDELL

Dear Secretary Deb Haaland,

I am inspired to see an advocate for our planet in the position of protecting our lands. Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet. Your leadership must not only evaluate the trauma imposed by the previous administration but move us forward based on what international scientists convey to us as an emergency.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

As a mother, I want to protect our future generations. Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Melanie Fontana

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Rebecca Carey

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Sandra Truman

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Carol Miller

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Amanda Moore

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
james seramba

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Dominique Woods

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
M Wilson

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Sandra Gamble

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Weslie Phillips

Dear Secretary Deb Haaland,

Please conduct a full environmental impact study to end new fossil fuel leasing and begin a managed decline of production. If done correctly, it will show what scientists have said - that there's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's current oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. So, any NEW oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs would benefit public health. Cutting climate pollution and stopping the destruction of public land and ocean habitats for endangered species, would prevent the worst of the climate and extinction crises.

Please work with other federal agencies, Congress, tribes and state governments to ensure an orderly phase-out of federal fossil fuel production — one that ensures a fair transition for communities that are economically dependent on, and affected by, federal fossil fuel development.

The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you.

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Jennifer Barron

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Donna Hegedus

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Sarah Smith

Dear Secretary Deb Haaland,

There's no room for further fossil fuel development if we want a livable planet. GHGs from the world's oil and gas fields will push warming well past 1.5 degrees Celsius. Any new oil, gas or coal leasing on public lands and waters is incompatible with a habitable planet. If course, the less developed, poorer nations of the world will be hit hardest.

We need an immediate but orderly phaseout of federal fossil fuel production now. Climate inaction will create hardship & suffering for our great-grandchildren & their decedents for centuries to come. The United States must lead because the US is the biggest historical contributor to GHGs since 1850.

Sincerely,
Barry Bennett

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
joyce niksic

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Mary Becker

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Dan Kegebein

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Elisabeth N.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Sandi Hutchinson

Dear Secretary Deb Haaland,

Congratulations on your recent and much-awaited appointment as Secretary of the Interior. We lead forward to your leadership in protecting our public lands from overuse and destruction.

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Living in the desert southwest, we are experiencing unduly long high temperatures in the summer, unsurvivable for those in our evergrowing cities ((another problem).The world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, Native communities, and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters. I will support your efforts and your voice.

Thank you for your consideration.

Sincerely,

Dear Secretary Deb Haaland,

Hello Debra,

First off, as a resident of New Mexico, let me congratulate you on your new position. It's great to see someone from the Land of Enchantment making decisions on a Federal level. Anyways, here's the body of the message. Thanks for your attention.

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Lawrence Friedrich

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Christine Preliasco

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Christopher R Miller

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Clare Goslant

Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Fran Stenberg

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Mary Brickley

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Denise Neal

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Tracy Marotta

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

Dear Secretary Deb Haaland,

I've read much and watched countless documentaries about the environmental degradation humans cause with impunity. Although I am frightened for the wildlife and marine life, who are bearing the brunt of our disrespect to the planet, my greatest fear is that we will cause our own extinction and kill most living things on our planet. Please do everything in your power as quickly and as permanently as possible to end this degradation, especially the defiling of public lands. We must end fossil fuel leasing of our public lands in an effort to move toward more sustainable, clean energy sources.

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Jim Haley

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Bobbi Lempert

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Ingrid Hullman

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals. And since we need to set aside and preserve from development a huge portion of the earth to have any chance of slowing climate change and protecting the natural ecosystems that sustain us, curtailing development and mining in our public lands is the absolute minimum we need to be doing.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Dorcas MacClintock

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Todd Milligan

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Peter Lesnik

Please do not lease or sell off our lands and waters to destructive mining and oil and gas. These are for all of us and the wildlife that live there. We do not want more pollution. Protect our land and water. Thank you.

Thank you for your consideration.

Sincerely,
Laura Waterworth

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Duane Wolfe

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Eric Jones

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Sue Janssen

Dear Secretary Deb Haaland,

Congradulation to Secretary Haaland. I am so excited for you, for the First People Nations, for Women. I am excited at this new story that will unfold.

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Rebecca Kelly

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Polly Taylor

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Ibn-Umar Abbasparker

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I know I don't have to urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Sharon Kurtz

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake the necessary steps to end new fossil fuel leasing and enact a managed decline of production. As scientists have said: There's no room for further fossil fuel development if we want a livable planet. We already have the data; any further study, if performed rigorously, will confirm this.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is entirely incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit not only the climate for all, but also public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of both the climate and the extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by, at the very least, ending new leasing on public lands and waters.

Thank you for your consideration.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Jane Brasher

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Richard Marchant

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Carol Kaminsky

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Amalie Callahan

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Mary Jane Gibson

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to craft a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production to zero. If done correctly, it will show what scientists have already said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. and global climate goals.

Phasing out all federal fossil fuel programs will also benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public lands and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, and tribal and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

I am confident that you will fully consider the social, economic and environmental costs of climate inaction. As you are aware, the United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your leadership. Thank you for standing for Mother Earth and all of her children.

Sincerely,

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Esther Prexl

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Jennifer Murray

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Jon Ingle

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Sally Bartow

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Betty Dunn

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Mary Flowers
