Classification: Hydrologist, GS-1315-12

INTRODUCTION

This position is located in an operating office (Office) within a bureau or bureau equivalent office (Bureau) within the Department of the Interior (Department). This position has responsibility for leading or participating on hydrologic studies of considerable scope and complexity or serving as a project leader or member of an interdisciplinary team. Plans, directs, performs and/or coordinates comprehensive hydrologic studies or significant components of extensive studies, that describe and interpret hydrologic conditions in order to define, analyze, forecast, or describe both natural and human-induced hydrologic changes in the area. Incumbent of the position is considered a discipline expert in the field of hydrology with an advanced level of professional competence who provides expert technical advice and assistance to land, resource, and facility managers, and other internal and external clients.

MAJOR DUTIES (80-100%)

Serves as a project leader or senior project member for complete hydrologic investigations by planning, conducting, and reporting on interpretive studies. Modifies established hydrologic techniques or procedures. Collects, interprets, analyzes and evaluates hydrologic data. Assignments involve planning, executing, and reporting on original hydrologic studies or ongoing studies requiring a fresh approach to resolve new problems. The complexity of assignments may require extensive modification and adaptation of standard procedures, methods, and techniques, or development of totally new methods and techniques to address problems for which guidelines or precedents are not substantially applicable. Develops approaches, standards, methods, guides, and procedures for conducting the interpretive study. Plans, performs, coordinates and directs comprehensive hydrologic studies of hydrologic systems in accordance with and applicable authorizations, policy, and regulatory requirements. Develops, utilizes, and maintains comprehensive models to conduct and simulate hydrologic analysis and inform operations. Develops, modifies, and utilizes relational databases and related applications to maintain hydrologic data for conducting operational support and planning analyses.

Works on complex or controversial water issues whose solutions require a proven understanding of hydrology and one or more related disciplines such as hydraulics, geology, ecology, geochemistry, and the complexities of ground or surface water flow. Conducts planning, review, and evaluation of multi-basin, multi-aquifer investigations which includes predictive water quantity and quality numerical modeling and adherence to all management-based water resource policies. Results of some studies fulfill environmental analysis and disclosure of the proposed impacts as required by the US Environmental Protection Agency or other regulatory bodies. The scientist develops monitoring/mitigation measures to ensure that impacts are minimized.

Serves as subject matter expert for the supported state/region/supported organizations. Provides current information on policy, resource management, State or local water regulations, and technical requirements. May be called on to provide technical data, professional advice, or recommendations to leadership, serve as an expert witness in hearings, or respond to Congressional inquiries. Works with Federal, State, local and/or tribal land managers to ensure water resources management practices are consistent with Clean Water Act, Safe Drinking Water Act, Federal Land Management Policy Act, and the National Environmental Policy Act, state laws, and various regional, State, Federal, and local policies and procedural guidance and with Interior Board of Land Appeal decisions. Develops and identifies landscape-level projects to restore watersheds, improve water quality, protect federal water rights, and protect Wild & Scenic Rivers. When federal water rights are threatened, the scientist assists field office staff in filing protests or taking other administrative or legal actions to protect the rights. May assist the office of the Solicitor or other officials with questions regarding compliance and/or water rights issues.

Prepares investigative project proposals and develops work plans and protocols which include consideration of previous experimental and theoretical analyses, evaluation of all available data from

various sources, and the development and adaptation of procedures and methods of investigation. Independently conducts interpretive studies or contributes to large scale hydrologic projects. Performs analyses and evaluations and formulates scientific findings. Discusses agreements, study methods, approach, techniques, and desired results with management and representatives of cooperative agencies to implement hydrologic studies. Reconciles differences in approach or scope of study objectives in order to develop a comprehensive and scientifically sound report that can be used for comprehensive water resource management or water rights decision-making. Provides technical advice and information on water resource problems of mutual concern.

Oversees, plans and/or performs a wide range of data collection assignments. Conduct of these investigations requires application of a high degree of experienced professional judgment as well as advanced analytical methods. Results of such investigations serve as authoritative references for water managers and often are the basis for water-resources decisions having significant impact on life, property, regional economics, and the environment.

Serves as principal contact with cooperating agencies in the identification, design, planning, and conduct of water-resources investigations. Conducts or participates in periodic meetings with cooperating officials to discuss program potential, development, progress, and technical accomplishments. This includes reconciling differences of opinion by persuasion or modification of project objectives, scope, approach, results, and conclusions of water-resource investigations or selected elements of such investigations.

OTHER DUTIES (non-grade controlling, non-series controlling)

Plans and performs a wide range of data collection assignments. Conduct of these investigations requires application of experienced professional judgment as well as advanced analytical methods. Results of such investigations serve as references for water managers and often are the basis for water-resources decisions having significant impact on life, property, regional economics, and the environment.

Serves as consultant and advisor to supervisors and other scientists on matters pertaining to specialized knowledge and assists in training personnel in areas of expertise including techniques of data collection and analysis.

Participates in meetings, cooperates with other bureau and Department offices, colleges, universities, industrial organizations, other Federal and State agencies, private consultants, and professional societies to obtain and exchange information. Represents the office at meetings and prepares replies to a variety of requests for information.

Analyzes, prepares, develops and publishes river volume and flood forecasts for river basins under a variety of hydrologic conditions.

Provides technical support to scientists in the field. Provides input on budget, accomplishments. Facilitates collaboration, responds to data requests, provides information on legal cases, and advice to management on policy and implications of changes.

Disseminates river volume and/or flood forecasts to federal, state, or municipal water resource or emergency management organizations, hydropower and agricultural industries, and the general public.

Performs complex tests to determine the chemical and/or biological components of water samples from a broad range of sources. Modifies methods to improve detection of contaminants. Trains other senior scientists in new methods and procedures.

Writes and publishes reports of findings as internal or external reports, recommendations to resource managers, or scientific journal publications.

FACTOR STATEMENTS

FACTOR 1 - KNOWLEDGE REQUIRED BY THE POSITION Level 1-7, 1250 points

Knowledge of hydrologic sciences, methods and techniques and water management practices and procedures as well as broad and varied hydrologic study techniques sufficient to analyze and interpret hydrologic data and information, to analyze the existence and feasibility of water resource management alternatives, and to prepare data and interpretive findings in support of study conclusions for publication of resource management and/or scientific reports.

Knowledge of applicable Federal statutes, State, local and municipal laws, when applicable, agency and bureau regulations, policies, and procedures, governing individual programs related to ground and surface water, water quality, and water availability. Ability to resolve complex problems involving multi-use resource management and apply regulatory requirement to resource management reviews and/or cooperator agreements.

Familiarity with related fields such as hydraulics, engineering, geology, geochemistry, biology, and soil sciences sufficient to incorporate considerations from these disciplines in the review and study of water management problems, plans, and activities.

Knowledge of administrative procedures sufficient to develop work plans and budgetary requirements for the personnel, equipment, and material necessary to implement project plans.

Knowledge of publication requirements and fundamental science practices applied to preparation of reports which clearly present scientific findings, interpretations, conclusions, and recommendations.

Skill in communicating scientific data orally and in writing to both technical and non-technical personnel.

FACTOR 2 - Supervisory Controls Level 2-4, 450 points

The supervisor sets the overall objectives and program emphasis and works with the employee in developing project priorities. The scientist is responsible for independently planning own work, coordinating this work with other hydrologists, engineers, or resource specialists, resolving technical problems, deciding on the necessity for and kind of technical compromise required by resource constraints, and finalizing all assignments.

The scientist keeps the supervisor informed of possible adverse reactions, publicity, or cooperator interest that might arise from study findings or conclusions. Analysis, recommendations, and conclusions are accepted as being technically correct.

Completed work is reviewed for adherence to overall program policies and attainment of study objectives and deadlines, and for feasibility of overall recommendations.

FACTOR 3 - GUIDELINES Level 3-4, 450 points

Guidelines include policy, procedural, and technical manuals and handbooks, standard professional practices, published research results and related scientific reports, annual work plans, and oral instructions from the supervisor or senior scientist. Guidelines specific to assignments are often scarce, not applicable, or have gaps in specificity that require considerable interpretation and/or adaptation for application to issues and problems.

The scientist uses resourcefulness and experienced judgment in devising new study techniques, developing methods, or significantly departing from established study practices, as required by unique local hydrologic conditions as well as the broad range of water-use practices, and water-quality issues. This responsibility requires substantial deviation and departure from precedent study techniques that result in more effective methods. Such methods may be used as prototypes, for application by other scientists and water managers in the area and elsewhere.

FACTOR 4 - COMPLEXITY**Level 4-4, 225 points**

Assignments involve the application of complex existing processes or development of new techniques, methods, and procedures for the study of local or regional hydrologic conditions. The work is complicated by interrelated factors which must be considered simultaneously, such as: (1) multi-disciplinary aspects of a study; (2) the varied nature of water velocities, water flow direction, storage capacity, flow boundaries recharge characteristics, and water chemistry; 3) complex aspects of model calibration when used as a predictive study tool; (4) varied surface and subsurface geology; (5) varied land use conditions such as spatial and temporal variation in urbanization and non-uniform water supply development practices.

The work requires the scientist to isolate specific variables to be considered in the study in order to describe conditions impinging on the storage, movement, and use of ground- and surface water within varied surficial and subsurface geologic environments, to evaluate natural and man-induced water quality conditions in hydrologic systems; and to draw scientifically correct conclusions from the evaluation of collected data. The scientist must be versatile and innovative in approach and be able to adopt or extend established techniques or methods to overcome existing study problems.

FACTOR 5 - SCOPE AND EFFECT**Level 5-4, 225 points**

The scope of the scientist's work includes planning, executing, and reporting on original studies and investigations or ongoing studies that require a fresh approach to resolve extremely complex or novel problems pertaining to the field of ground- and surface-water hydrology and water quality and its application in a geographic area. The work requires a thorough professional knowledge of hydrologic processes and the effects of natural or human-induced stresses on the environment.

Reports summarizing results of investigations into water resource problems often serve as definitive documents on the subject, and decisions based on these reports can affect life, property, regional economics, and the environment and/or the continued existence of specific resources.

FACTOR 6 - PERSONAL CONTACTS**Level 6-3, 60 points**

Establishes and maintains contact with a technical staff of cooperators; scientists and community planners in other Federal, state, or local agencies; as well as hydrologists and support personnel in the immediate organization. Contacts are also made with consultant hydrologists and engineers as well as landowners, the general public, universities, industry, and contract personnel.

FACTOR 7 - PURPOSE OF CONTACTS**Level 7-3, 120 points**

Contacts are for the purpose coordinating work efforts with co-workers; and to provide advice and recommendations to resource managers and cooperators. The scientist works with resource managers and cooperators who may need to be convinced to accept recommendations and who may be skeptical or unwilling to make needed changes.

FACTOR 8 – PHYSICAL DEMANDS**Level 8-1 5 pts or Level 8-2 20 pts**

(Level 8-1) The work is typically performed in an office setting with no special physical demands. However, work may also be performed in the field which involves periods of walking, bending, climbing, or driving motor vehicles to worksites. The work may also involve some overnight travel for training, meetings, and site visits.

(Level 8-2) The work regularly combines both office and field assignments. Field work requires physical exertion, such as long periods of standing, or recurring and considerable walking, stooping, bending, crouching, crawling, and climbing such as in regular and periodic construction activities and field inspections. Work may also include frequent lifting of moderately heavy items weighing less than

50 pounds. Field assignments may also involve operating small watercraft, driving motor vehicles to work sites, some of which may be remote, and include overnight stays in remote locations.

FACTOR 9 – WORK ENVIRONMENT

Level 9-1 5 pts or Level 9-2 20 pts

(Level 9-1) The work is usually performed in an office setting. However, work time may also be spent periodically visiting field sites. Field site visits are typically performed in either an outdoor setting subject to weather changes, diverse terrain, and safety hazards associated with working around complex features and/or construction, or an industrial setting subject to noise, fumes, and moving machinery. Both settings may require the use of personal protective equipment. Safety precautions and protocols are observed at all times and the scientist complies with safety instructions and regulations and ensures individual and others' safety by promptly reporting unsafe acts, unsafe conditions, and accidents to the supervisor.

(Level 9-2) The work involves regular and recurring exposure to moderate risks, discomforts, and unpleasantness such as: high noise levels, infectious materials, or toxic or irritating chemicals; travel in safety approved small aircraft and water craft; high winds and low or high temperatures; infestation of dangerous reptiles or poisonous plants, snakes, or insects; adverse weather conditions; noxious fumes; flammable liquids; or radiation. The work involves performing tasks in close proximity to rotating heavy mechanical and electrical machinery and may involve working within confined spaces for extensive periods of time. Special safety precautions such as protective clothing and gear are necessary. Safety precautions and protocols are observed at all times and the scientist complies with safety instructions and regulations and ensures individual and others' safety by promptly reporting unsafe acts, unsafe conditions, and accidents to the supervisor.

OTHER SIGNIFICANT FACTS

Position may be required to operate a motor vehicle as an incidental driver. Employees who operate a motor vehicle on public roadways require a valid drivers' license.

Position may be required to operate or be a passenger in small watercraft. Employees who operate a small watercraft are required to possess safety certification or pass an appropriate safety training course commensurate with watercraft used in the performance of duties.

Positions involving arduous field work may require a pre-employment medical examination.

TOTAL POINTS – 2790 to 2820

GRADE CONVERSION - 2755-3150 = GS-12

EVALUATION STATEMENT

STANDARD APPLIED

Job Family Standard (JFS) for Professional Work in the Physical Science Group, GS-1300 December 1997; Introduction to the Position Classification Standards/Primary Standard, revised 8/09

SERIES AND TITLE DETERMINATION

The JFS defines the 1315 series as positions that involve professional work in hydrology, the science concerned with the study of water in the hydrologic cycle. The work includes basic and applied research on water and water resources; the collection, measurement, analysis, and interpretation of information on water resources; the forecast of water supply and water flows; and the development of new, improved or more economical methods, techniques, and instruments.

The basic title for this occupation is Hydrologist.

GRADE LEVEL DETERMINATION

The 1300 JFS is a narrative standard. When applying narrative standards each position is placed at the grade with the descriptive material that best represents the overall work of the position. The standard describes the GS-11 position as performing responsible work of considerable difficulty requiring somewhat extended professional, scientific, or technical training and experience which has demonstrated important attainments and marked capacity for independent work. The work typically involves conventional methods and techniques, though going beyond clear precedents, and requires adapting methods to the problems at hand and interpreting findings in terms of their scientific significance. Finished products are reviewed for adequacy of conclusions and soundness of the procedures and methods used.

The standard describes work at the GS-12 as typically involve planning, executing, and reporting on original studies or ongoing studies requiring a fresh approach to resolve new problems. The complexity of assignments requires extensive modification and adaptation of standard procedures, methods, and techniques or development of totally new methods and techniques to address problems for which guidelines or precedents are not substantially applicable. The work of the position, like descriptions at the GS-12 level, is performed with wide latitude for the exercise of independent judgment. Work involves complex or controversial water issues whose solutions require a proven understanding of hydrology and one or more related disciplines. Assignments typically include considerable breadth and intensity. Hydrologists at the GS-12 make significant technical and scientific recommendations and decisions. They exercise considerable initiative and resourcefulness in carrying out these assignments to completion. Plans projects and makes changes without securing prior technical approval. Represents the agency before public bodies. Like GS-12 in the standard the position oversees, plans and/or performs a wide range of data collection assignments requiring application of a high degree of experienced professional judgment as well as advanced analytical methods.

Work of the position does not rise to the GS-13 level, where work is of unusual difficulty and responsibility requiring extended professional, scientific, or technical training and experience which has demonstrated leadership and marked attainments in professional, scientific, or technical research. At the GS-13 level, scientist represent an authoritative source of consultation for other scientists and program specialists and are called upon to perform a key role in resolving issues that significantly affect scientific programs. Some positions include staff work with responsibility for reviewing and coordinating field work in a narrow program area or reviewing and developing legislative or regulatory proposals. Other positions may involve planning, organizing, and leading teams to prepare requirements and specifications for new, large scale systems or to evaluate overall plans and proposals for significant systems. Typical work at the GS-13 includes describing hydrologic system and the related environmental framework of the basin, determining the quantity, distribution, availability, and quality of the water resources; and relating water resources to water needs. Hydrologist at this level develop long-range hydrologic plans, programs, and/or precedents of an authoritative and state-of-the-science nature.

As the work fully meets, but does not exceed, descriptions at the GS-12 level in the JFS, the position is properly classified as Hydrologist, GS-12.
