Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Linda Frances

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Rachel Faulkner

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Lori Nelson

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Barbara Garriel

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Anna Bailey

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Chris Popp

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Kimberly Hollis

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Peter Egan

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Terry WOLFE

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Christine Whitney

If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Laura Leader

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

The threat from continued fossil fuel extraction is existential. We must transition away from fossil fuels, but to continue to allow extraction on public lands is a bad example, is using public property for a purpose that is not in the public interest, and puts industry profits ahead of the public good on every level.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Nicole Gallo

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Melissa Cruz

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Penny Appelbaum Goldman

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Michelle Bogden Muetzel

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Catherine Lacey

Dear Secretary Deb Haaland,

Run out of fossil fuels, wait a hundred million years for the next batch. Run out of photons, wait until sunup tomorrow. We have batteries that will last overnight. Our research and money need to be invested in renewable energy sources. Let there be solar arrays in Interstate dividers and on abandoned south-facing former pastures and hayfields.

Sincerely,
William Leavenworth

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Jennifer Mathews

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Susanita Nichols

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Tom Francis

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a liveable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of colour who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Stefan Hadfield

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
MARY CALLEN

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes, and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
George Lamb

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Jesse Leithwood

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Svetlana Klimova

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Char Esser

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Jay Turner

Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Mary Sharkey

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Thomas Ruedas Gomez

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Ruth Fischer

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Scott Kartinen

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Shirley Thompson

Dear Secretary Deb Haaland,

First, please let me congratulate you on your appointment as Interior Secretary!

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production.

Pollution from the world's already-producing oil and gas fields, if fully developed and without factoring in coal, would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

Please work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production.

Thank you for considering my comments on this important matter.

Sincerely,
Eddie Konczal

If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Lance Runion

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Dear Secretary Deb Haaland,

I had been a republican for years but am now an independent as one of the issues I have concern with is drilling on public lands. I'm an avid hiker and I spend time on reservations out west as well, visiting natural wonders in remote place. My friends who visit from the UK are in shock and amazed at our incredible resources and vast unspoiled natural beauty. Please do help to phase out, in a responsible manner to all, drilling in particular on public lands. We lose biodiversity and I believe we lose much of the future benefit for ourselves and our children. Respectfully,
Melissa Sanfilippo

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Gary Thaler

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Ailsa Hermann-Wu

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Glen Wetzel

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Joel Esterman

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Cathy Brunick

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
stephanie peron

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Susan Storch

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Judy Larson

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Michael Mills

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Errol Gunn

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Debra Wontor

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Theresa Stiernagle

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Aline Rosenzweig

Dear Secretary Deb Haaland,

Congratulations on your confirmation, and thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. Please launch a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: there's no room for further fossil fuel development if we want a livable planet.

I believe there is really no option for continuing extraction. I fervently want my granddaughter to grow up in a world that is beautiful and livable.

I am committed to the simple principle "Keep it in the ground." Pollution from the world's already-producing oil and gas fields, if fully developed and without factoring in coal, would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with US climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on and affected by federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

As a minority who suffers from reactive airway diseases such as asthma and environmental allergies, this matter affects me greatly. I live in a poor area that has a higher than average minority demographic, when compared to other areas in Pennsylvania, and my area became more polluted under Trump. I'm Trump's last year in office, more industrial sites have opened up near me and they have been given free reign to do whatever they want. My skies are now a greenish-yellow when they used to be clear blue. The states are too weak and complacent on their own to make any changes, so please help us by ending the federal fossil fuel programs, as well as all other federal programs that catalyze climate change.

Thank you for your consideration.

Sincerely,
Ryan Reyes

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Lois S

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Barbara Foster

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Caitlin Nies

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Jay Satterwhite

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Marian Wineman

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Scott White

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Wendy Dearing

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Debra Care

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Kim Kean

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Alex Giron

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Brendan Weldon-Beltz

Dear Secretary Deb Haaland,

We, the people, are grateful for your appointment! Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts.
