Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Anita Stovall

Dear Secretary Deb Haaland,

It's past time to move away from allowing public lands to be dominated and exploited by oil and mining companies Secretary Haaland. Please take this petition seriously. Our public lands need to be used for reforestation projects, natural reserves and other sustainable projects that work within the goals of conservation and restoration of our natural lands and waters. Idk if you saw the report recently showing satellite images of California's kelp forests die offs. But you should look into it and absolutely take action to make sure that something is done to at least mitigate the damage from pollution at the very least on the public lands yiu now find yourself in charge of. I endorse the message below from biological diversity group.

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Mary M Lopez

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Josephine Cristobal

Dear Secretary Deb Haaland,

Dear Secretary Haaland, You might know of Robin Wall Kimmerer, botanist, teacher and Native American who wrote in Braiding Wheat Grass: all flourishing is mutual.

Our earth is suffering and wild lands and wild beings are being targeted to continue the exploitation of this sacred planet.

I am a New Mexico native who lives in Portland, Oregon now and remember the deep power and life of New Mexico and of this earth.

Please be courageous.

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
heather oheaney

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Frank Ortiz

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Andrew Alloy

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Jim Boyer

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Linda Ricks

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
John Thompson

Dear Secretary Deb Haaland,

We have an existential climate crisis and a crisis in losing our animals and wildlife. That means we need to preserve our public lands as habitat and get rid of fossil fuel development on these lands. We also need to keep fossil fuels in the ground and replace them with renewable energy. Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Kevin Hughes

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. We know you'll undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show how scientists have reiterated the Indigenous voice saying: There's no room for further fossil fuel (white man) development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

As your rigorous review works with other federal agencies, Congress, tribes and state governments, you can ensure an orderly phaseout of federal fossil fuel production exemplifying a just and equitable transition for communities both economically dependent on and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Jennifer Gitschier

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Christine Sirias

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have been saying for years: There is no room for further fossil fuel development if we want a livable planet.

Here in the Napa Valley, The City of American Canyon recently put a hold on permits and construction of future gas stations. And, the nearby City of Petaluma has banned the building of new gas stations indefinitely. As a parent, and as a resident of a County where the climate emergency is already here and now, real policy action on climate change matters deeply to me. My child, and all children, deserve a livable future-- a future in which they thrive and the natural world is cared for like never before, NOT a future of perpetual survival mode and continued destruction of the Earth and all we love.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Dear Secretary Deb Haaland,

I want to thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Teresa Coble

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Jacob Harmon

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Annmari Lundin

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Jena Hallmark

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Steve Perakis

Dear Secretary Deb Haaland,

I am a retired science teacher. I spent thirty one years teaching Biology, Environmental Earth Science and Wildlife Management classes in the public school systems of three states. My education was first as a Biologist, teaching came later. I have a Master of Science degree in Biology. As a biologist I am concerned with the effects our large human population is having on the sustainability of our Earth's life support systems. Although there are some impressive natural systems that help to stabilize the living environment on our planet, there are limits to how much abuse these systems can withstand. The fossil records show that in the past there have been several major disruptions of these systems. Today the biggest threat to our space ship Earth comes from the activities of us humans. Our continued population growth combined with the crazy notion that there must always be an expanding economy is a sure-fired prescription for disaster. Misguided economic policies are in direct conflict with the natural limits of Earth. Our finite planet can not provide unlimited resources to allow us to continue on the path we are on.

We must make decisions based on sound ecological principles if we are to bequeath our children and grandchildren with a place to live that is both sustainable and interesting. It will be a tragedy of monstrous proportions if our shortsighted way of making decisions degrades the world that our children inherit. The wonderful diversity of living creatures and wild unspoiled natural places must be preserved for them. It seems that we are unaware that the wild natural places are the ultimate infrastructure of the planet. The natural ecosystems stabilize the atmospheric gasses and maintain our freshwater systems. Our present economic systems of continued growth are nothing more than a Ponzi scheme in which our children will be left with nothing of value.

I am writing today to request that you help address one of the issues that will affect future generations, including our two sons and our wonderful 12 year old granddaughter and her 3 year old little sister. Our other son and wife have a 2 year old son and a new baby girl. Please try to throw off the short term considerations and take action that will address the long term welfare of humankind. The welfare of all of our children are depending on us.

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Dear Secretary Deb Haaland,

Hi:

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs.

I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production.

So far, scientists say: There's no room for further fossil fuel development if we want a livable planet.

Phasing out the federal fossil fuel programs benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts.

Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

And phasing out all old leasings.

Thank you.

Dr. Demian

Sincerely,
Dr. Demian

Dear Secretary Deb Haaland,

As someone who is old enough to have seen, over the decades, the catastrophic changes to the environment resulting from unfettered use of fossil fuels, I would like to thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration.

Sincerely,
Margaret Green

Dear Secretary Deb Haaland,

I am writing to you as a supporter of the Center for Biological Diversity, the Natural Resources Defense Council, Earth Justice, the Environmental Defense Fund, the Sierra Club and other environmental organizations.

I, along with these organizations, want to thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs.

We hope you will please undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your time and consideration.

Sincerely,
Lindsay Bess

Dear Secretary Deb Haaland,

It's great to see your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. Please undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will support what scientists have been saying: That there's no future for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields fully developed (and without in coal in the calculations) would push warming well past 1.5 degrees Celsius. So that means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

As well, closing down the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of colour who already experience disproportionate pollution and climate impacts. I believe cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will help prevent the worst of the climate and extinction crises.

Please work with other federal agencies, Congress, tribes and state governments to ensure a steady phase out of federal fossil fuel production so it ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

I ask you to fully consider the social, economic and environmental costs of climate inaction, of which there has been too much so far!. The world needs the United States to show strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration of my request.

Sincerely,

Dear Secretary Deb Haaland,

Thank you for your climate leadership and for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially that of low-income communities and communities of color who already experience disproportionate pollution and climate impacts. Cutting climate pollution and stopping the destruction of public land and ocean habitat for endangered species will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Please fully consider the social, economic and environmental costs of climate inaction. The United States must demonstrate strong global leadership by ending new leasing on public lands and waters.

Thank you for your consideration!!!

Sincerely,
Carl Englander

Dear Secretary Deb Haaland,

I strongly supported your confirmation through emails and calls to my legislative leaders. I am thrilled to see your climate leadership and I thank you for undertaking a long-overdue climate review of the federal fossil fuel programs. I urge you to undertake a full and rigorous environmental impact study to end new fossil fuel leasing and enact a managed decline of production. If done correctly, it will show what scientists have said: There's no room for further fossil fuel development if we want a livable planet.

Pollution from the world's already-producing oil and gas fields — if fully developed and without factoring in coal — would push warming well past 1.5 degrees Celsius. That means any new oil, gas or coal leasing on public lands and waters is incompatible with U.S. climate goals.

Phasing out the federal fossil fuel programs will benefit public health, especially for low-income communities and communities of color who already experience disproportionate pollution and climate harm. I am also advocating for reducing pollution and stopping the destruction of public land and ocean habitat for endangered species. This will prevent the worst of the climate and extinction crises.

I urge you to work with other federal agencies, Congress, tribes and state governments to ensure an orderly phaseout of federal fossil fuel production — one that ensures a just and equitable transition for communities both economically dependent on, and affected by, federal fossil fuel development.

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Alie Diaz

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Mary Christine Parks

Dear US Department of Interior Oil and Gas Comments,

Please terminate the federal oil and gas leasing program. You know it's time to stop all use of fossil fuels, time to value life over dollars, time to act in alignment with health and well-being for Earth and her inhabitants rather than cling to practices that have never aligned that way and are now extremely obviously strangling us all.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Sarah Wyckoff

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Michael Esten

Dear US Department of Interior Oil and Gas Comments,

As a VOTER and a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions. AND I DON'T EVEN CARE ABOUT CLIMATE CHANGE AS MUCH AS I DO ABOUT THE ECONOMIC DAMAGE TO TOURISM AND RECREATION INDUSTRIES. Take your drills and stick them up your rear end and stay out of the ocean you rapists!

Stop bowing to the special interests that want to extract every last bit of resource so they don't actually have to do any work for a living other than plunder land they don't own. Tourism and recreation are far better for the planet and the ECONOMY.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Jefferson Ray

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Dorothy Anderson

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program. We cannot afford to expand fossil fuel usage or provide an opportunity for the industry to survive. Climate change is literally killing our planet. For our survival, fossil fuels must become obsolete. This is the time to think long-term and to value future benefits over short-term gain. Please act to prevent the fossil fuel industry, which has lied about the damaging effects of its products for decades, from keeping a toehold in the US. Protect the environment and stop new offshore drilling, so the US can transition peacefully to renewables over the coming years instead of fighting against the influence of new investments. Thank you.

Sincerely,

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Joanne McMillan

Dear US Department of Interior Oil and Gas Comments,

Our oceans and our lands with all living creatures within these habitats are at risk. We in Florida have seen the devastation that occurs when there is an oil spill and its affect for many decades to come. The ill effects of gas drilling are becoming increasingly apparent. Fossil fuels are worsening climate change. Industry will only increase its shift to renewable energy resources if major changes are made and no further contract for oil and gas are allowed.

As a person of faith who appreciates the beautiful gifts of creation and as a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Dear US Department of Interior Oil and Gas Comments,

As an American citizen, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Further oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is particularly true concerning offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Janet Glover

Dear US Department of Interior Oil and Gas Comments,

There is already way more wells that are going to be abandoned at taxpayer expense. There is nothing (short of holding petulant toddlers that are the Masters of the Fossil Fuel Universe to even a shred of accountability) anyone can do about that, but the least you could do as (theoretically, on the off chance you aren't on their payroll) elected representatives of the taxpayers who will inevitably be stuck with the bill, not allow any more offshore drilling. Please find the cut and paste comment below. Thank you for your time. Sincerely, someone who appreciates not having oil wash up on shore (unless am in Santa Barbara.) Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Pam Slater Price

Dear US Department of Interior Oil and Gas Comments,

We are in the midst of an ecological disaster for our struggling planet. Fossil fuels are a big contributor to this problem and must be phased out. Drilling or fracking to obtain more fossil fuels not only places the environment at risk, it is a grave harm to living things and a dead-end as an energy source. It is long past time to end any more fossil fuel extraction. Also, as a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Colin Powers

Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Andy Donlan

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Anna Demidova

It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. Dear US Department of Interior Oil and Gas Comments,

As one who values natural places and a recreational user of our magnificent public lands and waters, I urge you to end the federal oil and gas leasing program. We need our public lands and water to address the global extinction crisis and to meet the administration's 30 x 30 goal (although I prefer 50% as a goal in keeping with Dr. Wilson's calculations to save biodiversity). Fossil fuel development is a damaging practice that puts our environment, other species, and human communities at great risk. Of course, it also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions and prevent the worst consequences of insufficient action.

Please protect our nation's environment, biodiversity, communities, and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Wallace Elton

Dear US Department of Interior Oil and Gas Comments,

I'm a recreational user of our nation's public lands and waters. Please terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Jane Miller

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

joan dobbs

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Ellen Franzen

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a criminally damaging practice that puts our environment and human communities at existential risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions. The burning of fossil fuels, it is established fact, is heating up the planet. It is an existential crisis.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program. We MUST stop destroying the very nature upon which all life depends.

Sincerely,

Leigh Emerson Smith

It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. Dear US Department of Interior Oil and Gas Comments,

I'm very concerned about the closing of leasing to fossil fuel companies of public lands with lateral movement to tribal lands. I want the tribes involved to experience economic advantage, but moving the leases to tribal lands just doesn't seem helpful in the greater scheme of things. The potential for environmental damage and human health costs remain the same. I hope Deb Haaland will reconsider this direction and discuss with the effected tribal elders what else can be done to improve their economic prospects.

Sincerely,

Roberta Kenney

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

John Paladin

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Julia Landress

It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Leah Collister

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Dear US Department of Interior Oil and Gas Comments,

Our Oceans and waterways are already struggling from pollution and animals all over are dying, we human beings have and are still poisoning everywhere! We must *CHANFE* before we kill it all! creational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Susanne Kiriaty

To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Scott Podvin

Dear US Department of Interior Oil and Gas Comments,

As a recreational user of our nation's public lands and waters, I ask that you terminate the federal oil and gas leasing program. Fossil fuel development is a damaging practice that puts our environment and human communities at risk. It also exacerbates climate change impacts as our nation and world struggle to reduce greenhouse gas emissions.

Oil and gas development is broadly opposed by communities, businesses, tribes and the public. This is especially true when it comes to offshore drilling. To date, more than 380 municipalities, 2,500 elected officials, 55,000 businesses and 500,000 fishing families have formally opposed new offshore oil and gas development.

Please protect our nation's environment, communities and the future of our planet by ending the federal oil and gas leasing program.

Sincerely,

Guy Taylor
