RE: 60 Day Notice of Intent to Sue under the Endangered Species Act

You are hereby notified that Alliance for the Wild Rockies and Native Ecosystems Council (collectively Alliance) intend to sue pursuant to the citizen suit provision of the Endangered Species Act (ESA), 16 U.S.C. § 1540(g) for violations of the ESA, 16 U.S.C. §§1531 et seq. Alliance will sue after the 60 day period has run unless the violations described in this notice are remedied.

The names, addresses, and phone numbers of the organizations giving notice of intent to sue are as follows:

Michael Garrity, Executive Director
Alliance for the Wild Rockies
P.O. Box 505
Helena, Montana 59624
Tel: (406) 459-5936

Dr. Sara Jane Johnson, Executive Director
Native Ecosystems Council

STATEMENT OF GENERAL FACTS

On July 2, 2013, the U.S. Fish and Wildlife Service (USFWS) issued a species list for the Helena National Forest. According to the list, both the Canada lynx, which is a threatened species, and the wolverine, which is a proposed species, may be present on the Helena National Forest east of Interstate 15. On November 15, 2013, the U.S. Forest Service (Forest Service) issued a biological assessment for the Cabin Gulch logging project on the Helena National Forest. The project involves 1,970 acres of commercial logging, including 417 acres of clearcutting, and construction of 6.7 miles of new temporary roads. The project area is approximately 15,600 acres and is located about 15 miles east/northeast of Townsend, Montana. The Mount Baldy Inventoried Roadless Area (IRA) is to the north of the project area. The area includes habitat for the threatened Canada lynx and the proposed wolverine. Logging, road construction, road use, and other activities will render areas of lynx and wolverine habitat unsuitable and cause other harm to lynx and wolverine such as displacement and disruption of normal behavioral activities. In the biological assessment, the Forest Service concluded that the Cabin Gulch logging project is not likely to adversely affect lynx. In the biological assessment, the Forest Service did not analyze wolverine at all. USFWS issued a letter of concurrence with the Forest Service's conclusion as to lynx. USFWS did not address wolverine.

PROJECT CHALLENGES

1. THE AGENCIES MUST ADDRESS WOLVERINES IN THE BIOLOGICAL ASSESSMENT AND LETTER OF CONCURRENCE.

The ESA requires that "[e]ach Federal agency shall confer with the Secretary on any agency action which is likely to jeopardize the continued existence of any species proposed to be listed . . ." 16 U.S.C. §1536 (a)(4). The first step is for the action agency to "request of the Secretary information whether any species which is listed or proposed to be listed may be present in the area of such proposed action." 16 U.S.C. §1536(c)(1). If "such species may be present, [the action] agency shall conduct a biological assessment for the purpose of identifying any endangered species or threatened species which is likely to be affected by such action." *Id.* "[I]f both proposed and listed species are present, a biological assessment is required and must address both proposed and listed species." ESA Section 7 Handbook at 3-11. "A biological assessment shall evaluate the potential effects of the action on . . . proposed species . . . and is used in determining whether . . . conference is necessary." 50 C.F.R. §402.12(a), (k). "The Federal agency shall submit the completed biological assessment to the Director for review." 50 C.F.R. §402.12(j). "If the biological assessment indicates that the action is not likely to jeopardize the continued existence of proposed species . . . and the Director concurs, then a conference is not required." 50 C.F.R. §402.12(k); see also 16 U.S.C. §1536(a)(4).

Due to the fact that wolverines -- a proposed species -- may be present in the Project area, the Forest Service must include the wolverine in the Biological Assessment for the Project. 16 U.S.C. §1536(c)(1); 50 C.F.R. §402.12(a),(k). In the Biological Assessment, the Forest Service must make a conclusion as to whether the Project will jeopardize the wolverine, and it must receive concurrence on this conclusion by FWS. 50 C.F.R. §§402.12 (j),(k). The Forest Service's failure to analyze the wolverine in the Biological Assessment for the Project, and failure to receive

concurrence from FWS, violates the ESA. 16 U.S.C. §1536(c)(1); 50 C.F.R. §§402.12 (j),(k).

2. THE AGENCIES' CONCLUSION FOR LYNX IS ARBITRARY AND CAPRICIOUS AND IGNORES AVAILABLE INFORMATION/BEST AVAILABLE SCIENCE.

The Canada lynx is listed as a threatened species under the ESA. There is one current designated Lynx Analysis Unit, one former Lynx Analysis Unit, and a designated lynx linkage area in the project area. The agencies admit that lynx may be present in the area. The agencies' own prior documents state that lynx is a species of concern in this area, that this watershed is one of the top priority watersheds for wildlife (including lynx) conservation in the southern Big Belt mountains, that there are concerns with habitat connectivity for lynx in the area, and that logging may cause adverse effects and take of lynx in "secondary, unoccupied" habitat. The agencies' conclusion that lynx will not be adversely affected by the project is arbitrary and capricious and ignores available information in the record/best available science, including but not limited to, contrary conclusions in the Biological Opinion/Incidental Take Statement for the Northern Rockies Lynx Management Direction, the South Belts Ecosystem Watershed Analysis, the memorandum eliminating the second Lynx Analysis Unit from the area, and the Lynx Recovery Outline. The agencies' conclusion also ignores the definition of adverse effect from the Section 7 Handbook, which requires a "likely to adversely affect" conclusion if there is any negative effect that is not extremely unlikely and can be meaningfully measured or detected or evaluated. The agencies use habitat as a surrogate to measure the impacts of logging on lynx. The agencies have measured the amount of lynx habitat that will be degraded/eliminated by the project in Lynx Analysis Unit BB-05, thus there is an adverse effect per the FWS definition of that term.

3. THE PROJECT VIOLATES SECTION 9 BECAUSE IT ALLOWS UNPERMITTED TAKE.

The agencies have failed to demonstrate that the project complies with the Biological Opinion/Incidental Take Statement for the Northern Rockies Lynx Management Direction. In fact, the Biological Assessment does not even mention that BiOp/ITS. The conclusions in that BiOp/ITS permitting potential take in "secondary, unoccupied" habitat are conditioned upon the Forest Service's compliance with survey requirements. The Forest Service has not complied with those requirements. Without such compliance, the take from the project is not permitted and violates Section 9.

CONCLUSION

The agencies have ignored their duties under the ESA, 16 U.S.C. §§1531 et seq., to ensure that their actions do not jeopardize threatened and endangered species, that their actions do not result in unauthorized take of these species of wildlife, and that their actions promote conservation and recovery of these species. The agencies' actions in this matter represent an unlawful departure from their legally binding mandate to protect and recover imperiled species and their habitats.

If the violations of law described above are not cured within 60 days, the Alliance intends sue for declaratory and injunctive relief, as well as attorney and expert witness fees and costs.

Sincerely,

/s/ Rebecca K. Smith

Dear Secretary Jewell and Director Ashe,

As wildlife ecologists and conservation biologists, we are writing to express concern about the Endangered Species Act listing process for the American wolverine (*Gulo gulo*).

In February 2013, Fish and Wildlife Service scientists proposed that the wolverine be designated as a threatened species in the lower 48 states based on threats from loss of snowpack due to climate change, combined with stresses from small population size and trapping. The listing proposal was based on the best available scientific information, including numerous peer-reviewed scientific studies demonstrating the wolverine's dependence on snowpack, and studies projecting the continued and extensive loss of snowpack across the wolverine's range due to climate change.

This scientific determination was supported by five of seven peer reviewers and received strong support from a nine-person independent science panel convened in April to review the science underlying the proposal. On May 17th, the assistant regional director of the Mountain-Prairie Region issued a memo recommending finalization of the threatened listing.

Despite the strong scientific support for the listing proposal as written, it has come to our attention that the Service's regional director has ordered the scientists responsible for reviewing the status of the wolverine to withdraw the proposed listing. In a memo issued on May 30th, the regional director acknowledged that her decision was based on no new scientific information, but rather on her opinion regarding uncertainties in the modeling studies used in the listing determination.

Endangered Species Act listing decisions must be based on the best available science. This standard does not require absolute scientific certainty prior to taking action and gives the benefit of the doubt to the species. In contrast, the regional director's decision to overturn the listing determination because climate model uncertainty prevents "definitive conclusions" about "the amount and persistence of snowfall at the scale of specific wolverine den sites" stands in conflict with Act's best available science standard.

The regional director's decision to overturn a scientifically well-vetted and well-supported listing determination sets a bad precedent by allowing an administrator to overrule the expert judgment of the Service's scientists as well as independent peer reviewers. Using "uncertainty" as an excuse to dismiss the best available science sets an equally dangerous precedent given that so many rare and imperiled species are very difficult to study and assess.

We urge the Fish and Wildlife Service to uphold the integrity of the Act's science-based listing process and follow the recommendations of the Service's scientists.

Re: Sixty-day notice of intent to sue for violating Section 4 of the Endangered Species Act in deciding not to list a distinct population segment of the North American wolverine (*Gulo gulo lucus*) occurring in the contiguous United States.

Dear Secretary Jewell and Director Ashe:

The Western Environmental Law Center (WELC) hereby provides this sixty-day notice of intent to sue for violations of Section 4 of the Endangered Species Act (ESA), 16 U.S.C. §1533, in deciding not to list a distinct population segment (DPS) of North American wolverine (*Gulo gulo lucus*) occurring in the contiguous United States (hereinafter "wolverine").

This notice is provided by WELC on behalf of the following organizations and individuals, all of which have a significant, concrete interest in ensuring the long-term survival and recovery of wolverine in the contiguous United States and ensuring the U.S. Fish and Wildlife Service (the Service) utilizes the best available science when making listing decisions: *WildEarth Guardians*, *Friends of the*

RECEIVED

Bitterroot, Friends of the Wild Swan, the Swan View Coalition, Oregon Wild, Cascadia Wildlands, the Alliance for the Wild Rockies, the Cottonwood Environmental Law Center, George Wuerthner, the Kootenai Environmental Alliance, Footloose Montana, Native Ecosystems Council, and the Helena Hunters and Anglers Association.

On August 13, 2014, the Service published a notice in the Federal Register (Docket No. FWS-R6-ES-2012-0107) announcing its decision to withdraw the proposed rule to list wolverine as a threatened species under the ESA (78 Fed. Reg. 7864 (February 4, 2013)) and finding that wolverine are not warranted for listing as an endangered or threatened species (hereinafter "listing decision" or "decision").

According to the Service, listing wolverines is not warranted because it believes: (1) the wolverine's range may be "expanding" in the contiguous United States and suitable habitat is and will remain available (even under conditions of future reduced snowpack from climate change); (2) non-climate related threats to wolverine, including an already small population size (actual and effective), timber management, winter recreation, land development, transportation corridors, natural mortality, trapping (incidental and intentional), and travel management – by themselves or in the aggregate – pose no threat to wolverine; and (3) there is insufficient evidence to reasonably conclude that climate change poses a threat to wolverine or its habitat in the foreseeable future.

Regarding climate change, the Service maintains information on an obligate relationship between wolverines and the need for persistent snow at the home range or DPS level is lacking (the Service admits such a relationship exists for denning) and that it cannot reliably predict – at the appropriate scale – how the loss of snow from climate change will impact denning sites. According to the Service, McKelvey et al. (2011) does not provide, and it does not have, the fine scale resolution of climate change models (or certainty in those models) which it maintains is necessary to make a listing determination. The Service also maintains there is too much uncertainty over whether den sites for wolverines will become a limiting factor in the foreseeable future or whether habitat connectivity for wolverine will no longer be maintained to warrant listing. The Service is wrong.

In deciding not to list wolverine, the Service failed to see the proverbial forest for the trees. The Service focused so much on the fine details and lack of "certain predictions," "fine scale" data, "precise mechanisms," and "definitive" conclusions on how climate change will impact wolverines – data that is both impractical and nearly impossible to obtain – in order justify not listing (likely in response to political pressure from Montana, Idaho, and Wyoming) that it failed to see the big picture and the larger cause and effect principles at play, i.e., that a warming climate

will most likely result in a detrimental impact on wolverine. There is general agreement amongst the scientific community that wolverine are a cold-climate dependent species that rely on snow (for denning and likely other benefits) and that the amount of snow within the range of wolverine will continue to decrease in the foreseeable future in response to a warming climate.

While some uncertainties exist and will always exist – indeed, there are many things we may never know about wolverines – the “best available science” – including the findings and recommendations of the Service’s own biologists, the peer-reviewed papers on wolverines and the likely impacts of climate change referenced in the Service’s proposed rule, two peer-reviewed panels (February, 2013 and April, 2014), the Society of Conservation Biologists North American Section (SCB), the American Society of Mammalogists (ASM), and fifty-six scientists (*see* Attachments)– reveals that the wolverine warrants protective status under the ESA’s “best available science” standard because they are a snow-dependent species threatened by climate change.

As detailed below, the Service wholly failed to grasp and apply the ESA’s “best available science” standard – as directed by Congress – and issued a decision not to list wolverines that is arbitrary, capricious, and not in accordance with law.

Best available science

Pursuant to Section 4(b)(1)(A), 16 U. S.C. § 1533 (b)(1)(A), the Service’s implementing regulations, and the Service’s 2011 policy on scientific integrity, the Service must make all listing determinations “solely on the basis of the best scientific and commercial data available.” The Service failed to do so when deciding not to list wolverine.

The standard – often referred to as the “best available science” standard – does not require scientific certainty (assuming it even exists) or prohibit the Service from making listing decisions in the face of uncertainty or even scientific disagreement. On the contrary, reliance upon the best available science, as opposed to requiring absolute scientific certainty, “is in keeping with congressional intent” that an agency “take preventive measures before a species is ‘conclusively’ headed for extinction.” *Defenders of Wildlife v. Babbitt*, 958 F. Supp. 670, 679–80 (D.D.C.1997) (emphasis in original); *see also American Wildlands v. Norton*, 193 F.Supp.2d 244, 251 (D.D.C.2002) (same). As such, contrary to the Service’s listing decision, “definitive conclusions” are not required.

As explained by the Service when listing Canada lynx: "We agree that additional studies of lynx are necessary to better understand the dynamics and requirements of lynx populations in the contiguous United States . . . However, the [ESA] does not allow us to defer a listing decision based on the need for more research. Most scientists would agree that there is always a need for more research, but listing decisions cannot be postponed based on this premise when known threats to the species are present that may result in a species' trend toward extinction." 65 Fed. Reg. 16052, 16064 (March 24, 2000); *see also* 55 Fed. Reg. 26114, 26128 (June 26, 1990)(Northern spotted owl) (because the Service used "the best data available . . . [it was] not obligated to have data on all aspects of a species' biology prior to reaching a determination on listing."); 61 Fed. Reg. 25813, 24817 (May 23, 1996) (California red-legged frog) (deciding to list species even though many aspects of the species' status were "not completely understood"). A similar approach should have been (but was not) applied with respect to wolverine.

Indeed, instead of recognizing that some degree of speculation and uncertainty will always exist – especially when dealing with a rare and elusive creature like wolverine and imprecise climate change models – the Service insisted on "fine scale" data and proof of the "precise mechanism(s)" demonstrating how climate change will negatively impact wolverine habitat, including denning. This is an impracticable and impossible approach that conflicts with the ESA's "best available science" standard.

Specifically, in deciding not to list wolverine, the Service failed to utilize the ESA's best available science standard in a number of respects.

First, the Service inappropriately manipulated its decision by relying on certain, select sources of information and "cloner" comments from certain individuals and states like Idaho, Montana, and Wyoming (not made available for public review and comment) to the exclusion of other, more reliable sources including, but not limited to, the peer-reviewed studies cited and referenced in the proposed listing rule and in comments submitted by WELC and other organizations, the findings of the Service's own biologists, the findings of two peer-review panels (February, 2013 and April, 2014), and the findings of the SCB, ASM, and fifty-six scientists, *see* Attachments. This is not allowed. *See Southwest Center for Biological Diversity v. Norton*, 2002 WL 1733618. *8 (D. D.C. 2002).

For example, the Service's listing decision relied heavily on the State of Idaho's comments and data (not subjected to peer review) on the issue of whether snow decline equates to year round habitat decline for wolverine while disregarding the findings of Copeland et al. (2010), on this very subject. The Service also places

too much emphasis on single, isolated dispersal events (single wolverine traveling to Colorado, for example) to support its finding that the population is expanding and that increased fragmentation from smaller and more isolated pockets of wolverine habitat is not a problem even though: (1) no regional studies or surveys on expansion have been undertaken and no evidence of reproduction in these “new” areas exists; and (2) McKelevy et al. (2011) says increased fragmentation is a problem. A wolverine’s ability and capacity to travel through areas of unsuitable habitat does not undermine McKelevy et al. (2011)’s findings regarding anticipated loss of connectivity. These are just a few examples.

Second, and discussed throughout this notice and in WELC’s and others’ comments on the proposed rule, the Service disregarded scientifically superior evidence on wolverine (including evidence on the wolverine’s historic and current status and range and threats to the species and its habitat). The Service’s unexplained disregard of scientifically superior, peer reviewed papers while relying on non-peer reviewed and politically motivated comments and concerns from Montana, Idaho, and Wyoming and others conflicts with the ESA’s best available science standard. *Id.*

For example, in electing not to list wolverine, the Service discounted and failed to utilize the best available science on how various threats to the species, including an already low total and effective population size in the contiguous United States, climate change, winter recreation (*see* Heinemeyer et al.’s on-going research in Idaho), lack of protective areas (recent research from Canada reveals wolverines do better in wilderness and protected parks with less human disturbance), travel planning, transportation corridors, development, trapping (incidental and intentional) and timber management may – individually and in the aggregate – threaten wolverine, wolverine habitat and range, and the ability of wolverine to move between sub-populations within the contiguous United States and between wolverine in the contiguous United States and wolverine in Canada (connectivity). The Service also failed to analyze these threats across all or a “significant portion” of the wolverine’s historic range and failed to account for and consider the amount of historic wolverine habitat already lost.

Notably, in the listing decision, the Service focused mainly on the impacts of climate change and, in so doing, failed to utilize the best available science on these and other non-climate stressors. The best available science – including peer-reviewed papers cited in the proposed rule and papers submitted and cited in comments on the proposed rule (including those from WELC) – reveal wolverines – whose total numbers range from 250-300 individuals in the contiguous United

States (with a much smaller effective population) – qualify for threatened or endangered status in the absence of the threats from climate change.

The Service also disregarded (without citing any new studies) scientifically superior evidence on climate change and how it may impact wolverine, including but not limited to research from the Rocky Mountain Research Station and the peer-reviewed papers cited in the proposed rule, including McKelvey et al. (2011) and the papers it relies on. The Service even disregarded the recommendations of its own biologists, including the Field Supervisor of the Montana Ecological Services Office's May, 2014, recommendation to list wolverine in light of the foreseeable threats from climate change and the findings of the February, 2013, and April, 2014, peer review panels, the SCB, and ASM. As mentioned above, the Service also failed to cite any new peer-reviewed paper published since McKelvey et al. (2011) that supports its findings or would otherwise warrant an about face on listing.

The majority of scientists believe McKelvey et al. (2011) and the other scientific, peer-reviewed papers analyzed by the Service in developing the proposed rule represent the best available science on wolverine. The majority of scientists also believe there is no legitimate scientific dispute that: (1) wolverines are dependent on cold and snowy conditions and habitat that is covered by snow until late spring for denning (and likely foraging); and (2) that climate change models predict a loss of snowpack within wolverine habitat in the DPS.

Third, as mentioned above, the Service failed to recognize that under the ESA's best available science standard, relatively minor flaws in scientific data or the absence of "precise mechanisms" do not render that information unreliable. The criticisms of Copeland et al. (2010) and McKelevy et al. (2011), for example, focus on small mechanisms of the snow model used, but do not undermine or disprove the model itself. As the Service's own biologist explains, the "precise mechanism" behind the relationship between wolverines and deep snow is "less important" than the fact that deep snow appears to be an obligate habitat feature for this species."

The Service's listing decision admits that McKelvey et al. (2011) and the studies it relies on are considered the "best available science" on wolverine. As outlined above, any uncertainty that may exist (due to the scale used) over how climate change and other threats may impact wolverines is inherently part of the listing determination and consistent with the best available science standard. Such uncertainty, therefore, cannot and should not be used (as it was in the wolverine decision) to deprive a species of protective measures under the ESA. The ESA "contains no requirement that the evidence be conclusive in order for a species to be

listed. Application of such a stringent standard violates the plain terms of the statute." *Defenders of Wildlife v. Babbitt*, 958 F. Supp. 670, 679 (D.D.C. 1997).

Fourth, and related to the discussion above, the Service's listing decision – as discussed above – mistakenly requires the "best data possible" on climate change and how it may impact wolverine when the standard under the ESA only requires the best data "available."

Fifth, the Service's listing decision mistakenly insists on having "conclusive" data or the ability to draw "definitive conclusions" on how climate change will affect wolverine when, as mentioned above, this is not required or expected by Section 4 of the ESA. Nor is the Service required to conduct or obtain new, independent research to improve the pool of existing, available data. The ESA anticipates and expects that in certain situations, like those circumstances presented for wolverine, the Service must and should rely on even inconclusive or uncertain information if that is the "best available science" at the time the decision is made. "Definitive conclusions" and "precise mechanisms" are not required, likely possible, or expected in the ESA.

Sixth, under the "best available science" standard and in accordance with the precautionary principle and Congress' intent in the ESA to be proactive, any ambiguity or uncertainty should weigh in favor of listing. In other words, the "benefit of the doubt" should go to providing protective ESA status to wolverine while additional studies and research is obtained.

Based on the best available science, the Service should adopt a precautionary approach, provide wolverine protective ESA status, and then seek to better understand wolverine, the species' habitat needs and relationship to cold, snow-dependent environments, and how climate change and other threats will impact the species. Once this information is obtained, the Service could then decide to maintain the wolverine's listing status, upgrade the species' status, or de-list the species in response to the information and data obtained. In the meantime, however, wolverine would be protected in the face of scientific "uncertainty" (assuming it even exists) about the degree of threats.

Finally, under the ESA's "best available science" standard, the Service must manage and consider all the evidence and data submitted to the Agency in an open and transparent manner. This did not occur. The public was never given the opportunity to review and comment on the "key" decision documents that prompted the Service to reverse course on its earlier, proposed rule to list wolverines (a single leaked memo does not suffice). Nor did the Service subject its

final listing decision, which reverses its earlier findings, to peer review in direct contravention of the Service's own policy, *see* 59 Fed. Reg. 34270 (July 1, 1994).

In sum, listing wolverine is warranted because the best available science reveals the current population is dangerously low, there are known and documented threats to wolverine, and that these threats may result in a trend towards extinction.

Misapplication of the ESA's standards

As mentioned above, the Service's listing decision is premised on a misapplication of the term "best available science." The Service's listing decision is also premised on a misapplication of the term "threatened" and "endangered" as used and applied in the ESA.

Pursuant to the ESA, a species is "threatened" if it is "likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range." 16 U.S.C. § 1532(20). A species is "endangered" if it is "in danger of extinction throughout all or a significant portion of its range." 16 U.S.C. § 1532(6). Construction of this language must be based on the best available science. *See Trout Unlimited v. Lohn*, 645 F.Supp. 2d 929, 947, 948 (D. Or. 2007); *Western Watersheds Project v. Foss*, 2005 WL 2002473, *15-17 (D. Id. 2005).

"Likely to become endangered" means "likely" to be "in danger of extinction." *Lohn*, 645 F.Supp. 2d at 948. "[L]ikely' clearly means something less than 100% certain, but how much less is not as clear." *Id.* at 945. A reasonable construction of "likely" is at least a 50% chance (more likely than not). *Id.* at 949. In any case, the level of certainty relied upon by the Service must be based on consideration of the relevant statutory factors using the best available science. *Id.* at 947.

Likewise, "in danger of extinction" is not a fixed term, but its construction must be grounded in the best available science. *See id.* at 948. Certainly, "in danger of extinction" does not mean a "high risk of extinction." *Western Watersheds Project*, 2005 WL 2002473, *17 (D. Id. 2005). "Instead, the required danger level for extinction necessarily depends on the applicable scientific viability assessments for the particular species." *Lohn*, 645 F.Supp. at 948. For example, 1-5% risk of extinction in 100 years can create a discernible risk of extinction. *Foss*, 2005 WL 2002473, *15 (citing *Center for Biological Diversity v. Lohn*, 296 F.Supp.2d 1223, 1232 (W.D.Wash.2003)).

The term “foreseeable future” must also be defined by reference to the best available science. *See Foss*, 2005 WL 2002473, *15-17. As the Service recognized in a 2009 Solicitor Memorandum, “[t]he Secretary’s analysis of what constitutes the foreseeable future for a particular listing determination must be rooted in the best available data that allow predictions into the future, and the foreseeable future extends only so far as those predictions are reliable. ‘Reliable’ does not mean ‘certain’; it means sufficient to provide a reasonable degree of confidence in the prediction, in light of the conservation purposes of the Act.” M-Opinion 37021 at 13. What must be avoided is “speculation.” *Id.* at 8.

The corollary is that the Service may not dismiss a risk of extinction that may be reasonably forecasted by science. *See Foss*, 2005 WL 2002473, *15-17. It “defies common sense” to define “foreseeable future” to exclude the timeframe in which [the best available science] predict[s] extinction. *Id.* at 15. Prediction of the future is necessarily grounded in the “data and logic” of today. M-Opinion 37021 at 8. As one court reasoned, if a species will be endangered in the future if current circumstances continue, “it is clearly threatened today.” *Biodiversity Legal Found. v. Babbitt*, 943 F. Supp. 23, 25 n.5 (D.D.C. 1996).

With respect to wolverine, the Service failed to properly apply the ESA’s standards for “threatened” and “endangered” and the terms included therein when deciding not to list, requiring instead “certain predictions,” “fine scale” data, “precise mechanisms,” and “definitive” conclusions to support listing.

As explained by the SCB and ASM, the Service’s own policy (M-Opinion 37021) “does not preclude use of predictive modeling approaches that are well-supported in the scientific literature, such as those used to project future effects of climate change on snow cover, and the of loss of habitat components such as snow cover on species dependent on or limited by these factors.” *See Attachments*. But in the case of wolverine, the Service mistakenly interprets its own policy guidance “to require data – specifically ‘experimental evidence’ – that in all likelihood would be impractical or impossible to obtain for a rare free-living mammal.” *Id.* The Service’s decision, therefore, “represents an arbitrarily narrow interpretation of the M-Opinion that, if generally applied, would substantially limit the ability of science to inform listing determinations.” *Id.*

The Service also failed to properly define and apply the phrase “significant portion of its range” when: (1) deciding not to list wolverine; and (2) defining the phrase in its Final Policy on Interpretation of the Phrase “Significant Portion of Its Range,” 79 Fed. Reg. 37577 (July 1, 2014).

Under the ESA, the Service must consider a species' status – in this case the DPS of wolverine in the entire contiguous United States – across a “significant portion of its range” in making listing determinations. *Defenders of Wildlife v. Norton*, 258 F.3d 1136 (9th Cir. 2001). The phrase “significant portion of its range” can mean, among other things, a “major geographical area[] in which [the species] is no longer viable but once was. Those areas need not coincide with national or state political boundaries, although they can.” *Defenders of Wildlife*, 258 F. 3d at 1145-46. The phrase *does not* mean that threats in the “significant portion” must render the entire species at risk of extinction. *Id.* at 1141. On the contrary, legislative history demonstrates that the phrase was intended to allow for protection in one area even if a species is abundant or overabundant in another area. *Id.* at 1144. Nor is there any bright-line percentage of habitat that must be affected in order for an area to be “significant.” *Id.* at 1143. For a species with a small historical range, even a very small percentage loss of habitat may be “significant.” *Id.*

Notably, the Service cannot interpret the phrase in a way that excludes analysis of the wolverine's historic range. *Tucson Herpetological Soc. v. Salazar*, 566 F.3d 870, 876 (9th Cir. 2009). Rather, the task of defining the phrase includes quantification of the wolverine's historic range and an evaluation of whether the lost habitat amounts to a “significant portion” of that range. *Id.* Nor may the Service look only to the health of the wolverine population in certain areas while turning a blind eye to threats in areas where the population is either extirpated or home to only a few individuals. “It is insufficient, under *Defenders of Wildlife*, to point to one area or class of areas where [a species'] populations persist to support a finding that threats to the species elsewhere are not significant” *Tucson Herpetological Soc.*, 566 F.3d at 877. The ESA requires more. *Id.*

Here, the Service never engaged in a proper “significant portion of its range” analysis with respect to wolverine. The Service, for example, failed to quantify and explain whether the loss of the DPS's historic range in the contiguous United States amounts to a “significant portion” and inappropriately supported its finding of non-significance by looking only to the health of wolverine populations in certain areas (including populations outside the DPS). The Service failed to analyze and explain whether the wolverine's lost, historic habitat in the contiguous United States, which includes, but is not limited to, large portions of the Sierras in California, the entire Southern Rockies (from north-central New Mexico, throughout Colorado, and south-central Wyoming), Oregon's and large portions of Washington's Cascade Mountains, portions of Idaho, Montana, Utah, and Nevada (as well as portions of Michigan and Wisconsin) qualifies a “significant portion of its range” for listing purposes.

In sum, in electing not to list the DPS of wolverine in the contiguous United States, the Service never examined whether the DPS is endangered or threatened “across a significant portion of its range” as that phrase is to be defined under the ESA. Nor does the Service’s new, July 1, 2014, policy defining the phrase (assuming it was applied), see 79 Fed. Reg. 37577, remedy the violation.

The Service’s new policy demands that a high threshold be reached before a species can be considered endangered or threatened throughout a “significant portion of its range.” Specifically, the policy (1) excludes lost historical range, and (2) requires that the existence of members in the “significant portion” of a species’ range be essential to ensuring that the species is not “endangered” or “threatened” across its entire range. 79 Fed. Reg. at 37609. This is not what Congress intended.

As described above and outlined in *Defenders of Wildlife*, the ESA requires the Service to analyze where lost historical range qualifies as a “significant portion.” 258 F. 3d at 1145. *Defenders of Wildlife* also holds that a species may be endangered or threatened across one portion of its range even if, in another part of its range, the species is so abundant that the animals are overrunning the human population. *Id.* at 1144. As *Defenders of Wildlife* pointed out, the ESA’s text seems to be premised on the following maxim: “There seems to be a tacit assumption that if grizzlies survive in Canada and Alaska, that is good enough. It is not good enough for me. . . . Relegating grizzlies to Alaska is about like relegating happiness to heaven; one may never get there.” *Id.* at 1145 n. 11 (quoting Aldo Leopold, *A Sand County Almanac* 277 (1966)).

With respect to wolverine, it is not “good enough” under the ESA to relegate wolverines to Alaska and Canada – or even to small portions of the contiguous United States (Montana) – while turning a blind eye to the species’ lost and shrinking habitats throughout its historic range in the contiguous United States. Nor can the Service rely on “healthy” wolverine populations in Canada or Alaska (populations outside the DPS) to deprive wolverine in the contiguous United States – the DPS – protective status. When evaluating “significant portion of a species range” the Service must limit the analysis to the species’ range; in this case the “species” is the contiguous United States DPS of wolverine.

The Service also places inappropriate weight on its finding that threats to the wolverine are not “geographically concentrated.” However, this is not the test. Significant portions of the wolverine’s range may be disappearing even though the culprit is widespread climate change, not more pinpoint threats.

The Service's interpretation of the phrase "significant portion of its range," therefore, as applied to the wolverine listing decision and as outlined in its new policy, 79 Fed. Reg. 37577, is inconsistent with the ESA. And, if the Service did rely on the new policy, doing so violated the notice and comment requirements because the policy was in draft form for over two years and was not cited or relied on in the proposed rule.

Insufficient data to support decision in the record

Pursuant to the ESA and APA, the Service's listing decision must be supported by reliable and meaningful data and evidence and there must be a rational connection between the facts found in the record and the ultimate choice made. See *Defenders of Wildlife v. Babbitt*, 958 F. Supp. 670 (D.D.C. 1997).

Here, the Service's listing decision fails to provide biological support and data for its findings that the wolverine population in the United States is "growing and expanding." There is some evidence of a small recovery in Washington's North Cascades but beyond that there is no meaningful evidence or data demonstrating wolverine are expanding their range within the contiguous United States. No state or regional surveys at the necessary scale have been conducted. A single individual wolverine walking to Colorado or the Sierras does not equate to growth and expansion. Nor does documenting a few individual wolverines in northeastern Oregon or a single wolverine in Utah. These events are likely nothing "new" (anecdotal reports of wolverine sightings in these states have always existed) and certainly are not evidence of a population increase or expansion. Indeed, no evidence exists suggesting that these events have resulted in colonization of an area with successful breeding.

The Service's listing decision also fails to provide sufficient biological support and data for its finding: (1) that the total habitat capacity for wolverine in the entire contiguous United States is only 644 wolverines (well below the habitat capacity in western Canada) and that the "current population size is approximately half of capacity"; (2) that the current population level (actual and effective) of wolverine in the contiguous United States - assuming it is approximately 300 total with an unknown effective population - is stable and not a threat to the species or reason (by itself) to list (irrespective of the Service's climate change findings); (3) that effective population size would never reach a 100 wolverine, even at full habitat capacity and that demographic stochasticity and loss of genetic diversity due to small effective population sizes is not a threat to wolverine; (4) that there is no evidence or data to suggest the impacts to wolverine habitat from climate change are "currently occurring" (see WELC's May 5, 2014, comments and the

Intergovernmental Panel on Climate Change (IPCC's) Fifth Assessment Report (March 31, 2014)); (5) that more information and data, including "precise mechanisms," are needed in order to predict that climate change will adversely impact wolverine habitat and range in the foreseeable future and that an analysis of the impacts of climate change on wolverine must be at a scale fine enough to deal with the site specific characteristics of den sites; (6) that wolverine den sites are currently not scarce or lacking or otherwise limiting wolverine reproduction and population abundance (the Service does not mention or discuss the fact that the vast majority of den sites – including all in Colorado – are likely unoccupied by wolverine due to low numbers); (7) that insufficient information exists demonstrating that climate change will negatively impact wolverine dens, den success, or other habitat; (8) that a projected loss of 31% and 63% of areas with snow cover persisting until mid-May does not represent the equivalent loss or an approximate loss of wolverine habitat; (9) that insufficient information exists demonstrating that climate change will result in reduced connectivity and genetic exchange between sub-populations of wolverine in the foreseeable future; (10) that the Service can only predict a decline of wolverine habitat from climate change if wolverine have an obligate relationship "with snow for all stages."; (11) that "secondary threats" to wolverine identified in the proposed rule, as well as other anthropogenic threats to wolverine (e.g., winter recreation, transportation corridors) do not individually or in the aggregate pose a threat to wolverine or that the best available science does not substantiate that such activities, including dispersed recreation, pose a threat to wolverine; (12) that legal wolverine trapping in Montana is not a threat to the population, that reduced harvest levels in Montana over the years are not due to reduced numbers of wolverines (just shorter seasons), and that known and future rates of incidental trapping in Montana and other states is not a threat to the species; (13) that the primary concern about the future of wolverines is associated with the availability of den sites; (14) that the available evidence does not indicate listing is warranted; (15) that wolverines "coexist with some level of human disturbance and habitat modification"; (16) that "even under future conditions of projected habitat loss" there would be sufficient habitat available in the contiguous U.S. to "potentially continue supporting wolverine populations at roughly the same level of abundance as at present"; and (17) that climate change, by itself or in conjunction with other threats (trapping, small population, winter recreation, development, etc...) does not pose a threat to wolverine or its habitat in the foreseeable future such that wolverines warrant listing under the ESA.

Having such biological support and data is especially important in this case, where the Service's finding that wolverine do not warrant listing under the ESA contradicts the Service's earlier findings in the proposed rule, the extensive comments submitted by WELC and other organizations and agencies (which the

Service neglected to properly respond to) and even the recommendations from the Service's biologists, two peer reviewed panels, and the SCB, ASM, and fifty-six scientists. See Attachments. The Service can "draw conclusions based on less than conclusive scientific evidence, [but] it cannot base its conclusions on no evidence." *National Assoc. of Home Builders v Norton*, 340 F.3d 835, 847 (9th Cir. 2003).

Reliance on conservation efforts

Pursuant to Section 4(b)(1)(A), 16 U.S.C. § 1533 (b)(1)(A), and the Service's implementing regulations, the Service must make listing determinations after "conducting a review of the status of the species and after taking into account those efforts, if any, being made by any State" to protect such species.

Under the ESA, the Service can rely on conservation efforts, including state-initiated efforts, so long as they are binding and current, not voluntary or future, and have a proven track record of success. See *Save Our Springs v. Babbitt*, 27 F. Supp. 2d 739, 748 (W.D. Tex. 1997); *Oregon Natural Res. Council v. Daley*, 6 F. Supp. 2d 1139, 1153 (D. Or. 1998); *Fed'n of Fly Fishers v. Daley*, 131 F. Supp. 2d 1158, 1165 (N.D. Cal. 2000); *Ctr. For Biological Diversity v. Morgenweck*, 351 F. Supp. 2d 1137, 1141 (D. Colo. 2004). A sufficient track record of success is two years. *Save Our Springs*, 27 F. Supp. 2d at 748. Any conservation effort relied upon by the Service must also have been submitted for public notice and comment. *Id.*; see also *Morgenweck*, 351 F. Supp. 2d at 1141.

In the listing decision, the Service inappropriately relies on non-binding state efforts such as, but not limited to, Idaho's, Wyoming's, and other states' bans on wolverine trapping and Montana's restrictions on wolverine trapping (including the current injunction prohibiting wolverine trapping). These state regulations are insufficient because they may be withdrawn or amended at any time and deal only with a small portion of the species' range and habitat.

Reliance on state efforts, such as trapping restrictions, is particularly inappropriate where the state requirements are less stringent than the requirements of the ESA. The ESA was intended to establish a federal floor for wildlife protection. Thus, in Section 4(b)(1)(A), Congress's aim was to prevent disruption of a state conservation program that would be *more* protective of a species than required under the ESA. See H.R. Rep. No. 93-412, p. 14 (1973) ("the State powers to regulate in a more restrictive fashion or to include additional species remain unimpaired."). If the wolverine were listed, it would be protected from all forms of "take," including "harvest" that is "sustainable" or spread "equitably" throughout a state.

Five listing factors

The Service's listing decision also violates Section 4(a)(1) of the ESA, 16 U.S.C. § 1533(a)(1).

Pursuant to Section 4(a)(1) of the ESA, 16 U.S.C. § 1533(a)(1), and the Service's implementing regulations, the Service is required to determine whether a species is threatened or endangered because of any of the following factors: (A) the present or threatened destruction, modification, or curtailment of the species' range; (B) overutilization for commercial, recreational, scientific, or educational purposes; (C) disease or predation; (D) the inadequacy of existing regulatory mechanisms; and (E) other man-made factors affecting the species' continued existence. *Tucson Herpetological Soc'y v. Salazar*, 566 F.3d 870, 873 (9th Cir. 2009) (citing 16 U.S.C. § 1533(a)(1); 50 C.F.R. § 424.11(c)). These factors are listed in the disjunctive so any one or combination of them can be sufficient for a finding that a species qualifies as threatened or endangered.

In deciding not to list wolverine, the Service failed to carefully consider and adequately apply Section 4(a)(1)'s listing factors in accordance with the ESA and the Service's implementing regulations.

Specifically, the Service failed to support its findings with sufficient and reliable evidence, including, as mentioned above, the best available, peer-reviewed science on wolverine and threats to wolverine. The Service also relied on unproven and unreliable methods to support its findings and failed to properly define the wolverine's range (both historic and present) and habitat within the contiguous United States. In addition, the Service failed to adequately consider historic population numbers (actual and trend) and current population numbers (actual and trend).

In applying the ESA's five listing factors, the Service also failed to consider and analyze how climate change is already and will continue to directly, indirectly, and cumulatively impact wolverine and a "significant portion" of the wolverine's range and habitat (both denning and foraging and core and secondary) in the contiguous United States.

Likewise, the Service erroneously discounted and did not adequately analyze the direct, indirect, and cumulative impacts of winter recreation, timber management, an already small total and effective population size, transportation corridors, climate change, travel planning, development, and trapping (for both

other species in occupied wolverine habitat and intentional trapping of wolverines in Montana) on wolverines. This includes how such threats may individually or in the aggregate affect individual wolverines, wolverine range and habitat (denning and foraging), and wolverine movement and connectivity between sub-populations in the contiguous United States and between wolverine in Canada and the contiguous United States. The Service also failed to assess the threats to wolverine across a significant portion of its range.

In applying the ESA's five listing factors, the Service also erroneously discounted and did not adequately consider how the lack of existing regulatory mechanisms for wolverines, specifically the lack of guidance in state wildlife and resource management plans, National Forest Plans, National Park Service management plans, and BLM resource management plans and the lack of any binding international, national, or state level regulatory mechanisms to address greenhouse gas emissions may directly, indirectly, or cumulatively affect wolverines.

In sum, the data and studies cited in the proposed rule and submitted by members of the public on the proposed rule, and the findings of the February, 2013, and April, 2014, peer-review panels, as well as the Service's own biologists, and the comments from the SCB, ASM, and fifty-six scientists (see Attachments), conclusively show – in accordance with the ESA's "best available science standard" – that the wolverine population is already dangerously small and currently faces serious and significant threats under several of the listing factors and, as such, merits listing as threatened or endangered under the ESA

Wherefore, this sixty day notice letter serves to put the Service on notice of its liability for violating the ESA and inform the Agency of our intent to file a citizen suit under the ESA seeking the appropriate relief.

This notice is provided pursuant to, and in accordance with, Section 11 (g)(2) of the ESA, 16 U.S.C. § 1540(g)(2).

Sincerely,

Matthew Bishop

RE: Sixty-Day Notice of Intent to Sue to Remedy Violations of the Endangered Species Act in the United States Fish and Wildlife Service's Withdrawal of the Proposed Rule to List the Distinct Population Segment of the North American Wolverine Occurring in the Contiguous United States as Threatened, 79 Fed. Reg. 47,522

Dear Secretary Jewell and Director Ashe,

On behalf of Center for Biological Diversity, Conservation Northwest, Defenders of Wildlife, Friends of the Clearwater, Greater Yellowstone Coalition, Idaho Conservation League, Jackson Hole Conservation Alliance, Klamath-Siskiyou Wildlands Center, and Rocky Mountain Wild, in accordance with the citizen suit provision of the Endangered Species Act ("ESA" or "Act"), 16 U.S.C. § 1540(g), I hereby provide notice that the United States Fish and Wildlife Service ("FWS" or "Service") is in violation of the ESA, 16 U.S.C. § 1533, and its implementing regulations, 50 C.F.R. § 402 *et seq.*, with regard to the Service's August 13, 2014 withdrawal of the proposed rule to list the distinct population segment ("DPS") of the North American wolverine occurring in the contiguous United States as threatened under the ESA. *See* 79 Fed. Reg. 47,522 (Aug. 13, 2014) ("Rule Withdrawal"). In light of the imperiled status of the wolverine, including both present and future threats to the species' survival, the Service's decision to withdraw its proposed rule violates section 4 of the ESA. 16 U.S.C. § 1533.

In its proposed rule issued on February 4, 2013, FWS proposed to list the wolverine DPS within the contiguous United States as threatened. 78 Fed. Reg. 7864 (Feb. 4, 2013) ("Proposed Rule"). This proposed listing was based on the Service's determination that climate change posed a significant threat to the snow-dependent wolverine, and that small population size and the effects of trapping also threatened the genetic diversity and survival of the species when combined with the detrimental effects of climate change. 78 Fed. Reg. at 7886. In its

withdrawal of that proposed rule, FWS examined the exact same science and reached the opposite conclusion, purporting to find that neither climate change nor other threats will pose a significant risk to the wolverine. 79 Fed. Reg. at 47,544-45. Contrary to FWS's withdrawal decision, the best available science demonstrates significant current and future threats to the North American wolverine. The Service's decision to withdraw the proposed rule contravenes its own earlier conclusions, the conclusions of scientific panel members convened to explore this issue, and the recommendations of the agency's own scientists. See 78 Fed. Reg. at 7880; U.S. Fish & Wildlife Serv., Wolverine Science Panel Workshop Report (April 3-4, 2014) ("Science Panel Report"); Memorandum from Theresa Rabot, Assistant Reg'l Dir. for Ecological Servs., U.S. Fish & Wildlife Serv., to Noreen Walsh, Reg'l Dir., Region 6, U.S. Fish & Wildlife Serv. (May 2014) ("Rabot Memorandum").

Pursuant to the citizen suit provision of the ESA, 16 U.S.C. § 1540(g)(2), this letter provides you notice that, unless within 60 days of receipt of this letter FWS promulgates a final rule listing the North American wolverine as threatened within the contiguous United States, we intend to challenge in federal district court the Service's withdrawal of the proposed rule to list the North American wolverine DPS as threatened.

I. The Wolverine

The wolverine (*Gulo gulo*) is the largest terrestrial member of the weasel family. It combines the weasel's ferocity and energy with a larger and stronger body that has frequently been described as bear-like in its appearance. Adult wolverines normally weigh 20 to 40 pounds and are three to four feet long. Wolverines typically exhibit a thick, glossy, dark-brown coat of fur, often with a pale buff stripe running laterally from the shoulders along the animal's side and crossing the rump just above a long, bushy tail. The elusive wolverine has long been a subject of folklore. Native American mythology describes the wolverine as a trickster-hero, and a link to the spirit world.

Wolverines once ranged across the northernmost tier of the United States from Maine to Washington, and south into the Adirondacks of New York, the Rocky Mountains as far south as Arizona and New Mexico, and the Sierra Nevada-Cascade and Siskiyou Mountains as far south as California. The wolverine has been eliminated from all but a fragment of this historic range by the destruction of its wilderness habitat and trapping by European settlers. Wolverines were extirpated from the upper Midwest states by the early 1900s, and from the Northeast shortly thereafter. Although one wolverine each has recently traveled to California and Colorado, wolverine populations are known to exist in the contiguous United States only in the Rocky Mountain regions of Idaho, Montana, and Wyoming, in the Cascade Mountains of Washington, and in eastern Oregon. The entire population in the contiguous United States is estimated at just 300 wolverines or fewer.

Wolverines are adapted to live in high-altitude and high-latitude ecosystems characterized by deep snow and cold temperatures. Deep snow is particularly important for wolverine reproduction: females create dens by tunneling deep into the snowpack, where they give birth in protected den cavities at ground level. Wolverines of both sexes also rely on these same cold, snowy areas year-round, perhaps because snow helps provide "refrigeration" for the

carcasses that wolverines feed on, and perhaps also because there is less competition for food in these cold, harsh regions. Wolverines primarily rely on scavenging ungulates killed by other predators or by natural causes such as disease, injury, or weather. Wolverines also prey on rodents and other small mammals, and are capable of taking even large ungulates such as deer, elk, and moose as live prey when the opportunity arises.

Individual wolverines require large home ranges to access sufficient food to sustain themselves throughout the year, with the size of those ranges varying by habitat and food conditions, age, and gender. Home ranges of studied wolverines in Idaho averaged approximately 1,522 square kilometers for adult males and 384 square kilometers for adult females. In northwest Montana, adult males had home ranges of 422 square kilometers, while females occupied ranges averaging 288 square kilometers.

Wolverines have a low reproductive rate. Female wolverines attain sexual maturity at about 15 months, but fewer than half of potentially reproducing females actually produce young, known as kits, in any given year. Wolverine litter size averages two to three kits in the years when a female does give birth. On average, an Idaho study found that wolverines reproduced at a rate of less than one kit per female per year.

In sum, the remaining wolverines in the contiguous United States exist in low numbers, require large home ranges in cold and snowy areas, and have low reproductive rates. These characteristics leave the wolverine vulnerable to localized or even range-wide extinctions due to escalating threats from climate change, human disturbance, and trapping.

II. The Endangered Species Act

Congress enacted the Endangered Species Act in 1973 with the goal of protecting and recovering species that are in danger of extinction or are likely to become so within the foreseeable future. In the words of the Act, its purpose is “to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved,” and “to provide a program for the conservation of such endangered species and threatened species.” 16 U.S.C. § 1531(b). In the seminal case on the purpose of the Endangered Species Act, Tennessee Valley Authority v. Hill, the Supreme Court confirmed that it is “beyond doubt that Congress intended endangered species to be afforded the highest of priorities.” 437 U.S. 153, 174 (1978). FWS highlighted this goal in its proposed rule to list the wolverine as threatened, stating that the “primary purpose of the Act is the conservation of endangered and threatened species and the ecosystems on which they depend.” 78 Fed. Reg. at 7886.

To achieve the goal of conserving threatened and endangered species, section 4 of the Act requires the Secretary of the Interior to determine whether a species is threatened or endangered, 16 U.S.C. § 1533(a)(1), designate critical habitat for the species, *id.* § 1533(a)(3), and promulgate and implement a recovery plan for the species, *id.* § 1533(f). Under the Act, a species is “endangered” if it is “in danger of extinction throughout all or a significant portion of its range,” *id.* § 1532(6), and it is “threatened” if it is “likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range,” *id.* § 1532(20). The Act requires the Secretary to determine a species’ status based on five statutory factors:

- (A) the present or threatened destruction, modification, or curtailment of its habitat or range;
- (B) overutilization for commercial, recreational, scientific, or educational purposes;
- (C) disease or predation;
- (D) the inadequacy of existing regulatory mechanisms; or
- (E) other natural or manmade factors affecting its continued existence.

Id. § 1533(a)(1). The Act mandates that the Secretary evaluate these factors “solely on the basis of the best scientific and commercial data available to [her] after conducting a review of the status of the species.” Id. § 1533(b)(1)(A) (emphasis added). See also Nw. Ecosystem Alliance v. U.S. Fish & Wildlife Serv., 475 F.3d 1136, 1147 (9th Cir. 2007) (“The ESA instructs the Service to make its determinations ‘solely on the basis of the best scientific and commercial data available’”) (quoting 16 U.S.C. § 1533(b)(1)(A)).

Courts interpreting these statutory provisions have repeatedly held that “failure by the agency to utilize the best available science is arbitrary and capricious.” Consol. Delta Smelt Cases, 717 F. Supp. 2d 1021, 1060 (E.D. Cal. 2010). An agency’s failure to draw rational conclusions from the evidence before it also constitutes arbitrary and capricious action. Motor Vehicle Mfrs. Ass’n of U.S., Inc. v. State Farm Mut. Auto. Ins. Co., 463 U.S. 29, 43 (1983). FWS’s listing and delisting actions have frequently been held arbitrary and capricious on these specific grounds. A recent case on grizzly bear delisting, for instance, vacated the Service’s delisting rule because “[t]he Rule did not articulate a rational connection between the data before it and its conclusion.” Greater Yellowstone Coal., Inc. v. Servheen, 665 F.3d 1015, 1030 (9th Cir. 2011). See also Trout Unlimited v. Lohn, 645 F. Supp. 2d 929, 944 (D. Or. 2007) (agency “violated the ESA by not relying on the best available science”). The requirement to use the best available science—and the necessity of overturning agency action that fails to do so—is therefore clear in the language of the Act and is also well established in ESA case law.

III. History of Wolverine Listing Efforts

Despite significant and escalating threats, FWS has repeatedly refused to apply the ESA’s protections to the North American wolverine. The Service’s withdrawal of the proposed listing rule is the latest move in a 14-year saga in which the public’s repeated attempts to secure protections for this imperiled species have met with continuous resistance from FWS, frequently requiring judicial intervention to compel FWS to take the actions required by the ESA.

On July 14, 2000, conservation groups submitted a petition to list the wolverine within the contiguous United States as a threatened or endangered species and to designate critical habitat for the species. After initial delay that required court action to resolve, the Service published a negative 90-day petition finding in the Federal Register on October 21, 2003. 68 Fed. Reg. 60,112 (Oct. 21, 2003). On June 8, 2005, a coalition of conservation organizations filed a complaint in the U.S. District Court for the District of Montana challenging the Service’s negative finding. On September 29, 2006, the Montana court ruled that the 90-day petition finding was arbitrary and capricious and violated the ESA. Defenders of Wildlife v.

Kemphorne, CV 05-99-M-DWM, slip op. at 18-19 (D. Mont. 2006). According to the court, the “petition ... included enough information to allow the Secretary to conclude the distribution of the species is substantially diminished and the wolverine’s existence is threatened.” Id. at 20. The court ordered the Service to prepare a 12-month finding on the wolverine listing petition, see id. at 21, and then later granted the Service’s motion to extend the status review and 12-month finding deadline by five months, to February 28, 2008.

FWS published its first 12-month finding, denying ESA protections for the wolverine, on March 11, 2008. 73 Fed. Reg. 12,929 (Mar. 11, 2008). The basis of this negative finding was FWS’s determination that “the contiguous United States population of the North American wolverine does not constitute a distinct population segment (DPS) under the Act,” and that the population “is not a significant portion of the range of the North American subspecies and does not warrant further consideration under the Act.” Id. at 12,941. Conservation groups again brought suit to challenge this finding, and on March 6, 2009, the Service agreed to settle that case by voluntarily retracting the challenged 12-month finding and issuing a new finding by December 1, 2010. See 78 Fed. Reg. 7866. On December 14, 2010, the Service finally published this second 12-month finding, which determined that the wolverine within the contiguous United States constituted a distinct population segment that warranted listing under the Act due to the predicted impacts of climate change and other threats. 75 Fed. Reg. 78,030 (Dec. 14, 2010). In its finding, the Service estimated that wolverines were “likely to lose 63 percent of their current habitat area over the next century,” and that “by 2045, maintenance of the contiguous U.S. wolverine population in the currently occupied area will require human intervention to facilitate genetic exchange.” Id. at 78,054. Yet the Service still refused to extend ESA protections to the wolverine, finding that an actual listing decision was “precluded by higher priority listing actions.” Id.

The Service did not even set a timetable for issuing a listing decision on the wolverine until it was required to do so by a court settlement addressing FWS’s chronic backlog of listing determinations. Endangered Species Act Section 4 Deadline Litig., Misc. Action No. 10-377 (EGS), MDL Docket No. 2165 (D.D.C. Sept. 9, 2011). As part of this settlement, the Service agreed to issue a proposed listing rule for the wolverine, or withdraw the “warranted” 12-month finding, by the end of the 2013 Fiscal Year. Id.; see also 78 Fed. Reg. at 7866. On February 4, 2013, FWS finally issued a proposed rule, which proposed to list the distinct population segment of the North American wolverine occurring within the contiguous United States as threatened. 78 Fed. Reg. at 7864. The proposed rule, discussed in detail below, found that climate change posed a primary threat to the wolverine’s survival, and that trapping and small population size also posed threats when acting in concert with climate change. Id. at 7885-86.

After publishing a proposed rule, the ESA requires the Service to publish a final rule or withdraw the proposed rule within one year, 16 U.S.C. § 1533(b)(6)(A), except that the Secretary may extend the period for 6 months for the purpose of “soliciting additional data,” id. § 1533(b)(6)(B)(i). In this case, the Service took the 6-month extension, during which time it consulted further with state wildlife agencies and an ad-hoc “science panel.” See Science Panel Report at 1-13, 15-16. Just months before the final rule was due, agency documents indicate that FWS abruptly changed course from its previous finding, rejecting the science it had previously relied on and the results of the Science Panel Workshop, and unexpectedly determined that

neither climate change nor other risks posed significant threats to the survival of the wolverine. Compare Rabot Memorandum at 1 (recommending finalization of the proposed rule with minimal changes) with Memorandum from Noreen Walsh, Reg'l Dir., Region 6, U.S. Fish & Wildlife Serv. to Theresa Rabot, Assistant Reg'l Dir. for Ecological Servs., Region 1, U.S. Fish & Wildlife Serv., 17 (May 30, 2014) ("Walsh Memorandum") (ordering staff to "prepare a withdrawal of the proposed rule"). The Service ultimately issued a withdrawal of its proposed listing on August 13, 2014, once again denying ESA protections to the wolverine. 79 Fed. Reg. 47,522.

IV. Threats to the North American Wolverine

Notwithstanding FWS's abrupt about-face on the wolverine listing determination, the best available scientific information demonstrates that the North American wolverine faces numerous current and future threats that are likely to lead to its extinction within the foreseeable future if the species does not receive protection under the ESA. These threats include habitat loss due to climate change and human disturbance, direct mortality from intentional and incidental trapping, and loss of genetic diversity due to small population size and habitat fragmentation. While all of these threats are significant, climate change—acting alone and in concert with these other threats—will likely have the largest impact on wolverine survival in the foreseeable future. The Service acknowledged these threats in its proposed rule, published on February 4, 2013, which found that the best available science demonstrated significant primary threats due to climate change, and secondary threats due to trapping and small population size working synergistically with climate change. 78 Fed. Reg. at 7886. Accordingly, the draft rule proposed to list the DPS of the North American wolverine occurring within the contiguous United States as threatened. *Id.*¹

A. Habitat Loss Due To Climate Change

Wolverines depend on areas with deep and persistent spring snow both for year-round habitat and for the snow-tunneled dens where females give birth and wean their young. The best available science shows that this snowy habitat is predicted to shrink dramatically as climate change progresses, with significant detrimental impacts on the wolverine. The proposed rule accordingly concluded that "[w]olverine habitat is projected to decrease in area and become more fragmented in the future as a result of climate changes." 78 Fed. Reg. at 7877. These habitat changes, in turn, "are expected to have direct and indirect effects to wolverine

¹ The Service also proposed a special rule under section 4(d) of the ESA, prohibiting both intentional and unintentional trapping and hunting of wolverines, but permitting development and a variety of other activities in wolverine habitat that would otherwise be considered "take" under the ESA. *Id.* at 7888. At the same time, the Service also issued a proposed rule under section 10(j) of the ESA, creating a "nonessential experimental population" of wolverines in Colorado, southern Wyoming, and New Mexico, which would be subject to less strict protection than the DPS in the Northern Rockies. 78 Fed. Reg. 7890 (Feb. 4, 2013). These associated proposed rules were also withdrawn by the Rule Withdrawal. 79 Fed. Reg. 47,522.

populations in the contiguous United States,” posing a significant threat to the continued survival of the wolverine DPS. Id.

The habitat analysis in the proposed rule began with an explanation of wolverines’ life history that highlights the snow-obligate nature of the species. The Service explained, for instance, that wolverines “select areas that are cold and receive enough winter precipitation to reliably maintain deep persistent snow late into the warm season.” Id. at 7867 (citing Copeland et al. (2010)). It recognized that this relationship with snow is particularly important for female denning, noting that “snow cover during the denning period [February through May] is essential for successful wolverine reproduction range-wide.” Id. at 7872. Although the precise reasons why female wolverines choose den sites in deep snow are not known, scientists hypothesize that a den dug deep below the surface of the snow provides protection from extreme cold in the early spring and also protects young kits from predators. Id. Regardless of the mechanism, it is clear that the correlation between spring snow and female reproductive dens is extremely tight: the most recent study found that every one of the 562 verified den sites in North America and Scandinavia occurred in snow. Copeland et al. (2010).

The Service explained, furthermore, that the correlation with snow extends beyond denning season. The proposed rule cited Copeland et al. (2010) to emphasize that “[w]olverine year-round habitat use also takes place almost entirely within the area defined by deep persistent snow.” 78 Fed. Reg. at 7868. Indeed, 95 percent of worldwide summer wolverine observations and 89 percent of year-round observations fell within the area that tended to have persistent spring snowpack.² Copeland et al. (2010), at 239. Accordingly, FWS concluded that “[d]eep, persistent, and reliable spring snow cover (April 15 to May 14) is the best overall predictor of wolverine occurrence in the contiguous United States.” Id. at 7872 (citing Aubry et al. 2007; Copeland et al. 2010). The Service therefore adopted the snow-dependent model of wolverine habitat developed by Copeland et al. (2010), combined with a closely aligned model developed by Inman et al. (2012),³ to define a baseline wolverine habitat model that is highly correlated with spring snowpack. 78 Fed. Reg. at 7874.

The most authoritative study of how this range might shift with a changing climate was done by McKelvey et al. (2011). That study uses a combination of scientifically accepted global climate models (GCMs) to project the impacts of changing temperature and precipitation on the wolverine habitat defined by Copeland et al. (2010). Based on this sophisticated analysis, the Service’s proposed rule concluded that “McKelvey et al. (2011, entire) represents the best

² The most recently developed model of wolverine habitat, using a different method, coincides more than 96 percent with this snow-driven model. See Inman et al. (2013), at 283.

³ The proposed rule attributes this model to “Inman et al. (2012)” but neither of the papers by Inman et al. (2012) listed under “Wolverine Proposed Listing Literature Cited” contain any habitat modeling. It seems more likely that the Service is working from an advance copy of the paper ultimately published as Inman et al. (2013), which models suitable wolverine habitat across the Western United States, and which is cited in the Rule Withdrawal. 79 Fed. Reg. at 47,526, 47,534, 47,536, 47,542. Inman et al. (2013) is listed under “Scientific Literature Cited” at the end of this letter.

scientific information available regarding the impacts of climate change to wolverine habitat.” 78 Fed. Reg. at 7874. FWS found McKelvey *et al.*’s analysis to be the best available science for four principal reasons: (1) their habitat projections are based on global models that are recognized as “the most reliable predictors of future climate available,” (2) they downscaled their analysis to infer climate impacts “at a scale relevant to wolverine habitat,” (3) their hydrologic model predicts snow cover during the spring denning period, which is “the strongest correlate with wolverine reproductive success,” and (4) they used the Copeland *et al.* (2010) habitat model “to relate projected climate changes to wolverine habitat.” 78 Fed. Reg. at 7876-77. FWS noted that other studies analyzing the impacts of climate change on wolverine habitat “have been superseded by a more sophisticated analysis provided by McKelvey *et al.* (2011, entire),” 78 Fed. Reg. at 7876, but these other studies nonetheless “all support the conclusion that climate changes caused by warming are likely to negatively affect wolverine habitat,” *id.* at 7877.

The McKelvey *et al.* model, as adopted by FWS in the proposed rule, predicts that “31 percent of current wolverine habitat in the contiguous United States will be lost due to climate warming by ... 2045” and that “[t]hat loss expands to 63 percent of wolverine habitat by ... 2085.”⁴ 78 Fed. Reg. 7876 (citing McKelvey *et al.* (2011)). Because FWS found that “deep snow maintained through the denning period is required for wolverines to successfully live and reproduce,” 78 Fed. Reg. 7874-75, this severe decline in spring snow is predicted to have a significant detrimental impact on the reproduction and survival of the species. Moreover, FWS found that these severe habitat declines would have the effect of “reducing the number of wolverines that can be supported by available habitat and reducing the ability of wolverines to travel between patches of suitable habitat, with negative consequences for gene flow and genetic viability.” 78 Fed. Reg. at 7877.

Wolverines within the contiguous United States currently exist as a “metapopulation,” or “a network of semi-isolated subpopulations” that “require some level of regular or intermittent migration and gene flow” in order to maintain genetic viability. *Id.* at 7867. As climate change shrinks the patches of suitable habitat occupied by these subpopulations and enlarges the distance between them, scientists predict that the difficulty of dispersal will increase. Thus, there will be even less gene flow between these subpopulations. McKelvey *et al.* (2011), at 2891-92. If this breakdown of metapopulation dynamics occurs, FWS concluded, “the entire metapopulation may be jeopardized.” 78 Fed. Reg. at 7867. Therefore, as severe as the projected habitat declines are, the proposed rule found that “gross loss of habitat area is likely to result in a loss of wolverine numbers that is greater than the overall loss of habitat area.” *Id.* at 7876 (emphasis added).

Based on its review of “the best scientific and commercial information available,” therefore, the Service properly concluded in its proposed rule that “the projected decrease and

⁴ FWS notes, however, that the model predicts the mountains of Colorado will be “slightly less sensitive to climate changes,” 78 Fed. Reg. at 7876, which is part of the reason why establishing a 10(j) population in the Southern Rocky Mountains may be an important protective measure for North American wolverines.

fragmentation of wolverine habitat or range due to future climate change is a threat to the species now and in the future.” Id. at 7880.

B. Other Threats to Wolverines

Wolverines in the contiguous United States are also threatened by non-climate factors, including human disturbance due to recreation and infrastructure, low genetic diversity due to small population size, and both intentional and incidental trapping. Each of these threats works alone and in concert with other threats—particularly climate change—to threaten the North American wolverine DPS.

Wolverine habitat in the contiguous United States is threatened by human disturbance in the form of recreational use, development, infrastructure, and roads. In particular, escalating motorized winter recreation, such as snowmobiling and helicopter-accessed skiing, poses a threat to wolverines’ successful denning and reproduction. Denning females are extremely sensitive to human disturbance. See Copeland (1996); Magoun and Copeland (1998). Such disturbance frequently results in den abandonment, often forcing the female to move to a less suitable site. Banci (1994). Denning females have been observed to abandon their dens even upon discovering human snowshoe tracks in the area. Copeland (1996); see also Magoun and Copeland (1998); Inman et al. (2007a) (discussing wolverine movement away from a maternal den after slight disturbance by researchers and light amount of recreational snowmobile activity). Despite the steep terrain that characterizes typical den sites, recent advances in snowmobile technology have enabled snowmobilers to reach previously inaccessible areas of suitable wolverine denning habitat. Heinemeyer et al. (2001). Further, an expanding helicopter skiing industry is impacting otherwise remote and inaccessible wolverine denning habitat in some areas with the noise and disturbance associated with numerous helicopter flights and landings throughout the winter months. See id.; see also Krebs et al. (2007), at 2188-89 (“Helicopter skiing and backcountry skiing were negatively associated with Columbia Mountain females’ use in winter.”); Ruggerio et al. (2007) at 2146 (“[r]esearchers in British Columbia found a consistent negative association between wolverine occurrence and areas where helicopter and backcountry skiing occur.”). A study of suitable wolverine denning habitat in the southwestern portion of the Greater Yellowstone Ecosystem concluded that “[w]inter recreational use, particularly snowmobile and heli-skiing, may be having potentially severe localized habitat impacts on wolverines.” Heinemeyer et al. (2001). This evidence suggests that wolverine habitat may be negatively impacted by recreational use, particularly as motorized winter recreation continues to increase in the Western mountain states.

Roads and other human infrastructure also threaten wolverine populations by causing direct mortality and limiting dispersal. Both of these impacts reduce population viability by reducing gene flow and thus threatening the critical metapopulation dynamics. Inman et al. (2007b), for instance, documented 3 verified incidents of road-kill mortality during their study period. Inman et al. (2007b), at 89. This was not an isolated result. See Preston et al. (2006) (documenting wolverine mortality in Kootenay National Park from a road); Krebs et al. (2004). Roads may also have indirect impacts on wolverine habitat and on individuals’ movements, as wolverines appear to avoid roads, especially when they are more heavily trafficked. Packila et al. (2007), at 105; Dawson et al. (2010), at 142 (“Our results also suggest that road densities may

affect selection of home ranges by Wolverines, in accordance with the broader distribution patterns of this species in the area”); Squires *et al.* (2006), at 2 (“The wolverines’ large spatial requirements and high mobility makes the species susceptible to direct road mortality as well as the barrier effects of roads on their movements.”); Austin (1998), at 30 (“wolverines avoid areas near the highway,” act agitated near highways, and are affected by the volume of traffic).

For a metapopulation in which linkage and active dispersal are required for continued genetic viability, the impact of roads on potential dispersers is particularly significant. Packila *et al.* (2007) also noted that roads and other human development also tend to be “relatively permanent,” *id.* at 109, so the dangers they pose are cumulative, long-term threats to the wolverine population.

The proposed rule briefly analyzed these threats from human disturbance but did not find them to be significant. Despite acknowledging that recreational use is heavy in some areas of wolverine habitat, *id.* at 7878, and that infrastructure development is increasing, *id.*, FWS concluded that there was not sufficient evidence to indicate that recreation, development, roads, or land management posed a significant threat to the North American wolverine DPS, *id.* at 7878-80. In fact, however, the best available science shows that human disturbance from both recreation and infrastructure may threaten the wolverine population, particularly as connectivity between subpopulations becomes increasingly difficult with escalating climate change and other threats.

The wolverine DPS is also threatened by its own small population size, because it severely limits genetic diversity. The estimated population of 250 to 300 wolverines in the contiguous United States has an “effective population”—i.e., the component of the population that engages in reproduction and thus passes on its genetic material to future generations—of just 35 breeding individuals. *Id.* at 7884 (citing Schwartz *et al.* (2009), at 3226), 79 Fed. Reg. at 47,542. The DPS’s effective population size is thus *far* below the threshold of 500 breeding animals that scientists believe is necessary to maintain long-term genetic diversity. *Id.* This makes wolverines vulnerable to inbreeding and genetic decline. The best available science thus shows that this incredibly low population size alone poses a threat to the population’s continued genetic viability. Although the proposed rule did not conclude that small population size poses a threat on its own, it did find that small population size and low genetic diversity pose a threat to wolverines when operating in concert with climate-driven habitat loss and fragmentation. The Service found that the metapopulation structure requiring genetic exchange to maintain viability—becoming more difficult as climate change increases habitat fragmentation—further amplifies this risk. *Id.* Indeed, the Service found that climate-driven isolation of certain populations “would result in a high likelihood of reduced genetic diversity due to inbreeding within a few generations.” *Id.* at 7876 (citing Cegelski *et al.* (2006), at 209). The Service therefore concluded that “the risk factor of small population size ... is a threat to the North American wolverine DPS when considered cumulatively with habitat loss resulting from climate change.” *Id.* at 7885.

Wolverine subpopulations—and thus, metapopulation dynamics—are also threatened by intentional and unintentional trapping. Wolverine trapping is still legal in Montana, the state that contains the majority of the remaining wolverines. 78 Fed. Reg. at 7881. From 2008 to 2012, an

average of 3.25 wolverines were legally trapped each year, in addition to an unknown level of incidental or “non-target” trapping (wolverines getting caught in traps set for other species). *Id.* Within a metapopulation structure, small subpopulations can be severely impacted by the loss of even a few individuals. Indeed, a 2007 study in Montana’s Pioneer, Beaverhead, Anaconda-Pintler, and Flint Creek Mountain Ranges observed a 30 percent population decline over the four-year study period due to trapping, with 6 of 8 known wolverine mortalities in these ranges caused by trapping. Squires *et al.* (2007). Given that “[m]etapopulations require ... migration and gene flow among subpopulations” to avoid inbreeding and local extirpations, 78 Fed. Reg. at 7867, such excessive localized trapping mortality, particularly in these “island” mountain ranges located between larger areas of suitable wolverine habitat such as the Crown of the Continent and the Greater Yellowstone Ecosystem, presents a significant threat to the species’ viability. In its proposed rule, the Service acknowledged that even small numbers of mortalities “are possibly locally significant for wolverines” in areas where wolverines exist in small, isolated populations. *Id.* at 7881.

Wolverine trapping in Montana has been suspended since late 2012, but the suspension is not permanent. Montana’s 2012-2013 trapping season was suspended by a court order in a lawsuit brought by a coalition of environmental groups. *Helena Hunters & Anglers Ass’n v. Maurier*, BDV-2012-868 (Mont. Dist. Ct. Nov. 30, 2012). Montana Fish, Wildlife and Parks (“FWP”) then suspended the 2013-2014 and 2014-2015 seasons in response to the Service’s proposed listing rule. *See* Press Release, Mont. Fish, Wildlife & Parks, *Feds Seek To List Wolverine As Threatened Species* (Feb. 1, 2013), available at http://fwp.mt.gov/news/newsReleases/headlines/nr_4064.html; *see also* Mont. Fish, Wildlife & Parks, *Furbearers: 2014 Montana Hunting and Trapping Regulations*, available at <http://fwp.mt.gov/eBook/hunting/regulations/2014/2014furbearers/index.html>. However, these temporary suspensions do not offer permanent protection. The Montana Fish and Wildlife Commission votes on wolverine quotas each year, and FWP could easily choose to re-open the wolverine season if the Service fails to list the wolverine under the ESA.

Incidental trapping also poses a significant threat to the species. For example, the Idaho Department of Fish and Game has documented at least 7 incidents in which wolverines were incidentally trapped since 2006. Letter from Nathan Fisher, Idaho Governor’s Office of Species Conservation, to U.S. Fish & Wildlife Serv. (May 17, 2010). FWS has also documented incidental take of wolverines in Montana and Wyoming. Unreported incidents of incidental trapping likely increase the toll even further beyond the number of verified incidents. Moreover, the legal wolf trapping recently instituted in Idaho and Montana could put even greater pressure on the wolverine population through incidental trapping. Wolf trapping in these two states will cover the range of the majority of the remaining wolverine population. The Service has admitted that “it is unknown whether or not increased trapping of wolves associated with wolf trapping regulations recently approved by the states of Idaho and Montana would be likely to result in increased incidental trapping of wolverines.” *Id.* at 7882. Thus the threat of incidental trapping is already significant and is likely to intensify as wolf trapping expands in Idaho and Montana.⁵

⁵ Poaching has also been a significant threat to wolverine populations in other jurisdictions. *See, e.g.,* Persson *et al.* (2009). The Service has not discussed the risk to wolverines from poaching or attempted to quantify this risk.

Although the proposed rule concludes that neither intentional nor incidental trapping is a threat on its own, in fact each of these two threats—and certainly the combination of both intentional and incidental trapping—has the potential to threaten wolverine populations. Moreover, the impact of both intentional and incidental trapping will only increase as climate change further fragments habitat and threatens metapopulation dynamics. Id. at 7885. The proposed rule acknowledged this risk and found that “human-caused mortality due to harvest is likely to become more significant to the wolverine population as connectivity needs increase and connectivity simultaneously becomes more difficult.” Id. The Service, thus, correctly concluded that “harvest and incidental trapping, when considered cumulatively with habitat loss resulting from climate change, are likely to become threats to the DPS.” Id. at 7886.

After “carefully assess[ing] the best scientific and commercial information available” under each of these statutory listing factors, the Service’s proposed rule ultimately concluded that the North American wolverine was threatened in the contiguous United States. Id. at 7886. The Service’s proposed determination stated:

We find that the contiguous United States wolverine DPS presently meets the definition of a threatened species due to the likelihood of habitat loss caused by climate change resulting in population decline leading to breakdown of metapopulation dynamics. Breakdown in metapopulation dynamics would make the DPS vulnerable to further loss of genetic diversity through inbreeding, and likely vulnerable to demographic endangerment as small subpopulations could no longer rely on demographic rescue from nearby populations. At that point wolverine populations would meet the definition of an endangered species under the Act.

Id.

The Service stated that it intended to seek review of the proposed rule by “independent specialists,” per its policy on peer review, id. at 7889, but did not indicate any lack of confidence in the science on which the proposed rule relied. At the time the proposed rule was issued, the Service’s interpretation of the best available science was clear: wolverines are threatened throughout their range in the contiguous United States.

C. Listing Recommendation of FWS Scientists

In a memorandum from May 2014, the Service’s own scientific experts stated their support for finalizing the proposed rule and reiterated that the science used in the proposed rule represented the best available science on climate-change impacts to wolverines. Rabot Memorandum at 1. This memorandum was written by the Assistant Regional Director (“ARD”) for Ecological Services in FWS’s Pacific Region, summarizing the conclusions of the scientists in FWS’s Montana Field Office who had worked on the listing determination. Id. The memorandum based its conclusions on a review of the proposed rule, the peer reviews of the proposed rule, and the outcome of the “science panel workshop” hosted by FWS in April 2014. Based on this information, the memorandum from the ARD stated:

The Montana Field Office recommends that: 1) the wolverine listing be finalized as threatened under the Act, 2) that the 4(d) rule be finalized as well [with minor modifications] and, 3) that the experimental/nonessential 10(j) rule in the southern Rocky Mountains be finalized, facilitating a reintroduction effort there to proceed should the State of Colorado decide to pursue it.

Id. at 10. The ARD added, unwaveringly, “I support these recommendations.” Id.

The memorandum reiterated the threat findings laid out in the proposed rule, highlighting the severity of projected climate impacts. Id. at 5-6. The memorandum also explained that the conclusions in the proposed rule (and recommended for inclusion in the final rule) were generally supported by both the peer review and the science panel workshop conducted by FWS. It noted, for instance, that “[p]eer reviews were generally supportive of the way the proposed rule presented and interpreted science.” Id. at 8. However, the memorandum also noted that two of the seven peer reviewers questioned the use of the habitat model developed by Copeland et al. (2010) and thus also questioned the validity of the climate impacts predicted by McKelvey et al. (2011) because that study relied on the Copeland model. Id. at 8-9. Based on this perceived uncertainty, state wildlife directors pushed to extend the listing deadline by six months and re-evaluate the scientific information that formed the basis for the finding. Id. at 9. FWS therefore organized a science panel workshop with biologists and climate scientists, to evaluate these scientists’ confidence in the results reached by the two studies at issue. Id. State wildlife officials helped organize and were present at this workshop. Id.; Science Panel Report at 16.

Despite somewhat varying views, perhaps in part because just one of the nine panelists was a recognized wolverine expert, the science panel generally confirmed the key findings on which the proposed rule was based. In evaluating Copeland et al. (2010), the ARD’s memorandum stated that “[p]anelists agreed strongly that wolverines were obligate snow denners,” and that “panelist scores indicated their beliefs that wolverines tended toward having an obligate relationship with contiguous snow at the home range and species[] range scales,” despite somewhat wider variation on this second point. Rabot Memorandum at 9. Similarly, the ARD said that “[p]anelists indicated strong support for McKelvey et al. (2011) as an analysis of the impact of climate change to snow cover[,] indicating relatively high certainty that climate changes would reduce snow cover similarly or more severely than depicted in that paper.” Id. at 10. Ultimately, the panelists supported the central conclusion of the proposed rule: “[e]ach of the panelists agreed ... that by the end of the century, wolverine populations would likely be significantly affected by habitat loss due to climate changes.” Id. (emphasis added).

Importantly, the Rabot Memorandum highlighted that the recommendation of threatened status is supported by the best available science on wolverines. Based on the peer reviews and “the general validation of our approach to interpreting climate science by the wolverine science panel,” the ARD stated, in no uncertain terms, “we conclude that relying on Copeland et al. (2010) and McKelvey et al. (2011) as the best available scientific information regarding the effects of climate changes on wolverine habitat remains scientifically justified.” Id. at 10. The ARD went on to say:

In our review we have been unable to obtain or evaluate any other peer reviewed literature or other bodies of evidence that would lead us to a different conclusion. While we recognize there is uncertainty associated with when population effects may manifest themselves, any conclusion that there will not be population effects appears to be based on opinion and speculation. In our opinion that would not represent the best available scientific or commercial data available.

Id.

The Rabot Memorandum also provided additional information about the factors FWS took into account in determining the timing and extent of wolverine response to climate changes. It noted that the proposed rule did not explicitly define the “foreseeable future” but explained that FWS had chosen end-of-century projections based on IPCC climate models that were deemed reliable to that point. The scientists had rationally concluded that “analyses of effects to wolverine habitat based on those models would also be reliable.” Id. at 11. The ARD explained that this method was similar to the method that has been used to determine the foreseeable future for listing determinations on other species. Id. at 5, 11. Despite the fact that climate models diverge toward the end of the century under different emissions scenarios, these models have tended to underestimate climate change impacts. Id. at 11. Therefore, “long-range projections are actually more likely to reflect the magnitude of impacts or be an underestimate of impacts,” and thus the 2085 projections were reliable for the listing process. Id. (emphasis in original).

The ARD also rebutted the suggestion that possible ongoing expansion of the wolverine population—i.e., lone dispersers to California and Colorado—indicates that the effects of habitat loss will be minimal. To begin with, the ARD explains, “[t]he hypothesis that wolverines are still expanding” is highly uncertain. Id. at 12. Moreover, “whether or not there is still expansion potential in the southern portion of the currently occupied range ... , there is not likely to be enough room to accommodate a loss of 31% [of current habitat], much less the 64% losses projected for 2085.” Id.

The Rabot Memorandum made it clear, therefore, that FWS scientists continued to have confidence in the projected impact of climate change on wolverines, both on its own and in concert with other factors. The Service’s own scientists thus firmly believed that the proposed rule represented the best available science and that the Service should finalize its proposed determination of threatened status for the North American wolverine within the contiguous United States.

V. The Service’s Failure to Rely on the Best Available Science in Withdrawing the Proposed Listing

On August 13, 2014, FWS issued a withdrawal of its proposed listing determination for the wolverine. 79 Fed. Reg. 47,522. This withdrawal suddenly reversed course from the Service’s previous determination, disregarding the best available science and the recommendations of its own scientists, and instead concluded that the wolverine faces no significant threats that make it likely that it will become endangered within the foreseeable future within all or a significant portion of its range. Id. at 47,543. The Rule Withdrawal explained

that the Service no longer believes impacts from climate change pose a risk of extinction to the wolverine DPS, despite its earlier findings to the contrary. Id.

In its Rule Withdrawal, the Service violated the ESA by failing to rely on the best available science in determining that the North American wolverine should not be listed as threatened or endangered under the ESA. 16 U.S.C. § 1533(b)(1)(A)(i)(IV). The Service also acted arbitrarily and capriciously in violation of the ESA by failing to draw rational conclusions from the information before it and failing to consider important aspects of the issue in making its determination. See 5 U.S.C. §§ 551 et seq.

Under the ESA, the Service may withdraw a listing proposal, but it must also publish “the finding on which such withdrawal is based.” 16 U.S.C. § 1533(b)(6)(A). And any listing determination under the ESA—including a determination not to list a species—must be made “solely on the basis of the best scientific and commercial data available.” 16 U.S.C. § 1533(b)(1)(A); see also Nw. Ecosystem Alliance, 475 F.3d at 1137. Congress specifically provided that “[t]he finding on which a withdrawal is based shall be subject to judicial review.” 16 U.S.C. § 1533(b)(6)(B)(ii).

Here, the Service failed to rely on the best available science when it erroneously determined:

- A. That massive predicted losses of spring snow cover will not affect wolverine denning and reproduction in the foreseeable future, 79 Fed. Reg. at 47,543-44;
- B. That wolverines do not have an obligate relationship with snow at the scale of home range and species range, and that climate-driven impacts on wolverine habitat can be reliably predicted only if wolverines are snow-obligate at all life stages, id. at 47,544;
- C. That small population size, trapping, and human disturbance are insignificant threats to wolverine survival, id. at 47,541, 47,543; and
- D. That the wolverine population in the contiguous United States is currently expanding, id. at 47,543, 47,536.

As set forth below, the Service violated the ESA by relying on speculation to disregard the best available science on each of these points, providing no affirmative data or information to support its contrary conclusions. The Service also failed to adequately consider whether wolverines are threatened within a significant portion of their range based on the significant contraction of their range from area they historically occupied and on the inadequacy of existing regulatory mechanisms to ensure a viable, self-sustaining wolverine population, among other factors.

- A. Best Available Science Predicts Huge Reductions in Spring Snow, Equating to Loss of Denning Habitat, at Finest Modeling Scale Possible

The best available science unequivocally shows that wolverines depend on deep spring snow for denning and reproduction, see 78 Fed. Reg. at 7866, and the best available climate modeling shows that areas with deep spring snow are likely to shrink dramatically as the climate warms, with a commensurate impact on denning habitat, McKelvey et al. (2011). FWS failed to

accept the best available science and draw rational conclusions when it claimed that this massive decline in spring snowpack—the one feature scientists know is essential for wolverine denning and reproduction—will have no foreseeable impact on wolverines’ reproductive success. 79 Fed. Reg. at 47,536.

The Service has admitted that the best available science clearly shows that female wolverines need persistent spring snow for denning and reproduction. Id. The evidence for this obligate relationship is overwhelming: the most recent study found that, of 562 verified natal (birthing) dens in North America and Scandinavia, every single one occurred in snow. Copeland et al. (2010), at 239. None of the peer reviewers questioned this conclusion. At the science panel workshop organized by FWS and state wildlife agencies, all panelists “agreed strongly that wolverines were obligate snow denners.” Rabot Memorandum at 9; see also Science Panel Report at 32.

Nevertheless, FWS has attempted to create uncertainty about the importance of spring snow for wolverine denning by focusing on the specific date used by Copeland et al. (2010) to define persistent spring snow cover. Montana Fish, Wildlife and Parks first raised this issue in its comments on the proposed rule, and the Service incorporated many of these concerns into its rationale for the Rule Withdrawal. See Mont. Fish, Wildlife & Parks, Comments in Response to the Proposed Rule to List Wolverine as Threatened in the Contiguous United States 3-11 (May 6, 2013). In the Rule Withdrawal, the Service emphasized that not all dens fall within the habitat area described by May 15th snow cover (though 98 percent of dens do fall within this area), and further noted that Copeland’s May 15th snow model includes areas that contained snow on that date “in as few as 1 in 7 years.” 78 Fed. Reg. 47,527. But this analysis misinterprets the data presented in Copeland et al. (2010). In fact, though some sites within the model did not contain snow on May 15th of every single year, wolverines used those sites only during years when they did in fact contain deep spring snow. Copeland et al. (2010), at 239. Further, most dens (69 percent) in North America were located in areas that were snow-covered for 6 to 7 out of the 7 years studied. Id. In sum, Copeland et al. (2010) found that 100 percent of dens were located in spring snow, and 98 percent of those dens occurred in locations where the snow persisted through at least May 15th in the year they were used.⁶ Id. The Service’s withdrawal decision attempted to ignore this 98 percent correlation and instead drew speculative conclusions from the 2 percent of outliers. However, with such incredibly strong correspondence between female reproductive dens and deep spring snow, any assertion that wolverines do not depend on snow for denning is unjustified by the best available scientific information.

Even in those portions of its discussion where it reluctantly accepted the importance of snow for wolverine denning, the Service nonetheless claimed it cannot conclude that shrinking spring snowpack will have a foreseeable effect on wolverine denning habitat. 79 Fed. Reg. at 47,534. The Service acknowledged that McKelvey et al. (2011), predicting 31 percent habitat loss by 2045 and 63 percent loss by 2085, represents “the most sophisticated analysis of impacts of climate change at a scale specific to the range of the wolverine.” 79 Fed. Reg. at 47,533 Yet the Service rejected McKelvey et al. (2011) both because of its reliance on the habitat model

⁶ The 2 percent (12 dens) that fell outside the May 15th snow layer were individually investigated and were determined to be snow dens.

defined by Copeland et al. (2010), as discussed above, and because McKelvey's climate modeling purportedly fails to predict habitat changes at a sufficiently precise scale for projecting impacts on individual den sites. 79 Fed. Reg. at 47,533-34. Like its unfounded rejection of Copeland's habitat estimate, the Service's rejection of McKelvey's modeling scale is similarly unjustified. To begin with, by claiming that McKelvey et al.'s analysis at the 500-meter scale is insufficient, the Service is effectively contending that wolverines make their denning decisions at a scale of less than 500 meters, with no supporting evidence. Furthermore, downscaling complex global climate models is simply not possible beyond a certain point. McKelvey et al. (2011) downscaled their modeling to a degree that is consistent with the best available climate science. McKelvey et al. (2011), at 2883-84. The courts have stressed that FWS must rely on "best scientific ... data available" and "may not ignore evidence simply because it falls short of absolute scientific certainty." Nw. Ecosystem Alliance, 475 F.3d at 1147 (emphasis in original). See also Defenders of Wildlife v. Babbitt, 958 F. Supp. 670, 680 (D.D.C. 1997) ("The 'best available data' requires the agency to consider the scientific information presently available."). The Service may not, therefore, ignore a peer-reviewed scientific study that is admittedly "the best analysis to date."

Moreover, by rejecting the best state-of-the-art modeling projections, FWS is essentially saying that it cannot make any conclusions until there is evidence of den sites actually being lost due to climate change. This position violates the precautionary principle, inherent in "the ESA's 'policy of institutionalized caution,'" which applies in section 4 and throughout the Act. GYC v. Servheen, 665 F.3d at 1030 (quoting Ariz. Cattle Growers' Ass'n v. Salazar, 606 F.3d 1160, 1167 (9th Cir. 2010)). The Service's dismissal of McKelvey et al. (2011) also contradicts the recommendation of its own scientists, who found that "relying on ... McKelvey et al. (2011) as the best available scientific information regarding the effects of climate change on wolverine habitat remains scientifically justified." Rabot Memorandum at 10.

Based on its assertion that McKelvey et al. (2011) does not project impacts at a small enough scale to predict changes at specific den sites—despite the fact that this would be scientifically impossible—the Service went on to speculate that specific den sites may not actually lose spring snow cover at the same rate as the overall projected snow loss. Without predictions at the scale of individual den sites, the Service argued, the loss of persistent spring snow cover projected by McKelvey et al. (2011) does not necessarily "represent an equivalent loss of habitat." 79 Fed. Reg. at 47,535. In essence, the Service is speculating that—despite the 100 percent correlation between den sites and snow, and despite the massive acknowledged snow loss—there might be still be some den sites that remain viable, and these sites might be enough to sustain the wolverine population. FWS is also engaging in speculation when it asserts that "it is possible that wolverines may be more adaptable [to earlier snowmelt (by denning earlier)] than currently available scientific information would suggest," despite acknowledging that earlier denning has never been reported for wolverines. 79 Fed. Reg. at 47,532. In making these assertions, FWS offered no affirmative data or information to support its position. Indeed, its own scientists stated that they had "been unable to attain or evaluate any other peer reviewed literature or other bodies of evidence that would lead ... to a different conclusion" about the impacts of climate change on wolverines. Rabot Memorandum at 10. Instead, the Rule Withdrawal impermissibly substituted speculation for the best available scientific information, in violation of FWS's statutory mandate. 16 U.S.C. § 1533(b)(1)(A).

ESA case law makes it clear that “[t]he Service may not base its listings on speculation or surmise.” Bldg. Indus. Ass’n of Superior Cal. v. Norton, 247 F.3d 1241, 1246-47 (D.C. Cir. 2001). See also Selkirk Conservation Alliance v. Forsgren, 336 F.3d 944, 954 (9th Cir. 2003). Similarly, “[i]t is not enough for the Service to simply invoke ‘scientific uncertainty’ to justify its action” under section 4 of the ESA. GYC v. Servheen, 665 F.3d at 1028. Indeed, the best available data standard “does not require the agency to rely on indisputable or unequivocal evidence.” Cabinet Res. Grp. v. U.S. Fish & Wildlife Serv., 465 F. Supp. 2d 1067, 1083 (D. Mont. 2006). Rather, “[e]ven if the available scientific and commercial data were quite inconclusive, [the Secretary] may—indeed must—still rely on it at that stage.” Sw. Ctr. for Biological Diversity v. Babbitt, 215 F.3d 58, 60 (D.C. Cir. 2000) (quoting City of Las Vegas v. Lujan, 891 F.2d 927, 933 (D.C.Cir.1989)). Thus the Service may not rely on the uncertainty inherent in downscaled climate modeling as a reason for disregarding the best available science. Moreover, the Service must take a precautionary approach—not its current dismissive approach—in dealing with the uncertainty that does exist.

Finally, the Service speculated that even if individual den sites did lose spring snow cover, this loss might not negatively impact wolverine populations. As the Service explained, “[w]e do not appear to know at this point with any reliability what the causal relationship is between the feature of deep persistent spring snow and wolverine dens; that is, we do not understand why wolverines appear to require deep persistent spring snow for denning”. 79 Fed. Reg. at 47,534. In this regard, the Service attempted to heighten the importance of understanding the causal mechanism relating snow cover to reproductive success. *Id.* Here again, the Service has impermissibly speculated regarding scientific uncertainties and has ignored the best available science showing a 100 percent correlation between wolverine dens and spring snowpack. Copeland et al. (2010), at 239. The Service went on to claim that, even if some den sites become unsuitable with the loss of spring snow, there is “no evidence that den sites are currently scarce or lacking, or that they currently limit wolverine reproduction” or to predict “at what level of reduced spring snow coverage den sites would become limiting.” 79 Fed. Reg. at 47,534. However, even if wolverines’ exact sensitivity to snow decline is not known, the Service’s scientists have explained that “there is not likely to be enough room to accommodate a [habitat] loss of 31%, much less the 64% losses projected for 2085” without impacting population numbers. Rabot Memorandum at 12.

The Service also has attempted to use a recent study by Inman et al. (2013), which estimates available habitat capacity at 644 wolverines, as evidence that habitat is not currently a limiting factor for the wolverine population. 79 Fed. Reg. at 47,534 (citing Inman et al. (2013)). In fact, however, that study estimated habitat capacity across the entire Western United States, including vast swaths of potential habitat in areas such as Colorado and the Sierra Nevadas where it noted that viable wolverine populations would likely only be reestablished through a reintroduction program. Inman et al. (2013), at 282-84. The study actually used current wolverine densities within occupied habitat as its baseline for determining overall carrying capacity across the Western United States, *id.* at 282, which suggests that the authors believed current density to be a good indicator of habitat capacity. Thus the study did not predict that there was room for significant population expansion within currently occupied wolverine habitat or areas to which wolverines could naturally expand. The study even found that “[m]aternal sites

occurred in areas of higher quality habitat,” *id.* at 283, suggesting that den sites may actually be more susceptible to the impacts of climate change than wolverine habitat in general, rather than less (as the Service suggests). The Service’s attempted use of this study to suggest that occupied habitat is not inhabited at maximum density—and thus that habitat is not a limiting factor for the wolverine population—is therefore incorrect.⁷

In sum, the Service failed to use the best available science in its attempts to discredit McKelvey *et al.* (2011) and to dismiss the significance of massive spring snow loss for wolverine reproduction and survival. As the Service’s own scientists have said, “any conclusion that there will not be population effects appears to be based on opinion and speculation” and “would not represent the best available scientific or commercial data available.” Rabot Memorandum at 10. That statement aptly characterizes the Service’s ultimate determination here.

B. Best Available Science Shows That Range-Wide Habitat Is Strongly Correlated with Spring Snow

Even beyond denning season, the best available science is also clear in demonstrating that wolverines depend year-round on areas that maintain persistent spring snowpack. The model developed by Copeland *et al.* (2010), the best available model of current wolverine habitat, makes it clear that wolverine habitat at all scales is defined by the area maintaining persistent spring snow. Copeland *et al.* (2010), at 239, 242. However, the Service unjustifiably rejected Copeland *et al.* (2010) as the best available estimate of overall wolverine habitat because, according to the Service, this snow-driven model may not represent wolverines’ year-round habitat needs at the species scale. 79 Fed. Reg. at 47,533. This analysis ignores the plain conclusions of Copeland *et al.* (2010). That study found that 89 percent of year-round wolverine observations, including 95 percent of summer observations and 86 percent of summer locations, occurred in the area defined by persistent spring snow cover. Copeland *et al.* (2010), at 239. The Service’s proposed rule noted this correlation and cited Copeland (2010) to support the statement that wolverines “select areas that ... reliably maintain deep persistent snow late into the warm season.” 78 Fed. Reg. at 7867. But the Rule Withdrawal inexplicably ignored this earlier scientific conclusion.

The Service has attempted to support its position by citing uncertainty among the panelists at the April 2014 science panel workshop. It claimed the panelists expressed uncertainty regarding whether wolverines need persistent spring snow at the scale of the species range, or just at the scale of den sites. 79 Fed. Reg. at 47,533. But in fact, the weight of the panelists’ scores indicated a general belief that wolverines do have an obligate relationship with snow at the species range. Science Panel Report at 32; see also Rabot Memorandum at 9. In

⁷ The Service conducted its own calculations to determine that, under the McKelvey *et al.* (2010) predictions with respect to habitat remaining after 2085, remaining habitat could support 344 wolverines. 79 Fed. Reg. at 47,535. No available science supports this rough calculation, and it is based on “average home range sizes” of wolverines, despite the fact that home range size varies immensely across the wolverine’s range and is influenced by a variety of factors. See *id.* at 47,534 (size of wolverine home ranges, and therefore wolverine densities, varies widely and is dependent on habitat quality).

concluding otherwise, the Service once again has chosen to speculate based on the outliers in the data, rather than making decisions based on the weight of the available evidence. Indeed, based on a review of the proposed rule, the peer reviews of the rule, and the science panel results, the Service's scientists in the Montana Field Office concluded that "relying on Copeland et al. (2010) ... as the best available scientific information ... remains scientifically justified." Rabot Memorandum at 10. The Service's sudden rejection of Copeland et al. (2010) in the Rule Withdrawal, contradicting this recommendation and the weight of the scientific evidence, thus constitutes a failure to use the best available science.

The Service also criticized Copeland et al. (2010) for its use of the May 15th date, again, because it does not represent the exact time period when kits emerge from their dens. 79 Fed. Reg. at 47,527. In reality, Copeland et al. (2010) chose the May 15th date not as a representation of den emergence but as a proxy to define the area that reflects current wolverine habitat use—and indeed it correlates very well with actual habitat use, as discussed above.⁸ Copeland et al. (2010), at 235. The Service also suggests that other factors besides snow might also influence habitat suitability, and that therefore a more complex habitat model such as the one developed by Inman et al. (2013) would be a more accurate approximation of overall wolverine habitat. 79 Fed. Reg. at 57,534. The Service fails to note, however, that the Inman et al. (2013) model agrees with the Copeland et al. (2010) model over 96 percent of the Western United States. Inman et al. (2013), at 283, demonstrating that adding variables to the habitat modeling did not yield different results.⁹ The Service simply ignores this strong corroborating evidence in claiming that the lack of habitat factors in addition to snow results in "uncertainties" in the Copeland et al. (2010) model. 79 Fed. Reg. at 47,527. These criticisms of the Copeland model are unfounded, and they fail to justify the Service's rejection of Copeland et al. (2010) as the best available scientific estimate of year-round wolverine habitat.

The Service further attempted to discount the correlation between spring snow and year-round habitat use by emphasizing that the precise mechanism or reason for this correlation is not well understood. 79 Fed. Reg. at 47,534. The Service tried to use this uncertainty to confound its "foreseeable future" analysis, based on an unreasonably narrow reading of the Interior Solicitor's memorandum defining that term. See Memorandum M-37021 from Solicitor, U.S. Dep't of Interior, to Acting Dir., U.S. Fish & Wildlife Serv. (Jan. 16, 2009). Because scientists do not fully understand the mechanism behind wolverines' snow-dependency, the Service asserted, changes in snow cover will not necessarily result in foreseeable impacts to the wolverine. 79 Fed. Reg. at 47,534. The idea that a species is not at risk unless it is threatened at all life stages has no basis in science or in the ESA. Indeed, the ESA protects many species based on significant threats at a single life stage, recognizing that a population cannot be

⁸ The May 15th date is also consistent with Aubry et al. (2007), the authoritative scientific paper on historical wolverine distribution, which used that date to correlate historical wolverine observations with spring snow cover. Indeed, Aubry et al. found that "[s]pring snow cover was the only habitat layer that fully accounted for the distribution of historical wolverine records in the western mountains." Aubry et al. (2007), at 2153.

⁹ The Rule Withdrawal incorrectly portrays the fact that Inman et al. (2013) used snow depth as of April 1, not snow cover until May 15, as a point of disagreement between the two models. 79 Fed. Reg. at 47,534.

sustained if, for example, its members cannot survive and reproduce. See, e.g., Threatened Status for Central California Coast Coho Salmon Evolutionarily Significant Unit (ESU), 61 Fed. Reg. 56,138, 56,141 (Oct. 31, 1996) (“Of particular concern is the increased sediment input into spawning and rearing areas ...”).

Moreover, the Service’s own scientists have explained that “[t]he precise mechanism(s) behind the relationship between wolverines and deep snow is less important than the fact that deep snow appears to be an obligate habitat feature for this species.” Rabot Memorandum at 5. Therefore, the scientists conclude, the “remarkable concordance between wolverine habitat use and persistent spring snow,” id. at 5, means that “climate change impacts to wolverine habitat constitute a threat” to the species, id. at 6. By ignoring the scientific evidence documenting this tight, obligate relationship between wolverines and snow—at the scale of den sites, home ranges, and species range—the Service again has failed to use the best scientific information available.

C. Best Available Science Shows that Small Population Size, Trapping, and Human Disturbance Are Significant Threats Both By Themselves and When Combined with Climate Change

The Service similarly failed to rely on the best available science when it concluded that small population size, trapping, and human disturbance did not pose significant threats to the survival of wolverines in the contiguous United States. The Service also “entirely failed to consider an important aspect of the problem,” State Farm, 463 U.S. at 43, when it dismissed non-climate threats to wolverines without analyzing their potential impacts in concert with the effects of climate change. In fact, the best available science shows that both trapping and small population size are almost certainly threats to the wolverine population when working in concert with climate change, and also pose threats on their own. Human disturbance, including motorized human recreation and infrastructure development, may also pose a threat to the survival of wolverines in the contiguous United States, both on its own and in combination with the impacts of climate change.

In the proposed rule FWS concluded, based on the best available science, that “the risk factor of small population size, including measures of effective population size ... , is a threat to the North American wolverine DPS when considered cumulatively with habitat loss resulting from climate change.” Id. at 7885. Even without the effects of climate change, the small population size is a significant threat to the DPS. The best available science shows that an effective population size of 500 breeding animals is necessary to preserve long-term genetic diversity and viability. Id. at 7884. The best available estimate of the wolverine population in the contiguous United States is approximately 300 wolverines or fewer, with an effective population of breeding animals that is estimated to be just 35 individuals. Id.; see also Inman et al. (2013). FWS has admitted, accordingly, that the effective population size of the largest remaining population in the contiguous United States, is “below what is thought necessary for short-term maintenance of genetic diversity.” 78 Fed. Reg. at 7884. The current population size is therefore insufficient to maintain the species’ genetic viability, but the Service unjustifiably concluded that this small population size does not pose a threat to the North American wolverine DPS, in large part relying on an unfounded assumption that continued population growth is likely

to ameliorate the effects of small effective population size. 79 Fed. Reg. at 47,532, 47,543. The Service failed to use the best available scientific information when it made this determination.

Similarly, as the Service concluded in its proposed rule, “harvest and incidental trapping, when considered cumulatively with habitat loss resulting from climate change, are likely to become threats to the DPS.” 78 Fed. Reg. at 7886. The best available science shows that trapping may also be a significant threat on its own. Montana, the state containing the most habitat and the greatest number of wolverines within the DPS, still allows wolverine trapping. *Id.* at 7881. Recent suspensions of the wolverine trapping season are not permanent, and trapping would likely be reinstated if FWS failed to list the wolverine under the ESA. Although the number of wolverines intentionally trapped each year has tended to be relatively small, FWS has found that even small numbers of trapping mortalities in vulnerable subpopulations “are possibly locally significant” due to the structure of the wolverine metapopulation. *Id.* Moreover, recently approved wolf trapping in Montana and Idaho—two states containing the vast majority of the remaining wolverine population—may “be likely to result in increased incidental trapping of wolverines.” *Id.* at 7882. Finally, the Service’s claim that “human-caused mortality has never been demonstrated to be additive or compensatory” in the DPS is incorrect – multiple scientific studies demonstrate that human-caused mortality is additive within the DPS. *E.g.*, Krebs *et al.* (2007); Squires *et al.* (2007). The Service therefore failed to consider the best available science, and draw rational conclusions from that science, when it concluded that trapping is not and will not become a threat to wolverines, either on its own or in concert with climate change and/or small population size.

FWS also failed to consider sufficiently the threats posed by human recreation, infrastructure, and road development. Science shows that human recreation, particularly motorized recreation, may have a significant impact on wolverines. Studies have shown that denning females are extremely sensitive to human disturbance. *See* Copeland (1996); Magoun and Copeland (1998). Such disturbance can result in den abandonment, Banci (1994), with possible impacts on reproductive success. These impacts are likely only to increase with advances in snowmobile technology and increases in helicopter skiing, which bring motorized recreation ever farther into what was once remote wolverine habitat. FWS failed to adequately evaluate the best available science when it concluded that these impacts from human recreation pose no threat to wolverines. *See* 79 Fed. Reg. at 47,524.

Moreover, although the Service has repeatedly stressed the importance of connectivity for metapopulation function, *e.g.*, 79 Fed. Reg. at 47,542, it inexplicably concluded that roads and developed infrastructure bisecting important dispersal corridors will have no effect on wolverine population dynamics, *id.* at 47,538. Science shows that wolverines tend to avoid areas of human infrastructure and roads. *E.g.*, Packila *et al.* (2007), at 105. Scientists have also documented direct wolverine mortalities associated with roads. Inman *et al.* (2007b), at 89. As the Service acknowledged in the context of trapping, even these few mortalities “are possibly locally significant.” 78 Fed. Reg. at 7881. Mortalities in connective areas between islands of suitable habitat are particularly significant because metapopulation dynamics may break down—which could mean “the entire metapopulation may jeopardized”—if individuals cannot disperse between subpopulations. 78 Fed. Reg. at 7867. Indeed, several peer reviewers of the proposed rule suggested that threats to connectivity due to increasing human development may be even

more significant than threats due to climate change. Inman Peer Review at 22; Magoun Peer Review at 35, 39. Whatever the merit of this comparative assertion, the Service has failed to rely on the best available scientific information when it concluded that these threats to connectivity are insignificant.

D. Assertions of Current Population Expansion Are Based on Speculation

Lastly, the Service's Rule Withdrawal speculated that the wolverine population in the contiguous United States is expanding, and claimed this expansion indicates that climate impacts will not be as severe as predicted by McKelvey *et al.* (2011). *See, e.g.*, 79 Fed. Reg. at 47,543. In speculating about population expansion, the Service fails to rely on the best available science showing that significant expansion of reproducing populations is unlikely. The Service cited recent instances of individual wolverines dispersing to Colorado and the Sierra Nevadas as evidence that the population is expanding its range. *Id.* at 47,535. But individual male dispersers do not provide evidence that wolverines would be capable of establishing new reproducing populations in these currently uninhabited areas. Indeed, the best available science shows that females tend to disperse less frequently and over shorter distances than males. *E.g.*, Inman *et al.* (2013), at 281-82; 79 Fed. Reg. at 47,535. Moreover, rather than indicating population expansion, male dispersal could just as easily indicate that currently occupied habitat is already degrading due to climate change or other factors. These two individual anecdotes of male dispersal therefore do not support the Service's bold assertion that the wolverine population is expanding. In nevertheless choosing to construe these data as demonstrating population expansion, the Service has engaged in nothing more than a coin flip.

E. Wolverines are Threatened in a Significant Portion of their Range

In addition to these threats within currently occupied wolverine habitat, wolverine populations are also threatened in a significant portion of their overall range due to the substantial contraction of the species' historical range. Aubry *et al.* (2007), which compiled a variety of types of historical data to estimate historical range, is recognized as "the best available summary of wolverine occurrence records in the contiguous United States." 78 Fed. Reg. at 7869. That study found that wolverines' historical range extended far beyond their current range to include Colorado, California, Utah, and New Mexico in the western mountain states, Minnesota, Wisconsin, and Michigan in the Upper Great Lakes region, and even included sparse but detectable presence in Maine, New Hampshire, Vermont, New York, and Pennsylvania in the Northeast. Aubry *et al.* (2007), at 2150. None of these areas currently contain wolverine populations. 78 Fed. Reg. at 7871-72.

The loss of wolverine populations in these historically occupied areas constitutes a dramatic contraction of the wolverine's range. Inman *et al.* (2013), for example, indicates that wolverines no longer exist in nearly half of their suitable range in the western United States. Inman *et al.* (2013), at 282. Indeed, Inman *et al.* found that the Southern Rockies alone contain 21 percent of suitable habitat in the western United States, *id.* at 284, yet no breeding populations have existed there for at least 50 years, Aubry *et al.* (2007), at 2150. The ESA defines a threatened species as one that is likely to become endangered "throughout all or a significant portion of its range." 16 U.S.C. § 1532(20). The total extirpation of wolverine populations from

these vast expanses of habitat warrants a finding that wolverines are threatened throughout a significant portion of the species' range.

VI. Conclusion

As set forth in this letter, FWS violated the ESA in its determination that the North American wolverine distinct population segment in the contiguous United States is not threatened or endangered. The Service failed to rely on the best available scientific information in determining that climate change and other threats will not significantly impact the North American wolverine in the foreseeable future. The Service also failed to draw rational conclusions from the scientific information before it. If the Service does not retract its Rule Withdrawal and issue a final rule listing the North American wolverine as threatened within the contiguous United States within 60 days of the receipt of this letter, the parties to this notice letter will institute a legal action to challenge the Service's determination in federal district court.

Sincerely,

Timothy J. Preso

Re: Additional notifier – Sixty-day notice of intent to sue for violating Section 4 of the Endangered Species Act in deciding not to list a distinct population segment of the North American wolverine (*Gulo gulo lucus*) occurring in the contiguous United States.

On August 13, 2014, the Western Environmental Law Center submitted written notice of the intent of a number of organizations to sue the U.S. Fish & Wildlife Service for violations of Section 4 of the Endangered Species Act (ESA) related to its decision to not list a distinct population segment (DPS) of wolverine occurring in the contiguous United States as a threatened species under the ESA.

This letter is submitted on behalf of Wildlands Network and serves as notice that they intend to sue the U.S. Fish & Wildlife Service for violations of Section 4 of the ESA in its decision to not list the wolverine under the ESA. Wildlands Network submits an identical notice letter to that already submitted, however including their organization as a signatory. This notice does not supercede or

otherwise alter the previous notice already submitted on behalf of other conservation organizations.

Please feel free to contact me if you have any questions about this letter.

Sincerely,

A handwritten signature in black ink, reading "John Mellgren". The signature is fluid and cursive, with a long horizontal flourish at the bottom.

Re: Sixty-day notice of intent to sue for violating Section 4 of the Endangered Species Act in deciding not to list a distinct population segment of the North American wolverine (*Gulo gulo lucus*) occurring in the contiguous United States.

Dear Secretary Jewell and Director Ashe:

The Western Environmental Law Center (WELC) hereby provides this sixty-day notice of intent to sue for violations of Section 4 of the Endangered Species Act (ESA), 16 U.S.C. §1533, in deciding not to list a distinct population segment (DPS) of North American wolverine (*Gulo gulo lucus*) occurring in the contiguous United States (hereinafter "wolverine").

This notice is provided by WELC on behalf of the following organizations and individuals, all of which have a significant, concrete interest in ensuring the long-term survival and recovery of wolverine in the contiguous United States and ensuring the U.S. Fish and Wildlife Service (the Service) utilizes the best available science when making listing decisions: *WildEarth Guardians*, *Friends of the*

Bitterroot, Friends of the Wild Swan, the Swan View Coalition, Oregon Wild, Cascadia Wildlands, the Alliance for the Wild Rockies, the Cottonwood Environmental Law Center, George Wuerthner, the Kootenai Environmental Alliance, Footloose Montana, Native Ecosystems Council, and the Helena Hunters and Anglers Association.

On August 13, 2014, the Service published a notice in the Federal Register (Docket No. FWS-R6-ES-2012-0107) announcing its decision to withdraw the proposed rule to list wolverine as a threatened species under the ESA (78 Fed. Reg. 7864 (February 4, 2013)) and finding that wolverine are not warranted for listing as an endangered or threatened species (hereinafter “listing decision” or “decision”).

According to the Service, listing wolverines is not warranted because it believes: (1) the wolverine’s range may be “expanding” in the contiguous United States and suitable habitat is and will remain available (even under conditions of future reduced snowpack from climate change); (2) non-climate related threats to wolverine, including an already small population size (actual and effective), timber management, winter recreation, land development, transportation corridors, natural mortality, trapping (incidental and intentional), and travel management – by themselves or in the aggregate – pose no threat to wolverine; and (3) there is insufficient evidence to reasonably conclude that climate change poses a threat to wolverine or its habitat in the foreseeable future.

Regarding climate change, the Service maintains information on an obligate relationship between wolverines and the need for persistent snow at the home range or DPS level is lacking (the Service admits such a relationship exists for denning) and that it cannot reliably predict – at the appropriate scale – how the loss of snow from climate change will impact denning sites. According to the Service, McKelvey et al. (2011) does not provide, and it does not have, the fine scale resolution of climate change models (or certainty in those models) which it maintains is necessary to make a listing determination. The Service also maintains there is too much uncertainty over whether den sites for wolverines will become a limiting factor in the foreseeable future or whether habitat connectivity for wolverine will no longer be maintained to warrant listing. The Service is wrong.

In deciding not to list wolverine, the Service failed to see the proverbial forest for the trees. The Service focused so much on the fine details and lack of “certain predictions,” “fine scale” data, “precise mechanisms,” and “definitive” conclusions on how climate change will impact wolverines – data that is both impractical and nearly impossible to obtain – in order justify not listing (likely in response to political pressure from Montana, Idaho, and Wyoming) that it failed to see the big picture and the larger cause and effect principles at play, i.e. , that a warming climate

will most likely result in a detrimental impact on wolverine. There is general agreement amongst the scientific community that wolverine are a cold-climate dependent species that rely on snow (for denning and likely other benefits) and that the amount of snow within the range of wolverine will continue to decrease in the foreseeable future in response to a warming climate.

While some uncertainties exist and will always exist – indeed, there are many things we may never know about wolverines – the “best available science” – including the findings and recommendations of the Service’s own biologists, the peer-reviewed papers on wolverines and the likely impacts of climate change referenced in the Service’s proposed rule, two peer-reviewed panels (February, 2013 and April, 2014), the Society of Conservation Biologists North American Section (SCB), the American Society of Mammalogists (ASM), and fifty-six scientists (*see* Attachments)– reveals that the wolverine warrants protective status under the ESA’s “best available science” standard because they are a snow-dependent species threatened by climate change.

As detailed below, the Service wholly failed to grasp and apply the ESA’s “best available science” standard – as directed by Congress – and issued a decision not to list wolverines that is arbitrary, capricious, and not in accordance with law.

Best available science

Pursuant to Section 4(b)(1)(A), 16 U. S.C. § 1533 (b)(1)(A), the Service’s implementing regulations, and the Service’s 2011 policy on scientific integrity, the Service must make all listing determinations “solely on the basis of the best scientific and commercial data available.” The Service failed to do so when deciding not to list wolverine.

The standard – often referred to as the “best available science” standard – does not require scientific certainty (assuming it even exists) or prohibit the Service from making listing decisions in the face of uncertainty or even scientific disagreement. On the contrary, reliance upon the best available science, as opposed to requiring absolute scientific certainty, “is in keeping with congressional intent” that an agency “take preventive measures before a species is ‘conclusively’ headed for extinction.” *Defenders of Wildlife v. Babbitt*, 958 F. Supp. 670, 679–80 (D.D.C.1997) (emphasis in original); *see also American Wildlands v. Norton*, 193 F.Supp.2d 244, 251 (D.D.C.2002) (same). As such, contrary to the Service’s listing decision, “definitive conclusions” are not required.

As explained by the Service when listing Canada lynx: “We agree that additional studies of lynx are necessary to better understand the dynamics and requirements of lynx populations in the contiguous United States . . . However, the [ESA] does not allow us to defer a listing decision based on the need for more research. Most scientists would agree that there is always a need for more research, but listing decisions cannot be postponed based on this premise when known threats to the species are present that may result in a species’ trend toward extinction.” 65 Fed. Reg. 16052, 16064 (March 24, 2000); *see also* 55 Fed. Reg. 26114, 26128 (June 26, 1990)(Northern spotted owl) (because the Service used “the best data available . . . [it was] not obligated to have data on all aspects of a species’ biology prior to reaching a determination on listing.”); 61 Fed. Reg. 25813, 24817 (May 23, 1996) (California red-legged frog) (deciding to list species even though many aspects of the species’ status were “not completely understood”). A similar approach should have been (but was not) applied with respect to wolverine.

Indeed, instead of recognizing that some degree of speculation and uncertainty will always exist – especially when dealing with a rare and elusive creature like wolverine and imprecise climate change models – the Service insisted on “fine scale” data and proof of the “precise mechanism(s)” demonstrating how climate change will negatively impact wolverine habitat, including denning. This is an impracticable and impossible approach that conflicts with the ESA’s “best available science” standard.

Specifically, in deciding not to list wolverine, the Service failed to utilize the ESA’s best available science standard in a number of respects.

First, the Service inappropriately manipulated its decision by relying on certain, select sources of information and “cloner” comments from certain individuals and states like Idaho, Montana, and Wyoming (not made available for public review and comment) to the exclusion of other, more reliable sources including, but not limited to, the peer-reviewed studies cited and referenced in the proposed listing rule and in comments submitted by WELC and other organizations, the findings of the Service’s own biologists, the findings of two peer-review panels (February, 2013 and April, 2014), and the findings of the SCB, ASM, and fifty-six scientists, *see Attachments*. This is not allowed. *See Southwest Center for Biological Diversity v. Norton*, 2002 WL 1733618. *8 (D. D.C. 2002).

For example, the Service’s listing decision relied heavily on the State of Idaho’s comments and data (not subjected to peer review) on the issue of whether snow decline equates to year round habitat decline for wolverine while disregarding the findings of Copeland et al. (2010), on this very subject. The Service also places

too much emphasis on single, isolated dispersal events (single wolverine traveling to Colorado, for example) to support its finding that the population is expanding and that increased fragmentation from smaller and more isolated pockets of wolverine habitat is not a problem even though: (1) no regional studies or surveys on expansion have been undertaken and no evidence of reproduction in these “new” areas exists; and (2) McKelevy et al. (2011) says increased fragmentation is a problem. A wolverine’s ability and capacity to travel through areas of unsuitable habitat does not undermine McKelevy et al. (2011)’s findings regarding anticipated loss of connectivity. These are just a few examples.

Second, and discussed throughout this notice and in WELC’s and others’ comments on the proposed rule, the Service disregarded scientifically superior evidence on wolverine (including evidence on the wolverine’s historic and current status and range and threats to the species and its habitat). The Service’s unexplained disregard of scientifically superior, peer reviewed papers while relying on non-peer reviewed and politically motivated comments and concerns from Montana, Idaho, and Wyoming and others conflicts with the ESA’s best available science standard. *Id.*

For example, in electing not to list wolverine, the Service discounted and failed to utilize the best available science on how various threats to the species, including an already low total and effective population size in the contiguous United States, climate change, winter recreation (*see* Heinemeyer et al.’s on-going research in Idaho), lack of protective areas (recent research from Canada reveals wolverines do better in wilderness and protected parks with less human disturbance), travel planning, transportation corridors, development, trapping (incidental and intentional) and timber management may – individually and in the aggregate – threaten wolverine, wolverine habitat and range, and the ability of wolverine to move between sub-populations within the contiguous United States and between wolverine in the contiguous United States and wolverine in Canada (connectivity). The Service also failed to analyze these threats across all or a “significant portion” of the wolverine’s historic range and failed to account for and consider the amount of historic wolverine habitat already lost.

Notably, in the listing decision, the Service focused mainly on the impacts of climate change and, in so doing, failed to utilize the best available science on these and other non-climate stressors. The best available science – including peer-reviewed papers cited in the proposed rule and papers submitted and cited in comments on the proposed rule (including those from WELC) – reveal wolverines – whose total numbers range from 250-300 individuals in the contiguous United

States (with a much smaller effective population) – qualify for threatened or endangered status in the absence of the threats from climate change.

The Service also disregarded (without citing any new studies) scientifically superior evidence on climate change and how it may impact wolverine, including but not limited to research from the Rocky Mountain Research Station and the peer-reviewed papers cited in the proposed rule, including McKelvey et al. (2011) and the papers it relies on. The Service even disregarded the recommendations of its own biologists, including the Field Supervisor of the Montana Ecological Services Office's May, 2014, recommendation to list wolverine in light of the foreseeable threats from climate change and the findings of the February, 2013, and April, 2014, peer review panels, the SCB, and ASM. As mentioned above, the Service also failed to cite any new peer-reviewed paper published since McKelvey et al. (2011) that supports its findings or would otherwise warrant an about face on listing.

The majority of scientists believe McKelvey et al. (2011) and the other scientific, peer-reviewed papers analyzed by the Service in developing the proposed rule represent the best available science on wolverine. The majority of scientists also believe there is no legitimate scientific dispute that: (1) wolverines are dependent on cold and snowy conditions and habitat that is covered by snow until late spring for denning (and likely foraging); and (2) that climate change models predict a loss of snowpack within wolverine habitat in the DPS.

Third, as mentioned above, the Service failed to recognize that under the ESA's best available science standard, relatively minor flaws in scientific data or the absence of "precise mechanisms" do not render that information unreliable. The criticisms of Copeland et al. (2010) and McKelevy et al. (2011), for example, focus on small mechanisms of the snow model used, but do not undermine or disprove the model itself. As the Service's own biologist explains, the "precise mechanism" behind the relationship between wolverines and deep snow is "less important" than the fact that deep snow appears to be an obligate habitat feature for this species."

The Service's listing decision admits that McKelvey et al. (2011) and the studies it relies on are considered the "best available science" on wolverine. As outlined above, any uncertainty that may exist (due to the scale used) over how climate change and other threats may impact wolverines is inherently part of the listing determination and consistent with the best available science standard. Such uncertainty, therefore, cannot and should not be used (as it was in the wolverine decision) to deprive a species of protective measures under the ESA. The ESA "contains no requirement that the evidence be conclusive in order for a species to be

listed. Application of such a stringent standard violates the plain terms of the statute.” *Defenders of Wildlife v. Babbitt*, 958 F. Supp. 670, 679 (D.D.C. 1997).

Fourth, and related to the discussion above, the Service’s listing decision – as discussed above – mistakenly requires the “best data possible” on climate change and how it may impact wolverine when the standard under the ESA only requires the best data “available.”

Fifth, the Service’s listing decision mistakenly insists on having “conclusive” data or the ability to draw “definitive conclusions” on how climate change will affect wolverine when, as mentioned above, this is not required or expected by Section 4 of the ESA. Nor is the Service required to conduct or obtain new, independent research to improve the pool of existing, available data. The ESA anticipates and expects that in certain situations, like those circumstances presented for wolverine, the Service must and should rely on even inconclusive or uncertain information if that is the “best available science” at the time the decision is made. “Definitive conclusions” and “precise mechanisms” are not required, likely possible, or expected in the ESA.

Sixth, under the “best available science” standard and in accordance with the precautionary principle and Congress’ intent in the ESA to be proactive, any ambiguity or uncertainty should weigh in favor of listing. In other words, the “benefit of the doubt” should go to providing protective ESA status to wolverine while additional studies and research is obtained.

Based on the best available science, the Service should adopt a precautionary approach, provide wolverine protective ESA status, and then seek to better understand wolverine, the species’ habitat needs and relationship to cold, snow-dependent environments, and how climate change and other threats will impact the species. Once this information is obtained, the Service could then decide to maintain the wolverine’s listing status, upgrade the species’ status, or de-list the species in response to the information and data obtained. In the meantime, however, wolverine would be protected in the face of scientific “uncertainty” (assuming it even exists) about the degree of threats.

Finally, under the ESA’s “best available science” standard, the Service must manage and consider all the evidence and data submitted to the Agency in an open and transparent manner. This did not occur. The public was never given the opportunity to review and comment on the “key” decision documents that prompted the Service to reverse course on its earlier, proposed rule to list wolverines (a single leaked memo does not suffice). Nor did the Service subject its

final listing decision, which reverses its earlier findings, to peer review in direct contravention of the Service's own policy, *see* 59 Fed. Reg. 34270 (July 1, 1994).

In sum, listing wolverine is warranted because the best available science reveals the current population is dangerously low, there are known and documented threats to wolverine, and that these threats may result in a trend towards extinction.

Misapplication of the ESA's standards

As mentioned above, the Service's listing decision is premised on a misapplication of the term "best available science." The Service's listing decision is also premised on a misapplication of the term "threatened" and "endangered" as used and applied in the ESA.

Pursuant to the ESA, a species is "threatened" if it is "likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range." 16 U.S.C. § 1532(20). A species is "endangered" if it is "in danger of extinction throughout all or a significant portion of its range." 16 U.S.C. § 1532(6). Construction of this language must be based on the best available science. *See Trout Unlimited v. Lohn*, 645 F.Supp. 2d 929, 947, 948 (D. Or. 2007); *Western Watersheds Project v. Foss*, 2005 WL 2002473, *15-17 (D. Id. 2005).

"Likely to become endangered" means "likely" to be "in danger of extinction." *Lohn*, 645 F.Supp. 2d at 948. "[L]ikely' clearly means something less than 100% certain, but how much less is not as clear." *Id.* at 945. A reasonable construction of "likely" is at least a 50% chance (more likely than not). *Id.* at 949. In any case, the level of certainty relied upon by the Service must be based on consideration of the relevant statutory factors using the best available science. *Id.* at 947.

Likewise, "in danger of extinction" is not a fixed term, but its construction must be grounded in the best available science. *See id.* at 948. Certainly, "in danger of extinction" does not mean a "high risk of extinction." *Western Watersheds Project*, 2005 WL 2002473, *17 (D. Id. 2005). "Instead, the required danger level for extinction necessarily depends on the applicable scientific viability assessments for the particular species." *Lohn*, 645 F.Supp. at 948. For example, 1-5% risk of extinction in 100 years can create a discernible risk of extinction. *Foss*, 2005 WL 2002473, *15 (citing *Center for Biological Diversity v. Lohn*, 296 F.Supp.2d 1223, 1232 (W.D.Wash.2003)).

The term “foreseeable future” must also be defined by reference to the best available science. *See Foss*, 2005 WL 2002473, *15-17. As the Service recognized in a 2009 Solicitor Memorandum, “[t]he Secretary’s analysis of what constitutes the foreseeable future for a particular listing determination must be rooted in the best available data that allow predictions into the future, and the foreseeable future extends only so far as those predictions are reliable. ‘Reliable’ does not mean ‘certain’; it means sufficient to provide a reasonable degree of confidence in the prediction, in light of the conservation purposes of the Act.” M-Opinion 37021 at 13. What must be avoided is “speculation.” *Id.* at 8.

The corollary is that the Service may not dismiss a risk of extinction that may be reasonably forecasted by science. *See Foss*, 2005 WL 2002473, *15-17. It “defies common sense” to define “foreseeable future” to exclude the timeframe in which [the best available science] predict[s] extinction. *Id.* at 15. Prediction of the future is necessarily grounded in the “data and logic” of today. M-Opinion 37021 at 8. As one court reasoned, if a species will be endangered in the future if current circumstances continue, “it is clearly threatened today.” *Biodiversity Legal Found. v. Babbitt*, 943 F. Supp. 23, 25 n.5 (D.D.C. 1996).

With respect to wolverine, the Service failed to properly apply the ESA’s standards for “threatened” and “endangered” and the terms included therein when deciding not to list, requiring instead “certain predictions,” “fine scale” data, “precise mechanisms,” and “definitive” conclusions to support listing.

As explained by the SCB and ASM, the Service’s own policy (M-Opinion 37021) “does not preclude use of predictive modeling approaches that are well-supported in the scientific literature, such as those used to project future effects of climate change on snow cover, and the of loss of habitat components such as snow cover on species dependent on or limited by these factors.” *See Attachments*. But in the case of wolverine, the Service mistakenly interprets its own policy guidance “to require data – specifically ‘experimental evidence’ – that in all likelihood would be impractical or impossible to obtain for a rare free-living mammal.” *Id.* The Service’s decision, therefore, “represents an arbitrarily narrow interpretation of the M-Opinion that, if generally applied, would substantially limit the ability of science to inform listing determinations.” *Id.*

The Service also failed to properly define and apply the phrase “significant portion of its range” when: (1) deciding not to list wolverine; and (2) defining the phrase in its Final Policy on Interpretation of the Phrase “Significant Portion of Its Range,” 79 Fed. Reg. 37577 (July 1, 2014).

Under the ESA, the Service must consider a species' status – in this case the DPS of wolverine in the entire contiguous United States – across a “significant portion of its range” in making listing determinations. *Defenders of Wildlife v. Norton*, 258 F.3d 1136 (9th Cir. 2001). The phrase “significant portion of its range” can mean, among other things, a “major geographical area[] in which [the species] is no longer viable but once was. Those areas need not coincide with national or state political boundaries, although they can.” *Defenders of Wildlife*, 258 F. 3d at 1145-46. The phrase *does not* mean that threats in the “significant portion” must render the entire species at risk of extinction. *Id.* at 1141. On the contrary, legislative history demonstrates that the phrase was intended to allow for protection in one area even if a species is abundant or overabundant in another area. *Id.* at 1144. Nor is there any bright-line percentage of habitat that must be affected in order for an area to be “significant.” *Id.* at 1143. For a species with a small historical range, even a very small percentage loss of habitat may be “significant.” *Id.*

Notably, the Service cannot interpret the phrase in a way that excludes analysis of the wolverine's historic range. *Tucson Herpetological Soc. v. Salazar*, 566 F.3d 870, 876 (9th Cir. 2009). Rather, the task of defining the phrase includes quantification of the wolverine's historic range and an evaluation of whether the lost habitat amounts to a “significant portion” of that range. *Id.* Nor may the Service look only to the health of the wolverine population in certain areas while turning a blind eye to threats in areas where the population is either extirpated or home to only a few individuals. “It is insufficient, under *Defenders of Wildlife*, to point to one area or class of areas where [a species'] populations persist to support a finding that threats to the species elsewhere are not significant” *Tucson Herpetological Soc.*, 566 F.3d at 877. The ESA requires more. *Id.*

Here, the Service never engaged in a proper “significant portion of its range” analysis with respect to wolverine. The Service, for example, failed to quantify and explain whether the loss of the DPS's historic range in the contiguous United States amounts to a “significant portion” and inappropriately supported its finding of non-significance by looking only to the health of wolverine populations in certain areas (including populations outside the DPS). The Service failed to analyze and explain whether the wolverine's lost, historic habitat in the contiguous United States, which includes, but is not limited to, large portions of the Sierras in California, the entire Southern Rockies (from north-central New Mexico, throughout Colorado, and south-central Wyoming), Oregon's and large portions of Washington's Cascade Mountains, portions of Idaho, Montana, Utah, and Nevada (as well as portions of Michigan and Wisconsin) qualifies a “significant portion of its range” for listing purposes.

In sum, in electing not to list the DPS of wolverine in the contiguous United States, the Service never examined whether the DPS is endangered or threatened “across a significant portion of its range” as that phrase is to be defined under the ESA. Nor does the Service’s new, July 1, 2014, policy defining the phrase (assuming it was applied), see 79 Fed. Reg. 37577, remedy the violation.

The Service’s new policy demands that a high threshold be reached before a species can be considered endangered or threatened throughout a “significant portion of its range.” Specifically, the policy (1) excludes lost historical range, and (2) requires that the existence of members in the “significant portion” of a species’ range be essential to ensuring that the species is not “endangered” or “threatened” across its entire range. 79 Fed. Reg. at 37609. This is not what Congress intended.

As described above and outlined in *Defenders of Wildlife*, the ESA requires the Service to analyze where lost historical range qualifies as a “significant portion.” 258 F. 3d at 1145. *Defenders of Wildlife* also holds that a species may be endangered or threatened across one portion of its range even if, in another part of its range, the species is so abundant that the animals are overrunning the human population. *Id.* at 1144. As *Defenders of Wildlife* pointed out, the ESA’s text seems to be premised on the following maxim: “There seems to be a tacit assumption that if grizzlies survive in Canada and Alaska, that is good enough. It is not good enough for me. . . . Relegating grizzlies to Alaska is about like relegating happiness to heaven; one may never get there.” *Id.* at 1145 n. 11 (quoting Aldo Leopold, *A Sand County Almanac* 277 (1966)).

With respect to wolverine, it is not “good enough” under the ESA to relegate wolverines to Alaska and Canada – or even to small portions of the contiguous United States (Montana) – while turning a blind eye to the species’ lost and shrinking habitats throughout its historic range in the contiguous United States. Nor can the Service rely on “healthy” wolverine populations in Canada or Alaska (populations outside the DPS) to deprive wolverine in the contiguous United States – the DPS – protective status. When evaluating “significant portion of a species range” the Service must limit the analysis to the species’ range; in this case the “species” is the contiguous United States DPS of wolverine.

The Service also places inappropriate weight on its finding that threats to the wolverine are not “geographically concentrated.” However, this is not the test. Significant portions of the wolverine’s range may be disappearing even though the culprit is widespread climate change, not more pinpoint threats.

The Service's interpretation of the phrase "significant portion of its range," therefore, as applied to the wolverine listing decision and as outlined in its new policy, 79 Fed. Reg. 37577, is inconsistent with the ESA. And, if the Service did rely on the new policy, doing so violated the notice and comment requirements because the policy was in draft form for over two years and was not cited or relied on in the proposed rule.

Insufficient data to support decision in the record

Pursuant to the ESA and APA, the Service's listing decision must be supported by reliable and meaningful data and evidence and there must be a rational connection between the facts found in the record and the ultimate choice made. *See Defenders of Wildlife v. Babbitt*, 958 F. Supp. 670 (D.D.C. 1997).

Here, the Service's listing decision fails to provide biological support and data for its findings that the wolverine population in the United States is "growing and expanding." There is some evidence of a small recovery in Washington's North Cascades but beyond that there is no meaningful evidence or data demonstrating wolverine are expanding their range within the contiguous United States. No state or regional surveys at the necessary scale have been conducted. A single individual wolverine walking to Colorado or the Sierras does not equate to growth and expansion. Nor does documenting a few individual wolverines in northeastern Oregon or a single wolverine in Utah. These events are likely nothing "new" (anecdotal reports of wolverine sightings in these states have always existed) and certainly are not evidence of a population increase or expansion. Indeed, no evidence exists suggesting that these events have resulted in colonization of an area with successful breeding.

The Service's listing decision also fails to provide sufficient biological support and data for its finding: (1) that the total habitat capacity for wolverine in the entire contiguous United States is only 644 wolverines (well below the habitat capacity in western Canada) and that the "current population size is approximately half of capacity"; (2) that the current population level (actual and effective) of wolverine in the contiguous United States – assuming it is approximately 300 total with an unknown effective population – is stable and not a threat to the species or reason (by itself) to list (irrespective of the Service's climate change findings); (3) that effective population size would never reach a 100 wolverine, even at full habitat capacity and that demographic stochasticity and loss of genetic diversity due to small effective population sizes is not a threat to wolverine; (4) that there is no evidence or data to suggest the impacts to wolverine habitat from climate change are "currently occurring" (see WELC's May 5, 2014, comments and the

Intergovernmental Panel on Climate Change (IPCC's) Fifth Assessment Report (March 31, 2014)); (5) that more information and data, including "precise mechanisms," are needed in order to predict that climate change will adversely impact wolverine habitat and range in the foreseeable future and that an analysis of the impacts of climate change on wolverine must be at a scale fine enough to deal with the site specific characteristics of den sites; (6) that wolverine den sites are currently not scarce or lacking or otherwise limiting wolverine reproduction and population abundance (the Service does not mention or discuss the fact that the vast majority of den sites – including all in Colorado – are likely unoccupied by wolverine due to low numbers); (7) that insufficient information exists demonstrating that climate change will negatively impact wolverine dens, den success, or other habitat; (8) that a projected loss of 31% and 63% of areas with snow cover persisting until mid-May does not represent the equivalent loss or an approximate loss of wolverine habitat; (9) that insufficient information exists demonstrating that climate change will result in reduced connectivity and genetic exchange between sub-populations of wolverine in the foreseeable future; (10) that the Service can only predict a decline of wolverine habitat from climate change if wolverine have an obligate relationship "with snow for all stages."; (11) that "secondary threats" to wolverine identified in the proposed rule, as well as other anthropogenic threats to wolverine (e.g., winter recreation, transportation corridors) do not individually or in the aggregate pose a threat to wolverine or that the best available science does not substantiate that such activities, including dispersed recreation, pose a threat to wolverine; (12) that legal wolverine trapping in Montana is not a threat to the population, that reduced harvest levels in Montana over the years are not due to reduced numbers of wolverines (just shorter seasons), and that known and future rates of incidental trapping in Montana and other states is not a threat to the species; (13) that the primary concern about the future of wolverines is associated with the availability of den sites; (14) that the available evidence does not indicate listing is warranted; (15) that wolverines "coexist with some level of human disturbance and habitat modification"; (16) that "even under future conditions of projected habitat loss" there would be sufficient habitat available in the contiguous U.S. to "potentially continue supporting wolverine populations at roughly the same level of abundance as at present"; and (17) that climate change, by itself or in conjunction with other threats (trapping, small population, winter recreation, development, etc...) does not pose a threat to wolverine or its habitat in the foreseeable future such that wolverines warrant listing under the ESA.

Having such biological support and data is especially important in this case, where the Service's finding that wolverine do not warrant listing under the ESA contradicts the Service's earlier findings in the proposed rule, the extensive comments submitted by WELC and other organizations and agencies (which the

Service neglected to properly respond to) and even the recommendations from the Service's biologists, two peer reviewed panels, and the SCB, ASM, and fifty-six scientists. *See* Attachments. The Service can “draw conclusions based on less than conclusive scientific evidence, [but] it cannot base its conclusions on no evidence.” *National Assoc. of Home Builders v Norton*, 340 F.3d 835, 847 (9th Cir. 2003).

Reliance on conservation efforts

Pursuant to Section 4(b)(1)(A), 16 U. S.C. § 1533 (b)(1)(A), and the Service's implementing regulations, the Service must make listing determinations after “conducting a review of the status of the species and after taking into account those efforts, if any, being made by any State” to protect such species.

Under the ESA, the Service can rely on conservation efforts, including state-initiated efforts, so long as they are binding and current, not voluntary or future, and have a proven track record of success. *See Save Our Springs v. Babbitt*, 27 F. Supp. 2d 739, 748 (W.D. Tex. 1997); *Oregon Natural Res. Council v. Daley*, 6 F. Supp. 2d 1139, 1153 (D. Or. 1998); *Fed'n of Fly Fishers v. Daley*, 131 F. Supp. 2d 1158, 1165 (N.D. Cal. 2000); *Ctr. For Biological Diversity v. Morgenweck*, 351 F. Supp. 2d 1137, 1141 (D. Colo. 2004). A sufficient track record of success is two years. *Save Our Springs*, 27 F. Supp. 2d at 748. Any conservation effort relied upon by the Service must also have been submitted for public notice and comment. *Id.*; *see also Morgenweck*, 351 F. Supp. 2d at 1141.

In the listing decision, the Service inappropriately relies on non-binding state efforts such as, but not limited to, Idaho's, Wyoming's, and other states' bans on wolverine trapping and Montana's restrictions on wolverine trapping (including the current injunction prohibiting wolverine trapping). These state regulations are insufficient because they may be withdrawn or amended at any time and deal only with a small portion of the species' range and habitat.

Reliance on state efforts, such as trapping restrictions, is particularly inappropriate where the state requirements are less stringent than the requirements of the ESA. The ESA was intended to establish a federal floor for wildlife protection. Thus, in Section 4(b)(1)(A), Congress's aim was to prevent disruption of a state conservation program that would be *more* protective of a species than required under the ESA. *See* H.R. Rep. No. 93-412, p. 14 (1973) (“the State powers to regulate in a more restrictive fashion or to include additional species remain unimpaired.”). If the wolverine were listed, it would be protected from all forms of “take,” including “harvest” that is “sustainable” or spread “equitably” throughout a state.

Five listing factors

The Service's listing decision also violates Section 4(a)(1) of the ESA, 16 U.S.C. § 1533(a)(1).

Pursuant to Section 4(a)(1) of the ESA, 16 U.S.C. § 1533(a)(1), and the Service's implementing regulations, the Service is required to determine whether a species is threatened or endangered because of any of the following factors: (A) the present or threatened destruction, modification, or curtailment of the species' range; (B) overutilization for commercial, recreational, scientific, or educational purposes; (C) disease or predation; (D) the inadequacy of existing regulatory mechanisms; and (E) other man-made factors affecting the species' continued existence. *Tucson Herpetological Soc'y v. Salazar*, 566 F.3d 870, 873 (9th Cir. 2009) (citing 16 U.S.C. § 1533(a)(1); 50 C.F.R. § 424.11(c)). These factors are listed in the disjunctive so any one or combination of them can be sufficient for a finding that a species qualifies as threatened or endangered.

In deciding not to list wolverine, the Service failed to carefully consider and adequately apply Section 4(a)(1)'s listing factors in accordance with the ESA and the Service's implementing regulations.

Specifically, the Service failed to support its findings with sufficient and reliable evidence, including, as mentioned above, the best available, peer-reviewed science on wolverine and threats to wolverine. The Service also relied on unproven and unreliable methods to support its findings and failed to properly define the wolverine's range (both historic and present) and habitat within the contiguous United States. In addition, the Service failed to adequately consider historic population numbers (actual and trend) and current population numbers (actual and trend).

In applying the ESA's five listing factors, the Service also failed to consider and analyze how climate change is already and will continue to directly, indirectly, and cumulatively impact wolverine and a "significant portion" of the wolverine's range and habitat (both denning and foraging and core and secondary) in the contiguous United States.

Likewise, the Service erroneously discounted and did not adequately analyze the direct, indirect, and cumulative impacts of winter recreation, timber management, an already small total and effective population size, transportation corridors, climate change, travel planning, development, and trapping (for both

other species in occupied wolverine habitat and intentional trapping of wolverines in Montana) on wolverines. This includes how such threats may individually or in the aggregate affect individual wolverines, wolverine range and habitat (denning and foraging), and wolverine movement and connectivity between sub-populations in the contiguous United States and between wolverine in Canada and the contiguous United States. The Service also failed to assess the threats to wolverine across a significant portion of its range.

In applying the ESA's five listing factors, the Service also erroneously discounted and did not adequately consider how the lack of existing regulatory mechanisms for wolverines, specifically the lack of guidance in state wildlife and resource management plans, National Forest Plans, National Park Service management plans, and BLM resource management plans and the lack of any binding international, national, or state level regulatory mechanisms to address greenhouse gas emissions may directly, indirectly, or cumulatively affect wolverines.

In sum, the data and studies cited in the proposed rule and submitted by members of the public on the proposed rule, and the findings of the February, 2013, and April, 2014, peer-review panels, as well as the Service's own biologists, and the comments from the SCB, ASM, and fifty-six scientists (see Attachments), conclusively show – in accordance with the ESA's "best available science standard" – that the wolverine population is already dangerously small and currently faces serious and significant threats under several of the listing factors and, as such, merits listing as threatened or endangered under the ESA

Wherefore, this sixty day notice letter serves to put the Service on notice of its liability for violating the ESA and inform the Agency of our intent to file a citizen suit under the ESA seeking the appropriate relief.

This notice is provided pursuant to, and in accordance with, Section 11 (g)(2) of the ESA, 16 U.S.C. § 1540(g)(2).

Sincerely,

/s/ Matthew Bishop

Washington DC 20240

Dear Secretary Jewell,

I am writing regarding the recent decision by the USFWS to abandon plans to protect wolverines. I do not understand how the USFWS can disregard the recommendation of its own scientists and withdraw an earlier proposal to protect American wolverines under the Endangered Species Act.

There are approximately 250 to 300 wolverines left in the lower 48 states, primarily in the Northern Rockies. Global warming in the next 75 years is expected to wipe out 63 percent of the snowy habitat they need to survive, and this will put the wolverine on the path toward extinction.

The USFWS has once again caved in due to pressure from western and mountain states like Montana and Idaho, instead of doing the job the agency is charged with, and that is protecting *fish and wildlife of the United States.*

OFFICE OF THE
ASSISTANT SECRETARY

Dear Secretary Jewell:

I just found out that you took no action on placing Wolverines on the Endangered Species list even though only 300 of them exist in the lower 48 states.

I have a feeling you are a person of great integrity and values to have been appointed to this position by our President. However I feel so frustrated with people in power who don't protect those creatures that need protection. We can't have all these species disappearing from our earth! I also read that service field Biologists believe that due to climate change the Woverines will be gone sooner than later due to lost of habitat and low numbers of possible mating pairs.

I often write in support of wolves who everyone loves except those who hate their guts. Wolverines don't have such a thrilling brand but my heart goes out to all of us if we let them drop off our world. I think we are suppose to be stewards of this earth and I hope you re-think your lack of support.

Best Wishes on the good work that you do.

OFFICE OF THE
EXECUTIVE SECRETARIAT

Dear EPA,

I had an idea
to help protect wolverine.
I think you should
have reserved land for
wolverines. They would be safe
from predators and have
it be quiet and have
unstable rocks be fenced
off.

P.S. from Michael
I'd pay Edward
for some Foley
of it.

The Honorable Daniel M. Ashe
Director
U.S. Fish & Wildlife Service
1849 C Street, N.W.
Washington, D.C. 20240

Dear Secretary Jewell and Director Ashe:

This letter follows up on a letter sent March 7, 2013 to the Department of the Interior (“Department”) and the Fish and Wildlife Service (“Service”) asking for detailed information about the Department’s response to 2011 litigation settlement that set a deadline for making a listing decision on the Greater Sage Grouse under the Endangered Species Act (“ESA”). Despite significant efforts from several states and other entities to work with the Service to develop and implement conservation plans for the lesser prairie chicken, the Service nevertheless decided last month to list the prairie chicken as threatened under the ESA. In light of this recent listing, additional concerns have been raised regarding the Department’s willingness to allow greater flexibility with settlement listing deadlines and work with states and local stakeholders to create conservation plans that will allow a sage-grouse listing to be avoided.

As the March 2013 letter discussed, significant concerns exist with the implementation and planned enforcement of the National Technical Team Report, A Report on National Greater Sage Grouse Conservation Measures, (“NTT Report”). In the last year, more questions have been raised about the validity of the science used in both the NTT report and in the Warranted But Precluded (“WBP”) determination. Specifically, there have been allegations that the NTT Report and the WBP determination both suffer from lack of independent authorship and peer review, contain substantial technical errors, and contain mischaracterization of past research.

OFFICE OF THE
EXECUTIVE SECRETARY

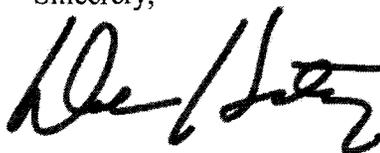

Unfortunately, the Department's responses to this request for documents and information have done little to alleviate these concerns.

While the Department has provided 2,700 pages of documents to the Committee related to Sage Grouse, only 500 of these were documents not already made available to the public under Freedom of Information Act requests. It has been nine months since the Department last provided documents to the Committee on this subject matter and nearly one-half of the items from the original request remain unanswered. In one particularly disappointing example, the Department's Office of Congressional and Legislative Affairs responded to specific questions by suggesting a visit to the Bureau of Land Management's sage grouse website for information related to the scientific adequacy of the Department's NTT Report.¹ It appears this website has not been updated since March 2013.

The Department has failed to provide any information to the Committee regarding the adequacy of the science the Department relied on to change the listing status of the sage-grouse under ESA between 2005 and 2010, and failed to provide any information regarding whether the Department has conducted any analysis of the socio-economic impacts that will result from the Department's listing decision. Many Members representing affected by the potential listing have requested this information.

If the Department does decide to list this species, 160 million acres of land throughout 11 Western states will face restrictions in grazing, farming, mining, and energy production. In light of the significant Department resources tied up in making this decision, it is vital that the American people have a full understanding of the total cost of this decision, and have faith that the Department is using sound, reliable, peer-reviewed science to inform this process. Through this letter, it is again requested that the Department produce the information and documents requested more than a year ago in the March 7, 2013 letter.

Sincerely,

A handwritten signature in black ink, appearing to read "Doc Hastings", written in a cursive style.

Recommendations for a Rangewide Sage Grouse Conservation Strategy

Dear Secretary Salazar, Assistant Director Ashe, and Director Abbey:

We are pleased that the Department of Interior is embarking on a new rangewide conservation strategy for the greater sage grouse. We encourage the Bureau of Land Management (BLM) and other federal land management agencies to embark upon a new direction based on multiple use on the public lands, under which industrial activities are managed in a way that renders them compatible with sage-grouse conservation. Because the U.S. Fish and Wildlife Service is the arbiter of existing regulatory mechanisms in the context of Endangered Species Act (ESA) listing decisions, and will determine whether the new sage grouse policies of the BLM and other federal agencies is sufficient to obviate the need for Threatened or Endangered Species listing, we encourage you to weigh in with specific, science-based recommendations for sage grouse conservation standards and guidelines to be implemented as part of Interior's new strategy. On behalf of the above-captioned groups, we would like to offer our perspective based on more than a decade of experience in sage-grouse and habitat conservation.

The greater sage-grouse has long been described by researchers as a 'landscape-scale' species, requiring large tracts of undisturbed, high-quality sagebrush habitat to survive and thrive. With this in mind, the most appropriate approach for sage grouse conservation on federal lands (which make up more than fifty percent of the remaining sage grouse habitat in the nation) is a rangewide approach, in the form of Instruction Memoranda and a rangewide Programmatic Environmental Impact Statement (PEIS) that will amend Resource Management Plans on BLM-managed lands, National Forests, National Parks, National Wildlife Refuges, and lands managed by the Department of Defense throughout the range of the sage-grouse and apply strong protection

RECEIVED

measures that allow sage-grouse populations not only to survive, but to rebound to levels where the survival of the species is no longer in doubt in any significant portion of its range, and to provide a surplus for game hunting.

It is important to bear in mind that the present depressed population numbers for sage-grouse have led to the bird to its current predicament, teetering on the edge of Endangered Species listing. It is not sufficient merely to maintain sage grouse populations at their present low levels, or (worse yet) to allow additional population decreases resulting from agency-permitted projects or activities. Instead, the goal should be to recover sage-grouse populations to levels where populations are secure rangewide, and expanding populations and suitable habitats in regions of the nation where current populations are at risk.

All stakeholders throughout the West, whether their goal is sage-grouse recovery or merely avoidance of additional regulations, should be able to agree that sage-grouse recovery is an outcome that best provides certainty for both sage-grouse persistence and for industries that do business and communities who live within its range. At the same time, a strong sage-grouse conservation plan, founded in establishing core habitats where land uses are made compatible with maintaining healthy habitat, is the cornerstone for protecting not only the grouse itself but also a broad diversity of other sagebrush-dependent wildlife. Many of these species are also declining and may soon become candidates for ESA listing in the absence of a comprehensive conservation strategy.

Sound science should drive the new conservation strategy

When the State of Wyoming embarked upon its groundbreaking sage-grouse Core Area policy, it started with the right idea, identifying core habitats that supported the most abundant populations of sage grouse, and prioritizing these areas for protection. However, because a consensus-based collaborative group (the Sage-Grouse Implementation Team or “Team”) was appointed by Governor Freudenthal to identify Core Areas and prescribe the conservation measures that applied there, representatives from the oil industry appointed to the Team were able to extract inappropriate concessions, both in terms of removing key habitats from Core Areas and in creating loopholes and lowering protection levels that apply both within and outside the Core Areas.

As a result, the Core Areas designated in the Powder River Basin likely are inadequate to prevent the extirpation of the species in this key linkage between populations in Montana and the Dakotas and the heart of the sage-grouse range. Populations elsewhere within Core Areas are likely to decline or even disappear if industrial development proceeds there under current guidelines. These crippling weaknesses in the Wyoming plan render it unlikely to survive judicial scrutiny as an adequate conservation measure. The federal government can and should do better for federal lands.

In his original 2008 Executive Order, Governor Freudenthal got it right: “New development or land uses within Core Population Areas should be authorized or conducted only when it can be demonstrated by the state agency that the activity will not cause declines in Greater Sage-Grouse populations.”¹ This provision essentially required that the best available science be consulted, and if levels of proposed development exceeded science-based thresholds at which sage-grouse declines begin to occur, the development would not be allowable. This provision was removed in Governor Freudenthal’s 2010 Executive Order, and was not reinstated by Governor Mead in his own 2011 Sage Grouse Executive Order. The Interior Department has the opportunity to redress

¹ State of Wyoming Executive Order 2008-2, ¶ 3.

this reversal of policy by ensuring that this commitment is included in the rangewide sage-grouse policy, and therefore protections reflecting the biological needs of the species (rather than the interests of developers) will apply in Core Areas on BLM lands.

The need for a fresh start in delineating Core Areas

For the purposes of the new federal policy on sage-grouse, we recommend starting from a clean slate and designating core habitat areas that include all of the most populous leks in each state. In Wyoming, Core Area delineation started from this point, but lands proposed for oil and gas projects or existing development were subtracted. Later, additional lands were removed from protection at the behest of industrial interests wishing to pursue projects incompatible with sage-grouse conservation inside designated Core Areas. This debacle illustrates the need for consistent, rigorous standards across all states in the sage grouse's range.

Science-based standards for oil and gas development

Oil and gas development poses perhaps the greatest single threat to sage-grouse persistence across the eastern half of its range. Walker et al. (2007) found that sage-grouse habitat within 4 miles of a lek site was important to the persistence of the lek. Conversely, Walker et al. (2007) concluded that leks heavily impacted by oil and gas development "typically became inactive within 3-4 years." Harju et al. (2008) found a time lag of 2-10 years post-development, at which point negative effects became evident. The same is true for winter habitats. Indeed, Naugle et al. (2006) found that a model using habitat variables and coalbed methane development provided a near perfect fit for grouse distribution data. In the Powder River Basin, CBM well density within a 4 km² area provided the best fit for modeling sage-grouse habitat use (Doherty et al. 2008). Holloran (2005) found that well densities greater than one well per 699 acres were correlated with lek declines. Doherty et al. (2010) did a statewide analysis in Wyoming and found that well densities greater than 1 well per square mile were correlated with sage-grouse declines.

Walker et al. (2007) found that coalbed methane development within 2 miles of a sage-grouse lek had a negative effect on lek attendance. Holloran (2005) found that active drilling within 3.1 miles of a lek reduced breeding populations, while wells already constructed and drilled within 1.9 miles of the lek reduced breeding populations. In Canada, Carpenter et al. (2010) found that sage-grouse strongly avoided oil and gas infrastructure to a distance of 1.9 km, and avoided two-track vehicle trails more weakly to a distance of 1.5 km; the closest that a grouse was located to a coalbed methane well in this study was 1,293m. Harju et al (2008) found that negative impacts of development on lek populations extended 4.8 km (3 miles) from the development. Both Holloran (2005) and Walker et al. (2007) documented the extirpation of breeding populations at active leks as a result of oil and gas development in the Upper Green River Valley and Powder River Basin, respectively. Rowland et al. (2006: A4-3 through A4-7) provide a useful literature review of the distance that impacts spread beyond the edge of disturbed areas into adjacent habitats. Males use shrubs <1 km (0.6 mi) from a lek for foraging, loafing, and shelter (Rothenmaier 1979, Emmons and Braun 1984, Autenrieth 1981). In Wyoming, State and BLM policies erroneously use this as a basis for an 0.6-mile No Surface Occupancy buffer around leks. However, there is no science to indicate that preventing wells within 0.6 mile of a lek will eliminate negative population impacts on sage grouse. In fact, the 1.9-mile buffer is the minimum amount found to be needed to avoid negative impacts to breeding grouse by Holloran (2005), and indeed, to protect the nesting hens that site their nests within 5 miles of a lek, an even larger buffer may be needed.

Road construction related to energy development is a primary impact on sage-grouse habitat from habitat fragmentation and direct disturbance perspectives. Rowland et al. (2006) modeled sage-grouse distribution, and reached the following conclusions:

“The secondary road network is a highly significant factor influencing processes in this landscape and is being developed and expanded rapidly across much of the WBEA (Thomson et al. 2005). Secondary roads are being built as part of the infrastructure to support non-renewable energy extraction (Chapters 2, 4). For example, within the Jonah Field in the Upper Green River Valley, >95% of the area had road densities >2 mi/mi² (Thomson et al. 2005).”

p. 5-10. Furthermore,

“The dominant feature affecting output of the sage-grouse disturbance model was secondary roads, which occupy nearly 8% of the study area (Table 5.2) and are presumed to negatively influence an even larger extent.”

Pp. 6-15 through 16. Holloran (2005) found significant impacts of road traffic on sage-grouse habitat use, concluding that habitat effectiveness declined in areas adjacent to roads with increasing vehicle traffic, documenting the secondary effect referenced by Rowland et al.

A number of researchers have noted a time lag between initiation of mineral development and sage-grouse population declines. Holloran et al. (2010) noted that yearling males avoided lekking near oil and gas infrastructure, and that yearling females avoided nesting within 950m of oil and gas infrastructure. Thus, the time lag in populations appears to be driven by the exodus of yearlings from affected areas, while older birds persist close to development until they die off. These researchers stated, “Our results... suggest to land managers that current stipulations on development may not provide management solutions.”

As a rule, breeding and nesting activity are concentrated in the habitats surrounding the lek site. In a Montana study, Wallestad and Schladweiler (1974) found that no male sage grouse traveled farther than 1.8 km from a lek during the breeding season. But following breeding, males may make long migrations to distant summer ranges (Connelly et al. 1988). Hulet et al. (1986) found that 10 of 13 hens nested within 1.9 miles of the lek site during the first year of their southern Idaho study, with an average distance of 1.7 miles from the lek site; 100% of hens nested within 2 miles of the lek site during the second year of this study, with an average distance from lek of 0.5 mile. In Montana, Wallestad and Pyrah (1974) found that 73% of nests were built within 2 miles of the lek, but only one nest occurred within 0.5 mile of the lek site. But in Bates Hole, Wyoming, Holloran (1999) found that average nesting distance from lek site was 3.25 km for adults and 5.27 km for yearlings. Wakkinen et al. (1992) cautioned that leks were poor predictors of sage-grouse nest sites; although 92% of sage-grouse nested within 3.2 km of a lek in this study, sage-grouse did not necessarily nest near the same lek where breeding took place.

Lyon (2000) pointed out that quarter-mile lek buffers were insufficient to maintain the viability of grouse populations. Several years ago, a multi-state group of fish and game biologists evaluated the standard BLM mitigation measures for grouse, and found them wholly inadequate (Christiansen and Bohne 2007). Connelly et al. (2000) recommended that sage-grouse habitat should be protected within 3.2 km of lek sites under ideal habitat conditions, within 5 km when habitat conditions are not ideal, and within 18 km where sage grouse populations are migratory. Furthermore, these researchers stated that in areas where 40% or more of the original breeding habitat has been lost, all remaining habitat should be protected. Holloran (2005) provided a critical test of BLM's lek buffers' effectiveness in the Jonah and Pinedale Anticline fields, and found that in the face of full-field gas development, finding that extirpation was expected for sage-grouse in both fields within 19 years if conditions remained the same (and, of course, conditions have become much worse for grouse under the continued intensification of drilling and road construction in these two fields).

Under current state and BLM Core Area standards in Wyoming, disturbance thresholds are set at five percent of the land area, beyond which additional surface disturbance is not permitted. However, the five percent disturbance threshold corresponds with oil and gas well densities that are far beyond the point where sage-grouse declines occur. For example, under the Continental Divide-Wamsutter Project, 3,000 wells were initially proposed with 22,400 acres of new surface disturbance, representing 2.1 percent of the planning area with an average well density of 4 wellsites per square mile (BLM 2000); today, sage-grouse are virtually extirpated in this field, although more than 50 leks existed prior to the project. In the Atlantic Rim coalbed methane field, 2,000 wells were permitted at a density of eight wells per square mile, far above the threshold known to cause sage grouse declines. The projected surface disturbance for this project is 15,800 acres, or 5.85% of the project area (BLM 2005). Clearly, a threshold of five percent is too high to sustain sage-grouse. Assuming a 10-acre multi-well wellpad and 0.75 miles of road per square mile – a generous figure (at 9.85 acres per mile of road), the estimated surface disturbance for a wellfield at one well per square mile would be 2.7 percent. Thus, a one- to three-percent disturbance threshold is more reasonable.

Sage-grouse standards for wind and transmission lines

Wind power generation represents a clean, renewable alternative to fossil fuels, but construction of wind farms in key habitats is likely to lead to unacceptable levels of impact. Although there is little published science directly addressing the impact of wind turbines or transmission lines on sage-grouse, there is a broad consensus among biologists that sage-grouse avoid tall structures (such as wind turbines and transmission towers) and abandon adjacent habitats. One unpublished study found that sage-grouse habitat use increased with distance (up to 600 meters) from transmission lines. Molvar (2008) compiled BLM data from a wind power project on Cotterel Mountain, Idaho and was able to determine that the erection of seven meteorological towers led to drastic declines in sage-grouse populations across nine sage-grouse leks, while populations in the surrounding area remained stable. There has been abundant scientific information that other types of energy development, particularly oil and gas, has a major impact on sage-grouse populations, and oil and gas development has some similar features such as habitat fragmentation and tall structures (in the form of drilling rigs).²

The USFWS (no date) conducted a literature review through 2010 and found that recommended buffer distances for sage grouse were generally 3.1 to 4 miles and beyond. We endorse the recommendations of USFWS (2003) and Mannville (2004) that wind power facilities be sited at least five miles from active sage grouse leks. Similarly, lands identified as sage grouse winter habitat should similarly be avoided by a distance of not less than three miles.

The State of Wyoming is pursuing a sound policy with regard to wind power development in sage-grouse habitat, that of excluding wind power development from designated Core Areas (although for several wind projects, Core Area boundaries have been shifted to exclude lands desired by the wind industry). Excluding wind power development from core habitats makes sense; in Wyoming, more than four million acres commercially viable for wind energy development are outside of Core Areas and have no other identified environmental conflicts (Molvar 2008), which represents approximately four times the maximum acreage needed for the high benchmark for wind development through 2030 (estimated at 10,000 turbines by the wind power industry). We recommend that wind power facilities be sited outside identified core habitat areas.

Sage-grouse standards for livestock grazing

Livestock grazing is considered the single most important influence on sagebrush habitats and fire regimes throughout the Intermountain West in the past 140 years (Knick et al. 2005: 68). Grazing is the most widespread use of sagebrush steppe and almost all sagebrush habitat is managed for grazing (Connelly et al. 2004; Knick et al. 2003; Knick et al. 2011).³ Livestock grazing disturbs the soil, removes native vegetation, and spreads invasive species in sagebrush steppe (Knick et al. 2005). Cattle or sheep grazing in sage-grouse nesting and brood-rearing habitat can negatively affect habitat quality; nutrition for gravid hens; clutch size; nesting success; and/or chick survival (Connelly and Braun 1997; Beck and Mitchell 2000; Barnett and Crawford 1994; Coggins 1998; Aldridge and Brigham 2003). Livestock may directly compete with sage-grouse for grasses, forbs and shrub species; trample vegetation and sage-grouse nests; disturb individual birds and cause nest abandonment (Vallentine 1990; Pederson et al. 2003; Call and Maser 1985; Holloran and Anderson 2003; Coates 2007).

The potential conflict between livestock grazing and sage-grouse intensifies near water sources due to the importance of these areas to sage-grouse, particularly during early brood rearing. Heavy cattle grazing near springs, seeps, and riparian areas can remove grasses used for cover by grouse (Klebenow 1982). According to Call and Maser (1985:17), "rapid removal of forbs by livestock on spring or summer ranges may have a substantial adverse impact on young grouse, especially where forbs are already scarce."

Grazing infrastructure, such as water developments and fences, fragment and degrade sage-grouse habitat (Connelly et al. 2004; Braun 1998; Call and Maser 1985; Knick et al. 2003). Fatal collisions with fences were "relatively common and widespread" in sage-grouse breeding habitat in southern Idaho (Stevens 2011), corroborating other evidence that fences may pose a significant risk to low flying sage-grouse (e.g., Danvir 2002, unpublished report). Fence densities exceed 2 km/km² in many areas occupied by sage grouse (Knick et al. 2011).

Native vegetation communities in sagebrush steppe did not evolve with grazing pressure (Mack and Thompson 1982). Excessive livestock grazing by domestic livestock during the late 1800s and early 1900s had significant impacts on sagebrush steppe and those effects persist today (Knick et al. 2003). Grazing (in addition to other factors) is implicated in the encroachment of conifers in sagebrush steppe, including western juniper (*Juniperus occidentalis*) (Kerr and Salvo 2007). Decades of livestock grazing have altered plant communities and soil and reduced productivity in sagebrush steppe (Knick et al 2003). Cattle grazed at "conservative" levels in sagebrush steppe in the northern Great Basin initially selected bunchgrasses in interspaces between sagebrush plants (France et al. 2008). The removal of native species from interspaces by cattle, in conjunction with other factors, appears to facilitate invasion by cheatgrass (*Bromus tectorum*) into these areas (Reisner 2010). The spread of cheatgrass and other invasive plants into degraded rangelands has accelerated the natural fire cycle and threatens to convert enormous areas of sagebrush habitat into annual grasslands (Wisdom et al. 2005; Miller et al. 2011).

Grazing management was identified as a threat to sage-grouse by three expert panels and in recent reviews (Connelly et al. 2011, Table 1). Federal scientists have suggested that "livestock grazing across the public lands of western landscapes has impacted and will continue to impact

³ One expert contended that the "livestock industry has had [a] more negative impact on sage-grouse than any other single factor" and "[i]t's rare to find any place that hasn't been grazed." Hudak, M. 2007. WESTERN TURF WARS: THE POLITICS OF PUBLIC LANDS RANCHING. Biome Books. Binghamton, NY: 28-29.

the quality of those habitats and their ability to support source populations of sagebrush bird species” (Rich et al. 2005: 592). The Fish and Wildlife Service concluded that grazing “can seriously degrade sage-grouse habitat” locally and that, “given the widespread nature of grazing, the potential for population-level impacts cannot be ignored” (75 Fed. Reg. 13942-13943). In their study on sage-grouse in eastern Oregon, Call and Maser (1985: 3) made the following basic assumption: “Where there are conflicts between sage grouse and livestock on public lands, it may be essential to give priority to sage-grouse if they are to continue to exist on these areas.”

Sage grouse standards for invasive plants

Baker (2006) reviewed the fire history of sagebrush ecosystems and found natural fire to be a rare and infrequent event, suggesting a fire rotation 325-450 years in length. However, overgrazing across many of the Great Basin states has led to the invasion of cheatgrass, a highly flammable noxious weed that accelerates the fire cycle to less than five years destroying the sagebrush upon which sage-grouse rely for food and cover. Approximately 36 percent of the Greater Sage-Grouse range is invaded by cheatgrass (Lebbin et al. 2010). Because sagebrush requires at least 15 years (and up to 50) to reoccupy burned sites, restoring invaded areas is a difficult and slow process. Preventing further spread into intact sagebrush should be prioritized.

Biological invasions, especially invasion by exotic annual grasses such as cheatgrass, are consistently cited as among the most important challenges to maintenance of healthy sagebrush communities (Miller et al. 2011; Wisdom et al. 2005; Suring et al. 2005). At least 46 exotic plants occur in sagebrush steppe (Pyke 2000). Estimates of the rapid spread of weeds in the West include 2,300 acres per day on BLM lands and 4,600 acres per day on all western public lands (See 65 Fed. Reg. 54544).

Cheatgrass, an invasive annual grass, is now the dominant species on 100 million acres (158,000 square miles) in the Intermountain West (Rosentreter 1994: 170, citing Mack 1981). It was estimated in 1999 that 25 percent of the original sagebrush ecosystem has been converted to cheatgrass/medusa-head rye (*Taeniatherum caput-medusae*) annual grassland, and an additional 25 percent of sagebrush steppe has only cheatgrass as understory vegetation (West 2000). Cheatgrass is estimated to spread at a rate of 14 percent annually in the United States (Duncan et al. 2004: 1412, table 1). The conversion of sagebrush steppe to exotic annual grassland has been described as “massive” (Allen 2003) and is expected to continue (Miller et al. 2011; Hemstrom et al. 2002).⁴

Cheatgrass thrives in disturbed, and especially burned, areas. It can increase fire frequency, favoring itself and potentially inhibiting perennial seedling establishment (Miller et al. 2011). Cheatgrass incursion into sagebrush habitat can lead to an eventual conversion of sagebrush/grass (perennial) community to sagebrush/grass (annual) or annual grass rangeland. In some cases, cheatgrass invasion encourages other exotic species such as medusa-head rye, knapweed and thistle. It was observed in 1979 that annual-dominated communities in sagebrush steppe appears to have crossed a threshold and created its own new equilibrium (Hanlley 1979) from which restoration to functional sagebrush steppe would be very costly and difficult (if not impossible) to achieve (Billings 1990).

Sage-grouse do not use cheatgrass. Invasive species was identified as a threat to sage-grouse by three expert panels and in recent reviews (Connelly et al. 2011, Table 1). One panel listed cheatgrass as the most important threat to sage-grouse in the western portion of its range (70 Fed.

⁴ A BLM ecologist and program coordinator has warned that “[c]heatgrass is changing the West.” Miller, J. (AP). “Alien invader clings to socks, stokes West’s wildfires.” *Daily Herald* (Provo, UT) (Aug. 8, 2007).

Reg. 2267), where it has invaded much of the lower elevation, xeric sagebrush habitat (Miller et al. 2011). Land uses such as livestock grazing (Reisner 2010), off-road vehicle use, and coalbed methane development (Bergquist et al. 2007), can facilitate cheatgrass incursion in sagebrush steppe.

RECOMMENDATIONS

Based on these scientific findings, we offer the following recommendations for science-based conservation measures for sage-grouse, suitable for application in a rangewide conservation strategy:

Include the Entire Range in the Conservation Plan

We do not believe the government will be able to demonstrate that adequate regulatory mechanisms are in place unless the entire range of the species is considered, not just the lands managed by BLM, and included in the management regime outlined in the plan.

Standards for Sage-Grouse Conservation

Core Areas

- ❖ Core habitats should be identified to encompass a 5-mile buffer around the most populous leks in each state.
- ❖ Boundaries of core areas should not be altered to accommodate nonconforming uses.

Sage-Grouse Reserves

In addition to designating Core Areas, a system of sage-grouse reserves should be designated where no harm to the species would be allowed. This could include restrictions on road construction, grazing, and off-road vehicle use, and which are withdrawn from future oil and gas leasing and other mineral entry. We recommend the establishment of several sage-grouse Areas of Critical Environmental Concern (ACECs) in each Field Office where sage-grouse occur to serve this purpose. In addition, a sage-grouse Long-Term Ecological Research (LTER) area should be established to serve as a research and reference area for scientific study.

Oil and Gas

Inside Core Areas

- ❖ Maximum density of 1 well per square mile in core habitats
- ❖ For future leasing, either no future leasing in core habitats or No Surface Occupancy leases with no opportunity for exceptions or waivers.
- ❖ For existing leases, no surface occupancy within 2 miles of the lek or winter habitat and no drilling within 3 miles of the lek or winter habitats during the season of use.
- ❖ Recommend withdrawal from mineral entry; no surface mining or in situ uranium recovery allowed.
- ❖ Total surface disturbance not to exceed 1 to 3 percent of surface area.

Outside Core Areas

- ❖ Year-round No Surface Occupancy within 2 miles of the lek or winter habitat, and no drilling within 3 miles of the lek or winter habitat during the season of use.

Wind and Transmission

Inside Core Areas

- ❖ No wind energy development
- ❖ Transmission lines limited to existing electrical transmission corridors of ¼ mile maximum width

Outside Core Areas

- ❖ Wind farms and transmission lines sited at least 5 miles from active sage-grouse leks and at least 3 miles from identified winter habitats.
- ❖ Transmission lines allowed along existing electrical transmission corridors of ¼ mile maximum width.

Livestock Grazing

- ❖ During spring and summer, do not permit grazing in key sage-grouse habitats until after June 20 and remove livestock by August 1 with a goal of leaving at least 70 percent of the herbaceous production each year to form residual cover to benefit sage-grouse nesting the following spring.
- ❖ Prohibit twice-over grazing systems, where livestock pass through an area twice in a grazing season.
- ❖ Encourage winter grazing, which is generally less negative for herbaceous vegetation and sage-grouse than grazing during the growing season.
- ❖ Water and salt should be placed near fences or fence corners, as livestock tend to congregate in these areas. The goal should be to reduce livestock impacts in the centers of pastures or allotments.
- ❖ Avoid constructing new fences; remove unnecessary fences; and visually mark remaining fences to reduce sage-grouse collisions with fences.
- ❖ Facilitate permanent, voluntary grazing permit/lease retirement.

(see Braun 2006).

Invasive Plants

- ❖ Restrict activities on public land that facilitate the spread of invasive plants.
- ❖ Rapidly restore burned or disturbed sagebrush steppe to prevent incursion of invasive plants.
- ❖ Develop and implement methods for prioritizing and recovering sagebrush steppe invaded by nonnative plants.

CONCLUSIONS

We applaud the Interior Department's leadership to initiate a rangewide conservation strategy for sage-grouse, and to base the provisions of that strategy in sound science. Conserving large core habitats for sage-grouse can lead to many benefits, not just in terms of sage-grouse recovery itself, but also in terms of conservation of a variety of sagebrush-dependent wildlife, from the pygmy rabbit to the pronghorn antelope.

For many years, heavy industrial use as well as unsustainable levels of grazing have had heavy impacts on sagebrush habitats in many parts of the West, resulting in the decline of the sage-

grouse and many other species. Protecting the sage-grouse will help to lead the BLM and other agencies toward a better balance between resource extraction and land and wildlife conservation.

As you craft this strategy and the policies to implement it, we urge you to stand firm behind strong conservation measures that reflect the biological requirements of the bird as elucidated in the science. This strategy should establish core habitats where science-based protection measures are applied, ensure that protection measures are sufficiently rigorous to prevent grouse declines and encourage grouse recovery, and close the loopholes in the Wyoming core area strategy in all cases where the federal government has habitat management authority.

Thank you for your attention to this matter, and please let us know how we can be of further assistance.

Respectfully yours,

Erik Molvar
Wildlife Biologist

Briefing Materials for Western Governors' Association Winter Meeting - 12/12

1 message

Olson, Elizabeth <elizabeth_olson@ios.doi.gov>

Wed, Dec 4, 2013 at 7:11 PM

To: Sally Jewell - (b)(6)@ios.doi.gov, Laura Davis <laura_davis@ios.doi.gov>, Nicole Buffa <nicole_buffa@ios.doi.gov>, Katherine Rupp <katherine_rupp@ios.doi.gov>, Erin Walls <erin_walls@ios.doi.gov>
Cc: Zaina Javaid <zaina_javaid@ios.doi.gov>

Secretary Jewell,

Attached, please find briefing materials for next Thursday's Western Governors' Association Winter Meeting.

This memo has been uploaded to Google Drive, and is located in the folder marked "NM and NV Trip December 2013."

Thank you,

--

Elizabeth

EVENT MEMORANDUM FOR THE SECRETARY

WESTERN GOVERNORS ASSOCIATION WINTER MEETING

DATE: December 12, 2013
LOCATION: Mandarin Oriental Hotel, Oriental Ballroom, Las Vegas, NV
TIME: 10:10AM – 11:45AM PST
FROM: Sarah Greenberger, Sr. Advisor (202)208-6726; Terri Johnson, Acting Director, OIEA (202)208-7513

I. PURPOSE

You will attend the WGA Winter Meeting on December 12 in Las Vegas, NV. You will be one of two Keynote Speakers kicking off the Combating Western Wildfires Plenary Session and YOU will also participate in the Governors' Luncheon sage grouse discussion (a separate Luncheon Briefing Memo is prepared for you). You will also participate in the Closing Press Conference / Public Launch of Crucial Habitat Assessment Tool. Approximately 220 people are attending this year's winter conference.

II. PARTICIPANTS

- YOU
- Governors Attending the Conference:
 - John Hickenlooper (CO) – WGA Chair
 - Butch Otter (ID)
 - Steve Bullock (MT)
 - Brian Sandoval (NV)
 - Matt Mead (WY)
 - Gary Herbert (UT)
 - Jan Brewer (AZ)
 - Eruviel Avila, Governor of the State of Mexico
- DOI
 - Anne Castle, Assistant Secretary, Office of Water and Science
 - Lori Carmanian, Deputy Assistant Secretary, Office of Water and Science
 - Neil Kornze, Principal Deputy Director, Bureau of Land Management
 - Dan Ashe, US Fish and Wildlife Service Director
 - Michael Bean, Senior Advisor, Fish and Wildlife and Parks
 - Mike Connor, Commissioner, Bureau of Reclamation
 - Sarah Greenberg, Senior Advisor, Office of the Secretary
 - Jim Douglas, Director, Office of Wildlife Fire, DOI
- USG Attendees:
 - Robert Bonnie, Under Secretary of Agriculture, USDA
 - Jennifer Yezak, Director, Intergovernmental Affairs, USDA
- Other Attendees Representing DOI Interests

- Energy (solar, wind, natural gas, copper, petroleum, coal, and transmission interests typically attend.)
- Conservation - (Theodore Roosevelt conservation Partnership, National Wildlife Federation, National Association of Conservation Districts, The Nature Conservancy, The Wilderness Society, Environmental Defense Fund, and the Western States Water Council)

III. TALKING POINTS

Talking Points will be forthcoming from O/S Communications.

IV. BACKGROUND

The Western Governors' Association was established in 1984 and is an independent, nonprofit organization representing the Governors of 19 states and three US-Flag Pacific islands. Through their Association, the Governors identify and address key policy and governance issues that include natural resources, the environment, human services, economic development, intergovernmental relations and international relations. The current chairman of is Colorado Governor John Hickenlooper, who was elected in June 2013.

Current initiatives of the Association are energy generation; regional transmission expansion; weather and climate risk; water: supply, transfers, and drought; forest health; outdoor recreation and tourism; and wildlife corridors and crucial habitat.

V. ATTACHMENTS

- Profiles of Attending Governors (*below*)
- Information Memo regarding WGA Issues of Interest
- Information Memo regarding Sequester Impacts on Payments to WGA States

PROFILES OF ATTENDING GOVERNORS WGA

Governor John Hickenlooper (D-CO): WGA CHAIR - Governor Hickenlooper describes himself as a “recovering geologist now on loan to public service.” Elected in 2010, his priorities include making Colorado the model for energy policy by promoting an “all-the-above” energy policy that develops Colorado’s traditional and renewable resources in a balanced way, and with the highest ethical and public safety standards and making Colorado the healthiest state. Governor Hickenlooper serves in leadership positions with the National Governors Association and the Western Governors’ Association. He also serves as the Vice Chair of the Democratic Governors Association.

Governor Jan Brewer (R-AZ) – Ms. Brewer became governor in January 2009 following the resignation of Governor Janet Napolitano and reelected in 2010. She previously served as Secretary of State of Arizona from 2003 to 2009 and also served in the Arizona House of Representatives and State Senate from 1987 to 1996 including a four year period as Majority Whip. Arizona ranks as the nation’s second-largest solar market. In 2012 Arizona installed more utility-scale solar last year than any other state. Arizona now has edged out New Jersey for the number two slot, and trails only California in solar production.

Governor Butch Otter (R-ID) - Governor Otter has been Governor of Idaho since January 2007. He previously served three terms in Congress representing Idaho’s 1st District from 2001 through 2006. Otter was the longest serving Lieutenant Governor of Idaho, holding office from 1987–2001. He is the first Idahoan since statehood to win elections as both a United States Representative and as governor.

Governor Steve Bullock (D - MT) - Steve Bullock, Montana’s former attorney general, was elected governor in 2012. Since becoming Governor, Bullock has approved a request from Yellowstone National Park to move bison from a holding facility in the park, to an Animal and Plant Health Inspection Service facility for research and quarantine. He also supported the creation of the “Native Language Preservation Program,” a partnership between the State of Montana and tribal governments to preserve the languages of Montana’s Indian tribes and enhance the educational opportunities students have on Montana’s reservations, while protecting American Indians’ cultural heritage.

Governor Matt Mead (R-WY) - Governor Mead took office January 2011. He serves on the Council of Governors, a group of 10 governors chosen by the President to advise top federal officials on matters related to the National Guard and civil support missions. He also serves on the U.S. Homeland Security Advisory Council. In the National Governors Association, he is a member of the Natural Resources Committee. He is co-chair of the State and Federal Sage Grouse Task Force, which brings together federal officials and representatives of 11 western states for a regional conservation effort.

Governor Brian Sandoval (R-NV) - Brian Sandoval took office January 2011. He is a member of the Western Governors Association, National Governors Association, Republican Governors Association and the Hispanic Leadership Network. Governor Sandoval also serves as Vice-Chair of the NGA Health and Homeland Security Committee. He was recently appointed Chair-elect of the Education Commission of the States. Prior to becoming Governor, he served as a federal judge, and as the Nevada Attorney General. Sandoval was also the first Hispanic candidate elected to statewide office in Nevada.

Governor Gary Herbert (R-UT): WGA CHAIR - Gary Herbert became Utah's Governor in 2009. Before assuming the governor's office, he served as Utah's sixteenth Lieutenant Governor. Governor Herbert's priorities are education, energy, jobs and self-determination. The Governor currently serves as the Chair of the WGA and is a leading voice on energy issues in the West. He has made it a priority for the WGA to advocate for increased energy development on public lands.

Governor Eruviel Avila Villagas – State of Mexico - Governor Villegas is a member of the Institutional Revolutionary Party. He was Mayor of Ecatepec de Morelos twice, from 2003 to 2006 and from 2009 to 2012 and deputy of the State of Mexico's Congress from 1997 to 2000 in the LIII Legislature and from 2006 to 2009. He has been a teacher at UNITEC. He is author of the book "*The Creation of the Constitutional Court in the State of Mexico*" published in 2003, a joint publication of the Legislative Investigations Institute.

Robert Bonnie –Under Secretary of Agriculture for Natural Resources and Environment - Robert Bonnie was confirmed as Under Secretary in August, 2013. He previously served as a senior policy adviser for Secretary Vilsack. Bonnie worked for the Environmental Defense Fund from 1995 to 2008, holding a number of positions including vice-president of land conservation and wildlife and managing director of the Center for Conservation Incentives. He served on the board of visitors at the Duke University Nicholas School of the Environment and Earth Sciences, and was a member of the board of directors for the Piedmont Environmental Council and Scenic America.

INFORMATION MEMORANDUM FOR THE SECRETARY

DATE: December 4, 2013
FROM: Sarah Greenberger, OS, (202)208-6726; Terri Johnson, OIEA; Michael Bean, AS-FWP office; Gary Frazer, FWS; Pam Haze, AS-PMB; Amy Holley, PMB; Neil Kornze, BLM; Liz Klein, OS; Janet Lin, BLM; Maureen Foster, NPS
SUBJECT: Western Governors Association (WGA) Issues of Interest

WOLVERINE

In January, FWS proposed protections for the wolverine throughout the continental U.S. It opened a comment period that's set to end on December 10. Wildlife officials for Western states are asking for a 6-month extension of the listing deadline. FWS's position is that the available scientific evidence indicates that significant reduction of wolverine habitat is likely within 30 years.

Q: Is FWS considering a 6-month extension on the deadline for a final listing rule?

A: Yes. The Service is evaluating new comments received where we specifically requested comments on the issue of whether the climate models represent the best available science from which we can reasonably predict future effects. They will be making a decision shortly on whether a 6-month extension is warranted.

Q: Is the Service going to consider convening a panel of experts to look at the climate science and wolverine biology pursuant to the states concerns, as was requested by WY Governor Mead?

A: FWS is strongly leaning towards convening an expert panel to look at the climate science and wolverine biology unless information provided during the comment period makes this unnecessary.

Q: If wolverines are currently more numerous than they have been in the past 100 years, why were they proposed for listing?

A: Although wolverine populations have rebounded significantly since 1930, projections of future habitat under moderate climate change scenarios indicate that it is likely to be reduced by about 31% by 2045 and 63% by 2085. This projected loss would significantly affect the wolverines' ability to maintain populations in its current range and was the primary reason for our proposal.

Q: What is the status of any reintroduction or range expansion efforts?

A: Currently, the only reintroduction effort that is being considered is by the State of Colorado. It is very early and will require legislative approval along with a significant planning effort. The State has informed FWS that they are not interested in any reintroduction effort unless the wolverine is listed under the ESA, with a 10(j) rule to provide regulatory certainty and flexibility.

BLM ALASKA

North Slope/National Petroleum Reserve in Alaska (NPR-A)

Q: What's being done to implement the NPR-A Integrated Activity Plan ROD?

A: BLM-Alaska is forming the NPR-A Working Group. The Working Group is a key component of the ROD for the NPR-A's Integrated Activity Plan/Environmental Impact Statement (IAP/EIS) signed in February. The Working Group will provide a forum for ongoing, meaningful input

regarding the implementation of the NPR-A IAP/EIS, including oil and gas leasing, land use conflicts, and infrastructure projects supporting onshore and offshore oil and gas development, such as production facilities and pipelines. The working group will consist of representatives of North Slope local governments, tribal entities, and Alaska Native corporations, to include the North Slope Borough, Inupiat Community of the Arctic Slope, Arctic Slope Regional Corporation, and other similar local entities as appropriate. The state of Alaska will participate.

Q: Is there any oil and gas development in the NPR-A?

A: On July 22, an application package was filed by ConocoPhillips, Alaska, Inc. for the first production well on BLM-managed public lands in the NPR-A. BLM-Alaska will prepare a supplement to the 2004 Alpine Satellite Environmental Impact Statement for this proposed development in the Greater Mooses Tooth Unit 1.

BLM ARIZONA

Renewable Energy

Q: What renewable energy and transmission projects are moving through the DOI pipeline?

A:

- (1) The Hyder Valley Solar Energy Project has a draft EIS scheduled for late-2014. The project would generate up to 325 MW using concentrated solar thermal technology and include storage capability.
- (2) The Maricopa Solar Park Project has begun the scoping process—this photovoltaic project would generate 300 MW.
- (3) The Sun Valley to Morgan Transmission Project final EIS was issued in July 2013, and the ROD is pending resolution of 2 protests. The line is proposed to run for 38 miles, with about 8 of those miles on BLM land.
- (4) Two major lines – SunZia and Southline – are proposed to originate in New Mexico and cross into Arizona. BLM New Mexico is the lead for both projects. The record of decision for SunZia is pending protest resolution. The draft EIS for Southline is anticipated in late 2013 or early 2014.

Q: What is BLM Arizona doing to implement the Solar Programmatic EIS and the Restoration Design Energy Project (RDEP)?

A: BLM Arizona is following the national lead in implementing the Solar PEIS. The first stage of that is the Regional Mitigation Strategy which will create regional mitigation plans for each solar energy zone. The proposed Maricopa Solar Park project site is outside a Solar PEIS-designated solar energy zone (SEZ) and thus required a variance—the first nationally to get variance approval. The Maricopa Solar Park is also interesting because it is proposed to be built in a renewable energy development area (REDA) established under Arizona's RDEP. RDEP classifies 192,000 acres of BLM-managed land as REDAs. Land in REDAs are considered to be suitable for solar or wind energy development, based on preliminary studies. The designated REDAs are outside SEZs.

BLM COLORADO

Q: How is the BLM responding to the potential Gunnison sage grouse listing?

A: The BLM Gunnison Field Office is working to implement the Candidate Conservation agreement for Gunnison sage grouse within the Gunnison Basin. The BLM is also reviewing and providing comments for the FWS's listing package. In November, the FWS conducted public hearings on the listing of the species.

Q: What is the status of Thompson Divide and White River National Forest Oil and Gas leasing?

A: The Thompson Divide is 221,500 acres of primarily National Forest land west of Carbondale, Colo (Northwest District). Two companies – SG Interests and Ursa Resources – have submitted separate development proposals in this area. In April, the BLM approved the companies' request to suspend the leases, which were set to expire May 31. In granting the request, the BLM has identified the need to remedy a defect when the leases were issued – the lack of a BLM NEPA analysis – and has decided to undertake additional NEPA analysis to determine whether the leases should be reaffirmed or subject to additional mitigation measures for site-specific development proposals or voided. The Notice of Intent is anticipated to publish in December or early 2014, initiating a public scoping process anticipated to be very controversial.

BLM IDAHO

Q: What is the Gateway West Project and what is the status of the project?

A: The Gateway West project would construct nearly 990 miles of high-voltage transmission lines across southern Wyoming and southern Idaho to add 1,500 to 3,000 MW of capacity. In response to the Final EIS, Idaho Governor Otter noted concerns about land use plan amendments and sage grouse management, all of which were rejected by the both the BLM Idaho State Director and, on appeal, the Director of the BLM.

Q: What is the timeline for the sub-regional Sage-grouse conservation DEIS, and what is the preferred alternative?

A: In a joint effort with the Forest Service to conserve the Greater Sage-Grouse and its habitat across 10 Western states, BLM issued a draft land use plan amendment and EIS on November 1. It is now open for a 90-day comment period. The Draft Idaho and Southwest Montana Sub-Regional Greater Sage-Grouse LUP Amendment/EIS would amend 21 BLM resource management plans and 8 Forest Service land management plans covering BLM and National Forest lands in Idaho and Southwestern Montana. In 2011, the BLM and the Forest Service joined forces to develop, analyze, and incorporate coordinated, long-term conservation measures and actions for the Greater Sage-Grouse in their land use plans. These planning measures must be incorporated into land use plans by the end of 2014, to give the FWS time to evaluate them before making a court-ordered, final listing decision in 2015. The BLM and the Forest Service have identified Alternatives D (Idaho and Southwest Montana sub-regional alternative) and E (Idaho Governor's Alternative) as co-Preferred Alternatives; they and all alternatives will undergo public comment and review.

BLM MONTANA

Greater Sage-Grouse Habitat Conservation

Q: What's the status of planning initiatives for the Greater Sage-Grouse in MT, ND, and SD? Is the BLM participating in Governor Bullock's Greater Sage-Grouse Advisory Council activities?

A: Habitat conservation for the Greater Sage-Grouse is being addressed in the BLM-Montana/Dakotas in four Resource Management Plan (RMP) revisions and three RMP amendments. BLM staff attended Council meetings in Helena as the group developed its draft Recommendations. The public comment period closed December 4. The BLM will make every effort to consider the state's final strategy during its selection of a proposed alternative for each of our Montana/Dakotas plans, as a way to strive for similar management actions across ownership boundaries, but Montana's strategy is not intended to provide direction for management of BLM-managed lands, just as our plans do not direct management of state or private lands.

Q: What is the BLM doing to improve the Section 368 energy transmission corridors plan?

A: Upgrading our nation's electrical grid is an important component of the President's Climate Action Plan and a major priority of the Administration. The President has identified seven high-priority transmission lines for expedited permitting, and DOI is leading on 5 of those. Already, DOI has approved the Susquehanna-Roseland transmission line in PA and NJ, and last month the BLM signed a ROD for the Eastern portion of the Gateway West transmission line that will allow the project to move forward while the BLM takes additional time to resolve siting concerns in Southwestern Idaho. The BLM continues to work on 3 additional Presidential priority lines, as well as a dozen or so other major projects across the West.

The Administration has also taken a more systematic look at how we permit these long, multi-jurisdictional projects with an understanding of the landscape. Under the leadership of CEQ, we are moving forward on developing an Integrated Interagency Pre-application process that will make this sort of coordination and cooperation the regular way of doing business.

The Administration is also working to improve the West Wide Energy Corridors completed by the BLM in 2009 and authorized by Section 368 of the Energy Policy Act of 2005. This upfront landscape-level planning is smart for land managers, communities, and developers alike, but it must be done in a collaborative way that considers the interests of states, communities, and stakeholders. A Federal interagency team is working to assess the utility of existing designated energy corridors and complete regional assessments that will examine the need for additions, deletions, and revisions to the existing energy corridors. In 2014, the BLM will look to a few key locations to focus on doing this cooperatively and collaboratively, with additional regional assessments following based on appropriations. I look forward to working closely with the western Governors to ensure that we can develop meaningful plans that avoid conflict in the first place.

BLM NEVADA

Q: What is the BLM Nevada doing to protect sage-grouse habitat?

A: BLM NV is undertaking a sub-regional environmental impact statement (EIS) to address Greater sage-grouse conservation. This analysis will guide management decisions to protect and improve existing habitat. The draft Nevada-Northeastern California Sub-region EIS for Greater-Sage grouse was released to the public in October 2013 and comments are due to BLM by January 29. A series of public workshops are being held across the area to raise awareness of the issue and to provide an understanding of the types of management actions that could be used to protect the sage-grouse. The BLM and Forest Service manage approximately 17.7 million acres of sage grouse habitat within the Nevada-Northeastern California Sub-region.

BLM NEW MEXICO

SunZia Southwest Transmission Line Project

Q: What is the status of the SunZia Transmission Line Project?

A: SunZia has proposed to construct, operate, and maintain two parallel overhead 500 KV transmission lines to tap into a high-potential wind energy area in central New Mexico. If built, the project would enable the development of currently stranded energy resources, including wind and solar, by creating access to the interstate power grid and adding 3,000 to 4,500 megawatts of electric capacity to the West. The BLM is the lead Federal agency for the development of the EIS/RMPA for the proposed Project. The ROD was expected during the fall of 2013. However, Senator Heinrich requested that the DoD fund a study by M.I.T. Lincoln Laboratory to look at concerns raised by White Sands Missile Range (WSMR) and examine potential changes to test protocols that would allow the DoD to continue its missions in the presence of the new transmission line. The results of this report are expected in January or February 2014. The report will determine if BLM issues the ROD based on its previous analysis or reopens the public process to consider new routes for analysis. The proponent has maintained the position that continued delays, as would be required for new route analysis, would kill the project.

Wolves on Public Lands in New Mexico

Q: How will the expanded area for direct initial release of Mexican Grey Wolves (MGW), one of the 2013 revisions to the 1998 final rule, impact public land in NM?

A: Expanding the direct initial release area will increase the potential for release of MGWs that could disperse onto BLM grazing allotments on the Socorro and Las Cruces Field Offices. Permittees are anticipated to have concerns about: Livestock depredation; Physiological impacts on livestock (stress); Changes in forage use; Need for additional ranch labor and supplies; Potential for negative wolf-human interactions; and Potential for negative wolf-dog interactions

BLM OREGON/WASHINGTON

Q: What is BLM Oregon doing to help conserve the Greater Sage-Grouse?

A: Maintaining and restoring sagebrush landscapes on public lands is the BLM's primary means of conserving sage-grouse populations and one of its most important current programs. BLM Oregon is working to restore sagebrush habitat in the area of the 2012 Miller Homestead fire which burned more than 160,000 acres in southeast Oregon, including 147,000 acres of BLM lands.

BLM Oregon has also been working with FWS and the Oregon Cattlemen's Association on a Candidate Conservation Agreement (CCA) as part of ongoing sage-grouse conservation efforts. The umbrella agreement, signed in May of 2013, highlights the commitment of the BLM and our partners to work together in finding ways to balance economic and conservation priorities. Individual permittees can now enter into CCAs under the umbrella agreement to implement voluntary conservation measures for Greater sage-grouse.

BLM UTAH

November 2013 Oil and Gas Lease Sale

Q: What is the economic impact of the sale and development of O&G leases on UT public lands?

A: In FY 2012, the State of Utah received more than \$164 million from royalties, rentals and bonus bid payments for federal minerals and energy development, including oil and gas. The BLM-Utah State Office currently administers almost 4 million acres of public mineral estate that is leased for oil and gas development. The extraction of oil and gas resources and their introduction into the market generated more than \$5.5 billion in direct economic benefits and more than \$8.3 billion in total economic impacts in FY2012. In fact, since FY2010, the extraction and development of oil and gas from BLM-administered mineral estate in Utah has generated \$15.1 billion in direct economic benefits and \$22.7 billion in total economic impacts.

Q: How did the BLM Utah determine that 44,021 acres of public lands in Utah were appropriate for oil and gas leasing and responsible development for the Nov 19 oil and gas lease sale?

A: Nearly 1.1 million acres in the Green River District were nominated by industry for oil and gas leasing. However, after evaluating these lands for occupied Greater sage-grouse habitat and areas included in proposed Master Leasing Plans and to ensure statutory availability for leasing, the preliminary lands list sent for further analysis contained 664,756 acres. In keeping with leasing reform standards and considering field office workloads, the Green River District Office subsequently deferred 521,339 acres of the lands contained in the preliminary list. After completing the environmental analysis required by the May 2010 oil and gas leasing reform, BLM Utah posted a Notice of Competitive Lease Sale in August that contained the proposed final parcel list for the November 2013 oil and gas lease sale. The posted final parcel list included 82 parcels covering 143,981 acres in the Price and Vernal Field Offices.

Posting the notice initiated a 30-day public protest period that closed in September. The BLM Utah received 431 timely filed protests, including those from the Southern Utah Wilderness Alliance, Sierra Club, Natural Resources Defense Council and Rocky Mountain Wild. Protests stated concerns with air quality, climate change, sensitive species, lands with wilderness characteristics, visual resources, and the Nine Mile Canyon Area of Critical Environmental Concern.

After further consideration, BLM Utah deferred an additional 99,960 acres from the sale for a range of reasons, including but not limited to:

- concerns with cultural resources;
- potential impacts to the Old Spanish Trail;
- potential impacts to the Graham's and White River penstemon; and
- non-Wilderness Study Area lands that have been inventoried and determined to contain wilderness characteristics but are not managed for their wilderness values.

The BLM sold 29 of the offered parcels, receiving \$3,340,266 in bonus bids. The sale also brought in \$54,724 in rental fees and \$4,495 in administrative fees, grossing \$3,399,486 in total receipts.

Q: Why did the BLM-Utah Nov. 19 oil and gas lease sale receive so much public/media attention?

A: The sale received heavy media attention due to: 1) activist groups and citizen concerns that 51 proposed parcels intersected with citizen-proposed wilderness included in proposed Red Rocks Wilderness legislation or were located in the vicinity of Utah's San Rafael Swell; and 2) industry and county government concerns that the BLM had deferred too many parcels from the 1.1 million acres initially nominated by industry.

BLM WYOMING

BLM fracking rule

Q: Has the State of Wyoming taken a position on the BLM's fracking rule?

A: Governor Mead may ask that Wyoming's fracking rule be deemed in compliance with the proposed Federal rule because he feels Wyoming's fracking rule already meets or exceeds the standards in the proposed Federal rule.

Q: Will the BLM determine that Wyoming's fracking rule is in compliance with the proposed Federal rule?

A: It's really too soon to say since the rule is not final, but we appreciate Wyoming's willingness to work with the BLM in the formation, implementation, and execution of the BLM's rule regarding hydraulic fracturing. While Wyoming's regulations meet or exceed the standards in the proposed Federal rule on certain provisions, there are some differences to reconcile before we can reach any conclusions

Oil and gas issues

Q: How have budget issues affected the oil and gas program in WY?

A: The BLM Wyoming is consolidating staffing levels by eliminating or not filling vacant positions, and has reduced funding support for the inspection and enforcement program since Energy Policy Act funding for energy pilot offices is due to expire in 2015. Budget funding impacts have also caused the elimination of four assistance agreements with State agencies designed as cooperative efforts to accelerate oil/gas drilling permit processing. As a result, oil/gas drilling permit processing will take longer in Wyoming. BLM is reviewing possible alternatives to replace the shortfall in oil/gas funding with the future elimination of receipts (i.e. extend 9141 funding by legislation, increase oil/gas program revenues, or reduce expenses/cost savings). Because of other budget issues, such as a reduction in MLR funding due to the sequester, BLM Wyoming is following the national priorities: 1) inspection and enforcement, 2) processing applications for permits to drill (APDs), and 3) oil and gas leasing. Total funding reductions in the BLM Wyoming oil and gas program since 2010 total about \$5.2 million for an overall reduction of 15%.

Wild horses

Q: Why is the BLM Wyoming conducting a wild horse gather?

A: The BLM must remove wild horses that have strayed onto Rock Springs Grazing Association (RSGA) private lands under an April 3, 2013, consent decree approved by a U.S. District Court Judge. The consent decree resolves *Rock Springs Grazing Assoc. v. Salazar*, requiring removal of wild horses from private lands. The BLM must gather and remove horses in Salt Wells Creek/Adobe Town (AT/SW) in 2013, Great Divide Basin in 2014 and White Mountain in 2015. The AT/SW gather commenced on November 22, 2013.

BLM FIRE AND AVIATION TOPICS

DOI's primary goal each fire season is to ensure safety for firefighters and the public. Unfortunately, 34 firefighters lost their lives in the line of duty in 2013, the most since 1994. The number of fires this year stands at about 44,000, which is about 65% of the ten-year average. Much the same is true of acres burned (about 4.1 million), roughly 58% of the decadal average. It's worth noting that the reason for the lower figures is the very slow fire seasons in the Southeast and Southwest. In other areas, fire season was within the bounds of a normal season. As of late November 2013, DOI has spent about \$394 million on fire suppression in 2013.

Q: Did the budget sequester harm firefighting efforts in 2013?

A: We were fortunate in one respect: that the national fire season was lighter than expected in some areas. However, in August, we did reach the highest of what we call "preparedness levels" for the first time in 5 years, so there was a time when fire activity was intense. The Forest Service estimates that it employed about 500 fewer firefighters this year because of budget cuts directly related to the sequester. The four DOI agencies with fire programs estimate the number to be about 230. When the western fire season peaked the third week of August, would it have been good to have another 730 or so firefighters available? Yes. We give great credit to firefighters and fire managers at all levels for the work they did with the resources they had. But a better, more suitable funding means for wildfire management needs to be adopted. Across-the-board mandatory budget cuts are not the best way to protect life, property, and natural and cultural resources from wildfire.

Q: The DOI budget for reducing fuels dropped substantially in 2013 and is scheduled for even greater cuts in the President's 2014 budget. You've been quoted as saying the nation cannot afford to allow fuels to build up again and thereby increase the danger from wildfires. How do you reconcile those two apparently contrasting points-of-view?

A: Our nation is in a difficult budget situation and tough choices need to be made, and fire management is not exempt from those discussions. But when it comes to fire management, an ounce of prevention is worth a pound of cure. And we have the data now to demonstrate that fuels reduction work is effective at slowing the growth of wildfires. We need to figure out ways to efficiently manage fuel loads and thereby reduce the risk from wildfire to communities and natural resources. We are working with our partners and within the Administration to come up with a better approach to address the problem.

RECLAMATION ISSUES

Colorado River Basin Hydrology

Despite dry conditions, Reclamation was able to make the required delivery commitments, including environmental releases, in the Upper Basin in water year 2013 and anticipates meeting those commitments in 2014. In accordance with the 2007 Interim Guidelines for the coordinated operation of Lake Powell and Lake Mead, the annual release from Lake Powell will be 7.48 million acre-feet (maf) in water year 2014. This is the first time since the filling of Lake Powell that its annual release will be less than 8.23 maf. Reclamation met all delivery obligations to U.S. water users in the Lower Basin and to Mexico in 2013 and all delivery obligations in the Lower Basin will be met in 2014. Throughout history, there has never been a shortage condition determined in the Lower Basin; however, over the next 5 years, the potential for shortage exists, with probabilities ranging from less than 1% in 2015, to 44% in 2016 and 54% in 2017 and 2018.

Quagga Mussel Infestation and Control on the Lower Colorado River

Three major Reclamation facilities on the lower Colorado River – Hoover, Davis, and Parker dams – are currently impacted with heavy infestations. This mussel colonization has increased operations and maintenance activities and associated costs. Action plans to address the presence of these mussels are in place for all three facilities and the annual budget for mussel control ranges between \$700 thousand to \$1.2 million. Current mussel control efforts are focused on testing and development of a variety facility protection technologies and strategies that are environmentally safe. To date, restrictions or interruptions of water and power deliveries have not been required at these facilities due to mussel infestation.

NOTE: You may be asked by Gov. Butch Otter of Idaho about Reclamation's quagga mussel control efforts at Lake Mead. The concern is infected boats trailered from Lake Mead to Idaho waters.

A: Quagga mussels have not been found in Idaho waters to date, and the Idaho State Department of Agriculture has established a watercraft inspection station program to inspect boats from impacted states. The technology to control invasive mussels in large open water bodies such as Lake Mead has not been developed; therefore, Reclamation's focus is on facility protection.

Great Plains Rural Water Supply Program (MT, ND, SD, MN, IA)

Since 1980, Congress has directed Reclamation to construct 13 individual rural water supply projects at a combined cost of more than \$2.3 billion. Projects have been authorized with varying local cost shares ranging between 0 and 25 percent. Federal law directs Reclamation to provide O&M funding on two projects authorized to benefit Tribes; including Garrison Diversion Unit in North Dakota and Mni Wiconi ("mini witch-OH-nee") Rural Water System in South Dakota. Indian O&M costs rise as new project features are constructed – consuming an increasing share of Reclamation's overall budget allocated to rural water projects.

Rural Water Supply Program Draft Criteria

In 2012, Reclamation received comments from proponents of each of the currently authorized projects on a draft criteria prioritization process to rank authorized rural water projects. The final criteria will be issued as part of Reclamation's Rural Water Assessment Report to Congress, which is currently under review by the Commissioner. BOR staff met with sponsors to describe the changes made in response to comments.

Q: Why is BOR using the ability of a non-Federal sponsor to contribute funds in excess of the authorized non-Federal cost share as a criterion for prioritizing funds?

A: Reclamation currently supports seven active Rural Water construction projects with a backlog of over \$1.3 billion. In times of constrained Federal budgets, non-Federal funding in excess of the minimum contributions originally contemplated in project authorizations helps to complete projects and provide water and other benefits more quickly.

Red River Valley Water Supply Project (ND)

In 2007, BOR and the State of North Dakota completed the Red River Valley Water Supply Project Final EIS. The preferred alternative would import water from the Missouri River basin for release into the Red River via the Garrison Diversion Unit (GDU) Principal Supply Works. Because the Project was determined to be inconsistent with the policies and programs of the President by OMB, an ROD has not been signed. The Dakota Water Resources Act requires that if a Missouri River import option is selected, the project must be expressly authorized by the Congress. In 2011, the Garrison Diversion Conservancy District (District) and former Senator Kent Conrad (D-ND) asked Reclamation what new Federal authorities would be needed, if any, in order for the State to construct the preferred alternative that could use the GDU Principal Supply Works or any other Federal facilities. In 2012, the District began planning on a State alternative that would deliver a water supply to the valley without the use of GDU Principal Supply Works or federal funding assistance. You visited with Governor Dalrymple earlier this year. The Governor followed up with Commissioner Connor on October 28 and it was a good conversation, with the Governor planning to look further into legislative alternatives with the ND delegation requiring less of a Federal role and possibly taking advantage of existing unused water and facilities.

Columbia River Treaty (WA)

After leading a multi-year stakeholder review of the Columbia River Treaty, the U.S. Entity (Bonneville Power Administration and Army Corps of Engineers) plans to present a regional recommendation to pursue modernization of the Treaty to the Department of State in December 2013. DOI recognizes the significant benefit to the region of a modernized Treaty that includes additional purposes like ecosystem function; addresses additional regional needs like water supply, navigation, and recreation; ensures acceptable levels of flood risk; adapts to climate change impacts, and fairly values and compensates the actions that one country takes on behalf of the other. A successful treaty modernization effort will balance the trade-offs necessary to optimize Columbia River flows among the new or expanded purposes and interests proposed. Interior appreciates the tremendous effort put forth by the U.S. Entity and the Sovereign Review Team members during the review process. Interior supports continued sovereign and stakeholder involvement in the treaty modernization process moving forward into 2014.

Yakima Basin Integrated Water Resource Management Plan (WA)

Governor Inslee is expected to seek DOI's commitment to provide financial support for implementing the Yakima River Basin Integrated Water Resource Management Plan (IP). The IP, which is a basin-wide restoration plan, calls for the balanced implementation of a broad-range of activities organized around seven elements: reservoir fish passage; structural and operational changes to existing facilities; surface water storage; groundwater storage, habitat/watershed protection and enhancement enhanced water conservation, and market reallocation. The total cost for implementing all elements of the IP is estimated to be between \$3 and \$5 billion (plus annual operation and maintenance costs estimated at \$10 million). Implementation is expected to take place over a 30-year period. The Washington State Legislature recently passed a policy bill supporting the IP which calls for a 50/50 cost-share with Federal, local, and private organizations for the entire IP project and a 2013-2015 state budget that includes \$132 million for the IP. The State is providing \$26M to Reclamation to continue exploration and refinement of infrastructure projects. Reclamation seeks a balanced approach to advancing Integrated Plan projects and proposes that for the near term FY2014 through FY2017 that we continue to support existing

conservation and tributary habitat projects and focus on advancing Kachess Pumping Plant to meet drought year irrigation supply and continue in our long term commitment to Cle Elum Fish Passage Facilities to benefit Yakima River fisheries. To date, the Department has provided about \$5M for IP activities. Reclamation's FY2014 budget request includes \$7.5M.

A: I am committed to continuing the cooperative relationship with the State of Washington to collaboratively further the goals of the IP, including due consideration to funding activities in the Yakima Basin as part of the FY2015 President's budget request.

INFORMATION MEMORANDUM FOR THE SECRETARY

DATE: December 4, 2013
FROM: Rhea Suh, AS-PMB, (202) 208-1927
SUBJECT: Sequester Impacts on Payments to States and WGA

YOU will be asked by governors at the WGA meeting about the status of funds that were sequestered in 2013 from payments to states and if they will become available in 2014.

BACKGROUND

The Budget Control Act of 2011, which was amended by the American Taxpayers Relief Act of 2012, set statutory limits for spending for ten years beginning in FY 2013. If spending levels exceed the limits, automatic spending reductions are triggered and discretionary and mandatory accounts are sequestered.

- Current spending levels in FY 2014, dictated by the continuing resolution that is in place through January 15, sustain the 2013 sequester to discretionary spending.
- Additional reductions are expected if Congress does not take action to find alternative reductions to achieve spending limitations.
- The spending limits established for 2014 by the Budget Control Act would reduce spending in mandatory accounts that are the source for most of the payments to states.
- If there is a sequester, under the normal operation of this process, the Office of Management and Budget would determine if spending has exceeded the applicable limits 15 days after Congress adjourns to end a session or about the middle of January. If spending exceeds the limits, sequester would be ordered and implemented.
- DOI is acting prudently to prepare for a sequester and is holding back 8% of the estimated 2014 amounts from mandatory spending allocations.

EXEMPT VS. NON-EXEMPT

The Balanced Budget Enforcement and Emergency Deficit Control Act of 1985 (BBEDCA), as amended by the Budget Control Act of 2011 is the basis for sequester implementation.

- The BBEDCA specifies the exemption of accounts from sequester. It exempts from sequester trust funds that receive revenues from excise taxes. It does not exempt the spending accounts from which funding allocations to states are made.
- For example, the Aquatic Resources Trust Fund that receives revenues from motorboat fuels taxes and fees on sport fishing tackle are exempt from sequester.
- The Sport Fish Account that funds payments to states is not exempt from sequester.

2013 SPENDING IMPACTS

For 2013, the sequester reductions resulted in cuts of 5.1 percent to DOI mandatory accounts.

- The 2013 sequester included reductions to mandatory funds including Mineral Leasing Act payments, Gulf of Mexico Energy Security Act (GOMESA) payments, and Sport Fish and Federal Aid accounts, and many others. The reductions to Sport Fish and Federal Aid was as follows:
 - Federal Aid in Wildlife Restoration \$29.1 million
 - Sport Fish Restoration \$23.6 million
- Except for the Mineral Leasing Act payments we do not have a final legal determination as to whether the amounts sequestered in 2013 from these accounts will become available in 2014. We are working on this matter and hope to have an answer soon.
- The community (States and the Council) is aware that the funds were made available in the year following sequester in 1986 and 1989 (during earlier sequester events). They presume based on precedent that funds sequestered in 2013 would become available in 2014. We have developed a very robust case to support this position.

CONFERENCE COMMITTEE

As a part of the agreement brokered to end the government shutdown and pass the continuing resolution, the House and Senate agreed to convene a Budget Conference Committee to be led by Senate Budget Chairwoman Patty Murray, D-Washington and House Budget Chairman Paul Ryan, R-Wisconsin.

- A Budget Conference Report is due December 13, 2013 that will serve as the template for spending allocations for FY 2014 full year appropriations.
- Changes in taxes and mandatory programs are anticipated to achieve the savings required by the Budget Control Act. In the absence of a plan that can achieve the mandated savings, sequestration will be triggered in January 2014.

TAKE AWAY MESSAGE

- YOU are following progress closely on the House and Senate negotiations on the budget situation for FY 2014.
- We need to act prudently and prepare for sequester, holding back 8% of the 2014 funds. If there is no sequester these funds would be allocated.
- We are working through the process to get a final determination about whether the funds that were sequestered in 2013 will become available in 2014.
- We will keep the governors informed as we learn more.

**STATEMENT OF SALLY JEWELL
SECRETARY OF THE INTERIOR
BEFORE THE
COMMITTEE ON ENERGY AND NATURAL RESOURCES
UNITED STATES SENATE**

June 6, 2013

Chairman Wyden and Ranking Member Murkowski, thank you for inviting me to appear before your Committee to discuss the programs and activities of the Department of the Interior. I am happy to be here today.

When I appeared before you at my confirmation hearing in March I talked about the scale of the duties of the position and the incredible diversity in the Department's mission. Every day Departmental employees are working to preserve our nation's great heritage and history, manage our federal lands, waters, and other resources, ensure the delivery of water for diverse users, empower insular communities, and support Native American communities. Since that time I have come to see and truly appreciate the astonishing breadth of the issues and responsibilities located within this one Department, many of which fall under the jurisdiction of this Committee. The Department's complex mission affects the lives of all Americans; nearly every American lives within an hour's drive of lands or waters managed by the Department.

During the past 5 weeks my duties have taken me from south Florida and the Arthur R. Marshall Loxahatchee National Wildlife Refuge and Everglades National Park, where I saw, firsthand, Everglades restoration projects underway; to Boise, Idaho, where I met with a group of smokejumpers – some really tough firefighters – at the National Interagency Fire Center and learned how our federal firefighters are deployed when a wildfire is reported; to the Gulf of Mexico where I viewed an offshore drilling rig and a production platform with an inspector from the Bureau of Safety and Environmental Enforcement; and to Portland, Oregon, where I signed an agreement with the States of Oregon and Washington to expedite the review and permitting of energy generation, transmission, and other infrastructure development.

The Department's bureaus serve as stewards of the nation's parks, wildlife refuges, wild and scenic rivers, seashores, and national monuments and recreation areas, and as the keeper of the history of this country. We share responsibilities to protect and advance the role of public lands

and Indian lands. The lands and resources we manage are also a huge economic engine, powering our economy through energy development, tourism and recreation, logging, grazing and other uses. The Department oversees the responsible development of 23 percent of U.S. energy supplies, is the largest supplier and manager of water in the 17 western states, maintains relationships with 566 federally recognized tribes, and provides services to more than 1.7 million American Indian and Alaska Native peoples.

In 2012, there were almost 500 million visits to lands managed by the Department. Recreational visits to our lands contributed an estimated \$49 billion in economic benefits to local communities in 2011. We collect nearly \$13 billion annually through mineral extraction and other activities, and share nearly \$5 billion of these revenues annually with states, tribes, counties, and other entities. An additional \$2 billion of our budget is used in local communities across the nation through contracts for goods and services. In many of your states, the revenues we share from energy production and other activities are a critical component of the local economy. Overall, the Department estimates the exploration and production of oil, gas, coal, hydropower, and minerals on federal lands contributed nearly \$275 billion to the U.S. economy in 2011.

It is with this fitting introduction to the Department's significant responsibilities that I come before you again to discuss the major programs and highlight some of the activities at the Department and my goal to ensure that it continues in its role as a resources manager, a job creator, and a partner to tribes and state and local governments.

Strengthening Our Energy Future

As I noted back in March, I believe that rapidly advancing technologies, smart policies, and a commitment to the President's "all of the above" energy strategy will allow us to continue with the safe and environmentally responsible expansion and diversification of our nation's energy production, further cutting our reliance on foreign oil, and protecting our land and water at the same time. We have been pushing forward with that goal.

Onshore Energy Development

Onshore, the Bureau of Land Management held 31 oil and gas sales last year and is scheduled to hold more than 30 this year. Oil production from federal onshore lands is at its highest level in

over a decade. The amount of producing acreage continues to increase, and was up by about 200,000 acres between 2011-2012. And the onshore leasing reforms put in place in 2010 resulted in the lowest number of protests in ten years - fewer than 18 percent of parcels offered in FY 2012 were protested, reducing costs and further speeding development.

The Administration is making more coal available as well, with the number of producing acres rising 4 percent from FY 2009 to FY 2012. The amount of coal the agency leased last fiscal year is the highest since FY 2003. And through the Office of Surface Mining Reclamation and Enforcement, we are working to ensure that communities impacted by coal mining and the environment are protected during mining. We are also pursuing the reclamation of priority abandoned mine sites, with a goal of reducing the number of remaining dangerous abandoned mine sites nationwide.

I have heard from a number of members about the need for better onshore permit processing. Secretary Salazar instituted reforms to the BLM's programs, including transitioning to an electronic system that will automate and streamline the application process and significantly reduce the time for approval of new projects. From FY 2006 to FY 2012, the amount of time it took for all BLM field offices to process and approve complete drilling applications fell by 40 percent and the number of inspections completed by all BLM offices rose 73 percent. We are headed in the right direction and will continue to look at procedures, processes, and the regulatory framework to identify areas for further reform.

The Department also published several weeks ago an updated proposed rule on hydraulic fracturing on public and Indian lands. These are common sense updates to 30-year old regulations that will increase safety in oil and gas production on public lands while, at the same time, provide flexibility and fostering coordination with states and tribes. This is an important step in ensuring that the public has full confidence that the right safety and environmental protections are in place.

Alaska is an important component of our nation's energy strategy. The Arctic holds substantial oil and gas potential, but also presents unique environmental and operational challenges. The BLM recently finalized a new comprehensive plan – the first ever – for the 23-million acre National Petroleum Reserve – Alaska. This balanced plan provides access to over 70 percent of

that area's estimated oil potential and provides for an important east-west corridor that could be needed for pipeline infrastructure to eventually carry Chukchi Sea oil to the Trans-Alaska pipeline. At the same time, it will protect the vital subsistence resources of Alaska Natives and the habitat of world-class wildlife populations.

I recently appeared before the Senate Committee on Indian Affairs and noted at that hearing that the Department is committed to assisting Indian tribes in expanding renewable, reliable, and secure energy supplies on Indian lands and safe and responsible oil and gas development. Including Indian Country in the "all of the above" energy strategy will help increase domestic energy supplies and improve the economies of many Indian tribes and Alaska Native villages.

Offshore Energy Development

We also are moving forward with oversight of the safe and responsible development of our offshore oil and gas resources, (b) (5). The first two sales of the 2012-2017 Five Year Program were held in the Gulf of Mexico in November 2012 and March 2013, and resulted in over \$1.3 billion dollars in industry investment and government revenue through bidding on 436 tracts. At the end of April we announced the Proposed Notice of Sale for Lease Sale 233, scheduled for this August, making available 21 million acres offshore Texas. With this sale, all unleased acreage in the Western Gulf of Mexico will be available for leasing.

Over the past several years, since the Deepwater Horizon oil spill, the Department has reformed the way development on the Outer Continental Shelf takes place. The Bureau of Safety and Environmental Enforcement has implemented safety and environmental management system regulations; issued a new drilling safety rule to refine safety reforms and strengthen requirements; taken steps to hold contractors accountable for their actions offshore; conducted two full-scale capping stack deployment exercises to respond to potential future well blowout scenarios; and provided new guidance on oil spill response plans.

The Bureau of Ocean Energy Management has also significantly reduced the time for review of exploration and development plans for deepwater drilling in the Gulf of Mexico, with time from submission to approval down almost 35 percent from the period between October 2010 and October 2011.

BSEE has achieved similar, significant improvements in the processing of deepwater permits, with the average time for review reduced by about 37 percent between 2011 and 2012. This has contributed to the approval by BSEE of 112 new deepwater well permits, higher than in either of the two years preceding the Deepwater Horizon oil spill. There are more floating deepwater drilling rigs working in the Gulf of Mexico today than prior to the Deepwater Horizon spill, and we expect drilling activity to steadily increase over the coming year. And both BOEM and BSEE are working to modernize and streamline their data systems and the processes for the submission and review of plans and permits. When completed, this investment will achieve significant gains for both the rigor of analysis and the efficiency of review, saving time and money and enhancing accountability.

Science continues to drive decision-making for the OCS leasing program. BOEM conducts rigorous scientific and environmental analysis to support all stages of the OCS program, partnering with academic institutions and other federal agencies to produce top-tier applied research to support decision making. BOEM also conducts thorough assessment of resource potential to identify areas of the OCS that are most promising for exploration and development. Last year BOEM began a Programmatic Environmental Impact Statement to support permitting decisions for geological and geophysical surveys that will be used for assessing energy resource potential off the coast of the Mid and South Atlantic. The Department also uses the results of exploratory drilling to improve its knowledge of the resource potential. As part of this process, the Department oversaw the first new exploratory activity in the Alaskan arctic in a decade, with Shell Oil Company beginning limited preparatory drilling activities in the Chukchi and Beaufort Seas under strict safety and environmental oversight.

A priority for the Administration is implementation of the Agreement between the United States and Mexico concerning Transboundary Hydrocarbon Reservoirs in the Gulf of Mexico.

Implementation of the Agreement will make nearly 1.5 million acres of the Outer Continental Shelf, currently subject to a moratorium under the Western Gap Treaty, immediately available for leasing and will make the entire transboundary region, which is currently subject to legal uncertainty in the absence of an agreement, more attractive to U.S.-qualified operators. BOEM estimates that the transboundary area contains as much as 172 million barrels of oil and 304

billion cubic feet of natural gas. We look forward to working you on legislation to implement this Agreement.

Renewable Energy Development

The Department has a critical role to play in fulfilling the President's goal to double renewable electricity generation again by the year 2020 by facilitating renewable development on public lands. I will continue to build on the Department's successes and work to make sure we are accomplishing this in the right way and in the right places.

Securing clean sources of energy not only is good for the environment, it creates American jobs, and promotes innovation. In 2009, there were no commercial solar energy projects on or under development on the public lands. From that time, the Department authorized 42 renewable energy projects on or through the public lands which, if constructed, will have the potential to produce enough electricity to power more than 4.2 million homes. The Department also plays a key role in efforts to strengthen the nation's electric transmission grid, approving permits enabling several hundred miles of transmission lines in seven states across federal lands in 2012.

BLM has focused on an accelerated, but environmentally responsible, permitting process for the development of renewable energy on public lands that ensures the protection of signature landscapes, wildlife habitats, and cultural resources.

Since 2009, BLM has authorized more than 12,000 megawatts of energy on public lands and waters, established a road map for responsible solar development in the West by designating energy zones, and flipped the switch on the first solar energy project to deliver power to the grid. BLM also released the Final Environmental Impact Statement for a proposed 750 megawatt facility in Riverside County that would be one of the largest solar energy projects on public lands in the California desert. BLM is also moving forward on wind energy, with a proposed complex in Wyoming that would generate up to 3,000 megawatts of power, making it the largest wind farm facility in the U.S. and one of the largest in the world. BLM also expects to propose rules that would establish a competitive process for issuing rights-of-way leases for solar and wind energy development on public lands.

Significant progress has been made to advance offshore wind energy. BOEM issued the second non-competitive commercial wind lease off the coast of Delaware in 2012. Earlier this week I announced the first ever competitive lease sale, to be held in July, for a wind energy area offshore Rhode Island and Massachusetts, and BOEM will hold another competitive lease sale offshore Virginia this year. These sales involve nearly 278,000 acres proposed for development of wind generation to produce electricity to power as many as 1.9 million homes. We expect additional competitive lease sales to follow for wind energy areas offshore Maryland, New Jersey, and Massachusetts, and we continue to make progress on potential projects in areas offshore New York, North Carolina, and Maine.

BOEM has established renewable energy task forces with a total of 12 coastal states, including recent task forces in the States of Hawaii and South Carolina, and is overseeing progress in the planning of a potential Mid-Atlantic wind energy transmission line, which would enable up to 6,000 MW of wind turbine capacity to be delivered to the electric grid along the East Coast.

And the Bureau of Reclamation's 58 hydroelectric power plants generate more than 40 billion kilowatt hours of electricity to meet the needs of over 3.5 million households and generate over \$1 billion in gross revenues for the federal government.

Management of Our Lands and Waters

I will also work hard to build on the progress this Administration has made in the management of the federal lands and waters that make this "America the Beautiful."

America's Great Outdoors

With the National Park Service's centennial anniversary approaching in 2016, we have the opportunity to both celebrate and confirm the NPS's stewardship of our cultural and natural treasures and its role in building enduring connections and enriching experiences with its visitors, including the nation's youth. I recently had the opportunity to meet students from Stonewall Middle School at Prince William Forest Park in Virginia to celebrate National Park Week and highlight the importance of outdoor recreation and education, especially to young people.

One of the major goals of President Obama's America's Great Outdoors initiative is to better connect youth and families to nature and outdoor recreation. Engaging with American's youth through the great outdoors helps lay the foundation for the next generation of our nation's stewards, scientists, business leaders, teachers, and others who will understand the key role that national parks and public lands play in conservation and preservation of our nation's treasures and the significance they have for local communities, drawing visitors and boosting the economy.

I have had an opportunity in these first weeks on the job to work alongside young people in Gateway National Recreation Area in New York and in a city park in Portland, Oregon, where high school and college-aged young people were restoring habitat and engaging other youth in environmental education and stewardship - all great examples of our commitment to a 21st Century Civilian Service Corps. In an effort to learn from the Civilian Conservation Corps of the last century, this provides a tangible way to boost youth employment and job training, supporting our public lands infrastructure in a cost-effective way while giving youth a lifetime connection to public lands close to home and far away. It also provides great opportunities for public/private partnerships with businesses and non-profit organizations.

We will continue through AGO to expand opportunities for recreation and conservation, through partnerships with states and others, and the promotion of America's parks, refuges, and public lands. The innovative partnerships developed through this important initiative have helped expand access to rivers and trails, created wildlife corridors, and promoted conservation while working to protect historic uses of the land including ranching, farming, and forestry.

An example of the great work done under this program is the Swan Valley Conservation Area, established as a unit of the National Wildlife Refuge System by the Department in 2012, which is situated between the Canadian Rockies and the central Rockies of Idaho and Wyoming, in partnership with landowners who voluntarily entered their lands into easements. The new Area will protect one of the last low elevation, coniferous forest ecosystems in western Montana that remains undeveloped and provides habitat for species such as grizzly bears, gray wolves, wolverines, and Canada lynx.

And we are continuing our commitment to America's Great Outdoors through our request this year, for the first time ever, of mandatory dedicated funding for Land and Water Conservation Fund programs, with full funding at \$900 million annually beginning in 2015. Enactment of a mandatory LWCF program would ensure continued funding for this program designed to make investments in conservation and recreation as compensation to the American people for the development of oil and gas resources.

Our nation's public lands, managed by BLM for multiple uses, include rangelands, forests, deserts, and mountains. They support a variety of resources and opportunities important to Americans such as forage for livestock, water storage and filtration, carbon sequestration, habitat for an abundance of wildlife, scenic beauty and many forms of outdoor recreation.

The National Landscape Conservation System, which includes 19 national monuments, 21 national conservation (and similarly designated) areas, and 221 wilderness areas designated by Congress offer a different conservation model where many traditional uses are allowed. These spectacular lands provide a multitude of benefits including scientific and historical resources, critical habitat for a variety of species, and diverse recreational opportunities including hunting, fishing, and hiking that generate millions of dollars for local communities.

The conservation and sustainable use of our rangelands is important to those who make their living on these landscapes—including public rangeland permittees, whose operations are important to the economic well-being and cultural identity of the West and to rural western communities. While significant workload and resource challenges exist, BLM is committed to reducing the backlog of grazing permit renewals and to issuing permits in the year they expire.

BLM manages the timber on its Oregon and California (O&C) Grant Lands according to the principle of sustained yield. We are increasing support in 2014 for resource management on the O&C lands to implement the Western Oregon Strategy, including increased timber volumes offered for sale while at the same time increasing surveys of species under the Northwest Forest Plan and facilitating recovery of the northern spotted owl, as well as increased support for the BLM to continue its comprehensive effort to prepare new Resource Management Plans covering six BLM Districts in western Oregon.

Wildland Fire

You heard several days ago from the Department on the outlook and planning for the coming fire season. Just a few weeks ago I had the opportunity to join with Secretary Vilsack at the National Interagency Fire Center in Boise to see this well-coordinated operation firsthand and discuss the efforts the federal government is making to protect citizens and property from wildfire.

After a decade of drought and the continued proliferation of non-native plant species and accumulation of hazardous fuels in our forests and rangelands, the 2012 fire season was one of the worst on record for BLM rangelands and woodlands in the lower 48 states. The 2012 season also impacted the other 3 bureaus with resource responsibilities, and with the outlook for the 2013 season to be as severe throughout much of the West, there may be record fires this year. To be prepared we are working together with other federal agencies, tribes, and local governments to ensure that we're doing everything we can with the resources that we have.

Let me add that the complexity and intensity of fires over the past ten years present enormous budgetary challenges for the federal government. While the latest projection for fire costs for the 2013 season indicate that we have sufficient funding, because of sequestration we absorbed an overall \$41 million cut to the Department's fire program that resulted in a reduction of approximately 7 percent of the Department's firefighter seasonal workforce, with reduced lengths of employment for those hired. This reduces our capability and significantly constrains our work in preventing fires through hazardous fuels removal and remediating land after fire damage.

Water Resources

The Bureau of Reclamation is the largest wholesaler and manager of water in the 17 western states and the nation's second largest producer of hydroelectric power. Its projects and programs are critical to driving and maintaining economic growth in the western states. Reclamation manages water for agricultural, municipal and industrial use, and provides flood control and recreation for millions of people. Reclamation activities, including recreation, have an economic contribution of \$46 billion, and support nearly 312,000 jobs. As a result, Reclamation facilities eliminate the production of over 27 million tons of carbon dioxide that would have been produced by fossil fuel power plants.

Reclamation has a long-standing commitment to support the Secretary's goal to strengthen tribal nations, including through ecosystem restoration, rural water infrastructure, and the implementation of water rights settlements.

Population growth, development, and a changing climate are creating growing challenges to the nation's water supplies. In many areas of the Country, including the arid West, dwindling water supplies, lengthening droughts, and rising demand for water are forcing communities, stakeholders, and governments to explore new ideas and find new solutions to ensure stable, secure water supplies for the future. The Department is tackling America's water challenges by providing leadership and assistance to states, tribes, and local communities to address competing demands for water by helping improve conservation and increase water availability, restore watersheds, and resolve long standing water conflicts. Today, many of Reclamation's activities address drought through the use of enhanced water management that helps guard against and, to a certain extent, mitigate the devastating effects of drought. Water conservation by agricultural, residential and commercial users is a prime example.

Through our national water conservation initiative, WaterSMART, we are finding better ways to stretch existing supplies and helping partners plan to meet future water demands. In 2012 the U.S. Geological Survey, a key partner in the WaterSMART initiative, began a three year study of three focus areas in the Delaware River Basin, the Apalachicola–Chattahoochee–Flint River Basin, and the Colorado River Basin that will focus on water availability, investigating the components of a regional water budget to understand the amount entering and leaving each basin.

This work also contributed to the Colorado River Basin Water Supply and Demand Study, the first of its kind, released by the Department in December 2012, which projects an average imbalance in future water supply and demand greater than 3.2 million acre-feet by 2060. The study projects the largest increase in demand will come from municipal and industrial users, owing to population growth, and estimates the number of people that rely on Colorado River Basin water could double to nearly 76 million people by 2060 under a rapid growth scenario. Based on this study, the Department, along with representatives from the seven Colorado River Basin states, the Ten Tribes Partnership, and conservation organizations, last week outlined the next steps to address these projected imbalances.

I am committed to continuing to work with our stakeholders to assess the implications of water shortages, develop flexible operational plans that account for expected periods of drought, and support projects that conserve water and improve the efficiency of water delivery infrastructure.

Addressing Challenges with Science

The Department's mission requires a careful balance between development and conservation, achieved by working closely with our diverse stakeholders and partners to ensure our actions provide the greatest benefit to the American people. The development and use of scientific information to inform decision making is a central component.

Science at the Department promotes economic growth and innovation. At the Department, we use science to address critical challenges in energy and mineral production, ecosystem management, invasive species, oil spill restoration, climate adaptation, and Earth observation - such as satellite and airborne land imaging, and water and wildlife monitoring.

Scientific monitoring, research, and development play a vital role in supporting Interior's missions and Interior maintains a robust science capability in the natural sciences, primarily in the U.S. Geological Survey. An example of how this expertise is applied is USGS's work as part of an interagency collaboration on hydraulic fracturing, which is aimed at researching and producing decision-ready information and tools on the potential impacts of hydraulic fracturing on the environment, health, and safety, including water quality and inducement of seismic activity. The USGS is also a leader in resource assessments, and just recently published an updated assessment of the Bakken and Three Forks Formations, finding greater resource potential there than previously thought.

The President has also made clear that climate change is an important issue for the nation, especially as we face more frequent droughts, wildfires, and floods. Here at the Department, we are using the science expertise in our bureaus to assist our land managers to effectively prepare for and respond to the effects of climate change on the natural and cultural resources that we manage.

While USGS provides exceptional support to Interior bureaus, other Departmental bureaus work collaboratively to bridge gaps in knowledge, leveraging the complementary skills and capacity to

advance the use of science to support management decision making, ensure independent review of key decisions and science integrity, and adaptively use data to assist states, tribes, and communities throughout the nation.

Impacts of Sequestration

Finally, I want to mention the impact sequestration and uncertainty about the future has had on the Department and its programs. The budget cuts that we have seen push us back to funding levels last seen in 2006, and reverse much of the progress made by Secretary Salazar, who worked in partnership with the Members of this Committee to advance the President's all-of-the-above energy strategy; conserve our federal lands, waters and wildlife; advance youth engagement in the outdoors; and honor commitments to Native Americans. The process put in place by the sequestration undermines the work we need to do on many fronts, and we will continue to see impacts across the country in all of our bureaus during the coming months.

We will survive these cuts this year by freezing hiring, eliminating seasonal positions, and cutting back on our programs and services, but these steps are not sustainable, as these actions which are eroding our workforce, shrinking our summer field season, and deferring important work cannot be continued in future years without further severe consequences to our mission.

Conclusion

Mr. Chairman, Ranking Member Murkowski, and Members of the Committee, thank you again for inviting me to appear before your Committee. Achieving success in all of these important responsibilities on behalf of the American people is the Department's primary focus. I look forward to working with you as we advance these important issues.

Jewell, Sally (b)(6)@ios.doi.gov

Fwd: Q and A

Subject: Fw: Q and A

Sally, at long last, the Q and A. Clearly there is no expectation you'll have done much w/ these b/f 1 tomorrow. We'll go through them then. Sarah

From: Haze, Pam [mailto:pam_haze@ios.doi.gov]
Sent: Saturday, May 04, 2013 05:36 PM
To: Rhea Suh <Rhea_Suh@ios.doi.gov>; Laura Davis <Laura_Davis@ios.doi.gov>; Sarah D Greenberger <Sarah_Greenberger@ios.doi.gov>; Amy Holley <Amy_Holley@ios.doi.gov>
Subject: Q and A

Here are the complete Q and A for the Senate hearing. Let me know if you need me to send to anyone else.

Only Mikulski is missing - likely she won't be there
Begich is not here but he is definitely not coming we are told.

Senate Appropriations Hearings May 7 QandA.docx
85K

CHAIRMAN JACK REED (D-RI)

Energy

Question: What is the timeline for development of wind energy offshore Rhode Island?

Response:

- This is a key component of our All of the Above Energy Strategy.
- We are completing work on the NEPA analysis and the mitigation measures to be included as terms of the leases.
- When that work is complete, we will issue a Final Notice of Sale that will set the date for the auction.

Question: Do we expect leases to be finalized by the end of the year?

Response:

- Yes, we expect that this year we will hold the first-ever competitive lease sales for wind energy areas offshore Rhode Island/Massachusetts and Virginia.

Question: In 2012 the Subcommittee provided special pay authority to allow higher pay rates for certain positions in BOEM and BSEE. Has that helped you to recruit and retain staff in these specialized areas?

Response:

- Yes, we appreciate your help with this.
- This it has helped us to recruit and retain staff in critical disciplines including geophysicists, geologists, and petroleum engineers.
- Hiring for these disciplines is key to our reforms and the market for these skills is very competitive since industry is able to pay higher salary rates.

Question: What is the status of hiring for BOEM and BSEE?

Response:

- BOEM staffing is at 89% of their hiring goal for this year. With 553 staff including 141 using the special salary rate authority.
- BSEE staffing is at 94% of their hiring goal for this year. With staff of 667 including 53 using the special salary rate authority.

Response:

- BSEE will hire an additional 50 engineers and inspectors this year.

Question: Are the funding increases in the BSEE for staffing? Can you explain?

Response:

- The budget includes increases of \$24.8 million for BSEE. The increases will fund additional 148 staff for ongoing improvements in the offshore program. Funding will be used for staffing and support to:
 - Hire, train, equip, and support for personnel to conduct inspections and safety and audits;
 - Improve capacity for oil spill response, technical support, and safety management;
 - Develop our new National Offshore Training program for inspectors and engineers;
 - Expand capacity in Alaska to support exploration, development, and production operations;
 - Conduct research and development of safety systems and operations;
 - Evaluation well integrity; and
 - Begin our electronic inspection initiative to modernize offshore inspection.

Question: In 2012 we gave you authority to collect inspection fees. How is that program working?

Response:

- The inspection fee has worked out very well.
- It provided adequate resources in 2012 in order to significantly expand the capacity of the inspection program.
- BSEE enhanced risk-based inspection protocols that guide actions taken to ensure compliance with safety and environmental requirements.
- Inspectors review many aspects of operational, facility and production including general safety, drilling, well completions, workovers, operations, production measurement, safety, and decommissioning.

Question: How much did you collect in 2012?

Response:

- In 2012, BSEE collected nearly \$59 million in rental revenue and \$3 million was provided in general revenue to fund the program.

Question: Why was there a shortfall in the amount you expected to collect?

Response:

- The shortfall in collections in 2012 was due to a lag at the beginning of the fiscal year.
- The authority was not available until the 2012 appropriations act was enacted in December 2011, providing the authority for the new fees.
- Once we had the authority we were able establish the program and mechanism to make the funds available to BSEE. We expect to collect \$65 million in 2013 and 2014.

Question: Your 2014 budget proposes to impose an on-shore inspection fee for oil and gas inspections. What will this allow you to do?

Response:

- The 2014 budget, like the 2013 budget, proposes to impose an inspection fee for oil and gas programs managed by the Bureau of Land Management.
- The fee charges industry for the costs we incur to inspect their facilities, operations and production.
- The estimated collections generated from the fee program is \$48 million. Beyond placing the costs for these programs that are totally dedicated to oversight of oil and gas production, this will allow us to reduce our request for appropriations.
- We will also be able to increase our efforts to ensure safe and environmentally compliant leasing on public lands and also ensure fair returns of revenues to the American taxpayers.

Question: How do you determine the fee?

Response:

- The fee schedule is based on the number of oil and gas wells per facility:
 - \$700 for each lease or agreement with surface use, disturbance or reclamation;
 - \$1,450 for each lease or agreement with 1 to 10 wells;
 - \$3,500 for each lease or agreement with 11 to 50 wells; and
 - \$6,800 for each lease or agreement with more than 50 wells.

Question: What is the return on investment for the oil and gas programs? Is the American public getting a fair return on the use of public lands?

Response:

- We think the American public is getting a fair return for the use of the public lands. We've done some analysis of the collections contrasted with the amounts we spend.

- For FY 2012, Interior collected approximately \$11.5 billion in oil, gas and coal revenues. Collecting those revenues and carrying out monitoring, enforcement, and environmental protection activities cost Interior about \$500 million.
- For each dollar Interior spent, we collected about \$21. In addition, the public also receives some non-monetary returns in the form of environmental protection, and increased workplace safety.

Question: You have experience working in the oil and gas area. What is your philosophy on oil and gas reforms?

Response:

- I believe the Department is pursuing conventional energy development opportunities quite vigorously as part of a diverse All-of-the-Above approach. These efforts are important for our energy security.
- The key aspect of these efforts is to ensure expansion takes place through responsible management, ensuring safe and environmentally responsible operations.

Question: Are the reforms effective?

Response:

- I believe we are going in the right direction with our reforms.
- Besides improving the management and operations, we are reforming our procedures, processes and regulatory framework to streamline and improve effectiveness and timeliness.
- For example, onshore we have significantly reduced the time it takes to approve a complete drilling permit. In FY 2006, it took an average of 127 days to approve an application, whereas in FY 2012, it took almost half the time - 77 days.

Question: What is the timeline for the hydraulic fracturing regulations?

Response:

- In response to comments from stakeholders and the public on the 2012 draft fracking rule, the BLM is revising the rule in order to maximize flexibility, facilitate coordination with state practices, and ensure that operators engaging in hydraulic fracturing on public lands apply proven cost-effective safety measures that meet environmental protection standards.
- The revised rule is currently under review by the Office of Management and Budget. We hope to have it out soon.

Science

Question: Your 2013 budget includes significant investments in science programs, an infusion of \$144 million. The majority of the funds are allocated to the U.S. Geological Survey, \$88 million. However, you have additional funds allocated to other bureaus including the Fish and Wildlife Service. Are you duplicating scientific infrastructure by creating science programs in multiple bureaus? Why does FWS require science funding?

Response:

- Science underpins all of Interior's efforts and provides the basis for informed resource management decisions.
- USGS remains the leader in basic research. USGS is not a regulatory agency and is able to produce independent scientific information that supports Interior's needs as well as the public's needs for protection from hazards, water availability and use, geological and energy inventories, and research and analysis use in resource management.
- USGS houses our science advisor and we have recently put in place a very strong science integrity policy to ensure that the sound scientific information is the basis for our decisions is accurate.
- USGS alone cannot provide for all of Interior's science needs. Interior agencies work collaboratively to bridge gaps in knowledge.
- Science funding at the bureau and office level is used for tactical science. Bureaus use their funds to purchase studies, models and expertise from universities, USGS, and others to interpret and apply the vast body of knowledge generated by USGS and other scientific institutions.
- Bureau and office science support helps answer imminent and important natural resource management questions and provides near-term solutions to address urgent and emerging issues such as the white-nose syndrome in bats.

Question: What is the role of USGS in fracking?

Response:

- Natural gas has and will continue to play a crucial role in America's energy economy and independence.
- The 2014 USGS budget requests an increase of \$13.0 million from the 2012 funding level to expand collaborative, interagency research and development efforts and answer critical research questions posed in a multi-agency research plan currently being developed by DOI, DOE, and EPA.

Question: Your budget request seeks significant increases for fracking research – how is this being coordinated with other agencies conducting research (e.g. EPA and DOE)?

- The three agencies build upon current work and collaboratively identify and prioritize new research and development activities that support sound management and policy decisions by Federal, State, tribal, and local entities.
- Each agency conducts complementary and non-duplicative work.
- The role of the U.S. Geological Survey in hydraulic fracturing is to apply and build upon its research strengths with focused studies on resource characterization and assessments, water quality and availability, ecological effects, effects on people and their communities, and induced seismicity.

Youth

Question: You have publicly advocated the book Last Child in the Woods: Saving Our Children From Nature-Deficit Disorder. Can you give us your views on youth and the importance of the outdoors?

Response:

- Children significantly benefit from a physical and mental health perspective from time spent in the outdoors.
- Engagement in conservation equips them with skills for a life-long journey that improves their participation in stewardship of our resources.
- The employment and engagement of youth also creates a pipeline of skilled and energetic employees.

Land and Water Conservation Fund

Question: Your budget includes a proposal to fully fund the Land and Water Conservation Fund beginning in 2014 and make it a mandatory appropriation beginning in 2014. Why put this proposal forward?

Response:

- The commitment for LWCF, first established in 1965 by John F. Kennedy, is to use a portion of the proceeds from the development of public lands and waters for investments in conservation and recreation.
- Permanent authorization and mandatory funding would provide certainty for planning and accomplishing our priority conservation efforts. They should be coordinated with our partners at the State, tribal and local level.
- The ability to plan and operate a multi-year program, would allow us to maximize our efforts to create areas for children and others to get outside, engage in conservation, and improve the quality of life for communities with greenspace.

Question: Why put this proposal forward now in a time of constrained budgets?

Response:

- The budget reduced by the sequester, provides the stark contrast for why full funding and mandatory funding is important for the Land and Water Conservation Fund.
- 2013 levels are significantly below the levels we had planned in the budget and we will have to pare back our plans and turn back many willing sellers who want to sell their lands and may have to sell to developers.
- Full and mandatory funding would provide a more reliable source of funding for these efforts.

Question: What role do you envision that the Congress and appropriators would have in the oversight and decision making process?

Response:

- We want to work with you on the legislative proposal to ensure there is a continuing role for the Congress and appropriators.
- We have examined several models, such as the creation of an advisory body that would have input on the overall program direction and the prioritization of program components.

Question: Your budget prioritizes collaborative landscape conservation. What are your thoughts on this approach to land acquisition?

Response:

- The Collaborative Landscape projects accelerate our efforts to protect ecosystems before collapse, recognize community-based work to protect green space and improve access to the outdoors.
- These projects are based on extensive work with partners, leverage resources, and conserve working landscapes.
- They have broad benefits since they are fueled by efforts at the local level for conservation and allow Federal funds to be leveraged by others.

Question: How acquisition in Rhode Island fit in here?

Response:

- The refuges within Rhode Island are a priority acquisition for FWS and funding for this is identified in the 2014 budget.
- The budget identifies \$900,000 for John H. Chafee National Wildlife Refuge acquisition.

- The collaborative landscape efforts have so far focused on a small number of landscapes where multiple agencies leverage efforts and build on community-based efforts. As we mature the program Rhode Island could be an area for leveraged efforts.

Heritage Areas

Question: You were on the National Parks Second Century Commission and advocated the need for heritage areas – both in terms of authorization and funding support. Do you agree that the heritage areas need support?

Response:

- Yes. Heritage areas are an important mechanism for communities to leverage private and public funds for locally-based efforts to protect and preserve natural and cultural resources.
- Heritage areas can bring recognition and energy to community revitalization and bring investments to bear on historic preservation.

Question: Why does your budget reduce heritage areas?

Response:

- The budget has many tough choices and this is one.
- The budget continues \$9 million for the program to continue ongoing support that will be focused on assisting the newer areas that have not yet developed their network of support.
- At this funding level we will need to phase out support for the more established areas.

Question: Blackstone National Heritage Area is authorized through the end of Fiscal Year 2013 and your budget seeks extension through 2014. What are your views about the creation of Blackstone National Historical Park?

Response:

- We support the establishment of Blackstone National Historical Park.
- I look forward to working with you on this project and look forward to visiting Rhode Island.

Hurricane Sandy

Question: What is the status of the emergency supplemental funds appropriated for Hurricane Sandy?

Response:

- We will announce today the release of \$475 million for 217 projects to rebuild and reopen facilities at parks, refuges and other Interior locations.
- The funds will also support research and be used to identify and make available sand and gravel for beach replenishment.
- A total of 41.5 million is allocated for refuge rebuilding in Rhode Island.
- We will allocate \$3 million in grants to the State of Rhode Island to be used for historic preservation.

Carcieri

Question: The U.S. Supreme Court in *Carcieri v. Salazar* held the Secretary may only place lands in trust under section 5 of the Indian Reorganization Act for Tribes "under Federal jurisdiction" in 1934. What is included in the budget relating to the *Carcieri* decision?

Response:

- The FY 2014 Budget proposes language to fix the issues raised in the Supreme Court's *Carcieri v. Salazar* decision.
- Similar language was Included in the FY 2013 budget and would allow federally recognized Tribes to submit fee-to-trust applications to the Secretary of the Interior regardless of when the Tribe was acknowledged.
- The Supreme Court decision led to confusion about the scope of the Secretary's authority to acquire land in trust for all federally recognized tribes – including those tribes that were federally recognized or restored after the enactment of the Indian Reorganization Act.
- Without enactment of the Department's proposed fix in the FY 2014 Budget, both the Department and Indian tribes will continue to face a very burdensome process.

RANKING MINORITY SENATOR LISA MURKOWSKI (R-AK)

National Petroleum Reserve - Alaska

Question: In December, the Bureau of Land Management announced a final plan for the National Petroleum Reserve in Alaska. I am concerned the plan allows for oil and gas development on only 11.8 million of the reserve's 23 million acres.

Response:

- The plan announced in December is a comprehensive blueprint that will allow for access to oil and gas.
- The February 2013 NPR-A Record of Decision made approximately 11 million acres, or nearly half, of the NPR-A available for oil and gas leasing.
- Areas made unavailable for leasing encompass critical wildlife habitat and other important surface values, thereby protecting critical areas for sensitive bird populations and caribou found in the Teshekpuk Lake and Western Arctic Caribou Herds – herds important for subsistence users in over forty villages in northwest Alaska.

Question: What is assumed in the 2014 budget in terms of leasing, production and revenue sharing?

Response:

- The 2014 budget estimates a total of \$467.9 million in NPRA bonuses, rents, and royalties over the 10-year period 2014 - 2023, of which 50 percent, or \$233.9 million, would be distributed to the State of Alaska.
- I commit to working with you on the critical role Alaska plays in domestic energy resource development within the NPR-A and elsewhere.

Question: Your budget proposes to redirect NPR-A revenues for Alaska conveyance and to clean up legacy wells. This is doubly offensive - how can you propose to shift Federal responsibilities to dedicated State funding and shift the burden for work that should already been completed?

Response:

- Our budget highlights the importance of these two programs and the need to fulfill the Federal requirements for Alaska conveyance and to clean up legacy wells.
- We want to work with you and the Committee to resolve the funding issue – the challenges of constrained budgets is impacting our ability to address these two programs.

- BLM's Alaska Region has significantly accelerated the completion of Alaska conveyances and is working on approaches to streamline and expedite conveyances.
- To date 96% of the conveyances have been accomplished through patents, interim conveyance, and tentative approval.
- The largest component of work remains in completing surveys, which can be done through contract and accelerated if additional funds are available.
- BLM has completed a comprehensive inventory of legacy wells and is working with the State and others on a strategy to address mitigation.
- BLM expects to release soon a long-term plan to addressing the abandoned legacy wells.
- To date, BLM has allocated \$60 million to plug and remediate wells.

Question: For the last several years, the BLM has proposed a budget that includes nearly a 50% cut to the Alaska Land Conveyance program. How can the Department justify this request?

Response:

- I appreciate the importance of meeting the BLM's obligations to Alaska Natives.
- This was a difficult budget choice and we reduced it with great reluctance but based on the need to fund other critical needs like Arctic oil and gas development.
- The BLM has recently has carefully evaluated the remaining work to complete the conveyances.
- BLM had developed some proposals to increase efficiency, reduce costs, and speed up conveyance.
- This will help to minimize the impacts of the proposed reduction in funding

Question: The non-wilderness coastal plain of the Arctic National Wildlife Refuge (ANWR) has an estimated 10.4 billion barrels of oil and 8.6 trillion cubic feet of natural gas. Advances in directional development technologies make it possible today to access and develop oil and natural gas resources with no surface occupancy of the land above the resources being developed. Could you explain why you do not propose opening of the coastal plain of ANWR for exploration and development in the 2014 budget?

Response:

- I recognize the important contribution Federal resources in Alaska make towards meeting our national domestic energy production goals.
- The Arctic Refuge itself is America's finest example of an intact, naturally functioning community of arctic and subarctic ecosystems, with significant resources that could be impacted by development.

- We do not believe that energy development should take place on these lands with their fragile ecosystems and habitat, and unique natural life.

Arctic Development

Question: During its 2012 attempt to drill in the Arctic, Shell encountered problems. Based on the findings of the 60-day report your Department completed, how do you intend to ensure energy development in the Arctic does not jeopardize the health of those pristine waters, as well as the lifestyles of the indigenous people and the wildlife upon which they depend?

Response:

- The Interior Department's review of Shell's 2012 Arctic drilling program reinforced the unique challenges that Arctic exploration presents.
- The extreme and unpredictable weather conditions, remote geography, lack of pre-existing infrastructure, and the importance of respecting environmental considerations and the needs of local communities, including subsistence hunting place a premium on our efforts to work closely with industry to develop strong, Arctic-specific safety and environmental approaches.
- David Hayes and Tommy Beaudreau are leading our efforts to work with other agencies, companies, the state of Alaska, and the communities of the North Slope to ensure that exploration activities are pursued safely and in an environmentally responsible manner.

Question: How will you work with the State and companies to ensure development proceeds without overwhelming regulations? What are your plans for issuing regulations?

Response:

- We have shared the results of our review with the industry and we are working with them to develop comprehensive and integrated operating plans to ensure we can work effectively to develop in the fragile Arctic environment.
- The 2014 Budget includes targeted increases for BOEM and BSEE of \$4.4 million to support an anticipated increase Alaska workload over the coming years.

Izembek

Question: The recent decision to deny a land exchange that would allow for a one-lane gravel road from Cold Bay to the King Cove airport for medical emergencies, ignores the threats to the Native residents' lives. More than a dozen people have died

over the past three decades from accidents with airplanes flying into or out of King Cove. Please tell me how you plan to resolve this serious issue?

Response:

- I understand the importance of this long-standing issue.
- In resolving this issue, we need to balance our obligations to Alaska Natives with wildlife conservation responsibilities.
- I directed Kevin Washburn, the Assistant Secretary for Indian Affairs, to hold consultations with the Tribe, Tribal Councils, Aleutians East Borough, Native Corporations, and the city of King Cove.
- He plans to tour the area to view the evacuation issues and to consult with the Indian Health Service. He will issue a report to me.
- I plan to hold an official meeting in King Cove to listen to testimony about medication evacuation benefits of the road.
- We will consider all this information along with the FEIS to make a determination.

Contract Support Costs

Question: The recent Supreme Court decision *Salazar v. Ramah Navajo Chapter* ending over 22 years of litigation. The Supreme Court advised the need for full contract support funding. Your budget does not do that and imposes a limit on contract support. This will seriously impede tribal self determination and make it impossible for Tribes to contract services. Can you explain?

Response:

- The budget includes \$231 million for contract support for services the Tribes deliver on behalf of the Bureau of Indian Affairs. This is an increase of nearly \$10 million.
- The budget also proposes to indicate the amount of contract support Interior will fund for each contract.
- The Court provided this as an option if Tribes do not receive full Contract Support Cost funding.
- Clearly we need a resolution of this issue to make the process and setting of rates more transparent and less burdensome.
- Our long term strategy is to consult with Tribes and develop a collaborative solution.
- We would like to work with you and the Committee on this.

SENATOR LAMAR ALEXANDER (R-TN)

Wind Energy

Question: The Administration has put an emphasis on renewable energy development and wind energy is a piece of this. I'm quite concerned with the impacts of wind, particularly as it relates to the mortality associated with birds. What are you doing to respond to this?

Response:

- Let me first say that I am committed to the President's "all-of-the-above" energy strategy to increase domestic production and reduce dependence on foreign oil.
- This includes exploring new frontiers and innovative technologies to develop both conventional and unconventional sources of energy, including renewables.
- I think most of us would not want any development—whether it is renewable or conventional to have a significantly adverse impact on any species.
- The 2014 budget contains an \$5.3 million, an increase of \$2 million for USGS to fund work on impacts to golden eagles, bats, condors, and tortoise from wind and solar energy.
- In the meantime, FWS has draft guidance for the wind industry to avoid or minimize impacts to bald and golden eagles.
- The budget includes an increase of \$1.4 million for FWS to ensure energy corridors avoid threatened and endangered species and inform eagle protection.

FWS Mitigation Hatchery Funding

Question: What is the status of the Mitigation Hatchery Funding in the FY 2014 budget request?

Response:

- The 2014 budget proposes that mitigation fish hatcheries be funded by the organizations that operate the projects for which mitigation is needed. FWS will continue to partner with the U.S. Army Corp of Engineers, the Bureau of Reclamation, and the Bonneville Power Administration on this program.
- And thanks to your leadership and assistance, the Tennessee Valley Authority has committed funds to produce mitigation fish for stocking in southern streams.
- I understand FWS will execute a reimbursable agreement with TVA for nearly \$1 million annually for the next three years that will fund the operations of the National Fish Hatcheries, including Dale Hollow NFH and the Erwin NFH.

Tennessee Lands Unsuitable for Mining Petition

Question: In 2010, the State of Tennessee filed with OSM a Lands Unsuitable for Mining Petition. Submitted under Section 522 (c) of SMCRA, the petition requested that OSM find ridgelines on land managed for public uses in the North Cumberland Wildlife Management Area and Emory River Tract Conservation Easement as unsuitable for surface coal mining operations. Where in the process is OSM with the petition?

Response:

- I've been made aware that OSM is making headway on this petition.
- The bureau recently finished drafting the alternatives, and it is sharing those alternatives with the agencies cooperating on the preparation of the EIS, developing a new work schedule, assessing the need for additional contract services, and necessary funding.
- Once these steps have been completed, OSM will proceed with the analysis and preparation of the petition evaluation document and the draft EIS.

Great Smoky Mountains National Park Funding

Question: The Great Smoky Mountains National Park is one of the most visited parks in the country. The visitation far exceeds those of other parks in the system, but the budget for the Great Smoky's is much lower than that of say, Grand Canyon or Yellowstone. Shouldn't the funding be commensurate with the level of visitation, given the demands that this places on the park?

Response:

- The Great Smoky Mountains is indeed one of the crown jewels of our national park system.
- In 2014, we included \$19.1 million for the park which is level with 2012 enacted.
- While visitation is a factor that drives park funding, it is not the only one. Both Grand Canyon and Yellowstone, for example, have a greater number of acres under park management and a greater percentage of visitors include overnight stays at those parks.
- A key to disparity in funding for the Great Smoky Mountains is the inability of the park to collect and retain entrance fees because this is now allowed by the authorizing legislation.
- That does create challenges for the park that has many meritorious projects.
- I look forward to working with you on ensuring that all of the important parks throughout the country have the resources they need.

National Parks Centennial

Question: As we approach the centennial of our national park system, what are your thoughts for mitigating the shortfall of funding needed to address the most critical issues in the park system? What does the 2014 budget include to prepare for the centennial?

Response:

- Thank you for your interest in this upcoming milestone. The 100th anniversary of the National Park Service in 2016 marks a defining moment in history.
- The 2014 budget proposes increases that support Director Jarvis' A Call to Action, a recommitment to the exemplary stewardship and public enjoyment of these places.
- The 2014 budget includes a \$238.6 million increase relative to the 2013 full-year continuing resolution after sequestration reductions.
- These increases are proposed in the areas of natural resource stewardship, visitor access and enjoyment, protection of our nation's wilderness and icons, and other areas that allow the NPS to move toward a shared vision for its second century.
- If the 2014 budget is passed as proposed, it will go a long way in beginning to provide the needed funding to address critical needs and concerns within the NPS.

SENATOR ROY BLUNT (R-MO)

Jefferson Expansion Memorial (St. Louis Arch)

Question: What is the status of the effort to re-establish a long term agreement between the NPS and the Bi-State Development Agency (Illinois and Missouri)?

Response:

- I understand that we have had a great partnership for many years with the Development Agency and I think it has resulted in one of the best urban parks in our country.
- It is my understanding that the NPS hopes to finalize the agreement as soon as possible.

Blueways

Question: Secretary Salazar initiated the blueways program. It has raised concerns about increased regulation of rivers and associated waterways. Can you explain how the \$3.3 million increase in the FWS budget for Blueways will be used?

Response:

- Thank you for your interest in this program. As you know, in May, 2012, my predecessor, Secretary Salazar, established the National Blueways System to recognize and support locally-led efforts to sustain the economic, recreational, and natural values of rivers and watersheds of national significance.
- The designation does not establish a new protective status or regulation, nor does it affect private property or water rights.
- The 2014 budget proposes \$3.6 million Department-wide, a continuation of \$250,000 in Reclamation and an increase of \$3.3 million in the Fish and Wildlife Service to expand this program.
- The \$3.3 million increase requested in the Fish and Wildlife Service budget will be used to provide candidate and designated National Blueways partnerships with financial assistance to support partnership coordination and watershed projects through grants and cooperative agreements.

Question: What is the cost associated with implementing this initiative, and from which accounts is the department drawing funds to support these efforts? What offices and bureaus of the Interior Department will have staff activities focused on these efforts?

Response:

- The National Blueways System's focus on watershed protection and restoration is fully consistent with Interior's core mission objectives.
- It is not a redirection of existing effort but a complementary approach to ongoing efforts in landscape protection and restoration.
- Many of Interior's bureaus and offices have responsibilities for river, estuarine and wetland protection and restoration; water sustainability; fisheries management; and river and trail resource protection; and outdoor recreation and education.
- The resources that support the National Blueways System initiative are derived from participating Interior bureau and office appropriated funds.
- Since the National Blueways System works to align existing activities and programs in support of blueways and associated resource benefits, there is not a dedicated stream of funding.

Question: The White River National Blueway in Missouri and Arkansas was established in January of this year. What Missouri constituencies supported the establishment of this National Blueway?

Response:

- Letters of support were received from the Missouri Department of Conservation, the Missouri Cooperative Fish and Wildlife Research Unit, and The Nature Conservancy—Missouri.

Question: Can private landowners opt out of a National Blueway designation on private property?

Response:

- The National Blueway program is entirely voluntary and private landowners are free to choose to not participate in any assistance programs or initiatives undertaken by the stakeholder partnership.
- A National Blueway is a designation that encompasses a river and its watershed, but is not specific to any parcel of land.

SENATOR THAD COCHRAN (R-MISS)

Historic Preservation Funding

Question: Historic Preservation is of huge importance to me and to many people not only in my state but in every state in this country. What is the status of the Historic Preservation Fund in the FY 2014 request?

Response:

- The 2014 budget requests \$58.9 million for Historic Preservation fund grants. This is a \$3 million increase from 2012 enacted.
- Of this total, \$46.9 million is for grants-in-aid to States and Territories, and \$9.0 million is for grants-in-aid to Tribes.
- The \$3 million increase is requested to provide competitive grants targeted toward communities that are currently underrepresented on the National Register of Historic Places.
- Within the fund, we expect that Mississippi will receive approximately the same level of funding that they did in 2012, which was around \$745,000.

Migratory Birds/North American Wetlands Conservation Act

Note: Senator Cochran is a member of the Migratory Bird Conservation Commission. The Commission, chaired by the Secretary of the Interior, was established in 1929. It is responsible for considering and approving purchases of migratory bird habitat with revenue primarily from the sale of duck stamps and from appropriated funds authorized by the North American Wetlands Conservation Act (NAWCA).

Question: What is the status of the NAWCA funding in the 2014 budget request?

Response:

- The 2014 budget requests a \$3.9 million increase for NAWCA acquisitions from 2012 enacted.
- It is my understanding that NAWCA expired at the end of FY 2012 and I would like to make it clear that reauthorization is a priority for the Department.

SENATOR MIKE JOHANNNS (R-Neb)

Keystone XL Pipeline

Question: Do you support the approval of the Keystone XL pipeline?

Response:

- Thank you for the question, Senator.
- I am committed to the President's all-of-the-above approach to the safe and responsible development of our country's abundant energy resources.
- The decision on the Keystone pipeline application will be made by the Department of State.
- A number of Interior Department bureaus are also cooperating agencies in the environmental review of that proposed project.
- I will ensure that the review Interior conducts on the pipeline project is conducted in an efficient manner, while taking into account all relevant

SENATOR JON TESTER (D-Mont)

ESA

Question: Stakeholders are very willing to participate in voluntary conservation agreements for oil and gas activities to help protect lesser prairie chicken and sage grouse habitat, and promote smart conservation practices. How does your 2014 budget promote the use of voluntary conservation agreements and other creative solutions that are reasonable alternatives to more ESA regulatory impediments?

Response:

- Senator, thank you for raising this issue. Recovery of listed or candidate species would be severely hampered were it not for these important conservation agreements.
- The 2014 budget request funds the Fish and Wildlife Service's Candidate Conservation Program at \$11.5 million, which is among the Department's most successful tools for promoting conservation of a species at risk before it needs to be listed under the ESA.
- Candidate Conservation Agreements and Candidate Conservation Agreements with Assurances provide certainty to landowners about actions that they can take immediately to address or minimize threats to a species at risk.
- If the species does become listed, these voluntary conservation agreements provide certainty to the participating landowner that they will not have to undertake any additional conservation actions.
- By working closely with landowners, the Service finds reasonable alternatives to meet the objectives of the ESA while continuing to support the needs of our partners to use their land and resources to meet their objectives.

Question: The FWS agreed to a work plan as part of a massive settlement for status and critical habitat reviews for 250 species. This could set in motion regulations that will prohibit many beneficial uses of private property. What are your views on how we should implement the settlement?

Response:

- In September 2010, FWS began negotiations with the Center for Biological Diversity) and Wild Earth Guardians in an attempt to settle the multiple lawsuits filed over missed statutory deadlines and preclude additional filings under the ESA.
- The Service developed a six year work-plan to resolve those lawsuits that enables the Service to evaluate each of the 251 species on the 2010

Candidate List and species recently added to the candidate list (North American wolverine and Pacific walrus), and make petition findings for a number of other species that have been the subject of recent petitions.

- The work plan allows the Service to focus efforts on species most in need of protection. These agreements have reduced deadline-related litigation-driven workloads by over 90 percent.
- This work plan also provides landowners with a clearer understanding of our timeline for determining the listing status of candidate species so that they can enter into voluntary conservation agreements now to balance their use of their lands with conservation of these highly imperiled species.
- Candidate Conservation Agreements and Candidate Conservation Agreements with Assurances provide certainty to landowners about actions that they can take immediately to address or minimize threats to a species at risk.
- If the species does become listed, these voluntary conservation agreements provide certainty to the participating landowner that they will not have to undertake any additional conservation actions.
- By working closely with landowners, we are able to find reasonable alternatives to meet the objectives of the ESA while continuing to support the needs of our partners to use their land and resources to meet their objectives.

Wolf Management Funding

Question: The U.S. Fish and Wildlife Service is not planning to implement a program that Congress has directed to reimburse ranchers for wolf losses. Can you provide the basis for this decision? How do you expect to ensure our ranchers are not irreparably harmed by wolf depredation?

Response:

- I recognize the importance of this issue to western States and appreciate your questions.
- State wildlife managers and the Fish and Wildlife Service's Northern Rocky Mountains wolf recovery team continue to work closely with ranchers to minimize wolf interactions and depredation of livestock in the Northern Rocky Mountains.
- As you know, the Department removed the Western Gray wolves from the Endangered and Threatened Species List beginning in 2011, returning management authority to the States such as Idaho, Montana, and Wyoming.
- The responsibility for management of population monitoring, hunting, and depredation programs belongs to States with approved management plans.

- FWS is executing the wolf depredation program using fiscal year 2012 funding as directed by Congress and will be allocating grants in the coming months.
- Given budget reductions to FWS and the sequester reductions of 5%, FWS will redirect 2013 funding to critical needs to address the recovery of listed species.
- FWS does not request funding for the wolf depredation program in 2014.

Blackfoot Water Rights Settlement

Question: I, as you may know, have legislation that proposes to settle water claims for the Blackfoot Nation. I am interested in your thoughts on this issue and in your commitment to supporting the legislation.

Response:

- I understand that our team has been working with your office closely on this issue and I greatly appreciate your leadership in trying to resolve these outstanding claims.
- To that end, I support the effort to settle conflicts, which I understand have existed for well over a century.
- I know we will send a representative to your upcoming hearing and we will be glad to offer you more detailed comments at that time.

Limited Liability Rule (OSM)

Question: OSM currently interprets SMCRA to mean that certified states and tribes cannot use coal Abandoned Mine Land (AML) funding for non-coal projects and enjoy limited liability. For years, I pressed OSM to revise its regulations to allow states and Indian tribes that have certified correction of all known coal AML problems within their jurisdiction to receive limited liability protection for certain non-coal reclamation activities. In February, the bureau proposed just such a rule change. What is the status of this rulemaking?

Response:

- The public comment period for this rule closed last month. I understand that OSM plans to issue a final rule by October 1, 2013.
- The proposed rule would allow eligible states and tribes to reclaim non-coal mine sites without incurring certain civil liabilities.
- The rule change deals with the use of Abandoned Mine Land (AML) funding by states and tribes that have certified to the Federal government

that they have completed reclamation of all known coal-related AML sites within their borders.

- *Background: To date, four states (Louisiana, Montana, Texas, and Wyoming) and three tribes (the Hopi and Crow Tribes and Navajo Nation) have been certified. Some of these states and tribes, however, have non-coal abandoned mines that threaten human health, safety, or the environment.*

Tribal Recognition: Little Shell Tribe of Montana

Question: What resources are included in your budget for tribal recognition? What are your plans to expedite this process?

Response:

- I am deeply interested in supporting the aspirations of tribes along the entire continuum of sovereignty.
- We do have an Office of Federal Acknowledgement in Assistant Secretary Kevin Washburn's purview.
- Kevin has made it clear that one of his goals as Assistant Secretary is to make adjustments in the regulated process to improve timeliness, transparency, flexibility, due process, and accuracy.
- I will make Kevin aware of your interest on this important matter and ask him to follow up with you and your staff to have a fuller conversation.

Cobell

Question: Now that the Cobell case has been settled and the Court has given you approval to proceed – what is the status of implementation?

Response:

- Implementation efforts are underway and progress is being made.
- Interior established the Land Buy-Back Program for Tribal Nations, and published an Initial Implementation Plan in December 2012.
- The Buy-Back Program is working to address the comments and input received from tribes and others on that Plan during three general tribal consultation sessions and through a public comment period that closed in March 2013. This June Interior is planning to release an update to the.
- The Plan is intended to be flexible and will be subject to change based on continuing consultation.

- As the Buy-Back Program is implemented, the Department expects to update its plans to reflect lessons learned, best practices, and tribal feedback and involvement.

Question: How will you ensure the land consolidation plan contemplated by the Cobell settlement will be carried out effectively and efficiently?

Response:

- Tribal leadership and involvement are crucial to the success of the Program, and we are seeking to leverage tribal experience and knowledge.
- The Department hopes to enter into cooperative, government-to-government agreements with many tribes and take advantage of tribes' ability to minimize administrative costs and improve overall effectiveness and efficiency of the Buy-Back Program.
- In addition, Interior is utilizing the extensive expertise, services, and systems within the Department, primarily in the Bureau of Indian Affairs and the Office of the Special Trustee for American Indians.
- Interior will gain significant efficiencies by automating and centralizing the land acquisition processes which involve the offer/deed printing, mailing, processing, and approval.
- To ensure that fractional interests are valued fairly, an independent-third party review of the planned appraisal methods is currently underway.
- Moreover, we are adding key staff to focus, for example, on program performance, evaluation, and improvement. In addition, the Program is seeking to proactively identify and manage risks.

Question: How many individuals and acres of land are involved in the settlement?

Response:

- There are approximately 150 reservations with fractioned tracts (tracts with two or more owners).
- There are over 92,000 fractionated tracts at these locations that are owned by more than 219,000 individuals. The acres associated with these tracts exceed 10 million.
- Approximately 90% of the purchasable fractional interests are located in 40 of the 150 reservations. Many of the fractional interests are located in reservations within the Great Plains and Rocky Mountain areas.

Indian School Construction

Question: Your budget zeros out funding for construction of new schools. What is the impact of that? How do you anticipate Indian children will be able to learn when facilities are in disrepair?

Response:

- Our responsibilities to Native American children are some of the most profound we have at the Department.
- I am personally committed to trying to increase the quality of educational opportunities we provide through the Bureau of Indian Education.
- Our budget contains \$652 million to support BIE elementary and secondary schools. The Department of Education provides an additional \$200 million.
- From 2002 through 2013, \$2 billion, including \$300 million of funding made available in the American Recovery and Reinvestment Act, has been provided for construction, improvement, and repair projects that have reduced the number of schools in “poor condition” from more than 120 of the 183 schools to 63 today.
- This includes 42 complete school replacements and 62 major renovations, which are either completed, funded or under-construction.
- While the 2014 budget request does not include funding to fully replace existing schools, the budget includes \$48.5 million for major facilities improvement and repair projects at education facilities.
- Projects are prioritized to address the most critical health and safety issues. This strategy recognizes the importance of a quality school environment to best meet the learning needs of Indian students while working in a period of fiscal restraint.

Rural Water Project Funding

Question: The current funding level for currently authorized rural water projects will result in unacceptable delays. Rural water projects are critical to get potable water supplies to communities including Indian communities. The program takes a disproportionate reduction in the President’s 2014 budget. Why? What solutions are there to fix this situation and advance completion of rural water projects?

Response:

- The Department supports the goals of encouraging vibrant rural economies and ensuring safe, reliable sources of drinking water for rural residents.
- There are currently seven congressionally authorized rural water projects under construction that help build strong, secure rural communities and are important to our non-federal sponsors.

- The President's FY 2014 Budget includes \$40 million for rural water projects. The reduction from FY 2013 reflects the completion of funding for construction of the Mini Wiconi Project in South Dakota.
- The Department also believes Federal investments in such projects must recognize the current fiscal constraints and the need to make tough choices in prioritizing those investments.

Land and Water Conservation Fund

Question: The 2014 budget calls for an approach to full funding for the LWCF, which I am in favor of. It also calls for the funding to move over to the mandatory side. Can you provide me with more information about your request?

Response:

- The budget request is truly historic in that it marks only the second time since LWCF was enacted in 1965 that we are requesting full-funding.
- The full-funding and the mandatory request is actually achieved over a two year period of time. In FY 2014, we request \$600 million which is split \$400 million in discretionary funds and \$200 in mandatory funds.
- One of the signature pieces of our LWCF package is the work we have been engaged in over the last several years to create a competitive and collaborative component within the federal side.
- Working across jurisdictional boundaries enables us to leverage funding and to seize larger opportunities, like the one in the Crown of the Continent.

Hunting and Fishing Access

Question: I know you are a great outdoors enthusiast. Many people in my state also love the outdoors and I've worked hard to both increase and ensure access for hunters and anglers to these great places. I want to know what your budget does to support this access?

Response:

- The land acquisition projects contained within our budget make significant investments in improved access.
 - All of BLM's 22 projects have access benefits, which include providing opportunities for recreational activities.
 - More than 50 percent of the FWS acquisition projects will expand refuges that offer hunting and fishing opportunities.

Grazing

Question: Why is the BLM proposing to add a fee for livestock grazing permit applicants?

Response:

- Thank you for the question, Senator. The BLM maintains about 18,000 grazing permits and leases, each typically issued for 10 years. Under our budget proposal, the BLM would charge an administrative fee of \$1 per Animal Unit Month (AUM), which would be collected along with current grazing fees.
- The goal of the proposed administrative fee of \$1.00 per AUM is to recover some of the costs (approximately 25%) of administering the permits and leases of the grazing program from the parties (permittees) who benefit from their use of public lands and resources. Requiring permittees of public lands and resources to support the programs under which they benefit is common.
- The oil and gas industry is a prime example in which the users of the public lands

SENATOR TOM UDALL (D-NM)

Fire – Hazardous Materials

Question: The buildup of hazardous fuels on public lands in the West is a major concern – high-density, unhealthy forests pose risks to public safety and private property, not to mention endangered species and historical sites. I am concerned about the safety of Western communities and the cutbacks in your hazardous fuels program, which will reduce fuels projects. Can you explain why your budget fails to adequately fund hazardous fuels management and cuts support for community assistance?

Response:

- Thank you for the question, Senator. I appreciate your concern over the wildland fire threat posed by the buildup of hazardous fuels.
- As a Westerner, I have seen my share of fires and I understand the importance of the program.
- It is important to note that the overall budget contains a \$200 million increase for wildland fire.
- There is a reduction of 48% to the fuels budget – one of the difficult choices.
- I will say that the complexity and intensity of fires over the last ten years present enormous budgetary challenges for the federal government. I would be very interested in working with you to try to come up with a more rational system to ensure we have adequate resources for both our hazardous fuels management and our suppression activities.

Question: What is your forecast for the 2013 fire season? Does your 2013 budget include adequate funds?

Response:

- While I have not received an in-depth briefing on the forecast for the fire season, I do know that it has already started in earnest in Southern California and overall it is expected be a normal to slightly above normal.
- Specifically, my staff informs me that the National Interagency Fire Center Predictive Services organization is currently predicting significant fire potential, above normal, for south central Oregon, the interior mountains and foothills of southern California and the Sacramento Valley and adjacent lower foothills, southeastern Arizona, much of western New Mexico. Fire potential will be below normal for most of the southeastern U.S., Puerto Rico and the southern half of Alaska. This forecast is

updated monthly and information provided above is from the May 2013 forecast.

- If I could also add that it is important to understand that because we are operating under sequestration, we absorbed a reduction in over \$41 million to our fire program. These are not ideal circumstances for us to begin our fire season with.
- Our budget assumed a ten-year average need of \$369 million for firefighting, which is within the amount, \$370 million, we have including our carryover.

Oil & Gas

Question: I understand the Department is looking at changes to the regulations regarding commingling, which is critical for allowing small producers throughout the West to produce otherwise uneconomical amounts of oil and gas from low-volume wells. If the Department eliminates the ability to commingle in these situations, these wells would have to be shut down, costing jobs, hurting local economies, and decreasing domestic production. I understand this would be done in the name of collecting more royalties, but if wells have to shut down, we don't get any royalties at all. Wouldn't it make more sense to continue to allow the long-standing practice of commingling?

Response:

- Senator, I appreciate your concern and understand the critical role that low-volume wells and small producers play for our economic and energy well-being.
- The Department is committed to ensuring the American people get a fair return for the production of their oil and gas resources, and that requires accurate production volume measurements.
- I understand that the Bureau of Land Management has begun the process of updating their measurement rules in order to ensure that fair return, and to address numerous external recommendations that found the BLM's existing regulations to be outdated.
- I will work with you to make sure that improved accuracy in measurement does not come at the expense of shutting down low-volume wells. We welcome the input of industry as we revise our regulations, and that is why we held a public forum last month in which we discussed the proposed changes to our Onshore Orders.

SENATOR JOHN HOEVEN (R-ND)

Energy Development

Question: Given that domestic oil and gas production has been one of the only bright spots in our otherwise struggling economy, are you concerned that the Federal government is losing massive potential revenues by actually decreasing production of oil and gas on federal lands and in federal waters at a time where growth has been substantially increasing on state and private lands?

Response:

- I am committed to the President's "all-of-the-above" energy strategy to increase domestic production and reduce dependence on foreign oil.
- This includes exploring new frontiers and innovative technologies to develop both conventional and unconventional sources of energy, including renewables.
- Onshore Federal oil production increased 14% in FY 2012 compared to 2011.
- Oil production from OCS decreased in 2012 as compared to 2011 by 8% reflecting the impacts of Deepwater Horizon. However efforts are underway to reverse that trend.
 - At the end of 2012, more rigs were operating in the Gulf than in the previous 2 ½ years. In January 2010 there were 41 rigs in the Gulf and in December 2012 there were 48.
 - In 2012 we approved 520 deepwater permits as compared to 274 approved in 2011.

Bakken Shale

Question: The U.S. Geological Survey recently released an assessment, that shows a 25-fold increase in the amount of oil that can be recovered compared to the agency's 1995 estimate of 151 million barrels of oil in the Bakken Formation. How is the USGS research on fracking impacting access to these resources?

Response:

- We are making information available through the USGS about the resources of the Bakken Formation.
- USGS research on fracking is assisting public land managers, tribes and others by addressing concerns include water resource availability, water quality degradation, disposal of produced waters, air quality, habitat degradation, and induced seismicity.

- USGS expertise is being brought to bear to look at potential earthquake hazards to inform energy-related decisionmaking.
- The USGS is developing a methodology that evaluates the water needs related to developing the Bakken Formation, an unconventional oil field.

LWCF State Grants

Question: What is in the 2014 budget for State recreation grants?

Response:

- The 2014 budget requests \$40 million for LWCF State grants. An additional \$20 million in mandatory funding is requested in a 2014 LWCF legislative proposal.
- In 2012, North Dakota received \$378,000 from this program.
- In 2014 the allocation of discretionary funds would be about the same amount.
- If Congress enacts the request for mandatory LWCF, the allocation to North Dakota would increase an estimated \$500,000.

Trailers on Reclamation Land at the Heart Butte Reservoir

Question: What is in the status of the Heart Butte recreation area trailer removal?

Response:

- I am not familiar with the details but I am told that Reclamation began managing the recreation area in Dec 2009.
- As a result of concerns identified in the wake of a 2009 flood event and through a public process, Reclamation modified the terms of the permits for the trailers to ensure the safety and security of project facilities.
- I understand that the permittees are expressing concerns to their congressional delegation to convince Reclamation to modify the new permits terms (allowing more time) and/or allow the relocation of trailers to other Reclamation lands around the Reservoir.
- You are asking Mike Connor to look into this situation and advise you about options.

BLM Permit Pilot Offices

Question: What is the status of the BLM pilot offices?

Response:

- The Energy Policy Act of 2005 established Federal Permit Streamlining Pilot Project Offices for oil and gas activities in seven field offices in five States.
 - Grand Junction/Glenwood Springs Field Office in Colorado; Miles City in Montana, Farmington Field Office and Carlsbad Field Office in New Mexico, Vernal Field Office in Utah; and Rawlins Field Office and Buffalo Field Office in Wyoming.
- The project has resulted in improved interagency coordination, permit processing improvements, improved reliability for processing timelines, and enhanced environmental stewardship.
- When first established, these seven field offices accounted for a very large percentage of the workload and demand for oil and gas applications for permits to drill (APDs).
- Since that time, shifts in oil and gas activity and APD workload and demand has grown in other BLM field offices as well; e.g. field offices with jurisdiction over Bakken Shale development.
- As part of the 2014 President's Budget, the Administration proposes to extend and revamp the Section 365 pilot office authority to give BLM flexibility to relocate pilot offices as needed based on changing permitting demands over time.

SENATOR FEINSTEIN (D-CA)

Bay Delta Conservation Plan

Question: Are you any closer to full implementation of the BDCP? Why is it taking so long, and is the Department fully committed to fulfilling its promise to resolve water conflicts and rights in the Bay Delta?

Response:

- The BDCP has been in the works for seven years to resolve decades of conflict over Delta water supplies.
- The project would divert a portion of the Sacramento River and route water to existing State and Federal water diversion canals in the south Delta.
- Diligent planning and collaboration from all stakeholders is needed to move forward with practical solutions and a sustainable water future.
- All stakeholders are engaged – we are working closely with CA Department of Water Resources, BOR, FWS, NOAA, EPA, and U.S. Corps of Engineers.
- David is the Department's lead and can provide more details.

Delta Smelt

Question: The uncertainty around the Delta Smelt Biological Opinion is causing significant hardship for farms and cities south of the Delta. What are you doing to resolve this situation?

Response:

- The Delta Smelt species declined as a result of water pumping operations from Central Valley State water projects, and remains in a precarious state, with 2012 abundance near the species' all-time low abundance.
- Water exports south of Delta farms and cities have been significantly cut back this year due to the drought and the need to protect the smelt and salmon.
- Not all the cutbacks are due to smelt and salmon; some restrictions have been imposed under the State water permit, and the drought itself has been a critical factor.
- The biological opinion was recently invalidated by a Federal court and the old opinion remains in place as the only existing authority at this time.
- Interior, the Department of Commerce, and the California Department of Water Resources have filed a joint motion for a three-year extension of the current Court-ordered deadlines.
- I would like David, who is our lead for this project, to talk about the details.
- FWS is continuing to work with the water contractors on all matters relating to implementation of the biological opinion.

- The Department is working with contractors to develop a collaborative Bay Delta science plan that will include Delta smelt.

Drakes Bay Decision

Question: What is the status of the permit for the Drakes Bay Oyster Company to remain in operation at Drakes Bay? Why is the Department continuing to rely on faulty science and questionable facts to make decisions about this?

Response:

- On November 30, 2012, Secretary Salazar directed the NPS Director to allow the Reservation of Use and permits for a commercial oyster operation using property in Drakes Estero in the Point Reyes National Seashore to expire, as anticipated by Congress when it designated the area as "potential wilderness" in 1976.
- The company sought a preliminary injunction; the trial court ruled in favor of DOI and an appellate court hearing is scheduled for mid-May.
- The Department is committed to preserving the integrity of the scientific activities and will not tolerate misconduct in the performance of scientific activities or in the application of the products of scientific activity in decision making.
- Interior issued a scientific code of ethics and scrupulously manages scientific performance.

San Joaquin River Restoration

Question: What is the Administration requesting for the San Joaquin River Restoration in FY 2014? What is the status of the restoration project?

Response:

- The 2014 budget includes \$26 million in discretionary funding in the San Joaquin River Restoration Fund, a component of the San Joaquin Settlement.
- Total funding for the San Joaquin project in 2014 is \$47.3 million including mandatory and other sources.
- The Settlement restores flows and fisheries in the River, while providing greater certainty for water supplies to farmers and municipalities.
- We are continuing to work with all parties to implement the Settlement and have made great progress in balancing the need to restore the River's natural flows while assuring adequate water supplies for the users.

Klamath

Question: What is the Administration doing to resolve the conflicts in the Klamath River Basin? Are there additional funds to develop and implement a basin-wide recovery program?

Response:

- The Department remains committed to Klamath River Basin restoration and recovery goals.
- The 2014 budget includes \$63.4 million for activities in the Klamath River Basin, an increase of \$11.2 million from 2012.
- This includes work by BLM, BOR, FWS, USGS, NPS and BIA to continue operation of irrigation projects, fisheries management, Klamath Refuge operations, and wetland restoration.
- BOR is leading the collaborative effort among Federal, State, Tribes, and the public to develop a Basin-wide recovery plan to resolve water supply and fisheries issues.
- Interior has not signed the Klamath Basin Restoration Agreement (KBRA), which seeks to restore the Basin and establish water agreements for lake levels, river flows, and irrigation. The Department needs Congressional authorization to become a party to KBRA.
- The activities conducted by Interior bureaus are being performed under current law.

Quagga and Zebra Mussels in Lake Tahoe

Question: What is the status of Quagga and Zebra Mussel control in Lake Tahoe? What amount of funding is dedicated to this effort currently, and what is the projected for FY 2014?

Response:

- The impacts caused by these invasive species to our economic and natural resources is immense and it is important to take steps to rapidly identify and control infestations.
- Lake Tahoe has one of the most extensive and stringent Aquatic Invasive Species prevention programs in the country, and fortunately, we do not have positive detections of quagga or zebra mussels in Lake Tahoe at this time.
- We are continuing to prioritize funding for prevention projects such as watercraft inspection.

Renewable Energy

Question: Encouraging renewable energy development on the public lands has been a high priority of the President and his Administration. I am aware that since 2009, the BLM has approved 34 renewable energy projects. I also was pleased to see that, in October 2012, the BLM completed its Western Solar Plan. Will you continue to prioritize renewable energy development while mitigating the unavoidable adverse impacts associated with developing and operating utility-scale power generation facilities on public lands? What is included in the 2014 budget for this?

Response:

- I strongly support the President's vision for increasing the generation of clean energy through responsible development of renewable energy on the public lands, and I understand the importance of mitigating adverse impacts associated with renewable energy development.
- The Department will continue to promote the environmentally-sound development of renewable energy on public lands.
- The 2014 budget for BLM's Renewable Energy Management program is \$29.1 million.

Question: How will you emphasize the use of existing disturbed lands for energy development instead of using undisturbed lands?

Response:

- We are focused on the use of lands already developed and avoiding expansion of development in fragile ecosystems.
 - DOI has created a roadmap for smart solar development – the Western Solar Energy Plan covering six States and 17 energy zones.
 - We have signed an MOU with DOD to encourage development on withdrawn lands.

Indian Recognition/Gaming

Question: What are your views about Indian Tribes acquiring land in trust far from their reservations and building casinos on the land, also called "reservation shopping" or "off-reservation gaming"?

Response:

- I believe any effort to open an off-reservation gaming facility should be carefully scrutinized, and comply with the law, and should, where appropriate, allow all stakeholders to be heard.

- The Department carefully reviews these applications and applies the requirements of the Indian Gaming Regulatory Act.
- Approval of the Governor is required.
- If you want to discuss specifics I would ask David to provide additional details.

SENATOR LEAHY (D-VT)

White Nose Syndrome in Bats

Question: What is Interior doing about the white nose syndrome in bats?

Response:

- We are very concerned about the impact of white-nose syndrome in bat populations and we are actively involved with finding a solution to the spread of the disease.
- The 2014 budget includes \$11.5 million for programs intended to address this serious problem, an increase of \$5 million above 2012 levels.
- FWS and NPS will increase prevention and containment while USGS will enhance surveillance, diagnostic detection, and develop management tools and a vaccine.
- White nose syndrome is caused by a species of fungus *Geomyces destructans* that thrives in places of low temperature and high humidity, such as caves where bats hibernate.
- White nose syndrome is responsible for high levels of mortality in at least six species of bats.
- Mortality at many sites reaches 95 percent.
- Bats are important species ecologically and economically. They consume large quantities of insects, thereby protecting crops and contributing to agricultural production.

Lake Champlain Streamgages

Question: How will you ensure that Lake Champlain streamgages will continue to be funded?

Response:

- Lake Champlain streamgage costs have been covered for the past two years through a combination of USGS Cooperative Water program funds and funds provided by the States of Vermont and New York.
- The sequester has not impacted any of these streamgages to date, but no determination has yet been made on which streamgages will be funded in 2014.
- Cooperator funding for 2014 is unknown at this time.

Silvio O. Conte NWR LWCF Land Acquisition Funding

Question: How much are you asking for Silvio Conte Land Acquisition?

Response:

- The 2014 budget includes \$4.6 million for the acquisition of 3,600 acres at the Silvio. O. Conte National Wildlife Refuge.
- These parcels would add to the 35,530 acres acquired through the end of FY 2012.

Sea Lamprey Control In The Great Lakes

Question: What are you doing to control the invasive sea lamprey in the Great Lakes? Its presence is having a devastating effect on the lakes and their many users.

Response:

- The Department remains a strong partner in efforts to control sea lamprey in the Great Lakes.
- The 2014 budget maintains FWS funding at the 2012 level of \$1.0 million.
- FWS supports sea lamprey control efforts from the Marquette and Ludington field stations in Michigan and the Lake Champlain Fish and Wildlife Resources Office in Vermont.
- In addition, funding for sea lamprey control is provided to the Department by the Great Lakes Fishery Commission. In 2012, the Commission funded \$9.75 million. In 2013, funding is reduced to \$8.7 million.
- 2014 funding has not been determined, but is estimated to be in the range of \$8.4 million.
- The 2014 USGS budget includes \$175,842 for sea lamprey control efforts, a decrease of \$338,912 from the 2012 enacted level.
- At present, the USGS provides ongoing scientific and technical support to the sea lamprey control efforts of the Great Lakes Fishery Commission in three primary areas:

Question: Along with my colleagues from the four states encompassing the Connecticut River's 7.8 million acre watershed, named as America's first National Blueway last May, I encourage the Administration to support effective collaboration between stakeholder partnerships in these nationally significant watersheds and the Federal agencies with land and water management responsibilities. How will the Department of the Interior provide support?

Response:

- A National Blueways Committee has been established to oversee the development and implementation of the System, which includes representatives of the Fish and Wildlife Service, National Park Service, Bureau of Land Management, and Bureau of Reclamation, as well as representatives from the U.S. Department of Agriculture and the Department of the Army (Civil Works).
- At the field level, representatives of these same federal agencies are developing inter-agency agreements to communicate, coordinate and collaborate in support of stakeholder partnerships that have received recognition for their river and watershed as a National Blueway.

SENATOR JEFF MERKLEY (D-OR)

Renewable Energy

Question: What are you proposing for renewable energy in this budget?

Response:

- The 2014 budget includes \$100 million for renewable energy – an increase of \$26 million from 2012.
- Interior's approach to renewable energy balances development with conservation of treasured landscapes for future generations and protection of natural and cultural resources.
- Onshore and offshore – efforts are closely coordinated with States and stakeholders.
- In 2009, there were no commercial solar energy projects on or under development on Federal lands. There are now 37 renewable energy projects authorized on public lands that would provide 11,500MW – enough to power 3.8 million homes.

Western Oregon Forestry

Question: The volume of timber from sales in the O&C remains very low and will not support the remaining mills in the Pacific Northwest. Does BLM plan to meet its targets for 2013? What are the targets for 2014? What actions are you taking to promote sustainable forestry?

Response:

- The BLM is working to maintain and potentially increase the harvest level while complying with statutory and regulatory requirements, and has been meeting budgetary performance volume targets since FY 2010.
- BLM is pursuing short-and long-term strategies to maintain and potentially increase the harvest level while complying with statutory and regulatory requirements.
- BLM is evaluating the recommendations developed by a cooperative working group convened by Oregon Gov. Kitzhaber with the goal of achieving compromise between environmental and timber industry concerns in developing recommendations to Congress.
- BLM expects to be able to meet the FY 2013 Volume Target.
- The sequester and impacts on staffing and surveys are expected to affect the BLM's ability to meet its FY 2014 Volume Target as well as future year levels since much of the field work needs to be done 1-2 years in advance of offering sales.

Question: What is the status of BLM's Western Oregon planning efforts?

Response:

- BLM has initiated a process to revise six Resource Management Plans and implement a landscape-level strategy for sustainable timber harvest consistent with final critical habitat designation for the Northern Spotted Owl.
- The 2014 BLM budget includes an increase to support preparation of the six new RMPs in western Oregon.
- The new plans are expected to be completed in the summer of 2015

Secure Rural Schools/PILT

Question: Payments made by the BLM to counties within my State under the Secure Rural Schools were reduced by 10% in anticipation of the "sequestration" mandated by the Budget Control Act of 2012. When will the balance of payments be issued?

Response:

- We are working diligently to provide the balance of funds due to the Counties as quickly as possible.
- We held back 10% and allocated 90% or \$40 million.
- We plan to allocate an additional set of payments this month of approximately \$2 million.

Question: The Secure Rural Schools authorization expired in 2012. What does the 2014 budget propose related to the need for continued support for communities that received payments under this program through 2013? What happens if SRS is not reauthorized – how much will the counties receive?

Response:

- The 2014 President's Budget includes a five-year reauthorization of the Secure Rural Schools Act with funding through USDA's Forest Service.
- In this proposal, appropriations start with payments for 2013 that will be made in 2014.
- If SRS is not reauthorized, the payments would revert back to payments under the 1937 O&C Act and subsequent amendments.
- It is difficult to know accurately what the payments would be, but we can estimate.
- In 2012, Secure Rural School payments would have totaled \$40.1 million, without the sequester. If SRS had not been reauthorized, western Oregon counties would have been paid \$10.8 million, or approximately one-quarter of the amount available through Secure Rural Schools.

Question: The authorization for mandatory funding for the Secure Rural Schools and Payments in Lieu of Taxes program expire with the payments made in 2013. What is the 2014 budget proposal relating to these two programs? What options does the Administration have to offset the cost of reauthorizing SRS and PILT?

Response:

- The 2014 budget includes a proposal for ongoing payments to Oregon Counties under a Secure Rural School proposal that is included in the USDA Forest Service budget.
- The 2014 President's Budget includes a five-year reauthorization of the Secure Rural Schools Act with funding through USDA's Forest Service.
- In this proposal, appropriations start with payments for 2013 that will be made in 2014.
- For Payments in Lieu of Taxes, the 2014 budget includes a one year extension for mandatory funding.
- If enacted by Congress, this would allow us to make a payment in 2014.
- The budget also recommends that we work with you to develop a longer-term solution for PILT.
- PILT pays over 1,800 counties each year as they are not able to tax Federal lands. PILT payments are provided in lieu of taxes and fund important services like emergency response, roads, and schools.

Crooked River Collaborative Water Supply

Question: Will the Administration support my legislation for the Crooked River Wild and Scenic River?

Response:

- Reclamation testified in general support of legislation before both the Senate and the House, and believes that certain identified concerns can be addressed through revisions to current language.
- Reclamation staff met with proponents of the legislation on January 29, 2013, to answer questions and clarify Reclamation's testimony and comments on previously introduced legislation, as well as its contracting processes and procedures.
- We want to work with you on a legislative solution.

Coal Export

Question: I am concerned about the impacts of proposals to increase coal export through ports in the Pacific Northwest. What are you doing to understand these impacts and how will you mitigate them?

Response:

- No dedicated export terminal for Power River Basin coal exists on the West Coast.
- BLM does not currently have any proposals to evaluate the impacts.
- BLM is continuing to monitor for information about the development of export markets for Federal coal.
- We would be happy to evaluate a proposal we receive.

Coal Valuation

Question: What are you doing to close the loopholes in existing coal valuations that allow companies to pay lower royalties than they should?

Response:

- Interior is taking steps to ensure that Federal and Tribal coal lessees are reporting the proper value when selling to an affiliate.
- The Department is auditing coal leases to ensure the U.S. is receiving every dollar due.

SENATOR TIM JOHNSON (D-SD)

Indian School Operations

Question: What is your 2014 budget request for Indian School Operations?

Response:

- The 2014 budget includes \$803 million for Bureau of Indian Education programs.
- This is an increase of \$7.3 million from 2012 to advance Indian education.
- The budget includes \$526.4 million for Elementary and Secondary School programs including \$377.5 million for ISEP formula funds.
- The 2014 budget includes an increase of \$15 million for an Education Turnaround program.
 - The Turnaround program is modeled on the Department of Education programs to improve the performance of students.
 - Grants will be awarded to schools that demonstrate the strongest commitment for using funds to raise student achievement.
- The budget includes \$65 million for post-secondary programs including an increase of 6.2 million to meet the growing enrollment at BIA funded tribal colleges, for fellowships and training for post-graduate study in science fields, and for other higher education scholarships and adult education.
- The budget includes \$2 million for an independent evaluation of BIE programs to consider future needs and structure of the system.

Question: What is the status of the Director of Indian Education?

- We are searching for a new Director of BIE – there is an advertisement out now.
- Dr. Charles Roessel is our acting Director. He is from the Navajo Schools.

Landsat

Question: What is your 2014 budget request for Landsat?

Response:

- The 2014 budget includes \$53.3 million, level with 2012.
- This funding continues the USGS role in current and future Landsat missions. Funds would be used for operation of Landsats 7 and 8 and to analyze future requirements for successor missions.

- USGS is working closely with NASA, NOAA and OSTP on the examination of alternatives for ensuring the availability of continuous land remote sensing data.
- The USGS Earth Resources Observation and Science Center in Sioux Falls, South Dakota, processes Landsat data.

U.S. Department of the Interior News Briefing for Tuesday, May 7, 2013

INTERIOR OFFICIALS TO DEFEND BUDGET BEFORE CONGRESS. The [EnergyWire](#) (5/6, Taylor, Subscription Publication) reports, "Interior Secretary Sally Jewell will make her first appearance before Congress tomorrow to defend her agency's \$11.7 billion budget, a proposal that envisions a significant boost in conservation cash and new fees on the oil and gas industry." According to the article, "Jewell, along with outgoing Deputy Secretary David Hayes; Assistant Secretary for Policy, Management and Budget Rhea Suh; and Deputy Assistant Secretary for the Office of Budget, Finance, Performance and Acquisition Pam Haze, will testify before the Senate Interior, Environment and Related Agencies Appropriations Subcommittee." Also, "at the same time this week, Bureau of Land Management Principal Deputy Director Neil Kornze will defend his agency's budget to a House panel."

In its "E2 Wire" blog, [The Hill](#) (5/7, Colman, Geman, 21K) reports, "The 10:30 a.m. hearing will provide lawmakers a chance to ask about several hot-button topics within Interior's jurisdiction." According to the article, "they include upcoming, controversial rules to regulate the oil-and-gas development method hydraulic fracturing when it

occurs on public lands."

Also reporting on the story are [Politico](#) (5/7, Guillen, 25K), the "E2 Wire" blog of [The Hill](#) (5/7, Colman, 21K) and the "On The Money" blog of [The Hill](#) (5/6, Needham, 21K).

STATE GOVERNORS, OFFICIALS URGE INTERIOR DEPARTMENT TO ALLOW MORE OFFSHORE

ACCESS. Several media outlets on Monday reported that six US governors spoke during an industry conference, urging the Federal government to allow greater access to coastal waters for offshore exploration and production.

The AP (5/7) reports that the governors of Alaska, Mississippi, Alabama, South Carolina, Texas, and North Carolina spoke out on Monday during the Offshore Technology Conference in Houston, as did officials from Virginia and Louisiana. The states all spoke urging the Federal government to allow increased access for offshore exploration and production. They argued that the moratorium placed on offshore drilling following the 2010 Deepwater Horizon spill has "made it difficult" for companies to produce in the area, despite the lifting of the ban. The officials urged increased drilling, saying it "would create jobs, strengthen the nation's economy and lower gas prices."

[FuelFix](#) (5/6) notes that all six Governors who spoke on Monday are Republicans. The article says Gov. Pat McCrory (R-NC) argued, "We want to create jobs." McCrory urged President Obama "to join us," making "government a partner with us - not an adversary." He pleaded, "Let the states unleash these natural resources to create jobs and (help) the economy." Gov. Rick Perry (R-TX) in comments touched upon new safety measures implemented since the Deepwater Horizon disaster, saying, "Today's energy exploration in the Gulf is safer than ever, for our operators (and) for the environment." FuelFix notes that although the Interior Department's current offshore drilling lease plan, which runs through June 2017, includes auctions for offshore areas near Alaska and in the Gulf of Mexico, no "mid-Atlantic states" are included in the auctions.

[Dow Jones Newswires](#) (5/7, Sider) provides similar coverage on the comments of Gov. Rick Perry (R-TX) and others during the Offshore Technology Conference on Monday. Governors from states that already have offshore drilling said Interior Department officials should relax regulations on the industry to help increase production in offshore areas.

The [Friendswood \(TX\) Journal](#) (5/7) reports, "Gov. Rick Perry today renewed his call for more offshore energy development and consistent federal regulations in order to help our nation reach its goal of energy independence." Perry "spoke at the 2013 Offshore Technology Conference as part of a panel of coastal governors." He said, "Today, energy exploration in the Gulf is safer for our operators and our environment than ever before. Technological and procedural advances have opened up huge sources of energy, giving us the capability to reach vast stores of energy reserves previously thought untouchable. With every step forward, we move closer to the day when our nation can reach true energy independence and end our crippling dependence upon foreign regimes to meet our needs."

The [Charlotte \(NC\) Observer](#) (5/6, 148K) reports, "Gov. Pat McCrory is visiting an offshore energy trade conference in Texas to try to help build momentum for drilling off the coast of North Carolina and other states." He "recently joined a coalition of governors in Outer-Continental Shelf states that want President Barack Obama's administration to open more coastal waters to natural gas and oil exploration."

Also reporting on the story are the [Winston-Salem \(NC\) Journal](#) (5/7, 55K), the [Triangle Business Journal](#) (5/7, Weisbecker, Subscription Publication) and [WFMY-TV](#) Greensboro, NC (5/7).

Industry Group Notes Offshore Producers Like Clarity On Industry Regulations. [FuelFix](#) (5/6) reports that offshore policies at the Federal level will likely be a hot topic at this week's Offshore Technology Conference. The industry hopes Washington will "clarify the standards that will govern a new era of Arctic drilling and approve a new generation of seismic research that could help pinpoint oil." Additionally, the industry has its eyes on new mandates for blowout preventers that are set to be implemented by the Interior Department.

[FuelFix](#) (5/6, Weber) reports that on Monday during the Offshore Technology Conference in Houston, Schlumberger senior engineer Praful Desai said "technology and collaboration between contractors will be key to plugging and abandoning" wells as drilling increases due to the US oil and gas boom. Desai discussed the

difficulties faced with well plugging in the Gulf of Mexico and North Sea, "key areas" for offshore exploration that pose "greater risks and costs" as producers drill deeper. He said field partners need to collaborate to lower costs, and that "a number of new technologies will be implemented, focused mainly on cost reduction and safety."

Federal Policies Urged To Support Innovation In Oil, Gas Exploration. In an op-ed for the [Houston Chronicle](#) (5/7, 434K), David Holt, President of the Consumer Energy Alliance, writes that "federal policies" must support the "expansion of oil and gas drilling technologies." He argues that "while remarkable advances in onshore technology have opened up vast fields of oil and natural gas once thought to be unreachable, the future of American energy production lies offshore, not just on land." Holt also notes at this week's Offshore Technology Conference, "a group of eight coastal governors, including Gov. Rick Perry, called for an improved dialogue with the federal government to allow expanded access to US waters."

Editorial: Move Forward With Fracking But Learn From North Dakota's Experience. The [Fayetteville \(NC\) Observer](#) (5/7, 47K) editorializes on offshore drilling, noting that Gov. Pat McCrory recently said it "could bring 140,000 new jobs to the Atlantic coastal region. And he cited North Dakota, with its 3.3 percent unemployment rate and booming economy as an example of what petroleum exploration can do." The Observer argued, "What the governor didn't mention was the problems North Dakota is facing," such as "spills of oil or fracking fluids," and "the rise of shantytowns." The piece concludes, "Yes, it is time to find out what's out there. ... Let's move ahead, but let's learn from North Dakota's experience too."

AGENCIES ASKING FOR MORE WILDLIFE DRONE MISSIONS. The [New York Times](#) (5/7, Farrell, Subscription Publication, 1.68M) reports, "Drone technology, which has become a staple of military operations, is now drawing scientists with its ability to provide increasingly cheaper, safer and more accurate and detailed assessments of the natural world." According to the article, "designed to monitor enemy positions from afar, the early Ravens, from about 2005, which cost \$250,000 per system, were slated for destruction when an Army colonel thought they might be better used for scientific research and were donated to the Geological Survey." Now, "every week brings more requests from...Interior Department agencies" seeking to use the drone.

INTERIOR'S INSPECTOR GENERAL'S OFFICE RECOGNIZED FOR TELEWORK PROGRAM. [Government Computer News](#) (5/7, Crowe) reports, "The Mobile Work Exchange, which promotes sharing about innovations in setting up telework systems and programs between government and commercial organizations, recently announced the recipients of the group's 2013 'Tele-Vision' Awards." The article notes that "'The Largest Leap In Telework/Mobility' award went to the Telework Program of the Department of the Interior Inspector General's Office." According to the article, "in three years, from 2009 to 2012, the agency's IG office went from near-zero participation in telework to 98 percent," which "might have made an impact on the employee satisfaction and productivity at the office."

DEPUTY SECRETARY HAYES TO LEAVE INTERIOR. [KCET](#) (5/7, Clarke) reports, "Deputy Interior Secretary David Hayes, who's generally credited with drafting the US Interior Department's massive expansion of renewable energy development on public lands since 2009, will be leaving his post for a job at Stanford University." According to the article, "as second-in-command at Interior, Hayes oversaw the implementation of Interior's development of programs such as the Solar Programmatic Environmental Impact Statement (PEIS) and its fast-tracking of wind energy developments on public lands." The article notes that "in addition to his work to promote industrial renewables on public lands, Hayes also oversaw Interior Department involvement on a number of Native issues and on Arctic energy exploration and development."

REPORT CALLS FOR INTEGRATED MANAGEMENT STRATEGY IN ARCTIC. The [Alaska Native News](#) (5/7, Bauman) reports, "A federal interagency working group led by the Interior Department says an integrated management strategy is called for in the rapidly changing Arctic." The article notes that "the report released April 4 by Interior Deputy Secretary David J. Hayes highlights the need for a coordinated approach using best available science to integrate cultural, environmental and economic factors in decision-making about development and conservation." Hayes said that "the interagency report chronicles how Arctic residents are dealing with rapid, climate change-induced impacts on their resources and traditional ways of life at the same time that new economic activity and opportunities are emerging."

EFFORT TO RECOGNIZE FEDERAL WORKERS TOUTED. The [Washington Post](#) (5/6, Davidson, 489K) reports

that Max Stier, president of the Partnership for Public Service, believes that the "antidote" to "bashing" of Federal workers is through the implementation of Public Service Recognition Week. The event is being organized by the Public Employees Roundtable. Stier says, "Seriously, we will never get the government we want if all we do is tear it down. Amazing things are going on by public servants and we need to recognize them if we want them to be replicated by other public servants."

PAPER URGES COMMITMENT TO OFFSHORE ENERGY DEVELOPMENT. The [Baton Rouge \(LA\) Advocate](#) (5/7, 80K) editorializes, "While there has been much attention paid to the development of shale oil and gas on land, the first visit of the new secretary of the US Department of the Interior to the oil patch is a reminder that immense natural wealth remains to be tapped offshore." On her visit to a drilling rig, Interior Secretary Sally Jewell told employees, "Maintaining the public's trust in the safety and environmental performance of oil and gas production is critically important as we continue to tap into the Gulf's abundant resource potential." The paper concludes that "potential sources of oil and gas should be part of, in Jewell's words, 'powering our nation and strengthening our economy.'"

VETERAN ARGUES CONSERVATION IS PATRIOTIC DUTY. For "The Blog" of the [Huffington Post](#) (5/7, Starr), Mark Starr, Program Director, Vet Voice Foundation, writes, "Protection of our nation's lands such as the California desert is clearly a patriotic duty." He notes, "first, as veterans we clearly understand the importance of renewable energy development and how it relates to our national security." Also, "by protecting these lands through the new designation of two new national monuments, wilderness areas, and wild and scenic rivers...we will undoubtedly see more tourism and dollars injected into the area."

[America's Great Outdoors:](#)

National Park Service:

ACADIA'S CADILLAC MOUNTAIN ROAD TO OPEN EARLIER THAN PLANNED. The [Boston Globe](#) (5/6, 250K) reports, "The National Park Service has worked with local Maine merchants to come up with a plan to open the Cadillac Mountain road earlier than planned." According to park officials, "the portion of the Park Loop Road that provides access to the mountain will open for the season on Saturday, while other parts of the loop road remain closed until May 17 because of the federal budget cuts."

Also reporting on the story is the [Bangor \(ME\) Daily News](#) (5/6, Trotter, 45K).

FLOODING HITS CONGAREE NATIONAL PARK. The [State \(SC\)](#) (5/6, Holleman, 71K) reports, "The combination of a wet spring and drenching weekend rains has pushed several rivers to flood levels, including the Broad, Congaree, Enoree, Saluda and Santee." According to the article, "if the National Weather Service forecast is accurate, flood waters at Congaree National Park will reach heights they haven't hit since 1988." The article notes that "the park's buildings will remain above the flood waters, but much of the boardwalk trail and all but the highest parts of the bluff trail will be under water."

Also reporting on the story is the [Greenville \(SC\) News](#) (5/7, Holleman, 56K).

VOLCANO HOUSE HOTEL TO REOPEN AT HAWAII VOLCANOES NATIONAL PARK. The [Hawaii Business Magazine](#) (5/7, Stickler) reports, "After standing empty for three years, the Volcano House Hotel is gradually reopening on the rim of the still-active Kilauea Caldera at Hawaii Volcanoes National Park." The NPS "closed the lava-stone and ohia-wood structure on Jan. 1, 2010, as its past glory faded below national-park standards," and "in August 2012, the newly formed Hawaii Volcanoes Lodge Co. picked up the lease and guaranteed to bring it up to 21st-century specifications." According to project manager Ercel Dunsmore, "a \$3 million renovation began in January and should be completed by June."

ART EXHIBIT TO FEATURE CELEBRATION OF STATUE OF LIBERTY. The [Jersey Journal \(NJ\)](#) (5/7, Stein, 17K) reports, "The opening reception for the NJCU art student exhibit 'Posters & Logos of the 125th Anniversary of the Statue of Liberty' will take place tonight at 6 p.m. in the lobby outside the Mildred H. Hunke Auditorium of the Five Corners Branch Library, 678 Newark Ave., Jersey City." According to the article, "the exhibit will feature posters and logos from contestants who designed the works to celebrate the Statue of Liberty's 125th

anniversary in 2011." The article notes that "the winning logo used for the year-long celebration was designed by Joseph Domalewski and was selected by the public through an online competition by the National Park Service."

RESCUERS SEARCH FOR MISSING HIKER IN YOSEMITE NATIONAL PARK. The [Minneapolis Star Tribune](#) (5/7, Smith, 335K) reports, "Searchers are looking for a 73-year-old Edina man who didn't return Sunday afternoon from a solo day hike to Vernal Fall in Yosemite National Park." According to the article, "about 30 people and a dog team scoured the area Sunday evening and Monday in search of Kenneth Stensby, an experienced hiker, and found only his dark colored day pack near the railing at the top of Vernal Fall." Park Ranger Scott Gediman said that "officials likely will add a helicopter and additional dog teams."

The [Fresno \(CA\) Bee](#) (5/6, 113K) reports, "Yosemite National Park officials are asking the public's help to locate a hiker who went missing on a hike to the top of Vernal Fall." Also, "the park service asked hikers to check their photos for images of Stensby or his pack."

Also reporting on the story are the [Los Angeles Times](#) (5/6, Mather, 692K), the [Modesto \(CA\) Bee](#) (5/6, Guerra, 59K), the [Sacramento \(CA\) Bee](#) (5/6, 202K) and the [St. Paul Pioneer-Press](#) (5/7, 201K).

INJURED HIKER RESCUED FROM YOSEMITE NATIONAL PARK. The [Sierra \(CA\) Sun Times](#) (5/7) reports on the rescue of Fernando Celis, who was injured while hiking in Yosemite National Park.

MISSING HIKER AT CONGAREE NATIONAL PARK FOUND. [WLTX-TV](#) Columbia, SC (5/7, Wirtzberger) reports, "Columbia Fire Department and several other agencies spent part of Sunday evening searching for a missing female hiker." According to Brick Lewis with the Columbia Fire Department, "crews have found the missing hiker at Congaree National Park."

BODY RECOVERED FROM DELAWARE RIVER. The [Lehigh Valley \(PA\) Express Times](#) (5/7, 44K) reports, "Authorities say they've recovered a body spotted floating in the middle of the Delaware River on the Pennsylvania-New York border." According to the article, "state police in Sullivan County, N.Y., say today that the body was found by a group of canoeists Saturday afternoon near the border of the towns of Tusten and Highland, 85 miles northwest of New York City." The article notes that "New York State Police, the National Park Service and local emergency crews responded."

Also reporting on the story are the [Pocono \(PA\) Record](#) (5/7, 14K), the [Lewistown \(PA\) Sentinel](#) (5/7), and the [Mid-Hudson News](#) (5/6).

GLACIER NATIONAL PARK BONES TO BE IDENTIFIED THIS WEEK. [KTVQ-TV](#) Billings, MT (5/7) reports on the "bones that were found in Glacier National Park last week." According to Flathead County Sheriff Chuck Curry, "the bones are being looked at by a medical examiner in Billings to determine whether they're from a human or an animal." Curry "says they should know more answers by the end of the week."

Also reporting on the story is [KPAX-TV](#) Missoula, MT (5/7).

NPS OFFICIALS PREPARING FOR PRESCRIBED BURN AT DEVILS TOWER NATIONAL MONUMENT. The [Rapid City Journal](#) (5/7, 24K) reports, "As National Park Service officials prepare for a prescribed burn at Devils Tower National Monument in Wyoming next week, they can't help thinking about the one that got away from them." The article notes that "the April 3 prescribed burn on the Grand River National Grasslands near Hettinger, N.D. and Lemmon escaped containment and burned thousands of acres, including private land." The fire is "a reminder to Devils Tower officials of what can go wrong and should be guarded against."

FIRE BURNS ABOUT 59 ACRES NEAR LAKE MEREDITH NATIONAL RECREATION AREA. The [Amarillo \(TX\) Globe News](#) (5/6, Bryant, 31K) reports, "A fire in the Lake Meredith National Recreation Area burned about 59 acres, Chief Ranger Paul Jones said." The NPS "responded about 5:45 p.m. Saturday to the fire at Harbor Bay, with the Fritch Volunteer Fire Department, the Stinnett Fire Department, Potter County Fire Department and Borger Fire Department assisting, Jones said." He "said the fire was caused by people and remains under investigation."

PROPOSED 9/11 MUSEUM FEE CRITICIZED. In his column for the [NorthJersey.com](#) (5/7, Kelly), Mike Kelly

writes, "The announcement that visitors to the 9/11 Museum at Ground Zero will pay an entry fee as high as \$25 per person to view underground exhibits and a vault containing the remains of unidentified victims has renewed a roiling debate over what should be done with that hallowed ground – and who's in charge of it." According to Kelly, "the proposed fee would effectively exclude low- and moderate-income families who were as affected as anyone by the 9/11 attacks." However, he notes that "not many other options are available," since "when asked last year if it would consider taking over the management of the museum and finances, the National Park Service responded with an emphatic no."

Bureau of Land Management:

BLM BEGINS TAKING COMMENTS ON GATEWAY WEST PROJECT. The [Boise \(ID\) Weekly](#) (5/6, 35K) reports, "Beginning today, the public will have the opportunity to weigh in on the latest version of the Gateway West power project - a proposed transmission line that would, if approved, run from Wyoming across southern Idaho." The BLM "is holding a series of public comment meetings around Idaho beginning this afternoon at 4 p.m. at the Boise Hotel and Conference Center on Vista Avenue," and "later this week, the BLM will take the issue to similar meetings in Kuna, Murphy and Melba."

The [Northwest Cable News \(Seattle, WA\)](#) (5/7, Grey) reports, "The Gateway West Transmission project is a high priority project for the Obama administration and Idaho's Republican senators and representatives are calling on you to make your voice heard with 'strong public input.'" The article notes that "some people are concerned about the transmission lines being near the Morley Nelson Snake River Birds of Prey National Conservation Area." Meanwhile, "others, including Idaho's congressional delegation, are concerned about the BLM creating new preferred lines after people most affected by the project had already worked with Idaho Power on a route."

Also reporting on the story is [KTVB-TV Boise, ID](#) (5/7, Grey).

BLM HOLDS MEETINGS ON HI-LINE PLAN. The [Great Falls \(MT\) Tribune](#) (5/6, Puckett, 25K) reports, "Five informational meetings on a proposed management plan that will direct energy development, conservation of wildlife habitat, recreation and livestock grazing on 2.4 million acres of public lands in northern Montana kick off this week." According to Stanley Jaynes, the field manager for the Bureau of Land Management's Have field office, "agency officials already are hearing from the public about the plans to protect unbroken prairie contained in the Hi-Line Draft Resource Management Plan and Environmental Impact Statement." The article notes that "key issues in the plan involve sage grouse protections, identifying lands with wilderness characteristics and documenting what lands will be available for oil and gas development."

NEBRASKA RANCHER FACES 149 ANIMAL CRUELTY COUNTS. The [High Plains Journal](#) (5/7) reports, "Morrill County Attorney Jean Rhodes has filed an amended complaint against a western Nebraska rancher, charging him with 149 felony counts of abandonment and cruel animal neglect resulting in injury or death." According to the article, "authorities last month found many of the 200 horses and several burros on the 3-Strikes Ranch emaciated and suffering from overgrown hooves and other ailments. Nearly 75 dead horses and burros have been documented." The article notes that "the ranch had been a sanctuary for wild horses adopted by the Bureau of Land Management."

ADDITIONAL COVERAGE OF POTENTIAL CLOSURE OF CASTLE ROCKS. Additional coverage of the potential closure of Castle Rocks was provided by the [Washington Post](#) (5/6, 489K), [Yahoo!](#) (5/7, Furfaro) , and [Yahoo! News Canada](#) (5/7).

Fish and Wildlife Service:

WOLVERINE PROPOSAL GENERATES STATES' OPPOSITION. The [San Jose Mercury News](#) (5/7, Brown, 539K) reports, "State officials in the Northern Rockies on Monday lined up against a federal proposal to give new protections to the carnivorous wolverine, as climate change threatens to melt the species' snowy mountain strongholds." According to the article, "Montana, Idaho and Wyoming officials insist federal protections aren't necessary for the estimated 250-300 wolverines that live across the West." But "biologists say warming temperatures could shrink the wolverine's mountain habitat in the Lower 48 by as much as 60 percent over the next 80 years."

Also reporting on the story is the [Denver Post](#) (5/7, Brown, 443K).

FWS SEEKS INPUT ON WHITE RIVER REFUGE EXPANSION. The [Stuttgart \(AR\) Daily Leader](#) (5/6, Morris, 2K) reports, "The US Fish and Wildlife Service (USFWS) is gathering input to increase the White River National Wildlife Refuge's acquisition boundary." According to Keith Weaver, the refuge's project leader, "the proposal would provide increased opportunities for willing sellers as well as conserve the 'southern end of the Big Woods of Arkansas for future generations, restore and enhance wildlife habitats for a diversity of migratory and resident species, improve water quality, and provide additional public access and wildlife-dependent recreation such as hunting, fishing and wildlife observation and photography."

ADDITIONAL COVERAGE OF GRIZZLY BEARS PROPOSAL. Additional coverage of the FWS grizzly bear management proposal was provided by [Yahoo!](#) (5/7, Ross).

Securing America's Energy Future:

Renewable Energy:

WYOMING'S HYDROPOWER POTENTIAL EXPLORED AS CONGRESS CONSIDERS BILLS. The [Casper \(WY\) Star-Tribune](#) (5/7, Voge, 22K) reports that the Idaho National Laboratory estimates Wyoming can be tapped for more than 500 megawatts of hydropower, while "another study, by the Bureau of Reclamation, and related to government-controlled properties only, adds another 23 megawatts to the picture." The paper says members of Wyoming's congressional delegation are pushing for the development of alternative energy sources in the state. A bill to "streamline the process needed to permit small hydropower generators in the West" was passed in the House in March. It was introduced in the Senate in April, and the Senate Energy and Natural Resources Committee "is scheduled to vote on the measure Wednesday."

WIND ENERGY GROUP EYES PLAN TO PRESENT TO CONGRESSIONAL PANELS. [The Hill](#) (5/7, Colman, 21K) reports in its "E2 Wire" blog that a "top wind trade group said Monday that it's crafting a long-term policy plan that it plans to take to tax-writing committees in the House and the Senate." Incoming American Wind Energy Association CEO Tom Kiernan said AWEA officials will go "on a road show of sorts to get input from industry stakeholders before finalizing a proposal."

[Bloomberg News](#) (5/7, Martin) reports the US wind-power industry "is expecting" a major challenge in Congress in its efforts for "another extension of a federal tax credit that received a one-year renewal at the last minute in January." Bloomberg quotes Kiernan as saying, "The political climate in Washington is getting tougher."

Onshore Energy Development:

ENVIRONMENTAL GROUP ASKS BLM TO RECONSIDER LEASE SUSPENSION FOR THOMPSON DIVIDE DRILLERS. The [Grand Junction Daily Sentinel](#) (5/7, Webb, 23K) reports, "A Carbondale-based conservation group asked Monday that the Colorado director of the Bureau of Land Management reconsider the agency's decision to prolong the duration of 25 oil and gas leases in the Thompson Divide area." According to the article, "the Wilderness Workshop appealed the lease suspension decision with the help of Earthjustice attorney Mike Freeman, who also led litigation resulting in the BLM reconsidering its leasing of some 55,000 acres for oil and gas development in the Roan Plateau area west of Rifle." The groups "are asking Helen Hankins, director of the Colorado state office of the BLM, to reverse a recent decision by Steve Bennett, director of the agency's Colorado River Valley Field Office in Silt."

BLM SEEKS FEEDBACK ON EXPANSION TO HORSESHOE BASIN OIL, GAS PROJECT. The [Casper \(WY\) Star-Tribune](#) (5/7, 22K) reports, "The federal Bureau of Land Management is seeking public input on a proposed oil and gas project that could include 20 wells." The agency "announced Monday that it is taking feedback on an expansion to the Horseshoe Basin oil and gas project, a Devon Energy proposal which would include two new wells drilled per year for a decade."

Tackling America's Water Challenges:

BAY DELTA CONSERVATION PLAN DIVIDES CALIFORNIA. In an editorial, the [Pasadena \(CA\) Star-News](#) (5/7) argues that the Bay Delta Conservation Plan will "protect what little of this important ecological resource is left." Rather than a "simple 'water grab' that would allow the spigot to be thrown open and more water transferred from north to south," the paper claims that "the delta plan is about stabilizing water deliveries in the face of an uncertain climate when both snowpack and rainwater sources have become incredibly volatile." It concludes that "this huge, complex project has a multi-billion dollar cost, but it's an investment that should prove worthwhile - for all Californians."

In an editorial, the [Los Angeles Daily News](#) (5/7, 86K) notes that there is a divide in opinion on the Bay Delta Conservation Plan between northern California newspapers and southern California newspapers. It notes that southern California newspaper have "said the entire state needs the delta project and that the mendacious 'us vs. them' rhetoric used by opponents 'is destructive, obstructive and belies how desperately we need this.'" Meanwhile, the northern California papers "were opining that the 'Delta water plan deserves to go down the drain.'"

CHIPPEWA CREE BUSINESS COMMITTEE REFUTES CORRUPTION ALLEGATIONS. The [Great Falls \(MT\) Tribune](#) (5/6, Murray, 25K) reports, "The Chippewa Cree Business Committee, the Rocky Boy's Indian Reservation's highest representative body, issued a news release Monday refuting recent allegations that millions of federal dollars intended for a regional water development project are unaccounted for." The tribe's acting Chairman, Rick Morsette, said, "The numbers reported by the local newspapers don't match the facts. We spoke to representatives from the Bureau of Reclamation office who agreed that what they read in the paper was inaccurate. Extensive reviews have actually revealed that the Chippewa Cree Construction Corp. may have some outstanding reimbursements coming from the Bureau of Reclamation."

WATER RIGHTS EXPECTED TO SPARK CONFLICT BETWEEN KLAMATH RIVER FARMERS, TRIBES. The [Los Angeles Times](#) (5/7, Barboza, 692K) reports, "New water rights have given a group of Oregon Indian tribes an upper hand just as the region plunges into a severe drought." According to the article, "farmers and wildlife refuges could be soon cut off by the Klamath Tribes, which in March were granted the Upper Klamath Basin's oldest water rights to the lake and tributaries that feed the mighty river flowing from arid southern Oregon to the foggy redwoods of the Northern California coast." The article notes that "within weeks, the 3,700-member tribes are poised to make use of their new rights to maintain water levels for endangered Lost River and Shortnose suckers, fish they traditionally harvested for food," and "under the 'first in time, first in right' water doctrine that governs the West, the Klamath Tribes can cut off other water users when the river runs low."

FULL SUPPLY EXPECTED FOR ALL YAKIMA BASIN IRRIGATORS. The [Yakima \(WA\) Herald-Republic](#) (5/7, 28K) reports, "A wet April provided a further boost to the summer water supply outlook for farmers and fish in the Yakima River Basin, the Bureau of Reclamation said this morning." The article notes that "all water users will have a full supply of water."

Also reporting on the story are the [Ellensburg \(WA\) Daily Record](#) (5/7, Johnston, 5K) and [KNDO-TV](#) Yakima, WA (5/7).

DEAL REACHED TO KEEP LAKE BERRYESSA'S MARKLEY COVE OPEN THROUGH 2014. The [Napa Valley Register](#) (5/7) reports, "The US Bureau of Reclamation has inked an interim contract to keep the Markley Cove Resort on the south end of Lake Berryessa open through December 2014." The agreement "is with the resort's current managers, John and Linda Frazier, and begins May 27." David Murillo, the regional director for Reclamation's Mid-Pacific Region, said in a news release, "Reclamation has enjoyed a positive and successful relationship with the Fraziers for many years, and we are pleased that this relationship will continue for this interim period."

CONTRACT AWARDED FOR FINAL PHASE OF WORK ON FOLSOM DAM SPILLWAY. The [Sacramento \(CA\) Business Journal](#) (5/6, Meer, Subscription Publication) reports, "The US Army Corps of Engineers Sacramento office has awarded a \$255.1 million contract for the last phase of work on a spillway at Folsom Dam." According to the corps, "Kiewit Infrastructure West Co. of Fairfield won the contract, which will allow work to begin July 1 and be finished by 2017." The article notes that "in addition to the corps, the US Bureau of Reclamation, Central

Valley Flood Protection Board and Sacramento Area Flood Control Agency are involved in the overall project."

Empowering Native American Communities:

NEW YORK TIMES STORY ON KEEPSEAGLE SETTLEMENT DISPUTED. The [Indian Country Today Media Network](#) (5/6, Capriccioso) reports, "The most respected newspaper in the country has pointed out the sour political undercurrent in the 2011 Keepseagle settlement that awarded \$760 million to Native American farmers for discriminatory practices they faced." However, "lawyers for those Indians say The New York Times is wrong." Cohen Milstein Sellers & Toll, which holds "the remaining \$460 million" of the settlement has "issued a background paper, offering a clarification and claiming that the firm was fighting the good fight."

CHEROKEES MAY WAIT UP TO 10 YEARS FOR COBELL LAND PURCHASES. The [Cherokee \(OK\) Phoenix](#) (5/7, Jackson) reports, "Cherokee Nation citizens who signed up for the Land Buy-Back Program under the \$3.4 billion Cobell Settlement may be waiting up to 10 years before selling their fractionated lands." According to the article, "within the CN, there are only 135 fractionated tracts containing purchasable interests and no highly fractionated tracts."

Top National News:

"WHISTLEBLOWERS" EXPECTED TO CONTRADICT OFFICIAL ACCOUNT OF BENGHAZI ATTACK. Ahead of Wednesday's House Oversight Committee hearing on allegations from so-called "whistleblowers" regarding the Administration's handling of the attack on the US consulate in Benghazi, media coverage of the surrounding controversy has increased substantially. [NBC Nightly News](#) (5/6, story 3, 2:40, Williams, 7.86M) devoted a full segment to Benghazi, and the [CBS Evening News](#) (5/6, story 5, 0:35, Pelley, 5.58M) briefly previewed Wednesday's hearing. However, the Benghazi narrative continues to be driven by conservative news outlets, particularly Fox News and the Weekly Standard, and, consequently, defenses of the State Department's actions are greatly outweighed by allegations of "politicization" from Congressional Republicans.

In a nod to that dynamic, Dana Bash, on [CNN's Erin Burnett OutFront](#) (5/6), reported that on Wednesday she anticipates "a lot of pushback from Democrats that were not really hearing from the State Department yet."

In an illustration of the partisan divide ahead of Wednesday's House hearing, Benghazi was the lead story on [Fox News' Special Report](#) (5/6), [Fox News' The O'Reilly Factor](#) (5/6) and [Fox News' Hannity](#) (5/6). On the other hand, the terror attack was not a topic of discussion on [MSNBC's Hardball](#), [MSNBC's Politics Nation with Al Sharpton](#), [MSNBC's All In](#), [MSNBC's The Rachel Maddow Show](#) or [MSNBC's The Last Word](#). Also, the [New York Times](#) does not have an article on Benghazi in this morning's paper.

Preview coverage of Wednesday's hearing on Benghazi was the lead story on [CNN's Erin Burnett OutFront](#) (5/6), which devoted nearly 10 minutes of air time to the story.

Representative of Fox's Benghazi coverage Monday was Sean Hannity's allegation, at the opening of [Fox News' Hannity](#) (5/6), that "evidence is mounting to prove what we have been saying...for months," which is, according to Hannity, that the White House "engaged in a widespread cover-up in the immediate aftermath of the Benghazi terror attack and they did it simply to win the election." Hannity added, "Remember, Watergate was about lying and covering-up."

Notably, Brian Stelter, in an article for Monday's [New York Times](#) (5/5, Stelter, Subscription Publication, 1.68M) on Jonathan Alter's new book, "The Center Holds: Obama and His Enemies," noted that Alter writes that between September 11 of last year and the presidential election, Fox News President Roger Ailes "covered the Benghazi story as if it were Watergate just before Nixon's resignation, with almost wall-to-wall coverage."

On [NBC Nightly News](#) (5/6, story 3, 2:40, Williams, 7.86M), Andrea Mitchell reported that at Wednesday's hearing, Republicans, who have, "for months...charged cover-up," plan to "undercut Hillary Clinton's explanation of what went wrong," and claim to have "State Department witnesses who can prove Clinton covered up." House Oversight Committee chairman Rep. Darrell Issa (R-CA) was shown saying, "Clinton is no longer Secretary of State, but there are many people still at State Department who were involved in this at the highest levels who

continue to keep their jobs." Mitchell added that "there is an obvious political undercurrent" since House Republicans are "taking direct aim at Hillary Clinton, the country's most popular Democrat and a possible presidential contender."

Monday evening, Wolf Blitzer, on [CNN's The Situation Room](#) (5/6), reported that "another whistleblower who now says the Benghazi consulate attack seemed like a terrorist attack from the get go." CNN's Dana Bash went on to suggest that "whistleblowers" will contradict statements made about Benghazi by Clinton in testimony before a Senate panel in January, testimony that generated nearly universally positive coverage at the time.

[Politico](#) (5/6, Cirilli, 25K) reports that in an appearance on [Fox News' Fox And Friends](#) (5/6) on Monday, Rep. Jason Chaffetz (R-UT) alleged that former Secretary of State Clinton "put politics above security," and is quoted as saying, "What boggles my mind is 4½ months after the fact, Secretary Clinton still had the gall to come here and perpetuate things that we know...are simply not true." Appearing on [Fox News' Hannity](#) (5/6), Chaffetz called the alleged decision not to send military assistance to Benghazi on September 11 "as sickening and depressing and disgusting as anything I have seen."

In a brief, 35-second item for the [CBS Evening News](#) (5/6, story 5, 0:35, Pelley, 5.58M), Scott Pelley reported that "career diplomat" Greg Hicks is "raising new questions about a possible cover-up" following the attack on the US consulate in Benghazi. Pelley added that Hicks "has already told congressional investigators" that he "repeatedly asked if the Pentagon could scramble jets to scare the attackers away," but was "told that that wouldn't be possible."

According to the [AP](#) (5/6, Cassata), Hicks, identified as a "former top diplomat in Libya," has said that a "team of U.S. special forces" was prepared to try to save the Americans under attack in Benghazi on September 11, but they were "told to stand down." [Bloomberg News](#) (5/7, Rowley) also reported that Hicks will testify that he "sought in vain for fighter jets to fly over Benghazi to scare off the terrorist attackers who killed the ambassador and three other Americans."

The [Washington Post](#) (5/7, A1, Londoño, 489K), in an article titled, "Special Ops Halted From Responding To Benghazi Attacks, US Diplomat Says," reports that Congressional Republicans are alleging that the Administration "could have saved lives with a nimbler, more assertive response." The Post goes on to give a paraphrase of the Administration's account of the attack and its aftermath, but does not reference any specific State Department officials until 13 paragraphs in, when it reports that State Department spokesman Patrick Ventrell asserted Monday that "the Republican-led inquiry appears to be politicized," and reiterated that the State Department is "not seeking to suppress the accounts of whistleblowers." Ventrell is quoted as saying, "We have always encouraged any State Department employee who wants to share their story and tell the truth."

[USA Today](#) (5/7, Dorell, 1.71M) reports that Wednesday's House Oversight Committee hearing "will explore why the State Department never activated its Foreign Emergency Support Team," which "specialize[s] in responding to crises." USA Today adds that Chaffetz, a member of the panel, "believes the reason is that activating the team...would have labeled the attack 'a terrorist activity,'" which, according to Chaffetz, the State Department "did not want to do." However, USA Today also reported that in a statement released by the State Department, Daniel Benjamin, "who ran the State counterterrorism bureau that headed the Foreign Emergency Support Team at the time of the attack," said, "I can say now with certainty...that this charge is simply untrue."

The [Washington Times](#) (5/7, Crabtree, 76K) reports that when asked about the new allegations Monday, White House press secretary Jay Carney "repeatedly touted the credentials" of retired Ambassador Thomas Pickering and Admiral Michael Mullen, former chairman of the Joint Chiefs of Staff, who led the State Department's Accountability Review Board. Carney is quoted as saying, "There was an accountability review board led by two men of unimpeachable expertise and credibility, who oversaw a process that was rigorous and unsparing, that was highly critical in some areas and that produced a series of recommendations that have all been acted on by the State Department, as the president insisted be the case."

At the opening of [Fox News' Special Report](#) (5/6), Brett Baier said the House hearing on Benghazi on Wednesday is "shaping up as a direct assault on the Obama Administration's handling of the crisis." Correspondent James Rosen went on to report that a "State Department whistleblower" - later identified as Mark Thompson, a "former Marine and long-time senior officer in State's counter-terrorism bureau" - will testify that

immediately after the Benghazi attack, Secretary Clinton and Patrick Kennedy, the State Department's Under Secretary of State for Management, "tried to cut the department's own counter-terrorism bureau out of the chain of reporting and decision-making." Chairman Issa was shown saying, "If you wanted it to seem like it wasn't terrorism, keeping them out of room allows to you play with this false truth that somehow it was a 'video'...which, of course, from the get-go, everyone knew just wasn't true." Rosen reported that State Department spokesman Ventrell "agreed" with Rep. Elijah Cummings (D-MD) that Issa's "motivations appear 'political.'"

Marc Thiessen, in his column for the [Washington Post](#) (5/7, 489K), says Thompson "will testify that the circumstances" of the Benghazi attack "have been 'purposefully misrepresented' by the administration and that 'all their public statements...were false, and they knew it.'" Thiessen also claims that last week, Ventrell "dismissed the whistleblowers, declaring there has already been a thorough investigation into the attack 'that should be enough.'"

Conservatives Liken Benghazi "Scandal" To Watergate. The [Washington Times](#) (5/6, McLaughlin, 76K) reported that in a radio interview Monday, Sen. Lindsey Graham predicted that on Wednesday, witnesses will describe "political manipulation seven weeks before an election," as well as "people asleep at the switch when it comes to the State Department, including Hillary Clinton." Graham went on to say that the Benghazi "cover-up" is "every bit as damaging as Watergate."

On [Fox News' Special Report](#) (5/6), Brit Hume claimed that it is now "clear that the State Department, CIA and White House deliberately concocted a Benghazi cover story that was false in every nearly every particular." However, according to Hume, if Benghazi is to "become the scandal it surely deserves to be," there will have to be "relentless news coverage of the kind the media typically avoid when the subject is someone, or some cause, they favor."

In an indication of the expansiveness of the claims being made about the aftermath of the Benghazi attack by conservative critics of the Administration, Victor Davis Hanson highlighted new developments in a post for [National Review](#) (5/7, Hanson, 193K) under the headline: "Is Benghazi Becoming A Watergate, Or Iran-Contra, Or Both?"

[Politico](#) (5/6, Weinger, 25K) reported that on his radio show Monday, Mike Huckabee "predicted" that President Obama "won't finish out his second term in light of the 'cover-up'" of the circumstances surrounding the attack in Benghazi, and "called the affair 'more serious than Watergate.'"

The Weekly Standard's Stephen Hayes, also appearing on [Fox News' Special Report](#) (5/6), cautioned "Republicans" not to "race ahead of the evidence in front of you" regarding Benghazi, and listed some instances where he thought Republicans had made unsubstantiated allegations against the Administration.

Much of the Benghazi coverage from right-leaning outlets is based on reporting from Hayes in a piece for the May 13 issue of the [Weekly Standard](#) (5/6, 83K) titled, "The Benghazi Talking Points." Hayes claims that "top Obama administration officials" were aware that the US consulate in Benghazi was "likely being attacked by al Qaeda-affiliated terrorists" while the "fighting was taking place" on September 11, and on September 12, a cable sent by "the CIA station chief in Libya" reported that "eyewitnesses confirmed the participation of Islamic militants" in the "terrorist attack." Hayes goes on to report that "talking points" regarding the attack that mentioned "Islamic extremists with ties to al Qaeda" were subsequently modified after State Department spokesperson Victoria Nuland expressed concern that "members of Congress would use the talking points to criticize the State Department for 'not paying attention to Agency warnings.'" Hayes also discusses his Benghazi reporting in a [Weekly Standard podcast](#) (5/7, 83K) released late Monday afternoon.

BIDEN SAYS GUN CONTROL WILL HAVE TO WAIT FOR IMMIGRATION. [Politico](#) (5/7, Epstein, 25K) reports that Vice President Joe Biden told a meeting of about 20 representatives from faith-based organizations at the White House on Monday that gun control will now have to take a back seat to efforts to pass immigration reform. Biden told the leaders that "gun control won't happen until after the Senate completes an immigration reform package." Politico notes that this is the first time the White House "has revealed such a timeline" and adds that Biden's comments "echo the sentiment from the major gun control groups and Senate aides working closely on the issue."

Senate Democrats Have More Votes For Expanded Background Checks. The [Huffington Post](#) (5/6, Stein) reports that in the wake of the "political backlash" from constituents faced by members who opposed expanding background checks for gun buyers, Senate Democrats believe "they have several new votes in favor" of the measure. However, the new votes would still leave the measure short of the 60 it needs for passage, and "tellingly, no one boasting of growing support would reveal the names of those lawmakers ready to flip." Nonetheless, the "bullish talk from Democrats" is "yet another indication that the party feels good about the fallout from the failed gun vote and is increasingly eager to try again." The Post notes that Senate Majority Leader Harry Reid "prompted the latest round of legislative speculation," when he told The Las Vegas Review Journal that bill sponsor Sen. Joe Manchin "thinks he has a couple more votes" and, "I may be able to get another Democrat or two. That would get us up to 57."

Despite Recent Victories, NRA Allies Worry About Long-Term Challenges. The [Washington Post](#) (5/6, Hamburger, 489K) reports that while the NRA celebrated the defeat of the White House-backed package of gun control bills at its convention in Houston last weekend, and while the "group seems stronger than ever," some of its allies "are uneasy, saying publicly and privately that the organization is facing long-term - and even short-term - challenges that on a scale it has not faced before." Among them: the growing willingness "of gun state lawmakers, particularly Democrats, to buck the NRA; and the rise of an organized and well-funded gun-control movement." The Post notes a "continued debate over whether the NRA and gun rights advocates made a mistake by pugnaciously opposing all of this year's major gun-control proposals."

Inhofe: Administration Buying Ammunition So People Can't. The [Daily Caller](#) (5/6) reports that Sen. James Inhofe said in a radio interview his weekend that the Obama Administration is buying up ammunition in an effort "to bypass the Second Amendment so gun-owners 'can't even buy ammunition because government is purchasing so much.'" Speaking on Aaron Klein's weekend show on New York City's WABC radio, Inhofe said that the President "has been doing everything he could to stop the private ownership of guns in America," adding, "And so my feeling is that he's doing this to buy up [ammunition] so that we can't buy: Honest, law-abiding citizens here in the United States, like my son, can't even buy ammunition because government is purchasing so much." Inhofe said he is planning to introduce the Ammunition Management for More Obtainability (AMMO) bill to "limit 'non-defense, armed federal agencies to pre-Obama levels of ammunition."

Newtown Educators Posthumously Awarded The Citizen Honors Medal. [NBC Nightly News](#) (5/6, story 6, 0:45, Williams, 7.86M) reported that in a ceremony in Newtown, Connecticut on Monday, the six educators who were killed in the Sandy Hook shootings were posthumously awarded the Citizen Honors Medal, which is "the highest civilian honor for valor given out" by the Congressional Medal of Honor Society.

ECONOMISTS EXPECT GDP GROWTH TO SLOW THIS YEAR. In a sharply negative story on the economy, [USA Today](#) (5/7, Mullaney, Hansen, Today, 1.71M) reports that last Friday's "upbeat" employment report "changed few experts' minds about the likelihood of an economic slowdown in mid-2013," according to a USA Today survey of economists. In the survey, only four of 37 economists said the report "reduced their fears that growth will suffer a sharp slowdown" in the second and third quarters of this year. In addition, "More than half say that hadn't been a concern of theirs before the report." The piece quotes a number of economists, who generally expect the economy to slow from its 2.5% Q1 GDP growth rate later in the year.

Fed Survey Finds Banks Easing Business Lending Standards. [Bloomberg News](#) (5/6, Zumbrun) reports that according to a new Fed survey, US banks "eased standards and terms on loans to businesses as commercial lending led a credit thaw." In its quarterly survey of top loan officers released on Monday, the Fed said, "Domestic banks, on balance, reported having eased their lending standards and having experienced stronger demand in several loan categories over the past three months." Bloomberg says that the portion of banks easing lending standards was "relatively large."

Analysis: Employment At Start-Ups Down Sharply. In an op-ed in [USA Today](#) (5/6, Reynolds, 1.71M), Glenn Harlan Reynolds, a professor and blogger, writes that the "latest data" show that new business start-ups are becoming "rarer," not "more common" as they did during the "dreaded Jimmy Carter era." Reynolds says that a new report from JPMorgan economists Mike Feroli says that employment at start-ups is "plunging." He adds that new jobs "tend to come from new businesses," but there are fewer of them, which "doesn't bode well" and suggests that the US is starting to look more like Europe.

Editorial Wrap-Up:

NEW YORK TIMES. "Corruption in Albany." In an editorial, the [New York Times](#) (5/7, Subscription Publication, 1.68M) says that the multiple indictments of top New York political officials raises questions about how to reform the political system. The Times suggests the public funding of campaigns "in order to provide competition for those entrenched in state office." The paper also encourages prosecutors to "keep probing."

"Mr. Watt, Fannie Mae, And Freddie Mac." An editorial in the [New York Times](#) (5/7, Times, Subscription Publication, 1.68M) supports the nomination of Rep Mel Watt to serve as director of the Federal Housing Finance Agency, noting that he has "long been a champion of homeownership and credit availability," and is "aware of the needs and demands of banks." The Times argues that Watt "has what it takes to explain and carry out policies to help revive credit and provide long overdue assistance to homeowners - if only the Senate will give him the chance."

"A Carbon Trading System Worth Saving." An editorial in the [New York Times](#) (5/7, Subscription Publication, 1.68M) praises the EU's cap-and-trade system, but notes concern from analysts that "technical mistakes, Europe's prolonged recession and the failure of policy makers to strengthen the system is undermining its effectiveness." The Times says Europe "has made real progress in dealing with climate change," and calls on the EU to put its cap-and-trade system "on a sounder footing to make sure it doesn't undo the real progress it has made."

WASHINGTON POST. "Concocting A Cure." The [Washington Post](#) (5/7, 489K) praises the efforts of members of the Senate Health, Education, Labor and Pensions Committee who are moving to "fix the government's oversight of the obscure world of compounding pharmacies." The Post suggests some refinements to the bill's language and calls on the Senate to "pass some version of this bill" and the House to "get to work" on a measure.

"Immigration Distortion." The [Washington Post](#) (5/7, 489K), in an editorial, claims a Heritage Foundation study on the Senate immigration bill is "chock-full of assumptions that most economists dispute," and describes it as a "blatant attempt to twist the immigration debate."

"Give New Education Law A Chance."

WALL STREET JOURNAL. "The Non-Intervention War." An editorial in the [Wall Street Journal](#) (5/7, Subscription Publication, 2.29M) argues for US intervention in Syria. the Journal says the President should go against his political character and make a case to the American people for intervention and then commit himself to removing Assad from power and helping to shape what follows. Failure to intervene, the Journal argues, will make a wider war more likely.

"Florida Flips Back." An editorial in the [Wall Street Journal](#) (5/7, Subscription Publication, 2.29M) praises Republican lawmakers in Florida for opposing Gov. Rick Scott's effort to expand the state's Medicaid program.

"Backroom Internet Tax Ambush." In an editorial, the [Wall Street Journal](#) (5/7, A16, Journal, Subscription Publication, 2.29M) takes issue with a claim from the Senate online tax bill, Sen. Mike Enzi's (R) that only a single tax collector per state will be allowed to audit an online retailer. However, the Journal says that due to backroom maneuvering pushed by Senate Majority Leader Harry Reid, the definition of "state" was expanded to include US territories and possessions, along with "any tribal organization," potentially allowing hundred of separate jurisdictions to audit online retailers. The Journal says it asked Enzi's office how many auditors there could be, but he didn't know.

Washington Schedule:

TODAY'S EVENTS IN WASHINGTON.

White House:

PRESIDENT OBAMA -Receives the Presidential Daily Briefing with the Vice President, Oval Office, closed press; holds a bilateral meeting with President Park Geun-hye of the Republic of Korea with the Vice President, Oval Office, pool spray at the top; hosts President Park Geun-hye of the Republic of Korea for lunch, the Vice President also attends, Cabinet Room, closed press; holds a joint press conference with President Park Geun-hye of the Republic of Korea, East Room, open press; meets with senior advisors, Oval Office, closed press; meets with the Vice President and Secretary Hagel, Oval Office, closed press; attends a DNC event, St. Regis Hotel, Washington, DC, closed press.

VICE PRESIDENT BIDEN -Attends the Presidential Daily Briefing, Oval Office, closed press; attends the President's meeting with President Park Geun-hye of the Republic of Korea, Oval Office, pool spray at the top; attends the President's lunch with President Park Geun-hye of the Republic of Korea, Cabinet Room, closed press; attends President's meeting with Secretary of Defense Hagel, Oval Office, closed press; delivers remarks at the 2013 Annual Gala Dinner of the Joint Center for Political and Economic Studies, Mandarin Oriental, open press.

FIRST LADY MICHELLE OBAMA - Signs copies of her book 'American Grown: The Story of the White House Kitchen Garden and Gardens Across America', Politics & Prose bookstore.

US Senate: 10:45 a.m. EVERY CHILD DESERVES A FAMILY ACT - Press conference held by the lead House and Senate sponsors of the Every Child Deserves a Family Act, which would preclude Federal funding for foster care or adoption programs that discriminate against potential foster and adoptive families due to marital status, gender identity, and sexual orientation, or the sexual orientation or gender identity of the adoptive child. Participants include: Senator Kirsten Gillibrand (D-NY). Reps. John Lewis (D-GA), and Ileana Ros-Lehtinen (R-FL); Mary Keane and daughter (New York, NY). Location: S 120 , The Hugh Scott Room, U.S. Capitol.

FLOOR SCHEDULE 10 a.m. - The Senate convenes and begins a period of morning business. At 11:00 a.m., Senators will proceed to executive session to consider the nomination of David Medine to be Chairman and Member of the Privacy and Civil Liberties Oversight Board. Thereafter, the Senate begins consideration of S.601, the Water Resources Development Act.

9:30 a.m. APPROPRIATIONS - Legislative Branch Subcommittee FY 2014 Budget Request for the Library of Congress and the Open World Leadership Center. Witnesses: James H. Billington, Librarian of Congress, The Library of Congress; Ambassador John O'Keefe, Executive Director, Open World Leadership Center, The Library of Congress. Location: 138 Dirksen.

9:30 a.m. ARMED SERVICES - Hearings to examine the Department of the Air Force in review of the Defense Authorization Request for fiscal year 2014 and the Future Years Defense Program. Witnesses include Air Force Secretary Michael B. Donley; General Mark A. Welsh III, USAF, Chief of Staff of the Air Force. Location: 216 Hart.

9:30 a.m. ENERGY AND NATURAL RESOURCES - privatization of the Federal helium reserve in a competitive market fashion that ensures stability in the helium markets while protecting the interests of American taxpayers. Location: 366 Dirksen.

9:30 a.m. JOINT ECONOMIC COMMITTEE - Hearing on Immigration Reform - Immigration and Its Contribution to Our Economic Strength. Panel one: Grover Norquist, President, Americans for Tax Reform; Dr. Adriana Kugler, Professor, Georgetown Public Policy Institute, Georgetown University. Panel two: Madeline Zavodny, Professor of Economics, Agnes Scott College, Decatur, GA; Dr. Steven A. Camarota, Director of Research, Center for Immigration Studies. Location: 562 Dirksen.

10 a.m. BANKING, HOUSING, AND URBAN AFFAIRS - The Full Committee will consider the nomination of Fred P. Hochberg to be President of the Export-Import Bank of the United States. Location: 538 Dirksen.

10 a.m. FOREIGN RELATIONS - Nominations hearing. Hearings to examine the nominations of James Knight, of Alabama, to be Ambassador to the Republic of Chad, and Deborah Kay Jones, of New Mexico, to be Ambassador to Libya, both of the Department of State. Location: 419 Dirksen.

10:15 a.m. APPROPRIATIONS - State, Foreign Operations Subcommittee hearing on Fiscal Year 2014 Budget Request for the United States Agency for International Development with Dr. Rajiv Shah, Administrator, United States Agency for International Development. Location: 192 Dirksen.

10:30 a.m. APPROPRIATIONS - Interior, Environment Subcommittee hearing on Fiscal Year 2014 Budget Request for the Department of the Interior. Witnesses: Sally Jewell, Secretary, Department of the Interior; David Hayes, Deputy Secretary, Department of the Interior; Rhea Suh, Assistant Secretary - Policy, Management and Budget, Department of the Interior; Pam K. Haze, Deputy Assistant Secretary, Office of Budget, Finance, Performance and Acquisition, Department of the Interior. Location: 124 Dirksen.

10:30 a.m. HOMELAND SECURITY AND GOVERNMENTAL AFFAIRS - Hearing on Border Security: Examining Provisions in the Border Security, Economic Opportunity, and Immigration Modernization Act (S. 744). Witnesses: DHS Assistant Secretary for Policy David Heyman, U.S. Customs and Border Protection (CBP) Acting Deputy Commissioner Kevin McAleenan, CBP Border Patrol Chief Michael Fisher, ICE Deputy Director Dan Ragsdale and DHS Assistant Inspector General Anne Richards. Location: 342 Dirksen.

12:30 p.m. - 1:30 p.m. COMMERCE, SCIENCE, AND TRANSPORTATION - The Committee will stream a NASA briefing direct from the International Space Station (ISS). Via a live downlink, NASA Astronaut Tom Marshburn will discuss the opportunities provided by the station's unique microgravity environment.
<http://www.commerce.senate.gov/public/>

2 p.m. JOINT ECONOMIC COMMITTEE - Hearing on Immigration and Its Contribution to Our Economic Strength Part two: Dr. Madeline Zavodny, Professor of Economics, Agnes Scott College, Decatur, GA; Dr. Steven A. Camarota, Director of Research, Center for Immigration Studies. Location: 216 Hart.

2:30 p.m. ARMED SERVICES - The Subcommittee on Strategic Forces will receive testimony on National Nuclear Security Administration management of its National Security Laboratories in review of the Defense Authorization Request for Fiscal Year 2014 and the Future Years Defense Program. Location: 222 Russell.

2:30 p.m. COMMERCE, SCIENCE, AND TRANSPORTATION - Subcommittee on Consumer Protection, Product Safety, and Insurance Hearing, Credit Reports: What Accuracy and Errors Mean For Consumers. Location: 253 Russell.

2:30 p.m. INTELLIGENCE - Closed Hearing: Intelligence Matters. Location: 219 Hart.

US House: 10 a.m. PUBLIC SKIN CANCER SCREENINGS - CAPITOL HILL - In an effort to increase skin cancer awareness and commemorate Melanoma/Skin Cancer Detection and Prevention Month(r), the American Academy of Dermatology Association (AADA) will hold a skin cancer screening for legislators, their staff and the general public. Briefing at 10 followed by screenings until 1:30 p.m. Speakers include: Brett Coldiron, MD - President-Elect, American Academy of Dermatology Association; Rep. Carolyn Maloney (D-NY) and Rep. Charlie Dent (R-PA) - sponsors of the Tanning Bed Cancer Control Act; Sen. Jack Reed (D-RI) - skin cancer prevention advocate; Sen. Johnny Isakson (R-GA) - skin cancer survivor; RADM Boris D. Lushniak, MD, MPH - Deputy Surgeon General and a dermatologist; Alyson Fuller, Ph.D. - former indoor tanner and melanoma skin cancer survivor; Johnny Bench - Baseball Hall of Famer and skin cancer survivor. Location: 345 Cannon Caucus Room on Capitol Hill.

10 a.m. REPUBLICAN LEADERSHIP STAKEOUT - Speaker John Boehner (R-OH); Majority Leader Eric Cantor (R-VA); Majority Whip Kevin McCarthy (R-CA); Conference Chair Cathy McMorris Rodgers (R-WA); Representative Martha Roby (R-AL). Location: RNC Lobby.

11 a.m. HOYER PEN AND PAD - House Democratic Whip Steny Hoyer will hold a pen and pad briefing in his U.S. Capitol office (H-144).

2 p.m. CHC - PEREZ CONFIRMATION - Congressional Hispanic Caucus (CHC) Chairman Ruben Hinojosa (TX-15), Chairman of the House Democratic Caucus Xavier Becerra (CA-34), and members of the Congressional Hispanic Caucus will hold a press conference with community leaders from the National Hispanic Leadership Agenda (NHLA), to urge the Senate confirmation of Thomas Perez as Secretary of Labor. Location: 234 Cannon.

FLOOR SCHEDULE 10 a.m. - The House will meet for Morning Hour debate and 12:00 p.m. for legislative business.

9:30 a.m. APPROPRIATIONS - Subcommittee on Interior, Environment, and Related Agencies hearing on Bureau of Land Management. Location: B-308 Rayburn.

10 a.m. APPROPRIATIONS - Subcommittee on Defense hearing on Navy and Marine Corps. Witnesses: Ray Mabus, Secretary, United States Navy; Admiral Jonathan W. Greenert, Chief, Naval Operations; General James F. Amos, Commandant, Marine Corps. Location: H-140 Capitol.

10 a.m. APPROPRIATIONS - Subcommittee on Health hearing on Chairman Brady Announces Hearing on Developing a Viable Medicare Physician Payment Policy. Location: 1100 Longworth.

10 a.m. EDUCATION AND WORKFORCE - Raising the Bar: Exploring State and Local Efforts to Improve Accountability. Location: 2175 Rayburn.

10 a.m. ENERGY & COMMERCE - Subcommittee on Energy and Power hearing entitled U.S. Energy Abundance: Exports and the Changing Global Energy Landscape. Location: 2123 Rayburn.

10 a.m. FINANCIAL SERVICES - Markup pending bipartisan legislation related to Title VII of the Dodd-Frank Act and the JOBS Act. The Subcommittee on Capital Markets & Government Sponsored Enterprises held a hearing on these bipartisan proposals last month. Location: 2128 Rayburn.

10 a.m. FOREIGN AFFAIRS - Hearing on Local and Private Sector Initiatives to Combat International Human Trafficking. Witnesses: Don Knabe, Supervisor, Fourth District, Los Angeles County Board of Supervisors; Bradley Myles, Executive Director and Chief Executive Officer, Polaris Project; Shawn MacDonald, Ph.D., Director of Programs and Research, Veriti. Location: 2172 Rayburn.

10 a.m. JUDICIARY - Markup: Resolution, To Create an Over-Criminalization Task Force; H.R. 180, and H.Res. ___, Supporting the Sixth Amendment to the United States Constitution, the right to counsel. Location: 2141 Rayburn.

10 a.m. NATURAL RESOURCES - Subcommittee on Public Lands and Environmental Regulation Oversight Hearing on Impediments to Public Recreation on Public Lands. Location: 1324 Longworth.

10 a.m. OVERSIGHT AND GOVERNMENT REFORM / JUDICIARY - Judiciary Subcommittee on the Constitution and Civil Justice and Oversight and Government Reform Subcommittee on Economic Growth, Job Creation and Regulatory Affairs hold joint hearing on DOJ's Quid Pro Quo with St. Paul: A Whistleblower's Perspective. Location: 2154 Rayburn.

10 a.m. SCIENCE, SPACE AND TECHNOLOGY - Joint subcommittee hearing Subcommittee on Energy and Subcommittee on Environment hearing: Keystone XL Pipeline: Examination of Scientific and Environmental Issues. Witnesses: Lynn Helms, Director, Department of Mineral Resources, North Dakota Industrial Commission; Brigham A. McCown, Principal and Managing Director, United Transportation Advisors LLC; Paul Chip Knappenberger, Assistant Director, Center for the Study of Science, Cato Institute; Anthony Swift, Attorney, International Program, Natural Resources Defense Council. Location: 2318 Rayburn.

10 a.m. WAYS AND MEANS - Subcommittee on Health will hold a hearing examining options for repealing the Sustainable Growth Rate (SGR) formula and reforming the Medicare physician payment system to reward quality and value. Witnesses: V David Hoyt, MD, Executive Director, American College of Surgeons; Kim Allan Williams, MD, Past President, American Society of Nuclear Cardiology; Charles Cutler, MD, Chair, Board of Regents, American College of Physicians; Frank G. Opelka, MD, Vice-Chair, Consensus Standards Approval Committee, National Quality Forum; Patrick Courneya, MD, Medical Director, HealthPartners Health Plan. Location: 1100 Longworth.

10:30 a.m. ENERGY & COMMERCE - Subcommittee on Commerce, Manufacturing, and Trade hearing entitled

Vacation Nation: How Tourism Benefits Our Economy. Witnesses include: Roger Dow, President & CEO, U.S. Travel Association; Kathleen Matthews, Executive Vice President and Chief Global Communications and Public Affairs Officer, Marriott International, Inc.; others. Location: 2322 Rayburn.

2 p.m. **APPROPRIATIONS** - Financial Services and General Government hearing on Securities Exchange Commission. Witness: Mary Jo White, Chairman, Securities Exchange Commission. Location: 2359 Rayburn.

2 p.m. **FOREIGN AFFAIRS** - Subcommittee on Africa, Global Health, Global Human Rights, and International Organizations hearing on Increasing American Jobs through Greater Exports to Africa - Exporting U.S. goods to Africa. Location: 2172 Rayburn.

2 p.m. **NATURAL RESOURCES** - Subcommittee on Public Lands and Environmental Regulation will hold an oversight hearing on Impediments to Public Recreation on Public Lands. Location: 1334 Longworth.

2 p.m. **VETERAN'S AFFAIRS** - Subcommittee on Oversight & Investigations hearing on VA Construction Policy: Failed Plans Result in Plans That Fail. Location: 334 Cannon.

3 p.m. **RULES** - Meets on H.R. 807, the Full Faith and Credit Act. Location: H-313.

4 p.m. **ENERGY & COMMERCE** - Subcommittee on Health Markup of H.R. 1407 and a bill to amend the Federal Food, Drug, and Cosmetic Act with respect to the pharmaceutical distribution supply chain (Opening Statements Only). Location: 2123 Rayburn.

Other: **SOUTH KOREAN PRESIDENT PARK GEUN-HYE Highlights:** South Korean President Park Geun-hye is scheduled to meet with President Barack Obama.

UMD - DALAI LAMA - The 14th Dalai Lama will be visiting the University of Maryland for two separate events: delivery of the prestigious Sadat Lecture and a dialogue with scholars of Sufism, a mystical Islamic tradition. Highlights: 10 a.m. - 11:30 a.m. In the morning, the Dalai Lama will join world leaders to deliver the Sadat Lecture, Peace Through Compassion: Connecting a Multi-Faith World. Before an audience of 15,000 at Comcast Center, the Dalai Lama will speak in English for about 45 minutes, answering questions submitted by the audience. 1:45 p.m. - 3 p.m. The Dalai Lama will meet in a smaller venue for dialogue on two religious traditions: Islam's Sufi tradition and Tibetan Buddhism. UMD's Roshan Institute of Persian Studies organized the event. Note: Media space is more limited at this venue. Location: Both events will take place on the campus of the University of Maryland, College Park, MD.

PEDIATRIC ACADEMIC SOCIETIES - Holds its annual meeting. Location: Walter Washington Convention Center, 801 Mt. Vernon Place, NW.

HUMANS TO MARS SUMMIT - The George Washington University Space Policy Institute and Explore Mars present The Humans to Mars Summit, which will address the major technical, scientific, and policy-related challenges that need to be overcome to send humans to Mars by 2030. Astronaut Buzz Aldrin will deliver a keynote address on the final day of the conference. Location: The George Washington University, Lisner Auditorium, 730 21st St., NW.

IDB - ROAD SAFETY - Road Safety events as part of a this Month's IDB-Supported Road Safety Events. Highlights: 6 p.m. - 8 p.m. Road safety reception. Location: Inter-American Development Bank Headquarters, 1300 New York Ave. NW.

PETERSON FOUNDATIONS ANNUAL FISCAL SUMMIT - CLINTON - GATES - 9 a.m. - 3 p.m. The Peterson Foundation hosts their fourth annual Fiscal Summit - Facing the Future. Participants include former President Bill Clinton and Bill Gates. Location: Mellon Auditorium, 1301 Constitution Avenue NW.

CAP - EARLY CHILDHOOD EDUCATION - 9 a.m. - 10:30 a.m. The Center for American Progress hosts discussion on Honoring Our Nations Mothers and Children through Investments in Early Childhood Education. Location: Center for American Progress, 1333 H St. NW, 10th Floor.

ITIF - COMPETES ACT - 9 a.m. - 10:30 a.m. The Information Technology and Innovation Foundation will host a

panel of experts for a Capitol Hill briefing on the past, present and future of the America COMPETES Act.
Location: 253 Russell.

BROOKINGS - PREPARING DISADVANTAGED STUDENTS FOR COLLEGE - 9 a.m. - 11 a.m. A Future of Children event: Is There a Better Way to Prepare Disadvantaged Students for College? Location: The Brookings Institution, Falk Auditorium, 1775 Massachusetts Ave, NW.

TACKLING THE COST CONUNDRUM - 9 a.m. - 12 p.m. Health Affairs briefing on the slowing growth of health care expenditures of late and examines whether it is a temporary or lasting phenomenon; and will examine major cost drivers and proposals for putting Medicare on a more sustainable path. Location: National Press Club, 529 14th Street NW.

NPC - ASHTON CARTER - 10 a.m. Deputy Secretary of Defense Dr. Ashton B. Carter on Managing the Pentagon in an Era of Fiscal Uncertainty. Location: National Press Club, Clubs First Amendment Lounge, 529 14th Street NW.

YOUNG ADULTS - MENTAL HEALTH AND SUBSTANCE USE CHALLENGES - 10 a.m. - 11 a.m. SAMHSA presents National Children's Mental Health Awareness Day 2013 press briefing. Remarks by HHS Secretary Kathleen Sebelius; singer, songwriter and actress Demi Lovato. Location: The University of the District of Columbia, Community College Auditorium, 4200 Connecticut Avenue, NW., Building 46.

AEI - AMERICAS NATURAL GAS - 10 a.m. - 12:30 p.m. Americas natural gas: Should exports be restricted? Location: AEI, Twelfth Floor, 1150 Seventeenth Street, NW.

TRUCK CRASH VICTIMS - 11 a.m. Families of truck crash victims and survivors join with members of Congress to address the disconnect between unacceptable increases in truck crash deaths and injuries and the industry-backed solutions promoted by Congress and DOT (Department of Transportation). Presented by the Truck Safety Coalition, this press conference caps a four-day conference, Sorrow to Strength, which itself is closed to press. Location: 253 Russell.

'SAVE VANISHING SPECIES' STAMP - 12 p.m. Representatives from Major League Baseball's Detroit Tigers will join U.S. Fish and Wildlife Service Director Dan Ashe and Members of Congress to celebrate the success of the Save Vanishing Species semipostal stamp. Participants include: Fish and Wildlife Service Director Dan Ashe; Dave Dombrowski, CEO, President and GM, Detroit Tigers; Max Scherzer, pitcher, Detroit Tigers; Erica May (fiancee of Scherzer), Pennies for Paws spokesperson. Location: B-369 Rayburn.

ACADEMIC MEDICINE AND TRAUMA CARE - 12 p.m. - 1 p.m. Triumph Over Tragedy: Academic Medicine's Vital Role in Providing and Advancing Trauma Care. The Association of American Medical Colleges hosts a congressional briefing exploring the irreplaceable role academic medical centers play in providing and advancing trauma care. Location: B-340 Rayburn.

WILSON CENTER - CLIMATE CHANGE - FARMER'S - 12 p.m. - 2 p.m. The Farmers Dilemma: Climate Change, Food Security, and Human Mobility. Location: Woodrow Wilson Center, 5th floor, Ronald Reagan Building, 1300 Pennsylvania Ave. NW.

API - GASOLINE REGULATIONS - 2:45 p.m. The American Petroleum Institute holds a press conference call previewing comments being submitted to EPA on the agency's new Tier 3 regulations for gasoline, which API contends would be extremely costly and would not provide measurable ozone air quality benefits. With Patrick Kelly, downstream senior policy advisor.

SAIS - INTERNATIONAL ENERGY FORUM - 4:30 p.m. International Energy Forum: Achievements and Prospects with Aldo Flores-Quiroga, secretary general for the International Energy Forum, and David Jhirad, director of the SAIS Energy, Resources and Environment Program. Location: Rome Building Auditorium, 1619 Massachusetts Ave., NW.

Last Laughs:

LATE NIGHT POLITICAL HUMOR.

Jay Leno: "Mexico's economy has been on the upswing the last couple of years. It's unbelievable. They're getting investors from companies all over the world. In fact, Mexico is now home to 11 million undocumented Americans. Did you know that?"

Jay Leno: "Over the weekend, President Obama gave the commencement speech at Ohio State University. He said, 'I dare you to do better.' That's what he told the students. 'I dare you to do better.' To which the students yelled back, 'No, we dare you to do better.'"

Jay Leno: "Well, according to the US Geological Survey, there are 7.4 billion barrels of recoverable oil in North Dakota. And today, Dick Cheney said if we had known how much oil they had, we would have invaded North Dakota years ago."

Conan O'Brien: "President Obama has changed his mind. He decided to support the morning after pill being available over the counter. Yeah. Yep. President Obama finally saw an episode of 'Teen Mom.'"

Conan O'Brien: "PETA is in the news. PETA is really upset at Chris Christie for killing a spider in front of a group of school children. Yeah. Governor Christie said, 'If PETA's upset by that they do not want to know what I had for lunch today.' Apparently Orb is missing."

Conan O'Brien: "George W. Bush's nephew George P. Bush is running for office in Texas. Yeah, he says the 'P' stands for 'Pretend you've never heard the name George W. Bush.'"

Conan O'Brien: "A company is coming out with a beer drone. A beer drone to deliver beer to attendees at music festivals. Yeah. And in a related story, everyone's now fine with drones."

Jimmy Fallon: "Yesterday, President Obama spoke at Ohio State's graduation and told their students that it's their responsibility to make the world a better place. Which got awkward when they were like, 'Wait, isn't that literally your responsibility?'"

Jimmy Fallon: "Some experts are saying that the 2016 Democratic presidential primary could come down to Hillary Clinton and Joe Biden. Biden is calling her 'a worthy opponent,' and Hillary's calling him 'practice.'"

Jimmy Fallon: "Joe Biden could be running against Hillary Clinton for the Democratic nomination. Even though the election is a few years off, we thought it would be helpful to show a side by side comparison to see some of their differences. Take a look. Hillary wants to bridge the gap between Democratic and Republican leaders. Biden wants to bridge the gap between Marvel and DC superheroes. Hillary has had to fight against a sexist political system. Biden has had to fight against the safety cap on his Flintstones vitamins. They're very tricky. You gotta push down and turn. Push down and turn. Forget it. Hillary has already imagined what it would be like to sit in the President's chair. Biden has already spent hours sitting in it and spinning around. Here's the last one. Hillary believes her greatest asset is her experience at dealing with complicated international issues. Biden just laughed at the word 'asset.'"

Stephen Colbert: "I hope you had a great weekend. I did. I spent it at the big annual NRA meeting in Houston, Texas. Not to be confused with the daily NRA meeting that is Houston, Texas. And this year's theme was accessories. Like pink assault rifles and bra holsters. Now, fellows can brag about getting to Second Amendment."

Stephen Colbert: "One thing I heard repeatedly down there this weekend is that Obama is coming for our guns. Now I'm not one to believe in far out conspiracy theories probably because the government implanted a chip in my brain that controls my thoughts. But, folks, I've had my eyes opened to some disturbing truths that raise troubling questions like, what did they know? When did they know it? And what am I talking about? Which brings me to my new segment exposing vast government conspiracies, 'Stephen Colbert's Bat[bleep] Serious.' Now, folks, I've wanted to do this segment for a long time. But I haven't. Why not? We'll look into that next time. But tonight's topic: Are they coming after our guns? No. They're coming after our bullets. ... Nation, follow me down

the rabbit hole. If it even is a rabbit and not a groundhog in a costume. The Federal government's suspicious ammo hoarding was first noticed by vigilant online conspiracy forums before it was picked up by conservative radio hosts and then eventually made its way out to the farthest fringe elements of our society - Congress."

Stephen Colbert: "Leading the congressional charge is Senator James Inhofe, if this is James Inhofe and not a groundhog in a costume. Senator Ground-hofe here recently introduced a bill that would ban Federal agencies from buying more ammunition if it currently possesses more than its monthly averages during the Bush Administration. Yes, not including the ammo that ended up in the faces of the friends of Dick Cheney."

Stephen Colbert: "Now, folks, a lot of news outlets including Fox News say that they have debunked the bullet conspiracy theory, but I say it's already started. Because out of fear of government hoarding, ammo sales have skyrocketed making it harder to find ammo which can only mean that the government is hoarding it which means we have to buy more ammo before the government gets it all but there's none left because we bought it. Oh, my God. It's too late. The feds already have us outgunned. Well, they're not going to take me alive. [bleep] I'm out of ammo. ... Well, that's it for tonight's 'Bat[bleep] Serious.' Join me next time when I ask the question, 'Did Big Foot help Lee Harvey Oswald build Stonehenge?'"

Jrwell, Sally (b)(6)@ios.doi.gov

Fwd: Draft of Your Proposed Statement for Next Thursday ...

1 message

Walls, Erin <erin_walls@ios.doi.gov>

Thu, May 30, 2013 at 3:07 PM

To: Sally Jewell, (b)(6)@ios.doi.gov

Here is the draft statement for your Senate Energy and Natural Resources hearing next week. This has also been uploaded to Google Drive in the June 3 folder. Please send any changes back to Chris Salotti.

Thanks,
Erin

Secretary Jewell –

I hope you're having a great trip.

I'm attaching the current version of your draft statement for next Thursday's SENR oversight hearing.

We want to make sure you're comfortable with it before it goes out of the building to OMB for clearance.

It is based on the major "buckets" that were in your Senate Appropriations hearing statement, but most of the budget information has been replaced by additional programmatic detail. That additional information came mostly out recent testimonies that senior folks have given on bureau budgets or energy issues. I've also added a new introduction for this Committee.

David H has reviewed, as have staff in the bureaus.

Once you've had a chance to review and let me know any changes you want to make, I'll send to OMB for clearance. We should be in good shape if we can get to OMB by early Friday (they are furloughed Monday!).

At that point we'll also work up a draft oral statement and get it to you, though we may have to make a few changes to that depending on OMB/WH comments/edits/etc.

Let me know if you have any questions.

Chris

**STATEMENT OF SALLY JEWELL
SECRETARY OF THE INTERIOR
BEFORE THE
COMMITTEE ON ENERGY AND NATURAL RESOURCES
UNITED STATES SENATE**

June 6, 2013

Chairman Wyden and Ranking Member Murkowski, thank you for inviting me to appear before your Committee to discuss the programs and activities of the Department of the Interior. I am happy to be here today.

When I appeared before you at my confirmation hearing in March I talked about the scale of the duties of the position and the incredible diversity in the Department's mission. Every day Departmental employees are working to preserve our nation's great heritage and history, manage our federal lands, waters, and other resources, ensure the delivery of water for diverse users, empower insular communities, and support Native American communities. Since that time I have come to see and truly appreciate the astonishing breadth of the issues and responsibilities located within this one Department, many of which fall under the jurisdiction of this Committee. The Department's complex mission affects the lives of all Americans; nearly every American lives within an hour's drive of lands or waters managed by the Department.

During the past 5 weeks my duties have taken me from south Florida and the Arthur R. Marshall Loxahatchee National Wildlife Refuge and Everglades National Park, where I saw, firsthand, Everglades restoration projects underway; to Boise, Idaho, where I met with a group of smokejumpers – some really tough firefighters – at the National Interagency Fire Center and learned how our federal firefighters are deployed when a wildfire is reported; to the Gulf of Mexico where I viewed an offshore drilling rig and a production platform with an inspector from the Bureau of Safety and Environmental Enforcement; and to Portland, Oregon, where I signed an agreement with the States of Oregon and Washington to expedite the review and permitting of energy generation, transmission, and other infrastructure development.

The Department's bureaus serve as stewards of the nation's parks, wildlife refuges, wild and scenic rivers, seashores, and national monuments and recreation areas, and as the keeper of the history of this country. We share responsibilities to protect and advance the role of public lands

and Indian lands. The lands and resources we manage are also a huge economic engine, powering our economy through energy development, tourism and recreation, logging, grazing and other uses. The Department oversees the responsible development of 23 percent of U.S. energy supplies, is the largest supplier and manager of water in the 17 western states, maintains relationships with 566 federally recognized tribes, and provides services to more than 1.7 million American Indian and Alaska Native peoples.

In 2012, there were almost 500 million visits to lands managed by the Department. Recreational visits to our lands contributed an estimated \$49 billion in economic benefits to local communities in 2011. We collect nearly \$13 billion annually through mineral extraction and other activities, and share nearly \$5 billion of these revenues annually with states, tribes, counties, and other entities. An additional \$2 billion of our budget is used in local communities across the nation through contracts for goods and services. In many of your states, the revenues we share from energy production and other activities are a critical component of the local economy. Overall, the Department estimates the exploration and production of oil, gas, coal, hydropower, and minerals on federal lands contributed nearly \$275 billion to the U.S. economy in 2011.

It is with this fitting introduction to the Department's significant responsibilities that I come before you again to discuss the major programs and highlight some of the activities at the Department and my goal to ensure that it continues in its role as a resources manager, a job creator, and a partner to tribes and state and local governments.

Strengthening Our Energy Future

As I noted back in March, I believe that rapidly advancing technologies, smart policies, and a commitment to the President's "all of the above" energy strategy will allow us to continue with the safe and environmentally responsible expansion and diversification of our nation's energy production, further cutting our reliance on foreign oil, and protecting our land and water at the same time. We have been pushing forward with that goal.

Onshore Energy Development

Onshore, the Bureau of Land Management held 31 oil and gas sales last year and, although we planned to conduct 35 sales in 2013, we anticipate that the impacts of the sequester will result in

fewer and smaller lease sales. The amount of producing acreage has increased by about 200,000 acres since 2011. Over 3,000 new oil and gas wells were started in 2012 and oil production from federal onshore lands is up 18 percent since 2008 –its highest level in over a decade. Moreover, the percentage of parcels of land during 2012 that received bids increased by 30 percent over 2009. And the onshore leasing reforms put in place in 2010 resulted in the lowest number of protests since FY 2003 - fewer than 18 percent of parcels offered in FY 2012 were protested, reducing costs and further speeding development.

The Administration is making more coal available as well, with the number of producing acres rising 4 percent from FY 2009 to FY 2012. The amount of coal the agency leased last fiscal year is the highest since FY 2003. And through the Office of Surface Mining Reclamation and Enforcement, we are working to ensure that communities impacted by coal mining and the environment are protected during mining. We are also pursuing the reclamation of priority abandoned mine sites, with a goal of reducing the number of remaining dangerous abandoned mine sites nationwide.

I have heard from a number of members about the need for better onshore permit processing. Secretary Salazar instituted reforms to the BLM's programs, including transitioning to an electronic system that will automate and streamline the application process and significantly reduce the time for approval of new projects. From FY 2006 to FY 2012, the amount of time it took for all BLM field offices to process and approve complete drilling applications fell by 40 percent and the number of inspections completed by all BLM offices rose 73 percent. We are headed in the right direction and will continue to look at procedures, processes, and the regulatory framework to identify areas for further reform.

The Department also published several weeks ago an updated proposed rule on hydraulic fracturing on public and Indian lands. These are common sense updates to 30-year old regulations that will increase safety in oil and gas production on public lands while, at the same time, provide flexibility and fostering coordination with states and tribes. This is an important step in ensuring that the public has full confidence that the right safety and environmental protections are in place.

Alaska is an important component of our nation's energy strategy. The Arctic holds substantial oil and gas potential, but also presents unique environmental and operational challenges. The BLM recently finalized a new comprehensive plan – the first ever – for the 23-million acre National Petroleum Reserve – Alaska. This balanced plan provides access to over 70 percent of that area's estimated oil potential and provides for an important east-west corridor that could be needed for pipeline infrastructure to eventually carry Chukchi Sea oil to the Trans-Alaska pipeline. At the same time, it will protect the vital subsistence resources of Alaska Natives and the habitat of world-class wildlife populations.

I recently appeared before the Senate Committee on Indian Affairs and noted at that hearing that the Department is committed to assisting Indian tribes in expanding renewable, reliable, and secure energy supplies on Indian lands and safe and responsible oil and gas development. Including Indian Country in the "all of the above" energy strategy will help increase domestic energy supplies and improve the economies of many Indian tribes and Alaska Native villages.

Offshore Energy Development

We also are moving forward with oversight of the safe and responsible development of our offshore oil and gas resources, (b) (5). The first two sales of the 2012-2017 Five Year Program were held in the Gulf of Mexico in November 2012 and March 2013, and resulted in over \$1.3 billion dollars in industry investment and government revenue through bidding on 436 tracts. At the end of April we announced the Proposed Notice of Sale for Lease Sale 233, scheduled for this August, making available 21 million acres offshore Texas. With this sale, all unleased acreage in the Western Gulf of Mexico will be available for leasing.

Over the past several years, since the Deepwater Horizon oil spill, the Department has reformed the way development on the Outer Continental Shelf takes place. The Bureau of Safety and Environmental Enforcement has implemented safety and environmental management system regulations; issued a new drilling safety rule to refine safety reforms and strengthen requirements; taken steps to hold contractors accountable for their actions offshore; conducted two full-scale capping stack deployment exercises to respond to potential future well blowout scenarios; and provided new guidance on oil spill response plans.

The Bureau of Ocean Energy Management has also significantly reduced the time for review of exploration and development plans for deepwater drilling in the Gulf of Mexico, with time from submission to approval down almost 35 percent from the period between October 2010 and October 2011.

BSEE has achieved similar, significant improvements in the processing of deepwater permits, with the average time for review reduced by about 37 percent between 2011 and 2012. This has contributed to the approval by BSEE of 112 new deepwater well permits, higher than in either of the two years preceding the Deepwater Horizon oil spill. There are more floating deepwater drilling rigs working in the Gulf of Mexico today than prior to the Deepwater Horizon spill, and we expect drilling activity to steadily increase over the coming year. And both BOEM and BSEE are working to modernize and streamline their data systems and the processes for the submission and review of plans and permits. When completed, this investment will achieve significant gains for both the rigor of analysis and the efficiency of review, saving time and money and enhancing accountability.

Science continues to drive decision-making for the OCS leasing program. BOEM conducts rigorous scientific and environmental analysis to support all stages of the OCS program, partnering with academic institutions and other federal agencies to produce top-tier applied research to support decision making. BOEM also conducts thorough assessment of resource potential to identify areas of the OCS that are most promising for exploration and development. Last year BOEM began a Programmatic Environmental Impact Statement to support permitting decisions for geological and geophysical surveys that will be used for assessing energy resource potential off the coast of the Mid and South Atlantic. The Department also uses the results of exploratory drilling to improve its knowledge of the resource potential. As part of this process, the Department oversaw the first new exploratory activity in the Alaskan arctic in a decade, with Shell Oil Company beginning limited preparatory drilling activities in the Chukchi and Beaufort Seas under strict safety and environmental oversight.

A priority for the Administration is implementation of the Agreement between the United States and Mexico concerning Transboundary Hydrocarbon Reservoirs in the Gulf of Mexico. Implementation of the Agreement will make nearly 1.5 million acres of the Outer Continental Shelf, currently subject to a moratorium under the Western Gap Treaty, immediately available

for leasing and will make the entire transboundary region, which is currently subject to legal uncertainty in the absence of an agreement, more attractive to U.S.-qualified operators. BOEM estimates that the transboundary area contains as much as 172 million barrels of oil and 304 billion cubic feet of natural gas. We look forward to working you on legislation to implement this Agreement.

Renewable Energy Development

The Department has a critical role to play in fulfilling the President's goal to double renewable electricity generation again by the year 2020 by facilitating renewable development on public lands. I will continue to build on the Department's successes and work to make sure we are accomplishing this in the right way and in the right places.

Securing clean sources of energy not only is good for the environment, it creates American jobs, and promotes innovation. In 2009, there were no commercial solar energy projects on or under development on the public lands. From that time, the Department authorized 42 renewable energy projects on or through the public lands which, if constructed, will have the potential to produce enough electricity to power more than 4.2 million homes. The Department also plays a key role in efforts to strengthen the nation's electric transmission grid, approving permits enabling several hundred miles of transmission lines in seven states across federal lands in 2012.

BLM has focused on an accelerated, but environmentally responsible, permitting process for the development of renewable energy on public lands that ensures the protection of signature landscapes, wildlife habitats, and cultural resources.

Since 2009, BLM has authorized more than 12,000 megawatts of energy on public lands and waters, established a road map for responsible solar development in the West by designating energy zones, and flipped the switch on the first solar energy project to deliver power to the grid. BLM also released the Final Environmental Impact Statement for a proposed 750 megawatt facility in Riverside County that would be one of the largest solar energy projects on public lands in the California desert. BLM is also moving forward on wind energy, with a proposed complex in Wyoming that would generate up to 3,000 megawatts of power, making it the largest wind farm facility in the U.S. and one of the largest in the world. BLM also expects to propose rules

that would establish a competitive process for issuing rights-of-way leases for solar and wind energy development on public lands.

Significant progress has been made to advance offshore wind energy. BOEM issued the second non-competitive commercial wind lease off the coast of Delaware in 2012. Earlier this week I announced the first ever competitive lease sale, to be held in July, for a wind energy area offshore Rhode Island and Massachusetts, and BOEM will hold another competitive lease sale offshore Virginia this year. These sales involve nearly 278,000 acres proposed for development of wind generation to produce electricity to power as many as 1.9 million homes. We expect additional competitive lease sales to follow for wind energy areas offshore Maryland, New Jersey, and Massachusetts, and we continue to make progress on potential projects in areas offshore New York, North Carolina, and Maine.

BOEM has established renewable energy task forces with a total of 12 coastal states, including recent task forces in the States of Hawaii and South Carolina, and is overseeing progress in the planning of a potential Mid-Atlantic wind energy transmission line, which would enable up to 6,000 MW of wind turbine capacity to be delivered to the electric grid along the East Coast.

And the Bureau of Reclamation's 58 hydroelectric power plants generate more than 40 billion kilowatt hours of electricity to meet the needs of over 3.5 million households and generate over \$1 billion in gross revenues for the federal government.

Management of Our Lands and Waters

I will also work hard to build on the progress this Administration has made in the management of the federal lands and waters that make this "America the Beautiful."

America's Great Outdoors

With the National Park Service's centennial anniversary approaching in 2016, we have the opportunity to both celebrate and confirm the NPS's stewardship of our cultural and natural treasures and its role in building enduring connections and enriching experiences with its visitors, including the nation's youth. I recently had the opportunity to meet students from Stonewall Middle School at Prince William Forest Park in Virginia to celebrate National Park

Week and highlight the importance of outdoor recreation and education, especially to young people.

One of the major goals of President Obama's America's Great Outdoors initiative is to better connect youth and families to nature and outdoor recreation. Engaging with American's youth through the great outdoors helps lay the foundation for the next generation of our nation's stewards, scientists, business leaders, teachers, and others who will understand the key role that national parks and public lands play in conservation and preservation of our nation's treasures and the significance they have for local communities, drawing visitors and boosting the economy.

We will also continue through AGO to expand opportunities for recreation and conservation, through partnerships with states and others, and the promotion of America's parks, refuges, and public lands. The innovative partnerships developed through this important initiative have helped expand access to rivers and trails, created wildlife corridors, and promoted conservation while working to protect historic uses of the land including ranching, farming, and forestry.

An example of the great work done under this program is the Swan Valley Conservation Area, established as a unit of the National Wildlife Refuge System by the Department in 2012, which is situated between the Canadian Rockies and the central Rockies of Idaho and Wyoming, in partnership with landowners who voluntarily entered their lands into easements. The new Area will protect one of the last low elevation, coniferous forest ecosystems in western Montana that remains undeveloped and provides habitat for species such as grizzly bears, gray wolves, wolverines, and Canada lynx.

And we are continuing our commitment to America's Great Outdoors through our request, for the first time ever, of mandatory dedicated funding for Land and Water Conservation Fund programs, with full funding at \$900 million annually beginning in 2015. Enactment of a mandatory LWCF program would ensure continued funding for this program designed to make investments in conservation and recreation as compensation to the American people for the development of oil and gas resources.

Our nation's public lands, managed by BLM, include rangelands, forests, deserts, and mountains. Managed by BLM for multiple uses, they provide and support a variety of resources and

opportunities important to Americans. They provide a valuable source of forage for livestock, store and filter water, sequester carbon, provide habitat for an abundance of wildlife, offer scenic beauty and support many forms of outdoor recreation.

The National Landscape Conservation System includes 19 national monuments, 21 national conservation (and similarly designated) areas, and 221 wilderness areas designated by Congress offer a different conservation model where many traditional uses are allowed. These spectacular lands provide a multitude of benefits including scientific and historical resources, critical habitat for a variety of species, and diverse recreational opportunities including hunting, fishing, and hiking that generate millions of dollars for local communities.

The conservation and sustainable use of our rangelands is important to those who make their living on these landscapes—including public rangeland permittees, whose operations are important to the economic well-being and cultural identity of the West and to rural western communities. While significant workload and resource challenges exist, BLM is committed to reducing the backlog of grazing permit renewals and to issuing permits in the year they expire.

BLM manages the timber on its Oregon and California (O&C) Grant Lands according to the principle of sustained yield. We are increasing support in 2014 for resource management on the O&C lands to implement the Western Oregon Strategy, including increased timber volumes offered for sale while at the same time increasing surveys of species under the Northwest Forest Plan and facilitating recovery of the northern spotted owl, as well as increased support for the BLM to continue its comprehensive effort to prepare new Resource Management Plans covering six BLM Districts in western Oregon.

Wildland Fire

You heard several days ago from the Department on the outlook and planning for the coming fire season. Just a few weeks ago I had the opportunity to join with Secretary Vilsack at the National Interagency Fire Center in Boise to see firsthand and discuss the efforts the federal government is making to protect citizens and property from wildfire.

After a decade of drought and the continued proliferation of non-native plant species and accumulation of hazardous fuels in our forests and rangelands, the 2012 fire season was one of

the worst on record for BLM rangelands and woodlands in the lower 48 states. The 2012 season also impacted the other 3 bureaus with resource responsibilities, and with the outlook for the 2013 season to be as severe throughout much of the West, there may be record fires this year. To be prepared we are working together with other federal agencies, tribes, and local governments, to ensure that we're doing everything we can with the resources that we have.

Let me add that the complexity and intensity of fires over the past ten years present enormous budgetary challenges for the federal government. While the latest projection for fire costs for the 2013 season indicate that we have sufficient funding, because of sequestration we absorbed an overall \$41 million cut to the Department's fire program and resulted in a reduction of approximately 7 percent of the Department's firefighter seasonal workforce, with reduced lengths of employment for those hired. This reduces our capability.

Water Resources

The Bureau of Reclamation is the largest wholesaler and manager of water in the 17 western states and the nation's second largest producer of hydroelectric power. Its projects and programs are critical to driving and maintaining economic growth in the western states. Reclamation manages water for agricultural, municipal and industrial use, and provides flood control and recreation for millions of people. Reclamation activities, including recreation, have an economic contribution of \$46 billion, and support nearly 312,000 jobs. As a result, Reclamation facilities eliminate the production of over 27 million tons of carbon dioxide that would have been produced by fossil fuel power plants.

Reclamation has a long-standing commitment to support the Secretary's goal to strengthen tribal nations, including through ecosystem restoration, rural water infrastructure, and the implementation of water rights settlements.

Population growth, development, and a changing climate are creating growing challenges to the nation's water supplies. In many areas of the Country, including the arid West, dwindling water supplies, lengthening droughts, and rising demand for water are forcing communities, stakeholders, and governments to explore new ideas and find new solutions to ensure stable, secure water supplies for the future. The Department is tackling America's water challenges by providing leadership and assistance to states, tribes, and local communities to address competing

demands for water by helping improve conservation and increase water availability, restore watersheds, and resolve long standing water conflicts. Today, many of Reclamation's activities address drought through the use of enhanced water management that helps guard against and to a certain extent mitigate the devastating effects of drought, for example, through conservation.

Through our national water conservation initiative, WaterSMART, we are finding better ways to stretch existing supplies and helping partners plan to meet future water demands. In 2012 the U.S. Geological Survey, a key partner in the WaterSMART initiative, began a three year study of three focus areas in the Delaware River Basin, the Apalachicola–Chattahoochee–Flint River Basin, and the Colorado River Basin that will focus on water availability, investigating the components of a regional water budget to understand the amount entering and leaving each basin.

This work also contributed to the Colorado River Basin Water Supply and Demand Study, the first of its kind, released by the Department in December 2012, which projects an average imbalance in future water supply and demand greater than 3.2 million acre-feet by 2060. The study projects the largest increase in demand will come from municipal and industrial users, owing to population growth, and estimates the number of people that rely on Colorado River Basin water could double to nearly 76 million people by 2060 under a rapid growth scenario. Based on this study, the Department, along with representatives from the seven Colorado River Basin states, the Ten Tribes Partnership, and conservation organizations, last week outlined the next steps to address these projected imbalances.

I am committed to continuing to work with our stakeholders to assess the implications of water shortages, develop flexible operational plans that account for expected periods of drought, and support projects that conserve water and improve the efficiency of water delivery infrastructure.

Addressing Challenges with Science

The Department's mission requires a careful balance between development and conservation, achieved by working closely with our diverse stakeholders and partners to ensure our actions provide the greatest benefit to the American people. The development and use of scientific information to inform decision making is a central component.

Science at the Department promotes economic growth and innovation. At the Department, we use science to address critical challenges in energy and mineral production, ecosystem management, invasive species, oil spill restoration, climate adaptation, and Earth observation - such as satellite and airborne land imaging and water and wildlife monitoring.

Scientific monitoring, research, and development play a vital role in supporting Interior's missions and Interior maintains a robust science capability in the natural sciences, primarily in the U.S. Geological Survey. An example of how this expertise is applied is USGS's work as part of an interagency collaboration on hydraulic fracturing, which is aimed at researching and producing decision-ready information and tools on the potential impacts of hydraulic fracturing on the environment, health, and safety, including water quality and inducement of seismic activity. The USGS is also a leader in resource assessments, and just recently published an updated assessment of the Bakken and Three Forks Formations, finding greater resource potential there than previously thought.

The President has also made clear that climate change is an important issue for the nation, especially as we face more frequent droughts, wildfires, and floods, and responding to the management challenges presented is a priority. We are using the science expertise in our bureaus to better understand and prepare for challenges that our cities, coasts, river basins and - ultimately - our economies face.

While USGS provides exceptional support to Interior bureaus, other Departmental bureaus work collaboratively to bridge gaps in knowledge, leveraging the complementary skills and capacity to advance the use of science to support management decision making, ensure independent review of key decisions and science integrity, and adaptively use data to assist states, tribes, and communities throughout the nation.

Impacts of Sequestration

Finally, I want to mention the impact sequestration and uncertainty about the future has had on the Department and its programs. The budget cuts that we have seen push us back to funding levels last seen in 2006, and reverse much of the progress made by Secretary Salazar, who worked in partnership with the Members of this Committee to advance the President's all-of-the-above energy strategy; conserve our federal lands, waters and wildlife; advance youth

engagement in the outdoors; and honor commitments to Native Americans. The process put in place by the sequestration undermines the work we need to do on many fronts, and we will continue to see impacts across the country in all of our bureaus during the coming months.

We will survive these cuts this year by freezing hiring, eliminating seasonal positions, and cutting back on our programs and services, but these steps are not sustainable, as these actions which are eroding our workforce, shrinking our summer field season, and deferring important work cannot be continued in future years without further severe consequences to our mission.

Conclusion

Mr. Chairman, Ranking Member Murkowski, and Members of the Committee, thank you again for inviting me to appear before your Committee. Achieving success in all of these important responsibilities on behalf of the American people is the Department's primary focus. I look forward to working with you as we advance these important issues.

Dear Chris -

Thanks for your continued hard work on my committee testimony. I don't have access to Track Changes on my iPad, so I'm hoping you can see the suggested edits I made when you open these on your desktop. I

(b)(5)

(b)(5)

(b)(5) Your call on this, but I certainly noticed it, especially when put into the same few sentences.

(b)(5)

(b)(5) I will endeavor to give you a quick turnaround once you have digested these and put them into your format.

Thanks,

Sally

**STATEMENT OF SALLY JEWELL
SECRETARY OF THE INTERIOR
BEFORE THE
COMMITTEE ON ENERGY AND NATURAL RESOURCES
UNITED STATES SENATE**

June 6, 2013

Chairman Wyden and Ranking Member Murkowski, thank you for inviting me to appear before your Committee to discuss the programs and activities of the Department of the Interior. I am happy to be here today.

When I appeared before you at my confirmation hearing in March I talked about the scale of the duties of the position and the incredible diversity in the Department's mission. Every day Departmental employees are working to preserve our nation's great heritage and history, manage our federal lands, waters, and other resources, ensure the delivery of water for diverse users, empower insular communities, and support Native American communities. Since that time I have come to see and truly appreciate the astonishing breadth of the issues and responsibilities located within this one Department, many of which fall under the jurisdiction of this Committee. The Department's complex mission affects the lives of all Americans; nearly every American lives within an hour's drive of lands or waters managed by the Department.

During the past 5 weeks my duties have taken me from south Florida and the Arthur R. Marshall Loxahatchee National Wildlife Refuge and Everglades National Park, where I saw, firsthand, Everglades restoration projects underway; to Boise, Idaho, where I met with a group of smokejumpers – some really tough firefighters – at the National Interagency Fire Center and learned how our federal firefighters are deployed when a wildfire is reported; to the Gulf of Mexico where I viewed an offshore drilling rig and a production platform with an inspector from the Bureau of Safety and Environmental Enforcement; and to Portland, Oregon, where I signed an agreement with the States of Oregon and Washington to expedite the review and permitting of energy generation, transmission, and other infrastructure development.

The Department's bureaus serve as stewards of the nation's parks, wildlife refuges, wild and scenic rivers, seashores, and national monuments and recreation areas, and as the keeper of the history of this country. We share responsibilities to protect and advance the role of public lands

and Indian lands. The lands and resources we manage are also a huge economic engine, powering our economy through energy development, tourism and recreation, logging, grazing and other uses. The Department oversees the responsible development of 23 percent of U.S. energy supplies, is the largest supplier and manager of water in the 17 western states, maintains relationships with 566 federally recognized tribes, and provides services to more than 1.7 million American Indian and Alaska Native peoples.

In 2012, there were almost 500 million visits to lands managed by the Department. Recreational visits to our lands contributed an estimated \$49 billion in economic benefits to local communities in 2011. We collect nearly \$13 billion annually through mineral extraction and other activities, and share nearly \$5 billion of these revenues annually with states, tribes, counties, and other entities. An additional \$2 billion of our budget is used in local communities across the nation through contracts for goods and services. In many of your states, the revenues we share from energy production and other activities are a critical component of the local economy. Overall, the Department estimates the exploration and production of oil, gas, coal, hydropower, and minerals on federal lands contributed nearly \$275 billion to the U.S. economy in 2011.

It is with this fitting introduction to the Department's significant responsibilities that I come before you again to discuss the major programs and highlight some of the activities at the Department and my goal to ensure that it continues in its role as a resources manager, a job creator, and a partner to tribes and state and local governments.

Strengthening Our Energy Future

As I noted back in March, I believe that rapidly advancing technologies, smart policies, and a commitment to the President's "all of the above" energy strategy will allow us to continue with the safe and environmentally responsible expansion and diversification of our nation's energy production, further cutting our reliance on foreign oil, and protecting our land and water at the same time. We have been pushing forward with that goal.

Onshore Energy Development

Onshore, the Bureau of Land Management held 31 oil and gas sales last year and, although we planned to conduct 35 sales in 2013, we anticipate that the impacts of the sequester will result in

fewer and smaller lease sales. The amount of producing acreage has increased by about 200,000 acres since 2011. Over 3,000 new oil and gas wells were started in 2012 and oil production from federal onshore lands is up 18 percent since 2008 –its highest level in over a decade. Moreover, the percentage of parcels of land during 2012 that received bids increased by 30 percent over 2009. And the onshore leasing reforms put in place in 2010 resulted in the lowest number of protests since FY 2003 - fewer than 18 percent of parcels offered in FY 2012 were protested, reducing costs and further speeding development.

The Administration is making more coal available as well, with the number of producing acres rising 4 percent from FY 2009 to FY 2012. The amount of coal the agency leased last fiscal year is the highest since FY 2003. And through the Office of Surface Mining Reclamation and Enforcement, we are working to ensure that communities impacted by coal mining and the environment are protected during mining. We are also pursuing the reclamation of priority abandoned mine sites, with a goal of reducing the number of remaining dangerous abandoned mine sites nationwide.

I have heard from a number of members about the need for better onshore permit processing. Secretary Salazar instituted reforms to the BLM's programs, including transitioning to an electronic system that will automate and streamline the application process and significantly reduce the time for approval of new projects. From FY 2006 to FY 2012, the amount of time it took for all BLM field offices to process and approve complete drilling applications fell by 40 percent and the number of inspections completed by all BLM offices rose 73 percent. We are headed in the right direction and will continue to look at procedures, processes, and the regulatory framework to identify areas for further reform.

The Department also published several weeks ago an updated proposed rule on hydraulic fracturing on public and Indian lands. These are common sense updates to 30-year old regulations that will increase safety in oil and gas production on public lands while, at the same time, provide flexibility and fostering coordination with states and tribes. This is an important step in ensuring that the public has full confidence that the right safety and environmental protections are in place.

Alaska is an important component of our nation's energy strategy. The Arctic holds substantial oil and gas potential, but also presents unique environmental and operational challenges. The BLM recently finalized a new comprehensive plan – the first ever – for the 23-million acre National Petroleum Reserve – Alaska. This balanced plan provides access to over 70 percent of that area's estimated oil potential and provides for an important east-west corridor that could be needed for pipeline infrastructure to eventually carry Chukchi Sea oil to the Trans-Alaska pipeline. At the same time, it will protect the vital subsistence resources of Alaska Natives and the habitat of world-class wildlife populations.

I recently appeared before the Senate Committee on Indian Affairs and noted at that hearing that the Department is committed to assisting Indian tribes in expanding renewable, reliable, and secure energy supplies on Indian lands and safe and responsible oil and gas development. Including Indian Country in the "all of the above" energy strategy will help increase domestic energy supplies and improve the economies of many Indian tribes and Alaska Native villages.

Offshore Energy Development

We also are moving forward with oversight of the safe and responsible development of our offshore oil and gas resources. (b) (5) The first two sales of the 2012-2017 Five Year Program were held in the Gulf of Mexico in November 2012 and March 2013, and resulted in over \$1.3 billion dollars in industry investment and government revenue through bidding on 436 tracts. At the end of April we announced the Proposed Notice of Sale for Lease Sale 233, scheduled for this August, making available 21 million acres offshore Texas. With this sale, all unleased acreage in the Western Gulf of Mexico will be available for leasing.

Over the past several years, since the Deepwater Horizon oil spill, the Department has reformed the way development on the Outer Continental Shelf takes place. The Bureau of Safety and Environmental Enforcement has implemented safety and environmental management system regulations; issued a new drilling safety rule to refine safety reforms and strengthen requirements; taken steps to hold contractors accountable for their actions offshore; conducted two full-scale capping stack deployment exercises to respond to potential future well blowout scenarios; and provided new guidance on oil spill response plans.

The Bureau of Ocean Energy Management has also significantly reduced the time for review of exploration and development plans for deepwater drilling in the Gulf of Mexico, with time from submission to approval down almost 35 percent from the period between October 2010 and October 2011.

BSEE has achieved similar, significant improvements in the processing of deepwater permits, with the average time for review reduced by about 37 percent between 2011 and 2012. This has contributed to the approval by BSEE of 112 new deepwater well permits, higher than in either of the two years preceding the Deepwater Horizon oil spill. There are more floating deepwater drilling rigs working in the Gulf of Mexico today than prior to the Deepwater Horizon spill, and we expect drilling activity to steadily increase over the coming year. And both BOEM and BSEE are working to modernize and streamline their data systems and the processes for the submission and review of plans and permits. When completed, this investment will achieve significant gains for both the rigor of analysis and the efficiency of review, saving time and money and enhancing accountability.

Science continues to drive decision-making for the OCS leasing program. BOEM conducts rigorous scientific and environmental analysis to support all stages of the OCS program, partnering with academic institutions and other federal agencies to produce top-tier applied research to support decision making. BOEM also conducts thorough assessment of resource potential to identify areas of the OCS that are most promising for exploration and development. Last year BOEM began a Programmatic Environmental Impact Statement to support permitting decisions for geological and geophysical surveys that will be used for assessing energy resource potential off the coast of the Mid and South Atlantic. The Department also uses the results of exploratory drilling to improve its knowledge of the resource potential. As part of this process, the Department oversaw the first new exploratory activity in the Alaskan arctic in a decade, with Shell Oil Company beginning limited preparatory drilling activities in the Chukchi and Beaufort Seas under strict safety and environmental oversight.

A priority for the Administration is implementation of the Agreement between the United States and Mexico concerning Transboundary Hydrocarbon Reservoirs in the Gulf of Mexico. Implementation of the Agreement will make nearly 1.5 million acres of the Outer Continental Shelf, currently subject to a moratorium under the Western Gap Treaty, immediately available

for leasing and will make the entire transboundary region, which is currently subject to legal uncertainty in the absence of an agreement, more attractive to U.S.-qualified operators. BOEM estimates that the transboundary area contains as much as 172 million barrels of oil and 304 billion cubic feet of natural gas. We look forward to working you on legislation to implement this Agreement.

Renewable Energy Development

The Department has a critical role to play in fulfilling the President's goal to double renewable electricity generation again by the year 2020 by facilitating renewable development on public lands. I will continue to build on the Department's successes and work to make sure we are accomplishing this in the right way and in the right places.

Securing clean sources of energy not only is good for the environment, it creates American jobs, and promotes innovation. In 2009, there were no commercial solar energy projects on or under development on the public lands. From that time, the Department authorized 42 renewable energy projects on or through the public lands which, if constructed, will have the potential to produce enough electricity to power more than 4.2 million homes. The Department also plays a key role in efforts to strengthen the nation's electric transmission grid, approving permits enabling several hundred miles of transmission lines in seven states across federal lands in 2012.

BLM has focused on an accelerated, but environmentally responsible, permitting process for the development of renewable energy on public lands that ensures the protection of signature landscapes, wildlife habitats, and cultural resources.

Since 2009, BLM has authorized more than 12,000 megawatts of energy on public lands and waters, established a road map for responsible solar development in the West by designating energy zones, and flipped the switch on the first solar energy project to deliver power to the grid. BLM also released the Final Environmental Impact Statement for a proposed 750 megawatt facility in Riverside County that would be one of the largest solar energy projects on public lands in the California desert. BLM is also moving forward on wind energy, with a proposed complex in Wyoming that would generate up to 3,000 megawatts of power, making it the largest wind farm facility in the U.S. and one of the largest in the world. BLM also expects to propose rules

that would establish a competitive process for issuing rights-of-way leases for solar and wind energy development on public lands.

Significant progress has been made to advance offshore wind energy. BOEM issued the second non-competitive commercial wind lease off the coast of Delaware in 2012. Earlier this week I announced the first ever competitive lease sale, to be held in July, for a wind energy area offshore Rhode Island and Massachusetts, and BOEM will hold another competitive lease sale offshore Virginia this year. These sales involve nearly 278,000 acres proposed for development of wind generation to produce electricity to power as many as 1.9 million homes. We expect additional competitive lease sales to follow for wind energy areas offshore Maryland, New Jersey, and Massachusetts, and we continue to make progress on potential projects in areas offshore New York, North Carolina, and Maine.

BOEM has established renewable energy task forces with a total of 12 coastal states, including recent task forces in the States of Hawaii and South Carolina, and is overseeing progress in the planning of a potential Mid-Atlantic wind energy transmission line, which would enable up to 6,000 MW of wind turbine capacity to be delivered to the electric grid along the East Coast.

And the Bureau of Reclamation's 58 hydroelectric power plants generate more than 40 billion kilowatt hours of electricity to meet the needs of over 3.5 million households and generate over \$1 billion in gross revenues for the federal government.

Management of Our Lands and Waters

I will also work hard to build on the progress this Administration has made in the management of the federal lands and waters that make this "America the Beautiful."

America's Great Outdoors

With the National Park Service's centennial anniversary approaching in 2016, we have the opportunity to both celebrate and confirm the NPS's stewardship of our cultural and natural treasures and its role in building enduring connections and enriching experiences with its visitors, including the nation's youth. I recently had the opportunity to meet students from Stonewall Middle School at Prince William Forest Park in Virginia to celebrate National Park

Week and highlight the importance of outdoor recreation and education, especially to young people.

One of the major goals of President Obama's America's Great Outdoors initiative is to better connect youth and families to nature and outdoor recreation. Engaging with American's youth through the great outdoors helps lay the foundation for the next generation of our nation's stewards, scientists, business leaders, teachers, and others who will understand the key role that national parks and public lands play in conservation and preservation of our nation's treasures and the significance they have for local communities, drawing visitors and boosting the economy. I have had an opportunity in these first weeks on the job to work alongside young people in Gateway National Recreation Area in New York and in a city park in Portland, Oregon where high school and college-aged young people were restoring habitat and engaging other youth in environmental education and stewardship - all great examples of our commitment to a 21st Century Civilian Service Corps. In an effort to learn from the Civilian Conservation Corps of the last century, this provides a tangible way to boost youth employment and job training, supporting our public lands infrastructure in a cost-effective way while giving youth a lifetime connection to public lands close to home and far away. It also provides great opportunities for public/private partnerships with businesses and non-profit organizations.

We will continue through AGO to expand opportunities for recreation and conservation, through partnerships with states and others, and the promotion of America's parks, refuges, and public lands. The innovative partnerships developed through this important initiative have helped expand access to rivers and trails, created wildlife corridors, and promoted conservation while working to protect historic uses of the land including ranching, farming, and forestry.

An example of the great work done under this program is the Swan Valley Conservation Area, established as a unit of the National Wildlife Refuge System by the Department in 2012, which is situated between the Canadian Rockies and the central Rockies of Idaho and Wyoming, in partnership with landowners who voluntarily entered their lands into easements. The new Area will protect one of the last low elevation, coniferous forest ecosystems in western Montana that remains undeveloped and provides habitat for species such as grizzly bears, gray wolves, wolverines, and Canada lynx.

And we are continuing our commitment to America's Great Outdoors through our request, for the first time ever, of mandatory dedicated funding for Land and Water Conservation Fund programs, with full funding at \$900 million annually beginning in 2015. Enactment of a mandatory LWCF program would ensure continued funding for this program designed to make investments in conservation and recreation as compensation to the American people for the development of oil and gas resources.

Our nation's public lands, managed by BLM for multiple uses, include rangelands, forests, deserts, and mountains. They support a variety of resources and opportunities important to Americans such as forage for livestock, water storage and filtration, carbon sequestration, habitat for an abundance of wildlife, scenic beauty and many forms of outdoor recreation.

The National Landscape Conservation System which includes 19 national monuments, 21 national conservation (and similarly designated) areas, and 221 wilderness areas designated by Congress offer a different conservation model where many traditional uses are allowed. These spectacular lands provide a multitude of benefits including scientific and historical resources, critical habitat for a variety of species, and diverse recreational opportunities including hunting, fishing, and hiking that generate millions of dollars for local communities.

The conservation and sustainable use of our rangelands is important to those who make their living on these landscapes—including public rangeland permittees, whose operations are important to the economic well-being and cultural identity of the West and to rural western communities. While significant workload and resource challenges exist, BLM is committed to reducing the backlog of grazing permit renewals and to issuing permits in the year they expire.

BLM manages the timber on its Oregon and California (O&C) Grant Lands according to the principle of sustained yield. We are increasing support in 2014 for resource management on the O&C lands to implement the Western Oregon Strategy, including increased timber volumes offered for sale while at the same time increasing surveys of species under the Northwest Forest Plan and facilitating recovery of the northern spotted owl, as well as increased support for the BLM to continue its comprehensive effort to prepare new Resource Management Plans covering six BLM Districts in western Oregon.

Wildland Fire

You heard several days ago from the Department on the outlook and planning for the coming fire season. Just a few weeks ago I had the opportunity to join with Secretary Vilsack at the National Interagency Fire Center in Boise to see this well-coordinated operation firsthand and discuss the efforts the federal government is making to protect citizens and property from wildfire.

After a decade of drought and the continued proliferation of non-native plant species and accumulation of hazardous fuels in our forests and rangelands, the 2012 fire season was one of the worst on record for BLM rangelands and woodlands in the lower 48 states. The 2012 season also impacted the other 3 bureaus with resource responsibilities, and with the outlook for the 2013 season to be as severe throughout much of the West, there may be record fires this year. To be prepared we are working together with other federal agencies, tribes, and local governments to ensure that we're doing everything we can with the resources that we have.

Let me add that the complexity and intensity of fires over the past ten years present enormous budgetary challenges for the federal government. While the latest projection for fire costs for the 2013 season indicate that we have sufficient funding, because of sequestration we absorbed an overall \$41 million cut to the Department's fire program that resulted in a reduction of approximately 7 percent of the Department's firefighter seasonal workforce, with reduced lengths of employment for those hired. This reduces our capability and significantly constrains our work in preventing fires through hazardous fuels removal and remediating land after fire damage.

Water Resources

The Bureau of Reclamation is the largest wholesaler and manager of water in the 17 western states and the nation's second largest producer of hydroelectric power. Its projects and programs are critical to driving and maintaining economic growth in the western states. Reclamation manages water for agricultural, municipal and industrial use, and provides flood control and recreation for millions of people. Reclamation activities, including recreation, have an economic contribution of \$46 billion, and support nearly 312,000 jobs. As a result, Reclamation facilities eliminate the production of over 27 million tons of carbon dioxide that would have been produced by fossil fuel power plants.

Reclamation has a long-standing commitment to support the Secretary's goal to strengthen tribal nations, including through ecosystem restoration, rural water infrastructure, and the implementation of water rights settlements.

Population growth, development, and a changing climate are creating growing challenges to the nation's water supplies. In many areas of the Country, including the arid West, dwindling water supplies, lengthening droughts, and rising demand for water are forcing communities, stakeholders, and governments to explore new ideas and find new solutions to ensure stable, secure water supplies for the future. The Department is tackling America's water challenges by providing leadership and assistance to states, tribes, and local communities to address competing demands for water by helping improve conservation and increase water availability, restore watersheds, and resolve long standing water conflicts. Today, many of Reclamation's activities address drought through the use of enhanced water management that helps guard against and, to a certain extent, mitigate the devastating effects of drought. Water conservation by agricultural, residential and commercial users is a prime example.

Through our national water conservation initiative, WaterSMART, we are finding better ways to stretch existing supplies and helping partners plan to meet future water demands. In 2012 the U.S. Geological Survey, a key partner in the WaterSMART initiative, began a three year study of three focus areas in the Delaware River Basin, the Apalachicola–Chattahoochee–Flint River Basin, and the Colorado River Basin that will focus on water availability, investigating the components of a regional water budget to understand the amount entering and leaving each basin.

This work also contributed to the Colorado River Basin Water Supply and Demand Study, the first of its kind, released by the Department in December 2012, which projects an average imbalance in future water supply and demand greater than 3.2 million acre-feet by 2060. The study projects the largest increase in demand will come from municipal and industrial users, owing to population growth, and estimates the number of people that rely on Colorado River Basin water could double to nearly 76 million people by 2060 under a rapid growth scenario. Based on this study, the Department, along with representatives from the seven Colorado River Basin states, the Ten Tribes Partnership, and conservation organizations, last week outlined the next steps to address these projected imbalances.

I am committed to continuing to work with our stakeholders to assess the implications of water shortages, develop flexible operational plans that account for expected periods of drought, and support projects that conserve water and improve the efficiency of water delivery infrastructure.

Addressing Challenges with Science

The Department's mission requires a careful balance between development and conservation, achieved by working closely with our diverse stakeholders and partners to ensure our actions provide the greatest benefit to the American people. The development and use of scientific information to inform decision making is a central component.

Science at the Department promotes economic growth and innovation. At the Department, we use science to address critical challenges in energy and mineral production, ecosystem management, invasive species, oil spill restoration, climate adaptation, and Earth observation - such as satellite and airborne land imaging, and water and wildlife monitoring.

Scientific monitoring, research, and development play a vital role in supporting Interior's missions and Interior maintains a robust science capability in the natural sciences, primarily in the U.S. Geological Survey. An example of how this expertise is applied is USGS's work as part of an interagency collaboration on hydraulic fracturing, which is aimed at researching and producing decision-ready information and tools on the potential impacts of hydraulic fracturing on the environment, health, and safety, including water quality and inducement of seismic activity. The USGS is also a leader in resource assessments, and just recently published an updated assessment of the Bakken and Three Forks Formations, finding greater resource potential there than previously thought.

The President has also made clear that climate change is an important issue for the nation, especially as we face more frequent droughts, wildfires, and floods, (b) (5)

(b) (5)

(b) (5)

While USGS provides exceptional support to Interior bureaus, other Departmental bureaus work collaboratively to bridge gaps in knowledge, leveraging the complementary skills and capacity to advance the use of science to support management decision making, ensure independent review of key decisions and science integrity, and adaptively use data to assist states, tribes, and communities throughout the nation.

Impacts of Sequestration

Finally, I want to mention the impact sequestration and uncertainty about the future has had on the Department and its programs. The budget cuts that we have seen push us back to funding levels last seen in 2006, and reverse much of the progress made by Secretary Salazar, who worked in partnership with the Members of this Committee to advance the President's all-of-the-above energy strategy; conserve our federal lands, waters and wildlife; advance youth engagement in the outdoors; and honor commitments to Native Americans. The process put in place by the sequestration undermines the work we need to do on many fronts, and we will continue to see impacts across the country in all of our bureaus during the coming months.

We will survive these cuts this year by freezing hiring, eliminating seasonal positions, and cutting back on our programs and services, but these steps are not sustainable, as these actions which are eroding our workforce, shrinking our summer field season, and deferring important work cannot be continued in future years without further severe consequences to our mission.

Conclusion

Mr. Chairman, Ranking Member Murkowski, and Members of the Committee, thank you again for inviting me to appear before your Committee. Achieving success in all of these important responsibilities on behalf of the American people is the Department's primary focus. I look forward to working with you as we advance these important issues.

**STATEMENT OF SALLY JEWELL
SECRETARY OF THE INTERIOR
BEFORE THE
COMMITTEE ON ENERGY AND NATURAL RESOURCES
UNITED STATES SENATE**

June 6, 2013

Chairman Wyden and Ranking Member Murkowski, thank you for inviting me to appear before your Committee to discuss the programs and activities of the Department of the Interior. I am happy to be here today.

When I appeared before you at my confirmation hearing in March I talked about the scale of the duties of the position and the incredible diversity in the Department's mission. Every day Departmental employees are working to preserve our nation's great heritage and history, manage our federal lands, waters, and other resources, ensure the delivery of water for diverse users, empower insular communities, and support Native American communities. Since that time I have come to see and truly appreciate the astonishing breadth of the issues and responsibilities located within this one Department, many of which fall under the jurisdiction of this Committee. The Department's complex mission affects the lives of all Americans; nearly every American lives within an hour's drive of lands or waters managed by the Department.

During the past 5 weeks my duties have taken me from south Florida and the Arthur R. Marshall Loxahatchee National Wildlife Refuge and Everglades National Park, where I saw, firsthand, Everglades restoration projects underway; to Boise, Idaho, where I met with a group of smokejumpers – some really tough firefighters – at the National Interagency Fire Center and learned how our federal firefighters are deployed when a wildfire is reported; to the Gulf of Mexico where I viewed an offshore drilling rig and a production platform with an inspector from the Bureau of Safety and Environmental Enforcement; and to Portland, Oregon, where I signed an agreement with the States of Oregon and Washington to expedite the review and permitting of energy generation, transmission, and other infrastructure development.

The Department's bureaus serve as stewards of the nation's parks, wildlife refuges, wild and scenic rivers, seashores, and national monuments and recreation areas, and as the keeper of the history of this country. We share responsibilities to protect and advance the role of public lands

and Indian lands. The lands and resources we manage are also a huge economic engine, powering our economy through energy development, tourism and recreation, logging, grazing and other uses. The Department oversees the responsible development of 23 percent of U.S. energy supplies, is the largest supplier and manager of water in the 17 western states, maintains relationships with 566 federally recognized tribes, and provides services to more than 1.7 million American Indian and Alaska Native peoples.

In 2012, there were almost 500 million visits to lands managed by the Department. Recreational visits to our lands contributed an estimated \$49 billion in economic benefits to local communities in 2011. We collect nearly \$13 billion annually through mineral extraction and other activities, and share nearly \$5 billion of these revenues annually with states, tribes, counties, and other entities. An additional \$2 billion of our budget is used in local communities across the nation through contracts for goods and services. In many of your states, the revenues we share from energy production and other activities are a critical component of the local economy. Overall, the Department estimates the exploration and production of oil, gas, coal, hydropower, and minerals on federal lands contributed nearly \$275 billion to the U.S. economy in 2011.

It is with this fitting introduction to the Department's significant responsibilities that I come before you again to discuss the major programs and highlight some of the activities at the Department and my goal to ensure that it continues in its role as a resources manager, a job creator, and a partner to tribes and state and local governments.

Strengthening Our Energy Future

As I noted back in March, I believe that rapidly advancing technologies, smart policies, and a commitment to the President's "all of the above" energy strategy will allow us to continue with the safe and environmentally responsible expansion and diversification of our nation's energy production, further cutting our reliance on foreign oil, and protecting our land and water at the same time. We have been pushing forward with that goal.

Onshore Energy Development

(b)(5)

(b) (5)

The Administration is making more coal available as well, with the number of producing acres rising 4 percent from FY 2009 to FY 2012. The amount of coal the agency leased last fiscal year is the highest since FY 2003. And through the Office of Surface Mining Reclamation and Enforcement, we are working to ensure that communities impacted by coal mining and the environment are protected during mining. We are also pursuing the reclamation of priority abandoned mine sites, with a goal of reducing the number of remaining dangerous abandoned mine sites nationwide.

I have heard from a number of members about the need for better onshore permit processing. Secretary Salazar instituted reforms to the BLM's programs, including transitioning to an electronic system that will automate and streamline the application process and significantly reduce the time for approval of new projects. From FY 2006 to FY 2012, the amount of time it took for all BLM field offices to process and approve complete drilling applications fell by 40 percent and the number of inspections completed by all BLM offices rose 73 percent. We are headed in the right direction and will continue to look at procedures, processes, and the regulatory framework to identify areas for further reform.

The Department also published several weeks ago an updated proposed rule on hydraulic fracturing on public and Indian lands. These are common sense updates to 30-year old regulations that will increase safety in oil and gas production on public lands while, at the same time, provide flexibility and fostering coordination with states and tribes. This is an important step in ensuring that the public has full confidence that the right safety and environmental protections are in place.

Alaska is an important component of our nation's energy strategy. The Arctic holds substantial oil and gas potential, but also presents unique environmental and operational challenges. The BLM recently finalized a new comprehensive plan – the first ever – for the 23-million acre National Petroleum Reserve – Alaska. This balanced plan provides access to over 70 percent of that area's estimated oil potential and provides for an important east-west corridor that could be needed for pipeline infrastructure to eventually carry Chukchi Sea oil to the Trans-Alaska pipeline. At the same time, it will protect the vital subsistence resources of Alaska Natives and the habitat of world-class wildlife populations.

I recently appeared before the Senate Committee on Indian Affairs and noted at that hearing that the Department is committed to assisting Indian tribes in expanding renewable, reliable, and secure energy supplies on Indian lands and safe and responsible oil and gas development. Including Indian Country in the "all of the above" energy strategy will help increase domestic energy supplies and improve the economies of many Indian tribes and Alaska Native villages.

Offshore Energy Development

We also are moving forward with oversight of the safe and responsible development of our offshore oil and gas resources. (b)(5) The first two sales of the 2012-2017 Five Year Program were held in the Gulf of Mexico in November 2012 and March 2013, and resulted in over \$1.3 billion dollars in industry investment and government revenue through bidding on 436 tracts. At the end of April we announced the Proposed Notice of Sale for Lease Sale 233, scheduled for this August, making available 21 million acres offshore Texas. With this sale, all unleased acreage in the Western Gulf of Mexico will be available for leasing.

Over the past several years, since the Deepwater Horizon oil spill, the Department has reformed the way development on the Outer Continental Shelf takes place. The Bureau of Safety and Environmental Enforcement has implemented safety and environmental management system regulations; issued a new drilling safety rule to refine safety reforms and strengthen requirements; taken steps to hold contractors accountable for their actions offshore; conducted

two full-scale capping stack deployment exercises to respond to potential future well blowout scenarios; and provided new guidance on oil spill response plans.

The Bureau of Ocean Energy Management has also significantly reduced the time for review of exploration and development plans for deepwater drilling in the Gulf of Mexico, with time from submission to approval down almost 35 percent from the period between October 2010 and October 2011.

BSEE has achieved similar, significant improvements in the processing of deepwater permits, with the average time for review reduced by about 37 percent between 2011 and 2012. This has contributed to the approval by BSEE of 112 new deepwater well permits, higher than in either of the two years preceding the Deepwater Horizon oil spill. There are more floating deepwater drilling rigs working in the Gulf of Mexico today than prior to the Deepwater Horizon spill, and we expect drilling activity to steadily increase over the coming year. And both BOEM and BSEE are working to modernize and streamline their data systems and the processes for the submission and review of plans and permits. When completed, this investment will achieve significant gains for both the rigor of analysis and the efficiency of review, saving time and money and enhancing accountability.

Science continues to drive decision-making for the OCS leasing program. BOEM conducts rigorous scientific and environmental analysis to support all stages of the OCS program, partnering with academic institutions and other federal agencies to produce top-tier applied research to support decision making. BOEM also conducts thorough assessment of resource potential to identify areas of the OCS that are most promising for exploration and development. Last year BOEM began a Programmatic Environmental Impact Statement to support permitting decisions for geological and geophysical surveys that will be used for assessing energy resource potential off the coast of the Mid and South Atlantic. The Department also uses the results of exploratory drilling to improve its knowledge of the resource potential. As part of this process, the Department oversaw the first new exploratory activity in the Alaskan arctic in a decade, with Shell Oil Company beginning limited preparatory drilling activities in the Chukchi and Beaufort Seas under strict safety and environmental oversight.

(b)(5)

A priority for the Administration is implementation of the Agreement between the United States and Mexico concerning Transboundary Hydrocarbon Reservoirs in the Gulf of Mexico.

Implementation of the Agreement will make nearly 1.5 million acres of the Outer Continental Shelf, currently subject to a moratorium under the Western Gap Treaty, immediately available for leasing and will make the entire transboundary region, which is currently subject to legal uncertainty in the absence of an agreement, more attractive to U.S.-qualified operators. BOEM estimates that the transboundary area contains as much as 172 million barrels of oil and 304 billion cubic feet of natural gas. We look forward to working you on legislation to implement this Agreement.

Renewable Energy Development

The Department has a critical role to play in fulfilling the President's goal to double renewable electricity generation again by the year 2020 by facilitating renewable development on public lands. I will continue to build on the Department's successes and work to make sure we are accomplishing this in the right way and in the right places.

Securing clean sources of energy not only is good for the environment, it creates American jobs, and promotes innovation. In 2009, there were no commercial solar energy projects on or under development on the public lands. From that time, the Department authorized 42 renewable energy projects on or through the public lands which, if constructed, will have the potential to produce enough electricity to power more than 4.2 million homes. The Department also plays a key role in efforts to strengthen the nation's electric transmission grid, approving permits enabling several hundred miles of transmission lines in seven states across federal lands in 2012.

BLM has focused on an accelerated, but environmentally responsible, permitting process for the development of renewable energy on public lands that ensures the protection of signature landscapes, wildlife habitats, and cultural resources.

Since 2009, BLM has authorized more than 12,000 megawatts of energy on public lands and waters, established a road map for responsible solar development in the West by designating energy zones, and flipped the switch on the first solar energy project to deliver power to the grid. BLM also released the Final Environmental Impact Statement for a proposed 750 megawatt facility in Riverside County that would be one of the largest solar energy projects on public lands

in the California desert. BLM is also moving forward on wind energy, with a proposed complex in Wyoming that would generate up to 3,000 megawatts of power, making it the largest wind farm facility in the U.S. and one of the largest in the world. BLM also expects to propose rules that would establish a competitive process for issuing rights-of-way leases for solar and wind energy development on public lands.

Significant progress has been made to advance offshore wind energy. BOEM issued the second non-competitive commercial wind lease off the coast of Delaware in 2012. Earlier this week I announced the first ever competitive lease sale, to be held in July, for a wind energy area offshore Rhode Island and Massachusetts, and BOEM will hold another competitive lease sale offshore Virginia this year. These sales involve nearly 278,000 acres proposed for development of wind generation to produce electricity to power as many as 1.9 million homes. We expect additional competitive lease sales to follow for wind energy areas offshore Maryland, New Jersey, and Massachusetts, and we continue to make progress on potential projects in areas offshore New York, North Carolina, and Maine.

BOEM has established renewable energy task forces with a total of 12 coastal states, including recent task forces in the States of Hawaii and South Carolina, and is overseeing progress in the planning of a potential Mid-Atlantic wind energy transmission line, which would enable up to 6,000 MW of wind turbine capacity to be delivered to the electric grid along the East Coast.

And the Bureau of Reclamation's 58 hydroelectric power plants generate more than 40 billion kilowatt hours of electricity to meet the needs of over 3.5 million households and generate over \$1 billion in gross revenues for the federal government.

Management of Our Lands and Waters

I will also work hard to build on the progress this Administration has made in the management of the federal lands and waters that make this "America the Beautiful."

America's Great Outdoors

With the National Park Service's centennial anniversary approaching in 2016, we have the opportunity to both celebrate and confirm the NPS's stewardship of our cultural and natural treasures and its role in building enduring connections and enriching experiences with its

visitors, including the nation's youth. I recently had the opportunity to meet students from Stonewall Middle School at Prince William Forest Park in Virginia to celebrate National Park Week and highlight the importance of outdoor recreation and education, especially to young people.

One of the major goals of President Obama's America's Great Outdoors initiative is to better connect youth and families to nature and outdoor recreation. Engaging with American's youth through the great outdoors helps lay the foundation for the next generation of our nation's stewards, scientists, business leaders, teachers, and others who will understand the key role that national parks and public lands play in conservation and preservation of our nation's treasures and the significance they have for local communities, drawing visitors and boosting the economy.

I have had an opportunity in these first weeks on the job to work alongside young people in Gateway National Recreation Area in New York and in a city park in Portland, Oregon, where high school and college-aged young people were restoring habitat and engaging other youth in environmental education and stewardship - all great examples of our commitment to a 21st Century Civilian Service Corps. In an effort to learn from the Civilian Conservation Corps of the last century, this provides a tangible way to boost youth employment and job training, supporting our public lands infrastructure in a cost-effective way while giving youth a lifetime connection to public lands close to home and far away. It also provides great opportunities for public/private partnerships with businesses and non-profit organizations.

We will continue through AGO to expand opportunities for recreation and conservation, through partnerships with states and others, and the promotion of America's parks, refuges, and public lands. The innovative partnerships developed through this important initiative have helped expand access to rivers and trails, created wildlife corridors, and promoted conservation while working to protect historic uses of the land including ranching, farming, and forestry.

An example of the great work done under this program is the Swan Valley Conservation Area, established as a unit of the National Wildlife Refuge System by the Department in 2012, which is situated between the Canadian Rockies and the central Rockies of Idaho and Wyoming, in partnership with landowners who voluntarily entered their lands into easements. The new Area

will protect one of the last low elevation, coniferous forest ecosystems in western Montana that remains undeveloped and provides habitat for species such as grizzly bears, gray wolves, wolverines, and Canada lynx.

And we are continuing our commitment to America's Great Outdoors through our request [this year](#), for the first time ever, of mandatory dedicated funding for Land and Water Conservation Fund programs, with full funding at \$900 million annually beginning in 2015. Enactment of a mandatory LWCF program would ensure continued funding for this program designed to make investments in conservation and recreation as compensation to the American people for the development of oil and gas resources.

Our nation's public lands, managed by BLM for multiple uses, include rangelands, forests, deserts, and mountains. They support a variety of resources and opportunities important to Americans such as forage for livestock, water storage and filtration, carbon sequestration, habitat for an abundance of wildlife, scenic beauty and many forms of outdoor recreation.

The National Landscape Conservation System, which includes 19 national monuments, 21 national conservation (and similarly designated) areas, and 221 wilderness areas designated by Congress offer a different conservation model where many traditional uses are allowed. These spectacular lands provide a multitude of benefits including scientific and historical resources, critical habitat for a variety of species, and diverse recreational opportunities including hunting, fishing, and hiking that generate millions of dollars for local communities.

The conservation and sustainable use of our rangelands is important to those who make their living on these landscapes—including public rangeland permittees, whose operations are important to the economic well-being and cultural identity of the West and to rural western communities. While significant workload and resource challenges exist, BLM is committed to reducing the backlog of grazing permit renewals and to issuing permits in the year they expire.

BLM manages the timber on its Oregon and California (O&C) Grant Lands according to the principle of sustained yield. We are increasing support in 2014 for resource management on the O&C lands to implement the Western Oregon Strategy, including increased timber volumes offered for sale while at the same time increasing surveys of species under the Northwest Forest Plan and facilitating recovery of the northern spotted owl, as well as increased support for the

BLM to continue its comprehensive effort to prepare new Resource Management Plans covering six BLM Districts in western Oregon.

Wildland Fire

You heard several days ago from the Department on the outlook and planning for the coming fire season. Just a few weeks ago I had the opportunity to join with Secretary Vilsack at the National Interagency Fire Center in Boise to see this well-coordinated operation firsthand and discuss the efforts the federal government is making to protect citizens and property from wildfire.

After a decade of drought and the continued proliferation of non-native plant species and accumulation of hazardous fuels in our forests and rangelands, the 2012 fire season was one of the worst on record for BLM rangelands and woodlands in the lower 48 states. The 2012 season also impacted the other 3 bureaus with resource responsibilities, and with the outlook for the 2013 season to be as severe throughout much of the West, there may be record fires this year. To be prepared we are working together with other federal agencies, tribes, and local governments to ensure that we're doing everything we can with the resources that we have.

Let me add that the complexity and intensity of fires over the past ten years present enormous budgetary challenges for the federal government. While the latest projection for fire costs for the 2013 season indicate that we have sufficient funding, because of sequestration we absorbed an overall \$41 million cut to the Department's fire program that resulted in a reduction of approximately 7 percent of the Department's firefighter seasonal workforce, with reduced lengths of employment for those hired. This reduces our capability and significantly constrains our work in preventing fires through hazardous fuels removal and remediating land after fire damage.

Water Resources

The Bureau of Reclamation is the largest wholesaler and manager of water in the 17 western states and the nation's second largest producer of hydroelectric power. Its projects and programs are critical to driving and maintaining economic growth in the western states. Reclamation manages water for agricultural, municipal and industrial use, and provides flood control and recreation for millions of people. Reclamation activities, including recreation, have an economic

contribution of \$46 billion, and support nearly 312,000 jobs. As a result, Reclamation facilities eliminate the production of over 27 million tons of carbon dioxide that would have been produced by fossil fuel power plants.

Reclamation has a long-standing commitment to support the Secretary's goal to strengthen tribal nations, including through ecosystem restoration, rural water infrastructure, and the implementation of water rights settlements.

Population growth, development, and a changing climate are creating growing challenges to the nation's water supplies. In many areas of the Country, including the arid West, dwindling water supplies, lengthening droughts, and rising demand for water are forcing communities, stakeholders, and governments to explore new ideas and find new solutions to ensure stable, secure water supplies for the future. The Department is tackling America's water challenges by providing leadership and assistance to states, tribes, and local communities to address competing demands for water by helping improve conservation and increase water availability, restore watersheds, and resolve long standing water conflicts. Today, many of Reclamation's activities address drought through the use of enhanced water management that helps guard against and, to a certain extent, mitigate the devastating effects of drought. Water conservation by agricultural, residential and commercial users is a prime example.

Through our national water conservation initiative, WaterSMART, we are finding better ways to stretch existing supplies and helping partners plan to meet future water demands. In 2012 the U.S. Geological Survey, a key partner in the WaterSMART initiative, began a three year study of three focus areas in the Delaware River Basin, the Apalachicola–Chattahoochee–Flint River Basin, and the Colorado River Basin that will focus on water availability, investigating the components of a regional water budget to understand the amount entering and leaving each basin.

This work also contributed to the Colorado River Basin Water Supply and Demand Study, the first of its kind, released by the Department in December 2012, which projects an average imbalance in future water supply and demand greater than 3.2 million acre-feet by 2060. The study projects the largest increase in demand will come from municipal and industrial users, owing to population growth, and estimates the number of people that rely on Colorado River

Basin water could double to nearly 76 million people by 2060 under a rapid growth scenario. Based on this study, the Department, along with representatives from the seven Colorado River Basin states, the Ten Tribes Partnership, and conservation organizations, last week outlined the next steps to address these projected imbalances.

I am committed to continuing to work with our stakeholders to assess the implications of water shortages, develop flexible operational plans that account for expected periods of drought, and support projects that conserve water and improve the efficiency of water delivery infrastructure.

Addressing Challenges with Science

The Department's mission requires a careful balance between development and conservation, achieved by working closely with our diverse stakeholders and partners to ensure our actions provide the greatest benefit to the American people. The development and use of scientific information to inform decision making is a central component.

Science at the Department promotes economic growth and innovation. At the Department, we use science to address critical challenges in energy and mineral production, ecosystem management, invasive species, oil spill restoration, climate adaptation, and Earth observation - such as satellite and airborne land imaging, and water and wildlife monitoring.

Scientific monitoring, research, and development play a vital role in supporting Interior's missions and Interior maintains a robust science capability in the natural sciences, primarily in the U.S. Geological Survey. An example of how this expertise is applied is USGS's work as part of an interagency collaboration on hydraulic fracturing, which is aimed at researching and producing decision-ready information and tools on the potential impacts of hydraulic fracturing on the environment, health, and safety, including water quality and inducement of seismic activity. The USGS is also a leader in resource assessments, and just recently published an updated assessment of the Bakken and Three Forks Formations, finding greater resource potential there than previously thought.

The President has also made clear that climate change is an important issue for the nation, especially as we face more frequent droughts, wildfires, and floods. (b) (5)

(b)(5)

(b)(5)

While USGS provides exceptional support to Interior bureaus, other Departmental bureaus work collaboratively to bridge gaps in knowledge, leveraging the complementary skills and capacity to advance the use of science to support management decision making, ensure independent review of key decisions and science integrity, and adaptively use data to assist states, tribes, and communities throughout the nation.

Impacts of Sequestration

Finally, I want to mention the impact sequestration and uncertainty about the future has had on the Department and its programs. The budget cuts that we have seen push us back to funding levels last seen in 2006, and reverse much of the progress made by Secretary Salazar, who worked in partnership with the Members of this Committee to advance the President's all-of-the-above energy strategy; conserve our federal lands, waters and wildlife; advance youth engagement in the outdoors; and honor commitments to Native Americans. The process put in place by the sequestration undermines the work we need to do on many fronts, and we will continue to see impacts across the country in all of our bureaus during the coming months.

We will survive these cuts this year by freezing hiring, eliminating seasonal positions, and cutting back on our programs and services, but these steps are not sustainable, as these actions which are eroding our workforce, shrinking our summer field season, and deferring important work cannot be continued in future years without further severe consequences to our mission.

Conclusion

Mr. Chairman, Ranking Member Murkowski, and Members of the Committee, thank you again for inviting me to appear before your Committee. Achieving success in all of these important responsibilities on behalf of the American people is the Department's primary focus. I look forward to working with you as we advance these important issues.

DOI in the News:

SECRETARY JEWELL TO TOUT CONSERVATION DURING MINNESOTA VISIT. The [Minneapolis Star Tribune](#)

(11/5, Mitchell, 1.14M) reports that Interior Secretary Sally Jewell will "visit Minnesota on Tuesday to promote her conservation initiatives." She will "release a new national report on the economic contributions of the nation's 561 national wildlife refuges while visiting the Minnesota Valley National Wildlife Refuge in Bloomington." Jewell will also tour the Prairie Wetlands Learning Center in Fergus Falls.

CONTINUING COVERAGE OF SECRETARY JEWELL'S NATIONAL PRESS CLUB SPEECH. For the [Denver Post](#) (11/5, Caldwell, 949K), editorial writer Alicia Caldwell writes that in her speech at the National Press Club last Thursday, Interior Secretary Sally Jewell laid out her conservation strategy and warned Congress that if it doesn't protect wild lands, President Obama will use his authority to do so. Caldwell argues that the warning was justified, since public lands bills have languished in Congress for years.

Secretary Jewell Urged To Listen To Scientists On Wild Horses. For the [Atlantic](#) (11/5, Cohen, 7.51M), Andrew Cohen writes that last Thursday, speaking at the National Press Club, Interior Secretary Sally Jewell "addressed in detail a question about the nation's beleaguered wild horses." Cohen criticizes Jewell's response and claims that her statement was "unsupported by key facts revealed in June... in a report by the National Academy of Sciences that was sharply critical of Bureau of Land Management's practices and policies toward the horses." Cohen writes that Jewell's stance "suggests that the Interior Department, under Secretary Jewell, is more concerned with papering over faulty BLM practices than it is with fixing those practices to bring them into line with accepted scientific methods."

Also criticizing Jewell for her position on wild horses is the [Desert Independent](#) (11/5).

Additional Coverage. Additional coverage of Jewell's speech was provided by the [Salt Lake \(UT\) Tribune](#) (11/5, 343K), the [Fly Rod & Reel](#) (11/5, 146K) and [KSJR-FM](#) Colleeville, MN (11/4, 34K).

ENVIRONMENTAL GROUPS CRITICIZE BLM'S LATEST PROPOSALS TO SAVE SAGE GROUSE. The [E&E Daily](#) (11/4) reports that a coalition of conservation groups found "mostly fault" with the BLM's "proposed plans to protect millions of acres of greater sage grouse habitat in five Western states, concluding that overall, they fail to protect the imperiled bird from energy development and other activity that could drive the grouse to extinction." However, the groups, led by WildEarth Guardians, gave BLM "high marks for its proposed grouse management plan in Nevada and eastern California, finding that it adequately addresses impacts from oil and natural gas drilling and livestock grazing."

In an editorial, the [Las Vegas Review-Journal](#) (11/5, 437K) says that the environmentalists' cause is less about saving the sage grouse or increasing its population, and more about gaining the land use restrictions that bar development of open spaces. The paper claims that for these activists, the sage grouse is a but pawn in the campaign to block the projects that lead to increased use of natural resources, improved standards of living and increased energy consumption.

CLIMATE CHANGE TASK FORCE CREATED. The [E&E Daily](#) (11/4) reports on the creation of the State, Local and Tribal Leaders Task Force on Climate Preparedness and Resilience. The team, "made up of eight governors, 16 local officials and two tribal leaders, has a year to recommend ways that the federal government can hasten investments in resilience to communities that are vulnerable to climate change." The group is also tasked with helping the government identify "useful climate preparedness tools" for towns and states.

Creation Of Council On Climate Preparedness Angers Republicans. The [National Journal](#) (11/5, Foran, Subscription Publication, 427K) reports that Republicans are enraged by President Obama's executive order setting up the inter-agency Council on Climate Preparedness and Resilience and subsequent appointments that make the 24-member task force primarily Democrat. Several Republican Representatives spoke out on the issue, criticizing Obama's use of executive orders to avoid involvement with Congress. Several Democrat representatives have spoken out to defend the order, saying that the Republican-controlled Congress would not have passed legislation to address climate change and that Obama's executive order was necessary to "help better prepare communities to withstand the impact of climate changes."

SENATE PANEL TO TACKLE WILDFIRE PREVENTION. The [E&E Daily](#) (11/4) reports that a Senate panel will "explore pre-emptive measures to reduce the spiraling cost of wildfires across the West." The Agriculture Subcommittee on Conservation, Forestry and Natural Resources will "discuss how reduced budgets and forest

management affect the risk of catastrophic wildfires." Members will "hear from the Forest Service's top wildfire deputy, a logging industry official, a conservationist, county leader and the CEO of a Colorado ski area that operates on agency lands."

DRAKES BAY OYSTER FARM DRAWS SUPPORT IN COURT BATTLE. The [Santa Rosa \(CA\) Press Democrat](#) (11/4, 156K) reports on eight "friend of the court" briefs filed in "the last three weeks in support of oyster company owner Kevin Lunny's request for a rehearing by the 9th Circuit US Court of Appeals in San Francisco." According to the article, "the briefs, totalling 150 pages, are intended to convince the appeals court to reconsider its 2-1 decision in September rejecting Lunny's bid to continue harvesting oysters from the 2,500-acre estero in Marin County's Point Reyes Peninsula."

Also reporting on the story is the [Petaluma \(CA\) Argus Courier](#) (11/4, 1K).

INTERIOR AGREES TO FUND MUDDY CREEK BRIDGE PROJECT. The [Cape Cod \(MA\) Day](#) (11/5) reports that the Interior Department has "agreed to fund the Muddy Creek Restoration Bridge project, to the tune of \$3.3 million, and now the design and permitting processes can move full-speed ahead." The article notes that the Muddy Creek bridge is "one of 45 Atlantic Coastal Restoration and Resiliency Projects selected to receive federal money from a competitive pool of projects along the Eastern Seaboard."

NEVADA COUNTY TO HEAR ON PRESENTATION ON FEDERAL CONTROL OF PUBLIC LANDS. The [Elko \(NV\) Daily Free Press](#) (11/5, 22K) reports that "the county will hear a presentation Wednesday by Pam Borda, Northeastern Nevada Regional Development Authority executive director, that will address how a transfer of public land from federal to state control could affect economic development." The article notes that Borda presented "in September to the Nevada Land Management Task Force — the state board meets monthly to study a possible land transfer." Borda "told the task force that federal control of public land costs businesses millions of dollars in regulatory expenses."

FEDERAL WORKERS FILE SUIT AGAINST GOVERNMENT OVER SHUTDOWN. The [Huffington Post](#) (11/4, Jamieson, 11.54M) reports that "hundreds" of Federal employees who worked through the shutdown "have now filed paperwork to join a lawsuit against the government over having their paychecks withheld last month, according to the lawyers handling their case." The suit argues that the Federal government broke the Fair Labor Standards Act by delaying pay for those working during the shutdown. The employees argue that they delayed paychecks played havoc with their personal finances.

ADDITIONAL COVERAGE: WYOMING LAWMAKERS PURSUE STUDY ON TAKING OVER FEDERAL LAND. Additional coverage of the study pursued by Wyoming lawmakers on taking control of federal land was provided by the [Casper \(WY\) Journal](#) (11/5, 80K).

PRESIDENT OBAMA URGED TO ATTEND GETTYSBURG EVENT. In an editorial, the [Pottstown \(PA\) Mercury](#) (11/5, 76K) urges President Obama to attend the 150th anniversary of the Gettysburg Address instead of sending Interior Secretary Sally Jewell in his place.

SHULTZ, SMITH: US HAS POTENTIAL TO ACHIEVE ENERGY INDEPENDENCE. In an op-ed for the [Wall Street Journal](#) (11/5, Shultz, Smith, Subscription Publication, 5.91M), George P. Shultz and Frederick W. Smith write that protecting domestic energy security is vital to defending the national interest, and the energy revolution of the last decade has given the US the means of doing so. They argue that the combination of rising US production and a drop in consumption due to new technologies, such as alternatively fueled vehicles, could see the US as essentially energy independent. However, the pair cautions that continuing this trend will require a national effort, and they suggest that the US establish oil displacement as a metric to measure success.

America's Great Outdoors:

National Park Service:

NPS HIRES CENTER FOR AMERICAN PROGRESS' PUBLIC LANDS DIRECTOR. The [E&E Daily](#) (11/4) reports that the director of the Center for American Progress' public lands program is now the deputy director for

congressional and external relations at the NPS. Christy Goldfuss, "a former Democratic public lands aide in the House who has led CAP's public lands efforts for more than two years, will serve as the Park Service's liaison to Congress and will lead the Office of Legislative and Congressional Affairs and the Office of International Affairs." In a statement, NPS Director Jon Jarvis said, "Christy's solid experience in the public and private sectors, understanding of public lands and preservation issues, and energy and commitment to bring people together to reach common goals make her a natural addition to my executive leadership team. As we ready the National Park Service for its second century of stewardship, we rely on close working relationships with many partners."

Also reporting on the story are the [Sacramento \(CA\) Bee](#) (11/5, 749K) and the [San Luis Obispo \(CA\) Tribune](#) (11/4, 126K).

FORMER DISCOVERY CHANNEL EXECUTIVE HIRED AS PRESIDENT OF NATIONAL PARKS

CONSERVATION ASSOCIATION. The [E&E Daily](#) (11/4) reports that the National Parks Conservation Association has announced it has hired former Discovery Channel executive Clark Bunting as its new president. Bunting will replace former NPCA President Tom Kieman, who left the group in April to lead the American Wind Energy Association. He will begin Nov. 11.

OFFICIALS MOVE AHEAD WITH PLANS TO RESTORE YOSEMITE SEQUOIA GROVE. The [E&E Daily](#) (11/4) reports that the NPS "last week released an environmental impact statement for a \$24 million, three-year project to restore the largest grove of giant sequoias in Yosemite National Park." Officials are seeking "to restore wetlands, remove parking lots, reduce noise and add a shuttle service for visitors to get to the trees in the south end of the park." The plan is "to break ground by the park's 150th anniversary next year."

Also reporting on the story is the [Los Angeles Times](#) (11/4, Boxall, 3.07M) and the [Chicago Tribune](#) (11/4, Boxall, 2.32M).

NPS ASKED TO PURCHASE WRIGHT BROTHERS BUILDINGS. The [Dayton \(OH\) Daily News](#) (11/5, 88K) reports that Rep. Mike Turner is asking the NPS to purchase the historic Wright Company Factory in Dayton. The request is "part of an effort to keep the building from being demolished."

Also reporting on the story is [WDTN-TV](#) Dayton, OH (11/5, 27K).

WASHINGTON MONUMENT SCAFFOLDING REMOVED. The [Washington Post](#) (11/4, 4.28M) reports that "gone Monday was the once-brilliant illumination of the screen around the Washington Monument." The NPS said "Sunday was the last night of the decorative lights on the monument."

IN RIM FIRE'S AFTERMATH, A NEW WORRY EMERGES OVER WATER. The [Los Angeles Times](#) (11/4, Barboza, 3.07M) reports that "as autumn turns to winter and rain falls over the charred landscape left behind by the Rim fire, forest rangers and emergency planners have a new worry: water." According to the article, "over 90% of the blaze burned in the Tuolumne River watershed, where more than 2,600 miles of streams cut through steep, now-burned slopes of the Sierra Nevada." The article notes that "trails and roads are at risk of washing away, cutting off access to world-class white-water rapids," and "burned trees and debris will almost certainly be flushed downstream, fouling irrigation water supplies."

CHERRY BLOSSOM FESTIVAL 2014 TO BE HELD MARCH 20 THROUGH APRIL 13. [WJLA-TV](#) Washington (11/5, 118K) reports that the annual Cherry Blossom Festival will take place from March 20 through April 13 of 2014, organizers announced Monday.

NPS ARCHAEOLOGISTS PARTICIPATE IN ANCIENT SPEAR TIP STUDY. The [Houston Chronicle](#) (11/5, Christian, 2.26M) reports that "two Texas universities studying ancient spear tips found in northwest Alaska have raised intriguing questions about how people spread throughout the Americas." A research team led by Texas A&M University Professor Ted Goebel has been analyzing "fluted" stone spear points "discovered in 2005 at Bering Land Bridge Preserve on the Seward Peninsula." Archaeologists with the NPS, "who are also participating in the study, found a fluted spear tip fragment in an area called Serpentine Hot Springs, according to an A&M news release."

CHICAGO AND NORTH WESTERN RAILWAY DEPOT ADDED TO NATIONAL REGISTER OF HISTORIC

PLACES. The [Milwaukee Journal Sentinel](#) (11/5, 798K) reports that the Chicago and North Western Railway Depot has joined the National Register of Historic Places.

EDITORIAL: NPS DECISION ON HELICOPTERS AND HOVERCRAFTS DESERVES APPEAL. The [Anchorage \(AK\) Daily News](#) (11/4, 198K) reprints an editorial by the Fairbanks Daily News-Miner arguing that the decision by the NPS on helicopters and hovercrafts deserves appeal. According to the paper, "the decision greatly limits the utility of a central provision that authors of the Alaska National Interest Lands Conservation Act added to protect the ability of the state and private landowners to use their lands within the vast federal parks, refuges and other units created when Congress passed the law in 1980."

Bureau of Land Management:

JUDGE OVERTURNS BLM MANAGEMENT PLAN FOR RANGELANDS OF CENTRAL UTAH. The [Columbus \(IN\) Republic](#) (11/5, 80K) reports that "a judge on Monday overturned a Bush-era management plan that opened more than 4,200 miles of dirt paths to motorized vehicles on public rangelands across a wide region of Utah." US District Judge Dale Kimball held that the BLM "failed to consider how vehicles were accelerating soil erosion and threatening archaeological sites." The decision "sent the Richfield district plan back" to the BLM, and "the paths will stay open until a final decision is made later."

The [Deseret \(UT\) News](#) (11/5, 274K) reports that "a coalition of conservation groups is hailing" the decision. Stephen Bloch, legal director for the Southern Utah Wilderness Alliance, said, "This landmark decision is a resounding rejection of the BLM's mismanagement of Utah's stunning public lands." He added, "The Richfield (Resource Management Plan) wrongly prioritized ORV use over all other uses of the public lands and neglected streams and special places worthy of protection. The court didn't mince words in its ruling that this violated federal environmental and historic laws."

BLM IDENTIFIES SUSPECT IN POMPEYS PILLAR VANDALISM. The [Billings \(MT\) Gazette](#) (11/5, 206K) reports that the BLM has identified Cole Randall as "the man suspected of carving his name and date at Pompeys Pillar National Monument last month." According to a press release from the BLM, Randall "owned up to having committed the act of vandalism." In an email sent to a Billings Gazette reporter, a person who identified himself as Randall said "I humbly apologize to the people of Montana and to every American who was affected by my foolishness."

Also reporting on the story is the [Minneapolis Star Tribune](#) (11/5, Brown, 1.14M).

COURT'S RULING OPENS DOOR FOR DOMESTIC HORSE SLAUGHTER. The [E&E Daily](#) (11/4) reports that "US horse slaughterhouses can start operating following a ruling from a federal judge last week." District Judge Christina Armijo in Albuquerque, N.M., has "dismissed a lawsuit from animal advocacy groups, including the Humane Society of the United States, that argued the Department of Agriculture did not conduct appropriate environmental studies before issuing permits to two horse slaughter plants." The Humane Society, joined by the state of New Mexico, has filed an appeal with the 10th US Circuit Court of Appeals in Denver.

SENATE TO TAKE UP MARINE BASE EXPANSION CONTROVERSY. The [Riverside \(CA\) Press Enterprise](#) (11/4, 465K) reports that a long-running battle "over the military's planned expansion of the Twentynine Palms Marine base into the off-roading mecca of Johnson Valley could be settled as early as this month when the issue comes before the US Senate." The article notes that Reps. Paul Cook, R-Yucca Valley, and Buck McKeon, R-Santa Clarita, "stepped in this summer with a compromise proposal." Their legislation "would keep the Johnson Valley Off-Highway Vehicle Recreation Area under control" of the BLM and "require the Marines to obtain a permit for their training exercises two months of the year." According to the article, "the House passed the compromise in June as part of the National Defense Authorization Act," and "the Senate will consider its own bill in the next two months, then both Houses will negotiate a final version."

BLM'S ADVISORY COUNCIL FOR NORTHWEST COLORADO MEETING ON DECEMBER 5. [The Hill](#) (11/5, 194K) reports in its "Regwatch" blog that the BLM's advisory council for Northwest Colorado is meeting on Dec. 5 in the town of Silt.

Fish and Wildlife Service:

REPORT SHOWS LAGGING HISPANIC PARTICIPATION IN OUTDOOR RECREATION. The [Huffington Post](#) (11/4, 11.54M) reports that "while Hispanics make up more than 17% of the nation's population, a 2013 outdoor recreation report shows that only 7% of those who participate in outdoor recreation are Hispanic." Meanwhile, members of the FWS "acknowledge that while Hispanics are affected by the issues USFWS addresses just as much as their neighbors, neither the government nor outdoor industries have reached out to this rapidly growing US population segment." According to Noemi Pérez of the USFWS Office of Partner Liaison, "while initiatives to increase diversity in the USFWS's 10,000-member workforce within the Department of Interior is a continuing process, no bureau within the department had specifically addressed diversity in consumer and participant involvement, until six months ago."

TOTOABA FISH BLADDER HIGHLY PRIZED IN BLACK MARKET. The [E&E Daily](#) (11/4) reports that the bladder of the endangered totoaba fish is "highly prized in China, leading to the smuggling of the commodity from the United States." Currently, "a single dried bladder can fetch between \$5,000 and \$10,000 on the black market." The article notes that "just this year, seven people have been charged with smuggling about 700 pounds of fish bladders."

PRIME HOOK WILDLIFE REFUGE TO HOST PUBLIC MEETING NOVEMBER 13. The [Dover \(DE\) Post](#) (11/4, 79K) reports that the FWS will host a public meeting on "its proposed planning for a dune/marsh restoration project in Units II and III at Prime Hook National Wildlife Refuge on Nov. 13." The meeting will "focus on environmental survey results, project overviews, conceptual designs, and potential sites to secure material to build up the dunes and beaches at Prime Hook to complete the initial phase of marsh restoration, and plans to restore the marsh complex within Units II and III."

Also reporting on the story are [WBOC-TV](#) Salisbury, MD (11/5, 30K) and [WBOC-TV](#) Salisbury, MD (11/5, 30K).

ENVIRONMENTALISTS PLEASSED BY DECISION TO REMOVE CALIFORNIA TOWHEE FROM PROTECTION. The [Bradenton \(FL\) Herald](#) (11/4, 143K) reports that on Monday, the FWS "published the formal proposal to remove the Inyo California towhee from the list of 'threatened' species." Environmentalists are "pleased" with the decision. The towhee's revival, they claim, shows the Endangered Species Act can still work. Tierra Curry, a biologist at the Center for Biological Diversity, said, "The recovery of the towhee and its spring habitats is cause for celebration and provides yet another example of the success of our most important law for saving wildlife."

Also reporting on the story is the [Chicago Tribune](#) (11/4, Doyle, 2.32M).

FWS DECISION CLOSES STATE-APPROVED SKILAK LOOP HUNT. The [Alaska Native News](#) (11/5, 245) reports that the Alaska Department of Fish and Game learned Friday that FWS will "implement additional hunting closures on the Kenai Peninsula." In a news release Friday, the FWS has "promulgated a closure of state-authorized wolf, lynx and coyote hunting within the Skilak Loop Management Area." The article notes that "the closure is scheduled to go into effect on November 10, 2013."

GRIZZLY DEATHS DECLINED BY HALF IN YELLOWSTONE AREA. The [Casper \(WY\) Star-Tribune](#) (11/5, 90K) reports that "the number of grizzly bear deaths declined by more than 50 percent this year in the greater Yellowstone ecosystem, according to the Interagency Grizzly Bear Study Team." According to the article, "the numbers are particularly notable because trees produced fewer than normal whitebark pine cones, an important grizzly bear food." The article notes that "grizzly bears' reaction to declines in whitebark pine cones will help determine if the bear is removed from the endangered species list."

MANATEES LOITERING IN SOUTH CAROLINA. The [Charleston \(SC\) Post and Courier](#) (11/4, 284K) reports that biologists are alarmed by manatee sightings in South Carolina. Jennifer Koches of the FWS said, "Providing manatees with food and water is not only a violation of federal law, but it also creates significant problems for the manatees, as they will easily acclimate to hand-outs of food and fresh water."

FWS EXTENDS WOLVERINE COMMENT PERIOD. The [Bonners Ferry \(ID\) Herald](#) (11/5, 10K) reports that the FWS is "reopening the comment period for the proposed listing of the North American wolverine to broaden the

discussion to the entire public and to ensure that all available information is adequately considered in the process." The reopened comment period will close on December 2, 2013.

PROTECTION URGED FOR WOLVES. For "The Blog" of the [Huffington Post](#) (11/5, Chu, 11.54M), Dan Chu, Director, Sierra Club "Our Wild America" campaign, writes that last June, the FWS "proposed no longer protecting gray wolves as an endangered species in the vast majority of the country, threatening any chance of wolves returning to much of their former range." Chu argues that "putting the fate of wolves back into the hands of the western state politicians will not keep them on the road to recovery, but send them down a path to destruction." He concludes that "we must allow the recovery of wolves to continue under the Endangered Species Act; the job is far from done."

US Geological Survey:

USGS CONCLUDES QUARRY BLAST SPARKS TREMORS IN CHICAGO SUBURBS. [NPR](#) (11/5, Peralta, 465K) reports that residents in Chicago's western suburbs assumed that the shaking they felt was an earthquake and the USGS reported it as a 3.7 magnitude quake. But "interestingly, after the USGS looked at their data, they came to the conclusion that the tremor was actually caused by a quarry blast."

Securing America's Energy Future:

Renewable Energy:

WIND POWER TAX CREDIT EXPECTED TO EXPIRE. [Politico](#) (11/5, Restuccia, 467K) reports, "It's looking increasingly likely that the production tax credit, a key wind industry lifeline," will expire soon after the end of the year, which "could hurt the wind industry." Uncertainty over the PTC this year caused new wind projects construction to "grind to a virtual halt." A Senate aide said tax writers "aren't even talking about a year-end extenders package," which is traditionally how credits like the PTC are continued. It then would have to be revived "as part of broader tax reform, which isn't expected to move until next year, if at all." Meanwhile, various companies are "lobbying hard to kill the tax credit." For instance, Exelon, says "that wind power threatens its nuclear power operations."

SENATE DEMOCRATS PUSHING RENEWABLES. The [Daily Caller](#) (11/5, Bastasch, 422K) reports Senate Democrats "have begun a renewable energy blitz," introducing a pair of bills "mandating an increase in renewable use through 2025." Sens. Tom Udall and Mark Udall introduced a bill last week that would call for 25% of the nation's energy to come from renewable sources by 2025. A similar bill was introduced by Sen. Ed Markey.

Onshore Energy Development:

STUDY LINKS CO2 INJECTIONS INTO WELLS WITH EARTHQUAKES. [Reuters](#) (11/5, Gebrekidan) reports a [paper](#) published in the Proceedings of the National Academy of Sciences linked injecting carbon dioxide into oil and gas wells to minor earthquakes in Texas. This would be the first study to link earthquakes of magnitude 3 and above with carbon dioxide injections in the Cogdell oil field.

Offshore Energy Development:

BSEE ISSUES REPORT ON NOVEMBER 2012 GULF OF MEXICO OFFSHORE RIG EXPLOSION. The [Wall Street Journal](#) (11/5, Gilbert, Subscription Publication, 5.91M) reports that on Monday, the Interior Department's Bureau of Safety and Environmental Enforcement issued a report on the November 2012 explosion at an offshore platform in the Gulf of Mexico being operated by Talos Energy for Black Elk. BSEE director Brian Salerno said, "Collectively, the industry must do more to protect workers."

The [E&E Daily](#) (11/4) reports that Black Elk Energy Offshore Operations LLC and its contractors "ignored hazards and failed to encourage workers to raise safety concerns before a fatal explosion and fire aboard a Gulf of Mexico production platform last fall, according to a scathing new report by federal investigators." Black Elk also "conducted welding work without taking required safety precautions, failed to isolate hydrocarbons inside an

oil tank and promoted ineffective communication among contractors," according to the 54-page report by the BSEE and the Coast Guard. The BSEE said "it plans to issue incidents of noncompliance to Black Elk and its contractors, which could include civil penalties of up to \$40,000 per incident per day." BSEE Director Brian Salerno said, "These failures reflect a disregard for the safety of workers on the platform and are the antithesis of the type of safety culture that should guide decisionmaking in all offshore oil and gas operations. BSEE safety regulations were not followed, and accordingly BSEE will proceed with appropriate enforcement actions."

Also reporting on the story are the "E2 Wire" blog of [The Hill](#) (11/5, 194K), the [New Orleans Times-Picayune](#) (11/5, 700K), the [FuelFix](#) (11/4, 7K), the [San Antonio Express-News](#) (11/5, 746K), the [MarketWatch](#) (11/4, 967K), the [Law 360](#) (11/5, 18K), [KHOU-TV](#) Houston (11/5, 125K), [KPLC-TV](#) Lake Charles, LA (11/5, 10K), [KALB-TV](#) Alexandria, LA (11/5, 1K), [WXVT-TV](#) Greenwood, MS (11/5, 98), and [WWL-TV](#) New Orleans (11/5, 107K).

INDUSTRY EXPRESSES WISH FOR EXPEDITED APPROVAL OF GULF OF MEXICO TRANSBOUNDARY TREATY. The [Oil and Gas Journal](#) (11/5, 1K) reminds readers that versions of bills approving the Gulf of Mexico transboundary treaty between the US and Mexico differ in the House and Senate, with the House including "a provision that waived a Dodd-Frank law" requirement for US companies to conduct foreign payment disclosure, and the Senate leaving such a provision out. This makes "a conference likely" and might harm "the treaty's timely ratification." The article then recalls that a US District Court for the District of Columbia ruling on July 2 barred implementation of that Dodd-Frank mandated provision by the SEC, "after the American Petroleum Institute and other business groups sued over what they considered an anticompetitive requirement." On October 28, "an API spokesman" said to the Journal, "Since the SEC's original rule has been thrown out and the SEC is working with all stakeholders on a new rule, we'd like to see the House and Senate work together to expedite approval of the transboundary agreement."

APPEALS COURT BEGINS REVIEW OF BP SETTLEMENT. The [E&E Daily](#) (11/4) reports that an appeals court was scheduled "to hear objections to the multibillion-dollar settlement meant to compensate victims of the 2010 Gulf spill." BP has contended that "the settlement it agreed to a year ago has been misinterpreted by the judge and the court-appointed claims administrator overseeing the payouts." The company "argues a decision that the claims administrator, Patrick Juneau, announced earlier this year has allowed businesses to manipulate comparisons of revenues and expenses from before and after the spill."

Tackling America's Water Challenges:

HIGH-FLOW RELEASES FROM GLEN CANYON DAM SCHEDULED FOR NEXT WEEK. The [Arizona Daily Sun](#) (11/5, 33K) reports that "next week, Glen Canyon Dam will start pumping an Olympic-sized swimming pool worth of water into the Colorado River every other minute." According to the article, "the experiment is an attempt to replicate the high-flow conditions that would naturally be seen in the Grand Canyon before the dam, where sediment rich water creates beaches and critical wildlife habitat."

ADDITIONAL COVERAGE OF BAY DELTA CONSERVATION PLAN. Additional Coverage of the Bay Delta Conservation Plan was provided by the [Huffington Post](#) (11/4, 11.54M), the [Bay Area \(CA\) Indymedia](#) (11/4, 2K), the [Central Valley \(CA\) Business Times](#) (11/5, 206), and [KXTV-TV](#) Sacramento, CA (11/5, 25K).

Empowering Native American Communities:

ALASKA TRIBES CALL ON OBAMA ADMINISTRATION TO SETTLE CONTRACT COST CLAIMS. The [Juneau \(AK\) Empire](#) (11/5, 21K) reports that "sixty tribes and tribally affiliated organizations from across the country have signed a letter to President Barack Obama asking his administration to settle outstanding Indian Health Service and Bureau of Indian Affairs contract costs claims." According to the article, "the letter — which includes signatures from leaders of the Tlingit-Haida Central Council, the SouthEast Alaska Regional Health Consortium, Southcentral Foundation and the Arctic Slope Native Association, among others — was sent to the president as representatives from tribes and tribal organizations from around the country prepare to attend a Nov. 13 White House Tribal Nations Conference."

NEW YORK TOWNS PIN HOPES ON REFERENDUM ON CASINOS. The [New York Times](#) (11/3, Mckinley, Subscription Publication, 9.61M) reports that towns in New York are "betting on the success of Proposal 1, a

statewide referendum to be decided on Tuesday that would authorize up to seven full-scale casinos around the state." The article notes that "supporters, including Gov. Andrew M. Cuomo, have been selling it as an economic development measure, describing the potential for 'Las Vegas style' resorts with investments in the hundreds of millions of dollars, and the potential for 10,000 new jobs." However, "the reality may be far more restrained." According to the article, "some of the possible locations for the new gambling operations are distant from major population centers, and the experience of some remote American Indian casinos suggests that luring customers from big cities could be a challenge."

FEDERAL AUTHORITIES PROSECUTING MORE INDIAN COUNTRY CRIMES. The [Tulsa \(OK\) World](#) (11/5, 271K) reports that "federal authorities have been ramping up their efforts to prosecute crimes in what they call 'Indian Country,' and statistics show those efforts have not been in vain." The US Department of Justice reports "a 54 percent increase in Indian Country criminal prosecutions since fiscal year 2009." The article notes that "in June 2009, Attorney General Eric Holder announced a Justice Department initiative to enhance public safety in Indian Country, a wide-ranging effort that has included increased prosecution, training and outreach efforts."

Top National News:

WHITE HOUSE PUSHBACK FAILS TO SHIFT ACA ROLLOUT MEDIA NARRATIVE. On Monday evening, after several days of coverage spotlighting Americans who are losing their health insurance or are facing thousands of dollars in increased premiums and deductibles as a result of the Affordable Care Act – including a front-page article in Monday's [Washington Post](#) on Americans who "are angrily complaining about 'sticker shock,'" and a viral [Wall Street Journal](#) op-ed by a cancer patient who may lose access to the specialists she credits for saving her life – President Obama offered what media reports are casting as a slightly modified case for the law in remarks at an Organizing For Action event.

Despite the President's attempt to reframe the national conversation about the ACA, he and his Administration continue to be the subject of a great deal of negative media coverage. And while much of it is focused on the problems associated with the implementation of the Affordable Care Act, some of the critiques are broader in scope. For instance, under the headline, "For Obama, A Sudden Struggle With Personal Appeal," the [AP](#) (11/5, Pace, Agiesta) reports that "Americans increasingly view the president unfavorably," and notes that "an NBC News/Wall Street Journal Poll released last week that found positive views of Obama at the lowest point of his presidency."

On [NBC Nightly News](#) (11/4, story 2, 2:45, Williams, 7.86M), Peter Alexander reported that in regards to HealthCare.gov, "even [the President's] Democratic allies are even calling for a time-out." Former Democratic Congressman Harold Ford was shown saying, "This program will crumble if you don't find ways to deal with the challenge right now. ... Shutting the program down for 60, 90, 120 days – I would rather see that and the political fallout than a program that limps along over the next several months."

On [ABC World News](#) (11/4, story 6, 2:45, Sawyer, 7.43M), Diane Sawyer said there is "new trouble for the President and Obamacare; it's about what the President said and what he knew and when." ABC's Chief White House Correspondent Jonathan Karl, who engaged in a [widely noted](#) verbal sparring match with Jay Carney during Monday's White House press briefing, went on to report that "as the healthcare website melted down, The President repeatedly told people there were other options working just fine." President Obama was shown saying, "You can bypass the website and apply by phone or in person." However, according to Karl, "ten days before the President said those words his own healthcare team knew that all applications were having the same problems."

The [Huffington Post](#) says the "heated exchange" between Carney and Karl came after Karl asked about "internal documents that show Obamacare applications submitted by phone or paper go through the same pipeline and system as the website, and do not take less time, as officials have previously said."

At the opening of [CNN's The Situation Room](#), Wolf Blitzer reported that there is "panic in the Obamacare war room," and that "we now have some proof of White House fears that Americans will be disappointed even after the website is fixed." Blitzer went on to report that "notes from inside the Administration...reveal deep fears about the healthcare program and the political backlash."

The perception that the "mainstream media" is growing increasingly skeptical of the Administration's narrative regarding the HealthCare.gov problems and the controversy over the Americans who are losing their current health insurance as a result of the ACA was a recurring theme during Fox News' primetime lineup Monday night. On [Fox News' Special Report](#) (11/5, 6.72M), which also showed a lengthy clip of ABC's Karl peppering Comey with questions Monday, Brit Hume drew attention to criticism of the Administration from Obama allies such as former White House Press Secretary Robert Gibbs on [MSNBC's Morning Joe](#) Monday. Neil Munro, in a piece for the [Daily Caller](#) (11/5, Munro, 422K), also notes negative coverage of the ACA's implementation "from some of the media outlets that championed" the law previously.

Reporting on the President's remarks at the OFA event, the [Washington Post](#) (11/5, Nakamura, 4.28M) says he "defended himself against Republican criticism that he misled the public...telling supporters that his administration could not in good faith allow people with inferior insurance plans to keep them." The President is quoted as saying, "The bottom line is we are making the insurance marketplace better for everybody."

Reid Epstein, in a piece for [Politico](#) (11/5, Epstein, 467K) titled "Obama Adds Explainer To 'You Can Keep It' Mantra," noted that on Monday, the President said, "Now if you had one of these plans before the Affordable Care Act came into law and you really liked that plan, what we said was you can keep it if it hasn't changed since the law passed." According to Epstein, the last "extra clause represents a slight change from the 'if you like your plan, you can keep it' mantra of the 2012 campaign."

Likewise, Jackie Calmes, in the [New York Times](#) (11/5, Calmes, Subscription Publication, 9.61M), says the President "has been widely criticized for having promised...that Americans could keep their current coverage," and so "on Monday he modified his language in the face of reports, long anticipated, that some companies had canceled individual policies because they did not meet minimum coverage standards set by the Affordable Care Act." Calmes notes that the President emphasized that as a result of the ACA's passage "nobody can be dropped all together," while also acknowledging that "some Americans with higher incomes will pay more up front, for better insurance with better benefits and better protections that could eventually help them a lot."

The [AP](#) (11/4) says that the President "express[ed] sympathy for Americans who are getting kicked off their health insurance plans," but also contended that "they were often getting 'a very bad deal'" before losing coverage, and that "virtually every insurer is offering newer, better plans."

According to [USA Today](#) (11/4, Madhani, 5.82M), the President was trying to "reframe the public conversation over the Affordable Care Act" as "millions of Americans...receiv[e] cancellation notices" sent by their insurers "despite Obama's frequently repeated pledge that no one would lose the coverage they already had."

The [Washington Times](#) (11/5, Wolfgang, 417K) quotes the President as saying, "If we had allowed these old plans to be downgraded or sold to new enrollees once the law had already passed then we would have broken an even more important promise: making sure that Americans gain access to health care that doesn't leave them one illness away from financial ruin."

[Bloomberg News](#) (11/5, Lerer, 1.91M) reported that later in the week, the President will be in Dallas "to meet with volunteers working on enrollment," while HUD Secretary Shaun Donovan and Secretary of Labor Tom Perez "are also being dispatched to the 10 cities with the highest rates of uninsured residents to promote the insurance plans." Bloomberg also reports that OFA "has started to promote the law with an initiative urging parents to use holiday visits to encourage their older offspring to sign up for coverage."

The [Washington Post](#) (11/5, Nakamura, 4.28M) notes that David Plouffe and Massachusetts Gov. Deval Patrick (D) "also addressed the crowd, sharply attacking Republican lawmakers who have opposed Obamacare." [Politico](#) (11/5, Epstein, 467K) notes that Plouffe predicted that ACA "enrollment will go smoothly 'as long as the website is completed and works error-free and delay-free by the end of the month.'"

The [Daily Caller](#) (11/5, Howley, 422K) reports that in response to an op-ed in Monday's [Wall Street Journal](#) by a California woman who suffered from stage-4 gallbladder cancer and is losing her health insurance because of ACA rules, White House senior adviser Dan Pfeiffer "tweeted out the message 'The Real Reason That The Cancer Patient Writing In Today's Wall Street Journal Lost Her Health Insurance,' along with a link to a [ThinkProgress](#) (11/5, Volsky, 117K) article that blames the woman's insurance company United Healthcare for

dropping her.”

Senate Democrats Want To Delay ACA-Mandated Coverage Cancellations. The AP (11/5, Espo) reports that “after millions of consumers received health care cancellation notices, lawmakers in both parties are pushing legislation to redeem” Obama’s “pledge that anyone liking their coverage will be allowed to keep it under the nation’s controversial new law.” Congressional Democrats “said top administration aides got a close-up view of the cancellation controversy last week, when Sen. Joe Donnelly said at a closed-door meeting...that his son had received notice his coverage was being terminated.” The AP goes on to report that Rep. Fred Upton has introduced legislation that “permits insurers to sell existing coverage plans that would otherwise be banned,” and that Sen. Mary Landrieu wants to “go one step further by requiring” insurance companies “to continue offering existing paying customers continued coverage under any plans in effect at the end of 2013.” Landrieu is quoted as saying, “A promise was made that if you like your health plan, you can keep it.”

The Hill (11/5, Easley, 194K) reports that on Monday, Sen. Marco Rubio said, “This week we learned that... people are, in fact, losing their health plans, and that President Obama’s administration has known this fact for over three years.” Rubio added, “In essence, ObamaCare’s passage was built on a foundation of lies and promises that simply can’t be delivered.”

Marc Thiessen, in his column for the [Washington Post](#) (11/5, Thiessen, 4.28M), notes reports that White House officials objected to the President’s “you can keep your plan” phrasing, but that it “stayed in the speech” anyways, which, according to Thiessen, is evidence of “a willful intent to deceive.”

ACA Enrollees Are Reportedly Older Than Anticipated. Under the front-page headline, “Young AVOID New Health Plans: Early Buyers of Coverage Are Older Than Expected, Raising Expense Concerns,” the [Wall Street Journal](#) (11/5, A1, Weaver, Martin, Subscription Publication, 5.91M) reports that according to insurance executives and state officials, the first cohort of Americans who have gotten healthcare coverage since the ACA marketplaces’ rollout on October 1 are, on average, older than anticipated, which could undermine some of the Administration’s financing projections. The Journal suggests that the well-documented problems affecting HealthCare.gov are contributing to the demographic trend because the younger, healthier uninsured are not as eager to get coverage as those who are older or have pre-existing conditions.

HealthCare.gov Security Concerns Draw Attention Amid Continuing Outages. Scott Pelley, on the [CBS Evening News](#) (11/4, story 3, 2:50, Pelley, 5.58M), reported that on Monday, HealthCare.gov “went down again for about hour and a half,” and “no one is sure why.” Pelley went on to say that “it turns out that even when the website works it may not be secure enough to protect privacy,” and Sharyl Attkisson reported that “the final required top-to-bottom security tests never got done.” Attkisson noted that the House Oversight Committee has “released an Obama Administration memo that shows four days before the launch...it granted itself a waiver to launch the website with a level of uncertainty deemed as a ‘high security risk.’” Georgetown law professor Lawrence Gostin, identified as a “big supporter of the Affordable Care Act,” was shown saying, “You could have somebody hack into the system, get your Social Security number, get your financial information.”

On [NBC Nightly News](#) (11/4, story 2, 2:45, Williams, 7.86M), Brian Williams reported that while the White House “says they have made a lot of progress over this past weekend fixing the Obamacare website...the sign-up page which has been plagued with problems from the start will go offline now every day from 1:00 to 5:00 in the morning...while that so-called tech surge team works to get it right.” Williams added that it is “also...becoming clear the problems with the website cannot be avoided by applying on the phone or in person as the President has been suggesting.” Peter Alexander went on to report that “internal Obama Administration memos showed that won’t solve the problem” because “the same portal is used to determine eligibility no matter how the application is submitted – paper or online.”

[Reuters](#) (11/5, Rampton, Holland) notes that in remarks at an Organizing for Action event Monday, President Obama said, “There are a whole range of things that we’re going to need to do once we get this fixed to talk about federal procurement when it comes to IT and how that’s organized.”

[Politico](#) (11/5, Kenen, 467K) reported that in testimony prepared for a Senate hearing on Tuesday, CMS Administrator Marilyn Tavenner says, “We are seeing improvements each week and by the end of November the experience on the site will be smooth for the vast majority of users.” [Politico](#) (11/5, Millman, 467K) also covered

CMS's response to media inquiries about the outages.

Cutler Warned Summers in 2010 That Administration Officials Were Incapable Of Implementing ACA. On Monday morning, [CBS News](#) (11/5, 3.87M) reported that in 2010, Harvard economics professor David Cutler, who "worked on the Obama 2008 campaign and was a valued outside health care consultant" for the White House, wrote to then-NEC director Larry Summers: "I do not believe the relevant members of the administration understand the president's vision or have the capability to carry it out." According to CBS, Cutler warned that "no one was in charge who had any experience in complex business start-ups," and "also worried basic regulations, technology and policy coordination would fail."

Yale Law School Peter Schuck, author of "Why Government Fails So Often, and How It Can Do Better," has an op-ed in this morning's [Wall Street Journal](#) (11/5, Schuck, Subscription Publication, 5.91M) titled, "The ObamaCare Website Failure Was Inevitable."

ADMINISTRATION LAWYERS CONCERNED ABOUT MEASURE RESTRICTING SURVEILLANCE PROGRAMS. The [Wall Street Journal](#) (11/4, Favole, Subscription Publication, 5.91M) reports that top Administration intelligence lawyers criticized a bipartisan measure to restrict US surveillance programs saying the measure goes too far. According to the lawyers, who testified at a hearing of the Privacy and Civil Liberties Oversight Board, the proposal is likely to prevent the collection of key telephone information and limit the ability of the government to investigate individuals.

[Reuters](#) (11/5, Selyukh) reports that the attorneys said the US government is open to changes to the phone and Internet surveillance programs provided that those changes do not undercut the effectiveness of the programs. After the hearing, Board Chairman David Medine said, "I think we've learned a lot about some potential reforms that the government was amenable to." The [Washington Times](#) (11/5, Waterman, 417K) also reports on the hearing.

Officials: Metadata Collection Must Continue As Administration Mulls Spying Changes. The [New York Times](#) (11/5, Sanger, Subscription Publication, 9.61M) reports that while the Obama Administration has said it is "considering reining in a variety of National Security Agency practices overseas," for now, the President and his top advisers "have concluded that there is no workable alternative to the bulk collection of huge quantities of 'metadata,' including records of all telephone calls made inside the United States." The Administration has suggested that it "may hold that information for only three years instead of five while it seeks new technologies that would permit it to search the records of telephone and Internet companies, rather than collect the data in bulk in government computers," but NSA Director Gen. Keith Alexander "has told industry officials that developing the new technology would take at least three years."

ADMINISTRATION TO RECONSIDER CARBON-COST ESTIMATES. [Bloomberg News](#) (11/5, Dragem, 1.91M) reports the Administration on Monday said it would "revise and open for public comment its estimate of the social cost of carbon," which is used by agencies to "calculate the benefits of regulations to address climate change." The move comes after "complaints from industry lobbyists" that the estimate, last revised in May, "exaggerated the potential costs of rising seas and droughts from climate change to justify regulations that would impose a high up-front cost for manufacturers and the energy sector."

Senate GOP Questioning Administration Input Into IPCC Report. The [Daily Caller](#) (11/5, Bastasch, 422K) reports that Senate Republicans "question" the Administration after reports that US officials "tried to suppress the 15-year global warming hiatus" in the Intergovernmental Panel on Climate Change report. The AP, the Caller says, reported back in September that the Administration joined with several European nations to lobby the IPCC to "omit or downplay data showing that global warming stopped in 1998." GOP senators have sent a letter to EPA Administrator Gina McCarthy, "questioning her knowledge of these international lobbying efforts."

Senate Democrats Pushing Renewables. The [Daily Caller](#) (11/5, Bastasch, 422K) reports Senate Democrats "have begun a renewable energy blitz," introducing a pair of bills "mandating an increase in renewable use through 2025." Sens. Tom Udall and Mark Udall introduced a bill last week that would call for 25% of the nation's energy to come from renewable sources by 2025. A similar bill was introduced by Sen. Ed Markey.

Four Colorado Towns To Vote Tuesday On Banning Fracking. The [Wall Street Journal](#) (11/4, Gold, Bryson,

Subscription Publication, 5.91M) reports that four towns in Colorado will hold votes on Tuesday to decide whether to ban fracking within their borders in "what many here say could be a precursor to a statewide referendum on fracking next year." While Vermont and New York have already moved to block fracking, Colorado "would be a bigger test of whether the oil and gas industry and its supporters can surmount growing opposition from some communities and national environmental groups."

More Commentary. In an op-ed for the [Wall Street Journal](#) (11/5, Shultz, Smith, Subscription Publication, 5.91M), George P. Shultz and Frederick W. Smith write that protecting domestic energy security is vital to defending the national interest, and the energy revolution of the last decade has given the US the means of doing so. They argue that the combination of rising US production and a drop in consumption due to new technologies, such as alternatively fueled vehicles, could see the US as essentially energy independent. However, the pair cautions that continuing this trend will require a national effort, and they suggest that the US establish oil displacement as a metric to measure success.

In his column for the [Wall Street Journal](#) (11/5, Subscription Publication, 5.91M), Bret Stephens says that leaks show a new IPCC report projects a consistent drop in crop yields in coming decades due to global warming, along with a rising demand for food. Combined, the report says, these events could put food supplies in jeopardy. Stephens says that similar predictions were made in the 1960s and 1970s, but the opposite turned out to be true – food output is up massively since then. Stephens says that despite the predictions, it is unlikely that the world will grow hungrier in the coming decades.

Editorial Wrap-Up:

NEW YORK TIMES. "Toward Ending Workplace Discrimination." In an editorial, the [New York Times](#) (11/5, Subscription Publication, 9.61M) calls ENDA an "overdue measure" and says that the Republicans who voted in favor of it "put to shame colleagues in their party who are still mired in intolerant thinking and too scared of Tea Party reactionaries to do the right thing."

"Mr. Kerry Fumbles In Egypt." An editorial in the [New York Times](#) (11/5, Subscription Publication, 9.61M) argues that Secretary of State Kerry's visit to Egypt "served only to add to the confusion over the Obama administration's policy toward this critically important Arab nation." The Times argues that it is important for the US and Egypt "to keep trying to work together," but both nations must "be clear about their differences, especially on what the word democracy means." Kerry, says the Times, "has muddied the waters."

"Arming The T.S.A. Is Not A Solution." An editorial in the [New York Times](#) (11/5, Subscription Publication, 9.61M) opposes calls to arm TSA screeners, arguing that the move "seems both overly reactive to the Los Angeles shooting and impractical." Noting that the TSA "doesn't train its agents to use firearms or recruit employees who would know how to handle themselves in a shootout," the Times says it would be "extremely costly for the agency to reimagine itself as an airport terminal police force."

"Election Day Choices."

WASHINGTON POST. "Red Blood On A Blue Shirt." In an editorial, the [Washington Post](#) (11/5, 4.28M) praises the efforts of TSA officers, arguing that last week's shootings should "encourage Americans to appreciate those who do the thankless work of running the airline security system Congress set up." The Post calls the officers "conspicuous symbols of a security system that, though necessary to make terrorist attacks and hijackings more difficult, some Americans detest," and says that "Americans should appreciate, not disrespect" them.

"Kerry's Diplomatic Games." In an editorial, the [Washington Post](#) (11/5, 4.28M) argues that Secretary of State Kerry's assertion that Egypt's military government is implementing the "road map" and moving toward democracy ignores "the fact that its last elected leader and thousands of his supporters are now political prisoners," overlooks "the reality that opposition media have been shut down," and "skips over the rigging of the constitution by the military and that leading secular liberal politicians...have been driven out of the country." The Post says it is clear that the Obama Administration "will accept and do business with the new autocracy that Gen. Sissi is constructing," and argues that they should "be honest about it," because "Kerry's embrace of the regime's empty

promises of democracy only makes him appear foolish — or, perhaps, as cynical as the generals.”

“The Post’s Va. Endorsements.”

WALL STREET JOURNAL. *“A Federalism Watershed.”* The [Wall Street Journal](#) (11/5, Subscription Publication, 5.91M) editorializes that the Supreme Court need to establish clear limits on treaty interpretation so that Federal officials are not able to use treaties with foreign nations to usurp state powers. Without limits, the Wall Street Journal fears that the treaty power will destroy Federalism.

“It’s Only Money.” The [Wall Street Journal](#) (11/5, Subscription Publication, 5.91M) editorializes that although SAC Capital will pay record penalties and has agreed to plead guilty to criminal insider-trading charges, it is unlikely that any individuals will plead guilty to any criminal wrongdoing. The Wall Street Journal criticizes that Justice Department’s statement that no institution is too big to jail, saying that institutions don’t go to jail—people do. While the SEC has brought a civil case against CEO Steven A. Cohen for failure to supervise, the end result is that Cohen is free to continue with his life after agreeing to the \$1.8 billion settlement, after which he will remain a multibillionaire.

“North Korean Horror Show.” The [Wall Street Journal](#) (11/5, Subscription Publication, 5.91M) editorializes that a UN commission has finally begun to investigate human rights violations in North Korea, recounting testimony delivered in Washington by a young woman from North Korea who fled to China after most of her family died of starvation, was caught by Chinese authorities, and repatriated to North Korea where she was placed in a detention center. The young woman asked the commission not to send humanitarian aid to North Korea, as the aid goes to the rulers rather than the people who need it. The commission said that it would consider her testimony and will report its findings in March.

“China’s Desperate Terrorists.” The [Wall Street Journal](#) (11/5, Subscription Publication, 5.91M) editorializes that an Uighur family burned themselves to death near Beijing’s Tiananmen to protest against Chinese rule, casting doubt on claims from Chinese authorities that the incident was a terrorist attack. Chinese authorities have blamed the Turkestan Islamic Movement for the incident and used it called for a renewed crackdown on Islamic extremism. The Wall Street Journal states that while Beijing’s repressive policies have driven some Uighurs to acts of terrorism, there is little evidence of organization behind the attacks and that the Uighurs’ anger is not based on radical ideologies, and that it stems from practical concerns, cultural injustices, and human rights abuses under Chinese rule.

Washington Schedule:

TODAY'S EVENTS IN WASHINGTON.

White House:

PRESIDENT OBAMA —Receives the Presidential Daily Briefing with the Vice President, Oval Office, closed press; meet with business leaders with the Vice President, The Roosevelt Room, pool spray at the top; meets with the Vice President for lunch, Private Dining Room, closed press; departs the White House en route Bethesda, Maryland, South Lawn, open press; arrives Bethesda, Maryland, in-town travel pool; visits the Walter Reed National Military Medical Center, Bethesda, Maryland, closed press; visits Fisher House, Bethesda, Maryland, closed press; departs Bethesda, Maryland en route the White House, in-town travel pool; arrives at the White House, South Lawn, open press

VICE PRESIDENT BIDEN —Attends the Presidential Daily Briefing, Oval Office, closed press; meets with top business leaders, Roosevelt Room, closed press; meets with the President for lunch, Private Dining Room, closed press; hosts a reception with Dr. Jill Biden commemorating Breast Cancer Awareness Month, Naval Observatory, remarks at the top of the event are pooled press.

FIRST LADY MICHELLE OBAMA – Delivers remarks at the White House Diwali, open press.

2:30 p.m. INTELLIGENCE — Closed hearings to examine certain intelligence matters. Location: 219 Hart. US House: The House will be in recess for a Constituent Work Period until 2 p.m., on Tuesday, November 12th.

Other: AICPA NATIONAL TAX CONFERENCE – WERFEL — 7 a.m. Top IRS officials – including the Acting IRS Commissioner, one of the IRS operating division heads, the head of the Office of Professional Responsibility, and the IRS Taxpayer Advocate – will offer insights about preparations for the 2014 tax filing season, including guidance on the net investment income tax, DOMA, and tangible property regulations at the American Institute of CPAs premier tax conference. Also, hear discussions about taxpayer identity theft, reporting under FATCA (Foreign Account Tax Compliance Act) when bank reporting and individual reporting requirements become effective in 2014 and the legislative outlook. Highlights: 8:15 a.m. Danny Werfel, Acting Commissioner, Internal Revenue Service. 9:45 a.m. – 10:45 a.m. Faris Fink, Commissioner, Small Business/Self-Employed Division, IRS. 10:55 a.m. – 11:55 a.m. Sunita Lough, Director, Pre-filing and Technical Guidance, Large Business & International Priorities, IRS. 1 p.m. – 2 p.m. David Alito, Deputy Commissioner, Wage and Investment Division, IRS. 2:30 p.m. – 3:30 p.m. Nina Olson, National Taxpayer Advocate, IRS. 3:40 p.m. – 4:40 p.m. Karen L. Hawkins, Director, Office of Professional Responsibility, IRS. Location: Gaylord National Resort and Convention Center, 201 Waterfront Street, National Harbor, Md.

2013 CIPAC PLENARY — National Protection and Programs Directorate (NPPD) Acting Under Secretary Suzanne Spaulding will deliver remarks (8:35a) on the Departments efforts and priorities related to critical infrastructure at the 2013 Critical Infrastructure Protection Advisory Council (CIPAC) Plenary. NPPD National Cybersecurity and Communications Integration Center Director Larry Zelvin will participate in a panel discussion entitled Response & Recovery (2:00p). Location: Walter E. Washington Convention Center, 801 Mt. Vernon Pl., NW.

CSIS – GLOBAL SECURITY FORUM 2013 — 8 a.m. – 5 p.m. The 2013 Global Security Forum. Highlights: 8:15 a.m. Keynote by Charles T. Chuck Hagel United States Secretary of Defense. 9:30 a.m. – 10:45 a.m. Remarks by: Ambassador J. Stapleton Roy Distinguished Scholar, Wilson Center, and former U.S. Ambassador to China; Charles W. Freeman III, Vice President, Rock Creek Global Advisors LLC. 1:15 p.m. Assistant Secretary for Terrorist Financing and Financial Crimes Daniel Glaser Participation in Panel Discussion on What Role Should Financial Power Play in National Security? Location: CSIS headquarters located at 1616 Rhode Island Avenue, NW.

HEALTH CARE INNOVATION CONFERENCE – HAMBURG — 8 a.m. – 12:30 p.m. Bloomberg Governments first health care summit, Mind the Gap: Connecting Health Care Policy with Next Century Innovation. Speakers include: Margaret Peggy Hamburg, Commissioner, U.S. Food and Drug Administration (11:40 a); John Sculley, CEO, Sculley Brothers LLC; Keith Dunleavy, President, CEO and Chairman, Inovalon; Elli Kaplan, CEO, Neurotrack; Doug Ulman, CEO, LIVESTRONG; Steve Downs, CTO, RWJF; Matthew Douglass, Co-Founder/VP Platform at Practice Fusion. Location: Ronald Reagan Building and International Trade Center, The Pavilion, 1300 Pennsylvania Ave. NW.

WASHPOST – DIGITAL DIVIDE – SPERLING, CLYBURN — 8:30 a.m. – 11:30 a.m. Gene Sperling, Baltimore Mayor Stephanie Rawlings-Blake, FCC Commissioner Mignon Clyburn, Richard Culatta and Rep. Doris Matsui among speakers addressing why the gap and access matter and what can be done about it. Speakers include: Richard Culatta, director, Office of Educational Technology, U.S. Department of Education. Location: The Washington Post, 1150 15th Street NW.

Contacts: Jennifer Lee 202-334-5207 desk (301-503-7787 cell)

NTSB – TEXAS PARADE FLOAT ACCIDENT — 9:30 a.m. The National Transportation Safety Board will meet to determine the probable cause of the November 2012 fatal grade-crossing accident involving a parade float in Texas. Background: At about 4:35 p.m. CT, on November 15, 2012, a truck-tractor combination unit being used as a Hunt for Heroes parade float was struck by a Union Pacific freight at a grade crossing in Midland, Texas. As a result of the accident, four parade float passengers were killed, and five float passengers were seriously injured. Additionally, eight float passengers and a deputy sheriff received minor injuries. The two train crewmembers, the combination unit driver, and seven other float passengers were not injured. Location: NTSB Board Room and Conference Center, 429 L'Enfant Plaza, SW.

FRANCHISE INDUSTRY – HIRING VETERANS EVENT — 10 a.m. National event including the International Franchise Association (IFA), Small Business Administration, White House Joining Forces Initiative, Military Officers Association of America, (MOAA) and the UPS Store will take place at U.S. Navy veteran Wade Franklins the UPS Store. Location: The UPS Store at 3033 Wilson Blvd. Suite E, Arlington, VA 2220.

DOD – HAGEL – BELGIUM — 11:30 a.m. Secretary of Defense Chuck Hagel hosts an honor cordon to welcome Belgium's Minister of Defense Pieter de Crem to the Pentagon. The cordon will be held on the steps of the Pentagon River Entrance. Journalists without a Pentagon building pass will be picked up at the Pentagon River Parking Pedestrian Bridge only. Plan to arrive no later than 30 minutes prior to the event; have proof of affiliation and two forms of photo identification. Please call 703-697-5131 for escort to the cordon.

CDC TELEBRIEFING – COLORECTAL CANCER — 12 p.m. Colorectal cancer screening (CRC) saves lives, but only if people get tested. A new Vital Signs report shows about 23 million adults have never been tested, as recommended. DIAL IN: Media: 888-795-0855. Non-Media: 800-369-1605. INTERNATIONAL: 1-630-395-0331. PASSCODE: CDC Media

PETERSON – CYCLICAL UNEMPLOYMENT — 12:30 p.m. The Peterson Institute will host a luncheon discussion on Keeping Cyclical Unemployment from Becoming Structural Inequality. While measured unemployment is slowly declining in the US and much of the advanced world, both long-term and youth unemployment remain a particular concern, with huge implications for already unprecedented levels of income and wealth inequality. Location: Bergsten Conference Center at the Institute at 1750 Massachusetts Avenue.

Last Laughs:

LATE NIGHT POLITICAL HUMOR.

Jay Leno: "You all turn your clocks back an hour over the weekend? You know, it is easier to remember spring ahead, fall back. It's like trying to log onto Obamacare. You spring ahead, make a little progress, then you fall back."

Jay Leno: "And NASA's next Mars mission is set to launch from Cape Canaveral on November 18th. It will be manned by a group of NASA scientists who obviously don't want to see their relatives on Thanksgiving."

Jay Leno: "Well, authorities in Columbus, Ohio, say they may have encountered their first case of the flesh eating drug krocodil. Have you heard about this drug? Krocodil? It's made by mixing codeine with oil and gasoline, and it rots your skin. It's a flesh eating drug. I guess this is for people who feel crystal meth's too hoity-toity."

Conan O'Brien: "The Obamacare website is still having problems. They just announced it will not be accessible at night due to maintenance. Also it will not be accessible during the day due to it sucking."

Jimmy Fallon: "President Obama gave his weekly address on Saturday and of course he talked about the economy. In fact, he said he'll do anything to increase job growth which got weird when he looked directly into the camera and he said, 'And I mean anything.'"

Jimmy Fallon: "Speaking of Obama, it turns out that Obamacare is surprisingly popular with prostitutes. Which is true. Because it's much cheaper than traditional insurance plans. I guess that explains its new name, 'Ho'bamacare. Just leave your co-pay on the dresser."

Jimmy Fallon: "Pretty important week for our pal, New Jersey Governor Chris Christie. We love Governor Christie. Well he's hoping to win re-election tomorrow and polls show he's winning by a 19-point margin. Christie was really excited to hear that, but only because he thought someone said margarine."

Stephen Colbert: "Folks, nation, the big news continues to be the slow motion train wreck that is the rollout of the President's signature legislation the Affordable Care Act ... Everyone is getting screwed by the website but the true victim of this healthcare disaster are America's most vulnerable, the men. When it comes to medical care men always get the short end of the long end of the scope. You see, folks, up until now health insurance in America has always struck a delicate balance. Women paid higher premiums than men and in return men paid less. The system worked. But now folks, all that's changing. Obamacare will have men and women paying the same amount for healthcare but since women live longer, and have babies shouldn't they pay more? Under Obamacare men will pay the same amount as women and yet we still don't get to pass cantaloupe with toenails through our genitals."

DATE: MONDAY, JULY 7, 2014 7:00 AM EDT

TODAY'S TABLE OF CONTENTS

DOI IN THE NEWS:

- + Jewell Profiled.
- + Lawsuits: DOI Needs To Redo Mining Plan Approvals.
- + Senate Confirms Assistant Secretary For Insular Areas.

AMERICA'S GREAT OUTDOORS:

Fish and Wildlife Service:

- + Report: Ten Places Suitable For Bison.
- + Zimbabwe Official: Elephant Numbers Rising.
- + FWS Considering Downlisting Manatee.
- + Audubon Society Concerned About Wood Stork Downlisting.
- + Fish and Wildlife Service Official Orders Change To Recommendation On Listing Wolverine.
- + Debate Over Listing "Obscure" Bird As Endangered Could Help Decide Senate Races.
- + North American Duck Population Up.
- + Reconnecting Grizzly Populations Urged.
- + Horse Endangered Species Petition Raises Questions.

National Park Service:

- + Poachers Threatening Redwoods.
- + Study: Climate Change Affecting National Parks.
- + Development Threatens Grand Canyon.

Bureau of Land Management:

- + BLM, Sheriff: Rancher Should Be Accountable For Standoff.
- + Solomon: Wilderness Act Stewardship Must Shift To Intervention.

US Geological Survey:

- + Plan For Bacteria Control Of Zebra Mussels Dropped.
- + USGS Study: Mining Pollution Reduce Streams' Fish Populations.

SECURING AMERICA'S ENERGY FUTURE:

Renewable Energy:

- + BLM Raised Over \$5.8 Million In Solar Project Auction.
- + DOE's Massachusetts Agreement Part Of Administration's Effort To Boost Wind Projects.

DOI in the News:

JEWELL PROFILED. In an over 3,400-word article, [Bloomberg BusinessWeek](#) (7/3, Wieners, 4.91M) profiles Secretary of the Interior Sally Jewell. While "the agencies that comprise Interior are almost comically at odds with one another" due to competing interests, Jewell "seems uniquely qualified to balance these contradictions." She said, "I just think we need to open our eyes and understand that these things have tradeoffs." Two great challenges for Jewell are dealing "with gridlocked Washington" and "protecting natural resources already stressed from climate change" when her budget approval rests with "legislators who are skeptical about global warming or deny it altogether." The article added, "Jewell is likely to make her greatest impact" in reforming Federal land energy development. Jewell says the US needs "faster permit processing in exchange for fees from industry for safety analysis."

LAWSUITS: DOI NEEDS TO REDO MINING PLAN APPROVALS. The [AP](#) (7/7, Brown) reports that lawsuits in Colorado, New Mexico, and Montana have environmentalist group WildEarth Guardians arguing "Department of Interior approved mining plans without enough public involvement, and gave little heed to the pollution caused by digging, shipping and burning coal." The group wants mining halted until the plans are redone. The government denies the claims, but a National Mining Association attorney says that if the government loses, "mines across the U.S. would be threatened."

Sources running this article include the [Great Falls \(MT\) Tribune](#) (7/6, Brown, 90K), the [Minneapolis Star Tribune](#) (7/7, Brown, 1.48M), and the [Sacramento \(CA\) Bee](#) (7/6, Brown, 687K).

SENATE CONFIRMS ASSISTANT SECRETARY FOR INSULAR AREAS. The [Northwest Asian Weekly](#) (7/4, Kia'aina) reported Esther Puakela Kia'aina was confirmed by the Senate as Assistant Secretary for Insular Areas. Secretary of the Interior Sally Jewell said, "Esther will bring considerable expertise to the issues facing the U.S. territories and the freely associated states, and I am pleased the Senate has voted to confirm her to this important leadership post at the Interior Department."

America's Great Outdoors:

Fish and Wildlife Service:

REPORT: TEN PLACES SUITABLE FOR BISON. The [AP](#) (7/3, Brown) reported, "A long-awaited Department of Interior report" identified "20 parcels of public lands in 10 states that could be suitable for" Yellowstone National Park bison. Concerns about brucellosis and competition for grazing space complicate efforts to deal with the herds' population pressures. Still, if a program to quarantine bison and ensure they're disease free is restarted, Jorge Silva-Banuelos, a U.S. Interior Department official, said, "If we were to do this, where would you place these bison? This report gives us a head-start on that question." While the National Wildlife Federation says the plan needs more collaboration with American Indian tribes, Silva-Banuelos "said Monday's report would be a 'foundation for future collaboration and consultation' with tribes."

The [Jamestown \(ND\) Sun](#) (7/5, Hricik, 3K) reported, "Interior Secretary Sally Jewell said in the report that her department is committed to restoring the bison to its former ecological and cultural place."

The [Summit County \(CO\) Citizens Voice](#) (7/6, 506) also covers this story.

ZIMBABWE OFFICIAL: ELEPHANT NUMBERS RISING. [E&E Daily](#) (7/3, Brown) reported that, in "jarring" testimony before a House committee, Itai Hilary Tendaupenyu, principal ecologist for the Zimbabwe Parks and Wildlife Management Authority, "coolly announced that African elephant populations in his country were growing." He appeared "at the behest of House Republicans and hunting groups enraged by" the Fish and Wildlife move to suspend elephant trophies imports from Zimbabwe and neighboring Tanzania. FWS spokesman Gavin Shire said in a phone interview, "Anecdotally, we can be told the elephant population is fine and this, that and the other, but without the specific information we require, we can't make a determination." Shire added that "the agency repeatedly requested that Zimbabwe provide information required under the Convention on International Trade in Endangered Species of Wild Fauna and Flora and the Endangered Species Act" and postponed the suspension so trophies hunted before the ban could enter the US. Shire also explained the suspension is separate from the anti-poaching push.

FWS CONSIDERING DOWNLISTING MANATEE. [E&E Daily](#) (7/3) reported the Fish and Wildlife announced an endangered species status review for the West Indian manatee. While boating groups seek to have the animal's status reduced to threatened, conservationists argue the "record deaths...in Florida last year" and habitat loss means the status should remain endangered.

AUDUBON SOCIETY CONCERNED ABOUT WOOD STORK DOWNLISTING. The [Orlando \(FL\) Sentinel](#) (7/3, Spear, 850K) reported that, with the US Fish and Wildlife Service's move to downgrade safeguards for wood storks, the National Audubon Society is worried that the birds' recovery "never happened." Audubon biologist Jason Lauritsen said that more needs to be done to restore and protect Florida's wetlands "to fundamentally improve conditions for wood storks." Interior Secretary Sally Jewell said, "The down-listing of the wood stork from endangered to threatened demonstrates how the Endangered Species Act can be an effective tool to protect and recover imperiled wildlife from the brink of extinction." However, Lauritsen argues the current population size is the product of "a few years of unusually ideal weather."

FISH AND WILDLIFE SERVICE OFFICIAL ORDERS CHANGE TO RECOMMENDATION ON LISTING WOLVERINE. The [Los Angeles Times](#) (7/6, Sahagun, 3.46M) reported Noreen Walsh, a biologist and Fish and Wildlife director for the region that includes Wyoming and Montana, "ordered federal biologists to withdraw their conclusion that the last 300 wolverines in the continental United States deserve threatened species status." While Walsh at first praised the recommendation, Wyoming, Montana, and Idaho officials "vigorously objected" to

the move, citing economic effects and arguing the effects of climate change on the animals are unknown. Critics have "accused Walsh of injecting politics into a scientific process."

DEBATE OVER LISTING "OBSCURE" BIRD AS ENDANGERED COULD HELP DECIDE SENATE RACES. The AP (7/6, Riccardi) reports a legislative debate over whether to list the greater sage grouse "as an endangered species next year" could "help determine whether Democrats or Republicans control" the Senate following midterm elections. Listing the "obscure, chicken-sized bird" as endangered "could limit development, energy exploration, hunting and ranching" on 165 million acres across 11 Western states, according to the AP. Republican Congressman Steve Daines and Cory Gardner, who are running for Senate seats in Montana and Colorado, respectively, "are co-sponsoring legislation that would prevent the federal government from listing the bird for a decade as long as states try to protect it."

NORTH AMERICAN DUCK POPULATION UP. The [Houston Chronicle](#) (7/5, Tompkins, 2.23M) reported the US Fish and Wildlife Service and Canadian Wildlife Service's Spring Waterfowl Breeding Populations and Habitat Survey estimated a duck breeding population of 49.2 million birds, "numbers unprecedented in more than half a century." The increase is attributed to "an unmatched, almost-two-decade stretch of beneficial habitat conditions on northern nesting grounds that resulted in several years of high duck production."

Also covering this story are the [Chicago Sun-Times](#) (7/3, Bowman, 1.1M), the [Grand Forks \(ND\) Herald](#) (7/7, 87K), and the [Milwaukee Journal Sentinel](#) (7/4, Smith, 893K).

RECONNECTING GRIZZLY POPULATIONS URGED. Jeff Burrell, Northern Rockies program coordinator for the Wildlife Conservation Society, writes in an op-ed in the [Los Angeles Times](#) (7/7, Burrell, 3.46M) that, "from my examination of the best available science, the criteria" for delisting Yellowstone's grizzly bears have been met, but the park's grizzlies "will remain a borderline viable population" until they are no longer isolated from grizzly populations. Burrell calls for reconnecting the isolated populations by keeping "open and connected what's already open and connected," keeping "habitats intact and healthy," and making sure "people have the information and support needed to coexist with bears."

HORSE ENDANGERED SPECIES PETITION RAISES QUESTIONS. Karin Klein wrote in a column in the [Los Angeles Times](#) (7/3, Klein, 3.46M) that wild horse fans "are petitioning the U.S. Fish and Wildlife Service to list the animals as an endangered species because open rangeland is reduced and also less fit to graze." However, ranchers "see the horses as pests" and want their land for cattle grazing, while many environmentalists consider them an invasive species. The horse proponents argue that, as horses originated in North America, Europeans reintroduced a native species. The Bureau of Land Management "has never bought" the argument, but "the groups hope for a better reception from Fish and Wildlife." This raises the question of what can be considered a native species, as well as the observation that "native" isn't necessarily the same as "good for the environment."

National Park Service:

POACHERS THREATENING REDWOODS. [NBC Nightly News](#) (7/6, story 8, 2:30, Holt, 7.86M) reported poachers are threatening "the iconic redwood trees in northern California." National Park Ranger Marshall Neek was shown saying, "It's the burrel part itself that they're looking for." Almaguer continued, "The knobby protrusions are crucial to the survival of the tree." Over 20 thefts have been reported and "rangers are closing down roads, trying to limit access for the poachers," but they have only 12 rangers, meaning "roughly one ranger for every 11,000 acres. The thieves have too much space and too much time to work in."

STUDY: CLIMATE CHANGE AFFECTING NATIONAL PARKS. [E&E Daily](#) (7/3, Dehnert) reported a new National Park Service [report](#) published in the scientific journal PLOS ONE found that "many of the country's national parks are in the tight grip of climate change, which continues to negatively affect surrounding habitats and local plant and animal species." Interior Secretary Sally Jewell recently said, "All you have to do is open your eyes and look around you to see that climate change is real." Jewell also said in a statement, "Through sound science and collaboration, we need to examine how we can help cultural and natural resources adapt to climate change and become more resilient to its impacts." Study co-author National Park Service scientist William Monahan said that tools to manage national parks in the face of climate change include vulnerability assessments, scenario planning, shared management with neighboring landowners, and new ecological base lines.

Bloomberg BusinessWeek (7/3, Wieners, 4.91M) reported, "The report is not alarmist but matter-of-fact" in that "steps will need to be taken—and soon—to better protect" national parks and historic sites. National Park Service Director Jonathan Jarvis said, "Studies like this are critical to inform national park managers and visitors alike about their local climate impacts so they can take proactive steps to address climate change."

DEVELOPMENT THREATENS GRAND CANYON. The **Los Angeles Times** (7/6, Cart, 3.46M) reported development proposals near the Grand Canyon "have set off alarms at the National Park Service, which sees them as the most serious threat the park has faced in its 95-year history." Park Supt. Dave Uberuaga said, "They are serious threats to the future of the park." Plans for restaurants, hotels, and shops on a Navajo Indian reservation mesa, along with a gondola to the canyon floor, "would alter the natural beauty of the canyon and encroach on its borders." While the Navajo argue they have rights to property above the high-water mark, the park says "Federal jurisdiction extends a quarter-mile on either side of the Colorado." Meanwhile, nearby Tusayan "approved plans for a development that would increase the town's demand for water fourfold," but "the park service says there isn't enough water to sustain both wildlife and the new development."

Bureau of Land Management:

BLM, SHERIFF: RANCHER SHOULD BE ACCOUNTABLE FOR STANDOFF. The **AP** (7/7, Griffith) reports US Bureau of Land Management officials agree with Clark County, Nevada Sheriff Doug Gillespie that rancher Cliven Bundy "crossed the line when he allowed states' rights supporters, including self-proclaimed militia members, onto his property to aim guns at police" and that he needs to be held accountable. In a statement, Bureau spokeswoman Celia Boddington "said the agency continues to pursue the matter 'aggressively'" and that "we are working diligently to ensure that those who broke the law are held accountable through the legal system." While "Gillespie blamed the bureau for escalating the conflict," Boddington said, "The sheriff encouraged the operation and promised to stand shoulder-to-shoulder with us as we enforced two recent federal court orders," adding, "It is unfortunate that the sheriff is now attempting to rewrite the details of what occurred, including his claims that the BLM did not share accurate information."

Sources running the AP article include the **Washington Post** (7/7, Press, 4.22M), the **Minneapolis Star Tribune** (7/7, Griffith, 1.48M), the **Huffington Post** (7/6, Griffith, 11.54M), **Fox News** (7/6, Press, 6.72M), and the **Sacramento (CA) Bee** (7/5, Griffith, 687K).

The **Las Vegas Review-Journal** (7/3, Blasky, 437K) reported that Gillespie told the paper the Bureau of Land Management needs to change its methods of dealing with the rancher.

SOLOMON: WILDERNESS ACT STEWARDSHIP MUST SHIFT TO INTERVENTION. **New York Times** (7/6, Subscription Publication, 9.65M) columnist Christopher Solomon writes about how the "Wilderness Act is facing a midlife crisis," noting that some "respected scientists" now call for Americans "to toss out the 'hands-off' philosophy that has guided our stewardship for 50 years" and help these wild areas "adapt and thrive in the diminished future we've thrust upon them." Claiming that "we need to accept our role as reluctant gardeners," Solomon details the "many forms" that intervention could take.

US Geological Survey:

PLAN FOR BACTERIA CONTROL OF ZEBRA MUSSELS DROPPED. **E&E Daily** (7/3) reported Wisconsin's Department of Natural Resources and the US Geological Survey withdrew an application to use the Zequanox bacteria to control zebra mussels in Keyes Lake after local officials and residents raised safety concerns.

USGS STUDY: MINING POLLUTION REDUCE STREAMS' FISH POPULATIONS. **Bloomberg News** (7/3, Raup, 2.76M) reports new US Geological Survey research published online June 30 in the journal *Freshwater Science* found streams in the Guyandotte River basin of West Virginia with elevated selenium and electrical conductivity levels from mountaintop mining runoff "have less than half as many fish species" and "about one-third as many fish as non-impacted streams." Further, lead author and USGS research fish biologist Nathaniel Hitt "said there is no evidence that fish communities recover over time from water quality degradation caused by mountaintop mining runoff."

Securing America's Energy Future:

Renewable Energy:

BLM RAISED OVER \$5.8 MILLION IN SOLAR PROJECT AUCTION. The [SNL Financial](#) (7/3, Copley, 21K) reported, "A U.S. Bureau of Land Management auction raised more than \$5.8 million in high bids for the right to submit development plans for utility-scale solar projects on 3,083 acres of public land in the Dry Lake Solar Energy Zone in Clark County, Nev." BLM Director Neil Kornze said in a release that the bureau's renewable energy program has permitted 52 projects during Obama's presidency, which he said "show that business is ready to come to the table in support of a clean energy future."

DOE'S MASSACHUSETTS AGREEMENT PART OF ADMINISTRATION'S EFFORT TO BOOST WIND PROJECTS. As part of the Obama Administration effort "to develop offshore wind power projects," the [Christian Science Monitor](#) (7/3, Gilmour, 566K) reported that the Energy Department "announced Tuesday a conditional agreement to guarantee a \$150 million loan for Cape Wind" in Massachusetts. Likewise, "on Wednesday, the Department of the Interior announced that nearly 80,000 acres off the coast of Maryland will be auctioned for wind development in August."

Around 80,000 Acres Off Maryland Coast To Be Auctioned For Wind Development. In continuing coverage, [SNL Financial](#) (7/3, Copley, 21K) reported on the Federal government on July 2 "said approximately 80,000 acres off the Maryland coast will be auctioned off in August for commercial wind development," with the Department of the Interior saying in a news release that "the entire area could support between 850 MW and 1,450 MW of offshore wind generation." According to SNL, "sixteen companies were identified as legally, technically and financially qualified to hold commercial wind leases offshore Maryland." Three of the companies, Cape Wind Associates, Fishermen's Energy and Dominion Resources, "are connected to efforts to develop offshore wind projects elsewhere."

Onshore Energy Development:

RESEARCHERS LINK OKLAHOMA EARTHQUAKES TO FRACKING. The [Los Angeles Times](#) (7/5, Branson-Potts, 3.46M) reported that, according to a study published Thursday in the journal *Science*, "a large swarm of earthquakes in central Oklahoma was probably caused by" fracking.

[USA Today](#) (7/3, Bui, 5.82M) reported that "the research merged seismic data from 2008 to 2013 with the locations of disposal wells in the state using the database from the Oklahoma Corporation Commission."

The [Washington Post](#) (7/5, Fears, 4.22M) reported that "the study says hydraulic fracturing for gas cannot be directly linked to increased seismic activity."

According to lead author Cornell University seismologist Katie Keranen, "the study shows the likely way in which the pressure can trigger fault lines," the [AP](#) (7/3, Borenstein, 645K) reported. However, Keranen indicated that "researchers need more detail on the liquid injections themselves to absolutely prove the case."

[US News & World Report](#) (7/3, Neuhauser, 645K) noted that the study found that just four disposal wells "may have triggered as many as 20 percent" of the recent earthquakes.

[Bloomberg News](#) (7/3, Shauk, 2.76M) reported that so far in 2014, Oklahoma has had 238 earthquakes of at least a magnitude 3.0 through June, more than twice as many as California, which typically is second only to Alaska in number of annual tremors.

[Reuters](#) (7/3, Gillam) noted that the Oklahoma Independent Petroleum Association said that due to the prevalence of oil and gas activity in the state, where there are 4,597 disposal wells, seismic activity likely will happen near industry operations. However the group insists that this doesn't prove a link between drilling and seismic activity.

BBC News (7/7, McGrath, 1.17M), **CNBC** (7/3, David, 1.75M), the **Denver (CO) Post** (7/4, Simpson, 940K), **Scientific American** (7/3, Schultz, 2.77M), **PBS** (7/3, Marder, 1.22M), the **International Business Times** (7/4, Bora, 697K), **The Guardian (UK)** (7/3, Goldenberg, 1.96M), and the **Boulder (CO) Daily Camera** (7/3, Kuta, 112K) also covered the Oklahoma research.

Scientists Also Investigating Possible Fracking, Quake Link in Kansas. **McClatchy** (7/4, Cockerham, Subscription Publication, 23K) reports that in addition to the investigation in Oklahoma, scientists are looking into "a major escalation in earthquakes" in Kansas, which saw 56 quakes from October 2013 to April 2014. In February Gov. Sam Brownback (R-KS) "appointed a task force" to study the issue along with the US Geological Survey. However the "USGS is lacking information on the area's oil and gas activity" and the commission's work "is moving slowly." Justin Rubinstein, a geophysicist with the US Geological Survey, noted the state collects wastewater injection data once a year, saying, "Unless we get the data sooner it will be very difficult to say anything about whether there is any connection from wastewater wells to the earthquakes until next March."

ENVIRONMENTALISTS CRITICIZE BLM PLAN FOR BUFFALO AREA. The **Casper (WY) Star-Tribune** (7/5, Storrow, 90K) reports, "A coalition of environmentalists and landowners is calling on the U.S. Bureau of Land Management to rewrite its proposed management plan for federal lands around Buffalo, arguing that the current draft would roll back protections aimed at preventing oil and gas development on areas unsuitable for drilling," the draft Buffalo Resource Management Plan "would allow companies to drill in those areas provided they produce site-specific plans saying how they intend to mitigate environmental concerns." Industry welcomed the changes, and "BLM officials said their proposal actually increases environmental protections, adding stipulations to conserve reptiles, bats, fish and sage grouse, while providing more consistency in their oil and gas leasing rules."

Tackling America's Water Challenges:

CALIFORNIA CITIES URGING RESIDENTS TO "TATTLE" ON NEIGHBORS' WATER CONSUMPTION. The **New York Times** (7/5, Lovett, Subscription Publication, 9.65M) reports despite "doomsday proclamations" about California's "historic drought," state residents have done "not much" to save water. According to the Times, since the "drought emergency was declared" five months ago, Californians "have cut their water consumption only 5 percent compared with recent years," according to state officials. With cities now urging residents "to tattle on their neighbors for wasting water," people have "responded in droves."

BATTLE LOOMING OVER THE EEL RIVER. In a column in the **Sacramento (CA) Bee** (7/6, Sward, 687K), Susan Sward says in about three years, the Federal Energy Regulatory Commission will "begin reviewing an application by Pacific Gas & Electric to re-license its Potter Valley Project," which "includes a mile-long tunnel that began diverting Eel water to the Russian River more than a hundred years ago." This license review "follows more than a century of harm – including extensive timber harvesting, the Potter Valley Project dams and destruction of an estuary that functioned as a nursery for juvenile salmon." The author hopes the Federal re-licensing process and 2022 decision "can be a catalyst for a compromise that would result in improved fish habitat and an approach acceptable to all sides."

NO FEDERAL WATER FOR MOST CENTRAL VALLEY IRRIGATION DISTRICTS. The **Los Angeles Times** (7/4, Marcum, 3.46M) reported, "For the first time in the more than half a century that the federal government had been diverting Sierra Nevada water to farmers, there would be no deliveries to most Central Valley irrigation districts." The article profiled the plight of farmer Fred Lujan.

Empowering Native American Communities:

TRIBES, DOI COMMITTED TO BUFFALO RESTORATION. The **Indian Country Today Media Network** (7/3, 45K) reported, "The Department of the Interior has reaffirmed its commitment to restore bison to 'appropriate and well-managed levels on public and tribal lands' by working with states, tribes and other partners." Secretary of the Interior Sally Jewell said in a statement, "We will continue to pursue the ecological and cultural restoration of the species on behalf of the American public and American Indian tribes who have a special connection to this iconic animal." The DOI Bison Report: Looking Forward "outlines plans to work with tribes, states, landowners, conservation groups, commercial bison producers and agricultural interests to restore the bison population to a 'proper ecological and cultural role on appropriate landscapes within its historical range.'"

DEADLINE EXTENDED FOR COMMENTS ON PROPOSED RULE ON PUTTING ALASKA LAND IN TRUST.

The [Indian Country Today Media Network](#) (7/5, 45K) reports Assistant Secretary Indian Affairs Kevin K. Washburn announced the comment deadline on the proposed rule to accept applications to place land into trust in Alaska has been extended through July 31, 2014.

\$2.9 MILLION TRANSFERRED INTO COBELL SCHOLARSHIP FUND. In continuing coverage, the [Native News Online](#) (7/1) reported, "The Department of the Interior Tuesday announced that \$2.9 million has been transferred to the Cobell Education Scholarship Fund."

LAND BU-BACK PROGRAM SENT \$50 MILLION IN OFFERS ON ROSEBUD SIOUX RESERVATION. The [Nation Sun News](#) (6/27) reported, "The Land Buy-Back Program for Tribal Nations has sent out \$50 million in offers on the Rosebud Sioux Reservation in South Dakota." Anthony Rodman, with the Department of the Interior's Buy-Back Program, "says the effort aims to piece back together trust land that was split up over generations."

[Native American News](#) (7/7) also covers this story.

DECISION ALLOWS ARIZONA TRIBE'S CASINO PLAN TO MOVE FORWARD. The [Arizona Republic](#) (7/4, Corbett, 1.45M) reports the Kevin Washburn, Bureau of Indian Affairs assistant secretary, issued a decision reaffirming the agency's decision that the Southern Arizona's Tohono O'odham tribe's land at 95th and Northern avenues is not within Glendale's city boundaries, bringing the tribe "a step closer to winning its contested bid to build a casino" there. This "clears the way for a final ruling from the 9th Circuit Court on the compacts governing Indian gaming and the issue of additional casinos in metro Phoenix."

The [Sierra Vista \(AZ\) Herald](#) (7/5, 3K) reported the move "gave the Tohono O'odham Nation final permission to make land it owns near Glendale part of the reservation."

The [AP](#) (7/3) reported, "Opponents have argued a 2002 voter-backed compact barred more casinos from opening in metro Phoenix."

CONGRESSMEN URGE APPROVAL OF CATAWBA INDIAN NATION'S TRUST APPLICATION. The [Indian Country Today Media Network](#) (7/4, Toensing, 45K) reported Congressman Jim Moran (D-Virginia), Congressman George Miller (D-Calif.) and former Democratic Congressman and New Mexico Gov. Bill Richardson "urged the Interior Department to approve the Catawba Indian Nation's trust application for land in North Carolina where it plans to build a casino, arguing that justice will be served by doing so." Meanwhile, the Eastern Band of Cherokee Indians, which own and operate a casino 130 from the proposed site, oppose the propose.

Top National News:**JOHNSON DECLINES TO ESTIMATE HOW MANY OF THOSE IN THE US ILLEGALLY WILL BE DEPORTED.**

Homeland Security Secretary Johnson's appearance on [NBC's Meet the Press](#) (7/6, Gregory, 3.08M) generated a great deal of coverage, including the lead story on [NBC Nightly News](#) (7/6, lead story, 1:30, Holt, 7.86M), that portrayed the Administration's immigration enforcement policies in a negative light, as well as analysis suggesting that President Obama seems to lack a clear plan to stop the wave of illegal immigrants from Central America. The [AP](#) (7/7, Babington) is reporting that on Sunday, both Republicans and Democrats "said the administration has reacted too slowly and cautiously to the crisis." According to the AP, the President wants to "allow millions of other people already living in the U.S. illegally to stay" even as "word of seemingly successful border crossings reaches [migrants'] home countries, encouraging others to try."

Much of the coverage of Johnson's appearance on NBC focuses on his apparent unwillingness to predict how many of the children arriving in the US illegally will ever be deported, even though analysts say that it is unlikely that the surge in illegal immigration will slow so long as it is the perception in Central America that children who make it as far as the US border are allowed by the Federal government to stay here.

On [NBC Nightly News](#) (7/6, story 2, 3:45, Holt, 7.86M), Kristen Welker reported that Johnson said the

Administration is "working to 'stem the tide,'" but "was not so certain when questioned specifically what will happen to children." Johnson was shown repeatedly not answering David Gregory directly when asked if "most" of the children in the US illegally will be deported. CNBC's John Harwood said the Administration is "ducking this question right now" because "they flat don't know what to do," but, according to Harwood, the President "can't afford the perception that his policies encouraged an uncontrolled flow of young people across the border." On the [CBS Evening News](#) (7/6, story 4, 2:00, Glor, 5.08M), correspondent Mark Albert reported that on [NBC's Meet the Press](#) (7/6, Gregory, 3.08M), Johnson "would not say if they would be deported."

The [Los Angeles Times](#) (7/7, Puzanghera, 3.46M) also reports that Johnson "would not say Sunday whether most of the Central American minors would end up staying in the U.S. or be deported." Mark Sappenfield of the [Christian Science Monitor](#) (7/7, Sappenfield, 566K) covers Johnson's appearance under the headline, "What Will Happen To Immigrant Kids In Border Crisis? Obama Official Evasive." Likewise, the [New York Daily News](#) (7/7, Edelman, 4.36M) says Johnson "promised to help...implement Obama's forthcoming, but vague, executive actions...but was repeatedly unable to offer specific details on how the actions will help curtail the ongoing humanitarian crisis at the border."

Under the headline, "Jeh Johnson Noncommittal On Child Migrants," the [Wall Street Journal](#) (7/7, Costa, Subscription Publication, 5.51M) reports that Johnson told NBC's David Gregory: "We are looking at ways to create additional options for dealing with the children in particular consistent with our laws and our values."

At the opening of [NBC Nightly News](#) (7/6, lead story, 1:30, Holt, 7.86M), Lester Holt said that as the Administration "struggles to stem the surge of Central American migrants crossing into the United States, it is the children, many making the journey without their families, who are presenting the biggest practical and political challenge." Correspondent Stephanie Gosk went on to report from the Honduras-Guatemala border on the children preparing to enter the US illegally.

On the [CBS Evening News](#) (7/6, story 4, 2:00, Glor, 5.08M), Jeff Glor said Johnson is scheduled to go to Guatemala this week "as the US tries to convince central American parents not send their children" to the US border. Glor noted that "more than 52,000 unaccompanied minors have been taken into custody during the current fiscal year," which is "almost double the number during the entire preceding fiscal year." Rep. Henry Cuellar (D-TX) was shown saying, "With all due respect to the administration, they're one step behind – they should have seen this coming a long time ago." Albert added that Texas Gov. Rick Perry "said the solution is better border security to keep immigrants from crossing over in the first place."

Sen. Lindsey Graham, one of the authors of the comprehensive immigration reform package that passed the Senate last year, said on [CBS' Face The Nation](#) (7/6, Schieffer, 2.64M), "We have to send [the unaccompanied minors] back, otherwise it incentivizes people to keep sending their children to the US." On [CBS' Face The Nation](#) (7/6, Schieffer, 2.64M), Senate Majority Whip Dick Durbin likewise said it is the "compassionate responsibility of the United States to process these kids and send them back to where they came from" because "they have no legal status here in the United States."

The [Los Angeles Times](#) (7/7, Puzanghera, 3.46M) reports that, according to Johnson, "Immigration officials have cut the turnaround time for processing deportation of adult immigrant detainees from about 33 days to four, and are working to add detention capacity for children and teens who arrive on their own." The Times goes on to report that Administration officials "say a 2008 law...has made it nearly impossible to deport unaccompanied minors to Central America unless they first appear before an immigration judge," and the "growing backlog in the immigration courts has meant that most are sent to live with family members in the U.S."

According to the [Washington Times](#) (7/7, Howell, 455K), on Sunday, Johnson "acknowledged the number of illegal immigrants is rising and it will be difficult to turn the situation around, particularly as violence and poverty roils central America." The Times notes that on [NBC's Meet the Press](#) (7/6, Gregory, 3.08M), Rep. Raul Labrador (R-ID), a supporter of comprehensive immigration reform, said "the flow of immigrants to the border will only increase, despite what Mr. Johnson said about stemming the tide, because criminal cartels are advertising their services based on deferred deportations for existing child migrants in the U.S."

The [Daily Caller](#) (7/6, Greer, 408K) reported that Labrador made the case that "the best, safest message we can send to Central America is – if you want Central American families to know that they shouldn't be bringing their

children to the United States – is by sending these children back in a humanitarian way.”

According to [The Hill](#) (7/6, Lillis, 237K), “Republicans have blamed Obama for the crisis, pointing specifically to his Deferred Action for Childhood Arrivals (DACA) program, which allows some undocumented immigrants brought to the country as children to remain...without fear of deportation.” [Politico](#) (7/6, Eischen, 637K) reported that Johnson nevertheless said on Sunday: “Our message to those who come here illegally: Our border is not open to illegal migration.” [AFP](#) (7/7, 16K) notes that Johnson added, “There are no free passes once you get here.” The [Daily Caller](#) (7/6, Ross, 408K) reported that on Sunday, Johnson “denied that the Obama administration’s policies, such as the Deferred Action for Childhood Arrivals program, have contributed to the influx.”

But [USA Today](#) (7/7, Jackson, 5.82M) reports that “other guests on Sunday shows blamed the Obama administration for the surge of immigrants.” USA Today notes that on Friday, the President “spent part of his Fourth of July at the White House welcoming new U.S. citizens and calling for changes to the U.S. immigration system.” [Reuters](#) (7/7, 11.54M) reports that on Sunday, Johnson said, “There are a number of things the president and I, within the confines of existing law, can do to fix the broken immigration system. If Congress doesn’t act, we will.”

Obama Will Travel To Texas This Week, But Is Not Expected To Visit Border. On the [CBS Evening News](#) (7/6, story 4, 2:00, Glor, 5.08M), correspondent Mark Albert reported that President Obama “will be in Texas this week but, as of now, that trip will not include a visit to the border.” [NBC Nightly News](#) (7/6, story 2, 3:45, Holt, 7.86M), Kristen Welker said “there is a lot of speculation that” the President “will have to directly address the crisis in some way while he’s down” in Texas this week. The [Washington Times](#) (7/7, Chasmar, 455K) reports that on [CNN’s State of the Union](#) (7/6, Crowley), Rep. Henry Cuellar (D-TX) said, “It would be nice of him to come down to the border.”

Perry: Obama’s Policies Have Encouraged Illegal Immigration. The [Washington Times](#) (7/7, Howell, 455K) reports that on [ABC’s This Week](#) (7/6, Raddatz, 2.73M), Texas Gov. Rick Perry claimed that he “warned the administration for years about the incoming tide of young illegal immigrants and begged for additional resources to deal with it, only to be rebuffed and left with a crisis along his state’s southern border.” According to the Times, Perry says he “warned about the influx of unaccompanied youths in a letter to the administration in 2012,” and before that, in 2010, he “asked for a thousand National Guard troops.” Perry is quoted as saying, “The president has sent powerful messages...that it is OK to come to the United States and you can come across and you’ll be accepted in open arms.”

The [Huffington Post](#) (7/6, Reilly, 11.54M) said Perry “is not backing away from a conspiracy theory he recently floated about the Obama administration somehow coordinating the surge of immigrants.”

Murrieta Mayor Says Residents Have “Legitimate Concerns” About Housing Illegal Immigrants. The [Los Angeles Times](#) (7/7, Staff, 3.46M) reports that in an appearance on [CNN’s State of the Union](#) (7/6, Crowley), Mayor Alan Long of Murrieta, California, “which has seen protests in recent days that prevented federal officials from housing some immigrant detainees at a facility there, defended his town’s response to the issue.” Long is quoted as saying, “We’re a very small town...and all the sudden we have a national problem at our doorstep. ... We didn’t have a lot of answers early on, and there were some legitimate concerns, health concerns and humane concerns.” [Politico](#) (7/6, Eischen, 637K) reported that Long said “one of the greatest concerns Murrieta citizens discussed was whether the facility could safely and humanely accommodate the large number of undocumented immigrants.”

“Sanctuary City” Policy Benefits Accused Rapist in Philadelphia. The [Washington Times](#) (7/7, Boyer, 455K) reports on a 28-year-old Honduran who “could become the Willie Horton of the immigration crisis” after being charged with rape, kidnapping and robbery while living illegally in Philadelphia, which has been declared a “sanctuary city” by Mayor Michael Nutter. According to the Times, Philadelphia’s “official policy” is “to defy federal authorities seeking to deport illegal immigrants unless the person sought by the U.S. Immigration and Customs Enforcement agency has been convicted of a violent felony.” The Times says ICE “has...request[ed] that local police notify federal immigration authorities before he would be released,” but the Philadelphia police “won’t honor that request” before the accused rapist is convicted.

Border Patrol Takes Heat Over Fatal Incidents. Joe Davidson, in his Federal Diary column for the [Washington Post](#) (7/7, 4.22M), says the Border Patrol is "trying to overcome a trigger-happy reputation" in the wake of "a string of reports about abusive, sometimes fatal, actions by its employees." According to Davidson, the ACLU estimates that "at least 29 people have died since January 2010 as a result of encounters with CBP," but Shawn Moran, vice president of the National Border Patrol Council, says agents should not "hesitate to defend themselves when under attack due to concern of a civil suit, thus leaving them vulnerable to serious injury or death."

Immigration Official Accused Of Accessing Databases To Help Smugglers. According to the [Washington Times](#) (7/7, Mcelhatton, 455K), "At least a half-dozen federal immigration agents have come under investigation since 2012 for snooping into law enforcement databases," including at least one who "tried to use the databases to warn drug smugglers if they were under investigation." According to the Times, "Investigators were tipped off about an official...using his or her position to 'conduct queries for friends and relatives engaged in criminal activity.'"

NYTimes A1: Anti-Money Laundering Rules Make It More Expensive For Immigrants To Send Money From The US. In a front-page article, the [New York Times](#) (7/7, Corkery, Subscription Publication, 9.65M) reports that "as government regulators crack down on the financing of terrorists and drug traffickers, many big banks are abandoning the business of transferring money from the United States to other countries," which could "reverse years of declines in the cost of immigrants sending money home to their families." According to the Times, JPMorgan Chase and Bank of America "have scrapped low-cost services that allowed Mexican immigrants to send money to their families across the border," and, "in perhaps the deepest retrenchment by a bank, Citigroup's Banamex USA unit has now...stopped most remittances to Mexico as it faces a federal investigation related to money laundering controls." The Times adds that "while Mexico may be most affected...the banks' broad retreat over the last year is affecting other countries in Latin America and parts of Africa as well."

DCCC Ad Blames House Republicans For Inaction On Immigration Reform. The [Wall Street Journal](#) (7/7, Peterson, Subscription Publication, 5.51M) reports that the DCCC is running ads targeting Rep. Mike Coffman (R-CO) over House's inaction on comprehensive immigration reform even though he was among those Republicans who supported the ENLIST Act, which would have allowed illegal immigrants to gain citizenship by joining the military. Regarding Republicans like Coffman, DCCC Chair Rep. Steve Israel (D-NY) says, "We have very specific vehicles to advance immigration that they have refused to support because they're toeing the party line."

GERMANY CALLS ON US TO RESPOND TO NEW SPYING ALLEGATIONS. The [New York Times](#) (7/7, Smale, Subscription Publication, 9.65M) reports that amid reports that a German intelligence service employee spied for the US, "German officials and commentators on Sunday angrily demanded a response from Washington, warning that an already troubled relationship was at risk of deteriorating to a new low." However, the demands for a statement from the US "were nevertheless couched in cautious terms, suggesting that the scandal...might not be as bad as initially feared." Nonetheless, "the anger was palpable." President Joachim Gauck "told German television that if it turned out that the United States had been spying on Germany, 'then that is really a gamble with friendship, with a close alliance.'" While German Chancellor Angela Merkel "kept silent on the matter," reporters "cited unidentified people in her circle as saying she was 'surprised' and 'disappointed' at the suggestion that an American intelligence agency had recruited a German agent."

The [AP](#) (7/7, Moulson) reports that the case presents a "new test" for US-German relations, noting that the case "threatens to strain German-U.S. relations again after earlier reports that the National Security Agency spied on Germans, including on Chancellor Angela Merkel's cellphone." The CIA and NSA "have declined to comment."

In a German-language analysis under the headline, "Frustration Over The Stubborn Ally," the center-left [Süddeutsche Zeitung](#) (DEU) (7/7, 1.29M) writes that Gauck's call was "very direct" for a German President. His "clear words" soon transformed from those of a moderating chief of state to a "disappointed friend of America." Near the end, the analysis says that from the perspective of Berlin, a spy case would only increase the impression that President Obama is either "unable" or "absolutely unwilling" to tame the US intelligence services.

Europe's largest circulation tabloid, the German-language [Bild Zeitung](#) (DEU) (7/7, 8K) carries reaction from

Germany's Minister of the Interior, Thomas de Maizière, who said the charges were "very serious." He added, "I expect everyone to cooperate promptly to clear up these allegations—with quick and clear comments from the United States as well." Bild also said that the German intelligence agency was considering expanding its surveillance to get a "360-degree picture" and did not rule out gathering intelligence on allies such as the US, UK or France, according to sources.

In a commentary for the center-right [Frankfurter Allgemeine Zeitung \(Germany\)](#) (7/7, 1.07M), Marcus Wehner takes a nuanced stance, but ends by saying that although the US remains a partner that Germany relies on, it is becoming "increasingly difficult" to say that "out loud" and to "convincingly defend the view."

Meanwhile, the influential magazine [Der Spiegel \(DEU\)](#) (7/7, 3.08M) reports in its current issue that 57% of Germans said that their country should become "more independent" from the US, while 69% said that their trust in the US had diminished recently, according to a poll it commissioned.

NRDC FOLLOWED API STRATEGY IN CRAFTING EMISSIONS BLUE PRINT. The [New York Times](#) (7/7, Davenport, Subscription Publication, 9.65M) reports that in November 2010, attorneys David Doniger and David Hawkins, and scientist, Daniel Lashof, along with a team of experts began work on a "110-page proposal, widely viewed as innovative and audacious, that was aimed at slashing planet-warming carbon pollution from the nation's coal-fired power plants." When the President proposed a new EPA rule on power plant emissions on June 2, it "used as its blueprint the work of the three men and their team." The Times says this was "a remarkable victory for the Natural Resources Defense Council, the longtime home of Mr. Doniger and Mr. Hawkins and, until recently, of Mr. Lashof," and notes that in crafting the proposal, the group "followed the strategy used by the American Petroleum Institute, the lobbying arm of the oil industry, to write an energy policy for Vice President Dick Cheney during the Bush administration."

Truck Owners "Rolling Coal" In Anti-Environmentalist Protest. The [Huffington Post](#) (7/6, Grenoble, 11.54M) reported that anti-environmentalist truck owners have found a new form of political protest, "intentionally producing copious amounts of diesel exhaust, spewing black smoke into the air," in a practice known as "rolling coal." According to a report by Vocativ, "coal rollers" can spend thousands of dollars altering their rides to produce ever greater amounts of smoke."

Environmentalists: New York Fracking Ruling A "Watershed Moment." [The Hill](#) (7/6, Cama, 237K) reports that opponents of fracking "are feeling emboldened by a ruling in New York's highest court that found towns can outlaw the controversial drilling practice." Environmentalists "are cheering the decision against hydraulic fracturing as a major step toward more local control over the natural gas production," but industry groups "fear the ruling could result in a patchwork of local rules that slow development of the booming energy source. 'I think it's a really watershed moment for the movement,' said Deborah Goldberg, an attorney with Earthjustice who argued the New York case for one of the towns involved. 'People all over the country have been watching what's been going on in New York, and what this says to them is that if you work with your neighbors and you educate yourself and you organize and you work with local government, you can stand up to industry and win.'"

WPost Blasts Congressional Inaction On Climate Change. The [Washington Post](#) (7/7, 4.22M), in an editorial, criticizes Congress for failing to address climate change concerns. According to the Post, some in Congress are "hoping that the scientists are dramatically wrong — or at least that the country can deal with the problem later." The Post concludes by saying that "if Congress were the board of a large company, ignoring such a serious risk would give shareholders ample reason to fire" them, and, according to the Post, "voters might want to contemplate the analogy this November."

NYTimes Criticizes North Carolina's Approach To Addressing Climate Change. An editorial in the [New York Times](#) (7/7, Subscription Publication, 9.65M) contrasts the "politics of climate change" occurring in North Carolina and Virginia, noting that in North Carolina "foolhardy denial about the severity of rising seas is underway," where the Republican Legislature "ordered a state commission of experts to soften its estimate that coastal waters could rise 39 inches by the end of the century," while in Virginia "a bipartisan group of political leaders is forthrightly talking about the problem." The Times criticizes North Carolina's approach, arguing that while the "anxiety of commercial interests and homeowners along threatened coastal areas is understandable," those interests "are not helped by pandering politicians who choose to see no further than the span of their own careers — and are shirking the challenge of climate change."

Editorial Wrap-Up:

NEW YORK TIMES. *"The Risks Of Hospital Mergers."* The [New York Times](#) (7/7, Subscription Publication, 9.65M) editorializes that in hindsight, "it looks as if Massachusetts made a serious mistake in 1994 when it let its two most prestigious (and costly) hospitals – Massachusetts General Hospital and Brigham and Women's Hospital, both affiliated with Harvard – merge into a single system known as Partners HealthCare." The Times notes that investigations by the Massachusetts attorney general's office "have documented that the merger gave the hospitals enormous market leverage to drive up health care costs in the Boston area by demanding high reimbursements from insurers that were unrelated to the quality or complexity of care delivered." The Times concludes that the "lesson for other states confronting the wave of hospital mergers is to look much more carefully at possible consequences than Massachusetts did 20 years ago," noting that mergers "are hard to undo after the fact."

"Reining In The Drones." An editorial in the [New York Times](#) (7/7, Subscription Publication, 9.65M) says that "grave moral and legal questions" about "the government's use of armed drones to kill people considered terrorist threats" are going unanswered. The Times cites a report from "a bipartisan panel of military and intelligence veterans" which warns that "without adequate controls and public accountability, the United States could be on a 'slippery slope' into a form of perpetual warfare that invites other nations to follow suit and never explain themselves." The Times says the Obama Administration should make "regular reports to the public about the rationale for the use of drones and the numbers of militants and civilians killed," and endorses the report's proposal "that drones be run by the Pentagon alone, without sharing that authority with the Central Intelligence Agency." In addition, it backs the report's call "for the creation of a nonpartisan, independent commission of specialists to review drone policy."

"Two Approaches To Tidal Politics." An editorial in the [New York Times](#) (7/7, Subscription Publication, 9.65M) contrasts the "politics of climate change" occurring in North Carolina and Virginia, noting that in North Carolina "foolhardy denial about the severity of rising seas is underway," where the Republican Legislature "ordered a state commission of experts to soften its estimate that coastal waters could rise 39 inches by the end of the century," while in Virginia "a bipartisan group of political leaders is forthrightly talking about the problem." The Times criticizes North Carolina's approach, arguing that while the "anxiety of commercial interests and homeowners along threatened coastal areas is understandable," those interests "are not helped by pandering politicians who choose to see no further than the span of their own careers — and are shirking the challenge of climate change."

WASHINGTON POST. *"A Roadblock To Reform."* The [Washington Post](#) (7/7, 4.22M), in an editorial, says the "the D.C. school system's experiment with a longer school day has produced encouraging results" as "students with an extended day posted gains on achievement tests that far outstripped those in schools with traditional hours." However, according to the Post, "None of that, though, seems to matter to the Washington Teachers' Union," which "for reasons that are impossible to fathom...is resisting – unfortunately, with some success – plans to expand this initiative." The Post says "the union that is supposed to represent the interest of teachers won't allow a vote in which teachers would decide for themselves...if they want a longer school day that would benefit students and for which they would be paid."

"Climate Inaction." The [Washington Post](#) (7/7, 4.22M), in an editorial, criticizes Congress for failing to address climate change concerns. According to the Post, some in Congress are "hoping that the scientists are dramatically wrong — or at least that the country can deal with the problem later." The Post concludes by saying that "if Congress were the board of a large company, ignoring such a serious risk would give shareholders ample reason to fire" them, and, according to the Post, "voters might want to contemplate the analogy this November."

WALL STREET JOURNAL. *"The Wheaton Overreaction."* The [Wall Street Journal](#) (7/7, Subscription Publication, 5.51M) editorializes that Justice Sonia Sotomayor's dissent in the last week's Wheaton College order, which granted a temporary exemption to the college from the ACA's contraceptive mandate while its challenge is litigated, was an overreaction that could make the Supreme Court a political target in upcoming elections.

"Obama's Letters To Corinthian." The [Wall Street Journal](#) (7/7, Journal, Subscription Publication, 5.51M), in an

editorial, criticizes the Administration for cracking down on for-profit colleges, including Corinthian Colleges, which was forced to sell its campuses after the Federal Education Department stopped allowing it to access financial aid due to concerns about its marketing practices. The Journal points out that traditional colleges don't even have to disclose their graduates' job placement data, although it is those numbers that are often cited by critics of the for-profit post-secondary industry within the Federal government.

"Japan's Corporate Tax Cut Opportunity." An editorial in the [Wall Street Journal](#) (7/7, Subscription Publication, 5.51M) argues in favor of Japanese Prime Minister Shinzo Abe's proposal to cut corporate tax rates, noting that low rates encourage investment and growth.

Washington Schedule:

TODAY'S EVENTS IN WASHINGTON.

White House:

PRESIDENT OBAMA — Hosts a group of teachers at the White House for lunch to discuss the Administrations efforts to ensure that every student is taught by an effective educator.

VICE PRESIDENT BIDEN — No scheduled events.

US Senate: No Scheduled Events.

US House: No Scheduled Events.

Other: July 7 – 9. **SECRETARY JOHNSON** — Secretary of Homeland Security Jeh Johnson will travel to Florida and Guatemala. On July 7-8, Secretary Johnson will travel to Miami where he will visit the National Hurricane Center to discuss hurricane season, meet with U.S. Coast Guard District Seven leadership, and meet with the U.S. Southern Command (USSOUTHCOM) leadership. From July 8-9, Secretary Johnson and USSOUTHCOM Commander General John Kelly will travel to Guatemala where they will participate in meetings with the Government of Guatemala to discuss issues of mutual concern, including ongoing government-wide response to the influx of adults, families, and unaccompanied children across the southwest border. Contact: DHS Press Office, (202) 282-8010

NOVA CIVIL RIGHTS ARCHIVE — 10 a.m. Press event for Congressman Gerry Connollys year-long project to create the "Northern Virginia Civil Rights Archive: Personal Histories of Struggle and Achievement in Commemoration of the 50th Anniversary of the Civil Rights Act." Speakers include: include Rep. Connolly, Northern Virginians who volunteered personal testimonials of their struggles and triumphs during the civil rights movement, and staff members from GMU and Connollys office who worked on the project. Contact: George Burke – 202-225-1492/ 202-503-7756 Location: Third floor, Grand Tier III, George Mason University Center of the Performing Arts, 4373 Mason Pond Drive, Fairfax, VA 22030.

CARDIN – HEALTH CARE – WOMEN — 1:30 p.m. Senator Cardin Tour and Roundtable on Womens Access to Health Care After the Hobby Lobby Supreme Court Decision. Location: Greater Baden Medical Servicesm, 7450 Albert Road, Brandywine, MD 20613.

NEW AMERICA FOUNDATION – NSA — 4 p.m. – 6 p.m. "National Insecurity Agency: How the NSA's Surveillance Programs Undermine Internet Security." Introductions: Rep. Zoe Lofgren (D-CA); Rep. Alan Grayson (D-FL). Featured speakers: Joe Hall, Chief Technologist, Center for Democracy & Technology; Danielle Kehl, Policy Analyst, New America's Open Technology Institute; David Lieber, Privacy Policy Counsel, Google; Bruce Schneier, Security Technologist and Author; Amie Stepanovich, Senior Policy Counsel, Access. Location: 1899 L Street NW, Suite 400

- + Washington Post.
- + Wall Street Journal.

BIG PICTURE:

- + Headlines From Today's Front Pages.

WASHINGTON SCHEDULE:

- + Today's Events In Washington.

LAST LAUGHS:

- + Late Night Political Humor.

DOI in the News:

SECRETARY JEWELL LEADS PUBLIC CAMPAIGN TO SUPPORT CONSERVATION FUNDING. The [E&E Daily](#) (7/7) reports that the Obama Administration is "going on the offensive this week to promote the Land and Water Conservation Fund and the need for Congress to fully fund the program that helps preserve historic sites, expand hunting and fishing locations, and protect water resources." Interior Secretary Sally Jewell on Monday announced "a weeklong series of events designed to raise public awareness of the LWCF – the government's main vehicle for acquiring new lands, protecting private lands and funding urban recreation." Jewell said, "There's a pretty good chance that if you're enjoying a bike trail or a fishing pier or a park in your neighborhood, the Land and Water Conservation Fund has helped pay for it. If you have access to hunting areas, if you've ever visited a Civil War battlefield, if you've enjoyed the sight of wildlife in a protected area near your home, the Land and Water Conservation Fund may have helped make it possible."

[The Hill](#) (7/7, Cama, 237K) reports that "Jewell's travels this week will bring her to events in Fort Worth, Texas, Birmingham, Ala., and Richmond, Va." Also, "Deputy Interior Secretary Michael Connor, Fish and Wildlife Service

Director Dan Ashe and Bureau of Land Management Director Neil Kornze will travel to Oregon, Florida and Alaska."

The [AP](#) (7/8) reports that Jewell is "scheduled to join Fort Worth Mayor Betsy Price and Ralph Duggins, vice chairman of the Texas Parks and Wildlife Commission, at a Tuesday morning news conference at Fort Worth's Gateway Park."

Coverage by the AP was picked up by the [Washington Times](#) (7/8, 455K), [WRAL-TV](#) Raleigh, NC (7/8, 117K), and [KWES-TV](#) Odessa, TX (7/8, 5K).

CONTINUING COVERAGE OF MEETINGS ON NATIVE HAWAIIAN GOVERNMENT. Covering the meetings to discuss a recognized native Hawaiian government, [KGMB-TV](#) Honolulu (7/8, 95K) discussed the issue with Trisha Watson, "a native Hawaiian expert and activist, community leader, Ph.D. and teacher." Watson described the situation as "a very unfortunate sequence of events" and "feels as though the meetings came at a bad time, with very short notice."

[KGMB-TV](#) Honolulu (7/8, 95K) also discussed the issue with President and CEO of the Council for Native Hawaiian Advancement Michelle Kauhane.

HOUSE REPUBLICANS TO EXPLORE BORDER CONCERNS LINKED TO NATIONAL MONUMENT DESIGNATION. The [E&E Daily](#) (7/7) reports that House lawmakers will "raise questions at a hearing Thursday about President Obama's designation of a national monument in the Southwest and its potential effects on border security." Republicans call New Mexico's Organ Mountains-Desert Peaks National Monument "a prime example of executive overreach." They claim that the designation will "impede the US Border Patrol's work along the Mexican border."

FEDERAL FIREFIGHTING SPENDING RISES. The [E&E Daily](#) (7/7) reports that the Forest Service "now allocates half its budget to fighting wildfires, which are burning at an alarming rate in Western regions and are at least in part fueled by climate change." Meanwhile, "spending to combat fires continues to seep into other agencies and state governments, leaving taxpayers with multibillion-dollar burdens that continue to increase every year." The article notes that the Forest Service and the Interior Department have "spent an average of \$1.54 billion per year to suppress fires in the past decade, and federal spending on fire suppression has not dipped under \$1 billion since 2005."

Additional coverage of wildfires was provided by the [AP](#) (7/8), the [AP](#) (7/8), the [AP](#) (7/8, Kruesi), the [AP](#) (7/8), and [ABC News](#) (7/8, 3.58M).

DEAL REACHED BETWEEN ATV RIDERS, CONSERVATION GROUPS IN COLVILLE NATIONAL FOREST. The [E&E Daily](#) (7/7) reports that "forest officials have reached a compromise with conservationists and ATV riders who use a national forest in northeastern Washington." Colville National Forest officials "finalized a plan last month to open more trails to ATV users while closing off some loops that have been damaged by off-road vehicles." The article notes that "the project will cost \$750,000 over 15 years and is backed by conservation groups and ATV riders alike."

[America's Great Outdoors:](#)

National Park Service:

DRAKES BAY OYSTER CO. APPEARS READY TO WIND DOWN OPERATIONS. The [Marin \(CA\) Independent Journal](#) (7/8, 88K) reports that "after 19 months of legal fights the Drakes Bay Oyster Co. appears ready to give up its battle to remain open." In federal court Monday in Oakland, a lawyer "representing the oyster operation said he was negotiating a settlement with the federal government." The article notes that "the discussions likely revolve around how operations would cease, but exact details were not revealed in court."

The [San Francisco Chronicle](#) (7/8, Fagan, 3.33M) reports that "however, while those talks go on, the Drakes Bay attorneys are still scraping for ways to adjust their lawsuit seeking to keep the farm open." According to

Lawrence Bazel, attorney for the company, "if they can find new claims to make, they may be able to file new appeals – and possibly win a new reprieve for the operation."

Meanwhile, the [Santa Rosa \(CA\) Press Democrat](#) (7/7, 148K) reports that "a federal judge Monday gave lawyers for Drakes Bay Oyster Company and the Interior Department another month to negotiate the oyster farm's departure from Marin County's Point Reyes National Seashore."

The [Marin \(CA\) Independent Journal](#) (7/8, 88K) editorializes that that "the US Supreme Court's refusal to hear the Drakes Bay Oyster Co.'s attempt to overturn federal orders to close the longstanding Marin business puts the oyster farm a big step closer to being shut down." According to the paper, the ruling "may close the door on this chapter of the park's history, but it does not lessen the park's need to rebuild bridges and trust with the community."

Also reporting on the story is [KQED-FM](#) San Francisco (7/7, 15K).

COLORADO MONUMENT PARK DESIGNATION WON'T MOVE FORWARD. The [AP](#) (7/8) reports that Colorado National Monument in Mesa County is "not going to be designated a national park." Rep. Scott Tipton and Sen. Mark Udall said Monday that "more dialogue is needed before the Monument should become the state's fifth national park." Tipton said that "the likelihood for national park legislation passing the House and Senate without impacting the local community is 'minuscule.'"

VOLKSWAGEN GROUP OF AMERICA HELPS CLEAN NATIONAL MALL AFTER INDEPENDENCE DAY CELEBRATIONS. [Roll Call](#) (7/8, 76K) reports that Volkswagen Group of America Inc. "volunteered 250 hours of service to help clean up the National Mall in the wake of Independence Day celebrations." Michael Horn, president and CEO of Volkswagen Group of America, said, "There's 60 or 70 employees, and they do service. They clean up the leftovers from the Fourth of July. They paint the fences."

GRAND CANYON TO MARK 1956 CRASH SITE. The [AP](#) (7/8, Fonseca) recalls changes in air travel and its regulation – including the formation of what would become the FAA – in the aftermath of the June 30, 1956 crash of a United Airlines Douglas DC-7 and a TWA Lockheed Super Constellation over the Grand Canyon, killing all 128 people aboard in what at the time was "the deadliest aviation disaster" ever. The tragedy reinforced for the public that much of US air space "was uncontrolled at that time," former NTSB managing director Peter Goetz said. On Tuesday, the AP reports, Grand Canyon National Park will officially designate the crash site as a National Historic Landmark in a ceremony overlooking the gorge on the east end, where 58 years ago wreckage was scattered over 1.5 square miles.

VOYAGEURS NATIONAL PARK CLOSES BACKCOUNTRY. The [AP](#) (7/8) reports that Voyageurs National Park has "closed its backcountry for about two weeks for flood damage assessment and repairs." Park officials have "set a target date of July 21 for reopening the backcountry."

Bureau of Land Management:

BLM, LOCAL LAWMAN DISPUTE ACTIONS IN CLIVEN BUNDY CASE. The [Los Angeles Times](#) (7/8, Glionna, 3.46M) reports that "the tense face-off over a Nevada rancher's right to graze his cattle on federal land has spilled over into a public squabble after the Bureau of Land Management and Clark County Sheriff Doug Gillespie issued conflicting statements over their lack of cooperation in an armed federal raid in April at Bundy's high-desert ranch." In a statement released Monday to the Los Angeles Times, the BLM "expressed its dismay that Gillespie had declined at the 11th hour to support federal agents as they moved in to round up hundreds of cattle officials say Bundy had grazed on federal land for decades without paying the required fees." The article notes that "last week, Gillespie said federal officials escalated an already tense standoff by ignoring his advice to delay the roundup." However, "both agencies agree on one thing: that Bundy and his family overstepped their legal rights by hosting the armed militia on that Saturday in April and should be held accountable."

Also covering the story are the [Raw Story](#) (7/6, 71K) and the [Mail Online \(UK\)](#) (7/8, 2.97M).

CONSERVATION GROUPS PRAISE SAGE GROUSE PLAN FOR NEVADA FORESTS. The [E&E Daily](#) (7/7)

reports that "conservation groups that have been highly critical of federal efforts to protect the imperiled greater sage grouse offered faint praise for a new Forest Service proposal to protect a subpopulation in and around the largest national forest in the continental United States." The article notes that "at issue is the draft environmental impact statement(EIS) released last week by the Humboldt-Toiyabe National Forest in Nevada that proposes amending the forest's land use plan to incorporate policies to protect the unique population of sage grouse, commonly referred to as the 'bi-state' or Mono Basin population." The BLM is also "exploring amending the resource management plans (RMPs) at two field offices as a result of the draft EIS."

Fish and Wildlife Service:

SENATE VOTES ON BIPARTISAN SPORTSMEN'S BILL. The [E&E Daily](#) (7/7) reports that "a package of bills to expand hunting, fishing and shooting opportunities on public lands will have a key test vote this evening in the Senate, offering another chance for a gridlocked upper chamber to pass popular legislation affecting the environment." According to the article, "while S. 2363, the 'Bipartisan Sportsmen's Act,' carries 45 co-sponsors and is backed by a bevy of sportsmen's and conservation groups spanning the political spectrum, many fear it could fall victim to the same partisan fights over amendments that have derailed bipartisan bills this year to boost energy efficiency and extend energy tax breaks." Moreover, "as the 2014 midterm election inches closer, proponents of the sportsmen's bill say the window of opportunity for Senate passage is quickly closing."

In its "Floor Action" blog, [The Hill](#) (7/7, Cox, 237K) reports that "the Senate voted to move forward on Monday with legislation aimed at preserving federal lands for hunting and fishing, despite objections from Democrats who wanted the measure to include gun control language."

Also covering the story is the [New Orleans Times-Picayune](#) (7/8, 678K).

SAGE GROUSE COULD AFFECT CONTROL OF SENATE. The [Arizona Republic](#) (7/7, 1.45M) reports that the greater sage grouse "could help determine whether Democrats or Republicans control the US Senate in the November elections." The federal government is considering listing the bird as an endangered species next year. According to the article, "doing so could limit development, energy exploration, hunting and ranching on the 165 million acres (67 million hectares) of the bird's habitat across 11 Western states." The article notes that "apart from the potential economic disruption, the specter of the bird's listing is reviving America's centuries-old debates about local vs. federal control and whether to develop or conserve the region's vast expanses of land," and "it has become a key issue in Senate races that are being closely watched because Republicans need to gain six seats in November to capture majority control of the Senate."

Efforts To Save Sage Grouse Criticized. For the "Congress" blog of [The Hill](#) (7/8, Graham, Seasholes, 237K), Carl Graham, director of the Sutherland Coalition for Self-Government in the West, and Brian Seasholes, director of the Endangered Species Project at the Reason Foundation, write that "the sage grouse, a large ground-dwelling bird that inhabits 165 million acres in nine Western states, appears headed for listing under the Act, much to the detriment of both the grouse and those with the greatest stake in preserving it." They claim that "over its 40-year history, the Endangered Species Act has often caused significant harm to the very species it is supposed to protect by unnecessarily creating adversaries of landowners harboring these species and preempting state conservation efforts." The authors argue that "for the sake of the sage grouse, and all imperiled species, this country needs a new approach to conserving endangered species that is based on rewarding — not punishing — landowners, and letting state experts take the lead." They conclude that "we need to head in a new, more promising direction so that landowners and resource users will willingly conserve, monitor and actively contribute to the successful conservation of endangered species."

HOUSE SUBPANEL EYES BIPARTISAN BILL TARGETING INVASIVE SPECIES ON PUBLIC LANDS. The [E&E Daily](#) (7/7) reports that a House Natural Resources subpanel this week will "take up bipartisan legislation aimed at reducing invasive species on federal lands." H.R. 3994, the "Federal Lands Invasive Species Control, Prevention and Management Act," would "direct the secretaries of the Interior and Agriculture departments to carry out programs that would reduce invasive species on public lands by 5 percent every year." Also, the bill would "require that the departments would use no less than 75 percent of their budgets dedicated to invasives for on-the-ground control and management."

ENVIRONMENTALISTS, INDUSTRY SPAR OVER PRAIRIE BIRDS. [USA Today](#) (7/7, 5.82M) reports that "a battle is brewing in the western USA over federal protections for four species of chickenlike birds with declining populations, setting up one of the most contentious fights over threatened species since environmentalists and business interests sparred over the northern spotted owl in the 1990s." The clash "intensified last month after three environmental groups sued the US Fish and Wildlife Service to try to force the agency to more aggressively protect the lesser prairie chicken — a bird the service placed on the threatened species list earlier this year." And "before the environmentalists' lawsuit, state, local and federal lawmakers decried the threatened species designation as overreach by the federal government that will hamper the energy and agriculture industries." The article notes that "Kansas and Oklahoma filed suit over the prairie chicken designation, and four New Mexico counties joined a suit by the Permian Basin Petroleum Association in Texas."

FWS ORDERS REVERSAL OF RECOMMENDATION TO LIST WOLVERINES AS THREATENED. The [E&E Daily](#) (7/7) reports that the FWS has "reversed its stance on listing the wolverine as a threatened species, asking federal biologists to withdraw their conclusion that the estimated 300 animals left in the Lower 48 states deserve protections." According to agency documents, the decision was "based on uncertainties 'about the degree to which we can reliably predict impacts to wolverine populations from climate change.'"

The [AP](#) (7/8, Brown) reports that "a top federal wildlife official said there's too much uncertainty about climate change to prove it threatens the snow-loving wolverine — overruling agency scientists who warned of impending habitat loss for the 'mountain devil.'"

There's no doubt the high-elevation range of wolverines is getting warmer, US Fish and Wildlife Service Regional Director Noreen Walsh said. But any assumption about how that will change snowfall patterns is "speculation," she said.

Coverage by the AP was also picked up by the [Washington Post](#) (7/8, 4.22M), [Yahoo!](#) (7/8, Brown, 17.91M), the [US News & World Report](#) (7/7, 645K), [TIME](#) (7/8, 24.1M), [ABC News](#) (7/8, 3.58M), the [Boston Herald](#) (7/8, 783K), the [Quincy \(IL\) Herald-Whig](#) (7/8, 85K), the [Casper \(WY\) Star-Tribune](#) (7/8, 90K), the [Sacramento \(CA\) Bee](#) (7/7, 687K), the [Spokane \(WA\) Spokesman-Review](#) (7/7, 210K), [The Oregonian](#) (7/8, 992K), and the [Minneapolis Star Tribune](#) (7/8, Brown, 1.48M).

FWS PROPOSES PAYING RANCHERS TO HELP FLORIDA PANTHER. The [E&E Daily](#) (7/7) reports that "federal wildlife officials are looking at paying ranchers, typically the sworn enemies of the Florida panther, to save the endangered cat." The FWS has "proposed paying landowners \$22 an acre to dissuade them from selling increasingly scarce panther habitat to developers." Kevin Godsea, manager for the Florida Panther National Wildlife Refuge, said, "It's really about buying us some time. We are never going to be able to purchase all the land that we are going to need to recover the species."

Also reporting on the story is [The Hill](#) (7/8, Cama, 237K).

FWS FINALIZES PROTECTIONS FOR TWO GARTER SNAKES. The [E&E Daily](#) (7/7) reports that the FWS "this week will finalize protections for two garter snake species found in the southwestern United States." A final rule scheduled to be published in the Federal Register will "list as threatened the northern Mexican garter snake (*Thamnophis eques megalops*) and the narrow-headed garter (*T. rufipunctatus*)."

Also reporting on the story are the [AP](#) (7/8) and the [Tucson \(AZ\) Sentinel](#) (7/8, 1K).

WILDLIFE ADVOCATE CALLS FOR EXPANSION OF SNAKE BAN. The [Orlando \(FL\) Sentinel](#) (7/7, 850K) reports that two years ago, the FWS "banned the import and sale of Burmese pythons and three other species of non-native snakes that have disrupted sensitive ecosystems, especially Florida's Everglades." Now the service is "considering banning five more snakes, including boa constrictors, for the same reason." In an email interview, the CEO of The Humane Society of the United States, Wayne Pacelle, "argued it's essential to expand the ban to protect the environment, the public — and the snakes themselves."

ANTIQUES HOLDERS HIRE FORMER AIDE TO SEN. REID IN IVORY BAN FIGHT. The [E&E Daily](#) (7/7) reports that "antiques holders have hired a former senior aide to Senate Majority Leader Harry Reid (D-Nev.) for the lobbying battle over the Obama administration's ivory ban." Families Conserving Antiques, "an informal coalition of

the Gerstenfeld, Van Auken and Bruehl families, has brought on Martina Bradford of Bockorny Group Inc. to lobby on 'issues related to the administration's proposed update of regulations relative to the import and export of African elephant ivory antiques,' according to disclosure records released by the Senate last week."

US Geological Survey:

USGS STUDY: TIGHTER CONTROLS HAVE HELPED LOWER ACIDITY LEVELS IN RIVERS. The [E&E Daily](#) (7/7) reports that "new federal research concludes that acidity levels in some of the nation's largest rivers have steadily declined over the past six decades, and it credits tighter regulations of industrial and agricultural wastewater discharges and air pollution as a major factor." A study led by researchers with the USGS and "published in the journal *Science for the Total Environment* reviewed water quality data in 23 rivers between 1945 and 2010 from Connecticut to California and found that acidity levels in most have been decreasing for years." according to the USGS, "reduced acidity levels were most commonly found in rivers in the Northeast, such as the Delaware and Schuylkill rivers; the Midwest, such as the Illinois and Ohio rivers; and the Missouri River in the Great Plains."

CRITICS QUESTION ETHICS BEHIND USGS AUTHOR'S MOUNTAINTOP-REMOVAL STUDY. The [E&E Daily](#) (7/7) reports that "advocates associated with the coal industry are questioning the ethics surrounding a recent US Geological Survey study on the potential impacts of mountaintop-removal mining because of the lead author's wife." The study, "published in the peer-reviewed journal *Freshwater Science*, found a correlation between pollution related to coal mining and reduced fish populations." However, "for years coal industry advocates have questioned lead author Nathaniel Hitt's involvement in such research," because "the fish biologist is married to Mary Anne Hitt, director of the Sierra Club's Beyond Coal campaign."

Securing America's Energy Future:

Onshore Energy Development:

INTERIOR IG REPORT: BACKLOG IN DRILLING REQUESTS HURTS ENERGY INDUSTRY. The [AP](#) (7/8, 313K) reports that according to a report from the Interior Department Inspector General, backlogs in drilling permits at the Bureau of Land Management are "handicapping development across the US." Currently the BLM's Vernal, UT office is handling 50% of the annual Federal workload, the report found. The report found that applications for mining and drilling on public lands aren't a high priority at the agency. Furthermore, "supervisors don't track progress on the applications."

OKLAHOMA EXPERIENCES UNPRECEDENTED AMOUNT OF EARTHQUAKES. [Bloomberg News](#) (7/8, Shauk, 2.76M) reports that Oklahoma is now the most seismically active state in the continental US with twice as many earthquakes as California this year alone. Although research connecting earthquakes to fracking is not conclusive, most seismologists are convinced that wastewater injected back into the ground is the cause. Austin Holland, Oklahoma's seismology chief, has said "if my research takes me to the point where we determine the safest thing to do is to shut down injection – and consequently production – in large portions of the state, then that's what we have to do." Oil companies, on the other hand, argue that "science isn't far enough along and that correlation... does not amount to proof."

EDITORIAL ARGUES COAL NOT GOING AWAY. In a [Bloomberg News](#) (7/8, Roston, 2.76M) editorial, Eric Roston argues that the current economics and politics of coal in the US will keep it relevant as a generation source through 2040, despite the "war" against it, unless there is a price on carbon emissions. He uses EIA models to predict that cheaper renewables "wouldn't make too much of a dent" in coal generation, but that a \$25/ton carbon price would "basically shuts down U.S. coal production."

Offshore Energy Development:

BSEE HEAD: INDUSTRY COOPERATION ON OFFSHORE DRILLING SAFETY NECESSARY. On [Platts](#) (7/8, 2K), BSEE Director Brian Salerno was interviewed about how the Gulf of Mexico is "rebounding from 2010's disastrous blowout of the BP Deepwater Horizon drilling rig."

(7/8, Onishi, Subscription Publication, 9.65M) reports that in addition to the 70,000 barrels of oil it yields each day, California's Kern River oil field "produces 10 times more of something that, at least during California's continuing drought, has become more valuable to many locals and has experienced the kind of price spike more familiar to oil: water." Chevron, which owns the field, "sells millions of gallons every day to a local water district that distributes it to farmers growing almonds, pistachios, citrus fruits and other crops." The Times notes that while the oil industry has been criticized "for its use of water, especially in the process known as fracking," it is "focusing on efforts to conserve and recycle water — or, in this case, to increase the available supply for irrigation." Critics, however, "dismiss the water conservation measures as political ploys."

BOR CRITICIZED FOR CUTTING OFF WATER TO MARIJUANA GROWERS. In an op-ed for [USA Today](#) (7/8, 5.82M), Jonathan Turley, the Shapiro Professor of Public Interest Law at George Washington University, writes that although the Obama Administration has "pledged to respect state laws, it is quietly going in the opposite direction by cutting off water" to marijuana growers. BOR spokesman Dan DuBray insists that the agency "is obligated to adhere to federal law." However, Turley argues that "that position is inconsistent with the actions of the Obama administration in other areas."

[Empowering Native American Communities:](#)

BIA REJECTS APPLICATION FOR PARK CITY TRIBAL CASINO. The [AP](#) (7/8, Hegeman) reports that "the federal government has refused to accept a tract of suburban Wichita land into trust so an Indian tribe can build a casino there, the Kansas Attorney General's Office said Monday." According to the article, "a July 3 letter from the Interior Department shows the agency rejected the request from the Wyandotte Nation of Oklahoma to take the land into trust." The tribe said "it was disappointed in the decision," but Attorney General Derek Schmidt "lauded the decision, saying in a written statement that the Interior Department reached the correct legal conclusion in disallowing the application."

Also reporting on the story are the [Joplin \(MO\) Globe](#) (7/8, 64K), the [Wichita \(KS\) Eagle](#) (7/8, Mann, Lowry, 313K), the [Topeka \(KS\) Capital-Journal](#) (7/7, 177K), [KWCH-TV](#) Wichita, KS (7/8, 44K), and [KSNW-TV](#) Wichita, KS (7/7, 26K).

TRIBE RECEIVES RESERVATION STATUS ON PROPOSED CASINO LAND. The [Glendale \(AZ\) Star](#) (7/8, 20K) reports that BIA chief Kevin Washburn "issued his decision July 3 in favor of the Nation regarding its reservation trust status on property it owns at 95th and Northern avenues, 135 acres of unincorporated land completely surrounded by the City of Glendale." Ned Norris Jr., chairman of the Nation, said, "Today's ruling by the Department of the Interior allows the Nation to move another step closer to benefiting from the United States' promise to the Nation that we would be able to replace our destroyed reservation lands. The nation is eager to move forward to use our replacement land to create thousands of new jobs in the West Valley."

CONGRESSMEN SUPPORT CATAWBA IN CASINO PLANS. The [Shelby \(NC\) Star](#) (7/8, 43K) reports that "three longtime congressmen have urged the Interior Department to approve the Catawba Indian Nation's trust application for land in Kings Mountain, where it plans to build a casino, arguing that justice will be served by doing so." In recent letters to the Interior Department, Congressman Jim Moran, Congressman George Miller, and former Democratic Congressman and New Mexico Gov. Bill Richardson said "now is the time for the federal government to fulfill its trust responsibility and the promises made in the 1993 Catawba Indian Land Claims Settlement Act." However, "the Nation still faces fierce opposition from the Eastern Band of Cherokee Indians—a tribe that wants to lock out all gaming competition in the state."

[Top National News:](#)

WHITE HOUSE: "MOST" CHILDREN ENTERING US ILLEGALLY WILL BE DEPORTED. The ongoing crisis along the US border with Mexico continues to get a great deal of national media attention, including a front-page article in this morning's the [New York Times](#) (7/8, A1, Hulse, Subscription Publication, 9.65M). However, the coverage on the network newscasts has diminished to the point where only [NBC Nightly News](#) (7/7, story 7, 2:35, Williams, 7.86M) had a full segment on the immigration debate on Monday evening. On the other hand, the surge in illegal immigration from Central America was the lead story on every prime-time Fox News program on Monday, and was the dominant topic of discussion throughout the night. For instance, at the opening of [Fox](#)

[News' On The Record](#) (7/7, 1.65M), Greta Van Susteren said, "This is a Fox News alert: the crisis at our border is getting worse" with "another plane full of Central American immigrants, mostly children traveling alone, landing in San Diego."

In a brief item for the [CBS Evening News](#) (7/7, story 6, 0:25, Pelley, 5.08M), Scott Pelley reported that on Monday, "more illegal immigrants were flown from Texas to San Diego." According to Pelley, "52,000 unaccompanied children have been caught at the border since October," and the White House maintains that "the law requires the US to send most of the children home." On [NBC Nightly News](#) (7/7, story 7, 2:35, Williams, 7.86M), Brian Williams also reported that on Monday, "the White House said...most of the children coming across the border will be deported back their home countries."

The [AP](#) (7/8, Babington, 11.54M) also reports that on Monday, in a "pointed warning," White House press secretary Josh Earnest said "most unaccompanied children arriving at the U.S.-Mexico border are unlikely to qualify for humanitarian relief that would prevent them from being sent back from their home countries." But the AP notes that "the administration will allow the immigration review process to take place," and "it's unclear how quickly that process will unfold." According to the AP, Homeland Security Secretary Jeh Johnson "acknowledged Sunday that such proceedings might be long delayed." The [Washington Post](#) (7/8, Zezima, 4.22M) says Earnest's "pointed response comes a day after...Johnson danced around questions over whether the children would be allowed to stay in the United States."

The [AP](#) (7/8, Werner, Kuhnhen) reports that according to unidentified "congressional aide," President Obama "is holding off for now on seeking new legal authority to send unaccompanied migrant kids back home faster," but will nevertheless "ask Congress on Tuesday for more than \$2 billion in emergency spending to deal with the children who've been arriving by the thousands from Central America." The [New York Times](#) (7/8, A1, Hulse, Subscription Publication, 9.65M) reports that Sen. Dianne Feinstein says the President already has "flexibility to accelerate the judicial process in times of crisis." Feinstein says the administration "should use that flexibility to speed up the system."

[Politico](#) (7/7, Kim, 637K) notes that the President had "signaled last week that" he would "request...expanded legal authority to respond to the influx of minors." However, according to Politico, "immigrant-rights groups were furious" after learning that the President wanted to curtail illegal immigration, so "when the White House sends its funding request on Tuesday, it won't include major policy changes, such as the broader legal authority that would effectively make it easier to send these migrant children home."

In the lead story for [Fox News' Special Report](#) (7/7, 2.15M), Sen. Lindsey Graham was shown claiming that the President "has sent out a message – whether he knows it or not – 'if you get to America you can stay.'" According to White House correspondent Ed Henry, "That message was reinforced on Sunday when Homeland Security Secretary Jeh Johnson dodged questions whether the children will be deported to Central America." Henry went on to report that "while the administration has seemed surprised by the crisis," there are "signs they knew it was coming." Henry noted that in January, the Department of Homeland Security "began shopping for contractors to move kids around the United States saying, 'there will be approximately 65,000 unaccompanied alien children in total.'"

Also on [Fox News' Special Report](#) (7/7, 2.15M), the Weekly Standard's Steve Hayes noted that Administration officials, including former Homeland Security Secretary Janet Napolitano, have repeatedly insisted that "the borders are secure." Hayes continued, "That was the key argument of the pro-reform crowd," but "now you have these same people saying in effect, 'we can't really do anything about this surge.'" Likewise, on [Fox News' The O'Reilly Factor](#) (7/8, 2.53M), Ed Henry said "the ultimate debacle...for the President is that for years now, he has been saying... 'we can have comprehensive immigration reform because the border is secure,'" which has "blown up on him."

Obama's Decision To Bypass Border While In Texas For Fundraisers Draws Scrutiny. [The Hill](#) (7/7, Sink, 237K) notes that the President is "set to travel to Texas, the center of a growing firestorm over the nation's inability to prevent illegal immigrants from entering the country." According to The Hill, the President will appear at fundraisers in Dallas and Austin, but "has no plans to visit the border" despite having "come under criticism from members of both parties over the wave of immigrants." The Hill also notes that on MSNBC on Monday, Rep. Raúl Grijalva (D-AZ), the co-chairman of the Congressional Progressive Caucus, said "the borderlands deserve a

presidential visit.”

The [Washington Post](#) (7/8, Zezima, 4.22M) reports that on Monday, White House press secretary Josh Earnest “said the administration is ‘not worried about those optics’ of the president fundraising while what the administration has called an ‘urgent humanitarian situation’ is happening hundreds of miles away.”

The [Washington Times](#) (7/8, Chasmar, 455K) reported that on [MSNBC's The Daily Rundown](#) on Monday, “panelists...seemed puzzled by the president's refusal to visit the U.S.-Mexico border while he fundraises in Texas, with USA Today reporter Susan Page calling the decision Mr. Obama's ‘Katrina moment.’” Page asked rhetorically, “And you're going to a fundraiser and not going to the border where there's this crisis?” The [Daily Caller](#) (7/7, Hoefler, 408K) notes that on the same program, Chuck Todd “suggested that Democrats are avoiding talking about immigration reform,” and the Washington Post's Dan Balz “agreed” that the Administration's “unpopular stance on immigration reform could motivate Republican voters.”

Asked, on [Fox News' The O'Reilly Factor](#) (7/8, 2.53M), if he thinks it is “a mistake” for the President to travel to Texas for fundraisers but not take a first-hand look at the border crisis, Fox's Ed Henry said, “I think it could blow up in the President's face because it is not just Republicans like Rick Perry demanding that he go to the border, now you have a Democrat, [Rep.] Henry Cuellar...saying not only should the President go to the border, but that he has been slow to react.”

In his opening monologue for [Fox News' The O'Reilly Factor](#) (7/7, 2.53M), Bill O'Reilly said it is “very strange” that the President is “traveling to Texas this week but is not going to the border.” O'Reilly went on to say that the President “has made a few statements about the border meltdown, but not many – perhaps because the stats are so grim.”

First Lady Will Speak To The League of United Latin American Citizens On Thursday. The AP (7/8, Superville) reports that First Lady Michelle Obama “is scheduled Thursday to address the League of United Latin American Citizens, or LULAC, during its meeting in New York City.”

NYTimes A1 Analysis: Bush-Signed Trafficking Law “At The Root” Of Border Crisis. In a front-page article titled, “Immigrant Surge Rooted In Law To Curb Child Trafficking,” the [New York Times](#) (7/8, A1, Hulse, Subscription Publication, 9.65M) reports that “one of the final pieces of legislation signed into law by President George W. Bush,” the William Wilberforce Trafficking Victims Protection Reauthorization Act, “is at the root of the potentially calamitous flow of unaccompanied minors to the nation's southern border.” The Times says that while the law “gave substantial new protections to children entering the country alone who were not from Mexico or Canada by prohibiting them from being quickly sent back to their country of origin.” The Times goes on to report that the law “required” that children entering the US illegally “be given an opportunity to appear at an immigration hearing and consult with an advocate.”

Surge Of Illegal Immigration Partly Attributed To Widespread Central American Gang Violence. According to [McClatchy](#) (7/7, Johnson, Subscription Publication, 23K), analysts warn that in El Salvador, “as the gangs deepen connections with regional organized-crime groups involved in drug, weapons and human trafficking, they present a direct challenge to state control over the tiny Central American nation.” McClatchy says “the chaos...provides an incentive for Salvadorans to try to flee north for the safety of the United States.” McClatchy adds that those “trying to explain the huge increase in children and teens who've arrived in the United States say anecdotal evidence points at least in part to the hold that criminal gangs have in El Salvador, Honduras and Guatemala.”

On [NBC Nightly News](#) (7/7, story 7, 2:35, Williams, 7.86M), Stephanie Gosk reported from Honduras that when she asked “teenagers who live in San Paola Sula – what many call the ‘murder capital of the world’ – if they “want go to the US, every hand went up.” Neil Munro, in a piece for the [Daily Caller](#) (7/7, Munro, 408K), says “most of the border-crossing migrant youths are arriving from...Honduras, Guatemala and El Salvador,” which have “an estimated population 12 million children.”

Illegal Immigrants Have Not Been Sent To Murrieta Since Bus Convoy Was Repelled On July 1. According to the [Los Angeles Times](#) (7/8, Hansen, 3.46M), “Dozens of protesters gathered Monday in Murrieta to challenge the expected arrival of buses carrying detained immigrants to a Border Patrol station.” However, according to the

Times, the protesters “waited in vain as the buses they thought would head their way instead traveled to a Border Patrol facility in San Ysidro, in San Diego County.”

Neil Munro, in a piece for the [Daily Caller](#) (7/7, Munro, 408K), makes the case that the Administration is “trying to minimize the public’s opposition” to the Administration’s policy of ferrying of illegal immigrants to communities within the US. Munro notes that since protesters in Murrieta “blocked a July 1 federal transfer of roughly 140 border-crossing adults and their children into their community,” the Administration “hasn’t supplied another convoy of Central American migrants to ignite a TV-ready clash.”

Goodlatte: Central Americans In US Illegally Are Paying To Have Their Children Brought Here. Appearing on [Fox News’ On The Record](#) (7/7, 1.65M), House Judiciary Committee Chairman Rep. Bob Goodlatte (R-VA), who represented immigrants seeking citizenship as an attorney before coming to Congress, said that in a recent visit to the border region, border patrol agents “said that overwhelmingly what” the unaccompanied minors “say they want is to be reunified with their parents who are already illegally in the United States.” Goodlatte continued, “Many of them are just...turning themselves in very willfully, knowing that after they are held for a few hours they are going to be released into the interior of the United States – adults with work authorization, children oftentimes sent to their parents who are already illegally here.”

McCain, Graham: US Should Withhold Aid From Central American Countries. [Roll Call](#) (7/7, Lesniewski, Subscription Publication, 76K) reports that Sen. John McCain, on of the authors of the comprehensive immigration reform plan that was approved by the Senate last year, “is calling for at least threatening to cut aid to Central American countries that don’t take steps to stop the flow of unaccompanied migrant children to the United States.” In a radio interview, McCain said, “We should tell these countries in Central America that no more aid, no more assistance, no nothing until they stop this from happening.”

On [Fox News’ Special Report](#) (7/7, 2.15M), Sen. Lindsey Graham, another prominent Republican supporter of comprehensive immigration reform, was shown saying, “I would put on the table cutting off any foreign assistance to these countries until they embrace solving this problem.”

Pentagon Reportedly Planning To House More Illegal Immigrants On Military Bases. According to the [Washington Times](#) (7/8, Ybarra, 455K), the Pentagon “is considering extending its parameters for harboring illegal immigrant children on military bases,” and “is also in talks with the U.S. Department of Health and Human services to extend the number of days that the children can stay on government property.”

Arizona Must Give Drivers Licenses To Illegal Immigrants Covered By Obama’s Deferred Action. The [AP](#) (7/8, Billeaud, 11.54M) reports that the 9th U.S. Circuit Court of Appeals has “sided with advocates for young immigrants who argued that Arizona’s policy of denying them driver’s licenses even though they had work permits under an Obama administration policy violated their equal protection rights.” The AP notes that in June 2012, President Obama blocked any deportations of those living in the US illegally if they first arrived “before they turned 16” and had “been in the country for at least five continuous years,” and declared that they “were allowed to apply for a two-year renewable work permit.” According to the AP, Arizona Gov. Jan Brewer then “direct[ed] state agencies to deny driver’s licenses...to young immigrants who get work authorization under the program.”

The [Washington Times](#) (7/8, Dinan, 455K) reports that on Monday, Brewer said, “The ruling is especially disturbing given the current influx of illegal aliens, a crisis President Obama created and escalated.” The [New York Times](#) (7/8, Santos, Subscription Publication, 9.65M) notes that “in a separate opinion, one of the judges...also said that the plaintiffs had ‘persuasively argued’ that Arizona’s driver’s license policy creates ‘a new type of alien status,’ therefore usurping the federal government’s role in determining immigration policy.” The Times notes that Nebraska is “the only other state to deny driver’s licenses to immigrants in the deferred-deportation program.”

LA Mayor: LAPD Will No Longer Keep “Deportable Inmates” In Jail Without A Judge’s Order. The [Los Angeles Times](#) (7/8, Hansen, 3.46M) reports that on Monday, Los Angeles Mayor Eric Garcetti “announced that Los Angeles would become one of several major U.S. cities that will no longer keep deportable inmates in prison past their jail term without a judge’s orders – a seeming rebuke to federal immigration officials.” Another [Los Angeles Times](#) (7/8, Reyes, 3.46M) article notes that Garcetti made his announcement on Monday “alongside a cheering crowd of immigrant advocates.” An editorial in the [Los Angeles Times](#) (7/8, Board, 3.46M) praises

Garcetti's decision, saying it, "and similar dominoes-like responses by local governments, are proper, and affirm a basic civil liberty: the right to due process."

Wickham: Unaccompanied Minors Should Be Flown To Guantanamo Bay. In his column for [USA Today](#) (7/8, 5.82M), DeWayne Wickham suggests that unaccompanied minors trying to enter the US illegally should be flown to Guantanamo Bay, Cuba, which he notes was "used in the 1990s as a detention camp for Haitians escaping bloodshed." Wickham notes that the Guantanamo Bay Navy base "boasts movie theaters, American fast-food restaurants and excellent recreational facilities."

TIGHTER SECURITY MEASURES TAKE EFFECT AT OVERSEAS AIRPORTS. The increased security measures at overseas airports for US-bound passengers led two of the three network news broadcasts Monday evening. The reports were all similar, noting that while US officials are concerned that terrorist groups including AQAP are developing explosive devices that are capable of making it through airport security undetected, there is currently no specific threat. [ABC World News](#) (7/7, story 3, 2:35, Ross) reported that US officials "say they fear a threat to US-bound aircraft from Jihadists with Western passports now in Syria and Iraq, carrying bombs designed by a master al Qaeda bomb maker." According to US intelligence reports, "the bombs could be carried in electronics. So, that's why travelers on select flights into the US from overseas are being told they must turn on their electronic devices at security checkpoints before boarding flights. The enhanced security steps were put in place over the weekend across the Middle East and Europe, including today at London's Heathrow Airport."

The [CBS Evening News](#) (7/7, lead story, 2:35, Orr, 5.08M) reported in its lead story that as security on overseas flights bound for the US is tightened, "al Qaeda's most dangerous wing is out with a propaganda tape celebrating the attempted underwear bombing of 2009." While the attack was not successful, it "demonstrated al Qaeda's ability to reach the US with a hidden bomb. And officials fear terrorists will try again. ... To reduce the risk, US-bound passengers at 20 foreign airports are being required to turn on their electronics to demonstrate the devices are actually phones and laptops and not bombs." Orr added that there is no intelligence that "that terrorists are targeting any domestic flights, so for now, there are no security changes planned at airports inside the US."

In its lead story, [NBC Nightly News](#) (7/7, lead story, 3:20, Williams, 7.86M) reported that "air security is ramping up around the world and many are wondering is domestic travel where we will see the next round of changes?" Tom Costello added, "Travelers in Europe flying to America could be facing big delays with those beefed-up restrictions turning airports like Heathrow, one of the world's busiest, into centers of mass confusion." Costello added that that according to security sources, while there is "no specific immediate threat, this is a general ongoing concern they have. The challenge for foreign airports is to balance the security procedures with a busy beginning of the summer tourist season."

Pamela Brown reported on [CNN's Situation Room](#) (7/7, 554K) that the increased security comes "as new intelligence warns terrorist groups including al Qaeda in the Arabian Peninsula are intent on developing new bombs capable of fooling airport security measures. The TSA is now asking airports in the Middle East, Europe and Africa to watch passengers turn their devices on before boarding US direct flights. And if those devices don't power up, they won't be permitted on board the aircraft."

The [New York Times](#) (7/8, Nixon, Schmidt, Subscription Publication, 9.65M) reports that the TSA would not say how long the new security procedures "would remain in place, nor would it specify the countries or airports that would be affected."

OBAMA, DUNCAN LAUNCH TEACHER EQUITY INITIATIVE AMID TENSION WITH THE NEA. The AP (7/8, Hefling) reports that the National Education Association "adopted a business item July 4 at its annual convention in Denver that called for...[the] resignation" of Education Secretary Arne Duncan, which, according to the AP, "underscores the long-standing tension between the Obama administration and teachers' unions – historically a steadfast Democratic ally." The AP says that the "tipping point for some members was Duncan's statement last month in support of a California judge's ruling that struck down tenure and other job protections for...public school teachers." The AP reports that on Monday, Duncan declined to comment on the NEA's call for his resignation, saying, "I always try to stay out of local union politics. I think most teachers do too,."

According to [Politico](#) (7/7, Simon, Emma, 637K), President Obama's "video address at the opening of" the NEA convention last week "got tepid applause — nothing like the cheers and screams that greeted union leaders when

they took the stage." Politico also notes that on Monday, Duncan pointed out that "the president of the other major teachers union, the American Federation of Teachers, was joining him Monday for the rollout of [a] teacher equity proposal."

The [Washington Times](#) (7/8, Wolfgang, 455K) reports that on Monday at the White House, President Obama "sat down for lunch with educators and rolled out a new initiative to support quality educators in low-income areas across the country." The Times says Duncan "told reporters the new plan calls on states to develop their own methods for ensuring the best teachers aren't clustered in affluent, suburban districts, where student achievement scores typically are higher." The Times adds that Duncan emphasized that "the initiative will be supported with \$4.2 million in federal money and requires no action from Congress."

The [Wall Street Journal](#) (7/8, Sparshott, Subscription Publication, 5.51M) reports that on Monday, Duncan said, "Of particular concern is the fact that typically the least experienced teachers...often end up in the poorest schools." [The Hill](#) (7/7, Shabad, 237K) reported that "as part of the initiative, the Department of Education will ask states to...create 'equity plans' to guarantee all students have effective educators."

Editorial Wrap-Up:

NEW YORK TIMES. "Four Horrific Killings." The [New York Times](#) (7/8, Subscription Publication, 9.65M) editorializes that the spiral of teenager deaths "should cause" the Jewish and Palestinian "communities to think again about the need for a permanent peace, but the loss of four young men may not be motivation enough."

"Germany And The Minimum Wage." In an editorial, the [New York Times](#) (7/8, Subscription Publication, 9.65M) praises Germany's expected passage this week of a measure "to set a nationwide minimum wage of 8.50 euros an hour, about \$11.60, effective in 2015," noting that "a solid wage floor ensures that economic growth is broadly shared even by those who fall outside the collectively bargained framework." The Times argues that the move "offers the United States important lessons, if only lawmakers in Washington would learn."

"The Long Wait To See A Doctor." The [New York Times](#) (7/8, Subscription Publication, 9.65M), in an editorial, notes a "new survey...conducted by Merritt Hawkins," which found while "Americans are already experiencing long waits to get doctor's appointments...the delays are bound to get worse when millions of previously uninsured Americans get health coverage under the Affordable Care Act." According to the Times, there are "ways to reduce wait times, like increasing primary care doctors, allowing nurses and physicians' assistants to provide more care and opening more primary care clinics."

"New York's Mapmaking Scandal." The [New York Times](#) (7/8, Subscription Publication, 9.65M), in an editorial, criticizes Gov. Andrew Cuomo for having "signed onto a set of legislative maps in 2012 that were carefully designed to keep legislators safely in their jobs." The Times goes on to say that since then Cuomo and the New York legislators "came up with a counterfeit reform, a constitutional amendment on November's ballot that would only make matters worse and make it harder to clean up the whole inbred process for years to come."

WASHINGTON POST. "Vetting vs. Abetting." An editorial in the [Washington Post](#) (7/8, 4.22M) says that the President's request that Congress appropriate \$5 billion for a Counterterrorism Partnerships Fund "raises some disturbing questions" including what to do about "foreign units that receive U.S. training and funding," and "commit human rights abuses." The Post argues that while a provision like the Leahy amendment which "prohibits aid to units and individuals thought to be involved in gross human rights violations," should be built into the new program, the Administration "is seeking to neuter the Leahy amendment by giving the defense secretary the authority to disregard it by asserting that 'it is in the national security interest to do so.'" The Post calls on Congress to reject the exemption, arguing that "allowing aid to flow to foreign military units that commit major human rights crimes cannot be in the U.S. interest in any circumstances."

"Shevardnadze's Legacy." In an editorial this morning, the [Washington Post](#) (7/8, 4.22M) criticizes Eduard Shevardnadze's "misrule as president of independent Georgia," calling it "lamentable," but says he "must be remembered, first and foremost, for those fleeting but inspiring years of glasnost and new thinking at the side of Mr. Gorbachev."

"A Challenge, Not A Catastrophe." An editorial in the [Washington Post](#) (7/8, 4.22M) says that despite the "overblown" conclusions reached by ACA critics, judging from "reports that the Obama administration found nearly 3 million discrepancies between what enrollees reported when they signed up for Affordable Care Act insurance and what federal records show about them," there is "more reason for encouragement from recent news about the act than there is to decry its problems." The Post argues that the "right response is to get better at catching and resolving errors faster, not to condemn the system," adding that the Administration "faces another Affordable Care Act management challenge, not a policy disaster."

WALL STREET JOURNAL. "West Chester USA." In an editorial, the [Wall Street Journal](#) (7/8, Subscription Publication, 5.51M) examines the efforts of Westchester County, NY Executive Rob Astorino, who is the Republican candidate for governor of New York, to comply with a 2009 housing settlement with the Federal government. The Journal decries accusations that Astorino has violated anti-discrimination laws, and notes that between 2000 and 2010, the number of minorities living in the county increased by 56 percent. The Journal argues that Federal officials are pressuring the county to toughen its zoning ordinances, and it lauds Astorino for standing up to this pressure.

"Where's Jim Comey?" The [Wall Street Journal](#) (7/8, Subscription Publication, 5.51M), in an editorial, says the revelations about the missing emails from Lois Lerner to the White House, as well as other IRS officials' emails, are leading some in Congress to question whether or not the FBI is actually investigating the improper targeting of Administration critics as FBI Director James Comey claims it is. According to the Journal, Comey never told Congress that the emails were unaccounted for even though that would have been immediately apparent to the FBI once it began to look into Lerner's correspondence.

"Germany's Fracking Follies." The [Wall Street Journal](#) (7/8, Subscription Publication, 5.51M) in an editorial criticizes Germany for proposing a fracking ban during a time when the crisis in Ukraine makes it apparent that Europe needs to diversify its gas supplies. The Journal argue that such a ban would leave Germany vulnerable to Russian President Vladimir Putin.

Washington Schedule:

TODAY'S EVENTS IN WASHINGTON.

White House:

PRESIDENT OBAMA — Welcomes NATO Secretary General Anders Fogh Rasmussen to the White House, in which he looks forward to discussing with the Secretary General the crisis in Ukraine and related reassurance measures for our NATO allies, improving allied defense investment, further work on bolstering NATO's network of partners, and NATO's post-2014 non-combat mission in Afghanistan; travels to Denver, CO area where he will remain overnight.

VICE PRESIDENT BIDEN — No Scheduled Events.

FIRST LADY MICHELLE OBAMA — Participates in a roundtable discussion with students who have overcome substantial personal challenges to graduate from high school.

US Senate: 9:30 a.m. ARMED SERVICES — Closed meeting to receive testimony on the situations in Iraq and Afghanistan. Witnesses: Defense Secretary Chuck Hagel; Gen. Martin E. Dempsey, USA, Chairman, Joint Chiefs of Staff. <http://www.armed-services.senate.gov/hearings/14-07-08-situations-in-iraq-and-afghanistan>
 Location: SVC-217, The Office of Senate Security in the Capitol Visitor Center.

10 a.m. FOREIGN RELATIONS — Combating Forced Labor and Modern-Day Slavery in East Asia And The Pacific. Witnesses: Panel One: Scot Marciel, Principal Deputy Assistant Secretary For East Asian And Pacific Affairs, U.S. Department of State; Luis CdeBaca, Ambassador-At-Large For The Office To Monitor And Combat, Trafficking In Persons, U.S. Department of State. Panel Two: Neha Misra, Senior Specialist, Migration & Human Trafficking, Solidarity Center; Jesse Eaves, Senior Policy Advisor For Child Protection, World Vision. Location:

419 Dirksen.

10 a.m. HEALTH, EDUCATION, LABOR, AND PENSIONS — Subcommittee on Children and Families hearings to examine the challenges of prevention and identification in child trafficking and private re-homing. Panel: JooYeun Chang, Associate Commissioner, Department of Health and Human Services Childrens Bureau, Washington, DC; Abigail English, Director, Center for Adolescent Health & the Law, Chapel Hill, NC; Jenee' Littrell, Assistant Principal, Grossmont Union High School District, San Diego County, CA; Megan Twohey, Investigative Reporter, Thomson Reuters, New York, NY. Location: 430 Dirksen.

2:30 p.m. FOREIGN RELATIONS — Subcommittee on European Affairs hearing on Renewed Focus on European Energy Security. <http://www.foreign.senate.gov/hearings/renewed-focus-on-european-energy-07-08-14p> Location: 419 Dirksen.

US House: 2 p.m. HOYER PEN AND PAD — House Democratic Whip Steny Hoyer will hold a pen and pad briefing. Location: H-144 in the U.S. Capitol.

12 p.m. — The House will meet for morning hour and 2:00 p.m. for legislative business. Votes will be postponed until 6:30 p.m. Legislation Considered Under Suspension of the Rules: 1) H.R. 1528 – Veterinary Medicine Mobility Act (Sponsored by Rep. Kurt Schrader / Energy and Commerce Committee); 2) H.R. 4653 – To reauthorize the United States Commissions on International Religious Freedom, and for other purposes, as amended (Sponsored by Rep. Frank Wolf / Foreign Affairs Committee); 3) H.Res. 588 – Concerning the suspension of exit permit issuance by the Government of the Democratic Republic of Congo for adopted Congolese children seeking to depart the country with their adoptive parents, as amended (Sponsored by Rep. Collin Peterson / Foreign Affairs Committee); 4) H.R. 3488 – The Preclearance Authorization Act of 2014 (Sponsored by Rep. Patrick Meehan / Homeland Security Committee); 5) H.R. 4007 – The Chemical Facility Anti-Terrorism Standards Program Authorization and Accountability Act of 2014, as amended (Sponsored by Rep. Patrick Meehan / Homeland Security Committee); 6) H.R. 4263 – The Social Media Working Group Act of 2014 (Sponsored by Rep. Susan Brooks / Homeland Security Committee); 7) H.R. 4812 – The Honor Flight Act (Sponsored by Rep. Cedric Richmond / Homeland Security Committee); 8) H.R. 4289 – The Department of Homeland Security Interoperable Communications Act (Sponsored by Rep. Donald Payne / Homeland Security Committee).

7:30 p.m. VETERANS AFFAIRS — Full Committee holds hearing on "Whistleblowers: Exposing Inadequate Service Provided to Veterans and Ensuring Appropriate Accountability." <http://veterans.house.gov/hearing/va-whistleblowers-exposing-inadequate-service-provided-to-veterans-and-ensuring-appropriate> Location: 334 Cannon. Other: July 7 – 9. SECRETARY JOHNSON — Secretary of Homeland Security Jeh Johnson will travel to Florida and Guatemala. On July 7-8, Secretary Johnson will travel to Miami where he will visit the National Hurricane Center to discuss hurricane season, meet with U.S. Coast Guard District Seven leadership, and meet with the U.S. Southern Command (USSOUTHCOM) leadership. From July 8-9, Secretary Johnson and USSOUTHCOM Commander General John Kelly will travel to Guatemala where they will participate in meetings with the Government of Guatemala to discuss issues of mutual concern, including ongoing government-wide response to the influx of adults, families, and unaccompanied children across the southwest border. Contact: DHS Press Office, (202) 282-8010

July 8 – 11. U.S. BLACK CHAMBERS CONFERENCE — USBC 2014 School of Chamber and Business Management (SCBM) conference. Speakers include Rev. Jesse Jackson and an advocacy day. <http://usblackchamber.chambermaster.com/events/details/2014-usbc-school-of-chamber-business-management-111> Location: Marriott Marquis, 901 Massachusetts Ave NW.

CAP – SENATOR BROWN — 9:30 a.m. – 11 a.m. Welcoming remarks: Neera Tanden, Counselor, Center for American Progress Action Fund Keynote speaker: Sen. Sherrod Brown (D-OH), Chairman, Social Security, Pensions, and Family Policy Subcommittee on the Senate Finance Committee Additional speakers: Melissa Boteach, Vice President, Half in Ten and Poverty and Prosperity Program, Center for American Progress Action Fund Stephen C. Goss, Chief Actuary, Social Security Administration; Virginia Reno, Vice President for Income Security, National Academy of Social Insurance; T.J. Sutcliffe, Director of Income and Housing Policy, The Arc of the United States; Eva Dominguez, Legislative Representative, Alliance for Retired Americans and Latinos for a Secure Retirement. Moderated by: Rebecca Vallas, Associate Director, Poverty to Prosperity Program, Center for American Progress Action Fund. Contact Katie Peters at kpeters@americanprogressaction.org or

202.741.6285. <http://www.americanprogressaction.org/events/2014/06/30/92886/social-security-disability-insurance-what-does-it-mean-to-american-workers-and-their-families/?evlcrsvp> Location: Center for American Progress Action Fund, 1333 H St. NW, 10th Floor.

CATO – OPERATION CHOKE POINT — 12 p.m. Discussion on DOJ's "Operation Choke Point: Illegally Choking Off Legitimate Businesses?". Speakers: Congressman Darrell Issa (CA-49), Chairman, House Committee on Oversight and Government Reform. Moderated by Mark Calabria, Director, Financial Regulation Studies, Cato Institute. http://www.cato.org/events/dojs-operation-choke-point-illegally-choking-legitimate-businesses?utm_sourceCato+Institute+Emails&utm_campaign3e887a9b20-events&utm_mediumemail&utm_term0_395878584c-3e887a9b20-141569086&mc_cid3e887a9b20&mc_eid20513483bd Location: Cato Institute, 1 Hayek Auditorium, 000 Massachusetts Ave. NW.

CATO – DIGITAL PRIVACY REFORM — 4 p.m. You're Gonna Need a Warrant for That: The Path to Digital Privacy Reform. Speakers: Congressman Ted Poe (R-TX); Greg Nojeim, Senior Counsel and Director, Center for Democracy & Technology, Project on Freedom, Security and Technology; Katie McAuliffe, Executive Director for Digital Liberty, Americans for Tax Reform; David Lieber, Privacy Counsel, Google; and Eric Wenger, Policy Counsel, Microsoft. Moderated by Julian Sanchez, Senior Fellow, Cato Institute. <http://www.cato.org> To register: events@cato.org, fax (202) 371-0841, or call (202) 789-5229 by 4:00PM on Monday, July 7th. Location: Cato Institute, Hayek Auditorium, 1000 Massachusetts Ave. NW.

Last Laughs:

LATE NIGHT POLITICAL HUMOR.

Jimmy Fallon: "I've got to tell you congratulations to Joey Chestnut. On Friday, he won the big Fourth of July Nathan's hot dog eating contest. He ate 61 hot dogs in 10 minutes. Another guy was like, 'But I ate a hundred.' And the judges said, 'Well, you have to wait until we say go, Governor Christie.'"

Jimmy Fallon: "House Speaker John Boehner is threatening to sue President Obama for using executive actions to create laws instead of going through Congress first. And then Obama just shrugged and made a new law that said you can't sue the President."

DOI in the News:

HOUSE PANEL SENDS INTERIOR-EPA SPENDING BILL TO THE FLOOR. The [E&E Daily](#) (7/15) reports that the House Appropriations Committee on Tuesday "approved a fiscal 2015 spending plan for the Interior Department and US EPA after voting down several attempts by Democrats to eliminate policy riders blocking environmental regulations." The panel "voted 29-19 along party lines to send the \$30.22 billion spending bill to the

House floor after 3½ hours of debate." The article notes that "the committee rejected all amendments to overturn what Democrats called 24 'problem' riders and shift wildfire funding."

SENATORS CALL FOR BETTER WAY TO FUND FIGHTING WILDFIRES. [USA Today](#) (7/16, Chebium, 5.82M) reports that a bipartisan group of senators called for finding "a better way to pay to fight wildfires," citing limitations on preventive work caused by rising costs. US Forest Service Chief Tom Tidwell told Congress that while "the government has the money to pay to combat about 99% of the wildfires," a stable funding source is needed "to pay for the biggest blazes because they consume 30% of his agency's budget." Democrats back a bill they say would prevent the Forest Service and the Interior Department from raiding other parts of their budgets each year by "making wildfires eligible for assistance from a special disaster relief fund." In contrast, some GOP senators favor a bill requiring a focus on thinning Federal land and giving "the timber industry a greater role in the process."

Also covering the story is the [Durango \(CO\) Herald](#) (7/15, 28K).

HOUSE PANEL TO MARK UP BILLS ON SNAKE SPECIES, MAPPING OF FEDERAL LANDS. The [E&E Daily](#) (7/15) reports that the House Natural Resources Committee is set to "mark up a variety of measures, including legislation that would allow for the export of certain snake species and another bill aimed at mapping federal land." Among the measures to be voted on is H.R. 2158, which "would remove a ban on the export of five non-native constrictor snake species." The committee will also mark up H.R. 916, which "would direct the Interior Department to develop an inventory of all federal real estate holdings and to create a report identifying duplicative older inventories and potential cost savings."

CONTINUING COVERAGE OF MEETINGS ON NATIVE HAWAIIAN GOVERNMENT. Covering the meetings to discuss a recognized native Hawaiian government, [KGMB-TV](#) Honolulu (7/16, 95K) discussed the issue with Dr. Keli'i Akina, president and CEO of Grassroot Institute of Hawaii.

PRESIDENT OBAMA SET TO ANNOUNCE HELP FOR CLIMATE-AFFECTED COMMUNITIES. The [E&E Daily](#) (7/15) reports that President Obama will "personally roll out a series of new climate change adaptation actions... when he meets with members of his State, Local and Tribal Leaders Climate Task Force on Preparedness and Resilience." According to a White House official, "the announcement will focus on ways the administration can 'support state, local, and tribal leaders in preparing their communities, including electricity systems and infrastructure, for the impacts of climate change.'" The article notes that "the 24-member task force includes the governors of seven states and Guam and 18 officials from local and tribal governments."

[The Hill](#) (7/15, Barron-Lopez, Cama, 237K) reports President Obama will "meet with the White House Climate Change Task Force on Preparedness and Resilience Wednesday to talk about new actions he plans to take through executive authority on climate change." The article notes that "the initiatives are expected to help state, local and tribal leaders better prepare electricity systems and infrastructure in their communities for climate change impacts."

Climate Change Skeptic Profiled. The [New York Times](#) (7/16, Wines, Subscription Publication, 9.65M) profiles University of Alabama professor of atmospheric science John Christy, who "argues that predictions of future warming have been greatly overstated" and that, instead of controlling carbon emissions people should be "adapting to what he says will be moderately warmer temperatures."

FORMER INTERIOR CHIEF OPPOSES PEBBLE MINING PROJECT. The [E&E Daily](#) (7/15) reports that former Interior Secretary Bruce Babbitt has "expressed opposition to the Pebble copper and gold mining project in Alaska and is defending US EPA's potential veto of key permits." In a [Seattle Times](#) op-ed, Babbitt wrote, "This is a nation accustomed to making tough choices between the development and protection of our natural resources." He said, "When I served as US secretary of the Interior, the country weighed the merits and risks of offshore oil drilling and made decisions that were both difficult and controversial. But the proposed Pebble Mine in Alaska is not a tough choice." The article notes that "Babbitt has been outspoken about contemporary controversial environmental issues, including opposing the proposed Izembek road in Alaska."

GROUP PROMOTES CONSERVATION AS KEY ISSUE WITH WESTERN VOTERS. The [E&E Daily](#) (7/15) reports that Center for Western Priorities, a Denver-based conservation group, announced on Tuesday "it's

launching a campaign designed to 'educate' politicians and candidates about the importance Western voters place on conservation issues heading into the midterm elections." The group's "new campaign, titled 'Winning the West,' features online advertisements and a website that will include ongoing research and testimonials from Western voters." The article notes that "the campaign, which includes a \$250,000 budget to buy space for the online ads, comes as land management and conservation funding, as well as related issues like oil and natural gas development on public lands, are expected to be major issues in many midterm elections, including Colorado Sen. Mark Udall's (D) tight race for re-election against Rep. Cory Gardner (R)."

America's Great Outdoors:

National Park Service:

BILL TO DESIGNATE MOUNTAINS TO SOUND GREENWAY AS HERITAGE AREA INTRODUCED. The [Seattle Post-Intelligencer](#) (7/15, 857K) reports that "a bipartisan proposal to designate the Mountains to Sound Greenway as a National Heritage Area, stalled in the House of Representative, was introduced Tuesday in the US Senate by Sens. Maria Cantwell and Patty Murray, D-Wash." Cantwell said that the National Heritage Area designation would "build on nearly two decades of efforts to preserve our state's natural landscape for future generations." The article notes that Interior Secretary Sally Jewell was "a major player in Mountains to Sound Greenway when she served as CEO of Recreational Equipment, Inc."

BOSTON REDEVELOPMENT AUTHORITY FILES LAWSUIT AGAINST NPS OVER WATERFRONT ACCESS. The [Boston Business Journal](#) (7/16, Subscription Publication, 64K) reports that "despite a Superior Court ruling last year that voided a license to convert a Long Wharf pavilion on Boston's waterfront into a 220-seat restaurant, the Boston Redevelopment Authority has filed suit in federal court to overturn the decision." The BRA is suing the NPS, "alleging that the federal agency arbitrarily expanded the boundaries of protected park space on Long Wharf and prevented construction of a restaurant on the city-owned waterfront parcel." The lawsuit claims that "the space reserved for the restaurant is not restricted open space, alleging the protected land is on the adjacent plaza."

Also covering the story is the [Boston North End Waterfront](#) (7/16).

HOUSE APPROVES BILL TO RENAME YOSEMITE'S MAMMOTH PEAK. The [E&E Daily](#) (7/15) reports that the House has "voted in favor of renaming a mountain in Yosemite after the woman credited with helping protect the area." Rep. Tom McClintock's H.R. 1192, which "would redesignate Mammoth Peak as Mount Jessie Benton Fremont, passed by voice vote." An NPS official "at a hearing earlier this year objected to the bill, saying there was not a strong enough connection between Benton Fremont and the mountain to justify renaming it," but "that prompted GOP lawmakers to say the agency should be 'ashamed' of some of the 'dumbest testimony' they'd ever heard."

HIKERS IN ROCKY MOUNTAIN NATIONAL PARK GROW CAUTIOUS AFTER DEADLY LIGHTNING STRIKES. The [E&E Daily](#) (7/15) reports that "hikers in Colorado's Rocky Mountain National Park are taking precautions after two visitors were killed by lightning strikes in recent days." The article notes that "a lightning bolt Friday killed 42-year-old Rebecca Teilhet of Yellow Springs, Ohio, as she hiked on the Ute Crossing Trail with her husband and a friend," and "on Saturday, Gregory Cardwell, 52, of Scottsbluff, Neb., was killed by a lightning strike on another trail in the park."

Also covering the story is [KUSA-TV Denver](#) (7/15, 226K).

STUDY: VISITORS SHOULDN'T BE DETERRED BY BURMESE PYTHONS IN EVERGLADES. The [Washington Post](#) (7/16, Fears, 4.22M) reports that a federal study says "visitors shouldn't avoid Everglades National Park, south of Miami, because some 150,000 Burmese pythons have made a home there." According to the study by NPS and USGS researchers, "pythons, among the world's largest snakes, tend not to bite... humans." The study notes that "more than a million people visit the park every year...and not one bite has been reported."

GRAND CANYON LOOKS TO INCREASE FOOD SERVED FROM SUSTAINABLE SOURCES. The [Arizona Republic](#) (7/15, 1.33M) reports that Grand Canyon National Park is looking to increase the amount of "the food

and drink served" at the park from sustainable sources to 45 percent by the end of the year. The article notes that "although the canyon is somewhat remote, it tries to get its food from within a 500-mile radius, with a preference to organic produce, grass-fed cattle and bison, and cage-free chickens." The park "hopes to have 50 percent of its food come from sustainable sources by the end of 2015."

SAGUARO NATIONAL PARK TARGETS NON-NATIVE PLANTS. The [AP](#) (7/16) reports that Saguaro National Park officials say "they'll take advantage of increased moisture from monsoon rains to resume work to restore native vegetation in the park on Tucson's outskirts." According to the article, "crews will apply herbicide on buffelgrass, a non-native grass that competes with saguaro cactuses, palo verde trees and other plants native to the Sonoran Desert." Park officials say "buffelgrass continues to spread in the park and poses a serious threat to biological conservation efforts."

EFFORT SEEKS TO KEEP HISTORIC SHIP AFLOAT. The [New York Times](#) (7/16, Hurdle, Subscription Publication, 9.65M) reports on the efforts to keep the steamship United States afloat. The ocean liner is "the focus of what its financially struggling owner, the SS United States Conservancy, says is a final effort to save it from the scrap yard." According to the article, "saying the ship could be only months away from being broken up, the conservancy is in talks with three developers about its potential to become a hotel, museum, shopping and restaurant mall, entertainment complex, conference center, educational facility, or some combination of all options for reuse." Susan L. Gibbs, executive director of the conservancy and granddaughter of the ship's designer, William Francis Gibbs "likened the ship to national icons like the Liberty Bell or the Chrysler Building, but said it had somehow failed to seize the public imagination, despite its presence on the National Register of Historic Places."

FISH LAKE GUARD STATION ADDED TO NATIONAL REGISTER OF HISTORIC PLACES. The [Albany \(OR\) Democrat-Herald](#) (7/16, 42K) reports that the Fish Lake Guard Station near McKenzie Bridge in Oregon has been added to the National Register of Historic Places.

ADDITIONAL COVERAGE: YELLOWSTONE ROAD MELTED BY HEAT. Additional coverage that "extreme heat from thermal features at Yellowstone National Park, created by the active volcano below the park, caused oil to bubble on a road surface on July 9 and damage it" was provided by [CNN](#) (7/16, Hetter, 12.15M).

NPS HELPING TO DEVELOP PLAN FOR KENTUCKY'S TRAILS NETWORK. In his column for the [Lexington \(KY\) Herald-Leader](#) (7/15, 395K), Tom Eblen writes that "Scott County leaders have worked for three years with the regional visioning group Bluegrass Tomorrow" and the NPS "to develop an ambitious plan for" the Legacy Trail, "Kentucky's most extensive trails network." According to Eblen, "plans call for 200 miles of biking, hiking, horseback riding and waterway trails throughout Scott County."

NPS LAUDED FOR CAPE COD NATIONAL SEASHORE. For [WSTM-TV](#) Syracuse, NY (7/16, 13K), Matt Mulcahy congratulates "all involved in the siting and design process" at Cape Cod National Seashore. He writes that "those looking to spend a day on a National Seashore beach would now be wise to utilize the near empty parking lot of this exemplary facility." Mulcahy concludes that "the National Park system would also be smart to take this design and adapt it to Race Point, Marconi, Nauset Light and Coast Guard."

Bureau of Land Management:

POINT ARENA-STORNETTA CALIFORNIA COASTAL NATIONAL MONUMENT TO BE CELEBRATED. The [Ukiah \(CA\) Daily Journal](#) (7/16, 17K) reports that "during the year leading up to" President Obama's "executive proclamation on March 11th of 2014, adding the Pt. Arena-Stornetta Public Lands, the Mendocino Land Trust led a coalition of people in a campaign to make it a reality." The article notes that "they received a grant from The Land and Water Conservation Fund supporting Bureau of Land Management in its efforts to create more conservation lands across the country." Jonna Hildenbrand, planning coordinator for Ukiah's BLM office, said "that Discover the Coast Celebration to be held on Saturday, July 19th, is a community celebration exposing this part of the Mendocino Coast to the world."

The story also appears in the [Willits \(CA\) News](#) (7/16, 10K).

REP. TIPTON'S BILLS AIM TO PROTECT LANDOWNERS. The [E&E Daily](#) (7/15) reports that Rep. Scott Tipton on Monday announced "the introduction of two bills designed to protect private landowners adjacent to federal lands." Tipton's H.R. 5075 would "offer legal protection to landowners if a Bureau of Land Management survey finds that lands once thought to be privately owned actually belong to the federal government." Also, Tipton's H.R. 5074 "seeks to improve the oversight and transparency of land exchanges involving BLM or Forest Service lands adjacent to private lands."

BLM OFFERS REWARD AFTER NAIL-SPIKED BOARDS FOUND ON COLORADO BIKING TRAIL. The [E&E Daily](#) (7/15) reports that the BLM is "offering a \$1,000 reward to anyone who can provide information that leads to the arrest and conviction of whoever placed nail-spiked wooden boards on a popular hiking and mountain bike trail in northwest Colorado." BLM Colorado River Valley Field Manager Steve Bennett said in a statement, "We simply do not tolerate this behavior and will seek convictions against the responsible parties. We are hoping someone has some information that will lead us to those responsible."

Also providing coverage are the [Denver Post](#) (7/16, Sahling, 940K) and [KUSA-TV Denver](#) (7/15, 226K).

SCIENTISTS URGE BLM TO CONSERVE INTACT PUBLIC LANDS. The [Akron \(OH\) Beacon Journal](#) (7/16, 381K) reports that "more than 200 professional fish and wildlife scientists, including 12 former state fish and game agency directors and several former high-ranking federal agency officials," urged the Interior Department and BLM to "act promptly and meaningfully to conserve intact and unfragmented BLM-administered public lands across the West." The scientists wrote in their letter, "We recognize the critical importance of habitat provided by 245 million acres of Bureau of Land Management-administered public lands...and we are concerned about mounting pressures that could result in the development and fragmentation of these lands. Barring responsive action by the BLM, many large landscapes could cease to support abundant fish and wildlife populations that have been restored and maintained over the past century."

BLM CLOSURES CAMPGROUND, REPAIRS ROAD IN LANE COUNTY, OREGON. The [Eugene \(OR\) Register-Guard](#) (7/16, Wihtol, 172K) reports that the US Bureau of Land Management has closed the Whittaker Creek Campground in Lane County, Oregon while crews work on installing a new bridge that will provide walking access in the campground. Additionally, the article notes BLM is repairing sections of Siuslaw River Road, which "were damaged during a flood in 2012." The road work, "totaling about \$230,000," will be paid by an FHWA fund "dedicated for federally owned roads."

Fish and Wildlife Service:

FWS DIRECTOR ASHE DEFENDS DECISIONS ON WOLVERINES, WOLVES AT UM CONFERENCE. The [Missoulian \(MT\)](#) (7/16, 122K) reports that FWS Director Dan Ashe "defended his agency's commitment to strong science Monday in light of recent controversies over wolverine and wolf protection." Ashe, a keynote speaker at the North American Congress for Conservation Biology in Missoula, "strongly defended" Rocky Mountain Regional Director Noreen Walsh and his staff Monday. He said, "It's not common for a regional director to reverse, but neither is it unusual for that to happen. This is a thing we all should be proud of, to explain to the field people the basis of that disagreement. (Walsh) explained in writing to our field biologists why she had reached different conclusions that was respectful of their initial recommendation. That's exactly how you want scientists to behave – transparent, logical and understandable."

Also providing coverage is the [Billings \(MT\) Gazette](#) (7/16, 174K).

FWS PROPOSES PROTECTIONS FOR BLUE BUTTERFLIES. The [E&E Daily](#) (7/15) reports that the FWS has proposed the designation "of thousands of acres as critical habitat for a rare Nevada butterfly." The rule proposal published in the Federal Register would "designate 5,561 acres for the Mount Charleston blue butterfly."

Also reporting on the story is the [AP](#) (7/16).

JUDGE SETS DEADLINE FOR DECISION ON LEONA'S LITTLE BLUE BUTTERFLY. The [Daily Astorian \(OR\)](#) (7/16, 23K) reports that a federal judge has given the FWS "until the end of June 2015 to decide whether to extend Endangered Species Act protection to the Leona's little blue butterfly, a rare species found only in

Oregon." US District Judge Michael Mosman has "given the agency more time than was requested by environmental groups, but he said it would be a hard deadline." Mosman said, "I don't expect to see any requests for extensions. I expect the agency to pay adequate attention to this case, which has been languishing."

The story also appears in the [Wallowa County \(OR\) Chieftain](#) (7/16, 9K).

JUDGE APPROVES WATER TRANSFERS THROUGH THE DELTA. The [Stockton \(CA\) Record](#) (7/14, 123K) reports that "a federal judge has approved water transfers through the Delta to drought-stricken portions of California, overruling environmentalists who warned of possible harm to threatened fish." US District Court Judge Lawrence J. O'Neill "found that the case amounted to disagreements between fishery experts, and said the court must defer to the opinion of the US Fish and Wildlife Service over the environmentalists." The FWS says that "while smelt may indeed be in the Delta while the water transfers occur this summer, the smelt are most often far away from the giant export pumps near Tracy and are unlikely to be killed by those pumps."

APPEALS COURT REJECTS GREAT LAKES STATES' BID TO SPUR FASTER ACTION ON ASIAN CARP.

The [E&E Daily](#) (7/15) reports that a federal appeals court on Monday "rejected an effort by Great Lakes states to compel the Army Corps of Engineers to take more immediate action to prevent invasive Asian carp from reaching Lake Michigan." The 7th US Circuit Court of Appeals "unanimously ruled that Michigan, Ohio, Wisconsin, Minnesota and Pennsylvania failed to state a legal claim and present facts that the corps and Chicago's water district were failing to address the problem." Chief Judge Diane Wood wrote, "The Corps and the District in particular are engaged in intensive efforts to prevent the carp from reaching the Great Lakes, and there is a great deal of evidence that indicates they have succeeded thus far in doing so."

WILDLIFE WORKERS RESCUE THREE ENTANGLED OSPREYS. The [Tri-City Herald \(WA\)](#) (7/13, 115K) reports that "an adult and two osprey chicks along the Snake River have been rescued by local wildlife workers after the adult became tangled in fishing netting last week." Dan Haas, a biologist with the Mid-Columbia River National Wildlife Refuge Complex noted that "it's the fifth time in three years that US Fish and Wildlife has rescued osprey that would have died after becoming tangled in trash, usually discarded fishing line or netting."

NEW JERSEY QUESTIONS PLAN TO ROUTE POWER LINE THROUGH WILDLIFE REFUGE. The [Philly](#) (7/16, 834K) reports that New Jersey is "expressing concerns over a route for a new transmission line under consideration by the operator of the regional power grid, saying it may impact sensitive environmental areas and be subject to delays because of opposition." In a letter from the New Jersey Board of Public Utilities to PJM Interconnection, "the agency questioned why its staff recommended a preferred route cutting through a national wildlife refuge and state-run wildlife management areas." The article notes that "the proposed route, one of nine projects under consideration, may affect the Supawana Meadows National Wildlife Refuge in Pennsville, the Alloway Creek Watershed Wetland Restoration site, the Abbots Meadow Wildlife Management Area in Elsinboro, and the Mad Horse Creek Wildlife Management Area in Salem, according to the BPU letter mailed in early June."

GIANT AFRICAN SNAILS SEIZED AT L.A. AIRPORT. The [E&E Daily](#) (7/15) reports that US customs officials "seized 67 giant African snails in two picnic baskets at Los Angeles International Airport, officials said." According to the article, "the live snails weighed more than 35 pounds – apparently the largest snail seizure at LAX – and appeared to be meant for human consumption."

ADDITIONAL COVERAGE: FWS TO ELIMINATE BEE-KILLING PESTICIDES FROM PROTECTED LANDS.

Additional coverage that the FWS "plans to eliminate the use of bee-harming pesticides on wildlife refuges in the Pacific region by 2016" was provided by the [Ashland \(OR\) Jefferson Public Radio](#) (7/16) and the [Oregon Public Broadcasting](#) (7/16, 4K).

US Geological Survey:

HOUSE COMMITTEE APPROVES FUNDS FOR EARTHQUAKE EARLY WARNING SYSTEM. The [Southern California Public Radio](#) (7/15, 85K) reports that the House Appropriations Committee has approved "a down payment on an earthquake early warning system." The article notes that "the full cost is an estimated \$38-million to build and \$16-million a year to operate." The committee "voted to include \$5 million of that in the budget" for the USGS, which is "enough to purchase and install additional sensors and hire new staff members."

Also covering the story is the [Everett \(WA\) Herald](#) (7/15, 152K).

STUDY: PRECIPITATION MAY AFFECT LONG-TERM SURVIVAL OF BIRD SPECIES UNDER CLIMATE CHANGE. The [E&E Daily](#) (7/15) reports that "in a climate-changed world, wetness or dryness could be a matter of life or death for some bird species, according to a recent study published in the journal *Global Change Biology*." Funded by the National Science Foundation with support from the USGS and others, "the analysis found that precipitation is more likely than temperature to influence the long-term population trends of birds." The article notes that "while there have been past studies that found rising temperatures can push birds – such as the white-winged robin in Papua New Guinea – into higher elevations and latitudes, this is the first large-scale study to look at the link between precipitation and the future survival of bird species under climate change."

US GEOLOGICAL SURVEY'S TRIGA RESEARCH REACTOR PROFILED. The [Denver Post](#) (7/16, Briggs, 940K) reports on the US Geological Survey's TRIGA nuclear research reactor, which has operated for the last forty-five years at the Federal Center in Lakewood, and has processed almost 500,000 samples. The Post notes that one of the more common experiments performed by the TRIGA neutron generator involves changing the nuclear composition of rocks to determine their age and mineral composition. According to reactor manager Tim DeBey, the TRIGA reactor at 45-years of operation is "one of the newer ones in the country," which "kind of tells you the fleet is old."

Securing America's Energy Future:

Renewable Energy:

SOUTH CAROLINA EYES OFFSHORE WIND POWER. The [Greenville \(SC\) News](#) (7/15, 204K) reports that "experts have identified the best locations for offshore wind power, and maps show the wind is the strongest off the coast of Myrtle Beach." According to experts, "if South Carolina chooses to pursue wind power – a move being studied now – the coastal waters would likely be the best resource." The state has "established a task force to study offshore wind energy, and the Legislature passed a resolution recently to recognize the state's offshore wind resource."

Onshore Energy Development:

USGS REPORTS TWO MORE MINOR OKLAHOMA EARTHQUAKES. The [AP](#) (7/16, Eaton, 645K) reports that the USGS again reported minor earthquakes in Oklahoma. The agency reported two early Tuesday morning quakes, one that "caused minor damage at local businesses." A 3.8 magnitude quake hit 3 miles outside of Harrah, OK, while another quake of magnitude 3.9 struck five miles from the town.

Earthquakes Said To Put Onus On Oil, Gas Industry To Explain Fracking's Benefits. In the "Innovations" blog in the [Washington Post](#) (7/15, Basulto, 4.22M), Dominic Basulto writes about the current debate over whether fracking is prompting Oklahoma's rise in earthquakes. He argues that this is "a warning lesson: every innovation comes with tradeoffs." In this example, he suggests that "the reward of cheaper, more bountiful energy promised by hydraulic fracturing appears to be offset by the risk of increased seismic activity." He notes that viewing maps of seismic activity compounds the "strangeness" of Oklahoma's situation because it would seem earthquakes would be "in regions near fault lines or plate lines," which Oklahoma doesn't have. He concludes that in "the court of public opinion" it is now up to "the oil and gas industry to show us that the tradeoffs involved in fracking are worth it."

BLM BEGINS PROCESS TO LEASE OIL, GAS RIGHTS IN IDAHO. The [Idaho Statesman](#) (7/15, 222K) reports that the BLM is "beginning the process to consider leasing 5,355 acres of mineral lands in Payette County." The BLM's Four Rivers will be "hosting a public scoping meeting on Thursday, from 6:30 p.m. to 8:30 p.m. at the Payette County Courthouse." BLM Assistant District Field Manager Matt McCoy said, "The lease sale would allow for the orderly development of the federal oil and gas resource and the payment of royalties to the United States."

Offshore Energy Development:

COLUMN: FEDERAL SENTENCES FOR FRAUDULENT DEEPWATER HORIZON SPILL CLAIMS TOUGH. The [New Orleans Times-Picayune](#) (7/15, Larino, 678K) reports that according to a [Forbes](#) (7/15, 11.38M) article by contributor Walter Pavlo, sentences for some accused of "making false claims for damages in the BP oil spill" are "tougher than they should be." The article highlights Luom Van Ngo, a Vietnamese immigrant who falsified a claim, received \$18,000 in funds from the Gulf Coast Claims Facility, and received 3 years in Federal prison after pleading guilty to charges of wire fraud.

Tackling America's Water Challenges:

CALIFORNIA DROUGHT CAUSING ECONOMIC DAMAGE. The [CBS Evening News](#) (7/15, story 2, 1:55, Pelley, 5.08M) reported California farmers have had "to idle hundreds of thousands of acres this year" due to "the severe drought," costing the state economy over two billion dollars. CBS (Evans) added the reduced crop production has the US Department of Agriculture predicting produce prices will increase "up to five percent this year, adding \$500 to the average American family's grocery bill."

[McClatchy](#) (7/16, Doyle, Subscription Publication, 23K) reports a study by the University of California, Davis Center for Watershed Sciences found that the "drought will cost the state's economy \$2.2 billion and an estimated 17,100 jobs, "including "\$810 million in lost crop revenues and \$203 million in lost livestock and dairy values" as an estimated 428,000 acres of irrigated cropland has been fallowed. The move tends to affect feed and other annual crops, as they have a lower profit margin. Richard Howitt, an emeritus professor of agricultural economics at UC Davis warned that the economic impact isn't distributed evenly in the state, and, "in certain parts of the Central Valley, it's extremely bad." The report also said that groundwater "management needs to be improved," as with increased pumping in the drought, "failure to replenish groundwater in future years will hit hard, the analysts say."

The [Wall Street Journal](#) (7/16, Carlton, Subscription Publication, 5.51M) reports that the researchers said that consumer prices will see little change as market demand has more effect on them than the drought. [USA Today](#) (7/16, Rice, 5.82M) also covers this story.

California Considering Water Restrictions Over Drought. [ABC World News](#) (7/15, story 3, 0:20, Muir) reported, "We have also learned tonight that the drought is forcing possible water restrictions in California" as, despite the governor "begging residents to conserve water," usage continues to increase. In a segment initially on the drought's effect on food prices, Carter Evans said on the [CBS Evening News](#) (7/15, story 2, 1:55, Pelley, 5.08M) there could be "bans on excess lawn watering, washing cars without a hose shutoff nozzle and spraying down sidewalks," with a \$500 fine for violators.

[USA Today](#) (7/16, Winter, 5.82M) reports the California State Water Resources Control Board "approved fines for washing cars, watering lawns or hosing down sidewalks." While Gov. Jerry Brown called for a voluntary 20% reduction in water use, updated monthly survey figures found consumption "increased 1% in May compared with a year ago." Board Chairwoman Felicia Marcus warned that if the move didn't solve the problem, "other steps could include even tighter rules for landscaping and possibly higher rates for wasteful consumers."

BOR BROKERING WATER TRANSFER DEAL BETWEEN WESTLANDS AND PLACER COUNTY. The [Hanford \(CA\) Sentinel](#) (7/16, 25K) reports that the BOR is brokering a proposed deal to transfer 35,000 acre-feet water "from Placer County Water Agency to thirsty Westlands Water District." The agency has "given Westlands a zero percent allocation this year due to drought and regulatory demands in the Sacramento-San Joaquin River delta," which "means that Westlands, like other districts with permanent crops that face an imminent threat from drought, is out on the open market trying to find more of the precious wet stuff."

ARIZONA BATTLES DROUGHT WITH TREE-KILLING BEETLE. The [E&E Daily](#) (7/15) reports that Arizona is "counting on a beetle to kill trees that use too much water." The tamarisk beetle targets "tamarisk trees growing along the Colorado River that can consume up to 200 gallons of water a day." According to officials, "the centimeter-long beetle – which was released in Arizona a decade ago – could help maintain water levels in the river as the state struggles with a yearslong drought."

Empowering Native American Communities:

BIA ORDERS KAMIAH TO VACATE LAND OWNED BY NEZ PERCE TRIBE. The [AP](#) (7/16) reports that the BIA has "ordered the northern Idaho city of Kamiah to vacate a 4.6-acre section of land the bureau says is owned by the Nez Perce Tribe." According to the article, "the land is currently occupied by the city dog pound and a concrete production plant that has a lease from the city."

MASHPEE WAMPANOAG TO MEET WITH INTERIOR OFFICIALS TO DISCUSS TRIBE RECOGNITION PROCEDURE. The [Taunton \(MA\) Gazette](#) (7/16, Larocque, 36K) reports that "two meetings will be held at the Mashpee Wampanoag headquarters to allow the Department of the Interior to discuss proposed regulations to reform its federal acknowledgment process for Native American tribes." Cedric Cromwell, Chairman of the Mashpee Wampanoag Tribal Council, said, "We are both pleased and honored to host the BIA and tribes from around the country to discuss President Obama's plans for reforming the federal acknowledgment process. It is fitting that these talks take place in Mashpee since our tribe has experienced, first hand, the flaws in the federal recognition process. We look forward to welcoming everyone to Mashpee and to a very spirited discussion."

Top National News:

HOUSE PASSES SHORT-TERM TRANSPORTATION SPENDING BILL ENDORSED BY OBAMA. President Obama's speech in northern Virginia on Tuesday regarding the necessity of infrastructure upgrades did not generate a great deal of national media coverage. Of the three network newscasts, only [NBC Nightly News](#) (7/15, story 12, 0:35, Williams, 7.86M), mentioned the President's appearance, and that was a very brief item about a simulator that the President tried out. Reports this morning note that the President reluctantly endorsed the short-term transportation spending plan that the House passed overwhelmingly on Tuesday, but chastised members of Congress for failing to agree on a longer term solution to the nation's infrastructure deficiencies.

On [NBC Nightly News](#) (7/15, story 12, 0:35, Williams, 7.86M), Brian Williams said that "because of their personal security, presidents are no longer able to drive...but they can still pretend," which is what President Obama did on Tuesday "in a crash avoidance simulator." According to Williams, "It didn't move an inch, but he got to remember what it felt like to hug the steering wheel."

According to [Bloomberg News](#) (7/15, Keane, Runnigen, 2.76M), the President was "championing spending on transportation projects" as he "highlighted government-backed research on technology being developed by companies including Ford Motor Co. and Toyota Motor Corp. to allow cars to communicate with each other." Bloomberg notes that at the Turner-Fairbank Highway Research Center in McLean, Virginia, the President said, "First-class infrastructure attracts first-class jobs."

[AP](#) (7/16) reports, that in Virginia on Tuesday, the President maintained that "better roads and bridges will help boost the economy by keeping construction workers on the job and by ultimately saving time and money for businesses and commuters." The AP notes that the President "pushed his own \$302 billion, four-year transportation spending plan, one partly paid for by closing corporate tax loopholes."

On [NBC Nightly News](#) (7/15, story 11, 0:35, Williams, 7.86M), Williams said the Federal Highway Trust Fund "is about to become insolvent, and while you think even Congress could agree on the need for roads...instead...Congress is about to approve the equivalent of blacktop on a pothole, a temporary funding bill." According to Williams, "No one in Congress wants to vote for a tax increase on something like gasoline." The [Washington Post](#) (7/16, Halsey, Eilperin, 4.22M) notes that the "stop-gap fix to avert a crisis imperiling up to 700,000 construction jobs won endorsement from the White House."

The [New York Times](#) (7/16, Baker, Subscription Publication, 9.65M) reports that the President "spoke hours before the House approved [the] short-term highway plan that would keep construction crews working through next May." The Times says the President "expressed support for that temporary fix but scolded Republicans for not agreeing to a multiyear program." The President is quoted as saying, "Congress shouldn't pat itself on the back for averting disaster for a few months, kicking the can down the road for a few months, careening from crisis to crisis." According to the Times, the President "linked the issue to his broader indictment of Congress for

blocking measures on all sorts of issues, including immigration."

Using the same metaphor that Williams employed, the AP (7/16, Lowy) reports that on Tuesday, the House "voted...to temporarily patch over a multi-billion dollar pothole in federal highway and transit programs while ducking the issue of how to put them on a sound financial footing for the long term." According to the AP, the House "cobble[d] together \$10.8 billion by using pension tax changes, customs fees and money from a fund to repair leaking underground fuel storage tanks to keep the federal Highway Trust Fund...solvent through May 2015." The AP notes that the short-term spending bill was approved on a 367 to 55 vote.

The [Washington Post](#) (7/16, Halsey, Eilperin, 4.22M) reports that the Senate has been "moving toward its own short-term fix," but "may amend the House bill to its liking" instead, "and send it to the White House." [Bloomberg News](#) (7/15, Litvan, 2.76M) reported that on Tuesday, Senate Majority Leader Harry Reid said the Senate "will vote on the House bill this month, alongside a competing version that doesn't have as much support." Bloomberg News adds that the "biggest difference between the two chambers is the Senate plan's inclusion of two tax-compliance changes projected to generate \$3.4 billion over the next decade." Bloomberg News says while "many Republicans in both chambers are objecting to including those," Senate Finance Committee Chairman Ron Wyden "continued to defend their importance this week."

According to [Politico](#) (7/16, Snider, 637K), Reid "is seeking to set up votes for three separate proposals: the House-passed bill," Wyden's "Senate Finance Committee alternative that is similar to the House bill" and "a plan from Sen. Barbara Boxer...to extend current policy only through December in order to force Congress to act on a long-term bill in the lame-duck session." Politico notes that Wyden has said the "December patch backed by fellow Democrats Boxer and Sen. Tom Carper had been his preferred option but that his bill was a compromise that sets the stage for negotiations on a longer-term measure."

[Roll Call](#) (7/16, Newhauser, 76K) reported that on Tuesday, House Minority Whip Steny Hoyer said Democrats "would have preferred a longer-term deal that shored up the highway trust fund's solvency for years to come, or an extension that did not last as long," but "he and many Democrats accepted the deal because there were no other viable options in the short term."

[The Hill](#) (7/15, Marcos, 237K) reported that the House bill offsets its spending "with about \$6.4 billion in revenue from pension smoothing, another \$3.5 billion from customs user fees and a final \$1 billion from an account set up to deal with leaking underground storage tanks." [The Wall Street Journal](#) (7/16, Hughes, Subscription Publication, 5.51M) reports that Rep. Peter Welch (D-VT) quipped that "this gimmick of pension smoothing is about creating a pothole in the pension system in order to fix a pothole on the highway." Likewise, Rep. Earl Blumenauer (D-OR) commented, "We will be no better off next May to resolve this question. In fact we will be worse off because we'll be in the middle of a presidential campaign, with a new Congress."

According to the [New York Times](#) (7/16, Weisman, Baker, Subscription Publication, 9.65M), the House's "overwhelming passage" of the infrastructure spending bill "was another in a series of defeats for conservative groups like Club for Growth and Heritage Action, the political arm of the Heritage Foundation, both of which had said they would score lawmakers negatively for voting for it." [The Wall Street Journal](#) (7/16, Subscription Publication, 5.51M), in an editorial, says the passage of the House bill on a 367-55 vote is evidence that bipartisanship can often be costly for taxpayers. On the other hand, an editorial from the [New York Times](#) (7/16, Subscription Publication, 9.65M) makes the case that "the enormous cost to society of poor infrastructure grows every year, and most of the blame can be placed directly on a Congress that refuses to collect and spend enough money to fix it."

DEMOCRATS PAN HOUSE PROPOSAL FOR DEALING WITH THE BORDER CRISIS. On the [CBS Evening News](#) (7/15, story 7, 1:05, Pelley, 5.08M), Scott Pelley reported that Sen. John Cornyn and Rep. Henry Cuellar (D-TX) have "introduced a bill aimed at stopping Central Americans from sending their children to the US border." Nancy Cordes went on to report that the bill "would call for unaccompanied minors who come from Central America to be treated more like minors who come here alone from Mexico," meaning "they could see a judge within seven days and if the judge determines they don't have a legal case to be here...then they would be sent home right away." According to Cordes, "so far," the plan "is getting support from the right," while "many Democrats argue that seven days really isn't enough time for these children to make the case they belong here when they don't speak the language and often don't have legal representation." Cordes noted that Senate

Majority Leader Harry Reid says he opposes the bipartisan legislation.

The AP (7/16, Werner) reports that on Tuesday, House Republicans announced that they "will recommend dispatching the National Guard to South Texas and speeding Central American youths back home," which "will set up a clash with leading Democrats who oppose changing U.S. law to eliminate automatic immigration hearings for Central American kids." The AP notes that Republicans are "also working to significantly pare down" the President's "\$3.7 billion emergency spending request for the border, hoping to act quickly on a smaller spending bill."

Politico (7/16, Kim, Sherman, 637K) reports that Speaker Boehner, Majority Leader Kevin McCarthy "and a group of top lawmakers working on the border crisis are set to file a bill that very closely mirrors the legislation crafted by" Comyn and Cuellar. According to Politico, that bill "will come with additional funding for the Obama administration somewhere between \$1 billion and \$2 billion," and "also would aim to give" the President "more tools" to deal with the crisis, such as policy changes to speed up deportations of unaccompanied minors."

However, The Hill (7/16, Schroeder, Marcos, 237K) reported that on Tuesday, Congressional Democrats said they "would oppose any changes to a 2008 human trafficking law Republicans have blamed for the wave of child immigrants crossing the border," which "raises serious doubts about whether Congress will be able to act before its summer recess." According to the Hill, Democrats "said the Obama administration never should have signaled a willingness to change the law." Rep. Raúl Grijalva (D-AZ) is quoted as saying, "The White House shouldn't have opened the door at all on that discussion."

Reuters (7/16) notes that on Tuesday, White House Press Secretary Josh Earnest said the children entering the US illegally from Central America are "entitled to due process but they will not be welcome to this country with open arms."

Politico (7/16, Everett, 637K) reported that Senate Majority Leader Reid "told reporters that he will oppose [the] proposal...to treat unaccompanied minors from Central America the same as those from Mexico and expedite immigration hearings for children with asylum claims." Politico says Reid "seemed unwilling to lay out a precise blueprint for how the chamber will move forward on the border crisis until senators speak to Homeland Security Secretary Jeh Johnson and other top administration officials." The Hill (7/16, Bolton, 237K) notes that on Tuesday, Reid also asserted that "the border is secure."

Under the headline, "Senate Democrats Push Back Against Speedy Deportations," the Wall Street Journal (7/16, Crittenden, Meckler, Subscription Publication, 5.51M) reports that Sen. Ben Cardin said, "They shouldn't be brought to our borders to start with, and that's not going to change just because we expedite their return to their host country or protective services." According to USA Today (7/16, Davis, Today, 5.82M), Cuellar has "incensed many of his Democratic colleagues, who view the migration surge as a humanitarian crisis because many children are fleeing violence at home."

Roll Call (7/16, Dumain, Hallerman, 76K) reports that Rep. Kay Granger (R-TX), who chairs the "special GOP working group convened by" Boehner "to make policy recommendations on the child migrant border surge, told reporters Tuesday her group is focused on increasing border security funding, adding National Guard troops on the border and having more immigration judges to preside over deportation hearings and asylum requests."

WPost-ABC Poll: 58% Disapprove Of Obama's Handling Of The Border Crisis. The Washington Post (7/16, Nakamura, Clement, 4.22M) reports that a new Washington Post/ABC News poll has found "widespread public disapproval of the way President Obama and Republicans in Congress are handling the influx of unaccompanied foreign children at the southern border." The Post notes that 58% say they "are not happy with Obama's performance in dealing with the tens of thousands of minors who have arrived from Central America." The Post adds that "congressional Republicans fare even worse in the court of public opinion, with 66 percent disapproving of the job GOP lawmakers have done to address the crisis."

In a piece titled, "Obama Is Struggling On Immigration — Big Time. But Latinos Aren't About To Vote Republican," Aaron Blake of the Washington Post (7/16, Blake, 4.22M) notes that the Washington Post-ABC News poll "shows just 40 percent of Hispanics approve of Obama's handling of the crisis on the Southern border, while 54 percent disapprove." But Blake adds, "When it comes to Republicans, just 23 percent of Latinos approve

of their efforts, and 68 percent disapprove.”

O'Malley Claimed Migrants Face “Certain Death” In Central America, Warned White House About Maryland Residents. [Politico](#) (7/16, Dove, 637K) reported that Maryland Gov. Martin O'Malley “says that deporting the children detained at the border would be sending them to ‘certain death’ — but he also urged the White House not to send them to a facility in his own state.” According to Politico, after O'Malley “became the most prominent Democrat to criticize the White House on the issue, Domestic Policy Director Cecilia Muñoz called O'Malley to complain,” and “before they hung up, O'Malley told Muñoz not to send any of the children to the facility in Westminster, Md., that the White House was looking at” because “it’s a conservative part of the state,” and “the children were at risk of getting harassed, or worse.”

Perry: Obama Has The Power To Secure The Border. In an op-ed for the [Wall Street Journal](#) (7/16, Perry, Subscription Publication, 5.51M) titled, “What Obama Missed On The Border,” Texas Gov. Rick Perry (R) says he warned the Administration in 2012 that US policy regarding unaccompanied minors entering the US illegally had created an incentive for Central Americans to send their children through Mexico into the US. Perry says President Obama has the power to secure the border, but contends that the \$3.7 billion request from the President in response to the current crisis is inadequate because only a small portion of the money would be used for border security.

School Districts Dealing With Surge Of Children In The US Illegally. The [AP](#) (7/16, Hefling, Lozano) reports US public schools “are one of the few government institutions where the children and teens coming unaccompanied across the border are guaranteed services,” and “districts in metropolitan areas such as Washington, Houston and Miami have seen an uptick in the number of these students and anticipate more could enroll this fall.” The AP says the children in the US illegally “frequently require special resources like English language and mental health services that already are strained because of budget cuts.” The AP also notes that in May, Education Secretary Arne Duncan and Attorney General Holder “remind[ed] districts that a 1982 Supreme Court ruling gives all children the right to enroll in school, regardless of immigration status.”

Arizona Sheriff Coordinates Protests Over Housing Illegal Immigrants. The [AP](#) (7/16, Galvan) reports from Oracle, Arizona that on Tuesday, “protesters...faced off with immigrant rights activists...after a sheriff said a bus filled with Central American children was on its way.” According to the AP, “Anger has been spreading in the town of Oracle since Pinal County Sheriff Paul Babeu warned residents last week that immigrant children from Central America caught crossing the border illegally would be” sent to Oracle, and the protesters are “hoping to mirror demonstrations in Murrieta, California, when immigrants were taken there recently.” The AP says Babeu “is credited with stirring up the anti-immigrant protesters via social media postings...and by leaking information about the migrants’ arrival to a local activist.”

In a brief item for the [CBS Evening News](#) (7/15, story 6, 0:15, Pelley, 5.08M), Scott Pelley reported that “the Federal government intends to house 40 immigrant children are to be housed” in Oracle.

Mexico Appoints “Czar” To Deal With Migration From Central America. The [Los Angeles Times](#) (7/15, Wilkinson, 3.46M) reports that the Mexican government has “appointed a czar to take charge of largely unimpeded migration from Central America, which sees tens of thousands of people each year enter southern Mexico and cross the country en route to the United States.”

Pope Says Immigrant Children Should Be Welcomed And Protected. [NBC Nightly News](#) (7/15, story 7, 0:25, Williams, 7.86M) that Pope Francis “waded into the immigration debate and the humanitarian crisis on our southern border with Mexico,” calling for “urgent intervention, as he put it, to welcome and protect unaccompanied minors traveling from Central and South America to the US.” The Pope “called for an information campaign to warn of the dangers of the journey, something President Obama has included as part of his plan.”

Immigration Activist, Journalist Arrested At Border. [NBC Nightly News](#) (7/15, story 8, 0:20, Williams, 7.86M) reported that Pulitzer Prize winning journalist and immigration activist Jose Antonio Vargas, who is an undocumented immigrant, “was detained and taken into custody, while making his way through security” at the airport in McAllen, Texas. Vargas “was there in McAllen as part of a vigil to highlight the plight of these unaccompanied children.”

The [CBS Evening News](#) (7/15, story 8, 0:55, Cordes, 5.08M), Nancy Cordes also reported on Vargas' arrest, noting, "McAllen is so close to the border that all of the roads and airports out of the city have customs checkpoints and Vargas, who was brought to the US from the Philippines when he was 12, says he wasn't aware of that when he went there. Critics are calling it a publicity stunt."

The [AP](#) (7/16, Sherman) reports that Ryan Eller, campaign director for Vargas' advocacy group Define American, "said that Vargas was unaware he would have to pass through such immigration checks in order to leave the city." Eller "confirmed the only identification Vargas carried was his Philippines passport."

[USA Today](#) (7/16, Bacon, Winter, 5.82M) reported that Eller said that the President and DHS Secretary Johnson were "asked to intervene to free Vargas. White House press secretary Josh Earnest would not comment, the Associated Press said."

The [Washington Post](#) (7/16, Lac, 4.22M) reports that Vargas, who "was held for about eight hours until his early-evening release," received "a notice to appear before an immigration judge." DHS spokeswoman Marsha Catron "said in a statement that federal agents who encountered Vargas at the airport "apprehended him after he stated that he was in the country illegally."

The [Wall Street Journal](#) (7/16, Campoy, Subscription Publication, 5.51M) reports that although he was released, Vargas faces a deportation hearing.

The [New York Times](#) (7/16, Preston, Subscription Publication, 9.65M) reports that Vargas' "apprehension highlighted the dilemmas facing the Obama administration at a time when the border situation has made all decisions about immigration high profile and politically fraught."

In an op-ed for [USA Today](#) (7/16, Reyes, 5.82M), attorney Raul Reyes writes that while Vargas "has been an outstanding voice for undocumented immigrants," inserting himself "into the child migrant crisis might not be the ideal way to help the thousands of children languishing in Department of Homeland Security detention — or to pursue his broader goal of promoting immigration reform." Reyes adds that the "distraction was the last thing the administration needed as President Obama prepares to roll out his executive action on immigration in August."

WHITE HOUSE: SIMAS WILL DEFY HOUSE OVERSIGHT COMMITTEE SUBPOENA. The [AP](#) (7/16, Pickler) reports that the White House is "defying a congressional subpoena by keeping" David Simas, "a top political aide...from testifying at a hearing Wednesday." According to the AP, the White House claims that Simas is "immune from the 'extraordinary demand' of being forced to testify before the House Oversight Committee as part of its investigation into the White House Office of Political Strategy and Outreach, which he directs."

The [New York Times](#) (7/16, Shear, Subscription Publication, 9.65M) reports that in a letter to Rep. Darrell Issa, the chairman of the House Oversight Committee, Neil Eggleston, "the president's top lawyer said that as a member of the executive branch," Simas "had immunity from being compelled to testify before Congress."

The [Hill](#) (7/16, Sink, 237K) reports that Issa has "said a federal court... 'already rejected' the notion senior presidential advisers were exempt from congressional subpoena," and "pointed to a 2008 ruling in which a federal court ruled that Bush advisers Harriet Miers and Josh Bolton must obey congressional subpoenas."

[USA Today](#) (7/16, Korte, 5.82M) reports that Issa wants Simas "to testify about what the White House was doing to ensure it complied with civil service laws forbidding executive employees from engaging in political activity." According to [Bloomberg News](#) (7/16, Lerer, 2.76M), Issa's "latest probe is focused on whether the political office complies with the Hatch Act, which limits the political activities of federal employees." Bloomberg News reports that on Tuesday, "White House political aides spent more than an hour today briefing Issa's aides on their operations and answering questions." [Roll Call](#) (7/16, Dennis, 76K) reports that according to Democratic sources, "nine Issa staffers attended the briefing from White House staffers."

[Politico](#) (7/16, Epstein, French, 637K) notes that the White House "reopened its political office in January, after shuttering its operations ahead of the launch of the president's re-election campaign and as an investigation into the Bush administration's mixing of official and political business heated up in 2011."

In his column for the [Washington Post](#) (7/16, Milbank, 4.22M), Dana Milbank says Issa's "careless use of the subpoena...has discredited [his] chairmanship by politicizing his probes from the start."

Editorial Wrap-Up:

NEW YORK TIMES. *"Highways Need A Higher Gas Tax."* An editorial from the [New York Times](#) (7/16, Subscription Publication, 9.65M) makes the case that "the enormous cost to society of poor infrastructure grows every year, and most of the blame can be placed directly on a Congress that refuses to collect and spend enough money to fix it."

"Lapses In The C.D.C.'s Labs." In an editorial, the [New York Times](#) (7/16, Subscription Publication, 9.65M) blasts the CDC's "appallingly careless" handling of dangerous pathogens. To restore public confidence, the paper calls for an independent Federal agency over seeing "the most dangerous research," reducing the number of both laboratories and researchers working with highly dangerous pathogens, controlling dual-use experiments, and "inculcat[ing] a culture of continued vigilance toward safety." Times concludes that CDC safety procedures should have prevented the Anthrax incident, but researchers "were poorly trained or...had grown complacent."

"A Sensible Marijuana Policy In Brooklyn." The [New York Times](#) (7/16, Board, Subscription Publication, 9.65M) editorializes that Brooklyn District Attorney Kenneth Thompson "served both justice and common sense this week when he announced that he would no longer prosecute most cases in which people are arrested or ticketed for small amounts of marijuana." The Times notes that such cases "are usually dismissed. But by keeping thousands of them from going to court at all, Mr. Thompson will have more resources to devote to fighting serious crime." The new policy "will also prevent the young minority men who are most of those arrested from getting criminal records that deny them jobs, housing or entry into armed services." The Times urges other district attorneys in the city to follow Thompson's lead.

WASHINGTON POST. *" Hamas's Misfire."* The [Washington Post](#) (7/16, 4.22M) editorializes that Hamas' "military campaign against Israel has been a dismal failure," but the group rejected the latest cease-fire effort for the "stomach-turning" reason that it "calculates that it can win the concessions" it wants "by perpetuating the killing of its own people in Israeli counterattacks." The Post urges the international community "not to surrender to Hamas's despicable tactics."

"The D.C. General Scandal."

"A Badge, A Gun And Impunity."

WALL STREET JOURNAL. *"The Senate That Taxed The Internet."* An editorial in the [Wall Street Journal](#) (7/16, Subscription Publication, 5.51M) says state and local tax collectors are urging Senate Democrats to hold a House-passed bill to make permanent a moratorium preventing state and local government from imposing taxes on access to the Internet hostage to ensure that a provision permitting states to collect online sales tax from out-of-state merchants is included. Noting that the current ban on taxing Internet access expires Nov. 1, the Journal questions whether senators seeking reelection want to defend new taxes on the campaign trail, and calls on them to urge Senate Majority Leader Reid to schedule a vote on the measure.

"Washington's Highway Dodge." The [Wall Street Journal](#) (7/16, Subscription Publication, 5.51M), in an editorial, says the passage of the House short-term transportation spending bill on a 367-55 vote is evidence that bipartisanship can often be costly for taxpayers.

"Harry Reid Gets His Man." An editorial in the [Wall Street Journal](#) (7/16, Subscription Publication, 5.51M) notes that Senate Majority Leader Reid and the White House have used FERC as a political operation to promote liberal causes including green energy, and decries Reid's personal influence over FERC decisions.

Washington Schedule:

TODAY'S EVENTS IN WASHINGTON.

White House:

PRESIDENT OBAMA — The President and the Vice President receive the Presidential Daily Briefing; meets with his State, Local, and Tribal Leaders Climate Task Force on Preparedness and Resilience, State Dining Room, pool spray at the top; the President and the Vice President meet with members of the Congressional Hispanic Caucus, Eisenhower Executive Office Building, closed press; the President and the Vice President meet with House Democrats, the State Floor, closed press. Notes: Press Briefing by Press Secretary Josh Earnest.

VICE PRESIDENT BIDEN — Vice President will deliver remarks at Generation Progress 2014 Make Progress National Summit in Washington, DC. The Vice President's remarks will be open press.

MICHELLE OBAMA — As part of the Joining Forces initiative, First Lady Michelle Obama will deliver the keynote address at the Unite for Veterans Summit, an event organized by United Way of Greater Los Angeles, the Federal Reserve Bank, and the University of Southern California. This event is open press. First Lady Michelle Obama will deliver remarks at the GRAMMY Museums Jane Ortner Education Award Luncheon. The Grammy Museum has created numerous music education programs, including an annual three-day experience for nearly 1,000 students at the White House, as part of the In Performance at the White House series. The Jane Ortner Education Award celebrates educators who find new and transformative ways to engage students by incorporating music into their classrooms and syllabi. This year's event will honor Southern California-based educator Sunshine Cavalluzzi and Grammy-nominated recording artist Janelle Monae. This event is open press.

U8VJHfdVXE.

REP. SHUSTER – 1776 – FACEBOOK — 2:30 p.m. Transportation and Infrastructure Committee Chairman Bill Shuster (R-PA) will meet with transportation startups at tech incubator 1776's Washington, DC campus to discuss innovation, technology, and the future of transportation. Immediately following the meeting, Shuster and 1776 cofounder Evan Burfield will start accepting questions about technology and transportation via Facebook. Contacts: Jim Billimoria, Justin Harcler, 202-225-9446. Notes: <https://www.facebook.com/transport>

GOP COMMITTEES – JOINT PRESS BRIEFING — 3 p.m. NRCC, NRSC, RGA, RNC, and RSLC Joint Press Briefing on why the GOP is in a winning position just over 100 days before the 2014 midterm elections. Participants: Liesl Hickey, NRCC Executive Director; Rob Collins, NRSC Executive Director; Phil Cox, RGA Executive Director; Mike Shields, RNC Chief of Staff; Matt Walter, RSLC President. Location: Capitol Hill Club, Eisenhower Room, 300 First Street SE. Contacts: Anna Epstein aepstein@gop.com (202-863-8614)

INTER-AMERICAN DIALOGUE – YOUNG MIGRANTS — 4 p.m. – 5:30 p.m. Roundtable discussion about the rising numbers of unaccompanied children seeking entry to the United States. Speakers: former Commissioner of the US Immigration and Naturalization Service, Doris Meissner, who founded and is now a senior fellow at the Institute for Migration Policy and the Ambassador of El Salvador to the UN and former Ambassador to the US, Rubin Zamora. Both Ms. Meissner and Amb. Zamora will be briefing members of the US Congress earlier in the day on the issues surrounding the young migrants. Location: 1211 Connecticut Ave NW, Suite 510. Contacts: 202-822-9002

SPYING ON YOUR ALLIES — 6:30 p.m. – 8 p.m. World Affairs Council hosts a discussion on "Spying on your Allies – Good Practice or Bad Policy?" Panelists: Ambassador Richard Kauzlarich, Nonresident Senior Fellow, Foreign Policy, Center on the United States and Europe, Brookings; Director, Center for Energy Science and Policy, School of Public Policy, George Mason University; Second panelists TBA. Moderator: Ambassador Bill Courtney, former ambassador to Kazakhstan and Georgia. <https://www.worldaffairsdc.org/EventDetails.aspx?enc=ZKttWtOqDC6qzOjqwbgIB3209qDIYYoIWbpcRCaO470>. Location: University of California Washington Center, 1608 Rhode Island Avenue NW.

WORLD AFFAIRS COUNCIL — 6:30 p.m. – 8 p.m. Panel discussion: Spying on your Allies – Good Practice or Bad Policy? Guest: Ambassador Richard Kauzlarich, Director, Center for Energy Science and Policy, School of Public Policy, George Mason University. Location: 1200 18th Street NW Suite 902, Washington, DC. Contacts: n/a, 202-293-1051. Notes: A wine and cheese reception will follow the program.

Last Laughs:

LATE NIGHT POLITICAL HUMOR.

Stephen Colbert: [Referring to news President Obama is going on vacation next month and last month's European trip] "Nation, it's clear what's going on here. The President has senioritis. He's in the last two semesters of his presidency and he's totally checked out. Tossing back beers, late night bull sessions with friends, traveling across Europe, and it's a huge mistake, sir. It may seem like fun to take some time off and find yourself abroad, but, trust me, it never works out the way you hope it will. ... So, Mr. President, just turn in the Eurail pass, come home, buckle down and hit the books before graduation, because you only got two years left

and you're looking at an F in ECON."

Jimmy Fallon: "I just saw that former President George W. Bush is recovering after having a partial knee replacement over the weekend. When asked how he hurt his knee, he said, 'There was a rock under my Slip 'N Slide. Slippin' accomplished.'"

Seth Meyers: "Yesterday, White House Press Secretary Josh Earnest said that President Obama has brought tranquility to the global community. And that's good, Josh. You should always open with a joke."

Seth Meyers: "The border crisis continues and a new poll shows the majority of Americans disapprove of how President Obama's dealing with immigration. Of course, those numbers could change if he lets more people into America."

Conan O'Brien: "Germany won [the World Cup], but they're still mad at us for spying on them. Did you hear the story? Germany is mad that we spied on them, so they're considering going back to using typewriters to avoid being spied on now. Using typewriters, yeah. It's never good news when Germany says, 'We're going to go back to our old ways.'"

DOI in the News:

DEAL ANNOUNCED FOR COLORADO RIVER BASIN CONSERVATION. The [AP](#) (8/1) reports that the Interior Department and four municipal water providers in the West are investing \$11 million to fund projects seeking to conserve water in the Colorado River basin. Interior officials said Thursday that "local water providers in Arizona, California, Nevada and Colorado will participate in a pilot program aimed at reducing water demand by cities, farmers and industry." Interior Deputy Secretary Mike Connor called the agreement "a critically important first step" in addressing water shortages in the basin.

The [AP](#) (7/31) reports that the deal seeks "to create several small pilot programs in 2015 and 2016 that would provide incentives and compensation for conservation by cities, farmers and industry." The project's partners include the Central Arizona Project, Denver Water, The Metropolitan Water District of Southern California, Southern Nevada Water Authority and the BOR.

Also reporting on the story is the [Summit County \(CO\) Citizens Voice](#) (7/31, 506).

Coverage by the AP was also picked up by the [Washington Post](#) (7/31, 4.06M), [ABC News](#) (8/1, 3.58M), [ABC News](#) (8/1, 3.58M), [Yahoo!](#) (8/1, 10.35M), the [Austin \(TX\) American Statesman](#) (8/1, 424K), the [Austin \(TX\) American Statesman](#) (8/1, 424K), the [Minneapolis Star Tribune](#) (8/1, 1.32M), the [Columbus \(IN\) Republic](#) (8/1, 81K), the [Quincy \(IL\) Herald-Whig](#) (8/1, 85K), the [Seymour \(IN\) Times Tribune](#) (8/1, 31K), the [Las Vegas Sun](#) (7/31, 148K), and [KUSA-TV Denver](#) (7/31, 226K).

WESTERN GOVERNORS, ENVIRONMENTAL EXPRESS OBJECTIONS TO OFFSHORE DRILLING. The [AP](#) (8/1) reports that in a letter to Interior Secretary Sally Jewell yesterday "the governors of California, Oregon and Washington" stressed "that they don't want the possibility of drilling off of the West Coast." The Department of Interior "is developing an updated plan for its Outer Shelf Oil and Gas Leasing Program, and the governors formally stated their opposition to the inclusion of any oil or gas lease sales off the coast as part of any new plan." The governors "wrote that their three states 'represent the fifth-largest economy in the world' and their ocean-dependent industries contribute billions of dollars to the region each year." The wrote, "While new technology reduces the risk of a catastrophic event such as the 1969 Santa Barbara oil spill, a sizeable spill anywhere along our shared coast would have a devastating impact on our population, recreation, natural resources, and our ocean and coastal dependent economies."

[The Hill](#) (8/1, Barron-Lopez, 237K) reports that environmental groups also sent a letter to Secretary Jewell objecting to offshore drilling.

Coverage by the AP was also picked up by the [Bloomberg BusinessWeek](#) (7/31, 4.91M), The [San Francisco Chronicle](#) (8/1, 2.87M), The [Sacramento \(CA\) Bee](#) (7/31, 582K), [Yahoo!](#) (8/1, 10.35M), and [KTVZ-TV Bend, OR](#) (8/1, 1K).

Also reporting on the story are the [Seattle Post-Intelligencer](#) (7/31, 857K), The [Seattle Times](#) (7/31, 1.11M), and [KTVZ-TV Bend, OR](#) (8/1, 1K).

HOUSE REPUBLICANS DASH HOPES FOR ADDITIONAL WILDFIRE FUNDS. The [E&E Daily](#) (7/31) reports that "the wildfire money President Obama sought as part of an emergency spending bill never had much chance of making it through the House." However, "Republican leaders' sudden decision" on Thursday "to abandon consideration of a supplemental appropriations measure extinguishes any hope of securing the wildfire money and related policy shifts until at least September." According to the article, "the decision to cancel a vote on the bill, announced just before the week's final vote series" Thursday afternoon, "indicates that Republicans were unable to persuade enough of their members to back the legislation, which was expected to be opposed by almost all Democrats."

Washington Gov. Inslee Pushes For Emergency Funds To Fight Wildfires. The [E&E Daily](#) (7/31) reports that "as major wildfires continue to burn across the Northwest," Washington Gov. Jay Inslee on Wednesday "sent a letter to the state's congressional delegation urging approval of President Obama's request for an additional \$615 million to help fight the blazes." Also, on Sunday, Inslee joined California Gov. Jerry Brown and Oregon Gov. John

Kitzhaber "in writing a different letter to the states' congressional delegations supporting other legislative efforts on Capitol Hill to fund fighting wildfires using disaster funding."

Additional Coverage. Additional coverage of wildfires was provided by the [Los Angeles Times](#) (8/1, Rocha, 3.42M), the [Los Angeles Times](#) (8/1, Forgione, 3.42M), the [Palm Springs \(CA\) Desert Sun](#) (7/31, 116K), the [Ashland \(OR\) Jefferson Public Radio](#) (8/1), and the [Corvallis \(OR\) Gazette-Times](#) (8/1, 31K).

SECRETARY JEWELL SAYS OUT OF CABINET, SAYS SHE'D MOST LIKE TO SPEND TIME WITH BURWELL. The "In The Loop" blog of the [Washington Post](#) (7/31, Itkowitz, Kamen, 4.06M) interviewed Interior Secretary Sally Jewell about "her hopes and dreams (other than climate change legislation), and, the really important questions, like her favorite foods." Asked which Cabinet secretary she would like to spend time with, Jewell said, "Sylvia Burwell. Besides being multifaceted (really... Office of Management and Budget and now Health and Human Services), we share a common connection to Seattle, an appreciation for good, wild salmon, and a commitment to connecting children to nature and the great outdoors." Jewell said that her "favorite non-work-related Web site/blog/app/magazine is "National Geographic," and that she cuts "jigsaw puzzles as a hobby." Among other things, the Post also explores Jewell's favorite food and her motivation for entering public service.

CRUISE TO ARCTIC OFFERS VIEWING OF CLIMATE CHANGE CONSEQUENCES. The [E&E Daily](#) (7/31) reports that "an American luxury cruise company is selling tickets for a 'Northwest Passage' trip to view the environmental effects warming climate conditions have had on the Arctic from the decks of the Crystal Serenity – a voyage described by Popular Science as 'environmental disaster tourism.'" The article notes that "the ship weighs 68,000 tons, has 13 decks and has a carbon footprint three times larger than that of a 747 flight," and "neither the frequently-asked-questions page nor the trip's summary website mentions the term 'carbon footprint' or even uses the word carbon." According to the article, "paying passengers, up to 1,070, will be able to view seals, walruses and other Arctic wildlife from the cruise liner with their tickets, which cost \$20,000 to \$44,000."

PRESIDENT OBAMA URGED TO INVOLVE UTAHNS IN NATIONAL MONUMENT DESIGNATIONS. In light of news that "14 senators support the creation of a new national monument in southeastern Utah," Natalie Gochnour, an associate dean in the David Eccles School of Business at the University of Utah and chief economist for the Salt Lake Chamber, urges President Obama in an op-ed for the [Deseret \(UT\) News](#) (8/1, 538K) to involve Utahns in national monument designations. She argues that "the public deserves to be a part of the discussion" because "land designations affect real people and their voices matter," and "when presidents circumvent a public process, they cause other problems."

America's Great Outdoors:

National Park Service:

BILL WOULD SHIFT CONSERVATION DOLLARS TO MAINTENANCE WORK. The [E&E Daily](#) (7/31) reports that Rep. Sam Graves "this week introduced a bill to require that federal conservation dollars be used for maintenance rather than federal land acquisition." The "No More Land Act" would "shift money from the Land and Water Conservation Fund to pay for maintenance on federal lands." Graves said, "Over the years, we've seen these agencies buying up more and more private property. My bill goes a long way in setting new priorities for these federal agencies and stopping the blatant power grab we have seen from them for too long now."

DRAKES BAY OYSTER CO. SHUTS DOWN RETAIL OPERATIONS. The [Marin \(CA\) Independent Journal](#) (8/1, 82K) reports that Drakes Bay Oyster Co. "shut down its retail operations Thursday in a goodbye ceremony attended by hundreds who raised the salty delicacies in a final toast on the sand spit by the water." The article notes that "while the retail operations have shut down, the company will be able to keep harvesting oysters for at least another 30 days in the wake of an agreement reached with the National Park Service last week."

Also covering the story are the [Santa Rosa \(CA\) Press Democrat](#) (8/1, 164K) and [KQED-FM](#) San Francisco (7/31, 15K).

MORE THAN 100 PROTESTERS ARRESTED IN DEMONSTRATION OVER DEPORTATIONS AT WHITE

HOUSE. [ABC News](#) (8/1, 3.58M) reports that "more than a hundred demonstrators intentionally had themselves arrested outside the White House today in protest against the Obama administration's response to the sudden surge of undocumented immigrants across the border with Mexico." According to the article, "the act of civil disobedience was organized mostly by religious groups, including the Catholic Sisters of Mercy and the United Methodist Church." The article notes that "several hundred additional supporters looked on as the activists staged a sit-in on the sidewalk outside the White House grounds, prompting National Park Service police to remove and arrest them for obstructing foot traffic in a highly choreographed, but peaceful, demonstration."

Also reporting on the story is [WJLA-TV](#) Washington (8/1, 125K).

YELLOWSTONE NATIONAL PARK SEEKS INPUT ON QUARANTINE PROGRAM FOR BISON. The [E&E Daily](#) (7/31) reports that Yellowstone National Park on Wednesday "announced plans to consider relocating its genetically pure bison to public and tribal lands across the West, a move conservationists have hailed as an important step toward restoring the massive herbivores to their native grasslands." The park is "considering establishing one or more long-term quarantine facilities in the park, tribal lands or elsewhere."

Also providing coverage by the AP is the [Wichita \(KS\) Eagle](#) (7/30, 313K).

MESA VERDE URGED TO PROVIDE WATER TO WILD HORSES. The [AP](#) (8/1) reports that "wild horse advocates want Mesa Verde National Park to start giving water to its herds following the deaths of six horses." Park wildlife biologist Neal Perry says "the watering ban is standard on all federal public lands." Instead, officials are "looking at rounding up some of the park's 100 wild horses and either selling them or treating them with birth control."

Also reporting on the story is the [Denver Post](#) (8/1, Lofholm, 923K).

EROSION CAUSES PARTIAL CLOSURE OF DUNES AT PICTURED ROCKS NATIONAL LAKESHORE. The [AP](#) (8/1) reports that "a portion of the Grand Sable Dunes in Grand Marais is now closed to the public because of hazardous erosion." Park officials announced Tuesday that "the northeast section of the dunes at Pictured Rocks National Lakeshore had been closed by the National Park Service." Officials said "the dunes in that area are rapidly eroding into Sable Creek and Lake Superior."

WOMAN RECORDS HER TALES FOR NPS. The [Richmond \(VA\) Times-Dispatch](#) (8/1, 323K) reports on the work by the NPS to record Ida Mae Garrison's "memories of her upbringing and education for use at Devils Tower National Monument." Amy Bracewell, "site manager of a park in the Shenandoah Valley, who formerly worked at Mount Rushmore, traveled to Roanoke last month to interview Garrison, who spent much of her adult life in Washington and Northern Virginia, where she met her husband, Carl."

MUDSNAILS FOUND IN WYOMING LAKE. The [E&E Daily](#) (7/31) reports that "the Game and Fish Department in Wyoming found fast-cloning invasive mudsnails in Lake Cameahwait in Wyoming." According to the state agency, "the mudsnails, native to New Zealand, can alter water chemistry and are used to tight living conditions with more than 275,000 snails sometimes living in a single square yard." The article notes that "the mudsnails have previously been found in Yellowstone and Grand Teton national parks and in rivers like the Bighorn, Shoshone and Snake."

REPORT URGES OVERHAUL OF CALIFORNIA'S STATE PARKS . The [E&E Daily](#) (7/31) reports that "California's state parks system is in dire need of a financial overhaul, a new report shows." The state "must revamp the way it funds and maintains its 280 state parks, according to a preliminary report issued by a state commission reviewing the system." The panel "recommended a stable year-to-year state funding model and rules changes that would make it easier for the parks system to accept private donations."

Bureau of Land Management:

REPORT: BLM'S BUNDY RETREAT WILL "EMBOLDEN" EXTREMIST MILITIA. The [E&E Daily](#) (7/31) reports that the BLM's "retreat from an armed confrontation with protesters during its roundup of cows in Bunkerville, Nev., will inspire more anti-government violence in the coming year, according to a new intelligence report from

the Department of Homeland Security." The July 22 report from DHS's Office of Intelligence and Analysis also "found the United States has experienced a spike in anti-government violence or plots over the past several months compared with previous years, fueled, in part, by the perception that armed militia were victorious at Cliven Bundy's Nevada ranch, the assessment warned." The article notes that "the assessment highlighted three incidents since April that appear to be connected to the events in Bunkerville, including the gunning down of two Las Vegas police officers, a threat that Texas militiamen will 'exterminate' federal officials who attempt a 'land grab,' and discussions by a Missouri-based militia movement about attacking federal convoys or helicopters it believed could be used to raid Bundy's ranch."

TWO WILD HORSES DIE DURING ROUNDUP IN UTAH. The [Salt Lake \(UT\) Tribune](#) (8/1, 470K) reports that "an agitated young wild horse alone in a corral apparently charged into a side panel and broke her neck after being rounded up on Utah's west desert," according to BLM spokeswoman Lisa Reid. Reid said that "the yearling filly died instantly and the BLM also had to euthanize a 7-year-old mare with a severely deformed leg from a previous fracture." The article notes that "both deaths — unusual during Utah's wild horse roundups — occurred Wednesday, the third day of the BLM's Blawn Wash gather in the Wah Wah Mountains of Beaver County, about 35 miles southwest of Milford." The bureau "finished the roundup Thursday with 143 horses removed from Blawn Wash, Reid said."

Fish and Wildlife Service:

FWS DIRECTOR ASHE DISCUSSES AGENCY'S USE OF SOCIAL MEDIA. FWS Director Dan Ashe described "how his agency has harnessed Facebook, Twitter, and other social media sites to keep national wildlife refuge visitors informed" with Curtis Franklin Jr. of [Information Week](#) (8/1, 1.3M). According to Franklin, in "a wide-ranging conversation in which we talked about why the agency has turned to social networks, what the agency's social network 'followers' get from their interaction with the agency, and what Dan has learned from his very active presence on Twitter." They also "had a chance to talk about how the agency manages its social media presence — no small issue for a geographically diverse organization that encompasses functions ranging from biology to bureaucracy."

BIOLOGISTS CRITICIZE FWS FOR LETTING OFFICIAL OVERRULE AGENCY SCIENTISTS ON WOLVERINE LISTING. The [E&E Daily](#) (7/31) reports that the FWS "set a 'dangerous precedent' when it allowed a regional director to overrule the agency's scientists and reverse a proposal to list the American wolverine as a threatened species, according to a letter signed by more than 50 wildlife biologists." The article notes that "the letter — spearheaded by the Center for Biological Diversity — stops short of accusing the agency of political meddling or scientific misconduct." However, "it asserts that the FWS official ignored the best available science when she ordered scientists to withdraw their recommendation to list the wolverine under the Endangered Species Act."

Also reporting on the story is the [Los Angeles Times](#) (8/1, Sahagun, 3.42M).

ANIMAL ACTIVISTS CRITICIZE REPUBLICANS FOR "BETRAYING MASCOT" ELEPHANT. [The Hill](#) (8/1, Devaney, 237K) reports that "GOP lawmakers are 'betraying the party's mascot' with legislation that would roll back protections for endangered African elephants, animal rights activists say." The article notes that "more than 75,000 people have signed a petition protesting the Republican-backed Lawful Ivory Protection Act, which the animal rights activists say would encourage elephant poaching by establishing a market for ivory trade in the US" The petition says, "For years, the GOP has proudly held up the elephant as a mascot for their party — but when it comes to protecting these gentle giants, it seems Republican lawmakers are willing to betray this majestic animal."

BILL SEEKS TO PROTECT PRODUCERS FROM CONSEQUENCES OF LESSER PRAIRIE CHICKENS LISTING. The [Hays \(KS\) Post](#) (7/31) reports that Sen. Jerry Moran "recently introduced legislation, S.2623, to protect producers from the consequences of the lesser prairie chicken listing as a threatened species under the Endangered Species Act." The measure would "prohibit the US Department of Agriculture and US Department of the Interior from altering any land management practices based on the lesser prairie chicken listing."

Also providing coverage is the [Hays \(KS\) Daily News](#). (8/1, 36K)

FWS FINALIZES PROTECTIONS FOR THREE FLOWERS. The [E&E Daily](#) (7/31) reports that the FWS will "finalize protections for three species of flower around the country." According to a notice scheduled to be published in Friday's Federal Register., "the Short's bladderpod (*Physaria globosa*), whorled sunflower (*Helianthus verticillatus*) and fleshy-fruit gladececross (*Leavenworthia crassa*) will all be listed as endangered under the Endangered Species Act."

STUDY BLAMES LOST CALVES ON PANTHERS. The [E&E Daily](#) (7/31) reports that "the recovery of Florida's panther population has brought unpleasant consequences for some ranchers, as a new study has linked the death of calves in the southwest part of the state with the feline predators." The article notes that the University of Florida research is "the first step in a potential program the US Fish and Wildlife Service is considering." The FWS is "looking into the possibility of paying ranchers to set aside panther habitat rather than compensate them for individual kills, which can be difficult to verify."

Also reporting on the story are the [Los Angeles Times](#) (8/1, Srikrishnan, 3.42M) and the [Christian Science Monitor](#) (7/31, 566K).

FWS RELEASING BALLVILLE DAM STUDY. The [Fremont \(OH\) News-Messenger](#) (7/31, 24K) reports that the FWS "should release the final Ballville Dam environmental impact statement today, an agency official said Thursday, a move that will help better determine costs associated with repair or removal of the structure." The article notes that "Fremont City Council members have been waiting on the release of the study, as well as a recommendation on whether to remove or repair the dam from engineering firm MWH, to aid them in making a final decision on the dam's fate before the end of 2014."

REFORM OF ENDANGERED SPECIES ACT WELCOMED. For [Forbes](#) (7/31, 11.38M), David Blackmon writes that "the US House of Representatives should be applauded this week for passage of HR 4315, the 21st Century Endangered Species Transparency Act." According to Blackmon, "the reforms proposed in the bill would become the first changes to this archaic and much-abused federal statute in 26 long years, during which time radical groups like the Center for Biological Diversity and WildEarth Guardians have made the law into a cottage industry for lawsuit abuse."

US Geological Survey:

USGS ANNOUNCES PLANS TO CONDUCT A THREE YEAR GROUNDWATER STUDY IN MOAB. The [Moab \(UT\) Times-Independent](#) (8/1) reports that the USGS "intends to sponsor and conduct a new comprehensive groundwater study of the Moab area, officials said this week." David Susong, supervisory hydrologist at the USGS Utah Water Science Center, and Victor Heilweil, a research hydrologist at the Utah Water Science Center, discussed "the proposed three-year study during a 90-minute public presentation and discussion held Tuesday, July 29 at the Grand Water and Sewer Service Agency (GWSSA) offices in Spanish Valley."

ADDITIONAL COVERAGE OF STUDY THAT PREDICTS SOUTHEAST CITIES WILL GROW TO HARM HABITAT, ECOSYSTEMS. Additional coverage of the study the US Department of Interior's Southeast Climate Science Center and North Carolina State University was provided by the [Atlanta Journal-Constitution](#) (8/1, 1.16M), the [Atlanta Business Chronicle](#) (8/1, Subscription Publication, 175K) and [WXIA-TV Atlanta](#) (7/31, 42K).

Securing America's Energy Future:

Renewable Energy:

COUNTY RAISES CONCERNS ABOUT PROPOSED WIND-ENERGY PROJECT'S IMPACT ON FISHERY. The [Newport \(OR\) News-Times](#) (8/1) reports that "citing potential damage to a cherished Pacific whiting fishery and the coastal economy, Lincoln County's Board of Commissioners oppose a proposed deep-water wind energy project located about 16 nautical miles off Coos Bay." Board Chair Terry Thompson initiated the action Wednesday after sending a letter to the BOEM "asking for 'a restart' of the site selection process for Principle Power's request to place a demonstration project on the Outer Continental Shelf (OCS)."

PMSS TO ADVISE ON OFFSHORE CABLING. The [Windpower Monthly](#) (8/1) reports that PMSS America Inc.

"will work with UK-based marine consultants Red Penguin Associates to draw up guidelines for the installation of offshore cables" for the Interior Department and BSEE.

Onshore Energy Development:

JUSTICE MINES HAVE 266 PENDING VIOLATIONS IN FIVE STATES. The [AP](#) (8/1) reports that "a West Virginia coal billionaire has more than 250 pending violations at mining operations in Kentucky and four other states." The Courier-Journal "cited data from the federal Office of Surface Mining Reclamation and Enforcement in reporting that almost half of the citations against mines owned by Jim Justice are located in Kentucky, where enforcement officials have set an Aug. 11 deadline to take corrective action." The article notes that "other violations are pending at operations in West Virginia, Tennessee, Virginia and Alabama."

The [Charleston \(WV\) Gazette](#) (7/31, 44K) editorializes that "Justice is truly beloved in West Virginia, and deservedly so. He's a blessing to this state. It's a shame that an albatross hangs around his neck, as part of the plight of Appalachian mining."

Coverage by the AP was also picked up by the [Washington Post](#) (7/31, 4.06M), the [Columbus \(IN\) Republic](#) (8/1, 81K), the [Charleston \(WV\) Gazette](#) (7/31, 44K), the [Bristol \(TN/VA\) Herald Courier](#) (8/1, 81K), the [Beckley \(WV\) Register-Herald](#) (8/1, 63K), [WDBJ-TV](#) Roanoke, VA (8/1, 81K), and [WSAZ-TV](#) Huntington, WV (8/1, 51K).

Also reporting on the story is [WCAV-TV](#) Charlottesville, VA (8/1, 1K).

BLM LEASES COLORADO TRACT FOR \$2.9 MILLION. The [E&E Daily](#) (7/31) reports that the BLM on Wednesday "accepted Bowie Resource Partners LLC's \$2.9 million bid for the right to access more than 8 million tons of coal in Colorado." Bowie "bid on the 1,790-acre tract to extend the life of its existing mine in Delta County, Colo., which BLM says produces more than 3 million tons of coal per year."

[Politico](#) (7/31, Guillén, 637K) reports that "Greenpeace is not happy with the price."

SENATE INDIAN AFFAIRS COMMITTEE PASSES FOUR RESOURCES BILLS. The [E&E Daily](#) (7/31) reports that the Senate Indian Affairs Committee "passed four land-management bills yesterday, including legislation that would promote tribal coal development." The article notes that "among the measures approved by voice vote was S. 2442, from Montana Democrats John Walsh and Jon Tester, which would correct a century-old surveying error depriving the Northern Cheyenne Tribe of mineral resources." The measure would "give the tribes about 5,000 acres of subsurface coal rights within the reservation," and "in return, the current owner would receive roughly 10,000 acres of federal coal reserves outside of the tribe's lands."

AFRICAN LEADERS LOOKS FOR ENERGY PARTNERSHIPS AHEAD OF WHITE HOUSE SUMMIT. The [E&E Daily](#) (7/31) reports that "dozens of African business and government leaders will be networking with the energy business community here over the next couple of days, part of a lead-up to a major White House summit with African governments in Washington, D.C., next week." According to the article, "government ministers and officials from Tanzania, Kenya, Mozambique and elsewhere will have a chance to explain to private companies interested in investing what their countries' future energy needs and plans are, and how they hope to reach their targets." The US government is "acting as the go-between during a series of events starting" Thursday, "hoping that the US private sector can help African governments further build out their energy infrastructure to be powered by natural gas and renewable sources."

LINK BETWEEN WASTEWATER WELLS AND EARTHQUAKES REMAINS CONTROVERSIAL. [NPR](#) (7/31, Wertheimer, 519K) reports in an interview with Joe Wertz, an energy reporter, that there remains controversy on whether there is a definitive link between wastewater wells and earthquakes. Despite insistence from many gas companies and state regulators that there is no scientific evidence to prove a link, some states have become "more aggressive with regulation" and are no longer "rubberstamping disposal well permits in earthquake-prone areas" as a precaution. Wertz says that the issue is unique in Oklahoma, where many of the people who are affected by the earthquakes also work in the oil and gas industry.

COLORADO COURT REJECTS FRACKING BAN, BUT LEAVES DOOR OPEN FOR MORATORIUMS. The [Fort](#)

Collins (CO) Coloradoan (7/31, Handy, 59K) reports that Colorado's "long-established legal precedent" that places power to regulate the oil and gas industry with the state is preventing cities like Longmont, Fort Collins, and Boulder from enacting fracking bans. According to Jan Laitos, a University of Denver environmental law professor, the only way Colorado cities will be able to implement a fracking ban is if there is a constitutional change. Despite the legal constraints facing an outright ban, other communities have maintained that a temporary moratorium is still within the authority of local governments to enact.

COURTS URGED TO STRIKE DOWN ANTI-FRACKING EFFORTS. In an op-ed for the [Wall Street Journal](#) (8/1, Matthews, Subscription Publication, 5.89M), Merrill Matthews, a resident scholar with the Institute for Policy Innovation in Dallas, writes that efforts by state and local government to curb "fracking," which may end up being reviewed by the Supreme Court, are unconstitutional attempts to limit the ability of property owners to profit from their mineral rights and should be struck down by courts.

LATIMES: CALIFORNIA MUST FOLLOW THROUGH ON EFFORTS TO CREATE REGULATIONS FOR MEDICAL MARIJUANA. The [Los Angeles Times](#) (8/1, 3.42M) editorializes that state legislature efforts to pass "the first comprehensive statewide regulations" for medical marijuana are "long past due" and "state leaders should not let another year go by without fixing...the mess." The Times notes while the current bill is "a work in progress...with some tweaks it would be a huge improvement over the current situation."

Offshore Energy Development:

SHELL RECONSIDERS ARCTIC DRILLING. [The Hill](#) (8/1, Barron-Lopez, 237K) reports that Shell CEO Ben van Beurden has announced that the company is "leaving Arctic drilling operations on the table for 2015." The announcement appears to be a slight shift from previous policy, as Shell cancelled plans for Arctic exploration earlier this year, and Van Beurden had previously indicated that "exploration in the Arctic may not fit well with Shell's fiscal policies." Van Beurden did not commit to a starting date for resuming drilling, but the company has said it will "push for permits."

Also reporting on the story is the [FuelFix](#) (7/31, 7K).

BOEM SEEK LEASE NOMINATIONS FOR 2017 BEAUFORT SEA SALE. The [Alaska Journal of Commerce](#) (8/1, 14K) reports that "Shell has not yet been allowed to drill on its existing leases in the Alaskan Beaufort Sea but the federal government is now requesting proposals from industry on areas to be offered for lease there, according to a notice published July 29 in the Federal Register." The BOEM is "calling for lease nominations for OCS Sale 242 planned for 2017, according to the notice." In a statement, BOEM acting director Walter Cruickshank said, "There is significant oil and gas potential in the Beaufort Sea, but this part of the Arctic Ocean is also a unique and sensitive environment that is crucially important to the subsistence needs of Alaska Native communities on the North Slope."

BOEM SEEKS TO RELEASE NEW CHUKCHI REPORT BY OCTOBER. The [Alaska Journal of Commerce](#) (8/1, 14K) reports that the BOEM has "developed a revised exploration and development scenario for Chukchi Sea oil and gas development that will be part of a new draft supplemental environmental impact statement, or SEIS, to be issued this fall." According to the article, "the scenario is confidential for now while being reviewed by other federal agencies, the State of Alaska and the North Slope Borough, the regional municipal government, the BOEM said in an update submitted to the US Alaska District Court in Anchorage." The bureau is "now working on revised oil spill scenarios using the draft exploration and development plan."

OIL COMPANIES CEDE BEAUFORT DRILLING RIGHTS. The [E&E Daily](#) (7/31) reports that "oil companies have ceded drilling rights on nearly half of their Beaufort Sea territory since 2003, according to an analysis of government data by the conservation group Oceana." The article notes that "even as the Obama administration plans to auction off more of the Beaufort Sea, it's not clear whether oil companies are interested in expanding operations there." According to the article, "about 584,000 acres of territory has been ceded by the companies since it was first acquired, and all but 7 acres is now held by Shell Oil Co."

JUSTICE DEPARTMENT: BP CAN'T DISMISS LAWSUITS BY BLAMING DRILLING MORATORIUM. The [E&E Daily](#) (7/31) reports that "BP PLC can't avoid paying oil field services firms to compensate them for losses linked

to the 2010 Deepwater Horizon oil spill by blaming the federal government's subsequent drilling moratorium, federal prosecutors said." The Justice Department said "in court filings late Tuesday that BP can't use the defense, known as a supervening cause defense, because it isn't allowed under the Oil Pollution Act." US attorneys told US District Judge Carl Barbier, "Those defenses aim to litigate the conduct of the United States, even though the conduct of BP in causing the Macondo blowout and its aftermath is the only relevant subject."

ENVIRONMENTAL GROUPS URGE FOR RE-EXAMINATION OF GULF OF MEXICO RIGS-TO-REEFS

PROGRAM. The [E&E Daily](#) (7/31) reports that "a group of environmentalists, scientists and fishermen is calling on the Interior Department for 'strong and consistent implementation' of its idle iron policy in order to restore the Gulf of Mexico." The group contends in a letter to Interior Secretary Sally Jewell that "oil and gas companies are using Interior's 'rigs to reefs' program to avoid the costs of decommissioning oil platforms in the Gulf under the guise of creating aquatic habitat." They wrote in the letter, "The permanent seabed placement of obsolete oil and gas extraction infrastructure invites more ecosystem damage rather than restoring it as originally envisioned. The proposed additional discard of uncounted tons of deteriorating scrap metal into sensitive Gulf habitats will result in significant cumulative environmental degradation."

SHELL REACHES DEAL WITH ALASKA NATIVES TO SHARE IN OFFSHORE PROFITS. The [AP](#) (8/1, D'oro) reports that "an Alaska Native regional corporation and six Native Village corporations signed an agreement with a Shell Oil subsidiary Thursday that aims to share the profits from offshore drilling off Alaska's northwest coast." Shell and the Arctic Slope Regional Corp. announced "the formation of a new company called Arctic Inupiat Offshore LLC." The article notes that "the agreement with the Shell subsidiary, Shell Gulf of Mexico Inc., gives the Alaska Native company the option of acquiring an overriding royalty interest from Shell's drilling on leases in the Chukchi Sea."

Also reporting on the story are the [Alaska Journal of Commerce](#) (8/1, 14K) and [KUCB-FM](#) Unalaska, AK (8/1).

VIRGINIA'S CONGRESSIONAL DELEGATION SUPPORTS COASTAL ENERGY EXPLORATION. In an op-ed for the [Hampton Roads \(VA\) Virginian-Pilot](#) (8/1, 405K), Sens. Mark Warner and Tim Kaine; and Rep. Randy Forbes, Rob Wittman and Scott Rigell, write to "to provide a more optimistic case for coastal energy exploration." They claim that "the benefits of advancing energy production are significant: It would diversify Hampton Roads' economy, provide revenue for our schools and roads, and lessen our dependence on foreign energy." Moreover, they "are convinced it can be done in a manner that meets our shared obligation to protect our waters and shoreline."

Tackling America's Water Challenges:

CALIFORNIA'S DROUGHT GETS WORSE. [Bloomberg News](#) (8/1, Randall, 2.76M) reports that in the course of the last week, "California's three-year drought...went from bad to dreadful." the article note that "the water reserves in California's topsoil and subsoil are nearly depleted, and 70 percent of the state's pastures are now rated 'very poor to poor,' according to the USDA." Also, "reservoir levels are dropping, and groundwater is being drained from the state as farms and cities pull from difficult-to-replenish underground caches."

Meanwhile, [Bloomberg News](#) (8/1, Vekshin, Marois, 2.76M) reports that "well drilling has doubled and tripled in two Central Valley counties that are at the core of the nation's most productive agricultural region after federal and state regulators cut the water they provide to farms as supplies ran low in the drought." The article notes that "if the shortage continues, there is a risk that farmers will deplete the groundwater reserves they are using as a lifeline to survive the dry spell."

EPA GREEN LIGHTS NAVAJO GENERATING STATION. The [Indian Country Today Media Network](#) (7/31, 45K) reports that the EPA has "green lighted the Navajo Generating Station in northern Arizona to operate until 2030 on the condition that its owners – the Bureau of Reclamation, Los Angeles Department of Water and Power, Arizona Public Service, NV Energy, Tucson Electric Power and Salt River Project – shut down one of the plant's three 750-MW generators or cut output at the plant by that amount by 2020." The article notes that "no other emissions controls will be required at the coal-fired power plant, one of the country's biggest emitters of nitrogen oxides, until 2030." According to the article, "with the pollution controls installed, the plant would be able to operate until 2044."

BOR SIGNS OFF ON MERCED COUNTY GROUNDWATER SALE. The [Sacramento \(CA\) Bee](#) (7/31, 582K) reports that the BOR has "signed off on the first step of a controversial proposal to sell groundwater out of Merced County by approving the project's environmental report." The bureau issued a "Finding of No Significant Impact." Rain Emerson, Supervisory Natural Resources Specialist for BOR's South-Central California office, said, "Based on how the project was scaled back and the analysis of how the (groundwater) pumping on the ranches won't change from what's been done already, there weren't any significant impacts identified to neighboring wells or adjacent land owners."

The story also appears at the [Fresno \(CA\) Bee](#) (7/31, 322K) and the [Merced \(CA\) Sun-Star](#) (7/31, 99K).

BOR RELEASES DRAFT ENVIRONMENTAL ASSESSMENT FOR HYDROPOWER PLAN ON SOUTH CANAL.

The [Delta County \(CO\) Independent](#) (8/1, 22K) reports that the BOR has "released a draft environmental assessment for a proposed hydropower project at Drop 4 of the South Canal, part of the Uncompahgre Project in Montrose." The article notes that "the project, proposed by the Uncompahgre Valley Water Users Association, would be located at existing Reclamation facilities on the South Canal."

BAY DELTA CONSERVATION PLAN DEFENDED. In an op-ed for the [Sacramento \(CA\) Bee](#) (8/1, 582K), Mark W. Cowin, the director of the California Department of Water Resources, writes that "the California Department of Water Resources and its federal and state partners on the Bay Delta Conservation Plan have a legal responsibility to protect threatened species and supply water to millions of Californians." He claims that "with the Bay Delta Conservation Plan, DWR and its partners have moved beyond decades of incremental, species-by-species compliance with the state and federal endangered species acts that have failed to recover Chinook salmon, Delta smelt and other species." He concludes that "the status quo in the Delta does not work for California's natural heritage or its economy, and we bear the responsibility to change that."

[Empowering Native American Communities:](#)

LAWMAKERS INTRODUCE BILL TO STREAMLINE DISTRIBUTION OF COBELL CHECKS. The [Nation Sun News](#) (8/1) reports that Sen. John Walsh and Rep. Peter DeFazio "introduced a bill last week that would streamline the Cobell Land Buy-Back program and the payment of the second and long awaited Cobell settlement payments to plaintiffs." Congressional members have "recently begun speaking out about their displeasure with the continued delays preventing tens of thousands of Native Americans from receiving their share of the Cobell settlement funds." The proposed measure would "amend the Claims Resettlement Act of 2010 that both approved payment of funds to individual Native American plaintiffs and also ordered the Department of the Interior to use \$1.5 billion of the \$3.4 billion awarded to distribute money to Settlement class members."

[Top National News:](#)

HOUSE LEADERS POSTPONE RECESS, SCRAMBLE TO SALVAGE BORDER BILL AS TIME RUNS OUT.

Media reports note prospects for House passage of a border bill remain in flux, after House GOP leaders failed to bring it to a vote on Thursday. Stories also note there is virtually no chance a House bill – were one to pass the lower chamber – could be reconciled with a Senate version and sent to the President before Congress goes on recess. As [USA Today](#) (7/31, Davis, 5.76M) puts it, for the House GOP "the exercise is largely political because whatever Republicans ultimately pass will face Senate opposition and a White House veto threat." The [CBS Evening News](#) (7/31, story 6, 1:25, Cordes, 5.08M) was the only network newscast to report on the immigration debate, describing a Congress "in a state of disarray" and noting that "Senate Democrats don't have enough votes for their bill either."

The [AP](#) (7/31, Werner) notes House GOP leaders had to "abruptly" abandon their bill yesterday due to lack of conservative backing, though "an hour later, they called an urgent meeting to plot their next moves" in what amounted to "an embarrassing setback for Speaker John Boehner and his leadership team as a small group of tea party lawmakers once again upset their plans." The issue for conservatives, "goaded by firebrand" Sen. Ted Cruz, is their reluctance to "give money to Obama without taking steps to rein in his executive authority on immigration." Democrats, adds the AP, "openly mocked the apparent influence of Cruz over the House GOP, referring to him as Speaker Cruz." Cruz, says the [Los Angeles Times](#) (8/1, Mascaro, 3.42M), "has been working

behind the scenes to stir up conservative opposition" to the House plan, and "it worked," leading "House GOP leaders" to bristle "at the senator's interference on their turf." Rep. Peter T. King is quoted as saying that the Texas senator "had 'hijacked'" the GOP.

In a front-page story highlighting Cruz's role in the bill's failure, the [Washington Post](#) (7/31, A1, Costa, 4.06M) says the "beginning of the collapse...came Wednesday evening, when...Cruz gathered more than a dozen House Republicans at his office in the Dirksen building on Capitol Hill." Present were "longtime Cruz confidants, such as Rep. Michele Bachmann (Minn.), and more recent ones, such as Reps. Todd Rokita (Ind.) and Marsha Blackburn (Tenn.)." Yesterday, [Politico](#) (8/1, Raju, 637K) reports, "an unapologetic...Cruz dismissed GOP criticism Thursday that he helped sink an emergency aid package for the Southwest border, arguing any bill Congress passes must end 'amnesty' for undocumented immigrants."

The [Washington Post](#) (8/1, A1, Kane, O'Keefe, 4.06M) similarly calls "the bill's retraction...an embarrassing failure in the first real test of the new leadership team that takes office Thursday after Virginia Rep. Eric Cantor's resignation as majority leader." House Appropriations Committee Chairman Harold Rogers "said he was 'disappointed' as he conceded that support quickly eroded Thursday."

At any rate, [Roll Call](#) (7/31, Dennis, Subscription Publication, 76K) reported, House GOP leaders "plan to try" to pass their bill "again Friday before jetting out of town for the August recess." Oversight and Government Reform chairman Darrell Issa told reporters, "We will stay until we vote." [Roll Call](#) described the atmosphere surrounding the GOP caucus' debate as "chaos." [Reuters](#) (7/31, Cowan) also casts the situation as a serious embarrassment for Boehner's leadership team, while [Politico](#) (7/31, Bresnahan, Palmer, Sherman, 637K) refers to a "meltdown," noting that to turn the situation "into a victory," GOP leaders "are going to have to pick up a lot of votes in a short period of time," with "GOP sources" saying "they would need to close a double-digit gap."

More optimistic was Rep. Spencer Bachus, who according to [Bloomberg News](#) (8/1, Wallbank, Wasson, Bender, 2.76M) said as he left a meeting yesterday afternoon, "We'll have the votes tomorrow," while [The Hill](#) (8/1, Marcos, 237K) notes Rep. Tom Cole "said the opponents are now 'a relatively small group.'" Another story in [The Hill](#) (8/1, Lillis, 237K), however, reports that "Tea Party conservative" John Fleming of Louisiana called "Republican opposition to" the bill "insurmountable," and warned "there are no changes GOP leaders could make to their \$659 million package that would win the support of 218 Republicans." Under the headline "Boehner Blinks: GOP Leaders Delay Border Bill, Leave Obama In Control," the [Washington Times](#) (8/1, Dinan, 465K) says that "at root, the conservatives said no matter what they passed, they didn't trust Mr. Obama to follow through."

The [New York Times](#) (8/1, Parker, Subscription Publication, 9.79M) also reports GOP leaders "are expected to hold another meeting with their members on Friday morning to decide how to move forward," facing the prospect of heading "home for the recess with nothing to show for their efforts – something many Republicans fear will be an enormous political liability." Like USA Today, the Times notes "the blow to...Boehner and his new team...makes it unlikely that any legislation to address what both Democrats and Republicans call an urgent humanitarian crisis will reach President Obama's desk before the August break." Moreover, "the Senate was also unlikely to pass its own border bill on Thursday."

The [Huffington Post](#) (7/31, Foley, 11.54M) briefly noted the developments in the House, while [Roll Call](#) (7/31, Dennis, 76K) reported that the White House issued a statement in which it called the House's failure to pass a bill "extraordinary," adding that "by failing to act on an immigration reform bill that requires that people who are here illegally pay taxes, undergo background checks and get on the right side of the law, the House is instead driving an approach that is about rounding up and deporting 11 million people, separating families, and undermining DHS' ability to secure the border."

[The Hill](#) (8/1, Shabad, 237K) reports on its website that Texas Gov. Rick Perry yesterday said "Congress should not leave Washington for its five-week recess until the 'job is completed' on the border crisis." Said Perry, "While Texas has taken what steps it can to mitigate the damage caused by a porous border, Congress and the President have a duty to address our border security issues without further delay. Congress should not go into recess until the job is completed."

In an editorial, the [Washington Post](#) (8/1, 4.06M) accuses House Republicans of "opting for the preposterous when summoned to do the practical," and says "Senate Democrats did not look much more determined to deal

with the immediate problem." The Post concludes calling for "resources to handle the influx at the border and accelerate the adjudication of...cases," and adds that "Congress's failure to provide them would be nothing short of shameful."

Under the headline "Republicans Deliver Another Self-inflicted Wound," Dan Balz writes in the [Washington Post](#) (8/1, 4.06M) that Republicans this week "have shown a remarkable capacity to complicate their path to victory" in November, because "the tea party gives the" GOP "energy, but...continues to push the party further to the right than some strategists believe is safe ground." The latest immigration dust-up "offered a fresh example of the conundrum for Republicans."

Senate Bill Blocked On Procedural Vote. [Politico](#) (8/1, Kim, Everett, 637K) reports that the Senate also failed to move its bill last night. The measure "died on a procedural vote, 50-44." Senate Majority Leader Harry Reid said after the vote, "It's very regretful that we're not able to move forward on it."

Amid DC Paralysis, Obama Awaiting Recommendations For Executive Action On Border. In the final paragraphs of a story about House GOP leaders' failure to pass a border bill, the [New York Times](#) (8/1, Parker, Subscription Publication, 9.79M) notes the White House "has said the president expects to receive recommendations from" DOJ and DHS "by the end of the summer about how Mr. Obama could use his executive authority to make immigration enforcement more humane." But the situation is politically dicey for the President, who is "coming under pressure on both sides" – with Republicans "asserting that they do not trust him to enforce the existing immigration laws" and Democrats "facing tough re-election fights...urging the administration not to take further executive actions on immigration, warning that it could hurt them back home with voters."

The [Washington Post](#) (8/1, A1, Kane, O'Keefe, 4.06M), meanwhile, reports Rep. Rogers "encouraged Obama to act on his own and rescind his 2012 executive order directing immigration officials to use broad discretion in deciding whether to deport undocumented children here in the United States." Referring to the standoff in the House, Rogers said, "I think this will put a lot more pressure on the president to act."

Boehner: "No More Unilateral Action By The President." [Reuters](#) (7/31, Felsenthal) reports that Boehner yesterday once more urged the President not to take unilateral action on immigration. Said Boehner, "No more unilateral action by the president. ... If the president takes these actions, he'll be sealing the deal on his legacy of lawlessness. ... He'll be violating the solemn oath he made to the American people on the day of his inauguration."

DHS: Diseases Spreading At Facilities Holding Children. The [Daily Caller](#) (7/31, Greer, 408K) noted that a DHS report "on the facilities housing the recent flood of 'unaccompanied alien children' (UAC) from Central America describes conditions where diseases such as tuberculosis (TB) and scabies are spreading, and staff are being exposed to human waste."

112 Arrested As Activists Protest Deportations Before White House. The AP (7/31, Lugo) reports "activists and religious leaders massed outside the White House on Thursday to protest against US policies on deporting migrants in the country illegally, and police arrested 112 demonstrators for blocking traffic." The protesters "urged...Obama to immediately halt all deportations," and "called on him to extend relief for migrants by decree and to protect Central American children crossing into the US unaccompanied by adults." [Reuters](#) (7/31, Chiacu, McGinnis) runs a similar report.

Amid Debate About Use Of National Guard At Border, "Masked Militias" Arrive In South Texas. [USA Today](#) (7/31, Jervis, 5.76M) reports the Texas governor's "impending deployment – no date has been announced – of up to 1,000 National Guards troops to help deal with the border crisis...has been met with mixed response throughout Texas and the USA," with critics calling the "move political theater by Perry, who is considering running for president in 2016," and warning that "the troops, ill-trained to handle immigrants, could do more harm than good."

The [Los Angeles Times](#) (8/1, Hennessy-Fiske, 3.42M), meanwhile, reports that "masked militias have arrived in South Texas with semiautomatic rifles and tactical gear, causing a stir not only in border communities, but among state officials." The Times notes that "outraged, members of the Texas Democratic congressional delegation wrote a letter to the state's attorney general demanding he denounce the militias and define what they

can legally do," but Greg Abbott, "a Republican campaigning to replace Perry as governor, dismissed the letter through a spokeswoman," calling it a "partisan political stunt."

DHS IG Dismisses 78 Out Of 116 ACLU Complaints Against Immigration Agents. The [Washington Times](#) (8/1, Dinan, 465K) notes that the DHS IG office issued a report yesterday dismissing "most complaints of civil rights violations against immigration agents handling the surge of illegal immigrant children on the border." The report says that "of the 116 complaints the ACLU filed, the IG has dismissed 78 of them," while "the other 38 are still under review."

Salvadorian Official Says Not All Children Are Fleeing To US Because Of Violence. James Brown reported on the [CBS Evening News](#) (7/31, story 7, 2:40, Brown, 5.08M), "Many of the children coming here from Central America are fleeing violence in their homeland." Reporting from El Salvador, Manuel Bojorquez added that while "gangs have merged with cartels moving drugs north," and corruption "reaches into the ranks of police, government, even schools," El Salvador's child protection agency director, Zaira Navas, "does not believe violence is driving out all those who have fled. She says most want to reunite with family in the US."

In an analysis piece, meanwhile, the [Washington Post](#) (8/1, Henneberger, 4.06M) reports that "advocates for immigrants do say that many of the young women and girls coming here from Central America are making the trip to escape sexual violence in their home countries," and "yet, incredibly, Republicans and...Obama have been arguing that a return trip to hell is the only way to keep many more Central American victims of violence from coming here."

DESPITE PREVIOUS BRENNAN DENIALS, IG SAYS CIA IMPROPERLY ACCESSED SENATE COMPUTERS.

A report from the CIA's inspector general, which says that agency employees improperly accessed the computers used by the Senate Intelligence Committee, was covered by two of the three network news broadcasts Thursday evening, and receives a great deal of print coverage this morning. Most reports note that the IG's finding, which contradicts repeated denials by CIA Director Brennan that no such spying had occurred, has prompted calls that Brennan be held accountable.

[NBC Nightly News](#) (7/31, story 3, 1:50, Williams, 7.86M) that the CIA has "admitted...to spying, not on a foreign government, but on our own Congress, improperly finding their way into US Senate computers during an investigation into the CIA's interrogation techniques after 9/11." NBC (Mitchell) added that while the CIA has denied "spying on Senate investigators looking into alleged CIA torture of prisoners after 9/11," on Thursday, the CIA's inspector general said that five agency employees, "including two attorneys, improperly accessed the computers launching a keyword search of all and a review of some of the emails of Democratic staff members." Some senators "are demanding that the CIA director, John Brennan, one of the President's closest advisers, be fired."

The [CBS Evening News](#) (7/31, story 4, 1:35, Brown, 5.08M) that Brennan "apologized today after an internal investigation determined the agency had spied on staff members of the United States Senate. Something Brennan had long denied."

[Reuters](#) (7/31, Hosenball) note that CIA spokesman Dean Boyd said that Brennan had informed Senate Intelligence Committee Chairwoman Dianne Feinstein and senior Republican Saxby Chambliss of the IG's finding and apologized.

The [New York Times](#) (8/1, Mazzetti, Hulse, Subscription Publication, 9.79M) calls the IG report a "vindication" for Feinstein, "who excoriated the C.I.A. in March when the matter became public." The Times adds that a CIA spokesman said that Brennan "would set up an internal accountability board to review the issue." According to the spokesman, the board, which will be led by former Sen. Evan Bayh, "could recommend 'potential disciplinary measures' and 'steps to address systemic issues.'"

The [AP](#) (7/31, Dilanian) calls the IG report "stark" and notes that with its release, the CIA's "insistence that it did not spy on its Senate overseers collapsed." The AP notes that the findings "were shared with the Justice Department, which has so far declined to pursue criminal charges, officials said."

[McClatchy](#) (7/31, Landay, Watkins, Subscription Publication, 23K) reports that the IG report contradicts "denials

of such intrusions" by Brennan, and notes that Feinstein called his "apology and his decision to submit the CIA IG findings to the accountability board 'positive first steps.'"

The [Washington Times](#) (8/1, Dinan, Ernst, 465K) says the admission is a retreat from Brennan's "vehement denials" that has further damaged the CIA's "credibility with Congress." The Times notes that senators "demanded accountability for Mr. Brennan's now-discredited denials." Sen. Ron Wyden said, "The CIA conducted an unauthorized search of Senate files, and attempted to have Senate staff prosecuted for doing their jobs. ... Director Brennan's claims to the contrary were simply not true."

The [Huffington Post](#) (7/31, Bobic, 11.54M) reported that Sen. Mark Udall "on Thursday called for the resignation of John Brennan as CIA director," saying in a statement, "After being briefed on the CIA Inspector General report today, I have no choice but to call for the resignation of CIA Director John Brennan. ... The CIA unconstitutionally spied on Congress by hacking into Senate Intelligence Committee computers. This grave misconduct not only is illegal, but it violates the U.S. Constitution's requirement of separation of powers. These offenses, along with other errors in judgment by some at the CIA, demonstrate a tremendous failure of leadership, and there must be consequences."

The [Wall Street Journal](#) (8/1, Gorman, Subscription Publication, 5.89M) notes that the IG report did not look into the CIA's claim that Senate aides had improperly gained access to an internal CIA document. Committee aides' actions are still under investigation by the Senate sergeant at arms.

An editorial in [USA Today](#) (8/1, 5.76M) argues that the CIA "appears to have directly violated the separation of powers doctrine," and says that Brennan either "knew what was going on and didn't tell the truth, or he didn't know what was happening in his own agency and looks dangerously uninformed." USA Today notes that Brennan's credibility "seems badly damaged," and if more senators echo Udall's call for his resignation he "would become a serious liability for President Obama."

NYTimes: CIA Culture Needs A "Thorough Overhaul." A [New York Times](#) (8/1, Subscription Publication, 9.79M) editorial argues that with its "shocking action," the CIA has offended "all of Congress and, by extension, the American public, which is paying for an intelligence agency that does not seem to understand the most fundamental concept of separation of powers." Arguing that the CIA is in need of "more than a few quiet personnel changes," the Times says the agency's "very core, and basic culture, needs a thorough overhaul."

OBAMA EXECUTIVE ORDER REQUIRES FEDERAL CONTRACTORS TO DISCLOSE LABOR VIOLATIONS.

[Reuters](#) (7/31, Becker) reports President Obama yesterday signed an executive order requiring that prospective Federal government contractors disclose any labor law violations. The Fair Play and Safe Workplaces Executive order also provides screening help to the Federal agencies hiring the contractors.

[McClatchy](#) (7/31, Clark, Subscription Publication, 23K) reports that "White House officials said the act isn't aimed at rooting at companies with a single offense, but rather those who have displayed a pattern of violations or 'particularly egregious' conduct." McClatchy notes "workers' groups hailed the move."

The [Washington Times](#) (8/1, Wolfgang, 465K) reports that before he signed the order, Obama "said that if there were fewer limits on his power, he could've accomplished the bulk of his agenda – immigration reform, a hike in the minimum wage and a variety of other items – in just 24 months." Said Obama, "If I could do all that, I would have gotten everything done in my first two years. Because these policies make sense. ... I'm confident when we look back, we'll see that these kinds of executive actions build some of the momentum and give people the confidence and hope that ultimately leads to broad-based changes."

[Politico](#) (7/31, Gerstein, 637K) reports that discussing the latest order yesterday, "administration officials" said "the House's vote to sue...Obama for allegedly abusing his executive authority won't dissuade him from keeping up his executive action drive." In fact, "aides made clear the step is also intended to send a message to the Republican House that the president isn't backing down in the face of the litigation threat." The [Christian Science Monitor](#) (7/31, Feldmann, 566K), meanwhile, reported that according to "political analysts," impeachment "chatter isn't serious," but "the lawsuit is – and cannot be dismissed lightly by the White House, even if its chances of success are low."

Editorial Wrap-Up:

NEW YORK TIMES. *"The CIA's Reckless Breach Of Trust."* A [New York Times](#) (8/1, Subscription Publication, 9.79M) editorial blasts the CIA over revelations that agency employees improperly accessed Senate computers, arguing that with its "shocking action," the CIA has offended "all of Congress and, by extension, the American public, which is paying for an intelligence agency that does not seem to understand the most fundamental concept of separation of powers." Arguing that the CIA is in need of "more than a few quiet personnel changes," the Times says the agency's "very core, and basic culture, needs a thorough overhaul."

"Holding McDonald's Accountable." The [New York Times](#) (8/1, Subscription Publication, 9.79M) editorializes that the NLRB ruling that McDonald's "is jointly responsible for the treatment of workers" is a "well-deserved burst of momentum" for efforts by fast-food workers to increase their pay. The Times says while McDonald's is fighting for the idea that "the well-being of the workers is not its responsibility...true corporate leaders would find a workable compromise."

"China Harasses US Tech Companies." An editorial in the [New York Times](#) (8/1, Subscription Publication, 9.79M) says China's antitrust investigations into US technology companies are "politically motivated" and warns that foreign companies operating there "could be in for more intense harassment than ever before." The Times says that for US companies "doing business in China, while potentially lucrative, is bound to be difficult and fraught," adding that China "is ruled by an authoritarian government that has scant concern for the rule of law when it comes to its own people," and there is "no guarantee that it will treat foreigners any better."

WASHINGTON POST. *"Shame On Congress."* In an editorial, the [Washington Post](#) (8/1, 4.06M) accuses House Republicans of "opting for the preposterous when summoned to do the practical," and says "Senate Democrats did not look much more determined to deal with the immediate problem." The Post concludes calling for "resources to handle the influx at the border and accelerate the adjudication of...cases," and adds that "Congress's failure to provide them would be nothing short of shameful."

"Argentina vs. The 'Vultures.'" An editorial in the [Washington Post](#) (8/1, 4.06M) says the question emerging from the Argentina debt situation is "what precedent this case might establish for other indebted sovereigns and those who lend them money." The Post says the outcome of the case "may actually encourage lenders to provide funds and debtors to use it wisely — rendering debt restructurings less necessary in the first place."

"An Irresponsible School Board."

WALL STREET JOURNAL. *"Obama's Big Mac Attack."* The [Wall Street Journal](#) (8/1, Subscription Publication, 5.89M) editorializes that by declaring McDonald's a joint-employer this week, the National Labor Relations Board (NLRB) is holding the company responsible for decisions of its approximately 3,000 franchisees, which make up about 90 percent of its operations. The Journal notes this also impacts thousands of franchisers and franchisees.

"The Ginsburg Mystique." The [Wall Street Journal](#) (8/1, Subscription Publication, 5.89M) editorializes that Supreme Court Justice Ruth Bader Ginsburg's recent remarks on the effect her colleagues' gender might have had on their votes in the recently decided Hobby Lobby case are an example of identity politics that should have no place in court decision-making.

"Argentina: Solo Deadbeat." In an editorial, the [Wall Street Journal](#) (8/1, Subscription Publication, 5.89M) decries efforts by the IMF to use Argentina's default to resurrect calls for a global bankruptcy court.

"The Global Religion Crisis." An editorial in the [Wall Street Journal](#) (8/1, Subscription Publication, 5.89M) says the State Department's release this week of its annual report on international religious freedom draws needed attention to the violent oppression of religious believers around the world, which the Journal says is subverting global peace and stability.

"The 'Illiberal' Idea Rises." A [Wall Street Journal](#) (8/1, Subscription Publication, 5.89M) editorial says that as a result of the lack of US leadership in the world, nations that have recently moved toward democracy are backsliding. The Journal cites comments by Hungarian Prime Minister Viktor Orban, who said that Hungary's EU

membership does not mean it cannot create "an illiberal new state based on national foundations," and cited Russia, Turkey and China as nations to emulate.

Washington Schedule:

TODAY'S EVENTS IN WASHINGTON.

White House:

PRESIDENT OBAMA — The President will attend meetings at the White House.

VICE PRESIDENT BIDEN — Unavailable.

US Senate: No Scheduled Events.

US House: Votes are now possible throughout the day.

Other: ALLIANCE FOR HEALTH REFORM -HEALTH CARE BEHIND BARS — 12 p.m. – 1:30 p.m. "Health Care Behind Bars: A Key to Population Health?" This briefing will explore innovations and challenges in delivering health care to a growing population of inmates. The event is sponsored by the nonpartisan Alliance for Health Reform and the Centene Corporation. Location: 325 Russell. Contacts: Marilyn Serafini, mserafini@allhealth.org, 202-789-2300

NPC – PRESIDENT OF REPUBLIC OF CONGO — 12:30 p.m. President of the Republic of Congo Denis Sassou-Nguesso will discuss peace, security and stability of the central Africa region and oil investments in his country at a National Press Club luncheon. This is a ticketed event. Location: National Press Club, 529 14th Street NW. Contacts: Marc Sames, msames@worldaffairsdc.org, 202-293-1051, reservations@press.org, 202-662-7501

SMALL BUSINESS FEDERAL PROCUREMENT SCORECARD — 1 p.m. Senator Ben Cardin (D-Md.), a member of the Senate Small Business and Entrepreneurship Committee, will join Small Business Administration (SBA) Administrator Maria Contreras-Sweet and NASA Administrator Charles Bolden at Goddard Space Flight Center in Greenbelt to announce the results of the 2013 Small Business Federal Procurement Scorecard. Speakers: Senator Ben Cardin, D-MD; SBA Administrator Maria Contreras-Sweet; NASA Administrator Charles Bolden. Location: NASA's Goddard Space Flight Center, Visitor Center, 8800 Greenbelt Rd, Greenbelt, MD 20771 (The Goddard Visitor Center is located off ICESat Road. Once on ICESat Road, turn left into the Visitor Center prior to the security checkpoint.). Contacts: Tim Zink 410-962-4436. Sue Walitsky (202-224-4524)

Last Laughs:

LATE NIGHT POLITICAL HUMOR.

Jimmy Kimmel: "Washington, D.C., today – after a very productive last few months, Congress is about to head off on their August recess, which seems appropriate. You know, adults go on vacation, children go on recess. And they take the whole month of August off. From what, exactly, I don't know."

Jimmy Kimmel: "Congress is a lot like nipples on men. They're there. They're displayed prominently. But they don't do anything. And now, they're leaving to go do nothing at home."

David Letterman: "There's a new study out that says that Republicans are more religious than Democrats. Yeah. But I don't think that includes President Obama praying every day for his term to end."

Stephen Colbert: "Folks, you know, if you've been watching this show for the past five years, and I hope you have been, it's no secret that Barack Obama is ruining our economy. Ask yourself this question. Under his leadership, are you as rich as you'd like to be? I know I could imagine me having more money."

Jimmy Fallon: "Yesterday, the House of Representatives voted 225 to 201 to sue President Obama for abusing his executive powers. Experts are calling this a meaningless political stunt that's a huge waste of taxpayer money, while Congress is saying, 'Yep, that's what we do.'"

Jimmy Fallon: "The House voted 225 to 201 to sue President Obama. That's the bad news. The good news is Congress actually passed something."

Seth Meyers: "You guys, today marks the last day before Congress' summer recess. They're taking five weeks off. Five weeks. I hope they can get used to doing nothing. What are you going to do for the recess? 'My kids want to go to the water park, but I'm going to try and block it.'"

Seth Meyers: "Supreme Court Justice Ruth Bader Ginsburg told reporters that despite her age, she does not plan on retiring and is likely to remain on the court for a while. After which, she was immediately traded to the New York Knicks."

DOI in the News:

SECRETARY JEWELL VISITS REDDING AND DISCUSSES WILDFIRE PREVENTION. The [Redding \(CA\) Record-Searchlight](#) (8/13, 92K) reports that Interior Secretary Sally Jewell "visited Redding on Tuesday and touted a new way to pay for fire prevention, which she said annually is looted to pay for fire suppression." Jewell "met with firefighters battling the thousands of acres burning across the North State and toured facilities at the Northern California Geographic Area Coordination Center in Redding." During her tour, Jewell said "federal officials

are caught in a downward spiral of taking money from fire prevention and using it for fire suppression." According to Jewell, "two bills in Congress, which the Obama administration supports, would change how firefighting is funded and prevent taking money from prevention."

Also covering the story is [KFBK-AM Sacramento, CA](#) (8/13).

Lightning Sparks Dozens Of New Fires In Northwest. The [AP](#) (8/13) reports that "lightning has started dozens of new wildfires in the Northwest, forcing incident commanders to juggle crews and equipment Tuesday as a new round of storms approached." President Barack Obama "signed a disaster declaration Monday for Washington state, where hundreds of homes have burned in wildfires in the past month." It "orders federal aid to supplement state, tribal and local recovery efforts in Okanogan County and the Confederated Tribes of Colville Reservation, and says federal funding also is available for hazard mitigation."

Coverage by the AP was also picked up by the [Bellingham \(WA\) Herald](#) (8/12, 143K), the [Clark County \(WA\) Columbian](#) (8/12, 109K), and the [York \(SC\) Enquirer-Herald](#) (8/12, 18K). Additional coverage was provided by the [Washington Post](#) (8/13, 4.06M), the [Denver Post](#) (8/13, 923K), the [Sacramento \(CA\) Bee](#) (8/13, 582K), and [Fox News](#) (8/13, 6.72M).

Man Pleads Not Guilty To 2013 Wildfire. The [AP](#) (8/12) reports that "a Northern California man accused of starting one of the state's largest wildfires when he lost control of his campfire last year can leave jail while the criminal case plays out in court, a federal judge said Tuesday." US District Magistrate Judge Gary Austin said Keith Matthew Emerald, 32, "can post a \$60,000 property bond if he wants to go free." Austin also "set a list of conditions, including one that prohibits Emerald from lighting any campfires."

Also reporting on the story is the [Los Angeles Times](#) (8/13, Rocha, Mather, 3.42M).

SECRETARY JEWELL AGREES TO MEET WITH KLAMATH SALMON ADVOCATES. The [AP](#) (8/13) reports that Jewell "agreed to an impromptu meeting with salmon advocates demanding more water for salmon in Northern California's Klamath and Trinity rivers." After the Tuesday meeting in Redding, California, salmon advocate Regina Chichizola said Jewell "agreed to send someone to assess the situation, but made no promises." The article notes that "members of the Hoopa Valley Tribe and others have been pressing the Obama administration to release more water from Lewiston Dam on the Trinity."

Coverage by the AP was also picked up by the [Sacramento \(CA\) Bee](#) (8/12, 582K), [The Oregonian](#) (8/13, 827K), [KFMB-TV San Diego](#) (8/13, 15K), [KTVN-TV Reno, NV](#) (8/13, 1K), and [KTVZ-TV Bend, OR](#) (8/13, 1K).

Also reporting on the story are the [Eureka \(CA\) Times Standard](#) (8/13, 76K) and [KIEM-TV Eureka, CA](#) (8/13, 428).

Secretary Jewell Urged To Consider Releasing Water From Trinity Lake. The [Willits \(CA\) News](#) (8/13, 10K) reports that "the Humboldt County Board of Supervisors took further action on the ongoing statewide drought during its Tuesday meeting by extending the local state of emergency and sending a letter to the federal government asking it to approve fish-kill preventative releases on the Klamath and Trinity rivers." The letter to the Jewell "urges her to consider releasing water from Trinity Lake into the Trinity and Klamath rivers to address low flows and warm temperatures that could lead to a potential fish kill."

The story also appears at the [Eureka \(CA\) Times Standard](#) (8/13, 76K).

SECRETARIES JEWELL, MONIZ DISCUSS ENERGY DEVELOPMENT. The [E&E Daily](#) (8/12) reports that "the Southwest needs a lot of work before it can overcome the challenges of exporting energy to markets, according to two officials in the Obama administration." Interior Secretary Sally Jewell and Energy Secretary Ernest Moniz met with dozens of tribal and state authorities on Monday "in Santa Fe, N.M., in an effort to develop recommendations on transmitting, storing and distributing energy." The two officials said "one of the biggest problems in tapping the region's great traditional and renewable energy potential was working across state lines and Native American jurisdictions to build pipeline and transmission projects."

Additional coverage was provided by the [AP](#) (8/13). Coverage by the AP was also picked up by the [Worcester](#)

[\(MA\) Telegram & Gazette](#) (8/11, 208K) and [KOB-TV](#) Albuquerque, NM (8/13, 59K).

Tribes Discuss Concerns At Energy Review Meeting. The [Nation Sun News](#) (8/13) reports that "tribal leaders took part in a day-long meeting hosted by the Department of Energy on Monday." Tribal officials "discussed jurisdictional issues at two panels during the meeting." They also offered comments to Energy Secretary Ernest Moniz and Interior Secretary Sally Jewell.

NATIONAL REGISTER OF HISTORIC VEHICLES PUSHED DURING DREAM CRUISE WEEK. The [Detroit News](#) (8/13, Abdel-Razzaq, 495K) reports that the National Historic Vehicle Register Act of 2014 was "introduced at the end of July by U.S. Rep. Gary Peters, D-Bloomfield Township, and U.S. Rep. John Campbell, R-Calif." The measure would allow the Interior Department "to work with the Historic Vehicle Association, the world's largest historic vehicle owners group, to document and preserve the most significant automobiles around today." The article notes that "the announcement comes during the week of the Woodward Dream Cruise, which regularly draws tens of thousands of classic cars and hot rods to Metro Detroit."

ADDITIONAL COVERAGE: INTERIOR DESIGNATES PARCELS OFF NORTH CAROLINA COAST FOR WIND DEVELOPMENT. Additional coverage that the BOEM has designated three areas off the coast of North Carolina for the potential development of offshore wind power was provided by the [AP](#) (8/13).

Coverage by the AP as also picked up by the [Columbus \(IN\) Republic](#) (8/13, 81K), the [Washington Times](#) (8/12, 465K), the [Seattle Post-Intelligencer](#) (8/13, 857K), the [Lakeland \(FL\) Ledger](#) (8/12, 140K), [WCTI-TV](#) Greenville, NC (8/13, 52K), [WHNS-TV](#) Greenville, SC (8/13, 106K), and [WITN-TV](#) Washington, NC (8/13, 52K).

Also reporting on the story are the [Raleigh \(NC\) News & Observer](#) (8/11, 456K), the [Burlington \(NC\) Times-News](#) (8/13, 57K), the [Hampton Roads \(VA\) Virginian-Pilot](#) (8/13, 405K), the [North American Windpower](#) (8/13, 43K), the [Fierce Energy](#) (8/13), the [Clean Energy](#) (8/12), and [WUNC-FM](#) Chapel Hill, NC (8/13, 15K).

ADDITIONAL COVERAGE OF NATIVE HAWAIIAN RELATIONS. Additional coverage of Native Hawaiian relations was provided by the [Government Executive](#) (8/13, 28K).

UTAH DEPARTMENT OF TRANSPORTATION URGED TO GIVE UP ON WEST DAVIS CORRIDOR. The [Salt Lake \(UT\) Tribune](#) (8/13, 470K) editorializes that the Utah Department of Transportation has "made a wise decision by delaying, again, moves toward building the planned West Davis Corridor freeway." But, according to the editorial, "it would be wiser still for UDOT to just come out and admit that the plan has so many deserved enemies, and so many serious flaws, that it should be shelved altogether, once and for all." The paper notes that "the official reason for yet another delay in the planning process, announced Monday, is that the state needs more time to fully examine an alternative, promoted by environmental groups, the US Interior Department and Corps of Engineers and some local elected officials, including those who run the city of Farmington."

America's Great Outdoors:

National Park Service:

NEW ROAD TO GRAND CANYON SKYWALK CELEBRATED. The [AP](#) (8/12) reports that "officials from the Hualapai Tribe gathered Tuesday for a ceremonial grand opening of a road that had been a major headache for tourists headed to the Grand Canyon Skywalk." According to the article, "crews recently paved the final 9-mile stretch of dirt and gravel road that had tour operators complaining of broken windows, flat tires, missing hubcaps and dust."

Coverage by the AP was also picked up by [Fox Business](#) (8/12, 333K), [Yahoo!](#) (8/13, Fonseca, 10.35M), the [Sacramento \(CA\) Bee](#) (8/12, 582K), the [Kansas City \(MO\) Star](#) (8/13, 1.39M), and the [Durango \(CO\) Herald](#) (8/12, 28K).

THREE BODIES FOUND ON MOUNT RAINIER NEAR WHERE CLIMBERS VANISHED. The [Los Angeles Times](#) (8/13, Queally, 3.42M) reports that "bodies of three people who may have been among six climbers killed in a fall on Mt. Rainier in late May were discovered last week, officials with the National Park Service said Tuesday." Patti

Wold, a spokeswoman for the NPS, said that "the three bodies were found last week during an aerial search of Carbon Glacier." According to the article, "though rescue crews were unable to identify the gender or ages of the victims, Wold said their bodies came to rest in the area where parks officials had been searching for the missing climbers." She said, "We're trying to figure out if there's a safe way to get in there so we can remove the remains and try to give their family some closure."

Also reporting on the story is [Reuters](#) (8/13, Cavaliere).

NUDISTS FIGHT NUDE BEACH BAN ON FIRE ISLAND. The [New York Post](#) (8/13, 2.52M) reports that "after Hurricane Sandy destroyed a large part of Fire Island's considerable dunes — essentially the curtain separating the lighthouse from the beach — park officials unceremoniously announced a ban on the clothing-optional section that comprised two 500-foot stretches." That has sparked a "grassroots movement against the ban on naked discrimination called 'Save Lighthouse Beach,' which is backed by the Naturist Action Committee, a national organization." The article notes that "last Saturday, hundreds of nudists turned out on the shore — some in semi-private camps partitioned off by makeshift curtains, others completely nude or in barely-there bottoms."

ROCKY MOUNTAIN NATIONAL PARK CONSIDERS CLOSING CRATER TRAIL. The [Sky-Hi Daily News \(CO\)](#) (8/13, 728) reports that "due to excessive erosion and damage to sensitive natural and cultural resources, the Crater Trail, a short trail located on the west side of Rocky Mountain National Park, will remain closed to use for the remainder of this year, according to the National Park Service." Moreover, "park staff are considering closing the Crater Trail permanently." Park personnel say "the trail is not sustainable in its current location and is subject to erosion, which is damaging cultural and natural resources, including alpine tundra," and "improving the trail in its current location is not desirable because the cost of long term maintenance would be excessive, according to park officials."

GREENS BAYOU COALITION WORKS TO MAKE IMPROVEMENTS. The [Houston Chronicle](#) (8/13, Meeks, 2.02M) reports that "since 2007, the Greens Bayou Corridor Coalition has been working to make improvements along the way." The article notes that "most recently, it completed a strategic plan for a 27.5-mile bayou paddle trail, the creation of the Ida Gaye Park for seniors in north Houston and a master plan that outlines parks and trail projects for the entire span of the bayou." The coalition developed its master plan in partnership with the National Park Service's Rivers, Trails and Conservation Assistance Program.

WOMAN ACCUSED OF STEALING \$42,000 FROM YOSEMITE CHILD CARE CENTER. The [Sacramento \(CA\) Bee](#) (8/12, 582K) reports that "a 40-year-old Sonora woman is accused of embezzling more than \$42,000 from the Yosemite National Park Child Care Center, US Attorney Benjamin B. Wagner announced Tuesday." Charity Brocchini was "served a summons to appear Tuesday in the case, according to a press release from Wagner's office." According to the article, "a federal grand jury in Fresno on Thursday returned with an indictment, charging her with two counts of wire fraud and one count of embezzlement concerning a program receiving federal funds."

NEW SUPERVISOR OF FOUR NPS SITES ANNOUNCED. The [Rock Hill \(SC\) Herald](#) (8/12, 112K) reports that John Slaughter, "a 13-year veteran of the National Park Service and supervisor of two US parks in South Carolina, has been named supervisor of a newly formed federal park group." Slaughter will "supervise Kings Mountain National Military Park, Cowpens National Battlefield, Ninety Six National Historic Site and the Overmountain Victory National Historical Trail." Slaughter said, "These four National Park sites play a significant role in preserving and making relevant the history of a fledgling nation, especially that of American Revolutionary War battles in the Southern states."

Also reporting on the story is the [Charlotte \(NC\) Observer](#) (8/12, 544K).

NPS URGED TO CONSIDER CHANGES TO DEAL WITH GROWING DENALI NATIONAL PARK CROWDS. For the [Anchorage \(AK\) Dispatch News](#) (8/12, 251K), John Schandelmeier writes that as visitors to Denali National Park grows, the NPS "may need to consider some changes." According to Schandelmeier, "wildlife viewing opportunities remain excellent, especially for grizzlies and caribou," but, "the quality of the experience is steadily declining due to crowds of people everywhere." He concludes that "now is the time to solve the congestion that is beginning to defeat the basic premise of the park."

Bureau of Land Management:

NEW BLM CHIEF FOR COLORADO VISITS DURANGO. The [Durango \(CO\) Herald](#) (8/12, 28K) reports that "the new director of the Bureau of Land Management for Colorado arrived in Durango on Tuesday for a four-day orientation tour of Southwest Colorado." Ruth Welch will "visit Silverton; the ghost town of Animas Forks; BLM holdings around Durango, including the Perins Peak State Wildlife Area and Grandview; the Tres Rios field office in Dolores; and the Spring Creek area." Welch said, "A major goal will be to balance development and conservation. I have the collaborative skills to bring diverse elements to the table."

BLM DELAYS WYOMING WILD HORSE ROUNDUP. The [County 10](#) (8/12) reports that the BLM has "agreed to delay the proposed roundup of more than 800 wild horses in Wyoming to allow the court time to rule on a motion for a temporary restraining order and/or preliminary injunction filed late Friday by the American Wild Horse Preservation Campaign (AWHPC), The Cloud Foundation, Return to Freedom, and wild horse photographers Carol Walker, Wild Horse Freedom Federation Board Member, and Kimerlee Curyl." The bureau has "agreed to postpone the roundup until at least September 1, in order to give the court time to rule on the motion."

Film Aims To Save Wild Horses. The [Chicago Sun-Times](#) (8/12, 1.03M) reports that "Jennifer Gage, a South Barrington resident who's been involved in animal rescue efforts for most of her adult life, is hosting a special screening" of "American Mustang" at "the AMC South Barrington 30 on Aug. 20, in an effort to promote an awareness of the troubling circumstances the US Bureau of Land Management has imposed on the American mustang."

BLM PLANS TO SELL 40 PARCELS OF PUBLIC LAND IN CLARK COUNTY. [KSNV-TV](#) Las Vegas (8/13, 12K) reports that the BLM "plans to sell 40 parcels of public land in Clark County totaling 516.8 acres, the agency announced Monday." The article notes that "the funds from the sale of the land will be used throughout Nevada for projects including the development of parks, trails and natural areas, capital improvements on federal lands, acquisition of environmentally sensitive land and landscape restoration projects."

Also reporting on the story is the [Las Vegas Review-Journal](#) (8/13, 386K).

Fish and Wildlife Service:

FWS WITHDRAWS PROPOSED PROTECTIONS FOR WOLVERINES. The [E&E Daily](#) (8/12) reports that the FWS announced Tuesday that "it would not list the American wolverine as a threatened species, against the advice of its own biologists." The article notes that "the decision is sure to spark outrage among environmentalists who say climate change will drastically reduce the wolverine's snowy habitat in the next few decades." However, "predicting the effect of global warming on a specific species is difficult, and states have argued that such predictions are premature." In a statement, FWS Director Dan Ashe "emphasized that while climate change has real consequences, its effect on wolverines is uncertain."

The [E&E Daily](#) (8/12) reports that Ashe said that "he was 'proud' of his agency's decision to not list the American wolverine as a threatened species, even as environmental groups announced their plans to challenge it in court." Environmental groups said that the FWS was "ignoring the 'best available science' on climate change as well as other threats to wolverines, such as their low numbers and limited genetic diversity." A coalition of nine groups said "they would sue FWS for refusal to protect wolverines under the Endangered Species Act."

The [AP](#) (8/13) notes that "the decision carries potential ramifications for other species affected by climate change — including Alaska's bearded seals, the Pacific walrus and dozens of species of corals — as scientists and regulators grapple with limits on computer climate models."

Coverage by the AP was also picked up by the [Sacramento \(CA\) Bee](#) (8/12, 582K), the [San Francisco Chronicle](#) (8/13, 2.87M), the [St. Paul \(MN\) Pioneer Press](#) (8/13, 558K), the [Fort Wayne \(IN\) Journal-Gazette](#) (8/13, 172K), the [Casper \(WY\) Star-Tribune](#) (8/13, 90K), the [US News & World Report](#) (8/12, 645K), [Yahoo!](#) (8/13, Brown, 10.35M), and [WJBK-TV](#) Detroit (8/13, 216K). Earlier coverage by the AP was provided by the [Washington Times](#) (8/12, 465K), the [Spokane \(WA\) Spokesman-Review](#) (8/12, 170K), the [Guardian \(UK\)](#) (8/12, 1.96M), [Yahoo!](#) (8/13, Brown, 10.35M), [NWCN-TV](#) Seattle (8/13, 48K), and [KING-TV](#) Seattle (8/13, 191K).

Also reporting on the story are [The Hill](#) (8/13, Cama, 237K), [Reuters](#) (8/13, Zuckerman), the [Los Angeles Times](#) (8/13, Sahagun, 3.42M), the [Salt Lake \(UT\) Tribune](#) (8/13, 470K), the [Denver Post](#) (8/13, Finley, 923K), the [Summit County \(CO\) Citizens Voice](#) (8/12, 506), the [Idaho Statesman](#) (8/12, 222K), the [Lexington \(KY\) Herald-Leader](#) (8/12, 353K), the [Prairie \(MT\) Star](#) (8/13), the [Boise State \(ID\) Public Radio](#) (8/13), the [Oregon Public Broadcasting](#) (8/13, 4K), [NBC News](#) (8/13, 7.5M), [KCSG-TV](#) St. George, UT (8/13, 43), [KWYB-TV](#) Butte, MT (8/13), [KCET-TV](#) Los Angeles (8/13, 15K), [KECH-TV](#) Missoula, MT (8/13, 2K), and [KTVZ-TV](#) Bend, OR (8/13, 1K).

FWS WANTS BLM, STATES TO SHOW LOCAL SAGE GROUSE EFFORTS ARE WORKING. The [E&E Daily](#) (8/12) reports that "if state land-management programs and partnerships are as successful in protecting the greater sage grouse as Western leaders argue they are, the Fish and Wildlife Service wants to see the proof." The agency has "alerted state governors, local leaders and private groups, as well as the Bureau of Land Management and American Indian tribes, that it wants information on these efforts as part of its ongoing review of the sage grouse and whether the bird should be proposed for listing under the Endangered Species Act by a September 2015 deadline." Specifically, the FWS "wants detailed data on the regulations, plans and projects that have been implemented, or that are expected to be implemented, to protect the greater sage grouse and its dwindling sagebrush steppe habitat."

Also covering the story are the [Deseret \(UT\) News](#) (8/13, 538K) and [KXLO-FM](#) Lewiston, MT (8/13).

FWS DECIDES NOT TO ISSUE NEW PROTECTIONS FOR WARTON'S CAVE MESH WEAVER. [The Hill](#) (8/13, Devaney, 237K) reports that the FWS "announced Tuesday it will not issue new protections for a small species of spiders without eyes, known as Warton's cave mesh weaver or *Cicurina wartoni*." According to the article, "animal conservation groups had petitioned the FWS to add the eyeless spider to the Endangered Species List, but the agency determined it is not distinct enough from other types of spiders to warrant its own protections."

WILD HORSES ON OUTER BANKS FACE THREATS. [McClatchy](#) (8/13, Cockerham, Subscription Publication, 23K) reports that the wild horses on North Carolina's Outer Banks "now face serious threats, say those who manage the herd: a boom in McMansion-style vacation homes on this once-pristine stretch of coast and federal policies that are leaving the mustangs severely inbred and starting to suffer from genetic deformities." The government has "described the herd, some of the last remaining wild horses in the Eastern United States, as pests that compete for resources with federally protected birds." Rep. Walter Jones "unanimously passed his bill in 2012 and 2013 to allow the herd to grow to 130 horses and to let the Corolla Wild Horse Fund bring a few horses from the Shackleford Banks, on another island at the far southern tip of the Outer Banks, in order to infuse some fresh genes into the herd." However, "the bill has been opposed by the US Fish and Wildlife Service, and it goes nowhere in the Senate."

NEW YORK PASSES LAW AGAINST IVORY TRADE. The [New York Times](#) (8/12, 9.79M) reports that "New York's Governor Andrew Cuomo on Tuesday signed one of the toughest laws in the nation banning the sale of elephant ivory and rhinoceros horns as a 'stand against a dangerous and cruel industry.'" New York will "not allow trade in anything but 100-year-old antiques with small amounts of ivory (and documented proof of provenance), musical instruments made before 1975, pieces used for education or scientific purposes such as museums and items handed down through estates." According to the article, "if it works as intended, the flow of ivory into New York — often ranked the number one importer of ivory in the United States — should soon slow to virtually nothing."

Additional coverage of ivory regulations was provided by the [International Business Times](#) (8/13, 697K).

OHIO AIRPORT PLANTS TALL GRASS TO AVOID BIRD-PLANE COLLISIONS. The [E&E Daily](#) (8/12) reports that "one Ohio airport is experimenting with a natural remedy to prevent bird-plane collisions, which cost the aviation industry an estimated \$950 million a year and countless birds their lives." Dayton International Airport, "a small 56-commercial-flight-a-day airport, saw 218 wildlife strikes between 2001 and 2013, but instead of shooting or poisoning the birds as other airports have, officials teamed up with the nearby Aullwood Audubon Center and Farm to convert 300 acres of buffer zones around runways to tall prairie grass." Officials "hope the grass will ward off birds that like to land in the open areas surrounding airports."

MAN SENTENCED FOR TRAFFICKING IN LOBSTERS. The [E&E Daily](#) (8/12) reports that a Florida man on

Monday "pleaded guilty and was sentenced for trafficking spiny lobsters." US District Judge James Lawrence King sentenced Eric Burman, "60, to three years of probation and a \$250,000 fine."

FWS DIRECTOR ASHE: NO PLANS TO BRING GRIZZLIES BACK TO CALIFORNIA. In a letter to the [Los Angeles Times](#) (8/12, 3.42M), FWS Director Dan Ashe asserts that the FWS has "absolutely no intention of reintroducing grizzlies" to California.

US Geological Survey:

USGS MONITORING LANDSLIDE RISK IN COLORADO. [KUSA-TV](#) Denver (8/12, 226K) reports that the USGS have "been keeping an eye on Colorado" for landslides and mudslides. The USGS "recently completed a study of landslides that occurred during the September 2013 floods."

Securing America's Energy Future:

Renewable Energy:

WIND INDUSTRY FACES UNCERTAIN POLITICAL LANDSCAPE. The [E&E Daily](#) (8/12) reports that "the wind industry is touting increased construction activity and power purchases from some of the country's largest companies to argue for an extension of its key federal incentive – amid an uncertain political landscape that could be heavily influenced by the outcome of November's election for control of the Senate." The article notes that "gridlock on Capitol Hill has so far prevented a renewal of the production tax credit, which expired last year alongside dozens of ostensibly temporary 'tax extenders.'" According to the article, "while the credit enjoys bipartisan backing, Democrats are more unified in support of the PTC and other clean energy incentives, while resistance has grown among Republicans, fueled partly by critiques leveled from outside conservative groups." The article notes that "the industry has been working to boost its allies in both parties, but an analysis of Senate contributions from the American Wind Energy Association's political action committee and some of its leading companies shows an emphasis on giving to Democrats up for re-election and far less to Republicans in tough races, according to an analysis of contributions that have been reported so far this cycle."

BLM ADVANCING CHOKECHERRY AND SIERRA MADRE WIND ENERGY PROJECT TOWARD CONSTRUCTION PHASE. The [E&E Daily](#) (8/12) reports that the Obama Administration "continues to move a massive wind farm project that proposes to string together 1,000 turbines across nearly 220,000 acres of public and private lands in southeast Wyoming closer to construction." The BLM this week "issued a preliminary environmental assessment (EA) of some of the infrastructure projects needed to build the massive Chokecherry and Sierra Madre Wind Energy Project, which would have the capacity to produce up to 3,000 megawatts of electricity, making it the biggest power-producing wind farm in North America." In addition to the EA, the bureau "this week also released a draft finding of no significant impact (FONSI) concluding that the project would not cause any significant additional impacts beyond what was analyzed in the final EIS and ROD nearly two years ago."

MEETINGS ON OFFSHORE WIND POSTPONED. The [Cape Cod \(MA\) Times](#) (8/12, 97K) reports that "a series of meetings planned by the federal agency for permitting offshore wind energy projects to show what turbines in areas off Martha's Vineyard and Rhode Island might look like and to answer questions have been postponed." According to a notice from the BOEM, "the meetings, including a session on Nantucket originally scheduled for later today, were postponed due to 'unforeseen scheduling conflicts.'" Officials "hope to reschedule the meetings, which were planned for Nantucket, Vineyard Haven, Block Island in Rhode Island and at the University of Rhode Island over the next two weeks, next year."

Onshore Energy Development:

SETTLEMENT OBTAINES YEARS OF LITIGATION OVER COLORADO DRILLING. The [AP](#) (8/12, 582K) reports that a settlement between the Federal and local governments in Colorado will end "several years of litigation" over drilling on the Roan Plateau. Under the settlement, Bill Barrett Corp. will be reimbursed \$28 million to relinquish Federal oil and gas leases in controversial areas of the plateau, but will be allowed to drill in less

disputed areas.

The [Glenwood Springs \(CO\) Post Independent](#) (8/13, 27K) reports that "the Hickenlooper administration believes a settlement that allows some energy development to proceed while protecting other areas of the Roan Plateau is in the interest of all parties," according to Henry Sobanet, director of Hickenlooper's Office of State Planning and Budgeting. The proposed settlement has been lauded by Barrett Corp., environmental groups, and the Federal government as a "win-win," although some local governments have expressed uncertainty.

TRIBES URGED TO BAN FRACKING ON RESERVATIONS. The [Nation Sun News](#) (8/13) reports that "Last Real Indians (LRI) and Honor the Earth are among Native American organizations calling for pressure on tribal councils to approve anti-fracking resolutions, as efforts increase to drill for fossil fuel in treaty territory." LRI's Matt Remle said, "This relatively new form of extracting oil and natural gas is generating serious environmental impacts, depletion of aquifers and negatively impacting human health." Honor the Earth "contends that wastewater produced "is polluted with hazardous fracking chemicals, oil and hydrocarbons, radioactive radon, and biocides, and there is no process or technique for treating this water."

TEXAS' DRILLING INDUSTRY MAKES PROGRESS ON WASTEWATER RECYCLING. The [E&E Daily](#) (8/12) reports that "under pressure during a drought, Texas' drilling industry is making progress in wastewater recycling." According to Marcus Gay, a former water analyst at HIS, "in Texas' Eagle Ford and Permian Basin, 10 to 20 percent of water used in hydraulic fracturing comes from recycling now, and that figure will double in the next 10 years." However, "despite growing pressure, wastewater recycling remains a costly process that not all companies can afford, making buying fresh water the go-to option even as the state's aquifers drain."

TEXAS RAILROAD COMMISSION PROPOSES NEW RULES TO ADDRESS INCREASED SEISMIC ACTIVITY. The [Fort Worth \(TX\) Star-Telegram](#) (8/12, Baker, 550K) reports that the Texas Railroad Commission proposed new rules today in an attempt to address the increase in earthquakes. The new rules would require drillers to provide additional information before drilling in areas where there has been seismic activity and would allow the commission to suspend or terminate a permit if a problem with the injection well does occur. The commission had faced criticism "for not acting more quickly to determine if wastewater injections wells" are linked to the increase in seismic activity.

FRACKING OCCURS AT SHALLOWER DEPTHS THAN PREVIOUSLY THOUGHT, NEW RESEARCH SHOWS. The [Los Angeles Times](#) (8/13, Banerjee, 3.42M) reports that new research shows that fracking is occurring at far shallow depths than was previously thought. The industry "has long held that it does not hydraulically fracture into underground sources of drinking water" because oil and gas deposits sit far deeper than aquifers, however, the study shows drilling occurring at 700 to 750 feet. The study's authors say that "any fracking within a thousand feet of the surface should be more clearly documented and face greater scrutiny" because the effects on groundwater resources at this level are not known.

Offshore Energy Development:

BOEM FUNDS PROJECT TO CATALOG GEORGIA'S SAND. The [Savannah \(GA\) Morning News](#) (8/12, 226K) reports that "as Tybee Island prepares for its latest beach renourishment, scheduled to begin in November, a Skidaway researcher is cataloging Georgia's sand resources." UGA Skidaway Institute professor Clark Alexander is "heading up the effort to describe what's known about the sand off the Peach State and identify where data gaps exist." According to the article, "the \$200,000 project, funded by the federal Bureau of Ocean Energy Management, focuses on the area 3-8 miles offshore, but Alexander will catalog inshore areas as well."

OYSTER HARVESTS DECLINE AFTER GULF SPILL. The [E&E Daily](#) (8/12) reports that "oyster harvests in the Gulf of Mexico have dramatically declined in the four years since BP PLC's Deepwater Horizon oil spill, raising concerns among fishermen." According to the article, "oyster beds where oil once washed ashore are producing less than a third of their pre-spill harvest." Meanwhile, "BP contends it is not to blame for the oyster downturn."

The [AP](#) (8/12) reports that BP senior vice president Geoff Morrell argues that "data from government studies have indicated it is likely due to other condition." Regardless of the cause, "the harvest is way down, and prices are way up as a result."

ADDITIONAL COVERAGE: INVESTIGATION URGES NEW OFFSHORE WELL BOLT STANDARDS. Additional coverage of the review of "bolting/connector performance in subsea marine applications" was provided by the [Rigzone](#) (8/13, 8K).

Tackling America's Water Challenges:

DROPPING LAKE MEAD WATER LEVELS RAISES CONCERNS. The [AP](#) (8/13, Ritter) reports that "the receding shoreline" at Lake Mead, "one of the main reservoirs in the vast Colorado River water system is raising concerns about the future of a network serving a perennially parched region home to 40 million people and 4 million acres of farmland." According to the article, "marina operators, water managers and farmers who for decades have chased every drop of water across the booming Southwest and part of Mexico are closely tracking the reservoir water level already at its lowest point since it was first filled in the 1930s." the article notes that "last week, officials announced an \$11 million pilot program involving the federal government and water agencies in Denver, Los Angeles, Las Vegas and Phoenix to pay farmers, cities and industries to reduce river water use." This week, an update from the BOR will "help set the course for water deliveries for the next two years."

Coverage by the AP was also picked up by the [Washington Post](#) (8/12, 4.06M), the [Arizona Republic](#) (8/12, 1.26M), the [Sacramento \(CA\) Bee](#) (8/12, 582K), the [US News & World Report](#) (8/12, 645K), and [KSL-TV Salt Lake City](#) (8/13, 1.07M).

Also providing coverage is the [Gant \(PA\) Daily](#) (8/12, 3K).

RECYCLED WATER PIPELINE TO COOMBSVILLE CELEBRATED. The [Napa Valley \(CA\) Register](#) (8/13, 50K) reports that "after 15 years of planning and fundraising, crews are preparing to break ground on a pipeline that will deliver 700 acre feet of recycled water annually from Napa Sanitation District to the groundwater-deficient area that drains Milliken, Sarco and Tulocay creeks east of the city Napa." According to the article, "with that major milestone looming, elected officials from the city of Napa and Napa County were in a mood to celebrate Tuesday afternoon at the Napa Valley Country Club, the eventual destination of the 5-mile pipeline and a major source of funding for the \$13.3 million project." The article notes that "a series of kudos were directed Tuesday at a citizens group that pushed for the pipeline in 1999, Napa County Supervisor Keith Caldwell, who helped give the project momentum after being elected in 2008, and the US Bureau of Reclamation, which provided grants that cover 25 percent of the cost."

Empowering Native American Communities:

PROPOSED RULES COULD LEAD TO MORE RECOGNIZED TRIBES, MORE CASINOS. [McClatchy](#) (8/12, Hotakainen, Subscription Publication, 23K) reports that new rules proposed by the Obama Administration "would give more tribes a faster track at joining the ranks of the recognized by making it easier for them to prove their legitimacy." This recognition "recognition makes a tribe eligible for more federal benefits and is a prerequisite to apply for the biggest prize of all: the right to run a casino." The rules "have won backing from large tribal groups," but are "generating lots of controversy." The Bureau of Indian Affairs has set a September 30 deadline for public comment and "will then decide whether to adopt the rules." Opponents of gambling argue that the proposed rules are too lenient and should be abandoned, while some smaller tribes contend that the rules "are too onerous, fearing they'll still be denied the recognition they've sought for decades."

TRIBES PRAY FOR RETURN OF SALMON TO COLUMBIA RIVER. The [E&E Daily](#) (8/12) reports that "from the mouth of the Columbia River near Portland, Ore., to its Canadian headwaters, American Indian tribes, Canadian First Nations, religious leaders and local residents have been praying for the return of salmon to the river's upper reaches." The article notes that "their 16 days of vigils, which will wrap up this weekend in remote British Columbia, come as the United States and Canada are preparing to renegotiate a treaty that could alter the future of the largest North American river to empty into the Pacific Ocean." The article notes that "the salmon issue has divided both the US and Canadian regional bodies charged with advising their respective federal governments about the river's management, but their reports indicate neither country is ready to end the treaty relationship that regulates the Columbia River for flood protection and power generation."

Top National News:

VIOLENT PROTESTS CONTINUE IN MISSOURI AS OBAMA PLEADS FOR "REFLECTION AND UNDERSTANDING."

Last night and this morning, the violence sparked by the fatal shooting over the weekend in Ferguson, Missouri continued to generate a great deal of media coverage – although less so than a day earlier when all three network newscasts led with reports on the shooting and the subsequent violent protests. On Tuesday, all three networks mentioned that President Obama had released a statement offering condolences to the victim's family and urging restraint on the part of those angered by the circumstances of the shooting. However, the President's statement is not the focus of much of the print and online reporting on the ongoing controversy.

The three Tuesday evening network newscasts devoted about six and a half minutes combined to the ongoing controversy in Ferguson, which was slightly less air time than they gave to reports on floods and the situation in Iraq – and all three of those topics combined only barely beat out the nearly 20 minutes the networks gave to remembrances of Robin Williams.

On [NBC Nightly News](#) (8/12, story 3, 2:05, Williams, 7.86M), Brian Williams reported that on Monday night, "suburban St. Louis...looked like a police state" as "police...once again had to put down and head off violence in the streets." John Yang went on to report that President Obama has "issued a statement from his Martha's Vineyard vacation saying, 'we should comfort each other and talk with one another in a way that heals, not in a way that wounds.'"

The [St. Louis Post-Dispatch](#) (8/13, 938K) reported on Tuesday afternoon that the President had "just issued a statement calling for 'reflection and understanding' in the wake of the police shooting death of Michael Brown on Saturday."

The [Chicago Tribune](#) (8/13, 2.19M) notes that Tuesday's statement was the President's "first comment on the death of...Brown," which "touched off clashes between demonstrators and police in the racially divided city." The [Washington Times](#) (8/13, Boyer, 465K) describes Ferguson as "predominantly black," while [USA Today](#) (8/13, Alcindor, Piper, Bacon, 5.76M) reports that Ferguson is "nearly 70% black." According to the [Wall Street Journal](#) (8/13, Kesling, Peters, Subscription Publication, 5.89M), just three of Ferguson's 53 police officers are African-American.

On [ABC World News](#) (8/12, story 5, 2:05, Muir, 5.84M), Steve Osunsami reported that on Monday night, "young people on the streets clashed with police who used tear gas and rubber bullets." On the [CBS Evening News](#) (8/12, story 10, 2:25, Pelley, 5.08M), Scott Pelley briefly noted the President's statement, and then correspondent Dean Reynolds reported that on Monday night, "young people" in Ferguson "threw rocks" at the police, who "responded with rubber bullets and tear gas." Reynolds went on to interview a Ferguson resident who said that in addition to throwing rocks, some protesters were firing guns.

[USA Today](#) (8/13, Alcindor, Piper, Bacon, 5.76M) reports that Ferguson Police Chief Thomas Jackson "said protesters Monday night threw rocks at police, and that gunfire came from the crowd, so officers used tear gas and shot 'beanbag rounds' meant to stun them." The [Los Angeles Times](#) (8/13, Pearce, 3.42M) reports that "St. Louis' predominantly black northern quarter has teetered toward chaos the last four days" as "stores have been looted" and "teens have hurled rocks at cops."

The [Washington Post](#) (8/13, Lowery, Zezima, Berman, 4.06M) reports that the President said his Administration will "continue to direct resources to the case as needed," and that Attorney General Holder "has said the Department of Justice is investigating the shooting." The Post also notes that "not long after Obama's statement, the Federal Aviation Administration said that it had banned flights from operating below 3,000 feet over Ferguson, at the request of" the St. Louis County Police Department, which had a helicopter "shot at 'multiple times on Sunday night,'" according to a police spokesman.

According to the [Washington Times](#) (8/13, Boyer, 465K), on Monday night, Ferguson's police officers "fired tear gas into a crowd of protesters...after a second day of unrest that included looting, arson, vandalized vehicles and people throwing rocks at police." [Politico](#) (8/12, Mccalmont, 637K) reported that in the statement he released on

Tuesday, the President "acknowledged" the continuing violence in Ferguson when he wrote: "I know the events of the past few days have prompted strong passions."

The [Huffington Post](#) (8/12, Terkel, 11.54M) reported that the Ferguson Police Department says Brown "assaulted the officer" who subsequently shot him in self defense, but "eyewitnesses...have disputed that claim and said Brown was killed while attempting to surrender or flee." The Huffington Post also reported that in the ensuing protests, "at least four people have been injured and 47 people have been arrested so far," as "looting and vandalism have been reported in the area." The [New York Times](#) (8/13, Storey, Subscription Publication, 9.79M) reported that "most of the protesters" in Ferguson on Monday night "[do] not live in the area."

CBC Seeks DOJ Investigation Of Ferguson Police. The [Hill](#) (8/12, Swanson, Sink, 237K) reported that the Congressional Black Caucus is urging the Justice Department to probe "any pattern or practice of police misconduct by the Ferguson Police Department." [Roll Call](#) (8/12, Dumain, Subscription Publication, 76K) reported that CBC chair Rep. Marcia Fudge (D-OH) "co-signed a letter Monday evening addressed to" Attorney General Holder, along with Reps. John Conyers (D-MI) and William Lacy Clay (D-MO), "who represents the Ferguson area."

According to the [New York Times](#) (8/13, Vega, Subscription Publication, 9.79M), "The speed with which the shooting...has resonated on social media has helped propel and transform a local shooting into a national cause, as African-American commenters draw attention to continued incidents of blacks being shot by police and the media portrayals of young black men."

The [Belleville \(IL\) News-Democrat](#) (8/13, 152K) reports that Tracy Martin, the mother of Trayvon Martin, who was "was fatally shot by...George Zimmerman, on Feb. 26, 2012," has "called for peaceful protests in the wake of" Brown's death.

The [Daily Caller](#) (8/12, Ross, 408K) reported that MSNBC's Al Sharpton "traveled to Ferguson on Tuesday" and "urged local citizens to avoid violence while calling for the federal government to take over the investigation into Brown's death." Author Joseph Epstein, in an op-ed for the [Wall Street Journal](#) (8/13, Epstein, Subscription Publication, 5.89M), cites the aftermath of the shooting as evidence that the African-American community lacks leaders of the stature of those who led the fight for civil rights in the 1950s and '60s.

DOJ Is Already Conducting National Review Of Some Police Tactics. According to [USA Today](#) (8/13, Johnson, 5.76M), the Justice Department is already "leading a broad review of police tactics, including the kind of deadly force that prompted recent protests in Missouri and New York." USA Today adds that "in addition to deadly force, the review is expected to examine law enforcement's increasing encounters with the mentally ill, the application of emerging technologies such as body cameras, and police agencies' expanding role in homeland security efforts since 9/11."

Ferguson Police Decline To Identify Officer Who Shot Brown. The [Huffington Post](#) (8/13, Cadet, 11.54M) reported that on Tuesday, the Ferguson police department announced that it "will not release the name of the officer involved in the fatal shooting," which was "an apparent shift after Chief Thomas Jackson initially said that the name would be released by 12 p.m. on Tuesday." According to the Huffington Post, the Ferguson police "reportedly chose to delay releasing the name out of fear for the officer's safety." The [New York Times](#) (8/13, Bosman, Williams, Subscription Publication, 9.79M) reports that Chief Thomas Jackson said on Tuesday that "the value of releasing the name is far outweighed by the risk of harm to the officer and his family."

NYTimes: "White Power Structure Dominates" Ferguson's Government And Police Dept. The [New York Times](#) (8/13, Subscription Publication, 9.79M), in an editorial, contends that a "history of racial segregation, economic inequality and overbearing law enforcement...produced so much of the tension now evident on the streets." According to the Times, St. Louis "has long been one of the nation's most segregated metropolitan areas," which the Times says has a "white power structure that dominates City Councils and police departments like the ones in Ferguson."

OMB NOW ALLOWS LOBBYISTS TO SERVE ON GOVERNMENT ADVISORY BOARDS. [USA Today](#) (8/13, Schouten, 5.76M) reports that the Administration has "dropped its blanket ban on federal lobbyists serving on advisory panels after losing a court battle on the issue earlier this year." According to USA Today, "Under the

new rules, the ban no longer applies when federal lobbyists represent trade associations, unions, companies, state or local governments and other groups," including "environmental organizations." USA Today adds that OMB says "federal lobbyists still cannot serve on commissions solely as private citizens."

The [New York Times](#) (8/13, Davis, Subscription Publication, 9.79M) says the announcement is "the latest example of the limits of the president's effort to rein in the influence of special interests in government." The Times notes that the President "signed an order on his first day in office in 2009 prohibiting" lobbyists "from serving in his administration," but has since "made a number of exceptions to that rule and has hired lobbyists for several important jobs." The Times also notes that "critics argue that the president's position has led to unintended consequences, prompting some operatives to refrain from registering as lobbyists merely to preserve the option of working with the administration," although "they are essentially doing the same thing as a lobbyist."

[Bloomberg News](#) (8/13, Talev, 2.76M) reported that OMB communications director Melanie Roussel says "the purpose of the prohibition is 'to restrict the undue influence of lobbyists on the federal government' and was 'not designed to prevent lobbyists or others from petitioning their government.'" However, [The Hill](#) (8/12, Wilson, 237K) reported that "the policy change...chips away at one of the main firewalls that President Obama had erected between K Street and government." [Reuters](#) (8/13, Felsenthal) covered the announcement from OMB in article titled, "White House Loosens Restrictions On Lobbyists."

Politico Analysis: Obama Administration Has Hired "About 70" Lobbyists. In an article published early Tuesday morning, [Politico](#) (8/12, Tau, 637K) reported that the Administration "has hired about 70 previously registered corporate, trade association and for-hire lobbyists," including "well-known Democratic lobbyist" Broderick Johnson, "a top aide to Obama as a liaison between federal agencies and the White House," who was employed as a "consultant" for Microsoft, Pearson, Globalstar, Comcast and FedEx "right up until he started to work at the White House." According to Politico, "Johnson's trip from registered lobbyist to...White House staffer violates the spirit of Obama's pledge to keep special interests out of his White House."

CLINTON CALLS OBAMA IN WAKE OF CONTROVERSIAL FOREIGN POLICY COMMENTS. Media coverage on Hillary Clinton's call to President Obama highlights both camps' efforts to minimize any talk of serious discrepancies between the President and his erstwhile secretary of state. Virtually all print accounts include language from a statement put out by a Clinton spokesman which stated that Clinton "looks forward to hugging it out" with Obama when they meet. Coverage of the call also overshadowed Obama adviser David Axelrod's comments earlier Tuesday, in which he had responded to Clinton's criticism of Obama. The story was not covered by the network newscasts, but was mentioned on some cable news shows.

Wolf Blitzer reported on [CNN's Situation Room](#) (8/12, 554K) that Hillary Clinton placed a call to the President "in the aftermath of an interview she did in which she seemed to suggest she was distancing herself from him on a key foreign policy issue." Brianna Keilar added that the White House is "really trying to downplay the differences here after...Clinton called the President to smooth things over." A Clinton spokesman said in a statement that she called the President to "make sure that he knows nothing she said was an attempt to attack him, his policies, or his leadership." However, Clinton's "hawkish comments here really getting not under the skin of the Obama camp, but a lot of liberal activists, who are very upset with her."

The AP (8/13, Pickler) notes "the call came on the eve of a party on Martha's Vineyard that Clinton and Obama planned to attend." Clinton "is on the Massachusetts island for a memoir-signing session at a bookstore, while Obama is in the midst of a two-week vacation." [Reuters](#) (8/13, Mason) reports that White House spokesman Eric Schultz said, "The president and first lady have accepted an offer to attend a social gathering at the home of Vernon Jordan on Wednesday evening. ... (They) are very much looking forward to the occasion and seeing former Secretary Clinton."

[USA Today](#) (8/13, Jackson, 5.76M) quotes Clinton spokesman Nick Merrill as saying, "Secretary Clinton was proud to serve with President Obama. ... She was proud to be his partner in the project of restoring American leadership and advancing America's interests and values in a fast changing world. ... Like any two friends who have to deal with the public eye, she looks forward to hugging it out when she they see each other tomorrow night."

[Bloomberg News](#) (8/13, Allen, 2.76M) reports that Clinton's "efforts to distance herself from Obama could hurt her

with Democratic primary voters should she run for president," while helping her "with independents and national security-minded Republicans in a general election." The AP adds that "the anti-war base of the Democratic Party has long distrusted Clinton's support for a muscular foreign policy." Iya Sheyman, executive director of the political action arm of MoveOn, said in a statement, "Secretary Clinton, and any other person thinking about seeking the Democratic nomination in 2016, should think long and hard before embracing the same policies advocated by right-wing war hawks that got America into Iraq in the first place and helped set the stage for Iraq's troubles today."

Under the headline "Hillary Clinton To Barack Obama: Let's Hug It Out," [Politico](#) (8/12, Haberman, 637K) reports that "several Clinton supporters have stressed that she is entitled to her own views, and that she is in a bind – either criticized as overly calculating if she stays silent or faulted for being candid about what she thinks." But "one of the criticisms about her interview relates to its timing: It comes as Obama is attempting to get his arms around a number of overseas crises, from Ukraine to Gaza to Syria." The [Daily Caller](#) (8/12, Stoltzfoos, 408K) headlined its story on Clinton's call "Hillary Kisses The Ring, Begs Obama For Forgiveness."

[Politico](#) (8/12, Haberman, Brown, 637K) says "a split between...Clinton and...Obama was inevitable. Now that they've made peace, keeping it will be the challenge." While "Obama aides and some Clinton allies downplayed the 72-hour episode with dismissive complaints about a voracious media...the maneuvering nonetheless demonstrated how the Obama-Clinton alliance, long viewed as mutually beneficial, will be tested repeatedly." Politico notes that asked to comment, "longtime Clinton ally James Carville, normally a chatty political observer, dodged by cheerfully saying, 'There's a town in Texas called El Paso. And I'm gonna El Paso' on this one."

The [Washington Times](#) (8/13, Boyer, 465K) reports Republicans "have noted that Mrs. Clinton was in charge of foreign policy until she quit her post in early 2013," and "many observers believe her interview was calculated to separate herself from Mr. Obama's policies in preparation for a presidential bid in 2016."

In an analysis piece, Juliet Eilperin writes in the [Washington Post](#) (8/13, Eilperin, 4.06M) that the controversy has "highlighted a little-noticed aspect of the president's tenure: He has devoted almost no effort to grooming a successor." That fact "has left an opening for Clinton, who has stepped firmly into the vacuum this summer, asserting herself as the next Democrat in line to lead the country."

Deputy National Security Adviser Ben Rhodes on [Fox News' Special Report](#) (8/12, 2.15M) said that the President and Clinton "are in broad agreement on so many of the issues around the world and has been a great partner. On this particular question, this is something she's written about in her book. She did support providing military assistance earlier than the President moved forward with that plan, but the reason that the President was deliberate in his decision making there is, one, we wanted to make sure we're providing assistance to people who we knew so it wouldn't fall into the wrong hands. Two, we didn't see a plan to decisively tip the balance against [Syrian President Bashar] Assad."

In an analysis for the [Washington Times](#) (8/13, 465K), Ben Wolfgang writes that Clinton's comment this week that the President's failure to contain ISIL in Syria enabled the group to spread "its brand of violence and Islamic law into Iraq," underscores "the heated criticism of the president's policy in regard to Iraq and Syria" from "Republicans, many foreign policy analysts and other critics." Wolfgang notes that the President "has indicated that the U.S. will not make a broader commitment to take out the Islamic State," which means that the responsibility to defeat ISIL "apparently will lie primarily with the new Iraqi government and the Kurdish regional authority, which the U.S. and Britain are now arming directly."

Axelrod Responds To Clinton Interview. Largely absent from the coverage of Clinton's call to the President is Axelrod's criticism of the former secretary of state earlier Tuesday. Reports did not speculate about a cause-and-effect chronology between Axelrod's tweets and Clinton's subsequent call.

[Politico](#) (8/12, Haberman, 637K) reported that Axelrod had "taken to Twitter to slam...Clinton in the wake of her comments rejecting the core of the Obama administration's self-described foreign policy principle." After Clinton told [The Atlantic](#) that "the White House doctrine of 'Don't do stupid stuff' is 'not an organizing principle,'" Axelrod retorted, "Just to clarify: 'Don't do stupid stuff' means stuff like occupying Iraq in the first place, which was a tragically bad decision." Clinton, notes Politico, "voted to authorize the use of force in Iraq," and that "Clinton aides would not immediately respond to emails for comment Tuesday."

The [New York Daily News](#) (8/13, Friedman, 4.15M) reported on its website, "They're fighting like it's 2008." Axelrod "no longer works in the White House," but "he remains close to his former boss and colleagues," and "his shot at Clinton suggests Obama allies are simmering at" her comments.

On its website, [TIME](#) (8/13, Miller, 24.1M) also referred to "a flashback to 2008 campaign."

In the last sentence of its account of Clinton's call to Obama, the [New York Times](#) (8/13, Chozick, Subscription Publication, 9.79M) notes Axelrod "was quick to defend the president this week, in a flashback to the 2008 campaign."

Dowd: "Cheap Shot" Was Typical Of The Clintons. In a column titled "It's The Loyalty, Stupid," Maureen Dowd writes in the [New York Times](#) (8/13, Dowd, Subscription Publication, 9.79M) that Clinton's "cheap shot" at Obama in *The Atlantic* was "a calculated attempt to be tough and show that, as a Democratic woman, she's not afraid to use power." Adds Dowd, "As one Democrat noted, citing the callous Clintonian principle that unpopular things make foolish investments: 'If Obama was at 63 instead of 36, she'd be happy to be Robin to his Batman.'" Dowd concludes that "after buoying Hillary, Obama is learning the truth of another unofficial slogan in politics: 'The Clintons will be there when they need you.'"

Editorial Wrap-Up:

NEW YORK TIMES. "The Death Of Michael Brown." The [New York Times](#) (8/13, Subscription Publication, 9.79M), in an editorial, contends that a "history of racial segregation, economic inequality and overbearing law enforcement...produced so much of the tension now evident on the streets." According to the Times, St. Louis "has long been one of the nation's most segregated metropolitan areas," which the Times says has a "white power structure that dominates City Councils and police departments like the ones in Ferguson."

"Making The Case For High-Speed Rail." The [New York Times](#) (8/13, Subscription Publication, 9.79M), in an editorial, says, "High-speed rail can play an important role in the nation's transportation system by reducing congestion," and "can also provide a big economic boost." The Times notes that President Obama "gave it an important place in the 2009 stimulus bill," and "since then, the federal government has spent about \$11 billion on high-speed rail, with only a few visible improvements in American passenger rail service."

"Battle On The Brooklyn Waterfront."

WASHINGTON POST. "Cairo's Crimes Against Humanity" The [Washington Post](#) (8/13, 4.06M) editorializes that while the President and Secretary of State Kerry have highlighted Egypt's crucial role in US diplomacy, "the reality check provided by Human Rights Watch this week is particularly worthy of attention." According to the group's report, "more people died on Aug. 14 in Rabaa Square than in Beijing's Tiananmen Square in 1989 or in any mass killing of protesters since then." Yet the Administration "treats" Sissi, "the architect of the slaughter," as "a valued partner rather than the pariah he should be."

"The Auto-Loan Bubble." In an editorial, the [Washington Post](#) (8/13, 4.06M) says there is "increasing evidence suggest[ing] that the Federal Reserve's ultra-low interest rate policy is goosing car sales, both new and used, beyond the level that economic fundamentals can sustain," although, according to the Post, "the systemic risks to the U.S. economy from an overheated car-loan market are...modest." The Post adds that while "a subprime auto-lending bubble probably can't and won't cripple the U.S. economy," it "would be better...to tap the brakes now than to risk a crash later on."

"Tax Holiday's Aren't Worth It." The [Washington Post](#) (8/13, 4.06M), in an editorial, criticizes those states, "including Maryland and Virginia" that "offer sales tax holidays during the August back-to-school shopping season." The Post says the holidays are "policy gimmicks...popular among consumers and a certain set of retailers," but "aren't in the public interest."

WALL STREET JOURNAL. "Medtronic's Tax Lesson." The [Wall Street Journal](#) (8/13, Subscription Publication, 5.89M), in an editorial, points out that following an inversion, formerly US-domiciled corporations have an incentive

to invest in the US because repatriating their foreign profits no longer triggers a tax bill as it did when they were based in the US.

"Government+." The [Wall Street Journal](#) (8/13, Subscription Publication, 5.89M), in an editorial, dismisses Monday's announcement that former Google engineer Mikey Dickerson has been appointed to lead a task force dedicated to improving the Federal government's IT infrastructure. The Journal notes that Dickerson was credited for improving HealthCare.gov after its initial failures, and suggests that the Administration seems intent on treating the symptoms rather than the underlying problems associated with government initiatives like the Affordable Care Act.

"Turkey's New Sultan." The [Wall Street Journal](#) (8/13, Subscription Publication, 5.89M) editorializes on Turkish Prime Minister Tayyip Erdogan's election win, casting him as an enemy of democracy. The Journal adds the US and EU cannot be blamed for Erdogan's ascent to power, but urges both to call on the Turkish leader to curb his assault on basic democratic freedoms.

"Google On The Run." An editorial in the [Wall Street Journal](#) (8/13, Subscription Publication, 5.89M) decries a ruling by Hong Kong's High Court, which said that tycoon Albert Yeung, who was convicted of illegal bookmaking and obstruction of justice in the 1980s, can sue Google for defamation because when users type in his name, it offers terms related to Hong Kong organized crime, arguing that the ruling is a blow to free speech.

Washington Schedule:

TODAY'S EVENTS IN WASHINGTON.

White House:

PRESIDENT OBAMA — Vacations in Martha's Vineyard.

VICE PRESIDENT BIDEN — No scheduled events.

US Senate: 10 a.m. AGING – FIELD HEARING — Montana Field Hearing. Location: Billings, MT.

US House: Aug. 4 – Sept. 7. — The House stands adjourned until 2 p.m. on Monday, Sept. 8. Please note however that some committees are still scheduling hearings during this time both in Washington and in the field. Just a reminder to check the Capitol Hill takes daily during this period of "Recess."

Other: MERITALK – FEDERAL FORUM — "How can agencies change the network conversation? The 2014 Federal Forum examines new network architectures, new financial approaches, and new technologies."

<http://www.federalforum2014.com/> 9 a.m. Richard McKinney, Chief Information Officer, U.S. Department of Transportation, delivers the morning keynote. 1 p.m. Acting Department of Defense Chief Information Officer Terry A. Halvorsen delivers the keynote luncheon address. Location: Ronald Reagan Building and International Trade Center, 1300 Pennsylvania Ave. NW.

NHTSA – DRIVE SOBER EVENT — 10:30 a.m. National Highway Traffic Safety Acting Administrator David Friedman joins law enforcement officers to kick-off the annual national "Drive Sober or Get Pulled Over" enforcement crackdown. The campaign includes more than 10,000 police departments and law enforcement agencies across the country. Location: U.S. Department of Transportation Headquarters, Courtyard (Intersection of 3rd and M Streets SE).

UNITED NATIONS – DISCRIMINATION – PRESS CALL — 1:30 p.m. Civil and human rights advocates host a press call from Geneva during the United Nations review of the United States progress on its obligations to reduce racial discrimination and disparities under the Convention on the Elimination of All Forms of Racial Discrimination (CERD). The call will take place immediately following the first half of the U.S. governments presentation to the U.N. committee. The second half of the governments presentation will conclude on Thursday.

INSA LEADERSHIP DINNER – ADMIRAL ROGERS — 6 p.m. The Intelligence and National Security Alliance (INSA) Leadership Dinner with Admiral Michael S. Rogers: Director, National Security Agency; Commander, U.S. Cyber Command; Chief, Central Security Service. <http://www.insaonline.org/AdmiralRogers>

Last Laughs:

LATE NIGHT POLITICAL HUMOR.

Jimmy Fallon: "Well, here's what people are talking about. I saw that President Obama went to the beach yesterday while he's vacationing on Martha's Vineyard. Which got weird when he took out his metal detector to search for \$16 trillion in quarters."

Jimmy Fallon: "A lot of people are upset that President Obama went to the beach yesterday with everything that's going on in the world. You know times are tough for Obama, because even the sharks were like, 'I'm not going near that guy.' I mean, it's just bad."

Jimmy Fallon: "Also, during a fundraiser last night, President Obama suggested that one or more Supreme Court justices may retire soon. Which got awkward when Ruth Bader Ginsburg said, 'You can have this gavel when you pry it out of my even colder, deader fingers. Why would you say that?'"

Jimmy Fallon: "And finally, we have 'Personal Motto.' Hillary's is, '2016 can't get here fast enough.' Obama's is, 'Ditto.' So, I guess that maybe they're not that different after all. They're kind of the same."

U.S. DEPARTMENT OF THE INTERIOR NEWS BRIEFING

Mobile version and searchable archives available at interior.bulletinintelligence.com.

DATE: THURSDAY, AUGUST 14, 2014 7:00 AM EDT

TODAY'S TABLE OF CONTENTS

DOI IN THE NEWS:

- + San Diego National Wildlife Refuge Complex Awarded \$1 Million To Engage Urban Communities.
- + Secretary Jewell Sends Letter Denying King Cove Road Denial Appeal.
- + Secretary Jewell Meets Girl Who Visited 50 Phoenix Parks.
- + Interior Names New CIO.
- + Man Pleads Not Guilty To 2013 Wildfire.
- + \$10 Million In Capital Improvement Project Grants To American Samoa Announced.
- + Additional Coverage Of Native Hawaiian Relations.
- + Organ Mountains-Desert Peaks National Monument "Correction" Act Criticized.

AMERICA'S GREAT OUTDOORS:

National Park Service:

- + Office Of International Affairs Helps Other Countries Improve Their National Parks.
- + NPS Estimates Yellowstone Bison Population At 4,900.
- + USS Arizona Memorial Wall In Hawaii Under Renovation.
- + Iconic Municipal Pier At Aquatic Park Pier Falling Apart.
- + Officials Optimistic About Fish Population On Olympic Peninsula.
- + Ozark National Scenic Riverways To Celebrate 50th Anniversary.
- + Five Tennessee Sites Added To National Register Of Historic Places.
- + Portions Of Northwestern State University's Campus To Be Added To National Register Of Historic Places.
- + Crews Continue Search For Man Who Disappeared After Being Swept Down Yellowstone River.
- + Utah Symphony To Play Near Five National Parks.

Bureau of Land Management:

- + Texas AG Abbott Demands Answers From BLM About Red River Property.
- + Fight Brewing Over Placitas Horses.
- + BLM Bans Campfires On Its Eastern Washington Lands.
- + BLM Pinedale Office Seeks Public Input On Pronghorn, Mule Deer.

Fish and Wildlife Service:

- + Conservation Groups To Sue FWS Over Decision On Wolverine Protections.
- + FWS Decides Not To Issue New Protections For Warton's Cave Mesh Weaver.
- + FWS Concerned Over Bat Population.
- + Hunters Set To Converge On Loxahatchee National Wildlife Refuge For Alligator Hunt.
- + South Africa To Evacuate 500 White Rhinos From National Park To Thwart Poachers.
- + FWS Urged Not To Rely On Single Study On California Gnatcatcher.

US Geological Survey:

- + USGS Helps Monitor Hawaii Quakes, Eruptions.
- + Climate Change Threatens Sequoias.
- + Alaskan Woman Chases Polar Bear From Tent.

SECURING AMERICA'S ENERGY FUTURE:**Renewable Energy:**

- + BLM Studying Solar Development Impact.

Onshore Energy Development:

- + Companies Erased Fracking Disclosures From Website, Group Says.
- + Environmentalists Laud Sen. Warren For Opposing Massachusetts Natural Gas Project.
- + Texas Railroad Commission Looks For Compromise On Fracking-Earthquake Rules.
- + Plans Announced For Pipeline To Move Marcellus Gas From Pennsylvania To New Jersey.
- + Fracking Bans Said To Deprive The Middle Class Of Income.
- + Morning News Urges Texas Lawmakers To Encourage Fracking Wastewater Recycling.

Offshore Energy Development:

- + Industry Urges Interior To Add New Offshore Acreage To Next Auction Schedule.
- + BSEE Head Urges New Offshore Drilling Database.
- + BOEM, Maine Sign Agreement To Evaluate Sand Resources.
- + Environmental Groups Attack Shell's Arctic Spill Response Plans

TACKLING AMERICA'S WATER CHALLENGES:

- + Lake Mead To Get More Water.
- + California Leaders Agree On \$7 Billion Replacement Water Bond Language.
- + Water From St. Charles Mesa Water District To Be Used For Growing Pot.
- + American River Water Flows Cut In Half Due To Work At Nimbus Fish Hatchery.
- + South Fork Of The Boise River Flows To Increase Significantly.
- + Federal Officials Urged To Release Preventative Flows Into Trinity River To Save Salmon.

EMPOWERING NATIVE AMERICAN COMMUNITIES:

- + David Gipp From United Tribes Technical College Joins Cobell Scholarship Board Of Trustees.
- + BIA Urged To Extend Comment Period On Proposed Changes To Right-of-Way Rules.

TOP NATIONAL NEWS:

- + US Air Campaign May Have Rendered Use Of US Ground Forces In Mount Sinjair Unnecessary.
- + Obama And Clinton Meet Amid Tension Over Her Critique Of His Foreign Policy.
- + Officer Was Assaulted Before Ferguson Shooting That Sparked Violent Protests.

EDITORIAL WRAP-UP:

- + New York Times.
- + Washington Post.
- + Wall Street Journal.

BIG PICTURE:

- + Headlines From Today's Front Pages.

WASHINGTON SCHEDULE:

- + Today's Events In Washington.

LAST LAUGHS:

- + Late Night Political Humor.

DOI in the News:

SAN DIEGO NATIONAL WILDLIFE REFUGE COMPLEX AWARDED \$1 MILLION TO ENGAGE URBAN COMMUNITIES. The [E&E Daily](#) (8/13) reports that the San Diego National Wildlife Refuge Complex will "receive \$1 million in funding to engage youth and urban communities in outdoor recreation and conservation," Interior Secretary Sally Jewell announced Wednesday. The article notes that "the complex's proposal to create the 'SoCal Urban Wildlife Refuge Project' is the first to win funding through a national competition launched earlier this year" by FWS Director Dan Ashe. According to the article, "the proposal focuses on outdoor learning, service and stewardship at natural habitats throughout San Diego, as well as at the Hopper Mountain National Wildlife Refuge Complex and in Los Angeles through the Los Angeles Urban Wildlife Refuge Partnership and Friends of the Los Angeles River."

The [Times of San Diego](#) (8/13) reports that Jewell said, "From teaching urban youth about the magnificence of the California condor to unlocking opportunities to explore nature along the Los Angeles River, the San Diego National Wildlife Refuge Complex is a model of how we can leverage innovative partnerships to connect new and diverse audiences to the great outdoors. This dedicated funding will help engage the next generation of conservationists while also strengthening connections between the community and these public lands that belong to all Americans."

Also reporting on the story are [KUSI-TV](#) San Diego (8/14, 859) [XETV-TV](#) San Diego (8/14, 836), and [KPBS-TV](#) San Diego (8/13, 16K).

SECRETARY JEWELL SENDS LETTER DENYING KING COVE ROAD DENIAL APPEAL. The [Anchorage \(AK\) Dispatch News](#) (8/13, 251K) reports that the Obama Administration on Wednesday "doubled down on its decision to not allow a gravel road through the Izembek National Wildlife Refuge in Southwest Alaska." In letters to Gov. Sean Parnell, Sen. Lisa Murkowski and the village of King Cove, Interior Secretary Sally Jewell said the department "won't reconsider the decision made in December to deny the road." Jewell said "she is concerned about the community's public safety issues and wants to work with the village, population 934, to improve transportation from King Cove to the community of Cold Bay, where a large all-weather airport awaits."

The [Alaska Business Monthly](#) (8/14) reports that the letter was met with disappointment by King Cove tribal and community leaders. Della Trumble, spokeswoman for the Agdaagux Tribe and the King Cove Corporation, said, "We are truly saddened by the Secretary's decision. We're not surprised, but it's certainly a big blow for the people of King Cove." Trumble added, "It's quite clear to us that Secretary Jewell does not have a thorough understanding of this issue. Otherwise, she would know from the information we provided several months ago that neither of those options would be reliable or feasible. These alternatives, among others, have already been analyzed and rejected."

Also covering the story are [KTUU-TV](#) Anchorage, AK (8/14, 4K) and [KTVA-TV](#) Anchorage, AK (8/14, 1K).

SECRETARY JEWELL MEETS GIRL WHO VISITED 50 PHOENIX PARKS. The [Arizona Republic](#) (8/12, 1.26M) reports that "Mykayla Pack and her soon-to-be stepdad, Timothy Collins, visited 50 Phoenix parks this summer." When Phoenix officials learned that Interior Secretary Sally Jewell "planned to visit two Phoenix parks on Aug. 9 to celebrate the 50th anniversary of the Land and Water Conservation Fund, they invited Mykayla and her family to join them." When Jewell met Mykayla, she "gave the 7-year-old Phoenix girl a message." Jewell said, "I hope you inspire other kids to use the parks."

Also covering the story is [KSAZ-TV](#) Phoenix (8/11, 108K).

Additional Coverage Of LWCF. The [Boston Globe](#) (8/13, 1.58M) reports that parks advocates say public spaces on Boston are "in dire need of funding to maintain and keep them attractive to visitors." However, "in recent months, their hopes of receiving federal grants for improvements have been stymied, as congressional leaders have moved to reduce budget allotments to the federal Land and Water Conservation Fund." Activists "plan to gather Thursday on Boston Common to present a petition calling for full and permanent funding to the Land and Water Conservation fund."

Also providing coverage of the issue is the [Asheville \(NC\) Citizen-Times](#) (8/13, 58K).

INTERIOR NAMES NEW CIO. The [E&E Daily](#) (8/13) reports that the Interior Department announced Wednesday that Sylvia Burns will "become its chief information officer, directing the agency's overhaul of its information technology system." Burns "takes the helm from Bernard Mazer, who retired in March." She will "oversee Interior's 'IT Transformation,' a sweeping plan to consolidate a technology infrastructure that has long been fractured across the agency's bureaus." Interior Assistant Secretary Rhea Suh said, "Sylvia is a tremendous asset to the Department and she will excel in this new role. As the Department continues to move forward on critical initiatives like data center consolidation, Sylvia's leadership and collaborative style will help ensure our success in improving our IT services, while reducing our IT costs."

Also reporting on the story are the [Federal Times](#) (8/13, 132K), the [Federal Computer Week](#) (8/14, 263K), and the [ExecutiveGov](#) (8/14, 548).

MAN PLEADS NOT GUILTY TO 2013 WILDFIRE. The [E&E Daily](#) (8/13) reports that "a federal judge is allowing a man accused of setting one of California's largest fires to go free while the criminal trial continues." According to the article, "Keith Matthew Emerald, 32, can post a \$60,000 property bail bond after pleading not guilty to charges of starting the 400-square-mile wildfire, but US District Magistrate Judge Gary Austin said Emerald would be prohibited from lighting any campfires." Emerald "pleaded not guilty to charges that he caused the massive wildfire that torched parts of Yosemite National Park and the Stanislaus National Forest in 2013 despite an earlier admission that a campfire he started while deer hunting got out of control."

Additional Coverage. Additional coverage of wildfires was provided by the [AP](#) (8/13), the [Denver Post](#) (8/14, 923K), the [AP](#) (8/14, Barnard), and the [Peninsula \(WA\) Daily News](#) (8/13, 41K).

\$10 MILLION IN CAPITAL IMPROVEMENT PROJECT GRANTS TO AMERICAN SAMOA ANNOUNCED. The [Pacific News Center](#) (8/14) reports that Office of Insular Affairs Assistant Secretary for Insular Areas, Esther Kia'aina, on Wednesday "announced more than \$10 million in grant assistance to the American Samoa Government through the Office of Insular Affairs's Capital Improvement Project (CIP) Program." According to the article, "funds will support a number of critical infrastructure projects in the territory, improving its transportation, health and educational services." Kia'aina said, "These grants represent our commitment to the people of American Samoa and we are pleased to be supporting the efforts of Governor Lolo Moliga in his efforts to improve the quality and standard of living in the territory."

ADDITIONAL COVERAGE OF NATIVE HAWAIIAN RELATIONS. The [Honolulu Star-Advertiser](#) (8/14, 379K) reports that on Wednesday, US Secretary of State John Kerry gave a speech at the East-West Center in Manoa. According to the article, "outside the event, about 80 to 100 protestors were waiting for Kerry's arrival to share their views on several issues including US support of Israel and federal recognition for Native Hawaiians." Last month, Interior Department officials "came to Hawaii for public hearings on how the US government should proceed on recognition." The article notes that "many speakers at the hearings insisted that the State Department and Kerry, not Interior officials, should be talking to the Hawaiians on a nation-to-nation basis."

Additional coverage of the issue was provided by the [Honolulu Civil Beat](#) (8/14, 41).

ORGAN MOUNTAINS-DESERT PEAKS NATIONAL MONUMENT "CORRECTION" ACT CRITICIZED. In an op-ed for the [Las Cruces \(NM\) Sun-News](#) (8/14, 41K), Stevie Hansen criticizes Rep. Steve Pearce's recently introduced Organ Mountains-Desert Peaks National Monument "Correction" Act. According to Hansen, the measure "appears to be an attempt to roll back important public lands protections within our nation's newest national monument, negating the will of a vast majority of his constituents." Hansen finds the "proposal to be more about him taking a swipe at the newly created national monument and furthering a different agenda" and argues that "it is not about real security concerns." He concludes that "that is not the foundation for the creation of good public policy."

America's Great Outdoors:

National Park Service:

OFFICE OF INTERNATIONAL AFFAIRS HELPS OTHER COUNTRIES IMPROVE THEIR NATIONAL PARKS.

The [E&E Daily](#) (8/13) reports on the meetings that the NPS holds to "help foreign countries with their parks" in an effort to aid in "soft diplomacy." According to the article, "it's all arranged by the little-recognized Office of International Affairs, a six-person operation at NPS headquarters that works with the State Department to provide expertise to other countries looking to improve their national parks." The article focuses on a recent trip by a group of South Koreans to Harpers Ferry Center.

NPS ESTIMATES YELLOWSTONE BISON POPULATION AT 4,900. The [AP](#) (8/14) reports that NPS officials say "aerial surveys have found the estimated bison population in Yellowstone National Park is 4,900 animals." The agency said in a statement Wednesday "those numbers are similar to last year's summer estimate, and just 100 shy of 2005's peak population of 5,000 bison." The article notes that "the bison observed from the air in June include 740 calves born this year."

USS ARIZONA MEMORIAL WALL IN HAWAII UNDER RENOVATION. The [Arizona Republic](#) (8/13, 1.26M) reports that "the USS Arizona Memorial wall, dedicated to the 1,177 sailors, marines and officers killed during the attack on Pearl Harbor, will be replaced over the next three months." Paul DePrey, superintendent for the National Park Service WWII Valor in the Pacific National Monument, said, "When you are in the forever business like the park service, you have to take time out to take care to make sure it will last forever."

ICONIC MUNICIPAL PIER AT AQUATIC PARK PIER FALLING APART. The [San Francisco Chronicle](#) (8/14, Ho, 2.87M) reports that "the old Municipal Pier in the northwest corner of San Francisco's Aquatic Park is falling apart." The NPS has been "waiting for funding to come through for years, as the pier deteriorates and the costs increase." The article notes that "the current estimate for fixing the pier is \$70 million."

OFFICIALS OPTIMISTIC ABOUT FISH POPULATION ON OLYMPIC PENINSULA. The [Sacramento \(CA\) Bee](#) (8/13, 582K) reports that "once locally extinct, fishers are bounding all over the Olympic Peninsula in Washington." The NPS "with other partners began a relocation effort in 2008, in an effort to bring the animals back." According to the article, "the population today isn't known, and the question remains as to whether births are keeping pace with losses, building a population that is self-sustaining over the long term." However, "the indications from a monitoring effort by federal, state and tribal biologists so far are promising."

OZARK NATIONAL SCENIC RIVERWAYS TO CELEBRATE 50TH ANNIVERSARY. The [Springfield \(MO\) News-Leader](#) (8/13, 57K) reports that "on Aug. 27, 1964, President Lyndon B. Johnson signed the act establishing Ozark National Scenic Riverways — which includes the Current and Jacks Fork rivers — as a unit of the National Park Service." ONSR Superintendent Bill Black said, "Over the last 50 years, there has been a world of change in our lives. But one thing has stayed the same. People are still enjoying the Current and Jacks Fork rivers as was envisioned by those who set aside the land and water for all." The article notes that "a free event recognizing the 50th anniversary of the act creating the park will be at 6 p.m. Aug. 23 at the Depression Era Cabin at Big Spring."

FIVE TENNESSEE SITES ADDED TO NATIONAL REGISTER OF HISTORIC PLACES. [The Chattanooga](#) (8/14, 12K) reports that the Tennessee Historical Commission has announced five Tennessee sites have been added to the National Register of Historic Places. The sites include the Happy Holler Historic District, the C.C. Card Auto Company Building, the Picardy Place Historic District, the Miller Farmstead, and the Norris Dam State Park Rustic Cabins Historic District.

PORTIONS OF NORTHWESTERN STATE UNIVERSITY'S CAMPUS TO BE ADDED TO NATIONAL REGISTER OF HISTORIC PLACES. [KALB-TV](#) Alexandria, LA (8/14, 1K) reports that "portions of Northwestern State University's campus will soon be included in the National Register of Historic Places."

CREWS CONTINUE SEARCH FOR MAN WHO DISAPPEARED AFTER BEING SWEEPED DOWN YELLOWSTONE RIVER. The [E&E Daily](#) (8/13) reports that "rescue crews in Yellowstone National Park continue to look for a Georgia man who disappeared Monday on the Yellowstone River." According to the article, "Darien Latty, 22, was reportedly illegally floating on the Lamar River using inner tubes with two fellow concession employees."

UTAH SYMPHONY TO PLAY NEAR FIVE NATIONAL PARKS. The [Wall Street Journal](#) (8/14, Mermelstein, Subscription Publication, 5.89M) reports that the Utah Symphony will perform four concerts in close proximity to Utah's five national parks this week.

Bureau of Land Management:

TEXAS AG ABBOTT DEMANDS ANSWERS FROM BLM ABOUT RED RIVER PROPERTY. The [Houston Guidry News Service](#) (8/14) reports that Texas Attorney General Greg Abbott on Wednesday, "again, urged the Federal Bureau of Land Management (BLM) to drop its claims to private property along the Red River." In a letter, Abbott "seeks specific answers about the exact property the BLM now claims belongs to the federal government, asks the BLM to further explain the legal basis for its claim to private property, and highlights the economic harm that the BLM's actions are imposing on Texas landowners."

Also covering the story are the [Western Journalism](#) (8/14, 100K) and the [Breitbart](#) (8/13, 356K).

FIGHT BREWING OVER PLACITAS HORSES. The [AP](#) (8/14) reports that free-ranging horses in Placitas are "now drawing the ire of some residents who say their growing numbers are hurting the delicate desert landscape because they eat what little vegetation there is amid an ongoing drought." However, "horse advocates say the drought is to blame for damaging landscape and state officials have blocked their attempts to administer a female contraceptive to help control the horse population." John Brenna, active field manager for the BLM, said "despite advocates' claims, federal and state courts have ruled that the horses aren't wild and federal officials consider the animals 'unauthorized excessive livestock.'" The BLM "recently posted a notice at the Placitas Post Office notifying residents that the agency plans to remove around 48 horses on BLM land sometime between now to Dec. 31."

BLM BANS CAMPFIRES ON ITS EASTERN WASHINGTON LANDS. The [Spokane \(WA\) Spokesman-Review](#) (8/13, 170K) reports that "extreme fire danger has prompted the US Bureau of Land Management to join Washington state agencies in prohibiting campfires in Eastern Washington, including in developed recreation areas." The bureau's "fire managers enacted initial fire restrictions in mid-July." On Wednesday, "they updated the restrictions to prohibit the building, maintaining, attending or using a fire of any type, including charcoal briquette fires on lands administered by the BLM's Spokane District."

BLM PINEDALE OFFICE SEEKS PUBLIC INPUT ON PRONGHORN, MULE DEER. The [Casper \(WY\) Star-Tribune](#) (8/14, 90K) reports that the BLM's Pinedale office is "seeking public comment on pronghorn and mule deer for its annual report on both species." The bureau is also "accepting comments for this year's supplement on the mule deer migration."

Fish and Wildlife Service:

CONSERVATION GROUPS TO SUE FWS OVER DECISION ON WOLVERINE PROTECTIONS. The [AP](#) (8/14) reports that "two coalitions of advocacy groups have filed notices that they intend to sue the US Fish and Wildlife Service over its withdrawal of proposed protections for the wolverine." The service "reversed course Tuesday and said it does not consider climate change a threat to the long-term survival of the members of the weasel family." According to the article, "the notices filed Wednesday by Earthjustice and the Western Environmental Law Center give officials 60 days to reconsider." Earthjustice attorney Adrienne Maxwell says "the government is ignoring evidence that warmer temperatures will reduce wolverine habitat."

Coverage by the AP was also picked up by the [Washington Post](#) (8/13), the [Denver Post](#) (8/14, 923K), the [Spokane \(WA\) Spokesman-Review](#) (8/13, 170K), the [Greenfield \(IN\) Daily Reporter](#) (8/14, 31K), the [Helena \(MT\) Independent Record](#) (8/14, 45K), the [Missoulian \(MT\)](#) (8/14, 122K), the [Minneapolis Star Tribune](#) (8/14, 1.32M), [Yahoo!](#) (8/14, 10.35M), and [KING-TV](#) Seattle (8/14, 191K).

Also reporting on the story is [Reuters](#) (8/14, Zuckerman).

FWS DECIDES NOT TO ISSUE NEW PROTECTIONS FOR WARTON'S CAVE MESH WEAVER. The [E&E Daily](#) (8/13) reports that the FWS on Wednesday "announced it won't consider listing a Texas spider under the Endangered Species Act." The service "determined the Warton's cave meshweaver (*Cicurina wartoni*) is not a distinct species, so it can't be listed, according to a notice in today's Federal Register." According to the article, "based on scientific analysis from both outside sources and the agency, the arachnid should be reclassified as

being the same as two other spider species, *C. trivisiae* and *C. reddelli*."

FWS CONCERNED OVER BAT POPULATION. The [AP](#) (8/14) reports that "federal wildlife officials are hosting a series of information sessions about a proposal to list a type of bat as endangered after a disease found in Georgia wiped out part of the species." Officials say "they're looking to list the long-eared bat as an endangered species because of white-nose syndrome." The FWS says "it's planning to host information sessions on Aug. 19-21."

HUNTERS SET TO CONVERGE ON LOXAHATCHEE NATIONAL WILDLIFE REFUGE FOR ALLIGATOR HUNT. The [Sacramento \(CA\) Bee](#) (8/13, 582K) reports that "after two years of arguments, protests and environmental analysis, hunters will arrive Friday, Aug. 15 at the Loxahatchee (Fla.) National Wildlife Refuge to start killing alligators." According to the article, "eleven hunters have won a lottery in which 1,203 people applied for permits to take two alligators each in the refuge." But "when the hunters arrive Friday – and many may not, since the hunt runs through October – they will be greeted by protesters from the Animal Rights Foundation of Florida, one of several groups that had written letters in opposition to the hunt."

SOUTH AFRICA TO EVACUATE 500 WHITE RHINOS FROM NATIONAL PARK TO THWART POACHERS. The [E&E Daily](#) (8/13) reports that South Africa is "planning to deport up to 500 rhinos from Kruger National Park to Zambia and Botswana in an effort to defend them from a poaching epidemic that has led to the deaths of more than 403 of the animals in the park so far this year." According to the article, "the evacuation will mean tracking down the animals in remote sections of bush and shooting them from helicopters with tranquilizers." The article notes that "the operation is expected to cost \$1,500 or more per rhino."

FWS URGED NOT TO RELY ON SINGLE STUDY ON CALIFORNIA GNATCATCHER. The [Los Angeles Times](#) (8/14, 3.42M) editorializes that "Southern California developers are petitioning federal authorities to kick the California gnatcatcher off the list of threatened species, where it's been since 1993." It notes that "they're backed by a scientific study, which they helped fund, showing a lack of DNA evidence for classifying the nondescript local songbird as a genetically unique subspecies." But the paper argues that "though the study raises interesting questions worth following up, the US Fish and Wildlife Service should not be changing wildlife policy based on a single study funded in part by the industry that stands to gain from it."

US Geological Survey:

USGS HELPS MONITOR HAWAII QUAKES, ERUPTIONS. The [AP](#) (8/13) reports that USGS "outposts in other states are helping monitor Hawaii's volcanoes and earthquakes while work is done to repair Tropical Storm Iselle's damage to the Hawaiian Volcano Observatory." Officials say "complete restoration of the station perched on the rim of Kilauea Caldera at Hawaii Volcanoes National Park is expected this week." Meanwhile, the National Earthquake Information Center in Golden, Colorado, is "tracking Hawaii's larger earthquakes, while USGS volcanologists in Alaska and Virginia are keeping watch via satellite imagery."

CLIMATE CHANGE THREATENS SEQUOIAS. The [E&E Daily](#) (8/13) reports that "extended droughts and raging forest fires, made worse by climate change, could have dire consequences in the coming decades for the survival of some of the world's largest and most ancient trees, the giant sequoias." The article notes that "sequoias' growth and death are not well understood, making it harder for scientists trying to predict how changing conditions could affect the trees' survival." But "decreasing snowmelt and increasing frequency of forest fires at higher elevations are factors that are likely to prevent new sequoia saplings from taking root and thriving." Nathan Stephenson, an ecologist with the USGS, said, "If there's long-term drought, within 25 years, we could see seedlings in trouble."

ALASKAN WOMAN CHASES POLAR BEAR FROM TENT. The [E&E Daily](#) (8/13) reports that "an Alaskan woman chased a polar bear from her tent in the latest of several encounters between the bears and humans on the state's North Slope." Marie Rexford "ran out with a rifle and warned the bear off." Biologists for the USGS and FWS have "said the melting of Arctic ice is pushing more bears south to the mainland in their quest for food."

Securing America's Energy Future:

Renewable Energy:

BLM STUDYING SOLAR DEVELOPMENT IMPACT. The [Pueblo \(CO\) Chieftain](#) (8/14, 79K) reports that the BLM is "looking to reduce uncertainty regarding how impacts from solar development in the San Luis Valley's public lands might be mitigated." According to the article, "while there are no pending proposals for the 20,000 acres the agency has designated specifically for solar development, the agency initiated the study in February and hopes to complete it by early summer 2015." BLM spokesman Kyle Sullivan said "the study also has the potential to reduce the costs, complexity and timeline associated with off-site mitigation activities and project approvals."

Onshore Energy Development:

COMPANIES ERASED FRACKING DISCLOSURES FROM WEBSITE, GROUP SAYS. [Bloomberg News](#) (8/13, Drajem, 2.76M) reports that drilling operators are "putting at risk drinking water supplies near wells" by using diesel in hydraulic fracturing without a permit, according to an environmental watchdog group. The Environmental Integrity Project used data from the industry-backed website FracFocus to find that 351 wells that were fracked with diesel. In 143 of such cases, the operator later erased the disclosure from the site, prompting criticisms for more transparency about the toxic chemicals used in fracking. According to Lee Fuller, vice president of the Independent Petroleum Association of America, "Drillers probably erased the diesel classification as they corrected data-entry mistakes."

The [International Business Times](#) (8/13, Gallucci, 697K) reports that none of the companies found to have used diesel in their fracking operators applied for or received a diesel permit. The Environmental Protection Agency, which oversees fracking when diesel is included, has not yet responded about how they might use the report's findings. Mary Greene, one of the report's authors, said the EIP is considering "what kind of citizen suit enforcement opportunities might exist."

[NPR](#) (8/13, Phillips, 519K) notes that diesel is an exception to "the so-called Halliburton Loophole" which exempts chemicals used in hydraulic fracturing from Federal oversight and that Congress requires "extensive oversight if diesel is present."

The [Los Angeles Times](#) (8/14, Banerjee, 3.42M) reports that a spokesman for the industry-backed group Energy in Depth contends that the integrity project "has systematically and deliberately abused the data to suggest 'diesel fracking' is occurring where it is not."

ENVIRONMENTALISTS LAUD SEN. WARREN FOR OPPOSING MASSACHUSETTS NATURAL GAS PROJECT. The [E&E Daily](#) (8/13) reports that "environmentalists fighting the Keystone XL oil sands crude pipeline from Canada today hailed Sen. Elizabeth Warren (D-Mass.) for declaring her opposition to pipeline titan Kinder Morgan Inc.'s plans for a 180-mile natural gas link that would cross her home state." According to the article, Warren "couched her opposition to the proposed natural gas pipeline in a broader principle for climate action by calling for an emphasis on upgrading existing pipelines that could alleviate the need for large new fossil fuel projects." Jamie Henn, communications director for the anti-KXL green group [350.org](#), praised Warren's stance as "good news for pipeline fighters in Massachusetts and across the country."

TEXAS RAILROAD COMMISSION LOOKS FOR COMPROMISE ON FRACKING-EARTHQUAKE RULES. The [E&E Daily](#) (8/13) reports that the Texas oil and gas industry on Tuesday "signaled its openness to proposed state rules that would allow disposal wells to be shut down if they're suspected of causing earthquakes." The article notes that "reviews from environmental groups and were mixed, but they applauded the Texas Railroad Commission for taking action on the issue of quakes linked to drilling." The commission "approved a draft of the rules" on Tuesday "after months of questioning scientific studies that show a link between earthquakes and oil and gas operations."

PLANS ANNOUNCED FOR PIPELINE TO MOVE MARCELLUS GAS FROM PENNSYLVANIA TO NEW JERSEY. The [E&E Daily](#) (8/13) reports that "UGI Corp., a Reading, Pa.-based natural gas and electricity supplier, and its partners announced plans" on Tuesday "for a 100-mile pipeline from Pennsylvania to New Jersey, providing a new outlet in both states for the expanding Marcellus Shale gas production." If approved by regulators, "the nearly \$1 billion PennEast Pipeline Company LLC project would run from Luzerne County in northeastern

Pennsylvania to the Trenton-Woodbury interconnection on the Transco pipeline in New Jersey."

FRACKING BANS SAID TO DEPRIVE THE MIDDLE CLASS OF INCOME. In an op-ed in the [Denver Post](#) (8/13, 923K) Michelle Smith, president of the National Association of Royalty Owners, describes court decisions to strike down bans on hydraulic fracturing as "victories for families in Colorado and beyond." According to Smith, bans on energy "cause waste" by preventing obstructing families from "a source of income that is rightfully theirs." She acknowledges that state oversight is necessary for "a predictable and effective regulatory environment" for the oil and gas industry, but concludes that "the fundamental concept of property rights, affirmed in the Fifth Amendment of the Constitution, cannot be lost in this debate."

MORNING NEWS URGES TEXAS LAWMAKERS TO ENCOURAGE FRACKING WASTEWATER RECYCLING. In an editorial in the [Dallas Morning News](#) (8/14, 1.11M) the paper calls on Texas lawmakers to do more to encourage fracking wastewater recycling, such as a fee on fresh water use, enacting tougher restrictions on wastewater injection well or establishing a timetable for drillers to adopt recycling technology. The Morning News writes that the amount of wastewater recycling is estimated to double in the next decade, but that lawmakers should push to expedite the transition before the economy is negatively effected by water-scarcity.

Offshore Energy Development:

INDUSTRY URGES INTERIOR TO ADD NEW OFFSHORE ACREAGE TO NEXT AUCTION SCHEDULE. [FuelFix](#) (8/13, Dlouhy, 7K) reports that Wednesday the American Petroleum Institute renewed its pleas for added "offshore drilling options in comments filed with the Interior Department." The API wants offshore East and West coast acreage to be included in the BOEM's scheduled auctions from 2017 to 2022. API senior policy adviser Andy Radford said of current drilling auctions, "You have a notable gap there on the East Coast of the United States. We think there are probably some trends that extend down the East Coast from what we see in Canada, but we won't know until we look."

The [Oil and Gas Journal](#) (8/13, Snow, 1K) reports that the American Petroleum Institute joined 10 other oil and gas trade associations in submitting public comments to the Interior Department on Wednesday over the 2017-22 offshore auction plan.

Also reporting on the story is [SNL Financial](#) (8/14, 21K).

Group Raises Concerns About Possibility Of Atlantic Offshore Drilling. [WABE-FM](#) Atlanta (8/14, 805) reports that "a Georgia environmental organization is concerned about including the Atlantic ocean from Florida through Delaware in a federal lease program for oil and natural gas." Alice Keyes, associate director of 100 miles, said, "Our concerns really focus around the impact to marine wildlife and our local coastal community." Keyes says "it's also worried about the effect noise from seismic surveys would have on marine life."

Georgia Chamber Supports Including Atlantic For Offshore Drilling. [WABE-FM](#) Atlanta (8/14, 805) reports that "the Georgia Chamber is in favor of including the Atlantic Continental Shelf in the US Interior Department's five-year lease plan for oil and natural gas between 2017 and 2022." Georgia Chamber President and CEO Chris Clark advocated for the inclusion in a July letter to the BOEM.

BSEE HEAD URGES NEW OFFSHORE DRILLING DATABASE. [Platts](#) (8/13, 2K) reports that in comments at an industry forum in Houston this week, Bureau of Safety and Environmental Enforcement director Brian Salerno urged offshore drillers to craft "a comprehensive public database to help improve safety and prevent spills in federal waters." He said, "Currently individual operators are collecting a lot of the data we need to properly assess risk, but that information isn't being shared. Everyone is working in their own silo, collecting and using information for their own operations." He said drillers and regulators are lacking "big picture data."

BOEM, MAINE SIGN AGREEMENT TO EVALUATE SAND RESOURCES. The [Dredging Today](#) (8/13) reports that the BOEM and Maine have "signed a two-year cooperative agreement totaling \$195,000 to evaluate sand resources for coastal resilience and restoration planning." Under this deal, the Maine Coastal Program and Maine Geological Survey of the Department of Agriculture, Conservation and Forestry will "develop an assessment to estimate the resource needs and evaluate the potential for Outer Continental Shelf sand and gravel resources."

BOEM Acting Director Walter Cruickshank said, "This agreement demonstrates BOEM's commitment to work with Maine to help coastal communities recover from storms like Hurricane Sandy and enhance resilience efforts for the future. We are committed to continuing to work in a collaborative manner to help local communities withstand damage from future storms."

ENVIRONMENTAL GROUPS ATTACK SHELL'S ARCTIC SPILL RESPONSE PLANS . The [Law 360](#) (8/14, 18K) reports that "environmental groups on Wednesday urged the Ninth Circuit to revoke the Bureau of Safety and Environmental Enforcement's approval of two Royal Dutch Shell PLC units' spill response plans for exploratory oil drilling in the Arctic Ocean, saying approval was granted arbitrarily."

Tackling America's Water Challenges:

LAKE MEAD TO GET MORE WATER. The [AP](#) (8/13) reports that Lake Mead will get more water this year, but not enough to halt its decline, according to new BOR projections. The BOR announced Wednesday that "it will release 10 percent more water from Lake Powell near the Arizona-Utah border into Lake Mead than it did the past year, thanks to near-normal runoff." Federal officials said "they'll send 8.23 million acre feet to Lake Mead, up from 7.48 million acre feet when Lake Powell was at its lowest level ever." But "despite the additional water, Lake Mead is projected to remain near record lows at 1,083 feet in January — three feet higher than it was Wednesday," because "more water will be delivered to cities, farms, American Indian communities and Mexico than Lake Mead will get from Lake Powell."

Coverage by the AP was also picked up by [Fox News](#) (8/13, 6.72M), the [US News & World Report](#) (8/13, 645K), the [Seattle Post-Intelligencer](#) (8/14, 857K), the [Quincy \(IL\) Herald-Whig](#) (8/14, 85K), [KTVK-TV](#) Phoenix (8/14, 23K), and [WJBK-TV](#) Detroit (8/14, 216K).

Also reporting on the story are the [Las Vegas Review-Journal](#) (8/14, 386K) and the [Las Vegas Sun](#) (8/13, 148K).

CALIFORNIA LEADERS AGREE ON \$7 BILLION REPLACEMENT WATER BOND LANGUAGE. The [E&E Daily](#) (8/13) reports that California Gov. Jerry Brown and Democratic leaders are "nearing agreement on a \$7 billion spending package for water that would replace an \$11.1 billion one now on the November ballot in the drought-plagued state." Brown on Monday "signed a measure extending the deadline to place a new water bond on the upcoming ballot and to give it a new proposition number." Lawmakers now have until the end of Wednesday "to approve its inclusion on the ballot."

[KXJZ-FM](#) Sacramento, CA (8/13, 1K) reports that "Gov. Jerry Brown and California lawmakers have signed off on a new water bond for the November ballot." The measure "approved Wednesday night removes the existing \$11 billion bond and replaces it with a \$7.5 billion measure."

WATER FROM ST. CHARLES MESA WATER DISTRICT TO BE USED FOR GROWING POT. The [Pueblo \(CO\) Chieftain](#) (8/14, 79K) reports that "water from the St. Charles Mesa Water District can be used for marijuana growing operations, a reversal of a policy adopted in March." David Simpson, general manager of the district, said, "We never received a letter from the federal government directly answering our questions."

AMERICAN RIVER WATER FLOWS CUT IN HALF DUE TO WORK AT NIMBUS FISH HATCHERY. [KCRA-TV](#) Sacramento, CA (8/14, 122K) reports that "users of the lower American River will notice a significant drop in the water flow over the next few days as workers at the Nimbus Fish Hatchery complete annual work on the fish weir." On Wednesday, "hatchery workers began installing metal pipes that block fish from proceeding any further up river from the hatchery." The BOR "hoped to restore water flows back to 1,500 cubic feet per second by Wednesday afternoon barring any complications with the hatchery work."

SOUTH FORK OF THE BOISE RIVER FLOWS TO INCREASE SIGNIFICANTLY. The [Boise \(ID\) Weekly](#) (8/13, 108K) reports that "in an attempt to restore fish habitat, water managers plan to greatly increase flows in the South Fork of the Boise River next week." The BOR will "increase river volume from Anderson Ranch Reservoir by 400 cubic feet per second (cfs) on Aug. 18 and 300 more cfs on Aug. 19."

FEDERAL OFFICIALS URGED TO RELEASE PREVENTATIVE FLOWS INTO TRINITY RIVER TO SAVE

SALMON. For the [Eureka \(CA\) Times Standard](#) (8/14, 76K), Kenny Priest writes that while the BOR is "holding firm on their stance to not release water until the salmon begin to show signs of disease," there have been "no big numbers of sick fish...reported as of yet, but it remains a real possibility." Priest urges the public to speak out to support the "release preventative flows into the Trinity River to save the fall salmon run from river conditions that are even more severe than those that caused the country's largest fish kill in 2002."

Empowering Native American Communities:

DAVID GIPP FROM UNITED TRIBES TECHNICAL COLLEGE JOINS COBELL SCHOLARSHIP BOARD OF TRUSTEES. The [Nation Sun News](#) (8/14) reports that "David Gipp, the president of the United Tribes Technical College in North Dakota, has been named to the board of trustees for the Cobell scholarship fund." Gipp is a member of the Standing Rock Sioux Tribe. He will represent the American Indian College Fund, which administers the Cobell scholarships, on the five-member board.

BIA URGED TO EXTEND COMMENT PERIOD ON PROPOSED CHANGES TO RIGHT-OF-WAY RULES. For the [Indian Country Today Media Network](#) (8/13, 45K), Jay Daniels writes that the BIA is "accepting comments on proposed changes to the Code of Federal Regulations that 'would comprehensively update and streamline the process for obtaining BIA grants of rights-of-way on Indian land,' until August 18, 2014." Jemez Mountain Electrical Cooperative officials and some of their customers are "speaking out against proposed federal rule changes they believe could lead to higher utility costs." Daniels urges the BIA to extend "the comment period to ensure that everything has been flushed out."

Top National News:

US AIR CAMPAIGN MAY HAVE RENDERED USE OF US GROUND FORCES IN MOUNT SINJAIR UNNECESSARY. Developments late last night drastically changed the tenor of the coverage of a potential US mission to rescue Iraqi refugees trapped in Iraq's Mount Sinjar. On TV broadcasts, and in early online versions of newspaper and wire accounts, much of the coverage touched on questions of whether the mission would violate the President's promise not to send US troops back into combat in Iraq. While the Administration was drawing a distinction between combat and rescue operations, an undercurrent of skepticism ran through much of the reporting. Then, as news broke that US ground forces may not be needed after all, the focus of the coverage moved to quotes from enthusiastic US officials who credit the effects of the recent US air campaign for the favorable outcome.

[McClatchy](#) (8/14, Youssef, Kumar, Subscription Publication, 23K), for example, notes that Brett McGurk, the State Department's deputy assistant secretary for Near East Affairs, "declared via Twitter that the US actions had 'broken the siege,' a sentiment repeated by State Department spokeswoman Marie Harf: 'President said we're going to break the siege of this mountain, and we broke that siege.'" The [Washington Post](#) (8/14, A1, Deyoung, Whitlock, 4.06M), in a front-page report, attributes that last quote to McGurk.

On its front page, the [New York Times](#) (8/14, A1, Cooper, Shear, Subscription Publication, 9.79M) reports that DOD "officials said late Wednesday that United States airstrikes and Kurdish fighters had broken the siege." The [AP](#) (8/14, Pace, Burns) reports Defense Secretary Chuck Hagel termed a rescue operation "far less likely now," and "said six days of US airstrikes against militant targets in the region gave many people an opportunity to get off the mountain."

[USA Today](#) (8/14, Jackson, Michaels, Bacon, 5.76M) reports Rear Adm. John Kirby, a DOD spokesman, said last night a "team of fewer than 20 US troops 'has assessed that there are far fewer Yazidis on Mount Sinjar than previously feared, in part because of the success of humanitarian airdrops, airstrikes on (Islamic State) targets, the efforts of the peshmerga (Kurdish fighters) and the ability of thousands of Yazidis to evacuate from the mountain each night over the last several days.'" Added Kirby, "Based on this assessment the interagency has determined that an evacuation mission is far less likely." The [Washington Times](#) (8/14, Ybarra, 465K) quotes Kirby as saying, "The Yazidis who remain are in better condition than previously believed and continue to have access to the food and water that we have dropped." The [Los Angeles Times](#) (8/14, Cloud, Hennessey, 3.42M), [Reuters](#) (8/14, Mohammed, Mason), [Politico](#) (8/14, Ewing, 637K), [TIME](#) (8/14, 24.1M) and [Voice of America](#) (8/14, 21K), among other news outlets, also highlight Kirby's comments in their reports.

Iraq received 12 minutes and 30 seconds in combined coverage from the network newscasts – one of which led with the story – while CNN once again extended its prime-time newscast by 30 minutes to cover the US mission and the negotiations between Israel and Hamas. At the time of the broadcasts, the tone of the coverage was markedly different: David Martin reported on the [CBS Evening News](#) (8/13, story 3, 2:25, Pelley, 5.08M) that while the US has “relied on nightly airdrops of food and water to keep the refugees alive,” that effort “will soon be replaced by a rescue operation that will put American troops in harm’s way.” Martin noted that while the President “has promised not to send American troops back into combat in Iraq...one of his top advisers said” yesterday “this would be a rescue operation, and that makes it different.”

In the lead story for [NBC Nightly News](#) (8/13, lead story, 2:35, Holt, 7.86M), Jim Miklaszewski also noted the debate over whether the special forces’ mission was a violation of the President’s vow “not to put US boots on the ground,” adding that the Deputy National Security Adviser “said the mission is humanitarian, not combat.” Ben Rhodes, Deputy National Security Adviser, was shown saying, “I think the principle holds that we’re not putting ground forces in combat role in Iraq.” Rhodes comments were highlighted in early reports from the [AP](#) (8/13, Pace), [Wall Street Journal](#) (8/13, Sparshott, Nissenbaum, Subscription Publication, 5.89M), [Christian Science Monitor](#) (8/13, LaFranchi, 566K), [AFP](#) (8/13), [Huffington Post](#) (8/13, Lavender, 11.54M), [The Hill](#) (8/13, Sink, 237K) and [Washington Times](#) (8/14, Boyer, 465K), among other news outlets, all of which noted the debate on whether the President was about to violate his pledge.

Muhammad Lila reported on [ABC World News](#) (8/13, story 4, 2:00, Muir, 5.84M) that the US is “preparing a rescue mission,” with the White House “saying it hasn’t ruled out deploying troops to help” the refugees “get down to safety.” In a separate story on [ABC World News](#) (8/13, story 5, 0:50, Muir, 5.84M), Martha Raddatz reported that “in order to rescue thousands of people, you would almost certainly need boots on the ground,” and “while the White House has insisted over and over that US troops would not be put back into a combat role in Iraq, this rescue mission would put them in enemy territory and they certainly could be sucked into combat if they came under fire.”

Barbara Starr reported on [CNN’s Situation Room with Wolf Blitzer](#) (8/13, 554K) that “two options remain on the table. Basically, there are only two ways out of there, either by ground over transport vehicles or by air. Some officials are saying the air option may look better at this point.”

Jennifer Griffin reported on [Fox News’ Special Report](#) (8/13, 2.15M) that according to “defense officials,” 129 “armed Marines and US special operations troops arrived in Erbil assessing if its possible to airlift the thousands of Yazidis trapped...on Mount Sinjar.” Harf was shown saying, “The President has been very clear that we will not be sending troops back in combat roles. That’s the key phrase. They are assessing. They are not there in combat roles.” Griffin noted that “there are 864 military personnel now on the ground in Iraq.” Harf said on [CNN’s Situation Room with Wolf Blitzer](#) (8/13, 554K), “We have unique capabilities we can bring to bear. ... We’re going to help here.”

Ivan Watson reported on [CNN’s Situation Room with Wolf Blitzer](#) (8/13, 554K) that US forces “would presumably have to coordinate on that mountain with” Kurdistan Workers’ Party (PKK) “fighters that” the US government “considers terrorists.” The troops “may have to waive that, considering how many thousands of people the PKK have saved off that mountain over the course of the last nine desperate days.”

An front-page analysis piece in the [Washington Post](#) (8/14, A1, Jaffe, Miller, 4.06M), meanwhile, contrasts statements from “senior US officials” who “describe the threat posed by the Islamic State in chilling terms, but have mounted a decidedly modest military campaign to check its advance through northern Iraq.” The Post sees a “disconnect between the unnerving assessments of the Islamic State and the apparent lack of urgency in confronting.”

George F. Will writes in the [Washington Post](#) (8/14, Will, 4.06M) that even if protecting Kurds and Yazidis is in the US’ national interest, the key question is: “Is it wise to support the use of force by this president? He is properly cautious about today’s awful dilemma, which is not primarily of his making. But caution can be reckless. ... Are F-18s going to be used for a foreign policy of rightminded gestures — remember #BringBackOurGirls? — the success of which is in making the gesturers feel virtuous?”

US Drone Destroys ISIL Truck In Sinjar. The AP (8/13) reports the US military said yesterday "a drone aircraft attacked and destroyed an armed truck operated by Islamic militants west of the village of Sinjar in northern Iraq."

France To Supply Arms To Kurds; Canada And Australia Offer To Play Role In Helping Refugees. The AP (8/14, Keller) reports that "calling the situation in Iraqi Kurdistan 'catastrophic,' France said Wednesday it would start supplying arms to the Kurdish forces fighting Sunni extremists from the Islamic State group." President Francois Hollande's office said yesterday the French leader had spoken with British Prime Minister David Cameron last night, "and agreed on the need for an 'extremely rapid response.'" The French statement, however, "didn't clarify whether Britain outright consented to furnish weapons to the Kurds, who are trying to push back radicals of the IS group." The [Washington Times](#) (8/14, Taylor, 465K) notes "Mr. Hollande's office said France had communicated with Iraq's central government in Baghdad before making the move to ship weapons to the Kurds."

Citing comments by Rhodes, meanwhile, the [Toronto \(CAN\) Star](#) (8/13, Campion-Smith, 113K) reports the US "announced Wednesday that it was talking to several countries including Canada about helping Yazidis, Iraqi Christians, and other people who have become displaced by the advance of Islamist fighters." Said Rhodes, "We have offers of support from a number of allies like France, Australia, Canada."

The AP (8/13, Salama, Yacoub) reports the UN yesterday "called its highest level of emergency for the humanitarian crisis in Iraq," and goes on to note that the EU's "28 foreign ministers will hold an emergency meeting Friday on Iraq to coordinate their stance on military support for the Kurds and on providing humanitarian assistance for those fleeing the fighting, the EU said Wednesday."

Another AP (8/13, Hadid) dispatch, meanwhile, reports that "after Washington's promises to arm them, the Kurds say they badly need heavier weapons from the United States to stem the expansion of the Islamic State group."

Militant Commander Says ISIL Holding More Than 100 Yazidi Women And Children. Wolf Blitzer reported on [CNN's Situation Room with Wolf Blitzer](#) (8/13, 554K) that a top ISIL commander says that "his forces are holding more than 100 Yazidi women and children who were taken after many of their men of their town were simply massacred."

Harf said on [CNN's Situation Room with Wolf Blitzer](#) (8/13, 554K), "We are looking at this situation, but this is the latest in a long line of nihilistic actions this group has taken. Not only are they trying to take territory with heavy weapons, which we've been pushing back on but they are really terrorizing whole populations in Iraq, not just Christians, not just Yazidis, but Kurds, Shia, moderate Sunnis. So in addition to what we have been doing recently with the humanitarian aid, the strikes around Erbil, we are working with the Iraqis on a long-term counterterrorism strategy to take out their leadership, to cut off their funding, to take away their operational capabilities so they can't terrorize Iraqis."

Former Army College Commandant: US Air Campaign Puts ISIL On Course To Claim Victory. Robert H. Scales, a retired Army major general and former commandant of the US Army War College, writes in the [Washington Post](#) (8/13, Scales, 4.06M) that "US airstrikes of the past week have mostly succeeded," but ISIL will adapt and they will cease to be effective. In fact, "recent history suggests there will be strategic consequences from seeking to blunt the Islamic State advance through airpower alone." That will leave "two unattractive alternatives: Escalate until tragedy occurs or accept battlefield stasis." And then, "when we fly away with the Islamic State still dominant on the battlefield, the terrorists will proclaim to the world that the United States is a cowardly country that has been beaten again."

Some Lawmakers Say Obama Needs Congressional Approval. The [Wall Street Journal](#) (8/14, Hughes, Subscription Publication, 5.89M) reports that a series of US lawmakers, including Sens. Tim Kaine and Rand Paul and Rep. John Garamendi, are calling for the President to ask for Congress' authorization for the current military mission in Iraq. No congressional leader has joined their ranks as of this moment.

Roll Call (8/13, Lesniewski, 76K) reported on its website that Paul said yesterday on Twitter that "constitutionally," Obama "should come forward with a plan to Congress and we vote for it or against it. It's the same way with, you know, bombing Libya, war with Libya or bombing Iraq."

Obama's Vacationing, Brief Return To DC Noted. In a story headlined "Obama Keeps Up Presidential Appearances Amid Golf Outings," [Bloomberg News](#) (8/14, Keane, Dornig, 2.76M) reports that Obama, "on pace to log 40 hours on the golf course during his two-week vacation on Martha's Vineyard, is making sure to show people that he's still at work," and to do so, he has "stepped before the microphones to talk about the upheaval in Iraq, and made six calls to world leaders about that and other global crises." Bloomberg notes that "each call merited a press release, and he's also issued a statement on the death of actor Robin Williams and another urging calm in Ferguson." Bloomberg also says "the flurry of activity is as much a part of any president's vacation as is the inevitable criticism from political opponents, no matter which party is in control of the White House."

The [Daily Caller](#) (8/13, Munro, 408K) titled its report "Obama Golfs, Lets Biden Do Foreign Policy" and said Obama is "letting Vice President Joe Biden play at foreign-policy president this week," citing the VP's efforts in Iraq "while Obama was golfing in Martha's Vineyard."

In a post for [The Hill](#) (8/13, Sink, 237K), meanwhile, Justin Sink reported that the White House said yesterday that Obama "won't make any major announcements on immigration reform during his secretive mid-vacation trip back to Washington next week." According to Sink, "speculation has circled around whether Obama might make an announcement of executive actions he's taking on immigration reform, or a surprise visit from a foreign leader." But spokesman Eric Schultz said yesterday the White House is "not anticipating a major announcement on immigration when the president is in Washington," and "adding more mystery to the topic," added that the Administration did not "anticipate any major significant news developments out of Washington those few days."

OBAMA AND CLINTON MEET AMID TENSION OVER HER CRITIQUE OF HIS FOREIGN POLICY. All three network newscasts aired segments on the continuing contretemps between allies of President Obama and those close to former Secretary of State Clinton. The news that the President and Clinton were set to be at the same event at Martha's Vineyard on Wednesday was widely noted, as was Clinton's spokesman's prediction that the two would be "hugging it out."

Notable in the coverage is the repetition of the suggestion that Clinton feels that she must distance herself from the President due to his relatively weak recent poll numbers. For instance, [Bloomberg News](#) (8/13, Allen, Keane, 2.76M), says the President's "poor poll ratings" give Clinton incentive to criticize him ahead of her anticipated presidential campaign, and [Politico](#) (8/13, Glueck, Fandos, 637K) reports that Clinton's recent remarks were "seen by some as an attempt to create space from an unpopular White House."

A front-page article in the [New York Times](#) (8/14, Martin, Chozick, Subscription Publication, 9.79M) making the case that Clinton represents the future of the Democratic Party, while the President "is fast becoming the past," says that in November, "Democrats face difficult races...in states where the president is especially unpopular." And Todd Purdum, in a piece for [Politico](#) (8/13, Purdum, 637K), refers to the President as "increasingly unpopular."

On [ABC World News](#) (8/13, story 7, 1:20, Muir, 5.84M), David Muir said the President and Clinton "forged a partnership in the White House, but are there signs it's cracking as she prepares for a possible run for president?" Jonathan Karl went on to report that the President and Clinton were scheduled to "see...each other" last night at an event on Martha's Vineyard "right after" Clinton "offered her most pointed criticism yet of President Obama's foreign policy." Karl added that Clinton has subsequently "tried to smooth things over," and showed her saying, "We have disagreements, as any partners and friends, as we are, might very well have, but I'm proud that I served with him and for him."

On the [CBS Evening News](#) (8/13, story 5, 1:50, Pelley, 5.08M), Bob Schieffer said, "Regardless of how many more times Mrs. Clinton says she was not criticizing president...she really did zing him when she said, 'Great nations need organizing principles and 'don't do stupid stuff' is not an organizing principle,'" because "'Don't do stupid stuff,' is the President's own description of his foreign policy." According to Schieffer, "It's going to take more than a party hug...to make the President forget that criticism." Schieffer went on to say that Clinton "favors a more muscular foreign policy than the President," but is also "walking a very fine line" because she "does not want to turn off the hardcore liberal left."

On [NBC Nightly News](#) (8/13, story 9, 1:55, Holt, 7.86M), Lester Holt said Clinton is "hoping to hug it out after some critical comments about the President's foreign policy." Correspondent Chris Jansing reported from

Martha's Vineyard that "the last few days have felt kind of like a flashback to 2008 when the two were locked in that pitched battle for president." Jansing noted that former Obama senior adviser David Axelrod "attack[ed Clinton's] Iraq war vote" when he tweeted earlier this week: "Just to clarify: 'Don't do stupid stuff' means stuff like occupying Iraq in the first place."

On Wednesday evening, the [AP](#) (8/13, Pickler) reported that the President and Clinton "did their best to shrug off their differences Wednesday as they gathered on Martha's Vineyard following a foreign policy split." According to the AP, deputy White House press secretary Eric Schultz "declined to say whether the president was upset over her critique of his performance."

The [Washington Post](#) (8/13, Zezima, 4.06M) reports that "the frenzy over Clinton's comments, and anticipated embrace, reached fever pitch at the White House news briefing Wednesday, where reporters pressed...Schultz on the state of the Obama-Clinton relationship — and pushed for access to the pair's rapprochement." The Post says Schultz "did concede that Obama and Clinton have disagreed on several fronts, including whether and when to arm Syrian rebels." [Reuters](#) (8/13, Mason) quoted Schultz as saying, "They continue to agree on a broad majority of issues confronting our country, even if they have the occasional policy difference."

[Politico](#) (8/13, Glueck, Fandos, 637K) noted that Wednesday night's "meeting comes just days after Clinton dinged elements of Obama's foreign policy in an interview with The Atlantic's Jeffrey Goldberg, complete with dissing as a 'failure' the early decision not to assist some Syrian rebels." Politico says Clinton's remarks were "seen by some as an attempt to create space from an unpopular White House," but also notes that Clinton "already called Obama to assure him that her remarks weren't meant as an attack."

According to [Bloomberg News](#) (8/13, Allen, Keane, 2.76M), "From the time of their shotgun wedding after the 2008 campaign," the President and Clinton have "kept the partnership of the two most powerful brands in Democratic politics from tearing asunder," but "that will increasingly be a challenge...as Obama works to burnish his legacy while Clinton lays the groundwork for her political future." Bloomberg News goes on to make the case that "the genesis of the...conflict is twofold: his poor poll ratings and her interest in the presidency." Bloomberg News notes that "in surveys taken from Aug. 9 through Aug. 11," the President "rated a 41 percent approval level, with 55 percent disapproving of his handling of the presidency."

Todd Purdum, in a piece for [Politico](#) (8/13, Purdum, 637K), says Clinton's "dilemma" is "how to distance herself from the increasingly unpopular president she served, yet might like to succeed." [McClatchy](#) (8/13, Douglas, Subscription Publication, 23K) notes that as of 2016, it will have been 160 years since a former secretary of state was elected president.

NYTimes A1: With Obama "Especially Unpopular" In Some States, Top Democrats Turn To The Clintons. In a front-page article, the [New York Times](#) (8/14, Martin, Chozick, Subscription Publication, 9.79M) reports from Martha's Vineyard that "after six years, energy here and elsewhere appears to be shifting from Mr. Obama toward Mrs. Clinton, as the former secretary of state moves away from the president's orbit toward her own political future, generating tensions that are spilling out in unusual ways." According to the Times, the President "is fast becoming the past, not the future, for donors, activists and Democratic strategists," who are "increasingly turning toward Mrs. Clinton and her husband...as Democrats face difficult races this fall in states where the president is especially unpopular." The Times says Clinton's "aides" are "making plain that she has no intention of running for 'Obama's third term.'"

More Commentary On The Dynamics Of The Obama-Clinton Relationship. In a column for the [Wall Street Journal](#) (8/14, Rove, Subscription Publication, 5.89M) titled, "Hillary's Risky Hawkish Makeover: Mrs. Clinton is doing her best to distance herself from Obama. But that may prove impossible," Karl Rove offers the conjecture that Clinton is uneasy about her ties to President Obama's foreign policy — after having served as his chief diplomat — in light of recent polls showing strong public disapproval of the President's handling of world affairs. But Rove says Clinton will find distancing herself to be difficult because voters will ask why she didn't bring up her differences of opinion while she was secretary of state.

Gail Collins, in her column for the [New York Times](#) (8/14, Collins, Subscription Publication, 9.79M), contends that in her remarks critical of the President's foreign policy, Clinton "was probably being neither politically calculating nor blundering, but simply saying what she believes."

The [Daily Caller](#) (8/13, Bordelon, 408K) reported that on [CNN's The Situation Room](#) on Wednesday night, political analyst Gloria Borger said of Clinton, "I think she's well aware she stepped in it." Borger added, "She had, in her book, said that there were differences with the president on Syria. But what she did was she took a policy difference and she made it personal."

The [Daily Caller](#) (8/13, Bordelon, 408K) also reported that in an appearance on MSNBC, the Washington Post's Chris Cillizza said, "I get that she's trying to distance herself — particularly on some of the things that she did have legitimate disagreements with the president on." But Cillizza added, "Don't do it and then try to undo it by putting out a statement saying you weren't trying to do it! Of course she was trying to do it."

In an op-ed for [USA Today](#) (8/13, Rabin-Havt, 5.76M), Ari Rabin-Havt, host of The Agenda on SiriusXM, says President Obama "clearly preferred a more aggressive approach in Syria after a chemical weapons attack on civilians last summer," but the "military action most thought was inevitable was scrapped after public pressure led a bipartisan coalition in the House of Representatives to make direct intervention in that country's civil war a political...impossibility." Rabin-Havt says "the message from public and Congressional reaction to potential military intervention in Syria was clear: there is a far tighter leash on the president when it comes to the use of force."

Shadee Ashtari of the [Huffington Post](#) (8/13, Ashtari, 11.54M) takes Clinton to task for having failed to condemn Israel for having bombed "a U.N. school at the Jabalia refugee camp" in Gaza last month, "killing more than 15 people, mostly women and children." According to Ashtari, "In an interview with The Atlantic...Clinton argued that the 'fog of war' made accountability over the Israeli attacks impossible to determine."

OFFICER WAS ASSAULTED BEFORE FERGUSON SHOOTING THAT SPARKED VIOLENT PROTESTS. The [Washington Post](#) (8/13, Berman, Lowery, 4.06M) reported that Ferguson, Missouri police chief Thomas Jackson revealed on Wednesday that "the officer who shot and killed Michael Brown 'was hit' in the face during the encounter on Saturday" and the "side of his face was swollen." The Post also notes that the St. Louis County Police Department says the officer "was 'physically assaulted' and that there was a struggle over the officer's weapon." However, the Post also reports that "at least one eyewitness offered a different account, saying that the officer initiated a confrontation and ultimately shot Brown as he was attempting to surrender." On [ABC World News](#) (8/13, story 6, 1:55, Muir, 5.84M), Jackson was shown saying, the unidentified officer's "was swollen, so he'd obviously had been hit or punched or something like that."

The [New York Times](#) (8/13, Bosman, Williams, Subscription Publication, 9.79M) reports that Jackson "has not released the name of the officer, citing fears for his safety and that of his family," but the Times adds that "the selective release of information about the shooting, especially the anonymity granted the officer, has stoked frustrations in...largely African-American" Ferguson. According to the [Christian Science Monitor](#) (8/13, Jonsson, 566K), "Police are concerned about making a fellow officer and his family vulnerable to death threats made on social media," but "residents have credible claims in demanding to know information that would be available if the shooter weren't a lawman."

On the [CBS Evening News](#) (8/13, story 6, 2:35, Pelley, 5.08M), Scott Pelley reported that Jackson says the Ferguson police are "working with community relations experts from the Justice Department to address racial tension in the St. Louis suburb." Mark Strassman went on to report that a gun store owner near Ferguson has seen a spike in the number of handguns sold since the outbreak of violent protests, looting and rioting in Ferguson.

[USA Today](#) (8/13, Alcindor, Bello, Fazal, 5.76M) notes that "African Americans are two-thirds of [Ferguson's] population," and "account for nine out of 10 stops by police," but "the 53-member police force includes" only three African American officers. The [Wall Street Journal](#) (8/14, Peters, Kesling, Subscription Publication, 5.89M) provides background on the community's history under the headline, "Ferguson Has Long Been Challenged By Racial Tensions."

David Mastio and Kelsey Rupp of [USA Today](#) (8/13, Mastio, Rupp, 5.76M) report that in November, the Defense Logistics Agency supplied the Ferguson police with "two vehicles, a trailer and a generator." Charles Blow, in his column for the [New York Times](#) (8/14, Blow, Subscription Publication, 9.79M), offers his take on the controversy

following last weekend's shooting in Ferguson.

Police Face Off Against "Armed Masked Men" And Rioters Throwing Molotov Cocktails. On [NBC Nightly News](#) (8/13, story 5, 1:40, Holt, 7.86M), Lester Holt reported that the Ferguson Police Department was "bracing...for what may be another night of violence," and correspondent Ron Allen went on to report that the police are encountering "armed masked men." According to Allen, "Police say they shot and critically wounded a 19-year-old who pointed a gun at them" late Tuesday night.

The [AP](#) (8/13, Suhr, Salter) reports that on Wednesday night in Ferguson, Missouri, there were "people lobbing Molotov cocktails at police who responded with smoke bombs and tear gas to disperse the crowd."

The [St. Louis Post-Dispatch](#) (8/14, 938K) reports that "after giving people several verbal warnings to leave the area or face arrest, somebody hurled a bottle at the police line," and then "police inched closer and closer to the crowd until they dispersed into side streets."

Two Reporters Held Briefly By Ferguson Police Following Confrontation. [Politico](#) (8/14, Byer, Gold, 637K) reported that on Wednesday night in Ferguson, Wesley Lowery of the Washington Post and Ryan Reilly of the Huffington Post "were arrested in a McDonalds shortly before 8 p.m." after "police entered the restaurant and told patrons there to leave." Politico says the reporters claim that they were "arrested...because they weren't packing their bags fast enough."

Los Angeles Police Kill Man Who Lunged For Officer's Gun. The [Los Angeles Times](#) (8/13, Winton, Vives, Mather, 3.42M) reported that on Wednesday, the Los Angeles Police Department "defended an officer-involved shooting that left a 25-year-old man dead, saying he tackled one of two officers, forcing him to use a backup gun." But the Times notes that the LAPD's "account differs from what family members of the man" have said. The Times says they maintain that he was "complying with police orders and was on the ground when he was shot."

The [New York Times](#) (8/13, Medina, Subscription Publication, 9.79M) reported that "family members told a local television station...that the man was Ezell Ford, a 24-year-old whose 'mental problems' they said were well known to the police." According to the Times, an LAPD spokesman "said that while he knew that the man had some kind of arrest record, it was unclear what the arrests had been for or whether the police had any evidence of mental illness." The [Huffington Post](#) (8/13, Ferner, 11.54M) also covers the Los Angeles shooting.

House Democrats Want DOJ To Probe NYPD Tactics. The [New York Times](#) (8/14, Goldstein, Subscription Publication, 9.79M) reports that six House Democrats are urging Attorney General Holder "to open a federal investigation into the circumstances surrounding the death of a Staten Island man in police custody, and to extend the inquiry into other possible civil-rights violations committed by the Police Department through its 'broken windows' approach to fighting crime."

Editorial Wrap-Up:

NEW YORK TIMES. "The O'Bannon Ruling: College Athletes Win." The [New York Times](#) (8/14, Board, Subscription Publication, 9.79M) editorializes about the "two important consequences of a long-awaited ruling last week" by US District Judge Claudia Wilken "in the so-called O'Bannon case." According to the Times, college athletes "will almost certainly be better off financially" because of the ruling, and "the notion that these athletes are pure amateurs" will "be impossible to sustain." Judge Wilken "issued an injunction against a ban on payments to players for the commercial use of their names, images and likenesses, which she said violated antitrust law," and she also ruled that the National Collegiate Athletic Association (NCAA) "may not prohibit universities from offering cost-of-living stipends in addition to scholarships." The Times concludes that the NCAA and its member institutions "built a lucrative commercial enterprise that depended in large part on unpaid labor," and now "they have to move forward without exploiting the very students they have always purported to protect."

"The O'Bannon Ruling: 'Student Athlete' Is History." In an editorial, the [New York Times](#) (8/14, Board, Subscription Publication, 9.79M) examines the "myth of the pure 'student-athlete'" that Judge Wilken "has now demolished." In the early 1950s, according to the Times, the NCAA was "worried that state industrial commissions and the courts could classify certain players, particularly football players, as employees, exposing

universities to workers' compensation claims and hefty settlements," so its leaders invented the phrase "student-athlete" to "persuade the public and courts that college players were not professionals entitled to benefits." The Times notes that there "is a difference between a quarterback at a Division I program and a pre-med student at the same university – the difference being that the former risks his physical well-being for that university," and also notes that there is "a difference between a Division I quarterback and a Division III swimmer," as the swimmer "probably considers himself a student first, an athlete second; for the quarterback those priorities are reversed."

"President Obama: No Internet Fast Lanes." In an editorial, the [New York Times](#) (8/14, Board, Subscription Publication, 9.79M) argues that a proposal under consideration by the FCC to allow telecommunications companies "to strike deals with powerful firms like Netflix and Amazon for faster delivery of videos and other data to consumers," would make it impossible for small, new businesses "to compete against established companies" since they would "have to pay fees to telephone and cable companies to get content to users in a timely manner." The Times notes that as a candidate, the President "rightly opposed letting telecommunications companies charge 'different rates to different websites,'" but his FCC Chairman, Tom Wheeler, "has proposed troubling rules that would allow cable and phone firms to enter into specials with companies," and "effectively allow telecoms to divide the Internet into fast and slow lanes."

"Justice Denied For Abused Children." The [New York Times](#) (8/14, Board, Subscription Publication, 9.79M) editorializes that New York Governor Andrew Cuomo "signed a bill last week that adds compensated public school coaches to the list of professionals, including teachers, required to report to authorities suspected cases of child sex abuse and other maltreatment." The Times argues that the bill "leaves uncovered some (but not all) private and parochial school coaches, volunteer coaches and college-level coaches," and it "does nothing to elevate New York's low ranking when it comes to providing justice to the victims of child sex abuse," which the Times says is "directly related to the state's failure to extend its severely short statute of limitations in child-sex-abuse cases." The Times notes that an effort to "give child-sex-abuse victims more time to file both civil and criminal complaints and provide a one-year window for filing expired claims" will "continue to languish" in the state legislature until Cuomo, "confronts intense lobbying by leaders of the Roman Catholic Church and other opponents of reform."

WASHINGTON POST. "Abuse In Azerbaijan." The [Washington Post](#) (8/14, 4.06M) editorializes about despotic actions by Azerbaijan's president, Ilham Aliyev, who is seeking to "emulate President Vladimir Putin of Russia, gradually turning the screws on critics through arrests and repressive legislation that narrowed the space for civil society to survive." Adds the Post, "It is beyond comprehension how Mr. Aliyev can carry out such repression at a time when Azerbaijan is chair of the committee of ministers of the Council of Europe, the continent's leading human rights organization." Aliyev, who "craves respect abroad," deserves "condemnation."

"Clarity On Export-Import Bank." An editorial in the [Washington Post](#) (8/14, 4.06M) argues that while advocates of the Export-Import Bank tout the number of jobs the bank's "loan guarantees and other financing for U.S. sales abroad" support, a May 2013 study by the GAO found that the bank "must speak vaguely of 'jobs supported,' rather than concretely of jobs created, since its methodology cannot really distinguish between new employment and retained employment." While GAO "found nothing fraudulent about any of this," it urged the bank to be "more transparent" about "the rather crucial assumptions and limitations embedded in Ex-Im's methodology."

"A Redskins Fumble." In an editorial, the [Washington Post](#) (8/13, Board, 4.06M) criticizes Virginia Gov. Terry McAuliffe for refusing to join the President, former Secretary of State Clinton, Maryland Gov. Martin O'Malley, and 50 members of the Senate in asking Washington Redskins owner Daniel Snyder to change the name of the team. Noting that McAuliffe "condemned the planting of a Confederate flag on private land," 10 months ago but now "insists that he cannot tell a private business to remove an offensive word emblazoned on its uniforms," the Post argues that the only difference between the two situations is "politics: two-thirds of Virginians support keeping the Redskins' name, while cultural and demographic evolutions have made criticizing Confederate flags politically safe."

WALL STREET JOURNAL. "The Advocate's Devil." In an editorial, the [Wall Street Journal](#) (8/14, Subscription Publication, 5.89M) praises a letter by Judge John Bates, director of the Administrative Office of the US Courts, which criticizes the NSA overhaul legislation being advocated by Senate Judiciary Committee Chairman Patrick

Leahy. In particular, the Journal notes Bates's opposition to the idea of a "special advocate" who would be responsible for opposing executive-branch lawyers in front of the FISC, and expresses hope that Bates's opposition will prompt Congress to abandon the idea.

"Iran's War On Journalism." In an editorial, the [Wall Street Journal](#) (8/11, Subscription Publication, 5.89M) notes Iran's arrest of Washington Post correspondent Jason Rezaian and his wife, among other journalists, and says such actions show president Hasan Rouhani is no moderate, as had been hoped when he took office.

"Japan Takes Consumption Tax Dive." A [Wall Street Journal](#) (8/14, Subscription Publication, 5.89M) editorial blames the second quarter decline in Japan's GDP to an increase in the consumption tax and expresses concern that Prime Minister Shinzo Abe's decision to raise the tax will harm his economic program. Noting that Abe must soon decide whether to raise the tax again in 2015, the Journal urges him to resist calls from the Ministry of Finance to do so.

Washington Schedule:

TODAY'S EVENTS IN WASHINGTON.

White House:

PRESIDENT OBAMA — President Obama is vacationing on Martha's Vineyard. There are no public events scheduled.

VICE PRESIDENT BIDEN — The vice president and Dr. Jill Biden visit Long Island, New York. There are no public events scheduled.

US Senate: No Scheduled Events.

US House: Aug. 4 – Sept. 7. — The House stands adjourned until 2 p.m. on Monday, Sept. 8. Please note however that some committees are still scheduling hearings during this time both in Washington and in the field. Just a reminder to check the Capitol Hill takes daily during this period of "Recess."

COMMITTEE MEETINGS

VETERANS' AFFAIRS – FIELD HEARING — 10 a.m. Full Committee hearing on "Challenges in Rural America: Infrastructure Needs and Access to Care". Location: Mueller Civic Center, 801 South 6th Street, Hot Springs, SD 57747.

Other: **KOREAN CULTURE** — Aug. 11 – 15. 9 a.m. – 4:30 p.m. The Maryland-National Capital Park and Planning Commission, the Korean Cultural Center, the Embassy of the Republic of Korea and the King Sejong Institute host Korean cultural immersion for students ages 13-19. Location: Clarice Smith Performing Arts Center, University of Maryland, College Park, Md. Contacts: Adam Wojciechowicz AWOJ@koreaembassy.org (202-587-6168). On the Net: <http://www.koreaCultureDC.org>

WIPP – SUMMIT FOR SUCCESS — 8 a.m. – 5 p.m. OPEN for Government Contracts Presents: "Summit for Success." Held by Women Impacting Foreign Policy. http://www.wipp.org/events/event_details.asp?id=480376. Highlights: 11:10 a.m. TSA Office of Security Operations Improvement Branch Program Analyst Kristin Best will participate in a panel discussion entitled "Doing Business With: The United States Department of Homeland Security." Location: JW Marriott, 1331 Pennsylvania Ave. NW.

NEW AMERICA – IRAQ CRISIS — 12:15 p.m. – 1:45 p.m. The New America Foundations International Security Program hosts a discussion about the current crisis in Iraq and its impact on the greater Middle Eastern region. Participants: Col. Derek Harvey (Ret.), professor, University of South Florida, former senior analyst for Iraq for General David H. Petraeus; Denise Natali, senior research fellow, Institute for Strategic Studies, National Defense University, author, *The Kurdish Quasi-State: Development and Dependency in Post-Gulf War Iraq*; Steve Levine, future Tense Fellow, New America Foundation, author, *The Oil and the Glory, The Pursuit of Empire and Fortune on the Caspian Sea*. Moderated by Douglas A. Ollivant, ASU Future of War Senior Fellow, International Security Program, New America Foundation, former NSC director for Iraq. Location: New America Foundation, 1899 L St. NW, Suite 400. Contacts: Jenny Lu Mallamo (mallamo@newamerica.net), 202-596-3368

ARLINGTON CEMETERY – ACTIVE DUTY BURIAL — 3:30 p.m. Burial service for U.S. Army Maj. Gen. Harold J. Greene, who was supporting Operation Enduring Freedom when he was killed in Afghanistan. Location: Arlington National Cemetery. Contacts: Melissa Bohan (arlingtoncemetery.pao@mail.mil), 877-907-8585. Notes: Meet on Memorial Avenue by 3:30 p.m. Please dress appropriately for the service. All media must register by 5 p.m., Wednesday, Aug. 13. For credentials, e-mail arlingtoncemetery.pao@mail.mil with the following information: name, media organization, e-mail address, and primary/secondary phone numbers.

Last Laughs:

LATE NIGHT POLITICAL HUMOR.

Jimmy Fallon: "Here's what people are talking about. I heard that both the Obamas and the Clintons attended the same party in Martha's Vineyard tonight. Although, it got awkward when Bill was like, 'Where's the bowl with all the keys? I saw it first. Is Carly Simon here?'"

Jimmy Fallon: "There's actually been a little tension between President Obama and Hillary Clinton this week. In fact, Hillary called Obama yesterday to say that she wasn't trying to attack him when she called his foreign policy too weak. And then she was like, 'Like you were going to do anything about it.'"

Jimmy Fallon: "Hillary also told the President that she was looking forward to hugging it out the next time they saw each other. So, you know it's going to be one of those awkward shoulders in, butt out hugs."

Jimmy Fallon: "Rick Perry is fueling speculation that he'll run in 2016 by visiting the Iowa State Fair. Unfortunately, he hurt his chances by holding a two-hour conversation with that butter sculpture of Kevin Costner."

Seth Meyers: "I couldn't believe this. Yesterday, Fox News' medical expert, Dr. Keith Ablow, told viewers that Michelle Obama needs 'to drop a few.' So I think there's a good chance Michelle Obama is going to drop Dr. Keith Ablow."

Seth Meyers: "Governor Chris Christie dumped a bucket of ice water on his head as part of an ALS ice bucket challenge fundraiser. Although, he's claiming his advisers dumped it on his head and he didn't know anything about it."

Conan O'Brien: "After attacking President Obama's foreign policy, Hillary Clinton now says she wants to hug it out. When he heard this, Bill Clinton told the President, 'Take it from me. You're not going to get any more than that.'"

EVENT MEMORANDUM FOR THE SECRETARY

VISIT TO CONFEDERATED SALISH AND KOOTENAI TRIBES OF THE FLATHEAD RESERVATION

DATE: August 20, 2014
LOCATION: Flathead Reservation, Pablo, Montana
TIME: 11:00AM – 6:00PM MDT
FROM: Kevin Washburn, A/S-IA, (202)208-7163; Sarah Harris, COS, BIA (202)208-6682

I. PURPOSE

You will be touring the Flathead Reservation, including tribal facilities and Kerr Dam, and meeting with tribal leaders to introduce them to the new Special Trustee, Vince Logan.

II. PARTICIPANTS

- Ronald Trahan, Chairman
- Tribal Council Members:
 - Carole Lankford, Vice-Chair (District: Ronan)
 - James “Bing” Matt, Secretary (District: Arlee)
 - Len TwoTeeth, Treasurer (District: Elmo)
 - Lloyd Irvine, Tribal Council Member (District: Pablo)
 - Terry L. Pitts, Tribal Council Member (District: Dixon)
 - Leonard Gray, Tribal Council Member (District: Hot Springs)
 - Vernon Finley, Tribal Council Member (District: Polson)
 - Patty Stevens, Tribal Council Member (District: St. Ignatius)
 - Shelly Fyant, Tribal Council Member (District: Arlee)
- Senator Jon Tester
- Anthony Walters, Deputy Chief Counsel for the Senate Committee on Indian Affairs
- DOI Staff: Vince Logan, Special Trustee; Mike Black, D-BIA

III. AGENDA

- 11:00 am Arrive at Flathead Reservation**
You will be greeted by Ron Trahan and tribal council members, and will address the Tribal Council. Vince Logan, Mike Black, Senator Tester, and Ron Trahan will also speak.
- **Opening Prayer**
 - **Welcome and Introductions – Ron Trahan, Chairman**
- 11:10 am Opening Remarks: Secretary Jewell, Senator Tester**
- 11:30am Drive to Kerr Dam**

You will ride in a motor coach with tribal officials, DOI staff, and Senator Tester to visit Kerr Dam. During that time you will discuss informally the Tribe's concerns and successes, including the Dam hydroelectric project.

11:45 am Tour of Kerr Dam

You will view the facility and discuss the Tribe's planned purchase of the Dam in 2015.

Background

Kerr Dam hydroelectric project was built in the 1930s on the Flathead reservation. The Corps of Engineers proposed more than one dam; the Tribe opposed building any of the dams. This hydroelectric project has the capacity to generate 194 megawatts of electricity from three turbines that supplies enough power to meet the needs of approximately 100,000 homes. When the lease was renewed with PPL Montana in 1985 the Tribe negotiated an option to purchase the Dam in 2015. The Tribe is planning to exercise this option for the purchase price of \$18,000,000. Current lease trust income from the Dam is around \$19,532,288. Upon purchase of the Dam the Tribe will operate it under the Energy Keepers Inc., which is a section 17 IRA Corporation owned by the Tribe. When this purchase is completed the Confederated Salish & Kootenai Tribes will be the first Tribe in the nation to operate a major hydropower facility.

12:15 pm Return from Kerr Dam

While riding back to tribal headquarters, you will continue to discuss issues that are important to the Tribe, including economic development (e.g. land buy back) and funding for justice services.

12:30 pm Working lunch with members of the Tribal Council and Senator Tester

2:00 pm Press Availability

2:45 pm Walking Tour of Flathead Reservation

You will view the reservation with Ron Trahan, Vince Logan, Mike Black and Senator Tester

4:00 pm Formal Meeting/Round Table with Tribal Council [tentative]

5:00 pm Depart Flathead Reservation

IV. BACKGROUND

Confederated Salish and Kootenai Tribes (CKST)

- **Enrollment:** 7,943 enrolled members; approximately 5,000 live on the reservation.

- **Acreage:** 1.3 million acres total, over half owned by the Tribe
- **Reservation Tribal Composition:** Bitterroot Salish, the Upper Pend d'Oreille and the Kootenai tribes.
- **Governing Body:** Tribal Council consisting of ten people elected for staggered four year terms from 8 districts: Arlee (2), St. Ignatius (2), Ronan, Pablo, Polson, Hot Springs, Dixon, and Elmo.
 - Council Members: Ron Trahan (St. Ignatius), Chairman for 2014; Carole Lankford (Ronan), Vice-Chair; James "Bing" Matt (Arlee), Secretary; Len TwoTeeth, (Elmo), Treasurer; Lloyd Irving (Ronan); Terry Pitts (Dixon); Leonard Gray, (Hot Springs); Veron Finley, Polson; Patty Stevens, (St. Ignatius); and Shelly Fyant, (Arlee).

The three main tribes moved to the Flathead Reservation were the Bitterroot Salish, the Pend d'Oreille, and the Kootenai. The Bitterroot Salish and the Pend d'Oreille tribes spoke dialects of the same Salish language.

The Salish (Flatheads) lived between the Cascade Mountains and Rocky Mountains. They initially lived entirely east of the Continental Divide but established their headquarters near the eastern slope of the Rocky Mountains. Occasionally, hunting parties went west of the Continental Divide but not west of the Bitterroot Range. They were called the Flathead Indians by the first Europeans who came to the area. The Flatheads call themselves Salish, meaning "the people". The Flatheads never practiced head flattening, but the Columbia River tribes who shaped the front of the head to create a pointed appearance spoke of their neighbors, the Salish, as "flatheads" in contrast.

The Kootenai people lived along the Kootenai River in Idaho, Montana, and British Columbia. They were hunter-gatherers, and salmon was an important staple to their diets. They have permanent winter villages of cone-shaped houses made from wooden poles and rush mats.

The tribes met with the Lewis and Clark Expedition on September 5, 1805.

By 1850 the Salish remained mostly in the fertile and relatively temperate Bitterroot Valley in Montana. However, under the terms spelled out in the Hellgate Treaty, the tribes ceded the Valley and other lands to the United States, totaling more than twenty million acres (81,000 km²). The treaty reserved from cession only about 1.3 million acres (5300 km²), thus forming the Jocko or Flathead Indian Reservation. The tribes were likely tricked into ceding the Bitterroot Valley or were assured that they would not be forced to leave. Indeed, after the Hellgate Treaty was ratified, the Salish remained in the Valley for over 30 years.

However, after the 1864 gold rush in the newly established Montana Territory, pressure upon the Salish intensified from both illegal non-Indian squatters and government officials. In 1871 President Ulysses S. Grant declared that the Jocko (Flathead) Reservation was better suited to the needs of the Salish. On the basis of Grant's executive order, Congress sent a delegation, led by future president James Garfield, to make arrangements with the Tribe for their removal. The chief, Charlot, refused to sign any agreement to leave. It is reported that U.S. officials then

forged Charlot's mark onto the official copy of the agreement that was sent to the Senate for ratification.

Conditions became intolerable for the Salish by the late 1880s, after the Missoula and Bitter Root Valley Railroad was constructed directly through the tribe's lands, with neither permission from the native owners nor payment to them. Charlot finally signed an agreement to leave the Bitterroot Valley in November 1889. Inaction by Congress, however, delayed the removal for another two years, and according to some observers, the tribe's desperation reached a level of outright starvation. In October 1891, a contingent of troops from Fort Missoula forced Charlot and the Salish out of the Bitterroot and roughly marched the small band sixty miles to the Flathead Reservation.

Organizational Structure

The Hell Gate Treaty of 1855 established the current Flathead Reservation. CSKT is an Indian Reorganization Act (IRA) Tribe with a constitution approved by the Secretary on September 25, 1935 and adopted by majority vote of tribal members on October 4, 1935. Theirs was the first constitution approved under the IRA for a tribe. The constitution provides for no tribal taxation authority without membership approval. The Tribe exercises civil regulatory authority for fees.

Self-Governance

CSKT is one of the few tribes that has compacted all of the functions possible from the BIA and the Office of the Special Trustee (OST). The Tribe entered into the agreement to compact programs from BIA in 1995. When the trust accounting performed by BIA was transferred to OST those functions were then compacted with OST. Currently OST has two MOUs with the Tribe. One is for operating the Beneficiary Process Program (referred to as IIM) and the other is to perform appraisals. The only BIA staff assigned to Flathead is a Superintendent (Bud Moran) and an administrative assistant. The OST FTO (Gus Kerndt) for Flathead is located at Fort Hall, ID.

State/Tribal Cooperative Agreements for fishing, bird hunting, and recreation require permits for non-CSKT members. CSKT also has agreements and self-governance contracts with the Environmental Protection Agency (EPA).

Land Resources

The Flathead Indian Reservation is 1.3 million acres. The Confederated Salish and Kootenai Tribes (CSKT) have worked since 1935 to reacquire land lost during the 1910-1935 allotment homesteading era. Current ownership is around 64 percent including surface area of Flathead Lake. This is a P.L. 280 reservation with the municipalities of Polson and Ronan with working city governments and law enforcement agencies. The majority of the population is non-Indian with about 30 percent being Native American.

Economic Development

The CSKT government is the largest employer in Lake County with 1,200 employees. The Tribal government infuses \$80 million annually into the area economy through a \$35 million payroll and \$45 million on vendor good and services. A recent report funded by the State of Montana showed that the Tribes contribute \$317 million to the Montana economy every year.

Kerr Dam:

On September 5, 2015, the CSKT will acquire and manage the Kerr Dam, a major hydroelectric generation facility, under its wholly-owned and federally-chartered Energy Keepers, Inc. Currently the tribe rents Kerr Dam. Approximately \$19,532,288 in 2014 was paid to the Tribe. Historically, forestry was the Tribe's main source of revenue and currently is approximately \$2-3 million per year.

Salish and Kootenai Gaming

The CSKT formed S & K Gaming, LLC (S & K Gaming) with two casinos: KwaTaqNuk Resort Casino and Gray Wolf Peak Casino. As of August 4, 2014, S & K Gaming employs 173 people, including a support staff of 147 associated with KwaTaqNuk; the Gray Wolf Peak Casino employs 26. Half of the workforce is enrolled CSKT tribal members. Tribal members receive \$400 per capita payments from net revenue three times a year. Annual total per capita payout is approximately \$9,500,000.

Salish and Kootenai Electronics is a contract manufacturer specializing in Electronic and Electro-mechanical assemblies.

S&K Technologies, Inc. is a federally-chartered corporation of professional and technology services owned by the Confederated Salish and Kootenai Tribes.

Tax Exemption during Fee-To-Trust Process

The CSKT sponsored state legislation that would benefit all seven Montana tribes by creating a tax exemption for property in the fee-to-trust process.

Natural Resources

The CSKT are the first tribes in the United States to establish a 90,000 acre Tribally-designated wilderness, known as the Mission Mountain Tribal Wilderness Area.

The CSKT prides itself on being good stewards of natural resources through its excellent Fish, Wildlife, Recreation, and Conservation Program management and by maintaining professional staffing, monitoring resources, coordinating with Federal, State, and local agencies, and implementing management plans and regulations, and educating users in the wise and ethical use of the resources.

Threatened and Candidate Terrestrial Species on the Flathead Indian Reservation: This project deals with three species, the Grizzly bear, Canada lynx and Wolverine. BIA Funded **\$99,000**.

Suppression of Non-Native Lake Trout in Flathead Lake: Increase native bull trout and westslope cutthroat trout in the interconnected Flathead system. Suppress abundance of non-native lake trout (Age 8+) by up to 75%. BIA funded **\$251,000**.

Mission Valley Power - P.L. 93-638 Innovation: Tribally-owned Mission Valley Power serves the Mission Valley and Flathead Indian Reservation. The CSKT operates Mission Valley Power under a P.L. 93-638 contract.

Water Rights Compact: The CSKT negotiated a Water Rights Compact with the United States and the State of Montana, to be reintroduced in the 2015 Montana legislature.

V. HOT TOPICS

Natural Resource Management

The Confederated Salish and Kootenai Tribes have placed the preservation, conservation, and management of their natural resources as their ultimate tribal priority.

Water Rights Compact

The Tribe has been negotiating water rights compact with the State of Montana and the United States to quantify the Tribe's reserved water rights. The State Legislature refused to ratify the negotiated water compact with the Tribe in the 2013 legislature. Tribe is prepared to file claims to adjudicate their water rights in state court if a compact is not ratified.

Bison Range

U.S. Fish and Wildlife Service (FWS) operate the National Bison Range and Ninepipes Reservoir which is located within the external boundaries of the Flathead Reservation. It was established in 1908 and has a 350-500 head carrying capacity. The Tribe had previously compacted certain functions with the FWS, but the compact was abruptly rescinded in 2010 by FWS. A draft Environmental Assessment for a Draft Annual Funding Agreement was issued in August 2014.

Flathead Lake

After extensive litigation, a federal court found that pursuant to the Hellgate Treaty, the Tribe owns the bed and banks of the south half of Flathead Lake held in trust by the federal government, which is the largest fresh water lake west of the Mississippi River. The surface area is 191.5 square miles. The Tribe's casino and Best Western hotel is located on the shores of the Lake in Polson, MT. Gray Wolf casino is located on the southern end of the Reservation near Evaro. Tribe is currently negotiating with the State of Montana to remove non- indigenous fish species (i.e., Lake Trout) from the lake which is a very unpopular proposal among the local sport fishermen. The Tribe wants to promote restoration of native bull trout.

Instream Flows: To protect fish and their habitat the CSKT requested the BIA to evaluate the 1996 interim instream flows.

Climate Change: The CSKT has aggressively collaborated with Federal, State and local agencies to assess current and probable climate change impacts.

Water Resources Management: A Tribal priority including monitoring water usage, monitoring water quality and generating the information necessary to support a Tribal Water Compact that values historical Tribal rights and Tribal land.

Diversified Land Base: To work positively to achieve the DOI BIA funding is necessary to manage a diverse land base with sufficient resources to promote sustainability of the tribal resources.

Land Buy Back

- Date of Award 1/30/2014
- Total Agreement Amount \$440,900
- Agreement Duration 11 months

Vice- Chair Carole Lankford provided testimony to the SCIA on July 16, 2014 and complained about the appraisal process as it was applied to the CSKT reservation. Office of Appraisal Services (OAS) believes all appraisal reports submitted by CSKT appraisers were deficient. The OAS review appraisers following the Uniform Standards of Professional Appraisal Practice (USPAP) requested revisions to meet standards. In the interest of approving as many appraisals as possible, OAS/LBBP took an extra step by travelling to CSKT to assist the contracted fee appraisers in resolving the deficiencies in their appraisal reports. OST appraisals are now complete. Pursuant to the requirements of the Secretarial Implementation Plan for the LBBP, there are legal description discrepancies that BLM is correcting.

LBBP has summarized the following information to assist with determining how the Confederated Salish and Kootenai Tribes of the Flathead Reservation (CSKT) are progressing toward full expenditure of the tribes' flexible purchase ceiling based on work conducted so far:

Amount	Tract Summary
538 tracts (75% of all purchasable tracts)	Number of tracts that are purchasable, including no mapping discrepancies
184 tracts (25% of purchasable tracts)	Number of tracts that are not purchasable due to mapping discrepancies

Amount	Value Summary
\$7.3 million	Purchase ceiling
\$41.9 million (nearly 6 times the purchase ceiling)	Value of appraisals received (not reviewed or approved)
\$19.1 million (approximately 2.6 times the purchase ceiling)	Total value of appraised properties completed, reviewed and approved

Based on the Program policy of honoring all accepted offers and the anticipated response rate, the Program does not intend to send more than approximately \$18 million in land purchase offers to CSKT landowners, an amount that is approximately 2.5 times the purchase ceiling. The amount of appraisals reviewed and approved has already reached the total amount of offers that the Program can send. LBBP requested CSKT to focus on identifying the handful of tracts without discrepancies so that OAS can quickly review the appraisals for those tracts and we can

reach the goal of sending approximately \$18 million in purchase offers.

VI. TALKING POINTS

Acknowledgments

Chairman Ronald Trahan

Introduction

- With deep humility, one of the most sacred duties is uphold our solemn trust responsibilities to American Indians and Alaska Natives
 - Familiarity with the First Americans developed through 19 years in
 - Indian tribes in the Northwest, lead banker for NANA commercial banking

Big Picture

- President Obama committed to working with Indian Country to promote **strong, prosperous and resilient** communities
 - North star is **self-determination** and **self-governance**
 - Strong leadership: **Jodi Gillette, Assistant Secretary for Indian Affairs, Kevin Washburn and Hilary Tompkins – the highest ranking Native American appointee in the Obama Administration who serves as Solicitor of the Department of the Interior.**
- As chair of the **White House Council on Native American Affairs**, I'm working to improve interagency coordination and efficiency
 - Education, Energy, Economic Development, Environment

Topline Points

- **2014 Budget**

The FY 2014 Indian Affairs Operating Plan provides \$2.5 billion, an increase of \$142.2 million above the 2013 Final sequester operating plan.

 1. Increases of \$22.4 million for Public Safety and Justice Programs
 2. The 2014 enacted budget includes increases of over \$24 million from 2013 for natural resource management projects, which includes energy program enhancements.
 3. The budget provides a net program increase of \$24.6 for elementary and secondary school education activities funded by BIE.
- **2015 Budget**

With many Departments facing cuts, the budget request for Indian Affairs is \$2.6 billion, an increase of \$34 million or 1.3%. The 2015 budget focuses on highest priorities as identified by the Tribes including full contract support and the Tiwahe Family Initiative.

 - Interior's overall FY 2015 budget includes \$612 million for programs in other bureaus in support of Native Americans and Tribes.

- **Advancing Indian Education**
 - Of paramount concern to tribal leaders and this Administration
 - Continue to look for ways to partner with Tribes as we reform Indian Education system in BIE

- **Continuing Efforts to Strengthen Tribal Economies**
 - Through White House Council we are working to identify the best ways to support tribal economies (issues: access to capital, business capacity, regulations on infrastructure development)

- **Water Settlements** – continued commitment to critical infrastructure in tribal communities
 - Permanent access to a clean and reliable water supply is fundamental to economic security and stability

- **Protecting Natural Resources in the Face of Climate Change** –
 - Climate change is increasingly evident for American Indian and Alaska Native communities
 - Tribal leaders voice growing concerns about effects on coasts, water supplies and wildlife - Tribes hit hardest; we have a moral obligation to act
 - Renewable energy, conserving natural landscapes, strengthening data/science

- **Energy Development on Indian Lands**
 - The Obama Administration proudly supports an “all of the above” energy strategy
 - Through the White House Council we are working to identify more opportunities for energy development on tribal land and to streamline permitting

VII. BIOGRAPHY

Trahan and his wife Vi, a 35-year veteran of the CSKT accounting office, are the parents of five children, and grandparents to 12. He broke his neck riding rodeo as a young man.

During the Vietnam War, Trahan was in the U.S. Army from 1967-69. He was deployed to South Korea to help guard missile sites during the USS Pueblo incident, when North Korea captured the U.S. Naval ship and its officers and crew. He worked as a logger, spent eight years installing septic systems and wells for the Indian Health Service, then spent a winter working at Kicking Horse Job Corps. He worked for the Salish and Kootenai Housing Authority for 15 years, then ran for Tribal Council.

VIII. ATTACHMENTS

- Information memo on the Flathead Irrigation Project *[below]*

INFORMATION MEMORANDUM FOR THE SECRETARY

FROM: Mike Black, Director
Bureau of Indian Affairs

SUBJECT: Flathead Indian Irrigation Project - Montana

I. INTRODUCTION

The Bureau of Indian Affairs (BIA) and the Confederated Salish and Kootenai Tribes (CSKT) are seeking to resolve contentious water rights and water resource issues on the Flathead Indian Reservation (Reservation). The United States, CSKT and Governor of Montana are in negotiations to finalize an Indian water rights settlement. If outstanding settlement issues cannot be resolved, BIA and CSKT will file extensive water rights claims, which are expected to be in conflict with non-tribal water interests.

Also, BIA was recently forced to reassume the operation and management (O&M) of the federal Flathead Indian Irrigation Project (FIIP or Project), which serves approximately 120,000 acres of irrigated lands on the Reservation. O&M had been transferred to local interests in 2010, but some irrigation districts' objection to the CSKT's role in Project management lead to the dissolution of the local entity created to operate and manage FIIP.

II. BACKGROUND

The Flathead Indian Reservation was established in 1855, and was partially opened by Congress to non-Indian settlement in 1904. In 1908, Congress authorized BIA to construct FIIP to irrigate tribal and non-tribal lands on the Reservation, and directed the future transfer of FIIP O&M to the owners of the lands irrigated by FIIP "under such form of organization and under such rules and regulations as may be acceptable to the Secretary of the Interior." In 1926, Congress authorized the construction of a power plant at the site known today as Kerr Dam. The Federal Energy Regulatory Commission's 1985 license for Kerr Dam provided that CSKT can acquire the dam from the current licensee as early as 2015. A conveyance price has been established, and CSKT has identified September 5, 2015 as the date for conveyance of ownership.

In the 1980s, federal courts confirmed an on-reservation reserved water right for fishery instream flows. Because of limited water resources on the Reservation, these fishery flows conflict with current FIIP irrigation diversions. BIA is currently reviewing the interim instream flows that were established in 1985 to ascertain whether an increase in these flows is warranted.

Also in the 1980s, Montana initiated court proceedings to adjudicate all water rights, including those held in trust for CSKT on and near the Reservation. The United States and CSKT must resolve these water right claims through either negotiations or litigation. Claims are currently due to the water court by July 1, 2015.

III. POSITION of INTERESTED PARTIES

United States/BIA:

- FIIP Operations – although it became necessary for BIA to reassume O&M earlier this year, BIA remains committed to resolving issues related to FIIP operations and once again transferring O&M to the local level. Recently, however, local irrigation districts have challenged in court BIA's approach to Project transfer.

- FIIP and CSKT Water Rights – the Interior Department supports a negotiated resolution of the Tribes’ water claims. The federal negotiating team is actively working with CSKT and Montana to reach a settlement of all tribal water claims, including for FIIP. BIA, the Solicitor’s Office and the Justice Department are also preparing water right claims to file in court in 2015 if negotiations fail.

CSKT:

- FIIP Operations – CSKT and the United States share the view that CSKT should have an integral role (such as equal representation with non-Indian irrigators) in any future local management arrangement.
- FIIP and CSKT Water Rights – in the water negotiations, CSKT has agreed to protect existing FIIP water uses, but has insisted that its instream flow claims also be resolved. CSKT has also filed a suit in federal court asking that the federal court, and not state courts, determine the water rights of FIIP.

Irrigation Districts Served by FIIP:

Local irrigation districts originally agreed to the 2010 local operations agreement, and comprised half of the local entity established to manage FIIP. More recently, however, the districts have been adamant that CSKT should have little to no role in FIIP management. They have sued BIA in federal court requesting that the court order BIA to transfer management to an entity comprised almost exclusively of representatives of the non-Indian irrigation districts.

Montana:

A proposed settlement supported by the United States, CSKT and Governor Steve Bullock failed to pass the 2013 Montana Legislature, but the Governor has committed to work with CSKT and other parties to obtain the Legislature’s approval in the 2015 session. Active negotiations were restarted in July 2014.

DOI in the News:

SECRETARY JEWELL SENDS LETTER DENYING KING COVE ROAD DENIAL APPEAL. The [E&E Daily](#) (8/14) reports that Interior Secretary Sally Jewell has told Alaska's lawmakers and the leaders of an Alaskan village that she will not revisit her decision of last year denying the construction of a road through the Izembek National Wildlife Refuge that locals say is needed to improve public safety. Jewell on Wednesday sent three letters to Sen. Lisa Murkowski, Gov. Sean Parnell and the city of King Cove and surrounding borough, "stating in each that while she has heard 'passionate and forceful advocacy for approval of a road through the Izembek National Wildlife Refuge,' the Interior Department 'stands by the decision' to reject the road and 'will not reopen the Record of Decision.'" Jewell added, "I continue to be interested in discussing with you potential transportation alternatives to a road." However, she wrote in the three letters that a federal lawsuit filed in June by the city of King Cove and Alaska Natives challenging Interior's decision on the road "complicates efforts to find a workable solution that can be endorsed by all sides."

[The Hill](#) (8/15, Cama, 237K) reports that in response, Murkowski said she's "appalled" at the Interior Department's "continued refusal to permit the road." Murkowski said, "Secretary Jewell promised to help the people of King Cove last December, then went silent for months. As of yesterday, we know that she and her team have done almost nothing to protect the health and safety of King Cove families, yet remain unwilling to reconsider what is by far the best solution — a road."

The [Alaska Business Monthly](#) (8/15) reports that Della Trumble, spokeswoman for the Agdaagux Tribe and the King Cove Corporation said, "Once again Secretary Jewell is brushing us off. We wholeheartedly agree with Senator Murkowski's assessment. It's truly shocking that after months of waiting to hear from the Secretary, all we get is a disingenuous response completely lacking in substance."

Also covering the story are [Politico](#) (8/15, Guillén, 637K), the [Ketchikan \(AK\) SitNews](#) (8/15), and [KDLG-AM Dillingham, AK](#) (8/15).

FORMER SECRETARY SALAZAR LEADS EFFORT TO OPPOSE STATES' ATTEMPTS TO ACQUIRE FEDERAL LAND. The [E&E Daily](#) (8/14) reports that former Interior Secretary Ken Salazar is "helping lead an effort with dozens of conservation groups and business leaders to beat back recent attempts by Western states to acquire millions of acres of federal land." Salazar said Thursday in a statement that "public lands should remain public, and that contrary to the suggestions of some lawmakers, they are huge economic drivers in local communities across the West." He said, "The nation's public lands are the birthright and priceless heritage of all Americans. Our policymakers and elected leaders should be working to preserve and enhance these multiple use economic engines."

Also reporting on the story are the [Deseret \(UT\) News](#) (8/15, 538K) and the [Grand Junction \(CO\) Daily Sentinel](#) (8/15, 73K).

PITTSBURGH BOTANIC GARDEN AT SETTLERS CABIN PARK OPENS FOR TOURS. The [Pittsburgh Post-Gazette](#) (8/15, Podurgiel, 590K) reports that the Pittsburgh Botanic Garden at Settlers Cabin Park "opened for tours with a grand opening celebration Aug. 1 that included a visit from US Secretary of the Interior Sally Jewell, who called the garden a great example of public-private cooperation." According to the article, "eventually, the botanic garden will encompass 460 acres in the park, which straddles North Fayette, Collier and Robinson."

DEPUTY SECRETARY CONNOR TO PARTICIPATE IN WATER CONFERENCE. The [Idaho Statesman](#) (8/14, 222K) reports that Deputy Interior Secretary Mike Connor, will provide "perspective of the current administration on water management issues" during a "conference marking the end of the 27-year Snake River Basin Adjudication sponsored by the Idaho Supreme Court, the Kempthorne Institute and the University of Idaho College of Law" on August 25 and 26.

CONSERVATIONISTS SEEK MONUMENT STATUS FOR BOULDER-WHITE CLOUDS. The [Idaho Mountain Express](#) (8/15, 36K) reports that "though establishment of the Sawtooth National Recreation Area in 1972 provided permanent protection against most types of development in the White Cloud Mountains, some conservationists contend that the job is not yet finished." According to the article, "with continued stagnation in Congress of Rep. Mike Simpson's proposed CIEDRA wilderness bill, creation of a national monument through presidential proclamation is being viewed as the next best alternative." But "debate over the issue has indicated that many people are baffled by the claim that legal protection is needed for an area already protected."

CONGRESS URGED TO ACT ON WILDFIRE DISASTER FUNDING ACT. The [Salt Lake \(UT\) Tribune](#) (8/15, 470K) editorializes that "the US Forest Service and the Department of the Interior have been spending ever larger portions of their ever-tightening budgets on fighting fires that occur in the forests and range lands they are responsible for." However, "the firefighting budget not kept up with the need, and for the past couple of decades those agencies have had to borrow from — and never repay — accounts that were supposed to pay for all kinds of other operations and projects — just to keep everything from burning up." Congress is criticized for not acting on the Wildfire Disaster Funding Act of 2014, "a bipartisan bill that would have created for firefighting the same kind of emergency fund that exists to cover the costs of other natural disasters, such as earthquakes and hurricanes."

Additional coverage of wildfires was provided by the [Sacramento \(CA\) Bee](#) (8/14, 582K) and [Fox News](#) (8/13,

6.72M).

America's Great Outdoors:

National Park Service:

DEVELOPMENT HINDERING CALIFORNIA'S COUGAR POPULATION. The [E&E Daily](#) (8/14) reports that "human development is hindering the genetic diversity of mountain lions." A new study shows that "a population of the large cats hemmed into the Santa Monica Mountains near Los Angeles by surrounding highways is seeing inbreeding and a high mortality rate among young mountain lion males." Seth Riley, a biologist at the University of California, Los Angeles, and the lead author of the study, released today in *Current Biology*, said, "We still do have mountain lions in Los Angeles, which is amazing." However, Riley, who also works for the NPS, said that "the population in the Santa Monica Mountains has a very low genetic diversity – the lowest in the United States among mountain lions after Florida panthers."

Also covering the story are the [Los Angeles Times](#) (8/15, Cart, 3.42M), the [Southern California Public Radio](#) (8/14, 85K), and the [Southern California Public Radio](#) (8/14, 85K).

ENCHANTED VALLEY CHALET IN OLYMPIC NATIONAL PARK TO BE RELOCATED IN SEPTEMBER. The [Oregonian](#) (8/15, 827K) reports that "a contract to temporarily relocate the Enchanted Valley Chalet has been awarded to Monroe House Moving, Inc. of Sequim, Wash." the article notes that "the award amount is \$124,000." The relocation is "tentatively set to occur during the first two weeks of September, as long as weather, visibility and trail conditions allow."

SCIENTISTS STUDYING MOUNT BALDY FIND ANOTHER HOLE. [WRTV-TV](#) Indianapolis (8/15, 209K) reports that "scientists are still confounded 13 months after a then-6-year-old boy was nearly buried alive in a popular sand dune in northwest Indiana, saying they found a sixth hole this week as they moved high tech gear into place to try to conduct further testing on what is causing the holes." Bruce Rowe, spokesman for the Indiana Dunes National Lakeshore, said Mount Baldy will remain closed until more is known. Rowe said, "We want to let the science do the talking before we do any management decisions as to whether to open Mount Baldy. We have a great desire to reopen it. It's one of the most popular areas in the lakeshore. But we want to make sure we understand what's going on from a geological standpoint so we can make the proper decisions."

NPS SEEKS COMMENTS ON EXPANSION OF FORT FREDERICA NATIONAL MONUMENT. The [Florida Times-Union](#) (8/14, 435K) reports that the NPS is "conducting a study on adding 173 acres to Fort Frederica National Monument." The article notes that "the expansion includes land and marsh fronting the Frederica River to the north and south of the existing park boundaries and would protect 'important cultural and natural resources,'" the NPS said in a release. The 30-day comment period is underway and ends Sept. 9.

NPS TO TEST GOATS AT POINT REYES SEASHORE TO COMBAT INVASIVE SPECIES. The [Point Reyes \(CA\) Light](#) (8/15) reports that the NPS will "experiment with a possible remedy for invasive plant species in the seashore by introducing goats onto a small section of the historic D Ranch that is overgrown with wild radish, poison hemlock and a variety of thistles to the detriment of 'historic structures and the cultural landscape,' a statement to potential bidders said." The agency "posted a solicitation for quotes from contractors last Thursday and will hold a site visit at the 16-acre section of land this morning."

Bureau of Land Management:

VANDALS PAINT SHOOTING TARGETS BY ANCIENT NATIVE AMERICAN ROCK ART IN UTAH. The [Salt Lake \(UT\) Tribune](#) (8/15, 470K) reports that the BLM is "offering a reward of up to \$500 to help catch the vandals who spray-painted shooting targets onto rocks near ancient Native American art in Utah County." The BLM's Salt Lake Field Office "received a report July 31 that someone had spray-painted at least a dozen targets onto rocks in the Lake Mountains area, west of Utah Lake." According to the article, "evidence found at the scene indicated the targets were shot with large-caliber weapons, the BLM said in a news release."

Also reporting on the story are the [AP](#) (8/15, 116K), the [Deseret \(UT\) News](#) (8/15, 538K), the [Provo \(UT\) Daily](#)

[Herald](#) (8/15, 116K), and [KSTU-TV](#) Salt Lake City (8/14, 78K).

FIGHT BREWING OVER PLACITAS HORSES. The [E&E Daily](#) (8/14) reports that "a notice of 48 horse roundups this year posted in a New Mexico post office has the Bureau of Land Management and advocates for wild horses worried about the potential for another standoff like the one between federal officials and Cliven Bundy in southeastern Nevada earlier this year." John Brenna, active field manager for BLM, said, "We're not saying when we will go out there because we want to prevent a Bundy-type situation." The bureau's decision "follows state officials' announcement of their own roundup of around 125 animals as dusty conditions around the mountain village of Placitas, north of Albuquerque, have been attributed to free-ranging horses that have roamed the area for decades."

GROUP SEEKS PERMIT FROM BLM FOR ANNUAL HUNTING CONTEST. [Reuters](#) (8/15, Zuckerman) reports that a group called Idaho for Wildlife is seeking a special recreation permit from the BLM to hold contests each January for five years that would see as many as 500 hunters targeting wildlife. Steve Alder, executive director of Idaho for Wildlife, said, "We're not going to stand by and allow the feds and environmentalists to try to take away our legal rights."

AFTER BUNDY STANDOFF, RANCHERS CONTINUE TO DEFY FEDERAL GOVERNMENT WITHOUT CONSEQUENCE. For "The Blog" of the [Huffington Post](#) (8/15, Bruner, 11.54M), Travis Bruner, Executive Director of Western Watersheds Project, writes that while the BLM is "required by federal law to protect wildlife habitat on our public lands, the agency has been woefully lax in addressing the combined impacts of livestock grazing and drought on habitat essential to sage-grouse, antelope, mule deer and countless other species." He notes that "this February, one local Nevada office of the Bureau of Land Management finally took a small step to address this issue, and recommended closing an area of priority sage-grouse habitat to grazing in order to protect the remaining habitat." But "then the Cliven Bundy debacle unfolded, and public lands ranchers saw that those who refuse to follow the rule of law face, well, no consequence," and "the ranchers who graze the Argenta allotment for less than 10 percent of fair market value refused to rest the land."

Fish and Wildlife Service:

FWS PROPOSES CRITICAL HABITAT DESIGNATION FOR CUCKOOS. The [E&E Daily](#) (8/14) reports that the FWS is "proposing designating 546,335 acres of land across nine states as critical habitat for the Western yellow-billed cuckoo." The article notes that "the designation would include 80 separate areas in Arizona, California, Colorado, Idaho, Nevada, New Mexico, Texas, Utah and Wyoming." Jennifer Norris, field supervisor for FWS's Sacramento office, said, "The designation of critical habitat is an important step in recovering the western yellow-billed cuckoo. Critical habitat identifies areas with essential nesting and fledgling sites where conservation actions are needed to protect and recover this imperiled songbird."

Also reporting on the story are [The Hill](#) (8/15, Devaney, 237K) and the [Prairie \(MT\) Star](#) (8/15).

FWS OFFERS ONLINE INFORMATION SESSIONS ON PROPOSAL TO LIST NORTHERN LONG-EARED BAT. [The Chattanooga](#) (8/15, 12K) reports that the FWS will "hold three public information webcasts in August to provide information and answer questions about our proposal to list the northern long-eared bat as endangered under the Endangered Species Act."

Additional coverage was provided by [WFXP-TV](#) Erie, PA (8/15).

ENDANGERED MINNOW REBOUNDING IN NEVADA. The [E&E Daily](#) (8/14) reports that "a tiny endangered fish is making a comeback as populations of the Moapa dace are increasing in thermal Nevada waterways 60 miles north of Las Vegas." The article notes that "the head count taken in a survey conducted this month showed a count of 2,248 dace – an increase of 521 fish compared with last year and almost double the number counted from August 2012."

EPA FINALIZES AGREEMENT SETTING "BUFFER ZONES" AROUND SALMON STREAMS. The [E&E Daily](#) (8/14) reports that the EPA finalized a settlement Wednesday that "prohibits the use of five pesticides in 'buffer zones' around endangered salmon habitat in a win for environmental groups that had sued the agency." The

settlement "stipulates buffers for five insecticides: diazinon, chlorpyrifos, malathion, carbaryl and methomyl." The article notes that "for aerial spraying, the chemicals will be prohibited within 300 feet of salmon habitat; for ground-based applications, buffers will shrink to 60 feet."

ADDITIONAL COVERAGE: HUNTERS SET TO CONVERGE ON LOXAHATCHEE NATIONAL WILDLIFE REFUGE FOR ALLIGATOR HUNT. Additional coverage of the alligator hunt at Loxahatchee National Wildlife Refuge was provided by [Reuters](#) (8/15, Fagenson).

FWS DECISION ON WOLVERINES PRAISED. For the [Port Huron \(MI\) Times Herald](#) (8/14, 75K), Michael Eckert supports the decision by the FWS to withdraw its proposal to list the wolverine as threatened under the Endangered Species Act. According to Eckert, "the decision was a victory both for science and for flat-earth anti-science." He writes that "it wasn't wrong about climate change. It just didn't have any evidence to back up its proposal."

Additional coverage of the decision was provided by [The Hill](#) (8/15, Barron-Lopez, 237K), the [Seymour \(IN\) Times Tribune](#) (8/15, 31K), the [Durango \(CO\) Herald](#) (8/13, 28K), the [Ashland \(OR\) Jefferson Public Radio](#) (8/15), and the [AllGov](#) (8/15, 1K).

Securing America's Energy Future:

Renewable Energy:

HOUSE REPUBLICANS CALL FOR END TO WIND PRODUCTION TAX CREDIT. The "Floor Action" blog of [The Hill](#) (8/15, Cox, 237K) reports Rep. Mike Pompeo is "calling on House GOP leadership to end the Wind Production Tax Credit (PTC)." He "and 54 other House members wrote to Speaker John Boehner (R-Ohio) and House Majority Leader Kevin McCarthy (R-Calif.) on Wednesday calling on them to let the 'crony' tax subsidy for energy companies to expire." The letter said, "We offer our full support of the current process undertaken by the House Committee on Ways and Means that will allow the most anti-competitive and economically harmful tax provisions, specifically the wind energy production tax credit (PTC), to expire."

GUAM PLANS TO TAP WIND ENERGY. The [Marianas Variety](#) (8/15) reports that the Guam Power Authority is "anticipating a mid-July 2015 completion date for its wind turbine pilot project." The article notes that "the \$1.65 million project is being funded by US Department of the Interior, Office of Insular Affairs grants amounting to \$1.5 million plus an additional \$200,000 budgeted by the power authority under its capital improvement funds."

DEADLINE FOR COMMENTS ON BOEM'S PROPOSED OFFSHORE WIND LEASE SALE NEARS. The [Surf City \(NJ\) Sandpaper](#) (8/15) reports that "there are 37 days left to comment on the US Department of the Interior, Bureau of Ocean Energy Management proposed sale of leases for offshore wind farms that includes nearly 344,000 acres offshore New Jersey, with some lots just four nautical miles from Ship Bottom and continuing south along Long Beach Island and 45 miles to Avalon, Cape May County."

Onshore Energy Development:

SECOND LAWSUIT FILED TO BLOCK MONTANA COAL MINE EXPANSION. The [AP](#) (8/14) reports that "two environmental groups are suing to block expansion of the Spring Creek coal mine in Montana." Northern Plains Resource Council and the Western Organization of Resource Councils "filed the lawsuit Thursday in federal court, naming Interior Secretary Sally Jewell and the US Office of Surface Mining as defendants." The groups claim the Interior Department "did not seek public input through an environmental review before approving the expansion."

Coverage by the AP was also picked up by the [Missoulian \(MT\)](#) (8/15, 122K) and the [Great Falls \(MT\) Tribune](#) (8/14, 90K).

Also reporting on the story is [KTVQ-TV](#) Billings, MT (8/15, 2K).

JUDGE SIDES WITH BLM IN NEVADA MINE APPROVAL. The [E&E Daily](#) (8/14) reports that "a federal judge is backing" the BLM's decision "in 2012 to approve a large molybdenum open pit mine in central Nevada." Great

Basin Resource Watch and the Western Shoshone Defense Project, "a group affiliated with the Western Shoshone tribes, sued BLM last year, seeking to overturn the agency's approval of Colorado-based General Moly Inc.'s Mount Hope project near Eureka, Nev." But Nevada US District Court Judge Robert Jones "last month found the groups' grievances 'without merit.'"

ENVIRONMENTAL GROUP SAYS DIESEL STILL USED IN FRACK FLUID. The [E&E Daily](#) (8/14) reports that "oil and gas companies have 'fracked' wells with fluids including diesel fuel at least 351 times in 12 states since 2010," according to a study released Wednesday by an environmental group. Mary Greene, managing attorney of the Environmental Integrity Project and author of the report, said, "We thought this problem was a thing of the past. Companies that inject diesel without permits should be fined for ignoring the law." Greene added that "many companies changed the reports they had made to the FracFocus disclosure website, in some cases after US EPA stepped up its scrutiny of diesel."

Offshore Energy Development:

JUDGE APPROVES BP'S SUBPOENA OF FEDERAL DOCUMENTS. The [FuelFix](#) (8/14, 7K) reports that "a federal judge is allowing BP to negotiate the scope of a massive subpoena aimed at gathering government documents related to the temporary moratorium on deep-water drilling that followed the 2010 Gulf of Mexico oil spill." According to the article, "the order this week by US Magistrate Judge Sally Shushan sets aside a legal bout over BP's right to blame the government for other companies' financial losses in the wake of the spill that resulted from the blowout of a BP well." Shushan is "keeping BP's subpoena alive while parties negotiate the range of dates, search terms and other restrictions on its request."

Also providing coverage is the [Law 360](#) (8/15, 18K).

CAROLINAS TO RECEIVE \$400,000 TO GAUGE OFFSHORE SAND. The [Hampton Roads \(VA\) Virginian-Pilot](#) (8/15, 405K) reports that "in the wake of superstorm Sandy, the Carolinas are getting \$400,000 to evaluate offshore sand deposits that could be used to routinely rebuild beaches or help the coast recover if another severe storm hits." The funds from the BOEM are "part of \$13.6 million Congress allocated to the agency after the destructive October 2012 storm smashed into New Jersey." According to Connie Gillette, a spokeswoman for the federal agency, "similar projects to gauge sand resources in federal waters 3 nautical miles and farther offshore are planned along the entire Eastern Seaboard."

ADDITIONAL COVERAGE: INDUSTRY URGES INTERIOR TO ADD NEW OFFSHORE ACREAGE TO NEXT AUCTION SCHEDULE. Additional coverage was provided by the [National Journal](#) (8/14, Subscription Publication, 561K) and the [Natural Gas Intelligence](#) (8/14).

Tackling America's Water Challenges:

LAKE MEAD TO GET MORE WATER. The [E&E Daily](#) (8/14) reports that federal officials on Wednesday said Lake Mead will "get extra water this year from upriver storage as the reservoir behind Hoover Dam already sits at its lowest level since being filled in the 1930s." The BOR will "release 8.23 million acre-feet of water from Lake Powell, 10 percent more than last year, to try to keep Lake Mead from dropping below levels that would trigger cuts in water deliveries to Arizona and Nevada." However, "despite the added water that comes thanks to near-normal runoff in Lake Powell, demand will continue to outstrip supply, keeping Lake Mead hovering around the record low logged in January."

Additional coverage was picked up by the [Durango \(CO\) Herald](#) (8/13, 28K), [WHLT-TV](#) Hattiesburg, MS (8/15, 137), [KVVU-TV](#) Las Vegas (8/15, 66K), and [KXNT-AM](#) Las Vegas (8/14, 44K).

In an op-ed for the [Pagosa \(CO\) Daily Post](#) (8/15), Aaron Citron writes that "with the recent news that Lake Mead is at its lowest level in history, it's impossible to ignore the trajectory of America's hardest-working river." He notes that "in the Colorado River Basin, we are already using more water annually than is being supplied by snowpack and other precipitation." Citron asserts that "it has become clear that, over time, our water uses are going to have to change." He argues that "in thinking about where — in what sectors — this change should take place, we must also consider the environmental, cultural and economic services that each sector provides."

Citron concludes that "as we consider all of our options to address the growing water supply and demand gap in the Colorado River Basin, cities must remain at the leading edge of water conservation and reuse practices so that we can avoid large-scale, permanent reductions in irrigated acreage, stream flows, and the economic impacts these will create."

BOR MEETS WITH HOOPA TRIBAL OFFICIALS TO TOUR TRINITY RIVER. [KIEM-TV](#) Eureka, CA (8/15, 428) reports that on Thursday, officials from the BOR "met with Hoopa Tribal officials to tour the conditions along the Trinity River." The BOR said Interior Secretary Sally Jewell "sent staff members to assess the conditions of the river in person." The article notes that "tribal members hope this will force the Bureau to release additional water into the Trinity."

Also providing coverage are the [Eureka \(CA\) Times Standard](#) (8/15, 76K) and the [Willits \(CA\) News](#) (8/15, 10K).

BOR FUNDING TO AID LAKE CACHUMA. The [Santa Barbara \(CA\) Edhat](#) (8/15, 961) reports that Rep. Lois Capps announced Thursday that the Cachuma Operation and Maintenance Board received \$300,000 from the BOR for an emergency drought relief project. The Cachuma Operation and Maintenance Board will "use the funding to support its effort to pump water from Lake Cachuma into the North Portal Intake Structure and maintain water flow to the South Coast communities of Santa Barbara County." Capps said, "This drought crisis is the most urgent problem facing our state and the Central Coast, and it requires a collaborative effort by many. I am glad to hear that Lake Cachuma received this federal support, and I will continue to work with federal agencies to ensure farmers, businesses, consumers, and municipalities have the resources they need to get through these difficult times."

BOR TO HOST CAST FOR KIDS FISHING EVENT. The [Red Bluff \(CA\) Daily News](#) (8/15, 20K) reports that the BOR, Central California Area Office, "in partnership with the CAST — Catch a Special Thrill — for Kids Foundation and Pleasure Cove Marina, will host a CAST for Kids fishing event at Lake Berryessa on Saturday, Sept. 13." The bureau is "seeking boaters and anglers who wish to volunteer their time and use of their boat."

SALT RIVER PROJECT TO CONTINUE DROPPING WATER LEVELS IN BLUE RIDGE RESERVOIR. The [Payson \(AZ\) Roundup](#) (8/14, 21K) reports that the Salt River project will "continue to lower water levels in the Blue Ridge Reservoir to undertake a series of projects, including work on intake tunnels normally underwater."

RESEARCHERS SUGGEST DUST COULD BE IMPACTING CALIFORNIA'S DROUGHT. The [E&E Daily](#) (8/14) reports that "new research presented in San Francisco" on Wednesday suggests that "dusty air blown across the Pacific Ocean from Asia and Africa could be influencing precipitation" in California. In a presentation at a national meeting of the American Chemical Society, Kim Prather from the University of California, San Diego, "described research she is leading into the dust swept westward by the jet stream." According to Prather, "the dust — and the tiny bacteria and molecules it carries with it across the Pacific Ocean — is then mixing with other airborne particles like sea spray and smoke to have distinct and variable impacts on clouds and precipitation."

ADDITIONAL COVERAGE: CALIFORNIA LEADERS AGREE ON \$7 BILLION REPLACEMENT WATER BOND LANGUAGE. Additional coverage that "a ballot measure that will ask voters in November to approve \$7.5 billion in borrowing for water projects sailed through the Legislature on Wednesday" was provided by the [Los Angeles Times](#) (8/14, Mason, 3.42M), the [San Francisco Chronicle](#) (8/14, Gutierrez, 2.87M), the [Fresno \(CA\) Bee](#) (8/13, 322K), the [Bakersfield Californian](#) (8/15, 127K), the [Antioch \(CA\) Herald](#) (8/15, 81K), the [Central Valley \(CA\) Business Times](#) (8/15, 206), the [AllGov](#) (8/15, 1K), [KCRA-TV](#) Sacramento, CA (8/15, 122K), and [KQED-FM](#) San Francisco (8/14, 15K).

Empowering Native American Communities:

PAYMENTS FROM INDIAN TRUST SETTLEMENT COMING SOON. The [Native American Times](#) (8/15, 337) reports that "payments for the Trust Administration Class in the Indian Trust Settlement are expected to be mailed in the early Fall, the Settlement Administrator," according to The Garden City Group, Inc. GCG will "hold two meetings in Montana for Class Members, their families and heirs to answer questions, take updates for address and contact information, and to obtain probate documents for estate distributions."

INTERIOR, COURTS URGED TO UPHOLD LIMITS ON INDIAN CASINOS. In an editorial, the [Detroit News](#) (8/15, 495K) argues that "unchecked expansion of tribal gaming houses would exacerbate saturation of gambling market." It notes that the Sault Ste. Marie Tribe of Chippewa Indians wants to build two new casinos in southeast Michigan and the Bay Mills Indian Tribe wants to "reopen its closed facility near Vanderbilt in northern Michigan's Otsego County and establish new casinos near Flint and Port Huron." It concludes that "the Department of the Interior and the courts should see the inherent dangers and reject the efforts to build these off-reservation casinos."

Top National News:

OBAMA CALLS ON FERGUSON PROTESTERS TO BE PEACEFUL, POLICE TO SHOW RESTRAINT. The already heavy coverage of the protests following the police shooting in Ferguson, Missouri last weekend increased remarkably from Wednesday to Thursday. The three network newscasts devoted more than 20 minutes, or about a third of their combined airtime, to various aspects of the Ferguson story, which was three times what they gave any of the rest of the day's news, including the situation in Iraq.

The spike in media attention was sparked by photos, video, and first-hand accounts of what was perceived as an unduly militaristic response to the sometimes violent behavior of crowds on the streets of Ferguson. President Obama's Thursday remarks on the protests were widely noted and generally cast as a successful effort on the part of the White House to be evenhanded – even as the President acknowledged the growing concern about the Ferguson police tactics. Notably, the [Wall Street Journal](#) (8/15, Subscription Publication, 5.89M), in an editorial, praises the President's remarks, including his request for "peace and calm on the streets."

The [Washington Post](#) (8/14, Markon, Branigan, 4.06M) says that on Thursday, "in a sudden burst of interest fueled by images of heavily armed police...politicians from both sides of the aisle rushed...to condemn the tactics of the nearly all-white police force in the predominantly African American town." According to the Post, "The reactions were remarkably similar from political opposites across the spectrum," as Sen. Claire McCaskill "called for authorities to 'de-militarize this situation,'" and Sen. Rand Paul "condemned 'the militarization of our law enforcement' in a [Time](#) (8/15, Paul, 24.1M) magazine essay."

At the opening of [NBC Nightly News](#) (8/14, lead story, 3:45, Holt, 7.86M), Lester Holt said, "Last night's jarring images of police clad in military gear and firing tear gas and rubber bullets at protesters on the streets of an American suburb has reverberated across this country, including to the Obamas' vacation residence where the President called for peace and calm and lashed out at both violence against police and excessive force by police." McCaskill was shown saying, "I think that it's very important that we demilitarize the response to what have been, by and large, very peaceful protests."

In the first segment for the [CBS Evening News](#) (8/14, lead story, 1:05, Pelley, 5.08M), Scott Pelley reported that "after four nights of violence in Ferguson...and with no end in sight, the President and the governor today took action." Pelley said Missouri Gov. Jay Nixon "put state police in charge of security in the St. Louis suburb," while the President "interrupted his vacation to call for calm," and "said there is blame for the violence on both sides." Lester Holt, on [NBC Nightly News](#) (8/14, story 3, 0:35, Holt, 7.86M), said the President was "asking everyone involved to take a step back."

In the lead story for [ABC World News](#) (8/14, lead story, 3:25, Muir, 5.84M), David Muir said the President had issued "an urgent plea to both sides – the police and the protesters." ABC's Steve Osunsami went on to report from Ferguson that the President "condemn[ed] the looting and thieving that took place earlier this week, but call[ed] for an end to the police state." According to Osunsami: on Thursday, "there was a clear turn in the reaction to Michael Brown's killing." Also on [ABC World News](#) (8/14, story 2, 2:05, Muir, 5.84M), correspondent Ryan Smith paraphrased the President as saying, "There is never an excuse for violence against the police and no excuse for police to use excessive force against peaceful protests."

In a front-page article, the [New York Times](#) (8/14, A1, Bosman, Shear, Williams, Subscription Publication, 9.79M) reports that the President "called for an end to the violence here, denouncing actions both by the police and by protesters," but, according to the Times, "to many," Obama "seemed less emotional and personal than he had been two years ago, when he called for 'soul searching' after the fatal shooting of Trayvon Martin." The Times

says the President spoke as "alarm had been rising across the country at images of a mostly white police force, in a predominantly African-American community, aiming military-style weapons at protesters and firing tear gas and rubber bullets."

The [Los Angeles Times](#) (8/14, Hennessey, 3.42M) reported that on Thursday, the President made a "brief statement from Martha's Vineyard, where he is on vacation," as he "sought to calm the increasingly tense situation in Ferguson...saying there was 'no excuse' for 'excessive force' by police or for looting or violence aimed at law enforcement." The Times says the President said the police "have a responsibility to be 'open and transparent' about the events that led up to the shooting," and "criticized police for their tactics" in the aftermath of the shooting.

Under the headline, "Obama: No Excuse For Violence, Excessive Force In Missouri," the [Wall Street Journal](#) (8/14, Nelson, Subscription Publication, 5.89M) reports that on Thursday, the President said, "There are going to be different accounts of how this tragedy occurred. ... Now's the time for an open and transparent process to see that justice is done." [Reuters](#) (8/14, Mason, Lovering) quotes the President as saying, "When something like this happens, the local authorities, including the police, have a responsibility to be open and transparent about how they are investigating that death and how they are protecting the people in their communities."

The [Huffington Post](#) (8/14, Bendery, 11.54M) noted that in addition to criticizing the Ferguson police for employing "excessive force against peaceful protests," the President also said, "There is never an excuse for violence against police or for those who would use this tragedy as a cover for vandalism and looting." Likewise, the [Washington Times](#) (8/14, Boyer, 465K) reported that the President "said protesters should not attack police officers."

[Politico](#) (8/14, Brown, 637K) reported that while the President "did not specifically mention the arrests of two reporters" in Ferguson, he "did speak to the aggressive law enforcement tactics" when he said, "Here in the United States of America, police should not be bullying or arresting journalists who are just trying to do their jobs and report to the American people on what they are seeing on the ground."

Holder "Concerned" That Police Use Of "Military Equipment" Sends A "Conflicting Message." The [CBS Evening News](#) (8/14, story 3, 2:00, Pelley, 5.08M) reported that on Thursday, Attorney General Holder said he is "concerned about the message that police send when they use military equipment to deal with protesters." Correspondent Jan Crawford went on to report that "law enforcement in St. Louis County have gotten more than half a million dollars' worth of military equipment from the Pentagon, including seven Humvees and a dozen M-16s."

The [Washington Post](#) (8/14, Markon, Branigan, 4.06M) notes that just after the President said he is "'deeply disturbed' by images of clashes between police and protesters," Holder "issued a statement saying he was 'deeply concerned' about 'the deployment of military equipment and vehicles' to combat protesters in Ferguson."

The [AP](#) (8/14) reported that on Thursday, Holder said he is "concerned that the use of military equipment by police in Ferguson...is sending a 'conflicting message,'" and "said the response by law enforcement... 'must seek to reduce tensions, not heighten them.'"

[Politico](#) (8/14, Mccalmont, 637K) quoted Holder as saying, "I am deeply concerned that the deployment of military equipment and vehicles sends a conflicting message." Politico also noted that Holder added that "while the vast majority of protests have been peaceful, acts of violence by members of the public cannot be condoned."

The [Christian Science Monitor](#) (8/14, Jonsson, 566K) also notes that "critics say that the scenes in recent days from Ferguson are offering Americans an unvarnished look at one consequence of federal programs that supply even tiny towns and small cities with heavy military equipment." According to the [Washington Post](#) (8/15, Gibbons-Neff, 4.06M), some US combat veterans contend that "the police response has appeared to be not only heavy-handed but out of step with the most effective ways for both law enforcement and military personnel to respond to demonstrations."

The [Washington Times](#) (8/14, Chasmar, 465K) reported that Rep. Hank Johnson (D-GA) "plans to introduce legislation that would 'end the free transfers' of military equipment to local law enforcement agencies." Johnson is

quoted as saying, "Unfortunately, due to a Department of Defense (DOD) Program that transfers surplus DOD equipment to state and local law enforcement, our local police are quickly beginning to resemble paramilitary forces." [Politico](#) (8/14, Palmer, Sherman, 637K) reported that other Democrats, "including Judiciary Ranking Member John Conyers of Michigan, called for a hearing into the controversial police tactics in the St. Louis suburbs."

In an op-ed for the [New York Times](#) (8/15, Beavers, Shank, Subscription Publication, 9.79M) titled, "Ferguson Shows The Risks Of Militarized Policing," Elizabeth Beavers and Michael Shank of the Friends Committee on National Legislation notes that the Pentagon "provides military-grade weapons and equipment to local law enforcement agencies through the 1033 program, enacted by Congress in 1997 to expand the practice of dispensing extra military gear." According to Beavers and Shank, "Due to the defense industry's bloated contracts, there is a huge surplus," and so the Pentagon "has donated military equipment worth more than \$4 billion to local law enforcement agencies."

AP Analysis: Obama More Reticent Since Having To Retract Criticism Of Cambridge Police In 2009. The [AP](#) (8/14, Pace) notes that the President "avoided mentioning race in his statement, and he called on people to 'remember that we're all part of one American family.'" The AP also says that the President's statement "stood in contrast to his initial handling of the 2009 arrest of his friend Harvard Professor Henry Louis Gates" when he "declared...that a white police officer had acted 'stupidly' in arresting Gates." The AP says that the President "conceded days later that his own remarks had inflamed the situation and that Gates had probably overreacted in the moment, contributing to his arrest."

In a piece titled, "How Race Undermines Obama's Bully Pulpit On Ferguson" for the [New York Times](#)' (8/14, Subscription Publication, 9.79M) TheUpshot blog, Dartmouth's Brendan Nyhan says the President's statement on Thursday "seemed intended instead to alleviate concerns that he was not taking what had happened seriously enough." But Nyhan adds that "many who have called on" the President to "speak up may not realize that it could be counterproductive for him to be visibly involved in the debate." According to Nyhan, "The Ferguson controversy may end up being as divisive as the Trayvon Martin case and the arrest of...Gates – two racially charged controversies that became...arguably more polarized after Mr. Obama addressed them."

[Roll Call](#) (8/14, Lesniewski, Subscription Publication, 76K) notes that Debo P. Adebile, President Obama's nominee to be assistant attorney general for the Civil Rights Division, "was rejected by a group of Senate Democrats who viewed him as insufficiently pro-law enforcement." Roll Call suggests that in the wake of the violence in Ferguson, the President "could make a personal push for Adebile's confirmation," but Roll Call adds that "there's no reason to believe that the Democratic senators who voted against advancing the nomination would reverse themselves."

Eugene Robinson, in his column for the [Washington Post](#) (8/14, Robinson, 4.06M), notes that in 2012, according to the FBI statistics, "2,614 whites were killed by white offenders and 2,412 blacks were killed by black offenders — similar numbers" — although the "white population is almost five times as large as the African American population, meaning the homicide rate in black communities is staggeringly higher."

Missouri Highway Patrol Takes Responsibility For Ferguson Security. [USA Today](#) (8/14, Alcindor, Madhani, Stanglin, 5.76M) reports that on Thursday, Missouri Gov. Jay Nixon "announced...that the Missouri Highway Patrol will take control of security in Ferguson and that the unit in the embattled town would be overseen by a native son, Capt. Ron Johnson." According to the [AP](#) (8/14), Johnson, "who is black, said he grew up in the community and 'it means a lot to me personally that we break this cycle of violence.'" The [Los Angeles Times](#) (8/14, Pearce, Raab, Srikrishnan, 3.42M) reports that on Thursday, Nixon pledged to "change the tone in the St. Louis suburb," and "assured [a] crowd gathered at a community meeting that 'you will see a much better and much different tone' in the city."

The [Los Angeles Times](#) (8/15, Pearce, Hennessy-Fiske, 3.42M) reports that on Thursday Ferguson was "under the lower-key supervision of police in standard uniforms," meaning that "there were no assault rifles, riot gear or armored personnel vehicles that had inflamed tensions over the last week." According to the Times, "Shortly before 8 p.m., protesters outside a burned convenience store approached police cars and began yelling," but "several representatives of the Black Panthers stepped in and urged the crowd to move back — and Johnson emerged to mingle with the crowd."

The [St. Louis Post-Dispatch](#) (8/15, 938K) reports that St. Louis County Prosecuting Attorney Robert McCulloch "blasted" Nixon's "decision...to replace St. Louis County Police control of the Ferguson situation with the Missouri State Highway Patrol." McCulloch is quoted as saying, "It's shameful what he did today, he had no legal authority to do that." McCulloch added, "I hope I'm wrong, but I think what Nixon did may put a lot of people in danger."

The [Politico](#) (8/15, Glueck, 637K) notes that Nixon "waited five days...to visit" Ferguson, and "by then, protesters had been marching for days, police had rolled in military-grade equipment, the president was calling for calm and the national media were all over the story." According to Politico, "Some observers, including fellow Democrats, said Nixon had dealt a significant blow to his career." In a profile of Nixon, the [New York Times](#) (8/15, Blinder, Eligon, Subscription Publication, 9.79M) says the "Democrat in a solidly Republican state" has "constantly sought a middle ground."

The [New York Times](#) (8/15, Board, Subscription Publication, 9.79M), in an editorial, says Nixon, "after keeping a low profile for too long," was right to give "an order that should have been given over the weekend: Let protesters who are angry about the shooting protest peacefully, without aggressive demands to disperse, as is their constitutional right."

McCaskill: Police "Response...Has Become The Problem Instead Of The Solution." The [Washington Times](#) (8/14, Klimas, 465K) reported that on Thursday, Sen. Claire McCaskill released a statement saying, "This kind of response by the police has become the problem instead of the solution." McCaskill added, "My constituents are allowed to have peaceful protests, and the police need to respect that right and protect that right." The [Wall Street Journal](#) (8/14, Peters, Kesling, Subscription Publication, 5.89M) reports that on Thursday, McCaskill tweeted: "Continuing to work the phones to de escalate the tense and unacceptable situation in Ferguson."

Lewis: Obama Should "Federalize The Missouri National Guard To Protect" Protestors. The [Daily Caller](#) (8/14, Stoltzfoos, 408K) reported that in an appearance on MSNBC on Thursday, Rep. John Lewis (D-GA) said, "President Obama should use the authority of his office to declare martial law," and "federalize the Missouri National Guard to protect people as they protest." The [Huffington Post](#) (8/14, Lazar, 11.54M) also notes Lewis's recommendations for the President.

Ferguson Police Chief: "We Have To Respond To Deadly Force." In a segment for [ABC World News](#) (8/14, story 2, 2:05, Muir, 5.84M) on how "peaceful protests in the afternoon suddenly turned into a violent clash at night," Ferguson Police Department Chief Thomas Jackson was shown saying, "If fire bombs are getting thrown, property is getting destroyed, people are being shot at, we have to respond to deadly force."

On [NBC Nightly News](#) (8/14, lead story, 3:45, Holt, 7.86M), correspondent Ron Allen said he was "with the marchers" on Wednesday night and "things were calm, winding down," until "the police seemed to run out of patience and tried to clear the streets." Allen added that the police say they used tear gas "because bottles and Molotov cocktails rained down on them." On the [CBS Evening News](#) (8/14, story 2, 3:00, Pelley, 5.08M), Mark Strassman reported from Ferguson that "most of the protesters are outsiders, not from Ferguson, and more are showing up every day."

Chief Jackson, in an op-ed for [USA Today](#) (8/14, Jackson, 5.76M), says that as for the investigation of the shooting of Mike Brown, "there's lots of physical evidence, there's lots of witness testimony and there's a lot of information that can be pulled together." According to Jackson, "There are so many witnesses that are coming forward and we're trying to get them to come in and be interviewed," which is "really what is holding things up."

Michael Gerson, in his column for the [Washington Post](#) (8/14, 4.06M), writes, "When an unarmed man is killed by a police officer, it is the police who have the burden to demonstrate that" the officer's actions were "somehow justified." [USA Today](#) (8/14, 5.76M), in an editorial, says Ferguson police department's "heavy handed, unprofessional tactics since the shooting raise grave doubts about both its competence and its credibility." According to USA Today, the Ferguson police "certainly cannot be trusted to investigate itself or, for that matter, to protect the community." The [Washington Post](#) (8/14, Board, 4.06M) editorializes that "nothing justifies looting or assaulting police," but the Ferguson police "did not need to respond to mostly peaceful protests by deploying armored vehicles, pointing sniper rifles at civilians and tossing tear gas and shooting rubber bullets liberally into

crowds."

FOP Executive Director: Obama's Criticism Of Police "Is Not Helpful." [USA Today](#) (8/14, Jackson, 5.76M) reported that Jim Pasco, the executive director of the Fraternal Order of Police, "criticiz[ed] President Obama for some of his comments Thursday about the protests over the police shooting in Ferguson, Mo." Pasco is quoted as saying, "I would contend that discussing police tactics from Martha's Vineyard is not helpful to ultimately calming the situation." [The Hill](#) (8/14, Trujillo, 237K) first reported Pasco's critique of the President's response to the shooting. The Hill reported that Pasco said, "Right now, I haven't seen anything from afar — and maybe the president has — that would lead me to believe the police are doing anything except to restore order."

Paul Decries "Racial Disparities In Our Criminal Justice System," "Rising Militarization Of Law Enforcement." [McClatchy](#) (8/14, Cockerham, Subscription Publication, 23K) reports that in an essay for [Time](#) (8/15, Paul, 24.1M). Sen. Rand Paul "call[s] for demilitarization of America's local police forces." McClatchy notes that Paul "has been reaching out to minorities as he explores a run for president in 2016," and notes that in the wake of the shooting of Mike Brown, Paul has written: "Given the racial disparities in our criminal justice system, it is impossible for African-Americans not to feel like their government is particularly targeting them."

Dan Balz, in a front-page analysis for the [Washington Post](#) (8/14, A1, Balz, 4.06M) titled, "Libertarians Make Their Voices Heard On Police In Ferguson, Mo.," describes the "rare and surprisingly unified response across the ideological spectrum" to the situation in Ferguson, "with Republicans and Democrats joining to decry the tactics of the city's police force in the face of escalating protests." According to Balz, "the changing reaction on the right is clear evidence of a rising and more vocal libertarian wing within the Republican Party," and there was "no better sign of that" than Paul's essay for [Time](#). Balz goes on to say that "in Ferguson," Paul "has found circumstances almost tailor-made to advance his worldview," and, "in doing so, he continues to set himself apart from others in the Republican Party with the hope of expanding the party's coalition."

Mark Barabak of the [Los Angeles Times](#) (8/15, Barabak, 3.42M) says "what was striking was the angry tone and underlying sympathies of Paul's essay, a condemnation of the 'rising militarization of law enforcement' in the country and assertion that equal justice under law is more a pleasing bromide than reality on the streets of 2014 America." According to Barabak, "Paul's rhetoric is not just a break with others in the embryonic Republican presidential field; it challenges GOP political orthodoxy going back several decades."

[Politico](#) (8/14, Everett, 637K) also notes Paul's op-ed, as well as "more measured" remarks from Sen. Ted Cruz, who wrote: "Police officers risk their lives every day to keep us safe, and any time a young man loses his life in a confrontation with law enforcement, it is tragic."

The [New York Times](#) (8/15, Peters, Subscription Publication, 9.79M) reports that "many conservatives were unsettled by the militaristic response from law enforcement officials in Ferguson." According to the Times, Red State's Erik Erickson says "many" on the right "see an increasingly disproportionate response to crime as a sign of a larger problem that should rattle the consciences of conservatives who are wary of centralized authority."

Scarborough: Reporters Ought To Have Followed Ferguson Police's Directions. In a post for [Politico](#) (8/14, Gold, 637K), Hadas Gold reported that on Thursday, MSNBC's Joe Scarborough said the Washington Post's Wesley Lowery and Huffington Post's Ryan Reilly "should have more closely followed police instructions" before they were briefly detained by police in Ferguson Wednesday night. On Thursday's Morning Joe, Scarborough said, "I've been in places where police officers said, 'all right you know what, this is cordoned off, you guys need to move along.' You know what I do? I go, 'yes, sir, or yes, ma'am.' I don't sit there and have a debate and film the police officer unless I want to get on TV and have people talk about me the next day."

Obama's Daily Golf Rounds Continue To Draw Scrutiny. The last sentence of the [Los Angeles Times'](#) (8/14, Hennessey, 3.42M) report on the President's remarks regarding the situation in Ferguson is: "Immediately after the brief statement, he continued his vacation and headed to the golf course."

Under the headline, "Obama Calls For Calm, Then Golfs," [The Hill](#) (8/14, Kurtz, 237K) reported that "shortly after making remarks on the situation in northern Iraq and the escalating tensions in Ferguson," the President "headed to the Vineyard Golf Club." The Hill notes that the President "has hit the links nearly every day since arriving in the ritzy enclave on Saturday."

Under the headline "Obama's 'Vacation From Hell,'" [Politico](#) (8/14, Brown, 637K) reports Obama "really wanted to take a vacation. But then the world intervened." However, according to Politico, the President is "managing to squeeze in quite a bit of leisure time." Politico says that on Thursday, the President "went from the podium where he delivered the statement on Ferguson to the Vineyard Golf Club faster than a ball driven by a 3-wood."

SENATE DEMOCRATS HESITANT TO PUSH OBAMA ON IMMIGRATION AHEAD OF MIDTERMS. [Politico](#) (8/14, Raju, Kim, 637K) reported that Democratic leaders in the Senate are weighing "how far to push" President Obama "on immigration before the crucial midterm elections." There is "palpable fear that Obama could cause trouble for the Senate's most vulnerable Democrats if he decides to circumvent Congress before the elections to make immigration changes through executive action." As a result, Democratic leaders are "in a jam." While Majority Leader Reid, Majority Whip Durbin and others have "called for executive action to halt deportations," they are now "coy," and representatives for each "refused to say this week whether their bosses want the president to move before November or wait until after the elections."

Texas Deploys National Guard Troops Along Mexican Border. The [Chicago Tribune](#) (8/14, 2.19M) reports that according to law enforcement officials, Texas has begun deploying National Guard troops along the US-Mexico border. A deputy with the Hidalgo County Sheriff's office said Thursday that border sheriffs "have been informed about the deployment and the first Texas National Guard troops have taken positions in places such as towers used for monitoring."

Immigrant Children Said To Get "First-Class Treatment" From Federal Government. Under the headline, "Illegal Immigrant Children Get First-class Treatment At Taxpayers' Expense," the [Washington Times](#) (8/14, 465K) reports that "the organizations the federal government is paying to house and care for the children who have surged across the border illegally are taking pains to make sure they are as comfortable as possible," providing, among other things Spanish-language life skills classes, intensive English training, and dietitians, who "scrutinize the menus each day to make sure they include enough whole grains but not whole milk." The Times notes that the effort to house and care for the children "is eating up an ever-larger portion of the Health and Human Services Department's budget, jumping from \$305.9 million last year to \$671.3 million so far in fiscal year 2014."

Administration Implements Accelerated Court Process To Deal With Immigrant Children. The [New York Times](#) (8/15, Semple, Subscription Publication, 9.79M) reports that a "cornerstone of the Obama Administration strategy to deal with the surge of unaccompanied minors from Central America," is "a new accelerated court process," under which the Justice Department "is moving children who recently arrived to the head of the line to see immigration judges, possibly leading to deportation within months rather than years."

Eleven-Year-Old US Citizen Held In Immigration Detention Facility For More Than A Month. The [Los Angeles Times](#) (8/15, Carcamo, 3.42M) reports on the case of an 11-year-old boy who was released from an immigration detention facility this week "after it was discovered that he is a U.S. citizen." After spending "more than a month at the detention center in Artesia, N.M.," an immigration attorney "who happened to be visiting the facility discovered his status last week." The boy, "whose father is a U.S. citizen, had migrated from Central America with his mother before both were detained."

CLINTON, OBAMA DANCE AT PARTY DAYS AFTER HER CRITICISM OF PRESIDENT. The [New York Times](#) (8/14, Chozick, Subscription Publication, 9.79M) reports that the White House on Thursday "declined to say whether President Obama and Hillary Rodham Clinton actually hugged at a party the night before on Martha's Vineyard. But they did dance." The Times quotes an unnamed "person who attended the party" as saying, "It was huge smiles and total abandon on the dance floor. You'd never know there was any discord." The Times notes that Clinton on Tuesday phoned the President "to assure him that critical remarks she had made about his foreign policy in an interview with *The Atlantic* were not intended 'to attack him, his policies or his leadership.'"

Progressives Unhappy With Clinton's "Harsh Critique" Of Obama's Foreign Policy. The [Washington Times](#) (8/14, Wolfgang, 465K) reports that in the wake of the "harsh critique of Mr. Obama's foreign policy" by Clinton, "disenchanted liberals" worry that the Democrats' "2016 front-runner is acting more like a thinly veiled neoconservative." Roger Hickey, founder of the "liberal" group Campaign for America's Future, is quoted as saying, "I thought the Democratic party was fairly unified on foreign policy these days. But when she goes

insulting Obama for his foreign policy weaknesses, suddenly people realize there needs to be a debate about foreign policy as well."

Clintons Said To Be Forging Relationship With Julián Castro, A Potential 2016 Running Mate. The [Washington Post](#) (8/14, O'Keefe, Rucker, 4.06M) reports that as the former secretary of state mulls a potential 2016 White House run, Hillary Clinton and former President Bill Clinton "have been cultivating an important ally who some believe could become her vice presidential running mate": ex-San Antonio Mayor Julián Castro, who President Obama has tapped to serve as his next HUD secretary. The Post says, for example, that Bill Clinton "invited" the 39-year old Castro "to the Clintons' home in Washington last week for a private dinner that friends described as" an opportunity for them "to become better acquainted." The Post also says that Castro joined Hillary Clinton last month at an event at "the Bronx Children's Museum."

Krauthammer: Clinton "Right" In Her Assessment Of Obama's Foreign Policy. In his [Washington Post](#) (8/14, 4.06M), Charles Krauthammer quotes Hillary Clinton as saying of President Obama's foreign policy in her recent interview with *The Atlantic*, "Great nations need organizing principles, and 'Don't do stupid stuff' is not an organizing principle." Krauthammer adds that in that interview, Clinton "acknowledge[d] the fatal flaw of" Obama's "foreign policy: a total absence of strategic thinking." Krauthammer adds that while Clinton's remarks come as she's "positioning" herself for a 2016 presidential run, "it doesn't matter. She's right."

Zakaria: Clinton's Strategic Talk Relating To Middle East Moderates A "Naive Fantasy." In his [Washington Post](#) (8/15, 4.06M) column, Fareed Zakaria writes that in her interview with *The Atlantic*, Clinton expressed "what has become Washington's new conventional wisdom," implying "that 'moderates' might have prevented the rise of the Islamic State" in the Middle East. However, writes Zakaria, the US "has provided massive and sustained aid to the moderates in the region" for some time, with little positive effect. Zakaria says, "The problem is that there are actually very few" moderates in countries such as "Iraq, Syria, Egypt, Libya and the Palestinian territories." Zakaria adds, "Asserting that the moderates in Syria could win is not tough foreign policy talk, it is a naive fantasy with dangerous consequences."

Poll Shows Clinton's Lead Over Potential 2016 GOP Foes Narrowing. [McClatchy](#) (8/14, Douglas, Subscription Publication, 23K) reports that a new McClatchy-Marist poll shows that Hillary Clinton's "lead over" potential GOP presidential rivals in hypothetical 2016 match-ups "has narrowed and her support has slipped below 50 percent" amid "recent gaffes by the former secretary of state." In the poll, Clinton leads Gov. Chris Christie 47%-41%, down from a 53%-42% lead she held in a similar poll taken in April and a 58%-37% edge in February. In the new poll, Clinton leads Jeb Bush 48%-41%, down from a 55%-39% lead in April. And the new poll shows Clinton leading Sen. Rand Paul 48%-42%, down from a 54%-40% edge in April. The report does not say when the new poll was in the field or how many voters were surveyed.

Noonan: After Criticizing Obama, Clinton Likely To Face Tough 2016 Challenge From The Left. In her [Wall Street Journal](#) (8/15, Subscription Publication, 5.89M) column, Peggy Noonan writes that with her criticism of Obama's foreign policy in the interview with *The Atlantic*, Hillary Clinton – if she runs for president – likely increased the odds that she will face a serious challenge from the left in the Democratic presidential primary. Noonan adds that though Sen. Elizabeth Warren has said she won't run for president, the Massachusetts Democrat, should she change her mind, would likely pose the biggest threat to Clinton winning the Democratic nomination.

Clinton Ally Brock Takes Over Formerly Non-Partisan Watchdog Group CREW. [Politico](#) (8/14, Vogel, 637K) reported that "in a major power play that aligns liberal muscle more fully behind the Democratic Party — and Hillary Clinton," Media Matters' David Brock "is taking over a leading watchdog group, Citizens for Responsibility and Ethics in Washington" after proposing "a multifaceted expansion intended to turn the group into a more muscular — and likely partisan — attack dog." According to Politico, "The reconfigured CREW...will add a more politically oriented arm, expand its focus into state politics and donor targeting and will operate in close coordination with Brock's growing fleet of aggressive Democrat-backing nonprofits and super PACs." Politico notes that while CREW was established by liberal Democrats, under executive director Melanie Sloan it "went out of its way to demonstrate that it would not pull punches when it came to Democratic corruption."

Editorial Wrap-Up:

NEW YORK TIMES. *"The Search For Calm In Missouri."* The [New York Times](#) (8/15, Board, Subscription Publication, 9.79M), in an editorial, says Missouri Gov. Jay Nixon, "after keeping a low profile for too long," was right to give "an order that should have been given over the weekend: Let protesters who are angry about the shooting protest peacefully, without aggressive demands to disperse, as is their constitutional right."

"Maliki And The Futility Of Regime Change." The [New York Times](#) (8/15, Subscription Publication, 9.79M) editorializes that "there should be no illusion that" Iraqi Prime Minister Nouri al-Maliki's "successor...will quickly end Iraq's crises," and that Obama "is right to be very cautious about plunging into foreign adventures." However, "he should be equally clear that there is often no choice, and that the most tempting action is hardly ever the best."

"Elmo's World." The [New York Times](#) (8/15, Board, Subscription Publication, 9.79M) editorializes that the "forces of civic order that drove the pimps, hustlers and drug dealers from Times Square never anticipated the Elmos." In "the tourist-choked, franchise-cheesy, pedestrian-mall version of the Crossroads of the World, adults in character costumes – a lot of Elmos, but also Cookie Monsters, Mickey and Minnie Mice, SpongeBobs, Batman, Statues of Liberty and others – are a fixture, practically an emblem." They are "fee-for-service entrepreneurs" that "deliver smiles for cheap" and are "thus appreciated by out-of-towners in a way no squeegee man ever was." New York City Mayor Bill de Blasio and members of the City Council "have said the Elmos are a problem that needs solving, through licensing or some other regulatory arrangement," but the Times argues that they "should be careful" in "a city that values eccentric expression and an entrepreneurial street life, to avoid cures that are worse than the disease."

WASHINGTON POST. *"Ferguson's Fumbled Response."* The [Washington Post](#) (8/14, Board, 4.06M) editorializes that "nothing justifies looting or assaulting police," but the Ferguson police "did not need to respond to mostly peaceful protests by deploying armored vehicles, pointing sniper rifles at civilians and tossing tear gas and shooting rubber bullets liberally into crowds."

"Defeating Extremists" The [Washington Post](#) (8/15, 4.06M) editorializes that "the limits Mr. Obama has placed on US action make little sense in the context of" ISIL's "extremist entity and the interconnected conflicts across the region." The President "lacks an integrated policy for Iraq and Syria, though the Islamic State cannot be defeated unless it is attacked in both countries. ... The idea that Iraqis will somehow solve these problems independently of Syria and with minimal U.S. support is a convenient but dangerous illusion."

"The GOP's War On Voters." In an editorial, the [Washington Post](#) (8/14, Board, 4.06M) criticizes Virginia Republicans for enacting voter ID laws and argues that a push "to tighten voter ID rules has accelerated for several years under GOP auspices, mainly in Southern states." The effort, the Post notes, "calls attention to the party's increasing identification with and reliance on older and whiter portions of the nation's electorate, which are shrinking." The Post argues that in their attempt "to negate the electoral effects of demographic change, Republicans are digging themselves deeper into a hole of their own making."

WALL STREET JOURNAL. *"The Ferguson Exception."* The [Wall Street Journal](#) (8/15, Subscription Publication, 5.89M), in an editorial, praises the President's remarks on Thursday, and notes that he sought "peace and calm on the streets."

"No Maliki, No More US Excuses." In an editorial, the [Wall Street Journal](#) (8/15, Subscription Publication, 5.89M) hails Iraqi Prime Minister Nouri al-Maliki's decision to give way to his successor, and expresses hope that the President will now craft a policy to stem ISIL's advance – something the Journal blames on Obama's lack of action in Syria and on his decisions to withdraw US forces from Iraq.

"Beijing vs. Foreign Capitalist Roaders." An editorial in the [Wall Street Journal](#) (8/15, Subscription Publication, 5.89M) criticizes Chinese President Xi Jinping's increased regulatory actions against foreign businesses including Microsoft and GM, among others, arguing that Xi is trying to create world-leading Chinese companies by crippling their competitors.

Washington Schedule:

TODAY'S EVENTS IN WASHINGTON.

White House:

PRESIDENT OBAMA — President Obama is vacationing on Martha's Vineyard. No public events are scheduled.

VICE PRESIDENT BIDEN — The vice president and Dr. Jill Biden visit Long Island, New York. There are no public events scheduled.

US Senate: No Scheduled Events.

US House: Aug. 4 – Sept. 7. — The House stands adjourned until 2 p.m. on Monday, Sept. 8. Please note however that some committees are still scheduling hearings during this time both in Washington and in the field. Just a reminder to check the Capitol Hill takes daily during this period of "Recess."

Other: **BULLYING PREVENTION SUMMIT** — 8 a.m. – 5:30 p.m. US Department of Education hosts fourth Federal Partners in Bullying Prevention Summit, with opening remarks by Deputy Assistant to the President Roberto Rodriguez and U.S. Department of Education Assistant Secretary Deb Delisle. Location: Barnard Auditorium, US Department of Education, 400 Maryland Ave. SW. Contacts: Press Office (press@ed.gov), 202-401-1576.

Last Laughs:

LATE NIGHT POLITICAL HUMOR.

Jimmy Fallon: "And during all of this [referring to a host of current national and international events], President Obama has decided to go on vacation, of course. And he's gotten a lot of criticism for that. And now, Obama is facing criticism for coming back to work for a couple days, because they say it wastes taxpayer money. Or as Obama put it, '28 more months, two weeks, four days and 16 hours. Get through this. We can't win. Just get through this.'"

Jimmy Fallon: "Actually, the White House says that President Obama won't make any major announcements during his brief trip back to D.C. this weekend. The reporters were like, 'Well, isn't that an announcement?'"

Jimmy Fallon: "The White House says that Obama won't make any major announcements during his trip back to D.C., but the White House did say that Obama would be making some minor announcements, like, 'Just mixed a bowl of Fruity Pebbles with Cocoa Pebbles, 'cause I'm the President and I can do whatever I want.'"

Seth Meyers: "I'm glad you're doing well, because some bad news for the President. President Obama's approval rating this week reached an all-time low. An all-time low. Apparently, it's all the way down to 'some of the people, some of the time.'"

Conan O'Brien: "Everyone's talking about a possible feud between President Obama and Hillary Clinton. ... At a

book signing, Hillary Clinton denied any friction with President Obama. Bill Clinton heard this and said, 'That's not the first time she's denied friction with the President.'"

Subject: Clips this morning

To:

Good morning,

Apologies - there was a problem receiving the clips this morning. Please find the briefing below.

Thank you!

Emily

DOI in the News

Secretary Jewell, Secretary Duncan To Visit Passamaquoddy School In

Maine. The [Portland \(ME\) Press Herald](#) (8/15, 352K) reports that Secretary of the Interior Sally Jewell and Secretary of Education Arne Duncan will visit the Beatrice Rafferty School in Perry, Maine, on Monday "to discuss education reform efforts for schools on tribal lands." According to the article, Jewell and Duncan will tour the school to "see first-hand the need for additional funding for replacement school construction and will meet with school officials, teachers and students to better understand the shared challenges in delivering educational services." The article notes that "among those expected to join Jewell and Duncan on Monday are: Monty Roessel, director of the Bureau of Indian Education; Reuben Clayton Cleaves, chief of the Passamaquoddy tribe at Pleasant Point; and Mike Chadwick, principal of the Beatrice Rafferty School."

Also reporting on the story are the [Bangor \(ME\) Daily News](#) (8/18, 166K), the [Nation Sun News](#) (8/18), the [Pechanga](#) (8/18), and [WABI-TV Bangor, ME](#) (8/15, 5K).

Also covering the story is the [AP](#) (8/18). Coverage by the AP was also picked up by the [Danbury \(CT\) News Times](#) (8/18, 137K).

Sen. Murkowski Decries Secretary Jewell's Stance On Izembek Road. The [E&E Daily](#) (8/15) reports that Sen. Lisa Murkowski says "she is 'appalled' that Interior Secretary Sally Jewell continues to oppose the construction of a gravel road through the Izembek National Wildlife Refuge that Murkowski and local residents say is badly needed to improve public safety." Murkowski, "in a scathing statement issued through the Senate Energy and Natural Resources Committee, where she is the ranking member, said she was disappointed in Jewell's letter to her this week stating that the Interior Department 'stands by the decision' to reject the road and 'will not reopen the Record of Decision.'" Murkowski also said "she 'cannot believe' that nearly eight months after the

December decision to reject the road proposal Jewell's letter contains 'zero solutions' to resolve the dispute."

Also providing coverage are [Politico](#) (8/18, Guillén, 637K) and [KUCB-FM Unalaska, AK](#) (8/18).

US Forest Service Chief Discusses Wildfires, Funding. The [Palm Springs \(CA\) Desert Sun](#) (8/17, 116K) printed excerpts of an interview with Forest Service Chief Tom Tidwell on wildfires and funding issues. The story also appears in the [Reno \(NV\) Gazette-Journal](#) (8/16, 166K).

Additional Coverage: Secretary Jewell Visits South Mountain Park. Additional coverage of Interior Secretary Sally Jewell's visit to Phoenix and South Mountain Park was provided by the [Ahwatukee Foothills \(AZ\) News](#) (8/18, 82K).

Additional Coverage: Former Secretary Salazar Leads Effort To Oppose States' Attempts To Acquire Federal Land. Additional coverage of former Interior Secretary Ken Salazar push for "conserving America's public lands and against attempts to sell or get rid of the lands that sustain fish and wildlife populations as well as hunting, fishing and the country's multi-billion-dollar outdoor recreation industry" was provided by the [Harrisburg \(PA\) Patriot-News](#) (8/18, 339K) and [KSL-TV Salt Lake City](#) (8/18, 1.07M).

Secretary Jewell Urged To Lift Moratorium On Tribal Water Codes. In an open letter to Interior Secretary Sally Jewell published in the [Rapid City \(SD\) Journal](#) (8/18, 141K), attorney David Ganje notes that "since the 1970s the Department of the Interior and your predecessors at Interior have prohibited certain Indian tribes and reservations from creating tribal water codes." Ganje urges Jewell "to change this 'moratorium' on the approval of tribal water codes." Ganje argues that "such a change would clean up old and very bad Department of Interior policy."

America's Great Outdoors

National Park Service

NPS Awards First Arch Grounds Renovation Contract. The [St. Louis Post-Dispatch](#) (8/18, 938K) reports that the NPS has "awarded a \$13.5 million contract to two local firms to renovate the first section of the Gateway Arch grounds, project officials announced Friday." According to the article, "a joint venture between McCarthy Building Companies and Castle Contracting won the contract for renovations of the southern 26 acres of the Arch grounds." Construction is expected to begin in mid- to late-September.

Olympic National Park's Roosevelt Elk Census Begins. The [AP](#) (8/17) reports that "biologists are beginning their annual count of Roosevelt elk in Olympic National Park." The NPS says staff from the park and from the USGS are "beginning the four-day count Sunday." Olympic National Park Superintendent Sarah Creachbaum says "they're part of the park's efforts to monitor and understand its resources and ecosystems." Coverage by the AP was also picked up by the [Everett \(WA\) Herald](#) (8/17, 131K).

Also reporting on the story is the [Tacoma \(WA\) News Tribune](#) (8/15, 267K).

Alaska Gov. Parnell Signs Resolution Opposing Beringia Park. The [AP](#) (8/15) reports that Alaska Gov. Sean Parnell has "signed a legislative resolution protesting the development of an international park that some in Alaska feel could limit development of remote northwest Alaska." The article notes that "the federal project, envisioned as a joint US-Russian research park in the Bering Strait, is already on hold because of Russia's intervention in Ukraine." According to the article, "Senate Joint Resolution 15 urges the federal government to stop pursuing the creation of a park that would reach from Alaska into Russia." State Sen. Cathy Giessel "does not want international bodies dictating how Alaskans use their land, she said." Also, Giessel "noted the federal government has

blocked a road through Izembek National Wildlife Refuge, a migratory birds wetlands, even though locals want the road to improve access between the village of King Cove and an airport at Cold Bay." The NPS "in February sent a letter noting what it called factual errors and mistaken assumptions in Giessel's resolution."

Meeting To Be Held On Possible Designation For Pullman. The [Times of Northwest Indiana](#) (8/18, 283K) reports that "an upcoming Illinois Historic Preservation Agency meeting will explore possible options for including Chicago's Pullman neighborhood in the National Park System." The article notes that "the meeting of the preservation agency will take place Aug. 21 at the Pullman Factory Complex in Chicago." According to agency officials, "representatives from Sen. Dick Durbin's office and the National Park Service will discuss efforts to include the site and the surrounding neighborhood as a unit of the national parks."

Knife River Indian Villages National Historic Site Studying Threats To Historic Indian Villages. The [AP](#) (8/17) reports that "the head of the only national site in the United States that preserves the homelands of the Northern Plains Indians says it's time to deal with nature-made threats to the site's archaeology." Wendy Ross, superintendent of the Knife River Indian Villages National Historic Site, said "erosion, flooding, burrowing rodents and trees with invasive roots are damaging the site." Ross has "begun a management plan in an effort to fully detail those treats and how to deal with them."

Palo Alto Battlefield National Historical Park Could Have Truck Stop

Nearby. The [AP](#) (8/18) reports that Palo Alto Battlefield National Historical Park "faces having a large truck stop close to an entrance." According to the article, "a Utah-based company got the go-ahead for rezoning from a planning and zoning commission in Brownsville." Now, "the proposal from United Fuel Supply in Salt Lake City to change the zoning will be the topic of a public hearing Tuesday."

Minneapolis Lags On Black History Listings. The [Minneapolis Star Tribune](#) (8/15, Brandt, 1.32M) reports that "the recent addition of the Arthur and Edith Lee house to the National Register of Historic Places highlights the paucity of black-oriented Minneapolis sites on the prestigious federal list." The article notes that "St. Paul boasts five of the state's nine national register sites associated with black history," and "the Lee home at 4600 Columbus Av. S. represents only the second such black-oriented listing for Minneapolis on the national list."

Hawaii Volcanoes National Park Reopens Areas. The [West Hawaii Today](#) (8/18, 30K) reports that "the popular forested trail at Kipukapuauulu, Namakanipaio campground, and Mauna Loa summit and backcountry within Hawaii Volcanoes National Park are now open." Park Superintendent Cindy Orlando said, "We're delighted to report that most of the places visitors typically visit within the national park are now open. Our park crews mobilized quickly, safely, and efficiently to reopen as much of the park as possible following Hurricane Iselle."

New Superintendent Of Bighorn Canyon National Recreation Area Named. The [Lovell \(WY\) Chronicle](#) (8/18) reports that "John Bundy, a 36-year veteran of the National Park Service (NPS), has been named superintendent of Bighorn Canyon National Recreation Area in Montana and Wyoming." Bundy will assume his new post on August 24. Intermountain Regional Director Sue Masica said, "John's many decades of experience with the National Park Service and his proven ability to manage complex issues makes me confident he'll be an effective leader at Bighorn Canyon National Recreation Area."

Glacier Park Sees Record Number Of Visitors In July. The [AP](#) (8/15) reports that NPS officials say "this July was the busiest that Glacier National Park has ever seen." According to the park service's statistics office, "nearly 700,000 people visited the northwestern Montana park last month."

Additional Coverage: NPS Working On LGBT Heritage Initiative. Additional coverage of the NPS' LGBT heritage initiative was provided by the [South Florida Gay News](#) (8/18, 6), the [EDGE Boston](#) (8/18, 1K) and the [EDGE on the Net](#) (8/18).

Bureau of Land Management

BLM Investigating Wild Horse Deaths. The [Hutchinson \(KS\) News](#) (8/18, 2K) reports that "fifty-seven wild horses recently transferred to a corral in Scott City died, prompting an investigation by the Bureau of Land Management in the US Department of Interior." According to the article, "preliminary findings from a US Department of Agriculture veterinarian indicated the animals died as a result of their age combined with stress from the recent relocation, the shift from pasture to corral environment, and the change from pasture feed to processed hay feed." The BLM said that "there is no indication of infectious or contagious diseases being the cause."

Also providing coverage are the [Garden City \(KS\) Telegram](#) (8/18, 24K) and [KTMJ-TV Topeka, KS](#) (8/15).

Rep. Amodei Concerned Grazing Dispute Could Lead To Widespread Closure

Decisions. The [Elko \(NV\) Daily Free Press](#) (8/18, 22K) reports that "a dispute that on the surface appeared to have pitted a few Lander County ranchers against a lone BLM district manager could balloon into policy detrimental to grazing," according to Rep. Mark Amodei. Amodei was "in Elko on Thursday and, while in town, met with local representatives from the Bureau of Land Management and US Forest Service to discuss public land management issues." On his way to Elko, he "met with Battle Mountain District Manager Doug Furtado, who has come under fire this year from ranchers after the Argenta allotment was closed due to ongoing drought."

The story also appears in the [Prairie \(MT\) Star](#) (8/18).

Wyoming To Intervene In Wild Horse Lawsuit. The [AP](#) (8/15) reports that "the state of Wyoming is moving to intervene in a lawsuit filed by wild horse preservation groups opposing the federal government's plan to remove about 800 horses from areas in the southern part of the state." Gov. Matt Mead announced Friday that "Wyoming has asked a federal judge in Cheyenne to allow the state to participate in the lawsuit." Wild horse preservation groups are challenging the BLM's "plans to start removing horses from lands within the Great Divide Basin, Adobe Town and Salt Wells Creek herd management areas starting Sept. 1."

Also providing coverage is the [Casper \(WY\) Star-Tribune](#) (8/18, 90K).

BLM, Partners Plan Cleanup Of Coal Mountain Road. The [Casper \(WY\) Journal](#) (8/18, 80K) reports that the BLM, "Wyoming Game and Fish Department, Wyoming Office of State Lands, the City of Casper, Natrona County Road and Bridge, private landowners, sportsmen, and local citizens and businesses will join together to clean up Coal Mountain Road on Aug. 16."

Fish and Wildlife Service

FWS Director Ashe Participates In Discussion On Forest Management. The [Clark County \(WA\) Columbian](#) (8/15, 109K) reports that FWS Director Dan Ashe participated in roundtable discussion hosted by Rep. Jaime Herrera Beutler "on how to increase federal timber harvest and improve the health of the forests." The article notes that "the conversation was framed around the 1994 Northwest Forest Plan." Ashe said "agencies and interested parties have a choice: 'Swing the pendulum one way or build alignment.'" He said, "Let's define this thing we're calling healthy forests and then let's walk in that direction."

FWS Proposes Critical Habitat For Yellow-billed Cuckoo. The [AP](#) (8/15) reports that "the federal government has announced a proposal to designate an area near a proposed mine south of

Tucson as a critical habitat for the yellow-billed cuckoo." The FWS has "now proposed that a large area in the upper Cienega Creek be designated a critical habitat for the yellow-billed cuckoo." Conservationists say "the creek is home to dozens of species that would be adversely affected" by the planned Rosemont Copper mine.

Also reporting on the story is the [Sacramento \(CA\) Bee](#) (8/15, 582K).

FWS Mulling Status Of Manatees. The [Los Angeles Times](#) (8/15, Sahagun, 3.42M) reports that "about 2,500 manatees have perished in Florida over the last four years, heightening tension between conservationists and property owners as federal officials prepare to decide whether to down-list the creature to threatened status." Conservationists say "the deaths are evidence of the vulnerability of the walrus-like mammals, which were included on the endangered species list in 1967 because of boat collisions and destruction of sea grasses in the shallow coastal inlets they inhabit." However, "owners of waterfront property and businesses filed a lawsuit in April in federal court accusing the US Fish and Wildlife Service of failing to adhere to its own 2007 recommendation that down-listing is warranted because there are now more manatees than ever."

FWS Officials Search For Wisconsin Osprey, Owl Shooter. The [AP](#) (8/15) reports that FWS officials are "searching for the person who shot federally protected birds in Wisconsin". According to Marge Gibson, the executive director of the Raptor Education Group in Antigo, "at least one osprey and one barred owl were shot in Bayfield County in recent weeks. Both species are protected under the Migratory Bird Treaty Act." Tina Shaw, spokeswoman for the FWS' Midwest Region, said the service "hopes the public will help identify the culprits."

Coverage by the AP was also picked up by the [Minneapolis Star Tribune](#) (8/15, 1.32M) and the [St. Paul \(MN\) Pioneer Press](#) (8/18, 558K). Also reporting on the story is [WSAW-TV](#) Wausau, WI (8/18, 18K).

FWS Drafts Plan For Lake Freeman Water Releases. The [AP](#) (8/15) reports that "federal officials are proposing a water-monitoring plan for a popular northwestern Indiana reservoir where water releases required to safeguard endangered mussels have dropped the lake's water levels significantly this summer." According to the article, "the operator of Lake Freeman's dam, Northern Indiana Public Service Co., is under a federal agency's order to release water to protect riverbeds with several water-starved mussel species." The article notes that "the lake was 15 inches down Thursday when members from the three congressmen's offices and two state lawmakers joined US Fish and Wildlife Service and NIPSCO representatives to outline the water mitigation plan, which is intended to reduce the economic impact of the water releases."

Coverage by the AP was also picked up by [WRTV-TV](#) Indianapolis (8/18, 209K).

Animal Rights Advocates Protest Gator Hunting In Loxahatchee Refuge. The [AP](#) (8/16) reports that "some animal rights advocates are protesting the allowing of alligator hunting in a South Florida wildlife refuge." The Arthur R. Marshall Loxahatchee National Wildlife Refuge is "opening its first-ever alligator hunting season to control the reptile's population." The article notes that "eleven hunters, randomly selected from more than 1,000 applicants, are being allowed to take two alligators each from the roughly 150,000-acre swamp and forest."

FWS Sets West Virginia's Migratory Bird Seasons. The [Charleston \(WV\) Gazette](#) (8/16, 44K) reports that FWS officials have "set West Virginia's seasons for mourning doves, woodcocks, snipes and rails." According to the article, "under this year's regulations, hunting for doves, snipes and rails will begin Sept. 1." Woodcock season will begin on Oct. 18.

Climate Change Altering Approach To Species Preservation. The [E&E Daily](#) (8/15) reports that "climate change is altering the way some scientists are trying to save endangered plant and animal species from extinction." According to the article, "for nearly 100 years, conservationists have focused preservation efforts on maintaining species' historical ranges and reintroducing captive-bred

species to boost dwindling populations." But "now, some scientists are experimenting with a new approach," called "conservation translocation." According to the article, "scientists move endangered species that are unable to shift their habitats on their own into new locations."

Additional Coverage: FWS Withdraws Proposed Protections For Wolverines. Additional coverage of the FWS' decision on wolverines was provided by the [Flathead \(MT\) Beacon](#) (8/17, 15K), the [Coeur d'Alene \(ID\) Press](#) (8/18, 63K), the [Methow Valley \(WA\) News Online](#) (8/15, 971), [KCET-TV Los Angeles](#) (8/18, 15K), and [KGVO-FM Missoula, MT](#) (8/18).

US Geological Survey

USGS Report Indicates Greater Quake Hazard In Greater Yellowstone Than Previously Thought. The [AP](#) (8/18) reports that a new USGS report "indicates a slightly greater earthquake hazard in the Greater Yellowstone region of Wyoming, Montana and Idaho than previously thought, a geophysicist says." University of Utah geophysicist Bob Smith said, "The new maps show how Yellowstone has had a relative increase in the hazard. It's not a lot – it's like 5 to 10 percent of peak acceleration." The map of seismic hazards also "shows that the region is as seismically hazardous as anywhere in the United States."

Coverage by the [AP](#) was also picked up by the [Washington Times](#) (8/17, 465K), the [Idaho Statesman](#) (8/17, 222K), and the [Missoulian \(MT\)](#) (8/18, 122K).

USGS Report: Climate Change Reflected In Altered Missouri River Flow. The [Los Angeles Times](#) (8/18, Srikrishnan, 3.42M) reports that "the Missouri River's stream flow has changed significantly over the last 50 years, leading to serious water shortages in Montana and Wyoming and flooding in the Dakotas," according to a USGS report released last month. The report says that "climate shifts may be causing the disparate changes in the Missouri River Basin." The scientists noted that "higher stream flow in the Dakotas had occurred even as water use increased," and "in addition, they said, lower stream flow in some areas could be related in part to groundwater pumping."

Securing America's Energy Future

Renewable Energy

BOEM Considers Offshore Wind's On Fishing Grounds. The [New Bedford \(MA\) Standard-Times](#) (8/17, 54K) reports that city and state politicians are trying "to convince industry leaders and the public that New Bedford should be America's offshore wind hub." However, "while landlubbers may see offshore wind as simply a promising new industry that could bring new jobs, the fishermen who will have to work along these turbines often see" another "layer of federal rules and regulations to navigate." And "in addition to worrying about how many days they can go out to sea, they say they now have to worry about giant steel structures getting in their way and impeding their catch." The article notes that "concerns about offshore wind farms encroaching on prime fishing grounds have not been overlooked by the Bureau of Offshore Energy Management that designates which federal areas are eligible for offshore wind energy development."

BLM Approves Permit For Chokecherry-Sierra Madre Wind Farm. The [Pittsburgh Post-Gazette](#) (8/18, Storrow, 590K) reports that "the 1,000-turbine Chokecherry and Sierra Madre wind farm will have no significant impact on the human environment, according to a preliminary assessment released this week by the US Bureau of Land Management." The article notes that "the study is one of two site-specific environmental analyses to be done by the BLM." The assessments will "likely be finalized sometime this year, leaving only an environmental study of a transmission line serving the wind farm and an eagle take permit for the first 500 turbines to be completed."

Numerous Birds Deaths At Ivanpah Solar Plant Raise Concerns. The [AP](#) (8/18, 4.06M) reports that Federal wildlife investigators, who visited the BrightSource Energy solar plant in Ivanpah Dry Lake last year and watched as birds burned and fell at an average of one every two minutes, "are urging California officials to halt the operator's application to build a still-bigger version." The California Energy Commission is "now considering the application from BrightSource to build a mirror field and a 75-story power tower that would reach above the sand dunes and creek washes between Joshua Tree National Park and the California-Arizona border." The proposed area "is richer in avian life than the Ivanpah plant, with protected golden eagles and peregrine falcons and more than 100 other species of birds recorded there," according to experts. The commission's staff "estimates the proposed new tower would be almost four times as dangerous to birds as the Ivanpah plant" and "is expected to decide this autumn on the proposal."

Bat Deaths Prompt Change At Spring Valley Wind Energy Project. The [Las Vegas Review-Journal](#) (8/18, 386K) reports that the Spring Valley Wind Energy project has been forced to change operations after its massive turbines killed triple the number of bats allowed under an agreement with federal regulators. The windfarm killed an estimated 566 bats in 2013, so its operator agreed to change when the windmills kick on in hopes of reducing the number of deaths. In June, the wind farm's 66 turbines were adjusted on nights with high bat activity so they would only start turning when sustained winds reach about 11 mph instead of the usual speed of about 7 mph.

Onshore Energy Development

Theodore Roosevelt Park Fights To Keep Oil Boom Out. The [Minneapolis Star Tribune](#) (8/17, Louwagie, 1.32M) profiles Theodore Roosevelt National Park superintendent Valerie Naylor. The park, is located around the Bakken oil field, and Naylor "is on a mission to keep its natural sounds, fresh air and breathtaking views free from the effects of" the oil boom.

BLM Decides Against Drilling In Wayne National Forrest. The [Athens \(OH\) News](#) (8/18, 54K) reports that the Interior Department has "dismissed a protest against oil and gas drilling in the Wayne National Forrest but also has decided against allowing any such drilling." A letter from the BLM dated July 21, 2014 and noted as received by the city of Athens on Aug. 1 "explains that the protest of the leasing of these parcels has been dismissed as moot because the parcels in question were deleted from the sale."

Study Finds Drilling Thompson Divide Could Degrade Water Quality. The [E&E Daily](#) (8/15) reports that "a study designed to establish base-line water quality in west-central Colorado's pristine Thompson Divide in the event of future oil and gas drilling has found that surface waters and springs in the area are indeed clean and support a large volume of aquatic life that one of the study's authors says could be placed at risk by development." The Thompson Divide Coalition, "a group of ranchers and business owners that commissioned the study, says the results bolster their long-standing position that oil and gas development has no place in the environmentally sensitive area of White River National Forest." The study, "conducted for the coalition by Golden, Colo.-based Michael-Moran Associates LLC and the Basalt, Colo.-based Roaring Fork Conservancy, is designed to 'define baseline water quality and flow conditions' prior to any drilling activity in the Fourmile Creek and Thompson Creek watersheds."

BLM Posts Proposed Parcel List, Oil, Gas Lease Sales. The [St. George \(UT\) News](#) (8/17, 3K) reports that the BLM-Utah "posted Friday the list of parcels proposed for auction at the quarterly competitive oil and gas lease sale Nov. 18 in Salt Lake City." The article notes that "the list includes 69 proposed parcels covering 72,236 acres in the Vernal, Price and Richfield Field Office areas."

BLM Schedules Next Oil, Gas Lease Sale In Colorado For November. The [Denver Business Journal](#) (8/18, Subscription Publication, 71K) reports that BLM will "offer leases on 24

parcels of land totaling 6,797 acres during its quarterly oil and gas lease sale in November.” According to the article, “the sale is scheduled for Nov. 13 at 9 a.m. at the agency’s Colorado office, at 2850 Youngfield St. in Lakewood.” The article notes that “about 481 acres that are included in the lease sale are located on BLM-managed land.”

Nationwide Communities Debate Fracking. [CBS News](#) (8/17, Kennedy, 5.21M) reports that while “fracking has had amazing results,” it remains a contentious issue in many communities that worry about the long-term environmental and economic threats associated with the process. Pro- and anti-fracking measures in California and Colorado are examples of the contention between jobs and risk “that appears to be keeping a lot of people on the fence” when it comes to fracking. According to Ken Carlson, professor of environmental and civil engineering, the key to compromise is finding a middle ground “that has practices, that has regulations, that has rules acceptable to all the stakeholders.”

Coal Imports Increase. The [E&E Daily](#) (8/15) reports that “weakened prices have led to an increase in coal imports to the United States, much of which is coming from Colombia.” According to Global Trade Information Services Inc., “while mines shutter in central Appalachia, where mature coal seams make for costlier mining, the US imported 44 percent more coal in the first half of this year than last year – 5.4 million metric tons.”

Breitling Energy CEO Criticizes Denton, TX, Fracking Ban Proposal. In the [Wall Street Journal](#) (8/16, Faulkner, Subscription Publication, 5.89M), Breitling Energy Corp. CEO Chris Faulkner criticized the proposed fracking ban in Denton, TX. Faulkner claimed that the entire industry shouldn’t be punished for the misdeeds of a few irresponsible energy companies. Further, the proposed ban could cost Denton more than \$251 million in economic activity.

Offshore Energy Development

BOEM Requests Industry Input For New Rules For Offshore Oil, Gas Sites. The [New Orleans Times-Picayune](#) (8/17, Larino, 527K) reports that the BOEM is asking the oil and gas industry for input on new rules regulating the removal of aging pipelines and platforms from the Gulf of Mexico. The agency is looking to “update rules to better reflect the ‘realities of aging offshore infrastructure’” and change existing bonding requirements for companies working offshore. As a result, oil and gas companies are “likely to see the cost of doing business,” although it could also mean more work for local businesses in the Gulf that specialize in cleaning up old offshore sites.

[FuelFix](#) (8/15, 7K) reported that on Friday “an American Petroleum Institute spokesman said the group was reviewing” the BOEM’s notice that it wants “public input on how to modernize the bureau’s risk management program and the bonding regulations governing oil and gas companies working offshore.” The agency is rewriting “20-year-old bonding requirements” at a time when “some of the oldest deep-water wells in the Gulf of Mexico reach the end of their lives and companies look to tear down the operations.”

Also reporting on the story is the [Law 360](#) (8/18, 18K).

BOEM Receives Feedback On Offshore Drilling. The [Columbia \(SC\) State](#) (8/15, 303K) reports that “South Carolinians are sharing strong and sharply different opinions with the federal government about the prospect of oil derricks going up off the state’s coast.” According to the article, “dozens of residents have commented as the federal Bureau of Ocean and Energy Management begins the process of deciding where to issue new oil and gas leases on the Outer Continental Shelf should between 2017 and 2022.” The article notes that “those in favor say coastal energy will bring jobs and tax revenues,” but “opponents worry about the environments, including spills that could damage the state’s beaches, which are the heart of South Carolina’s \$18 billion tourism industry.”

The [Carteret County \(NC\) News-Times](#) (8/18, 28K) reports that “the Southern Environmental

Law Center – a regional nonprofit dedicated to using the law to protect the health and environment of the southeast US – submitted comments to BOEM against opening up the mid- and south Atlantic coast to offshore drilling on behalf of 27 citizens groups.” The article notes that “these groups include the N.C. Coastal Federation (based in Carteret County) the N.C. Conservation Network, The N.C. Wildlife Federation and Environment North Carolina.”

NPR (8/15, Brady, 519K) reported on Friday’s deadline for public comments for the Interior Department’s 2017-2022 offshore lease plan. The American Petroleum Institute’s Erik Milito said of the proposal, “We haven’t had the ability to really look at the Atlantic or the Pacific in about 30 years now. So what we’d like to do is have an opportunity to get out there and just see what’s there – see if we have oil and natural gas.” Milito also touted the Obama Administration’s decision earlier this year allowing Atlantic coast seismic surveys. Milito argued increased offshore oil and gas production “has been good for the economy,” and that “from 2007 to 2012, any exploration and production side – jobs actually increased at a 40 percent rate, while the rest of the economy saw jobs at really a flat rate.”

The [Greenville \(SC\) News](#) (8/16, 155K) editorializes that “the recent announcement that energy companies will be allowed to use seismic testing off the Atlantic Coast to search for potential oil and gas deposits beneath the ocean floor could open the door to significant economic development opportunities in South Carolina.” It claims that “the shift in policy is a major step forward for companies that want to harvest the natural resources from a coastal area that has been closed to drilling.” The paper also argues that “if reasonable steps are taken by the government and the oil and gas industry, the natural resources that are valuable to the tourism industry can be protected while the natural resources that are valuable to the energy industry are harvested.”

Also reporting on the story are the [Augusta \(VA\) Free Press](#) (8/18, 1K) and [WSAV-TV Savannah, GA](#) (8/18, 19K).

Louisiana Coalition Calls For More Offshore Drilling Areas. The [New Orleans Times-Picayune](#)(8/18, 527K) reports that “a coalition of Louisiana businesses and elected officials is calling on the Obama administration to open more of the Gulf of Mexico to oil and gas exploration.” According to the article, “a group of 30 businesses and elected officials from across on Friday (Aug. 15) sent a letter to the Bureau of Ocean Energy Management asking the agency to allow the oil and gas industry continue and expanded access to all areas Gulf of Mexico.” The letter said, “Continued and expanded access to all areas of the Gulf of Mexico will increase these economic gains for Gulf Coast residents and ensure that the Gulf Coast continues to supply American consumers across the country with reliable crude oil, petroleum products and natural gas.”

Obama Administration Studies Arctic Requirements. The [FuelFix](#) (8/17, 7K) reports that “the Obama administration is closer than ever to imposing the first minimum standards for oil and gas activity in U.S. Arctic waters, as Shell pursues permits that could allow it to resume drilling in the region next year.” The Interior Department “sent a draft of those Arctic regulations to the Office of Management and Budget on Friday, marking the launch of an interagency review process that typically spans months.”

South Carolina Awarded Grant For Offshore Sand Inventory. The [Charleston \(SC\) Post and Courier](#) (8/17, 317K) reports that “the S.C. Department of Natural Resources just won a \$200,000 ‘Hurricane Sandy’ grant to look for potential beach renourishment sand in federal waters more than three miles offshore.” The federal government “wants to inventory the supply off 13 Atlantic coast states.” Renee Orr, BOEM chief of strategic resources, said, “It’s very clear that sand restoration projects are very important. Knowing where the sand is is critical to making decisions whether, where and how to provide it (for projects).”

Judge Approves BP’s Subpoena Of Federal Documents. The [E&E Daily](#) (8/15) reports that “a federal judge has allowed BP PLC to negotiate the terms of a proposed subpoena of government documents related to the moratorium on deepwater drilling in the Gulf of Mexico after the Deepwater

Horizon oil spill in 2010." The order by US Magistrate Judge Sally Shushan of the District Court for the Eastern District of Louisiana "declined to quash the BP subpoena, as US attorneys had requested." BP also "won a legal victory in the Canadian justice system this week." The Ontario Court of Appeal held that "shareholders in the province who purchased BP stock on the New York Stock Exchange cannot sue the oil company over the 2010 spill."

Attorneys: BP Has No Right To Repayment On Deepwater Spill Payouts. The [New Orleans Times-Picayune](#) (8/17, Larino, 527K) reported that on Friday attorneys for plaintiffs suing BP say the company "has no right to demand repayment of claims the company says were improperly overpaid under the 2010 Gulf of Mexico oil spill settlement." The argument comes after BP in late June requested that US District Court Judge Carl Barbier order repayment plus interest of "inflated or unwarranted" claims.

API-Sponsored Poll Shows PA Voters Support Oil, Gas Production. In the "Energy" blog the [Pittsburgh Business Times](#) (8/17, Subscription Publication, 25K) reported that a new American Petroleum Institute-sponsored poll issued Thursday found that a majority of Pennsylvania supporters support additional oil and gas production. Of the 608 registered state voters surveyed by Harris Poll, 72% were supportive "to one degree or another more development of the domestic oil and natural gas resources." Additionally, 70% of respondents, and a majority of both Democrats and Republicans, indicated "they'd be more inclined to support a candidate who supports" increased production. Associated Petroleum Industries of Pennsylvania executive director Stephanie Catarino Wissman said, "Pennsylvania voters, regardless of party affiliation, want more American-made energy. Voters are more likely to support candidates who encourage smart energy policy that will increase investments in the commonwealth and increase energy and job security for Pennsylvanians in the future."

Tackling America's Water Challenges

BOR To Reconsider Trinity-Klamath Releases For Salmon. The [AP](#) (8/15) reports that the BOR said Friday "it is taking another look at releasing water in Northern California's Klamath Basin to prevent the spread of disease among salmon returning to spawn in drought conditions." According to BOR spokeswoman Janet Sierztutowski, "a decision is likely next week following discussions with fisheries biologists and others."

The [Fort Bragg \(CA\) Advocate-News](#) (8/18, 16K) reports that Yurok Tribe Fisheries Program Manager Dave Hillemeier called the announcement "good news." He said, "We met with the Bureau of Reclamation last week and presented our rationale why they should provide some preventative flow releases to minimize the risk of another fish kill. They told us that they would consider that information, and I'm glad that they are. It sounds like they are gathering more information. Hopefully, some more knowledge on the conditions — as they are right now — is going to get them to do the right thing."

Coverage by the AP was also picked up by the [Washington Examiner](#) (8/18, 335K), the [Biloxi \(MS\) Sun Herald](#) (8/15, 140K), the [Greenfield \(IN\) Daily Reporter](#) (8/18, 31K), the [Sacramento \(CA\) Bee](#) (8/15, 582K), the [Seattle Post-Intelligencer](#) (8/18, 857K), the [Oregonian](#) (8/18, 827K), the [Eugene \(OR\) Register-Guard](#) (8/18, 172K), the [Columbus \(IN\) Republic](#) (8/18, 81K), and [KPIX-TV San Francisco](#) (8/15, 51K).

Also reporting on the story is the [Willits \(CA\) News](#) (8/18, 10K).

California Gov. Jerry Brown Defends Delta Tunnel Plan. The [Inside Bay Area \(CA\)](#) (8/16, Richmon, Calefati, 20K) reports that California Gov. Jerry Brown said "he plans to proceed with his twin-tunnel plan for the Delta whether or not the public votes on it." According to the article, "although Brown conceded his plan to construct tunnels beneath the San Joaquin River Delta to siphon water south will likely end up on the ballot eventually, he said he's not going to put it there voluntarily

because the plan seeks to address a problem – deteriorating levees and saltwater intrusion – that can't wait." He said, "I'm doing this because it's a problem that's presented to me. People think I'm talking about my legacy. No. I do things that show up that I can't avoid, and this is one that I've got to do."

Additional coverage of the tunnel plan was provided by the [Fresno \(CA\) Bee](#) (8/17, 322K) and the [Energy Collective](#) (8/18).

“Alarm” On The Rise Amid Unremitting Drought In Western US. On its front page, the [Washington Post](#) (8/18, A1, Warrick, 4.06M) reports that “across California’s vital agricultural belt, nervousness over the state’s epic drought has given way to alarm,” with “aquifers...being pumped away at rates that scientists say are both historic and unsustainable.” The area affected by the drought “now spans a dozen states and nearly 600 counties, from southern Texas to the northern Rockies, and includes fields and grazing land that produce a third of the country’s beef cattle and half of its fruit, vegetables and winter wheat.” The Post adds that “environmentalists and many scientists argue that any long-term solution would have to balance competing interests, including the need for clean water for growing cities as well as thriving habitats for fish and wildlife.”

Arkansas Valley Conduit Receives More Funding. The [Pueblo \(CO\) Chieftain](#) (8/18, 79K) reports that the Arkansas Valley Conduit has “received \$2 million for the current fiscal year through reprogramming of funds within the Bureau of Reclamation,” according to Sens. Michael Bennet and Mark Udall. Bennet said, “Folks in Southeast Colorado have been waiting a long time for the federal government to fulfill its promise to build the Arkansas Valley Conduit. Making these resources available for the conduit is crucial to completing this phase of the project and moving it one step closer to completion.”

BOR Working To Resolve Lake Nighthorse Issues. The [Durango \(CO\) Herald](#) (8/16, 28K) reports that “opening Lake Nighthorse for recreation has been as tough a sell as getting the construction of its home – a 1,500-surface acre reservoir in Ridges Basin – approved and built in the first place.” The article notes that “holding up the ability of boaters and bathers today to get onto and into the frigid water of the lake – three years after it was filled to the brim – are issues related to operating the park.” Ed Warner, area director of the BOR in Western Colorado, said Friday the bureau is “working with all parties.”

BOR Seeks Comments On Site Specific Visitor Surveys. The [Examiner](#) (8/18, 1.54M) reports that the BOR is “taking public comments on its visitor experience surveys.”

Additional Coverage Of Colorado River System Conservation Program. Additional coverage of the Colorado River System Conservation Program was provided by the [Glenwood Springs \(CO\) Post Independent](#) (8/18, 27K).

Empowering Native American Communities

Push For Access To Rattlesnake Mountain Puts Tribes, Locals At Odds. The [E&E Daily](#) (8/15) reports on the “debate over public access to eastern Washington state’s Rattlesnake Mountain.” The article notes that “the vista is a sacred one for the Yakama, Umatilla and other tribes of the Columbia River Basin.” According to the article, “since the mountaintop became part of the 200,000-acre security buffer zone around the Hanford Nuclear Reservation in 1943, few people have been back to the top.” And “the tribes, which were allowed to return to the summit as it was deemed ‘traditional cultural property’ by the Department of Energy in 2007, want to keep it that way.”

Top National News

Violence Escalates In Ferguson Amid Reports Of Gunfire, Firebombs From

Protesters. The situation in Ferguson, Missouri continued to dominate news cycles over the weekend, and on Sunday, all three network newscasts led with reports from Ferguson. The three networks combined devoted more than 16 minutes of air time to various aspects of the story – about twice the time they gave to the US airstrikes in Iraq, and far more than any other topic.

The [New York Times](#) (8/18, A12, Blinder, Vega, Subscription Publication, 9.79M) reports from Ferguson that “the most chaotic violence in a week of unrest broke out here Sunday evening, with law enforcement officers...responding to reports of gunfire and fire bombs.” According to [USA Today](#) (8/18, Alcindor, Piper, 5.76M), St. Louis County police reported that “that protesters were throwing ‘Molotov cocktails’ at police.” Likewise, the [Los Angeles Times](#) (8/18, Hennessy-Fiske, Lee, 3.42M) reports that “another round of unrest erupted in the streets of Ferguson...on Sunday night as volleys of tear gas, flash grenades and Molotov cocktails split the darkness.”

[USA Today](#) (8/18, Alcindor, Piper, 5.76M) notes that earlier on Sunday, Benjamin Crump, “the civil rights attorney who represented the family of Trayvon Martin...told a crowd that police are trying to assassinate Brown’s character.” Crump was referring to the release of video showing Michael Brown rob a store and assault a clerk shortly before his fatal confrontation with Officer Darren Wilson. [USA Today](#) notes that also on Sunday, MSNBC’s Al Sharpton “told the crowd that protests would continue.”

The networks aired their broadcasts before violence once again flared in Ferguson on Sunday night ahead of the midnight curfew, so much of their reporting concerned the police’s return to military tactics on Saturday night under the command of Missouri State Highway Patrol Captain Ron Johnson. On [NBC Nightly News](#) (8/17, lead story, 3:20, Holt, 7.86M), NBC’s Ron Allen reported from Ferguson that law enforcement there on Saturday night “faced a threatening situation, including armed men on the roof top and in the street.” On the [CBS Evening News](#) (8/17, lead story, 3:20, Glor, 5.08M), Vladimir Duthiers reported that on Saturday, the Ferguson police “received a report of armed men...spotted a man with a handgun and received a report of a gunshot victim.” And on [ABC World News](#) (8/17, lead story, 3:15, Harris, 5.84M) Dan Harris reported that in Ferguson on Saturday night, “the situation was anything but peaceful” as “one person [was] shot by another protester.”

In the lead story for [NBC Nightly News](#) (8/17, lead story, 3:20, Holt, 7.86M), Lester Holt reported that on Saturday night in Ferguson, “a midnight curfew failed to clear the streets triggering a heavy police response, including smoke and tear gas.” According to Holt, “The delicate and fast moving situation in the streets continues to out pace the investigation into the police shooting death of Michael Brown, but “a probe is now working on multiple levels with the US Justice Department stepping forward today to order it’s own autopsy on Brown.” NBC’s Ron Allen also reported that “many blame” the Ferguson police department’s “decision to release...video surveillance tape showing Brown allegedly robbing a store before he was killed...for igniting an outburst of violence” over the weekend.

On the [CBS Evening News](#) (8/17, lead story, 3:20, Glor, 5.08M), Vladimir Duthiers reported that Captain Johnson had “promised the curfew would not be enforced with military-style tactics, but in an extraordinary 3 AM news conference, Johnson said, in this case, the use of force was justified.” Johnson: “I tell you, we had a shooting victim in critical condition that may lose their life; we had someone standing in the middle of the road with a handgun; we had a police car shot at tonight.”

On [ABC World News](#) (8/17, lead story, 3:15, Harris, 5.84M), Alex Perez reported that on Saturday, “a small army of police officers...in full riot gear confront[ed] a crowd of protesters out in defiance of that midnight curfew.” Perez said the “critical point” was “when police learned that some in the crowd were armed and one person shot.”

The [AP](#) (8/18) reports that “after several tumultuous nights, police tried to change their tactics” as Johnson “took command of security from local authorities and walked the streets side-by-side with the protesters,” but “the festive atmosphere lasted only one night, and protests again turned violent during the weekend.” [Reuters](#) (8/18, Wulfhorst) covers the events of Saturday night under the

headline, "Seven Arrests In Ferguson, Missouri, On First Night Of Curfew."

Private Autopsy Finds Brown Was Shot "At Least Six Times." In a front-page article, the [New York Times](#) (8/18, A1, Robles, Bosman, Subscription Publication, 9.79M) reports that "a preliminary private autopsy performed on Sunday found" that Michael Brown "was shot at least six times, including twice in the head." The Times says Dr. Michael Baden, "the former chief medical examiner for the City of New York, who flew to Missouri on Sunday at the family's request to conduct the separate autopsy," concluded that "one of the bullets entered the top of Mr. Brown's skull, suggesting his head was bent forward when it struck him and caused a fatal injury." The Times notes that Attorney General Holder has said that the Justice Department "would conduct its own autopsy, in addition to the one performed by local officials and this private one."

On NBC Nightly News 📺 (8/17, story 2, 2:00, Holt, 7.86M), Lester Holt reported that "with so many questions surrounding exactly what happened in that fatal encounter between Michael Brown and that police officer, there are new calls for police officers to be equipped with body cameras."

Obama And Holder Reportedly Pushed For Changes In Police Tactics Last Week. On the CBS Evening News 📺 (8/17, story 2, 0:55, Glor, 5.08M), Major Garrett reported that during his vacation, President Obama has been "able to confer all the time he has been here in Martha's Vineyard face to face with the two most important administration officials dealing with the unrest in Missouri," Attorney General Holder and senior adviser Valerie Jarrett, who "has been conferring with civil rights leaders and Governor Nixon to have a less aggressive response" to the violence in the streets of Ferguson.

[The Hill](#) (8/17, Wong, 237K) reported that on CBS' Face The Nation 📺, NAACP President Cornell William Brooks said that in regards to the situation in Ferguson, "The Attorney General has been very engaged, the president has been engaged." Brooks added, "I've received calls from the White House late at night, early in the morning."

Patrik Jonsson of the [Christian Science Monitor](#) (8/17, 566K) says Missouri Highway Patrol Captain Ron Johnson took command of security in Ferguson last Thursday "after President Obama complained to Missouri Gov. Jay Nixon about the local police's military approach." Jonsson adds that "two days of largely peaceful protests ended Friday night when looters...ransacked several stores" as "riot police were stationed far away," and "police officers on the scene did little to quell the looting."

In a front-page article titled, "Federal Authorities Wade Deeper Into Teen's Death," the [Wall Street Journal](#) (8/18, A1, Barrett, Kesling, Subscription Publication, 5.89M) reports that on Thursday, Attorney General Holder demanded that the police in Ferguson change their tactics. Holder is quoted as saying, "Tell them to remove the damn tanks."

The [Washington Times](#) (8/18, 465K) reported that on ABC's This Week 📺, Missouri Gov. Jay Nixon (D) maintained that "turning over control to the highway patrol – which has attempted to maintain order without resorting to military tactics – was the right decision." The [Wall Street Journal](#) (8/18, Kesling, Dolan, Subscription Publication, 5.89M) reports that on CNN's State Of The Union 📺, Nixon said, "We are trying to use the least amount of force to provide people the ability to speak while also protecting the property of the people of Ferguson."

The [Huffington Post](#) (8/17, 11.54M) reported that on Saturday, Rep. William Lacy Clay (D-MO), who represents Ferguson, said, "I have absolutely no confidence in the Ferguson police, the county prosecutor. We know we won't get a fair shake there." [The Hill](#) (8/17, Sullivan, 237K) reported that on NBC's Meet the Press 📺, Rep. John Lewis (D-GA) said, "It is a shame and a disgrace that in a city that is almost 70 percent African-American, to have only 3 African-American police officers."

Former Missouri state senator Jeff Smith, in an op-ed for the [New York Times](#) (8/18, Subscription Publication, 9.79M) notes that as recently as 1990, Ferguson was "74 percent white and 25 percent black," but "by 2010, 67 percent black and 29 percent white." Smith also notes that in Ferguson in 2013, "86 percent of stops, 92 percent of searches and 93 percent of arrests were of black people."

Chris Cillizza of the [Washington Post](#) (8/18, Cillizza, 4.06M) says, "on one level," President

Obama's "decision to watch and wait on high-profile incidents in which race seemed to play a role makes perfect sense," but, "at the same time," the President "is caught between a genuine — and much-expressed — desire to use his unique experiences to move the country beyond its divisive racial past."

Nixon Decries Decision To Release Video Of Brown Robbing Store, Assaulting

Clerk. The [Huffington Post](#) (8/17, Siddiqui, 11.54M) reported that on ABC's This Week , Missouri Gov. Jay Nixon (D) "criticized the Ferguson police for releasing a video allegedly showing Michael Brown robbing a convenience store" after "reportedly ignoring a request from the Justice Department not to." Nixon said, "We certainly were not happy with that being released, especially in the way that it was. It appeared to cast aspersions on a young man that was gunned down in the street. It made emotions raw."

Charles Blow, in his column for the [New York Times](#) (8/18, Subscription Publication, 9.79M), notes that the Ferguson police released the video of Brown robbing the store and assaulting the clerk at the same time that they released Officer's Wilson's name. According to Blow, "It's impossible to truly know the chief's motives for his decision to release the robbery information at the same time as the officer's name, but the effect was clear...a fragile peace was shattered" and "there was more looting."

Highway Patrol Captain In Charge Of Ferguson Security Speaks At Rally. The [Los Angeles Times](#) (8/18, Serrano, Hennessy-Fiske, Hansen, 3.42M) reports that on Sunday, "at a rally in Ferguson, speakers including the Rev. Al Sharpton and Martin Luther King III sounded calls for the nation to respond constructively to the situation by addressing what Sharpton called the militarization of police." The Times notes that Missouri State Highway Patrol Captain Ronald Johnson "said at the rally that he met Saturday with some of Brown's relatives," who he said "brought tears to my eyes and shame to my heart."

Officer Who Shot Brown Is The Target Of Death Threats. ABC World News  (8/17, story 2, 3:15, Harris, 5.84M) profiled Officer Darren Wilson, who says he shot Michael Brown last weekend after Brown assaulted him and tried to take his gun. Steve Osunsami reported that Wilson "is just 28-years-old," but "in February accept[ed] an award for 'extraordinary effort in the line of duty.'" Ferguson Police Chief Tom Jackson was shown saying Wilson "has been an excellent officer." Osunsami noted that the Ferguson Police are "still getting death threats daily from around the country, but now they're also getting calls of support and concern for" Wilson.

The [Washington Post](#) (8/18, Wax-Thibodeaux, Brown, 4.06M) reports that in addition to the rally for Brown in Ferguson, there was a church service on Sunday for those wishing to show support for Officer Darren Wilson. According to the Post, Wilson's supporters "said they had empathy for the family of the teenager the officer killed," but "also said they feared that they might be attacked by rioters at their church, because Southminster Presbyterian sits right behind the suburban home of Wilson."

NYTimes A1: Bipartisan Workforce Investment Act "Leaves Many Jobless And In

Debt." In a front-page article titled, "Seeking New Start, Finding Steep Cost: Workforce Investment Act Leaves Many Jobless And In Debt," the [New York Times](#) (8/18, A1, Williams, Subscription Publication, 9.79M) reports that "millions of unemployed Americans...have trained for new careers as part of the Workforce Investment Act, a \$3.1 billion federal program that, in an unusual act of bipartisanship, was reauthorized by Congress last month with little public discussion about its effectiveness." However, according to the Times, "Many graduates wind up significantly worse off than when they started — mired in unemployment and debt from training for positions that do not exist, and they end up working elsewhere for minimum wage." The Times reports that in order to "avoid any appearance of favoritism, federal job counselors are not allowed to recommend schools to job seekers," which "leav[es] many of the unemployed to unwittingly select institutions that are expensive, have a history of legal trouble or are academically substandard."

Perez Touts Reports Showing Hiring Gains In Higher-Wage Sectors. According to a front-

page story in the [Washington Post](#) (8/18, A1, Mui, 4.06M), "The recovery in America's job market is finally spreading to industries with good pay after years of being concentrated in fields with low wages." The Post notes that "hiring has picked up steam in areas such as construction, manufacturing and professional services...sectors with a median hourly wage of at least \$20," and "nearly 40 percent of the jobs created over the past six months have been in high-wage industries, compared with just a quarter during the last half of 2013." Labor Secretary Perez is quoted as saying, "I often hear that the recovery is only in low-wage jobs. That is categorically inaccurate. ... This recovery is creating a lot of good jobs."

Labor Department's Weil Criticizes US Corporations' Reliance On Contractors. [USA Today](#)(8/18, Guynn, 5.76M) reports on "a new and growing underclass who work at some of the world's wealthiest companies." USA Today says "US companies under growing pressure from Wall Street to deliver higher returns have outsourced jobs such as janitors and security officers to drive down labor costs." David Weil of the US Department of Labor's Wage and Hour Division says "that nationwide trend has led to falling wages, eroding health and safety conditions and a lower standard of living for these workers."

WSJournal A1: Small-Business Lending Has Yet To Recover From Recession. Under the front-page headline, "Small-Business Lending Is Slow To Recover: Lending Remains Far Below Pre-Recession Levels; Things 'Aren't What They Used to Be,'" the [Wall Street Journal](#) (8/18, A1, Simon, Loten, Subscription Publication, 5.89M) reports that according to the FDIC, total small-business lending is still 18% less than what it was in 2008 before the financial crisis, although commercial lending in general is up 9% in that same time.

Yellen Doesn't See Urgent Need To Raise Interest Rates. The [Wall Street Journal](#) (8/18, Hilsenrath, Subscription Publication, 5.89M) reports that a number of economists fear the economy is growing prone to overheating, and want the Federal Reserve to hike interest rates sooner rather than later. The Journal indicates some Fed officials back that view, but most (including Chairwoman Janet Yellen) believe economic data (including wages and prices) do not presage inflation is an immediate concern.

Editorial Wrap-Up

Wall Street Journal. "Texas Chainsaw Prosecution." The [Wall Street Journal](#) (8/18, Subscription Publication, 5.89M), in an editorial, says the decision to indict Perry for threatening to veto legislation is a clear case of prosecutorial overreach.

"Spies Like Us." The [Wall Street Journal](#) (8/18, Subscription Publication, 5.89M), in an editorial, notes that it has been reported that the German government tapped phone calls made by US officials, including Secretary of State Kerry, and his predecessor, Hillary Clinton. The Journal says the revelation undermines the widespread outrage expressed by Germans after it became known, via Edward Snowden's leaks, that the NSA had spied on Chancellor Angela Merkel.

"Hacking Victims Become Federal Targets." The [Wall Street Journal](#) (8/18, Subscription Publication, 5.89M) editorializes about a claim by the Federal Trade Commission that a data security breach at Wyndham Hotels provided the agency with the authority to oversee the company's IT operations. The Journal points to this as another effort by the Obama Administration to use loosely written laws in ways unintended by Congress. The Journal notes that the 3rd Circuit Court of Appeals is considering Wyndham's challenge to the FTC, and urges the court to rule in favor of the company.

Washington Post. "Democrat? Republican? There's An App For That." In an editorial, the [Washington Post](#) (8/17, 4.06M) notes the new smartphone app BuyPartisan, which "accesses campaign finance data and offers a breakdown of" a product "manufacturer's political giving." The app "would take the nation's ideological sorting to a new level," and the Post hopes it "fails."

"A Damaging Waiver." The [Washington Post](#) (8/18, 4.06M) writes in an editorial the "the 'coup clause,' which mandates foreign aid suspension to countries after a military takeover, has long been

among the strongest foreign affairs legislation passed by Congress precisely because no such waiver exists for it." However, "the House Appropriations Committee passed a bill that would allow aid resumption if the 'provision of assistance is vital to the national security interests of the United States'" – as defined by the Executive Branch. Congress, concludes the Post, "should reject this waiver and insist on maintaining discipline over the United States' foreign policy."

"The Real Ebola Threat." The [Washington Post](#) (8/18, 4.06M) editorializes that "some of the reactions" to the Ebola outbreak "have been tinged with hysteria," and "it is time to get sober, fast," because controlling the epidemic is "very much in the hand of humans" and "the inadequacy of current efforts to stop the disease is becoming increasingly clear. ... Either the world mobilizes now, or the next fight against the disease will be even more frightening."

New York Times. "Europe's Recurring Malaise." The [New York Times](#) (8/18, Subscription Publication, 9.79M) editorializes that the EU's disappearing economic growth "is an entirely predictable outcome of the misguided policies that European leaders stubbornly insist on pursuing, despite all evidence that they are exactly the wrong medicine." Namely, the Times criticizes the EU's, "insistence, led by Germany, that governments reduce their deficits by cutting spending and raising taxes," and the European Central Bank's "slow and timid" efforts to lower interest rates and buy bonds.

"A Critical New Role For The World Bank." The [New York Times](#) (8/18, Subscription Publication, 9.79M) editorializes that a Federal trial in Brooklyn "is focusing anew on illicit money flows," and notes that up to now, Federal probes "have targeted European banks that laundered dirty money into dollars for drug cartels," The Brooklyn case "involves a bank headquartered in Jordan, called Arab Bank, which plaintiffs say handled transactions for people or organizations it knew were linked to terrorist attacks from 2001 to 2004," and the case "is already reverberating through the banking industry – and not in ways that would make the world a better place." Bank attorneys "say that developments in the case could reinforce an unfortunate trend: the departure of several banks from the business of arranging remittances for immigrant workers, on the ground that the legal risk of inadvertently handling dirty money has become too high." The Times argues that the World Bank "can broadly transform remittances," and "should do so quickly."

"The Verdict On A Troublesome Carcinogen." In an editorial, the [New York Times](#) (8/18, Subscription Publication, 9.79M) notes that "formaldehyde, a substance widely used in consumer products and industrial processes, has been authoritatively judged a carcinogen despite the best efforts of the chemical industry to confuse the issue." In fact, "the chemical is still found in nail polish, shampoo, soap, fabric softeners, hair straighteners, carpets and other consumer products," even as "many" companies "are yielding to consumer demands that carcinogens and other toxic chemicals be taken out."

Washington Schedule

Today's Events In Washington.

White House:

PRESIDENT OBAMA — No scheduled events.

VICE PRESIDENT BIDEN — No scheduled events.

US Senate: The Senate stands adjourned until 2 p.m. on Monday, Sept. 8.

US House: The House stands adjourned until 2 p.m. on Monday, Sept. 8. Please note however that some committees are still scheduling hearings during this time both in Washington and in the field. Just a reminder to check the Capitol Hill takes daily during this period of "Recess."

Other: Aug. 17 – 19. ALCOHOL INTERLOCK SYMPOSIUM — The Traffic Injury Research Foundation (TIRF) hosts the 14th Alcohol Interlock Symposium. The theme of this year's event is Alcohol Interlocks: Managing Risk and Behavior Change. Sessions will involve a mixture of panel presentations and discussion groups. Attendees include practitioners and vendors from North America, the European Union, South Africa, the Philippines and Japan. 9 a.m. – 10 a.m. Opening remarks by David Friedman, acting administrator, National Highway Traffic Safety Administration (NHTSA), and Dr. Doug Marlowe, chief of science, policy and law, National Association of Drug Court Professionals (NADCP). 11:35 a.m. – 12:20 p.m. Debbie Weir, CEO, Mothers Against Drunk Driving talks about MADD's past and present initiatives. Location: Dupont Circle Hotel, 1500 New Hampshire Ave. NW.

REAKFAST FOR LEARNING – CONFERENCE CALL — 1 p.m. The Breakfast for Education Alliance hosts a conference call with USDA Under Secretary Kevin Concannon and others to talk about efforts to increase the number of children eating school breakfast.

Last Laughs

Late Night Political Humor.

Jimmy Fallon: "Well, the President is still on vacation. A lot of people were very unhappy about this, given everything that's going on right now. But a new report shows that George W. Bush went on vacation 349 days during the same period of his presidency, while Obama has only gone on vacation 129 days. While most Americans are like, 'Yeah, yeah, that's still way too much vacation.'"

DOI in the News:

SALLY JEWELL BEGINS WORK AS INTERIOR SECRETARY. The [E&P Magazine](#) (4/16) reports, "Sally Jewell, the 51st secretary of the US Department of Interior, spent her first full day meeting employees and holding meetings issues before the department, including energy development, conservation, Indian affairs, and youth engagement, a news release stated."

For the "Goat" blog of the High Country (CO) News (4/16, Peterson, 25K), Jodi Peterson writes that "longer-term," Jewell's "got a lot on her plate already: the BLM's new proposal for tightening regulations on fracking and horizontal drilling on public lands has been met with accusations of industry pandering." Also, "she's gotten letters from green groups asking her to push through a conservation plan for the Arctic National Wildlife Refuge and to put a moratorium on coal mining in Wyoming's Powder River Basin." And "the final decision about building a road through Alaska's Izembek National Wildlife Refuge will be hers to make (Alaskan Sen. Lisa Murkowski wants the road and is the top Republican on the Interior, Environment and Related Agencies Appropriations Subcommittee that funds Jewell's agency)." Finally, "she'll be overseeing the controversial decision to possibly list the sage grouse as endangered (which, of course, could have major impacts on energy development in the West)."

Jewell Tweets Enthusiasm For Job. In its "E2 Wire" blog, [The Hill](#) (4/16, Geman, 21K) reports, "New Interior Secretary Sally Jewell is tweeting about her enthusiasm for the job during her first full day at work." According to

the article, "Jewell said Monday on the social media site Twitter that she's 'honored & humbled' and 'ready to get to work on behalf of all Americans.'" The article notes that "in contrast, her predecessor Ken Salazar didn't tweet as secretary until late into his four-year tenure, which ended Friday."

Politico (4/16, Slack, 25K) reprints Jewell's tweets.

ENVIRONMENTAL GROUPS SEEK HALT TO NEW POWDER RIVER BASIN COAL MINING. The AP (4/16) reports, "Environmental groups are calling for a moratorium on coal leasing in the Powder River Basin of Montana and Wyoming until the federal government reviews the program." The article notes that "representatives of 21 groups including Greenpeace and the Sierra Club requested the moratorium Monday in a letter to newly-confirmed Interior Secretary Sally Jewell." According to the article, "as companies seek to ramp up coal exports, the environmentalists say the government needs to make sure companies are paying proper royalties," and "they also want more attention given to the climate change impacts of greenhouse gasses emitted when coal is burned."

The Billings (MT) Gazette (4/16, 39K) reports, "An Interior official confirmed that the department had received and was reviewing the letter Monday, but declined to comment." Meanwhile, "a representative of the Powder River Basin Resource Council said Monday that her group has for years backed the slowing of coal leasing to ensure better reclamation of mine sites." On the other hand, "the director of the mining industry trade group in Wyoming called the letter 'disappointing' and said a moratorium would be damaging to a major Wyoming industry." Also reporting on the story are the Casper (WY) Star-Tribune (4/16, 22K), The Missoulian (4/16, 26K), the Ravalli (MT) Republic (4/16, 5K), the Bozeman (MT) Daily Chronicle (4/16, 16K), The Oregonian (4/16, 237K), the St. Louis Business Journal (4/16, Weiderman, Subscription Publication), Yahoo! (4/16), and the Climate Progress (4/15, Koronowski).

MEETINGS BETWEEN WHITE HOUSE, INDUSTRY ON FRACKING REGULATIONS CONCERN

ENVIRONMENTALISTS. Politico (4/16, Buford, 25K) reports on meetings between the White House and the oil and gas industry that have some environmentalists concerned Federal fracking guidelines may be too lax. Politico notes that the Interior Department has yet to release new official draft regulations, and as of Friday was declining "to comment on the environmental groups' complaints." However, Politico notes that since January when the first draft was released, there have been 10 meetings at the White House Office of Budget and Management. Of those, three have included environmental groups, two Native American tribes, and five oil and gas industry representatives "from trade groups such as the American Petroleum Institute, America's Natural Gas Alliance and the Independent Petroleum Association of America, as well as companies like ExxonMobil, ConocoPhillips, Devon Energy, Shell, BP, Halliburton and Anadarko Petroleum Corp."

SALAZAR CALLS COLORADO RIVER DELTA RESTORATION HIS KEYSTONE WATER ACHIEVEMENT. The National Geographic (4/15, 4.49M) reports, "Departing Secretary of Interior Ken Salazar shared a few thoughts at his exit ceremony about the keystone accomplishments of his four years and three months in office, and called out restoration of the Colorado River Delta as his signature achievement in water management." Salazar said: "The fourth keystone I spoke to the President about [in Chicago when he asked me to join his cabinet] was working on water issues. I won't spend a lot of time on that other than to say that on the Colorado River between the nation of Mexico and the United States we were able to put together what essentially is the most important agreement that has ever been put together between the United States and Mexico on water in the Colorado River. You will see a restoration of the Colorado River on the Mexican side of the border. You will also see water sharing arrangements and a whole host of other things. And for that I give [Commissioner of Reclamation] Mike Connor great recognition and [Assistant Secretary for Science and Water] Anne Castle because they have led that effort on behalf of the United States of America."

FWS SUPPORTS IDAHO'S SAGE GROUSE STRATEGY. The Salem (OR) Capital Press (4/16, Dumas, 38K) reports, "With prompting from Sen. Jim Risch, the US Fish and Wildlife Service sent a letter of concurrence last week to Idaho Gov. C.L. 'Butch' Otter in support of the state's greater sage grouse conservation strategy." The article notes that "Risch, R-Idaho, had put a hold on the nomination of Sally Jewel to become secretary of the Interior until that letter was received, said Brad Hoaglund, Risch's director of communications and senior policy adviser." According to Risch, "his hold on Jewell's nomination was to get a commitment from the Department of the Interior to follow the best science available and support the collaborative effort that has been taking place to protect sage grouse in Idaho."

REP. BISHOP SEEKS COMMON GROUND ON PUBLIC LANDS. The [Salt Lake \(UT\) Tribune](#) (4/16, Burr, 107K) reports, "Tired of the gridlock over how to manage federal lands, Rep. Rob Bishop is attempting to bring together all sides of the issue to find common ground to either preserve or drill." Bishop "is one of Congress' top cheerleaders for oil and gas development and a dogged critic of environmentalists - but he says it's time to tone down the rhetoric and seize on a change at the Interior Department to get beyond the bitter feud in the public-lands debate." He "has invited energy companies, green groups, local officials and other interested parties to submit their plans for what they want to get done and hopes to craft legislation to bring up later this year."

NATIVE LEADERS CRITICAL OF OBAMA'S PROPOSED BUDGET. The Indian Country Today Media Network (4/15, Capriccioso) reports, "Concerned Indian country leaders are saying that President Barack Obama, in his proposed budget for 2014, is not doing as strong a job at upholding the nation's trust responsibility to American Indians as he has promised," as the budget would "dramatically shrink his support for Indian programs in some key areas, including reductions in contract support services, education and school construction cuts, and spending on low-income housing." Meanwhile, "the White House has been hesitant to single out Indian programs for protection in its budget process and in the current budget sequester."

Writer Praises President's Budget. In an op-ed on the Indian Country Today Media Network (4/15), writer Mark Trahan, a member of the Shoshone-Bannock Tribes, wrote that the proposed budget "would significantly shift resources, adding money to important programs, and protecting much of Indian country from government contraction." He cited the increased budget request for the Bureau of Indian Affairs, "law enforcement, police, courts, and expanded domestic violence services," along with trust management, and real estate. While Trahan believes education and healthcare for natives need more money than requested, he notes that the amounts are greater than last year's.

Continuing Coverage Of Budget Proposal. Additional coverage of President Obama's budget proposal was provided by the [Summit County \(CO\) Citizens Voice](#) (4/15, Berwyn) and the [Sierra \(CA\) Sun Times](#) (4/16).

CONTINUING COVERAGE OF SEQUESTER. The [DCist](#) (4/16) reports, "The National Park Service is considering cutting late-night ranger and bathroom hours, reports WTOP, though the proposed cuts are unrelated to sequestration: Currently, ranger stations and nearby restrooms are open until almost 11:30 p.m. or midnight." The NPS "is contemplating closing those facilities at 10 p.m." Also reporting on the story is [WTOP-FM Washington](#) (4/16, Augenstein).

Yellowstone National Park. The [West Yellowstone \(MT\) News](#) (4/16, Tumbleson, 1K) reports, "Roads from Yellowstone's West Entrance in West Yellowstone and Mammoth Hot Springs to Old Faithful will open as originally scheduled this Friday, April 19." Yellowstone spokesman Al Nash said, "We were able to open the roads, We started later than normal on clearing the road segments from Mammoth to Old Faithful. We were able to take advantage of some of the better weather conditions and we had a somewhat lighter snowpack to chew through."

Shenandoah National Park. [WHSV-TV Harrisonburg-Shenandoah, VA](#) (4/16), "Shenandoah National Park leaders are pushing back opening dates for some seasonal activities." According to the article, "a spokeswoman from Shenandoah National Park said pushing back starting dates on spring activities will delay paying seasonal employees, utilities involved in running facilities and even paying sanitation to clean up at the park."

Hyatt Lake. The [Salem \(OR\) Statesman Journal](#) (4/15, Miller, 35K) reports, "Federal budget uncertainties will keep the campground and docks at Hyatt Lake closed until mid-May, officials from the Medford District of the Bureau of Land Management said today."

Minute Man National Historical Park. [WBUR-FM Boston](#) (4/15, Gellerman) reports on the sequester's impact on Minute Man National Historical Park.

Timber Payments. [FOX News](#) (4/15, Springer) reports on the sequester's impact on timber payments.

CONSERVATION TOUTED AS BOOSTING TOURISM. For the "Congress Blog" of [The Hill](#) (4/16, White, Stanton-masten, Amelia, Beteta, 21K), Al White, director of the Colorado Tourism Office, Louise Stanton-

Masten, executive director of the Washington Tourism Alliance, Margot Amelia, executive director of the Maryland Office of Tourism Development, and Caroline Beteta, president and CEO of Visit California and deputy secretary of Tourism, write that the new national monuments will boost tourism. They note that "research shows that protected public lands like national parks, monuments, and wilderness areas provide a quality of life that lures entrepreneurs and skilled talent to our communities." The yclaims that "when policy-makers put conservation on equal ground with development and tourism marketing investments, our communities and our economies benefit."

In an op-ed for the Philly.com (4/16, Fitzpatrick, Garber, Marshall), U.S. Rep. Mike Fitzpatrick (R-PA), Adam Garber, the field director for PennEnvironment, and Jeff Marshall, president of the Heritage Conservancy, write, "Without the help of one national program, the Land and Water Conservation Fund, many of these places would have been polluted or lost to development." They note that "since that first year, however, in good budget times and bad, Congress has raided the fund for nonconservation programs," which "has caused us to miss out on opportunities to protect our parks and open spaces from new threats." They write that "we can change this by stopping the raids on the Land and Water Conservation Fund, and ensuring that it is used to protect our precious assets."

CONGRESSMAN URGES REVIEW OF ENERGY POLICY. In an op-ed for the Morristown (NJ) Daily Record (4/14, Frelinghuysen, 23K), Rep. Rodney Frelinghuysen writes, "We need a new direction in energy policy that increases the supply, security and diversity of American energy and puts real alternative and renewable fuels in the hands of consumers at lower cost." For instance, he claims that "we have domestic reserves, but far too many are placed 'off-limits' by the regulatory policies of our own EPA and Interior Department." Frelinghuysen argues that "bureaucrats need to 'get out of the way' and allow development of new American-produced oil, natural gas and a modernized energy infrastructure such as construction of the Keystone XL pipeline." He also argues that "renewables, such as solar and wind, need encouragement without the government picking 'winners' and 'losers.'"

US ENERGY INDEPENDENCE PROJECTIONS SIGNIFICANTLY VARY WITH ASSUMPTIONS. Emily Pickrell writes on FuelFix (4/15) that while "experts unanimously agree that the United States' ability to supply its own energy needs is growing," the degree to which it will be self-sufficient is in question. The US Energy Information Administration's supplements to its Energy Outlook 2013, issued on Monday, "show how assumptions on such as the growth of labor, the amount of capital invested and availability of tax credits could shape supply and demand for different forms of energy decades down the road." Jonathan Cogan, an analyst at the US Energy Information Administration, said, "If you change assumptions about key factors, it can have a very significant impact on the long term projections." Experts unanimously agree that the United States' ability to supply its own energy needs is growing, but how self-sufficient it will be in the next decade or two is still up for debate.

America's Great Outdoors:

National Park Service:

JUDGE AGREES WITH PSYCHOLOGISTS THAT OHIO BOMB PLOT SUSPECT IS FIT FOR TRIAL. The AP (4/15) reports from Akron, OH, "The last of five bridge bomb-plotting suspects is mentally competent to stand trial, a judge ruled Monday after hearing testimony on the man's two-decade history of mental health issues." US District Court Judge David Dowd "ruled that 23-year-old Joshua Stafford of Cleveland is able to assist in his defense," and he "set a Thursday hearing on trial arrangements." Judge Dowd "ruled after hearing from psychologists who said Stafford is suicidal, depressed and wary of a dangerous world but able to assist in his defense."

Bureau of Land Management:

BLM ALLOWS DISCOVERY CHANNEL'S "MYTHBUSTERS" TO FILM IN MOAB. The Grand Junction Daily Sentinel (4/16, 23K) reports, "The US Bureau of Land Management has given the science- and thrill-based television show 'Mythbusters' permission to film an upcoming episode in Utah's Desolation Canyon." The article notes that "officials for the popular show on the Discovery Channel won't discuss the 'myth' they are out to prove or bust." However, the Deseret News reports "that BLM documents indicate the project will involve duct tape and

bubble wrap."

Also reporting on the story are the Deseret (UT) News (4/16, O'Donoghue, 105K), the Provo (UT) Daily Herald (4/16, 25K), and the Ogden (UT) Standard Examiner (4/15, 63K).

AGREEMENT ALLOWS BETTER COOPERATION FOR HIGHWAY PROJECTS. The Las Cruces (NM) Sun-News (4/16, 22K) reports, "One state agency and two federal agencies announced Monday a new agreement that should open the door for better cooperation in roads projects." According to a news release, "a memorandum of understanding was signed Monday to resolve 'longstanding problems concerning the transfer of federal lands and mineral interest for Federal Aid Highway Projects.'" The article notes that "these problems stemmed from inconsistencies between various US Bureau of Land Management districts and field offices in processing federal land-transfer requests, in addition to inconsistencies with federal regulations, according to a New Mexico Department of Transportation news release."

BLM INCREASES FEES ALONG UPPER COLORADO RIVER. The Summit County (CO) Citizens Voice (4/16, Berwyn) reports, "Boaters, hikers and anglers will pay just a bit more to use Bureau of Land Management day use areas along the upper Colorado River between Pumphouse and Dotsero." The article notes that "the daily fee is jumping from \$3 to \$5 and season passes are climbing from \$15 to \$20 in the first fee increase since 1998 for the popular area, used by about 60,000 people annually."

BALANCED SOLUTION SOUGHT FOR OREGON'S FORESTS. In an op-ed for the Eugene (OR) Register-Guard (4/16, Montgomery, 52K), David Montgomery, president of Montgomery Timber Management, writes, "Oregonians can't afford another 20 years of gridlock and extremism in our federal forests." Montgomery says that "it's time for our leaders at all levels to travel down the middle road and achieve a balanced solution."

Fish and Wildlife Service:

FWS DIRECTOR ASHE TO APPEAR ON "ANTIQUES ROADSHOW". The AllAfrica.com (4/16) reports, "The US Fish and Wildlife Service (USFWS) is taking to the airwaves to educate Americans about the ongoing rhino crisis and the need to be vigilant in ensuring that they not buy products containing parts from endangered wildlife." According to the article, "for the April 15 broadcast of the popular Public Broadcasting Service program Antiques Roadshow, there will be a segment that features the series host Mark L. Walberg, appraiser Lark Mason, and USFWS Director Dan Ashe on a visit to the Cincinnati Zoo to discuss the history of the rhino crisis and how it relates to the antiques trade." Ashe said, "We want to get the message out about protections for wildlife. People don't always think about this issue in terms of the antiques and collectibles that they own, buy, or sell. Anything that creates a demand for products made from endangered species can be bad news for survival of the animal in the wild."

UNWANTED ANIMALS LEFT AT WICHITA MOUNTAINS WILDLIFE REFUGE. The Oklahoman (4/16, 127K) reports, "It's tough enough for US Fish & Wildlife Service to manage the animals they have at" Wichita Mountains Wildlife Refuge. However, "additional animals dumped on the refuge by those who do not want them makes the task more difficult." According to refuge officials, "unwanted animals - six horses and two donkeys - have been left on refuge land in three separate incidents."

PASSPORT SYSTEM FOR INSTRUMENTS PROPOSED. For the miPRO (4/16), Gary Cooper writes, "Musicians traveling with instruments made from allegedly endangered materials, including rosewood, ebony, ivory and abalone, will need to obtain separate 'passports' for each instrument, following a recent decision at the UN-organized CITES convention, held in Bangkok, Thailand." He notes that "the passport proposal, initiated by US Fish and Wildlife Service Director Dan Ashe, seeks to replace the existing system with a single internationally recognized passport." Cooper discusses how the proposed passports for instruments system "could effect the industry."

US Geological Survey:

HEALTH OF EASTERN SNAKE AQUIFER TO BE ANALYZED. The Salem (OR) Capital Press (4/16, Ellis, 38K) reports, "US Geological Survey and Idaho Department of Water Resources officials are asking for landowners'

cooperation as they measure groundwater levels in more than 1,300 private and public wells throughout the eastern Snake River Plain in southern Idaho." The article notes that "the data will be used in a variety of ways, including to measure water levels in different areas, determine flow directions and to continue improving the IDWR's computer model of the aquifer."

Securing America's Energy Future:

Renewable Energy:

ONLINE PUBLIC MEETING TO BE HELD ON BRIGHTSOURCE ENERGY'S PALEN SOLAR PROJECT. The Palm Springs (CA) Desert Sun (4/15, Kaufmann, 33K) reports, "The California Energy Commission will hold an online public meeting on BrightSource Energy's Palen solar project at 10 a.m. Wednesday." The article notes that "BrightSource bought the project last year from bankrupt Solar Trust of America, which had originally planned to use a different type of solar thermal technology - parabolic troughs - that concentrate sunlight and heat liquid running through tubes in the troughs." According to the article, "the project had won approval from the Energy Commission, but the change in technology has meant the original approval must be amended." The BLM "must also approve the project, which it had not done before the Solar Trust bankruptcy."

IRS COMPLETES RULES THAT DEFINE HOW WIND FARMS CAN QUALIFY FOR TAX BREAKS. Bloomberg News (4/16, Rubin, Martin) reports the IRS "completed rules today that define how wind-farm developers can qualify for tax breaks." The article says that under "a law signed by President Barack Obama in January, wind projects must begin construction by Dec. 31 to qualify for the production tax credit." Amy Grace, an industry analyst at Bloomberg New Energy Finance in New York, says "the ruling sets the stage for a rebound in wind energy in the second half of this year as developers rush to meet the new requirements."

Onshore Energy Development:

BLM REVEALS NORTH FORK VALLEY LEASE NOMINATOR NAMES. The Grand Junction Daily Sentinel (4/16, Webb, 23K) reports, "The Bureau of Land Management today revealed the names of companies that nominated oil and gas leases in the North Fork Valley after deciding not to appeal a judge's order." The article notes that "the groups behind the lawsuit say the BLM's decision not to appeal is a big victory for transparency, while the Western Energy Alliance industry group expressed disappointment in it, and in US District Court Senior Judge Richard Matsch's decision last week to not let it intervene in the lawsuit in hopes of challenging his ruling." But "the nominator of most of the 30,000 acres turned out to be a Denver company that acquires leases on behalf of others rather than developing them itself," which "means activists have fallen short in their goal of determining who ultimately may have an interest in developing those leases."

Also reporting on the story is the Ventura County (CA) Star (4/15, 56K) and the Seattle Post-Intelligencer (4/16, 114K).

Offshore Energy Development:

BP MANAGER TESTIFIES ABOUT FRUSTRATIONS AT LAST-MINUTE PROJECT CHANGES DURING DEEPWATER HORIZON TRIAL. The AP (4/16, Kunzelman) reports that on Monday during the ongoing Deepwater Horizon spill trial in New Orleans, the BP wells team leader for the Deepwater Horizon project John Guide testified. He said "he was frustrated by last-minute changes to the drilling project, but didn't have any safety concerns before the deadly blast." Guide was the supervisor of "two rig managers who have been indicted on manslaughter charges in the deaths of 11 workers" during the rig explosion. In an email sent three days prior to the blowout of the Macondo well, "Guide complained about last-minute changes and warned his boss, David Sims, that the operation wouldn't succeed if it continued 'in this manner.'" The email described operations as "flying by the seat of our pants." Despite plaintiffs' attorneys argument the email demonstrates "BP sacrificed safety" in the project, Monday guide said the concerns he'd been expressing in that email weren't related to safety.

Bloomberg News (4/16, Johnson, Feeley, Calkins) notes that in additional comments during his testimony

Monday, Guide told US District Judge Carl Barbier, "I don't think I did anything to cause the blowout." He also maintained, "I don't think I could have done anything different." The New Orleans Times-Picayune (4/16, Thompson, 130K) also covers the story.

OFFSHORE OIL EXPLORATION IN CUBAN WATERS IN DOUBT. The South Florida Business Journal (4/16, Subscription Publication) reports that in recent months speculation has grown over whether the quest for offshore exploration off Cuba's coast has ended. In a Monday report in the Sun Sentinel, the paper suggested "major companies have abandoned their search." Meanwhile, last November a National Geographic report indicated there were "continuing possibilities of oil exploration." In both instances, a "lack of foreign investment" is described as severely hampering any potential offshore exploration that may occur.

Tackling America's Water Challenges:

FEDERAL WILDLIFE AGENCIES CONCERNED ABOUT WATER DIVERSION TUNNELS PLAN. The Sacramento (CA) Bee (4/15, Weiser, 202K) reported, "The U.S. Fish and Wildlife Service and National Marine Fisheries Service praised Gov. Jerry Brown's administration for making progress on many concerns" about the two giant water diversion tunnels proposed in the Delta, but they added that "the Bay Delta Conservation Plan still presents a number of major concerns, some of which they labeled 'critical.'" Areas of concern include the potential for the tunnels to "cause extinction of winter-run chinook salmon, an endangered species in the Sacramento River." Additionally, the "water diversions may leave insufficient flow in the Sacramento River, under some conditions, to facilitate fish migration - and may even cause river flow to reverse in some situations."

Columnist Calls For Brown To Work On Water Bonds. George Skelton, in a column in the Los Angeles Times (4/16, Skelton, 692K), criticizes California Gov. Jerry Brown's "thumb-twiddling and navel-staring over" on water bonds needed for his "ambitious re-plumbing of the delta that would complete and modernize the California Water Project." The bonds will be "dead without a substantial pork paring," and people are "waiting for the governor to decide how he wants to reshape the bond." Meanwhile, San Luis didn't get as much water over the winter because the pumps hurt fish, and farmers argue that the trucks hauling the soil from the proposed tunnels for the water project will ruin their area. Selton calls for Brown to "engage legislators and shrink the bond - maybe the proposed tunnels too. Fix the pumps so they're fish-friendly. And move at Mach speed."

Official Lauds Water Diversion Plan. In an op-ed in the Sacramento (CA) Bee (4/14, 202K), deputy secretary of the California Natural Resources Agency Jerry Meral wrote that the Bay Delta Conservation Plan will make the state's "water supplies safer and more secure," avoid the "devastating economic impacts of a natural disaster," restore the Sacramento-San Joaquin Delta's ecology, "and enhance Delta communities." He argued that the project will not hurt the water rights of others or take up water meant to help fish species. Meral added that the state will continue to maintain local levees but added that the levees protecting the Delta islands will inevitably fail and so additional money shouldn't be spent on them.

California Called To Ease Distrust Of Plan. In an op-ed in the Sacramento (CA) Bee (4/14, 202K), professor Gregory S. Weber of the University of the Pacific McGeorge School of Law wrote that a "critical" part "missing from the efforts to 'fix' the Sacramento-San Joaquin Delta" is addressing "one of the Delta's most fundamental problems: gut-level mistrust among key stakeholders." This distrust causes "huge costs" through greater uncertainty, litigation, and blocked solutions. The distrust could be overcome by "a transparent and inclusive process that attempted to develop constitutional-level assurances." If, given the short time that cannot be done, "then solutions need to be found that do not depend upon trust, but focus on legally binding assurances on" how the diversion will operate during dry years "and what levels of diversion will otherwise be permitted."

BUREAU OF RECLAMATION TO REHABILITATE GENERATORS AT GRAND COULEE DAM. The Renewable Energy World (4/16, Vick) reports, "The U.S. Department of the Interior's Bureau of Reclamation, plant owner and operator, has spent several years planning" the needed "significant rehabilitation" of the six units of the Grand Coulee Dam's Third Power Plant. "Work on the overhaul of three of the six units will commence in March 2013 and is scheduled to be complete in September 2017," while the other three will be worked on starting "in January 2018 and be completed in December 2022."

Empowering Native American Communities:

TRIBES SEEK TO MINIMIZE LEGAL CONFLICT WHILE SEEKING RECLAMATION OF LANDS. The Coos Bay (OR) World (4/16, Moriarty, 11K) reports the Confederated Tribes of the Coos, Lower Umpqua and Siuslaw Indians, "hope to minimize legal conflict and maximize utility in lands sought for reclamation from the federal government." At the first of three meetings "scheduled by the tribes to discuss proposed legislation that would return more than 14,000 acres of the much larger area taken from the tribes in the 1800s," Howard Crombie, natural resources director for the Confederated Tribes, said that they "had tried to identify federal lands that fell outside marbled murrelet and spotted owl habitat." Additionally, "Tribal Chairman Bob Garcia said the tribes are merely seeking compensation for lands lost to the U.S. government under an 1855 treaty."

MINNESOTA COURT REVIVES DULUTH SUIT AGAINST TRIBE. The Duluth (MN) News Tribune (4/16, 43K) reports the Minnesota Court of Appeals "has steeled the Duluth city administration's resolve to block the growth of Indian lands in its downtown, at least temporarily." The court revived the city's suit against "the Fond du Lac Band of Lake Superior Chippewa, claiming a breach of contract when the tribe took its first steps to expand the physical size of a downtown reservation that's also home to the Fond-Du-Luth Casino." However, "Tribal Chairwoman Karen Diver has maintained that the band has no immediate plans for the property" the tribe bought next to its reservation.

DISPUTE OVER SPIRIT LAKE SIOUX CHAIRMANSHIP. The Grand Forks (ND) Herald (4/16, Haga, 27K) reports elders and others opposed to Spirit Lake Sioux Chairman Roger Yankton Sr. held a ceremony swearing in Leander (Russ) McDonald as chairman, but Darren Walking Eagle, the tribe's chief administrative officer and second in command to the chairman, "said Yankton remained in charge and the attempted takeover was illegal." An emergency general assembly meeting on Sunday voted "to seek Yankton's removal as chairman," 114-3 and elected Yankton in his place. However, Walking Eagle said "that the tribe's constitution provides that members may remove a tribal official only by petitioning for a vote." Meanwhile, "Clarice Brownshield, a Tribal Council member recently suspended by Yankton, on Wednesday accused him of corruption and said she had turned over documents to the FBI. "

WPOST, NYTIMES URGE HIGH COURT TO WEIGH IN ON NATIVE AMERICAN CUSTODY CASE. The Washington Post (4/16, 489K) editorializes about a "wrenching" custody case that the Supreme Court will hear today between a South Carolina couple who adopted a girl, and the girl's father, who is part Native American and gained custody of the girl under the Indian Child Welfare Act, which restricts adoptions of Native American children. The Post argues that in restricting adoptions under the act, Congress intended "to prevent the forcible breakup of Native American families, a shameful past practice," but adds that lawmakers "surely did not mean to protect the rights of Native American biological parents to the point that a child's unwed, absent father can undo an adoption that her biological mother and legal custodian determined to be in her best interests, merely because she has a drop of Native American blood in her," and urges Congress to amend the law should the court rule in the father's favor.

The New York Times (4/16, Subscription Publication, 1.68M) editorializes that under the laws of both Oklahoma, "where the biological mother lives," and South Carolina, where the adoptive couple lives, "a biological father is not allowed to intervene in an adoption once he has given up his parental rights." The Times argues that in cases like this, "it makes little sense to allow a biological father who was not in the picture from surfacing belatedly and vetoing an adoption that would be in the best interests of the child."

Top National News:

OBAMA VOWS TO FIND PERPETRATOR OF BOSTON MARATHON ATTACK. The detonation of two bombs at the Boston Marathon, which killed at least three people and injured more than 140, dominated the news cycle after the news broke Monday afternoon. All three networks, for example, devoted extended broadcasts to coverage of the attack. Lacking specific information on the perpetrator or motivation for the attack, the great majority of both TV and print coverage emphasizes the aftermath of the bombing and the treatment of victims.

President Obama's avoidance of the terms "terrorist" or "terrorism" in his remarks to the nation about the attack sparked a great deal of commentary, although many outlets are reporting that White House officials privately acknowledge that the bombing has all the hallmarks of a terrorist attack, and that the President chose his words

merely out of an abundance of caution.

USA Today (4/16, Madhani, Singer, 1.71M) reports that in his address, the President "vowed...to get to the bottom of who is behind" the attack in Boston earlier Monday, "but warned Americans not jump to any conclusions." However, the Wall Street Journal (4/16, Levitz, Helliker, Germano, Subscription Publication, 2.29M), after noting that the President had declined to identify the attackers as terrorists, reports that just afterward, an unidentified White House official said the attack was almost certainly terrorism and that it was being investigated by Federal authorities as such.

As of approximately 2 AM this morning, FOX News (4/16), in an online article titled, "Death Toll At 3 In Boston Marathon Bombing Seen By White House As Terrorism," is reporting that a "senior Administration official" said Monday evening, "When multiple devices go off, that's an act of terrorism." Fox is also reporting that "five total explosive devices were found in the Boston area, including the two that exploded."

Brian Williams, at the opening of NBC Nightly News (4/15, lead story, 1:45, Williams, 7.86M), described the bombing as "another apparent act of terrorism within our shores." A few minutes later on NBC Nightly News (4/15, story 6, 1:20, Williams, 7.86M), Chuck Todd reported that when the President spoke, he "did not call this 'terrorism,'" because "the decision was made not to have the President use that specific word." Todd went on to report that at the White House on Monday evening, there was "a little bit of a frustration of how little they do know at this point in time, which is why the President was clearly being very careful with the language he chose to use."

Jon Karl, on ABC World News (4/15, story 7, 2:00, Sawyer, 7.43M), reported that while the President "referred to the bombing as, quote, 'the events in Boston,'" the White House is "treating this as a terrorist attack." Karl went on to reiterate that the incident is "obviously being treated as a terrorist attack, although the President did not use that word."

Likewise, on the CBS Evening News (4/15, story 8, 2:00, Pelley, 5.58M), Major Garrett noted that the President "did not call the act in Boston an act of terrorism," but added that a "top White House aide" said the President "does consider it an act of terrorism." Garrett went on to report that the "the big unresolved question" is, was "this an act of domestic or foreign terrorism."

Politico (4/16, Glueck, 25K) also notes that the President did not refer to the bombing as "a terrorist attack," although Sen. Dianne Feinstein, who chairs the Senate Intelligence Committee, "called the bombing a terrorist event." Politico also reports that Sens. Susan Collins and Angus King released a statement that said the bombing "bear[s] the hallmarks of a terrorist attack."

The AP (4/15, Frommer) reports that Attorney General Holder "directed the full resources of the Justice Department be deployed to investigate the bombs that exploded at the Boston Marathon," and Carmen Ortiz, the US attorney for Massachusetts, is "coordinating the department's response with the FBI and other federal, state and local law enforcement authorities."

The AP (4/16, Jakes) also reports that an unnamed "senior US intelligence official" has confirmed that "two more explosive devices have been found near the scene of the Boston marathon where two bombs detonated earlier."

According to the Boston Globe (4/16, Abel, 250K), "Dozens of victims lay in the street...including some whose limbs had been tom off by the blast." The Globe reports that according to "two law enforcement sources," an 8-year-old boy was one of those killed. The Globe adds that when asked if the attack was the work of terrorists, Boston Police Commissioner Edward Davis said, "We're not being definitive on this right now, but you can reach your own conclusions based on what happened." The Globe says the President "vowed that whoever planted the explosives would be found and brought to justice."

The Boston Herald (4/16, Graham, Zaremba, Cassidy, 91K) reports that the President had called Gov. Deval Patrick and Boston Mayor Thomas Menino, and in his statement to the public, insisted: "We will get to the bottom of this. We will find out who did this and we will find out why." The Herald is also reporting that Boston police have "discovered at least two other devices and had a controlled detonation on at least one object."

USA Today (4/15, Winter, 1.71M) reports that the FBI is "overseeing the investigation, which Special Agent Rick Deslauriers said involved possible terrorism," but the President told the public "not [to] speculate over who was responsible."

According to McClatchy (4/15), the President was briefed about the attack at about 3 PM by homeland security adviser Lisa Monaco and "other members of his senior White House staff."

The Washington Times (4/16, Howell, 76K) reports that FBI Director Robert Mueller and Homeland Security Secretary Janet Napolitano also "briefed" the President "on the investigation and response to the explosions, including coordination among federal agencies and state and local officials."

The New York Times (4/16, A1, Belson, Pilon, Subscription Publication, 1.68M) reports that an unidentified "senior United States government official" says there were "no reports in recent days about a threatened attack on the marathon and that there was no warning on Monday." The Washington Post (4/16, Branigin, 489K) reports that "authorities in New York and Washington tightened security precautions in the wake of the blasts."

The Washington Times (4/15, Crabtree, Boyer, 76K) reported that the Secret Service "pushed back members of the public across the street from the White House into Lafayette Park," and "shut down Pennsylvania Avenue during the peak of spring tourism season..."

USA Today (4/16, A1, Hampson, Raasch, 1.71M), in an article titled, "That Post-9/11 Quiet? It's Over," says that since 9/11, "events like the Boston Marathon...had been successfully policed and secured, along with Super Bowl after Super Bowl, World Series after World Series," and "aside from the pre-9/11 bombing at the 1996 Atlanta Olympics, you had to look to fiction - notably the Super Bowl plot in Black Sunday - for a such a nightmare."

"Saudi National" Injured Monday Is Reportedly In Custody. At 9 PM EST Monday night, the New York Post (4/16, 498K), in an article titled, "Authorities ID Person Of Interest As Saudi National In Marathon Bombings, Under Guard At Boston Hospital," reported that a 20-year-old "Saudi Arabian national" is "under guard at an undisclosed Boston hospital." The Post adds that Fox News reported that "the suspect suffered severe burns." FOX News (4/16), meanwhile, is reporting this morning that "police are searching an apartment in the nearby Boston suburb of Revere as part of the investigation into the explosions."

On the CBS Evening News (4/15, story 2, 2:00, Pelley, 5.58M), correspondent John Miller, who formerly served assistant director of the FBI, similarly reported that a "Saudi national who was near the scene of the blast" is "in custody." Miller reported that just as the bombs exploded, the suspect in custody "began to run," but a "civilian, who thought this individual was acting suspiciously, chased him down and tackled him and then turned him over to Boston police."

On NBC Nightly News (4/15, story 5, 2:15, Williams, 7.86M), Michael Leiter, a national security analyst at NBC News who served as director of the National Counterterrorism Center, commented that it is "potentially the sign of a more sophisticated attack" that the attack in Boston Monday "us[ed] two explosive devices, the first charge which attracts to some extent the first responders...and then to have a second charge go off that is potentially targeting those responders." Leiter said that type of attack is evidence that "a terrorist organization" is "trying to kill people."

CBS News (4/15) reported on its website last night that "two bombs were inside trash cans near the viewing area close to the finish line" and "two unexploded devices has been recovered intact." CBS also reported that video has been recovered that "shows a man with what looked to be two backpacks near the scene just moments before the blast."

The Washington Times (4/16, Chasmar, 76K) reports that Mohammad al-Chalabi, who was "convicted in an al-Qaeda-linked plot to attack US missions in Jordan in 2003," responded to news of the attack by saying, "Let the Americans feel the pain we endured by their armies occupying Iraq and Afghanistan and killing our people there."

Commentators Tie Attack To Tax Day; Kristof Takes Shot At GOP. The Daily Caller (4/15) reports that on MSNBC's Hardball Monday, Chris Matthews and Rep. William Keating (D-MA) "speculated" that the attack

"could be related to Tax Day." Keating is quoted as saying, "We also have Tax Day, April 15, so we don't know if that's the kind of symbol a domestic terrorist might use as well." According to the Daily Caller, Matthews added, "It's filing day for the federal income tax, which does cause some emotions around the country, sometimes in the wrong parts of the brain."

In a post for Politico (4/16, Byers, 25K), Dylan Byers notes that on Monday afternoon, the New York Times' Nicholas Kristof "[E]xplosion is a reminder that ATF needs a director. Shame on Senate Republicans for blocking apptment." Byers noted that Senate Republicans have blocked the confirmation of B. Todd Jones, who "currently serves as acting-director of the ATF." The Daily Caller (4/15) noted that later Monday, Kristof "recanted his comment, calling it a 'low blow.'"

More Commentary. David Callaway is editor in chief of USA Today (4/15, 1.71M), writes, "No one knows whether the origins of this attack were foreign or domestic," and says that following the 1995 Oklahoma City bombing, "people rushed to blame Muslims."

The Washington Post (4/16, 489K), in an editorial, also welcomes the "general understanding of the danger of jumping to conclusions," and says the US has "seen its share of foreign terrorism and homegrown terrorism attacks alike (the 1996 Summer Games in Atlanta come to mind)." And the New York Times (4/16, Subscription Publication, 1.68M) editorializes that it "could be a while before officials determine which malevolent ideology" is to blame.

On the other hand, the Wall Street Journal (4/16, Subscription Publication, 2.29M), in an editorial, says Monday's attack was clearly terrorism, and says it should be a reminder that the threat from extremists has not abated despite the damage the US had done to international terrorist organizations.

USA Today (4/15, 1.71M), in its editorial on the Boston bombing, notes that the Heritage Foundation "has counted more than 50 terrorist plots - 42 of them homegrown - since 9/11."

"Syrian Electronic Army" Hacks NPR Article On Obama's Response To Boston Attack. For a brief period Monday night, NPR's (4/16) website featured a story linked to from the headline: "Obama: 'All Americans Stand With The People Of Boston,'" but the article was replaced with the words: "Syrian Electronic Army Was Here."

SENATE BACKGROUND CHECKS BILL SHORT ON NEEDED VOTES. Media reports indicate the bipartisan compromise bill to require background checks for gun sales is still short of the 60 votes it needs for passage in the Senate. Print reports this morning indicate that President Obama and Vice President Biden have been calling lawmakers seeking support for the measure.

The AP (4/15, Fram) reports that both sides of the issue are seeking "support for a nail-biting showdown vote expected this week." Noting that 16 Republicans voted last week to reject a conservative effort to block debate on gun control measures, the AP reports that Democrats are hoping to tap that group for support for the background check amendment. Seven Republicans have already said they will oppose the plan, and according to the AP, another is leaning against it.

Politico (4/15, Bresnahan, Sherman, 25K) reports that Sen. Pat Toomey, who along with Sen. Joe Manchin authored the background check compromise, "acknowledged they don't yet have the votes," saying, "I'm cautiously optimistic. We're not there at the moment but were working on it." Manchin also said they were short of the votes they needed but added that "he remained hopeful that it would pass." A cloture vote on the measure could occur on Thursday.

In its report on the efforts to line up support for the measure, the Wall Street Journal (4/15, Jones, Peterson, Subscription Publication, 2.29M) notes that opponents question whether expanded background checks will prevent gun violence or would have prevented recent shootings like the Sandy Hook massacre.

Reid: "Unreasonable Extremists" May Try To Prevent Gun Vote. The Washington Times (4/16, Sherfinski, 76K) reports that Senate Majority Leader Harry Reid opened Monday's Senate session with a call to give the victims of the Sandy Hook shootings a vote on gun legislation and a warning that "unreasonable extremists" may attempt to delay or derail the effort. Reid said, "This compromise legislation shouldn't be controversial," and

added that he hopes "there aren't going to be a few unreasonable extremists' that will try to prevent a vote."

Democrats Concerned About Potential Lautenberg Absence. The New York Times (4/15, Hernandez, Subscription Publication, 1.68M) reports that as Democrats work to line up the votes they need to pass gun control measures, lawmakers have become concerned about the whereabouts of Sen. Frank Lautenberg, who has been absent for weeks due to complications stemming partly from cancer treatments. The Times notes that Lautenberg's presence during the gun votes "is shaping up to be critically important" and his aides say that he "will try to get to Washington once the voting begins on the assortment of gun-safety measures."

Senate Gun Owners Divided. USA Today (4/15, Singer, Korte, 1.71M) reports that in last week's Senate vote to proceed on the gun measure, gun-owning Senators "were divided on the bill, but senators who say they do not own guns were mostly unified in favor of debate." Twenty-eight GOP senators and 18 Democrats have indicated to USA Today that they own guns. In last week's 68-31 vote, "26 gun owners (including 10 Republicans) voted to proceed, while 20 gun owners voted against." Of the 30 senators who said they do not own guns, "only three voted not to advance the bill." USA Today adds that 11 senators did not respond to the question and 13 said they did not want to disclose whether they were gun owners. Of those, "four in each group – all Republicans – voted to block the gun bill."

Kerry: Foreign Students Scared To Come To US Due To Guns. The Washington Times (4/16, Chumley, 76K) reports that Secretary of State Kerry told CNN that foreign students considering studying abroad avoid the US because they are scared of guns. Kerry made the comments "in reference to statistics that show the number of Japanese students coming to America fell by 14 percent between 2010 and 2011." Kerry said, "We had an interesting discussion about why fewer students are coming to - particularly from Japan - to study in the United States, and one of the responses I got from our officials from conversations with parents here is that they're actually scared. ... They think they're not safe in the United States, and so they don't come."

More Commentary. In an op-ed for the Washington Post (4/16, Rivkin, Grossman, 489K), David B. Rivkin Jr., who served in the Justice Department and the White House Counsel's Office in the Reagan and George H.W. Bush Administrations, and Andrew M. Grossman, both of whom who practice law in the Washington office of BakerHostetler, argue that there is a risk that the move to quickly pass gun control measures in the wake of the Sandy Hook shootings "will result in bad laws, with unintended and lasting consequences." They write that the President and his allies "have understated the difficult legal questions posed by extending the background-check system to cover more sales and transfers." They argue that while those issues could be addressed with time, "artificial deadlines and an undue sense of urgency guarantee worse results and continued mistrust on both sides of this debate."

In his column for the Washington Post (4/16, Cohen, 489K), Richard Cohen criticizes the gun control under consideration by the Senate, arguing that it would have done nothing to prevent the Sandy Hook shootings or the Aurora, Colorado movie theater shootings. Cohen argues that the Newtown and aurora shootings, while tragic, are "anomalies," and the real threat is "day-in-day-out gun violence." Cohen cites a 1959 Gallup survey which found that "60 percent of Americans favored a total handgun ban," and notes that nine years later, former Johns Hopkins University President Milton Eisenhower "proposed the confiscation of nearly all handguns." Noting that today, "only 24 percent of Americans would support such a ban," Cohen argues that those who would advocate handgun confiscation "read the polls and go quiet or cheer the mere consideration of a bill that would do very little."

SENATORS TO UNVEIL IMMIGRATION PLAN ON WEDNESDAY. Due to the Boston Marathon bombing, coverage of the progress of the bipartisan immigration reform talks in the Senate is relatively light this morning. However, details about the plan, now scheduled to be unveiled to the public Wednesday, are beginning to be confirmed by news organizations with access to summaries of the legislation.

The Washington Post (4/15, Nakamura, 489K) reports that Senate's "Gang of Eight" has planned to "unveil its proposal at a high-profile Tuesday news conference, but that event was canceled" after the Boston Marathon bombing. According to the Post, Sens. Schumer and McCain will be at the White House today to "discuss the bill." The Post also reports that the Senate Judiciary Committee will hold hearings on the bill this Friday and next Monday. Sen. Jeff Sessions is quoted as saying, "Having a hearing Friday and Monday when most members of the Senate aren't even here is proof that they desire no real public airing on the issues. That's very

unacceptable."

USA Today (4/16, Gomez, 1.71M) reports that the Senate plan calls for "pump[ing] an additional \$7 billion into securing" the US-Mexico border, allowing "11 million unauthorized immigrants" to "become US citizens in 13 years or less," while also "dramatically chang[ing] the way US grants visas and green cards in the future." According to USA Today, as it is now, "only about 16% of immigrants are granted green cards based on their skills or their possible contributions to the economy," but under the Senate plan "close to 50% of future immigrants could be granted access based on their skills." USA Today reports that the eight Senators now intend to introduce their legislation to the public on Wednesday.

Bloomberg News (4/15, Tiron) reported that the four Republicans and four Democrats working on a House version of the Senate's immigration reform plan are "considering a 15-year path to citizenship," which would include a "probationary period of two to five years." According to Bloomberg, after that "probationary period" the illegal immigrants will receive "work permits" and then "after roughly 10 years they would be able to get green card." However, Bloomberg adds that the House members crafting the plan want to "make it much easier to achieve citizenship for children brought to the US by their parents," which Bloomberg says is a "goal also shared by" House Majority Leader Eric Cantor.

Sens. McCain and Schumer, in an op-ed for the Wall Street Journal (4/16, McCain, Schumer, Subscription Publication, 2.29M) titled, "A Bipartisan Path To Immigration Reform," describe what they consider the merits of their approach to immigration reform. McCain and Schumer emphasize aspects of the Senate deal meant to appeal to conservatives skeptical about the impact of granting "amnesty" to illegal immigrants currently in the US. The Senators note the lengthiness of the "path to citizenship" they have proposed and insist that border security will be improved as a result of the passage of comprehensive reform legislation.

Carney: Senate Immigration Plan Is "Consistent With The President's Position." Politico (4/15, Slack, 25K) reported that on Monday, White House press secretary Jay Carney said the "plan for a 10- to 13-year path to citizenship for illegal immigrants" envisioned by the Senate's "Gang of Eight" is "consistent with the president's position." Politico noted that Carney also said President Obama "favors enhanced border security and employer verification, as well as 'a number of very specific steps' along the path to citizenship, including paying taxes and a potential fine, learning English and going to the back of the line of immigrants seeking citizenship."

Conservatives Dismiss Rubio's Immigration Reform Defense. Coverage of the bipartisan campaign for immigration reform was brought to a halt by the Boston Marathon attack Monday afternoon, but prior to that, Sen. Marco Rubio's Sunday arguments for the Senate deal he helped craft were being met with a notably skeptical reception from conservative outlets.

One focus of conservative opposition to the Senate immigration reform plan continues to be the Drudge Report. Although a revolving series of big news stories - including the North Korea crisis, the gun control debate, and, on Monday, the Boston attack - have occupied Drudge's banner space for the most part over the past few weeks, there has also been a substantial stream of headlines critical of the bipartisan Senate agreement. As of 6 PM Monday, for example, the Drudge Report featured six headlines on immigration: "DANGER: Senate hearing on immigration delayed for more review of bill... "; "Secret draft lays out plan to select who stays... "; "RUBIO CLAIMS LAW NOT 'AMNESTY'... "; "Status quo 'horrible'... "; "Would boost 'legal' arrivals by 50%... "; and "Business groups peel off as details leak..."

The Wall Street Journal (4/15, Murray, Paletta, Subscription Publication, 2.29M) offers a recap of Rubio's remarks from Sunday, including his contention, made on NBC's Meet The Press, that he is not proposing "blanket amnesty," because he wants illegal immigrants to "pay serious consequences for having violated the law," as well as his claim, on ABC's This Week, that "it will actually be cheaper if they went back home, waited 10 years and applied for a green card."

Mickey Kaus, whose blog for the Daily Caller (4/15, Kaus) is currently devoted to the immigration debate, posted an item Monday morning titled, "Three (3) Quick Rubio Cons," which scrutinizes Rubio's appearances on the Sunday morning news shows. Kaus's assessments of Rubio's performances range from "defensive and jargon-addled on ABC's This Week" to "slick and effective on NBC and CNN." Kaus contends that, despite Rubio's assertions, illegal immigrants currently in the US will have no incentive to return to their home countries if the

Senate plan becomes law and suggests that the border security "trigger" envisioned by Rubio will be essentially meaningless after the threat of deportation is lifted. Kaus notes that on Fox News Sunday, Rubio said, "It's a trigger because, basically, homeland security will have five years to meet that goal," and, "if after five years, Homeland Security has not met that number [90% apprehension rate], it will trigger the Border Commission who will then take over this issue for them." Kaus says Rubio was acknowledging that "all that's triggered is a commission, not any holdup in the march to green cards."

In a post for the National Review (4/16, Krikorian, 193K) titled, "Rubio's Amnesty Pitch: From The Predictable To The Ridiculous," Mark Krikorian accuses Rubio of outright "lying" when he insists the Senate bill does not offer "amnesty." Krikorian maintains that unless Rubio is an "idiot, which I do not think to be the case, he's trying to fool voters, not persuade them."

Also on Monday morning, Byron York, in a column for the Washington Examiner (4/15, York, 93K), said that few, if any, Republicans in Congress have signaled that they are persuadable regarding the necessity of immigration reform, which has led proponents to describe - in a "final, mostly whispered, argument" - a "nightmare scenario" which is, according to York, that if the Senate bill is defeated, President Obama "might unilaterally legalize the millions of illegal immigrants in the country today in an adult version of his Dream Act decree," which "would be impossible for a future president to reverse."

Regarding that particular argument, Conn Carroll, in another post for the Washington Examiner (4/16, Carroll, 93K), says Rubio's "threat" of "unilateral Obama amnesty" only "reminds conservatives exactly why they can't trust Democrats on immigration to begin with," while Republican support for a reform bill out of resignation regarding "an inevitable Obama amnesty would only demoralize conservative voters more." On the other hand, The Weekly Standard's (4/16, Graham, 83K) blog has not had a post on immigration since Friday morning. Both the Weekly Standard and the Washington Examiner are owned by Philip Anschutz's Clarity Media Group.

McCarthy: House Will Follow "Regular Order" On Immigration Reform. In a Monday evening post for National Review Online (4/16, Costa, 193K) Robert Costa reported House Majority Whip Kevin McCarthy has announced that if the Senate approves an immigration reform bill, the House "will follow 'regular order'...regardless of public pressure or a push by the Senate to quickly consider the Gang of Eight's legislation." McCarthy is quoted as saying, "I don't want people to get into the mindset that if the Senate passes something, somehow that comes to the [House] floor, just like that. Regular order means we pass something, the Senate passes something, and then we go to conference."

In another piece for the National Review (4/16, Barone, 193K), conservative columnist Michael Barone, an advocate of the kind of comprehensive immigration reform championed by Rubio, says the Senate should be given adequate time to debate the legislation because, according to Barone, while it is "certainly true that opponents of legislation will try to stretch the process out until it is too late to act," it is also the case that "rubber-stamping the first draft of a bill hundreds of pages long can produce a law rife with unintended and unhappy consequences..."

Lane Questions Effectiveness Of US "Visa-For-Dollars Program." Charles Lane, in a column for the Washington Post (4/16, Lane, 489K), describes as "dubious policy" and a "real scandal" the Federal government's "EB-5 visa-for-dollars program." According to Lane, there are 10,000 "permanent-residency slots for EB-5 each year," and "U.S. officials tout the \$6.8 billion invested and 50,000 jobs created since the program's start" in 1990, which Lane says "sounds impressive - until you realize that foreign investment in the United States totals \$2.5 trillion and that the program's fuzzy job-creation count includes jobs 'indirectly' attributable to the investment."

Editorial Wrap-Up:

NEW YORK TIMES. "Bombs At The Marathon." The New York Times (4/16, Subscription Publication, 1.68M) editorializes that it "could be a while before officials determine which malevolent ideology" is to blame for the bombings in Boston.

"A Wrenching Adoption Case." The New York Times (4/16, Subscription Publication, 1.68M) editorializes

about a custody case that the Supreme Court will hear today between a South Carolina couple who adopted a girl, and the girl's father, who is part Native American and gained custody of the girl under the Indian Child Welfare Act, which restricts adoptions of Native American children, noting that under the laws of both Oklahoma, "where the biological mother lives," and South Carolina, where the adoptive couple lives, "a biological father is not allowed to intervene in an adoption once he has given up his parental rights." The Times argues that in cases like this, "it makes little sense to allow a biological father who was not in the picture from surfacing belatedly and vetoing an adoption that would be in the best interests of the child."

"West Chester Loses Again On Fair Housing." The New York Times (4/16, Subscription Publication, 1.68M) editorializes about a consent decree signed by Westchester County, NY, more than three years ago to settle a fair-housing lawsuit. According to the Times, county officials have spent that time "shirking their obligations, challenging the deal in court, and losing," most recently on April 5, when the 2nd Circuit Court of Appeals "upheld a district judge's ruling that the county was in violation of terms of the court order." County Executive Rob Astorino, who was elected in 2009, "set the county on its defiant path" by arguing "that the county had met its obligation to promote the law," but the Times adds that these "theatrics may play well on talk radio, but they could cost Westchester dearly - not just in dollars lost for housing and services for the poor, plus additional fines."

"An Ethical Breakdown."

WASHINGTON POST. "Shock Wave In Boston." The Washington Post (4/16, 489K), in an editorial, welcomes the "general understanding of the danger of jumping to conclusions," about the Boston bombings and says the US has "seen its share of foreign terrorism and homegrown terrorism attacks alike (the 1996 Summer Games in Atlanta come to mind)."

"Whose Child Is Baby Veronica?" The Washington Post (4/16, 489K) editorializes about a "wrenching" custody case that the Supreme Court will hear today between a South Carolina couple who adopted a girl, and the girl's father, who is part Native American and gained custody of the girl under the Indian Child Welfare Act, which restricts adoptions of Native American children. The Post argues that in restricting adoptions under the act, Congress intended "to prevent the forcible breakup of Native American families, a shameful past practice," but adds that lawmakers "surely did not mean to protect the rights of Native American biological parents to the point that a child's unwed, absent father can undo an adoption that her biological mother and legal custodian determined to be in her best interests, merely because she has a drop of Native American blood in her," and urges Congress to amend the law should the court rule in the father's favor.

"Questions For Terry McAuliffe." An editorial in the Washington Post (4/16, 489K) says that some of the questions surrounding Virginia gubernatorial candidate Terry McAuliffe's involvement with the electric car company GreenTech Automotive are "specious, some not." The Post argues that if GreenTech was merely a "magnet for cheap foreign capital, without realistic prospects of producing cars, jobs or profit," it would "produce a stench." However, the "skepticism of Virginia officials and the participation of foreign investors under a legitimate federal program do not, by themselves, constitute a scandal."

WALL STREET JOURNAL. "Terror In Boston." The Wall Street Journal (4/16, Subscription Publication, 2.29M), in an editorial, says Monday's attack was clearly terrorism, and says it should be a reminder that the threat from extremists has not abated despite the damage the US had done to international terrorist organizations.

"Death Tax Made More Deadly." The Wall Street Journal (4/16, Subscription Publication, 2.29M), in an editorial notes that in his FY'14 budget plan, President Obama proposes raising the Federal estate tax to 45% from 40% and decreasing the exemption level to \$3.5 million from \$5 million. The Journal notes that the existing rates were agreed to by the President just three and a half months ago, and suggests that his proposal, which it says is extremely unlikely to become law, is an effort to revive his popular appeal for more revenue from the wealthiest Americans.

"Putin's Got A List." In an editorial, the Wall Street Journal (4/16, Subscription Publication, 2.29M) notes that after the US government published a list of Russians banned from travel to the US under the Magnitsky Act, the Russian government issued two lists of US officials who are banned from traveling to Russia. One list consists of individuals Moscow says were involved in torture and indefinite detention at Gitmo. The other includes Americans

who are said to have violated the human rights of Russian citizens abroad. The Journal dismisses both lists and argues that while these officials are banned from travel to Russia, no US judges, prosecutors, or Members of Congress should accept invitations to visit the country.

"The Mess In Caracas." An editorial in the Wall Street Journal (4/16, Subscription Publication, 2.29M) calls the close results of Venezuela's presidential election a rejection of Hugo Chavez's legacy, and argues that challenger Henrique Capriles is right in his demand for a recount and his refusal to concede. The Journal cites popular uprisings in the Philippines and Ukraine and argues that the only way for Venezuelans to resist the regime is to do the same.

New Interior Chief Savors a Steep Learning Curve

By JOHN M. BRODER

SHENANDOAH NATIONAL PARK, Va. — Sally Jewell bounded up a granite boulder near the peak of Old Rag Mountain and turned back to her hiking companion, who was staring up at the smooth rock that offered no obvious hand- or footholds.

"Trust your feet," she said.

That mountaineer's mantra has carried Ms. Jewell through a lifetime of challenging ascents and a varied career as petroleum engineer, banker and retail executive. On April 12, she was sworn in as the 51st secretary of the interior.

Ms. Jewell, 57, who has climbed Mount Rainier seven times along with some of the world's highest peaks, said that she is happiest on the steepest part of the learning curve. A woman of untamed energy, competitiveness and confidence in the boardroom and on a mountain trail, she is undertaking perhaps the greatest challenge of her life as she assumes command of a huge bureaucracy in a city that festers barely above sea level.

Until President Obama tapped her as interior secretary to succeed Ken Salazar, a former Democratic senator from Colorado, Ms. Jewell was chief executive of Recreational Equipment Inc. in Kent, Wash., a suburb of Seattle. She has never held elective office, though she has served as member of the board of trustees of the University of Washington and at a variety of nonprofits. She has spent little time in what residents of the Pacific Northwest call "the other Washington."

Like many successful corporate titans who have come to Washington before her, she will learn that running a business or a university board is not necessarily adequate training for a top government post. She noted during a five-hour round-trip hike of Old Rag, for example, that no rational business executive would cut an operating budget across the board, as the federal budget process known as the sequester requires. And she said that no matter how determined she is to spend her time promoting outdoor recreation or increasing renewable energy production, events can rudely intrude.

"You never know what's going to hit you in a job like this," she said. "For Secretary Salazar, very unfortunate, but the Deepwater Horizon spill happened relatively early in his term and it took an enormous amount of time and energy that one has to deal with. Things happen. Earthquakes happen. Natural disasters happen. The American West is a tinderbox right now."

Ms. Jewell underwent weeks of grueling briefings for what turned out to be a relatively mild Senate confirmation hearing. The toughest questions from Republicans concerned her role on the board of the National Parks Conservation Association, a mainly volunteer group that advocates for parks and park employees and that has sometimes sued the federal government. Senators largely glossed over the major missions of the Interior Department, including supervising oil drilling on public lands and waters, protecting endangered species, managing millions of acres of public lands, coping with climate change and coordinating federal relations with hundreds of American Indian tribes.

Before taking office, she spent scores of hours with senior political and career employees in a small conference room at the department headquarters in Foggy Bottom, learning the physics of oil spill containment gear, the habitat of the Gunnison sage-grouse and the politics of an obscure road-building project through the Lembeh Wilderness of Alaska. She likened the experience to drinking from a fire hose.

She professed not to be overawed by taking charge of an agency with an \$11 billion budget, 70,000 employees and stewardship of 20 percent of the territory of the United States.

"Well, I'm not scared of it," she said in an interview at the peak of the 3,291-foot Old Rag, one of the most popular hiking spots near Washington, after she scampered up a trail that rose 2,500 feet over roughly three miles. Ms. Jewell was slowed only by a party that included two park officers, a press aide, a bodyguard, a reporter and a photographer, none of them as fit and agile as she.

"You can't possibly come into a job like this and expect to know what you're doing right out of the gate," she said. "You have to listen to very, very smart people who know what they're doing and who can help you prioritize."

Ms. Jewell was born in England and came to the United States at the age of 3. She said her father, Peter Roffey, an anesthesiologist, had moved the family because he was uncomfortable with England's ossified class system. He died in 2003. Her mother, Anne, who died in 2011, was a nurse practitioner who specialized in women's health.

Ms. Jewell met her future husband, Warren, a computer consultant, at the University of Washington, where both were studying engineering. They have two children, Peter, 29, a pediatric intensive care nurse and Anne, 27, a revenue agent with the federal government. Both live in Seattle.

Ms. Jewell is an accomplished mountaineer, which made her a natural for the top job at R.E.I., founded as a cooperative by a group of Northwest climbers in the 1930s. She first attempted Mount Rainier at age 15, was turned back by snow, but summited the following year. She climbed Mount Kilimanjaro with Peter for his 16th birthday. She took Anne to Switzerland on her 16th birthday to climb Mont Blanc, but her daughter demurred. Ms. Jewell hired a guide and climbed the mountain, the highest point in Western Europe, on her own.

In 2011, she joined an expedition to Antarctica to climb Mount Vinson, at 16,050 feet the highest point on that continent. Stranded there for 11 days by an airline strike in Chile, she killed time by climbing the remaining peaks of the glacial Vinson Massif.

Senator Maria Cantwell, Democrat of Washington, has known and hiked with Ms. Jewell for more than 20 years. She said that the capital is very different from the outdoor and corporate worlds Ms. Jewell has conquered, one where humility, even if feigned, is an essential tool.

"She has seen success in several industries — oil and gas, banking and then shifted to R.E.I. and made it all the way up the food chain there," Ms. Cantwell said. "But this is a different animal. My advice was, 'if a member calls you, call back the same day.' The way it works here, if you show respect, you'll get respect back."

Why would the chief executive of a popular outdoor gear company earning an annual salary of \$2 million take on a temporary job in an unfamiliar town paying less than \$200,000 a year?

"My work at R.E.I. was incredibly fulfilling and rewarding, especially the stewardship elements of it, the ability to connect young people to public lands close to home," said Ms. Jewell, a sinewy 5-foot-7 with short salt-and-pepper hair. But, she said, "There are very few roles I would say on this planet compared to the one that I've been asked to serve in that has an opportunity to make a difference."

Ms. Jewell, who is something of a celebrity in Seattle, has already had a taste of how humbling Washington can be to newcomers. Of the two dozen or so other hikers whom she passed on

the Old Rag trail, none recognized her or bothered to ask why such a large entourage followed her.

And when she went to open an account at a local bank branch near her new home in the Dupont Circle area of Washington, the clerk asked where she was employed.

"The Interior Department," Ms. Jewell replied.

"What's your position there?" the clerk asked.

"Secretary," Ms. Jewell answered. The clerk just nodded.

U.S. DEPARTMENT OF THE INTERIOR NEWS BRIEFING

Mobile version and searchable archives available at interior.bulletinnews.com.

DATE: TUESDAY, MAY 7, 2013 7:00 AM EDT

TODAY'S TABLE OF CONTENTS

DOI IN THE NEWS:

- + Interior Officials To Defend Budget Before Congress.
- + State Governors, Officials Urge Interior Department To Allow More Offshore Access.
- + Agencies Asking For More Wildlife Drone Missions.
- + Interior's Inspector General's Office Recognized For Telework Program.
- + Deputy Secretary Hayes To Leave Interior.
- + Report Calls For Integrated Management Strategy In Arctic.
- + Effort To Recognize Federal Workers Touted.
- + Paper Urges Commitment To Offshore Energy Development.
- + Veteran Argues Conservation Is Patriotic Duty.

AMERICA'S GREAT OUTDOORS:

National Park Service:

- + Acadia's Cadillac Mountain Road To Open Earlier Than Planned.
- + Flooding Hits Congaree National Park.
- + Volcano House Hotel To Reopen At Hawaii Volcanoes National Park.
- + Art Exhibit To Feature Celebration Of Statue Of Liberty.
- + Rescuers Search For Missing Hiker In Yosemite National Park.
- + Injured Hiker Rescued From Yosemite National Park.
- + Missing Hiker At Congaree National Park Found.
- + Body Recovered From Delaware River.
- + Glacier National Park Bones To Be Identified This Week.
- + NPS Officials Preparing For Prescribed Burn At Devils Tower National Monument.
- + Fire Burns About 59 Acres Near Lake Meredith National Recreation Area.
- + Proposed 9/11 Museum Fee Criticized.

Bureau of Land Management:

- + BLM Begins Taking Comments On Gateway West Project.
- + BLM Holds Meetings On Hi-Line Plan.
- + Nebraska Rancher Faces 149 Animal Cruelty Counts.
- + Additional Coverage Of Potential Closure Of Castle Rocks.

Fish and Wildlife Service:

- + Wolverine Proposal Generates States' Opposition.
- + FWS Seeks Input On White River Refuge Expansion.
- + Additional Coverage Of Grizzly Bears Proposal.

SECURING AMERICA'S ENERGY FUTURE:**Renewable Energy:**

- + Wyoming's Hydropower Potential Explored As Congress Considers Bills.
- + Wind Energy Group Eyes Plan To Present To Congressional Panels.

Onshore Energy Development:

- + Environmental Group Asks BLM To Reconsider Lease Suspension For Thompson Divide Drillers.
- + BLM Seeks Feedback On Expansion To Horseshoe Basin Oil, Gas Project.

TACKLING AMERICA'S WATER CHALLENGES:

- + Bay Delta Conservation Plan Divides California.
- + Chippewa Cree Business Committee Refutes Corruption Allegations.
- + Water Rights Expected To Spark Conflict Between Klamath River Farmers, Tribes.
- + Full Supply Expected For All Yakima Basin Irrigators.
- + Deal Reached To Keep Lake Berryessa's Markley Cove Open Through 2014.
- + Contract Awarded For Final Phase Of Work On Folsom Dam Spillway.

EMPOWERING NATIVE AMERICAN COMMUNITIES:

- + New York Times Story On Keepseagle Settlement Disputed.
- + Cherokees May Wait Up To 10 Years For Cobell Land Purchases.

TOP NATIONAL NEWS:

- + "Whistleblowers" Expected To Contradict Official Account Of Benghazi Attack.
- + Biden Says Gun Control Will Have To Wait For Immigration.
- + Economists Expect GDP Growth To Slow This Year.

EDITORIAL WRAP-UP:

- + New York Times.
- + Washington Post.
- + Wall Street Journal.

BIG PICTURE:

- + Headlines From Today's Front Pages.

WASHINGTON SCHEDULE:

- + Today's Events In Washington.

LAST LAUGHS:

- + Late Night Political Humor.

DOI in the News:

INTERIOR OFFICIALS TO DEFEND BUDGET BEFORE CONGRESS. The [EnergyWire](#) (5/6, Taylor, Subscription Publication) reports, "Interior Secretary Sally Jewell will make her first appearance before Congress tomorrow to defend her agency's \$11.7 billion budget, a proposal that envisions a significant boost in conservation cash and new fees on the oil and gas industry." According to the article, "Jewell, along with outgoing Deputy Secretary David Hayes; Assistant Secretary for Policy, Management and Budget Rhea Suh; and Deputy Assistant Secretary for the Office of Budget, Finance, Performance and Acquisition Pam Haze, will testify before the Senate Interior, Environment and Related Agencies Appropriations Subcommittee." Also, "at the same time this week, Bureau of Land Management Principal Deputy Director Neil Kornze will defend his agency's budget to a House panel."

In its "E2 Wire" blog, [The Hill](#) (5/7, Colman, Geman, 21K) reports, "The 10:30 a.m. hearing will provide lawmakers a chance to ask about several hot-button topics within Interior's jurisdiction." According to the article, "they include upcoming, controversial rules to regulate the oil-and-gas development method hydraulic fracturing when it

occurs on public lands."

Also reporting on the story are [Politico](#) (5/7, Guillen, 25K), the "E2 Wire" blog of [The Hill](#) (5/7, Colman, 21K) and the "On The Money" blog of [The Hill](#) (5/6, Needham, 21K).

STATE GOVERNORS, OFFICIALS URGE INTERIOR DEPARTMENT TO ALLOW MORE OFFSHORE

ACCESS. Several media outlets on Monday reported that six US governors spoke during an industry conference, urging the Federal government to allow greater access to coastal waters for offshore exploration and production.

The AP (5/7) reports that the governors of Alaska, Mississippi, Alabama, South Carolina, Texas, and North Carolina spoke out on Monday during the Offshore Technology Conference in Houston, as did officials from Virginia and Louisiana. The states all spoke urging the Federal government to allow increased access for offshore exploration and production. They argued that the moratorium placed on offshore drilling following the 2010 Deepwater Horizon spill has "made it difficult" for companies to produce in the area, despite the lifting of the ban. The officials urged increased drilling, saying it "would create jobs, strengthen the nation's economy and lower gas prices."

FuelFix (5/6) notes that all six Governors who spoke on Monday are Republicans. The article says Gov. Pat McCrory (R-NC) argued, "We want to create jobs." McCrory urged President Obama "to join us," making "government a partner with us - not an adversary." He pleaded, "Let the states unleash these natural resources to create jobs and (help) the economy." Gov. Rick Perry (R-TX) in comments touched upon new safety measures implemented since the Deepwater Horizon disaster, saying, "Today's energy exploration in the Gulf is safer than ever, for our operators (and) for the environment." FuelFix notes that although the Interior Department's current offshore drilling lease plan, which runs through June 2017, includes auctions for offshore areas near Alaska and in the Gulf of Mexico, no "mid-Atlantic states" are included in the auctions.

Dow Jones Newswires (5/7, Sider) provides similar coverage on the comments of Gov. Rick Perry (R-TX) and others during the Offshore Technology Conference on Monday. Governors from states that already have offshore drilling said Interior Department officials should relax regulations on the industry to help increase production in offshore areas.

The [Friendswood \(TX\) Journal](#) (5/7) reports, "Gov. Rick Perry today renewed his call for more offshore energy development and consistent federal regulations in order to help our nation reach its goal of energy independence." Perry "spoke at the 2013 Offshore Technology Conference as part of a panel of coastal governors." He said, "Today, energy exploration in the Gulf is safer for our operators and our environment than ever before. Technological and procedural advances have opened up huge sources of energy, giving us the capability to reach vast stores of energy reserves previously thought untouchable. With every step forward, we move closer to the day when our nation can reach true energy independence and end our crippling dependence upon foreign regimes to meet our needs."

The [Charlotte \(NC\) Observer](#) (5/6, 148K) reports, "Gov. Pat McCrory is visiting an offshore energy trade conference in Texas to try to help build momentum for drilling off the coast of North Carolina and other states." He "recently joined a coalition of governors in Outer-Continental Shelf states that want President Barack Obama's administration to open more coastal waters to natural gas and oil exploration."

Also reporting on the story are the [Winston-Salem \(NC\) Journal](#) (5/7, 55K), the [Triangle Business Journal](#) (5/7, Weisbecker, Subscription Publication) and [WFMY-TV](#) Greensboro, NC (5/7).

Industry Group Notes Offshore Producers Like Clarity On Industry Regulations. FuelFix (5/6) reports that offshore policies at the Federal level will likely be a hot topic at this week's Offshore Technology Conference. The industry hopes Washington will "clarify the standards that will govern a new era of Arctic drilling and approve a new generation of seismic research that could help pinpoint oil." Additionally, the industry has its eyes on new mandates for blowout preventers that are set to be implemented by the Interior Department.

FuelFix (5/6, Weber) reports that on Monday during the Offshore Technology Conference in Houston, Schlumberger senior engineer Praful Desai said "technology and collaboration between contractors will be key to plugging and abandoning" wells as drilling increases due to the US oil and gas boom. Desai discussed the

difficulties faced with well plugging in the Gulf of Mexico and North Sea, "key areas" for offshore exploration that pose "greater risks and costs" as producers drill deeper. He said field partners need to collaborate to lower costs, and that "a number of new technologies will be implemented, focused mainly on cost reduction and safety."

Federal Policies Urged To Support Innovation In Oil, Gas Exploration. In an op-ed for the Houston Chronicle (5/7, 434K), David Holt, President of the Consumer Energy Alliance, writes that "federal policies" must support the "expansion of oil and gas drilling technologies." He argues that "while remarkable advances in onshore technology have opened up vast fields of oil and natural gas once thought to be unreachable, the future of American energy production lies offshore, not just on land." Holt also notes at this week's Offshore Technology Conference, "a group of eight coastal governors, including Gov. Rick Perry, called for an improved dialogue with the federal government to allow expanded access to US waters."

Editorial: Move Forward With Fracking But Learn From North Dakota's Experience. The Fayetteville (NC) Observer (5/7, 47K) editorializes on offshore drilling, noting that Gov. Pat McCrory recently said it "could bring 140,000 new jobs to the Atlantic coastal region. And he cited North Dakota, with its 3.3 percent unemployment rate and booming economy as an example of what petroleum exploration can do." The Observer argued, "What the governor didn't mention was the problems North Dakota is facing," such as "spills of oil or fracking fluids," and "the rise of shantytowns." The piece concludes, "Yes, it is time to find out what's out there. ... Let's move ahead, but let's learn from North Dakota's experience too."

AGENCIES ASKING FOR MORE WILDLIFE DRONE MISSIONS. The New York Times (5/7, Farrell, Subscription Publication, 1.68M) reports, "Drone technology, which has become a staple of military operations, is now drawing scientists with its ability to provide increasingly cheaper, safer and more accurate and detailed assessments of the natural world." According to the article, "designed to monitor enemy positions from afar, the early Ravens, from about 2005, which cost \$250,000 per system, were slated for destruction when an Army colonel thought they might be better used for scientific research and were donated to the Geological Survey." Now, "every week brings more requests from...Interior Department agencies" seeking to use the drone.

INTERIOR'S INSPECTOR GENERAL'S OFFICE RECOGNIZED FOR TELEWORK PROGRAM. Government Computer News (5/7, Crowe) reports, "The Mobile Work Exchange, which promotes sharing about innovations in setting up telework systems and programs between government and commercial organizations, recently announced the recipients of the group's 2013 'Tele-Vision' Awards." The article notes that "'The Largest Leap In Telework/Mobility' award went to the Telework Program of the Department of the Interior Inspector General's Office." According to the article, "in three years, from 2009 to 2012, the agency's IG office went from near-zero participation in telework to 98 percent," which "might have made an impact on the employee satisfaction and productivity at the office."

DEPUTY SECRETARY HAYES TO LEAVE INTERIOR. KCET (5/7, Clarke) reports, "Deputy Interior Secretary David Hayes, who's generally credited with drafting the US Interior Department's massive expansion of renewable energy development on public lands since 2009, will be leaving his post for a job at Stanford University." According to the article, "as second-in-command at Interior, Hayes oversaw the implementation of Interior's development of programs such as the Solar Programmatic Environmental Impact Statement (PEIS) and its fast-tracking of wind energy developments on public lands." The article notes that "in addition to his work to promote industrial renewables on public lands, Hayes also oversaw Interior Department involvement on a number of Native issues and on Arctic energy exploration and development."

REPORT CALLS FOR INTEGRATED MANAGEMENT STRATEGY IN ARCTIC. The Alaska Native News (5/7, Bauman) reports, "A federal interagency working group led by the Interior Department says an integrated management strategy is called for in the rapidly changing Arctic." The article notes that "the report released April 4 by Interior Deputy Secretary David J. Hayes highlights the need for a coordinated approach using best available science to integrate cultural, environmental and economic factors in decision-making about development and conservation." Hayes said that "the interagency report chronicles how Arctic residents are dealing with rapid, climate change-induced impacts on their resources and traditional ways of life at the same time that new economic activity and opportunities are emerging."

EFFORT TO RECOGNIZE FEDERAL WORKERS TOUTED. The Washington Post (5/6, Davidson, 489K) reports

that Max Stier, president of the Partnership for Public Service, believes that the "antidote" to "bashing" of Federal workers is through the implementation of Public Service Recognition Week. The event is being organized by the Public Employees Roundtable. Stier says, "Seriously, we will never get the government we want if all we do is tear it down. Amazing things are going on by public servants and we need to recognize them if we want them to be replicated by other public servants."

PAPER URGES COMMITMENT TO OFFSHORE ENERGY DEVELOPMENT. The Baton Rouge (LA) Advocate (5/7, 80K) editorializes, "While there has been much attention paid to the development of shale oil and gas on land, the first visit of the new secretary of the US Department of the Interior to the oil patch is a reminder that immense natural wealth remains to be tapped offshore." On her visit to a drilling rig, Interior Secretary Sally Jewell told employees, "Maintaining the public's trust in the safety and environmental performance of oil and gas production is critically important as we continue to tap into the Gulf's abundant resource potential." The paper concludes that "potential sources of oil and gas should be part of, in Jewell's words, 'powering our nation and strengthening our economy.'"

VETERAN ARGUES CONSERVATION IS PATRIOTIC DUTY. For "The Blog" of the Huffington Post (5/7, Starr), Mark Starr, Program Director, Vet Voice Foundation, writes, "Protection of our nation's lands such as the California desert is clearly a patriotic duty." He notes, "first, as veterans we clearly understand the importance of renewable energy development and how it relates to our national security." Also, "by protecting these lands through the new designation of two new national monuments, wilderness areas, and wild and scenic rivers...we will undoubtedly see more tourism and dollars injected into the area."

America's Great Outdoors:

National Park Service:

ACADIA'S CADILLAC MOUNTAIN ROAD TO OPEN EARLIER THAN PLANNED. The Boston Globe (5/6, 250K) reports, "The National Park Service has worked with local Maine merchants to come up with a plan to open the Cadillac Mountain road earlier than planned." According to park officials, "the portion of the Park Loop Road that provides access to the mountain will open for the season on Saturday, while other parts of the loop road remain closed until May 17 because of the federal budget cuts."

Also reporting on the story is the Bangor (ME) Daily News (5/6, Trotter, 45K).

FLOODING HITS CONGAREE NATIONAL PARK. The State (SC) (5/6, Holleman, 71K) reports, "The combination of a wet spring and drenching weekend rains has pushed several rivers to flood levels, including the Broad, Congaree, Enoree, Saluda and Santee." According to the article, "if the National Weather Service forecast is accurate, flood waters at Congaree National Park will reach heights they haven't hit since 1988." The article notes that "the park's buildings will remain above the flood waters, but much of the boardwalk trail and all but the highest parts of the bluff trail will be under water."

Also reporting on the story is the Greenville (SC) News (5/7, Holleman, 56K).

VOLCANO HOUSE HOTEL TO REOPEN AT HAWAII VOLCANOES NATIONAL PARK. The Hawaii Business Magazine (5/7, Stickler) reports, "After standing empty for three years, the Volcano House Hotel is gradually reopening on the rim of the still-active Kilauea Caldera at Hawaii Volcanoes National Park." The NPS "closed the lava-stone and ohia-wood structure on Jan. 1, 2010, as its past glory faded below national-park standards," and "in August 2012, the newly formed Hawaii Volcanoes Lodge Co. picked up the lease and guaranteed to bring it up to 21st-century specifications." According to project manager Ercel Dunsmore, "a \$3 million renovation began in January and should be completed by June."

ART EXHIBIT TO FEATURE CELEBRATION OF STATUE OF LIBERTY. The Jersey Journal (NJ) (5/7, Stein, 17K) reports, "The opening reception for the NJCU art student exhibit 'Posters & Logos of the 125th Anniversary of the Statue of Liberty' will take place tonight at 6 p.m. in the lobby outside the Mildred H. Hunke Auditorium of the Five Corners Branch Library, 678 Newark Ave., Jersey City." According to the article, "the exhibit will feature posters and logos from contestants who designed the works to celebrate the Statue of Liberty's 125th

anniversary in 2011." The article notes that "the winning logo used for the year-long celebration was designed by Joseph Domalewski and was selected by the public through an online competition by the National Park Service."

RESCUERS SEARCH FOR MISSING HIKER IN YOSEMITE NATIONAL PARK. The Minneapolis Star Tribune (5/7, Smith, 335K) reports, "Searchers are looking for a 73-year-old Edina man who didn't return Sunday afternoon from a solo day hike to Vernal Fall in Yosemite National Park." According to the article, "about 30 people and a dog team scoured the area Sunday evening and Monday in search of Kenneth Stensby, an experienced hiker, and found only his dark colored day pack near the railing at the top of Vernal Fall." Park Ranger Scott Gediman said that "officials likely will add a helicopter and additional dog teams."

The Fresno (CA) Bee (5/6, 113K) reports, "Yosemite National Park officials are asking the public's help to locate a hiker who went missing on a hike to the top of Vernal Fall." Also, "the park service asked hikers to check their photos for images of Stensby or his pack."

Also reporting on the story are the Los Angeles Times (5/6, Mather, 692K), the Modesto (CA) Bee (5/6, Guerra, 59K), the Sacramento (CA) Bee (5/6, 202K) and the St. Paul Pioneer-Press (5/7, 201K).

INJURED HIKER RESCUED FROM YOSEMITE NATIONAL PARK. The Sierra (CA) Sun Times (5/7) reports on the rescue of Fernando Celis, who was injured while hiking in Yosemite National Park.

MISSING HIKER AT CONGAREE NATIONAL PARK FOUND. WLTX-TV Columbia, SC (5/7, Wirtzberger) reports, "Columbia Fire Department and several other agencies spent part of Sunday evening searching for a missing female hiker." According to Brick Lewis with the Columbia Fire Department, "crews have found the missing hiker at Congaree National Park."

BODY RECOVERED FROM DELAWARE RIVER. The Lehigh Valley (PA) Express Times (5/7, 44K) reports, "Authorities say they've recovered a body spotted floating in the middle of the Delaware River on the Pennsylvania-New York border." According to the article, "state police in Sullivan County, N.Y., say today that the body was found by a group of canoeists Saturday afternoon near the border of the towns of Tusten and Highland, 85 miles northwest of New York City." The article notes that "New York State Police, the National Park Service and local emergency crews responded."

Also reporting on the story are the Pocono (PA) Record (5/7, 14K), the Lewistown (PA) Sentinel (5/7), and the Mid-Hudson News (5/6).

GLACIER NATIONAL PARK BONES TO BE IDENTIFIED THIS WEEK. KTVQ-TV Billings, MT (5/7) reports on the "bones that were found in Glacier National Park last week." According to Flathead County Sheriff Chuck Curry, "the bones are being looked at by a medical examiner in Billings to determine whether they're from a human or an animal." Curry "says they should know more answers by the end of the week."

Also reporting on the story is KPAX-TV Missoula, MT (5/7).

NPS OFFICIALS PREPARING FOR PRESCRIBED BURN AT DEVILS TOWER NATIONAL MONUMENT. The Rapid City Journal (5/7, 24K) reports, "As National Park Service officials prepare for a prescribed burn at Devils Tower National Monument in Wyoming next week, they can't help thinking about the one that got away from them." The article notes that "the April 3 prescribed burn on the Grand River National Grasslands near Hettinger, N.D. and Lemmon escaped containment and burned thousands of acres, including private land." The fire is "a reminder to Devils Tower officials of what can go wrong and should be guarded against."

FIRE BURNS ABOUT 59 ACRES NEAR LAKE MEREDITH NATIONAL RECREATION AREA. The Amarillo (TX) Globe News (5/6, Bryant, 31K) reports, "A fire in the Lake Meredith National Recreation Area burned about 59 acres, Chief Ranger Paul Jones said." The NPS "responded about 5:45 p.m. Saturday to the fire at Harbor Bay, with the Fritch Volunteer Fire Department, the Stinnett Fire Department, Potter County Fire Department and Borger Fire Department assisting, Jones said." He "said the fire was caused by people and remains under investigation."

PROPOSED 9/11 MUSEUM FEE CRITICIZED. In his column for the NorthJersey.com (5/7, Kelly), Mike Kelly

writes, "The announcement that visitors to the 9/11 Museum at Ground Zero will pay an entry fee as high as \$25 per person to view underground exhibits and a vault containing the remains of unidentified victims has renewed a roiling debate over what should be done with that hallowed ground – and who's in charge of it." According to Kelly, "the proposed fee would effectively exclude low- and moderate-income families who were as affected as anyone by the 9/11 attacks." However, he notes that "not many other options are available," since "when asked last year if it would consider taking over the management of the museum and finances, the National Park Service responded with an emphatic no."

Bureau of Land Management:

BLM BEGINS TAKING COMMENTS ON GATEWAY WEST PROJECT. The [Boise \(ID\) Weekly](#) (5/6, 35K) reports, "Beginning today, the public will have the opportunity to weigh in on the latest version of the Gateway West power project - a proposed transmission line that would, if approved, run from Wyoming across southern Idaho." The BLM "is holding a series of public comment meetings around Idaho beginning this afternoon at 4 p.m. at the Boise Hotel and Conference Center on Vista Avenue," and "later this week, the BLM will take the issue to similar meetings in Kuna, Murphy and Melba."

The [Northwest Cable News \(Seattle, WA\)](#) (5/7, Grey) reports, "The Gateway West Transmission project is a high priority project for the Obama administration and Idaho's Republican senators and representatives are calling on you to make your voice heard with 'strong public input.'" The article notes that "some people are concerned about the transmission lines being near the Morley Nelson Snake River Birds of Prey National Conservation Area." Meanwhile, "others, including Idaho's congressional delegation, are concerned about the BLM creating new preferred lines after people most affected by the project had already worked with Idaho Power on a route."

Also reporting on the story is [KTVB-TV](#) Boise, ID (5/7, Grey).

BLM HOLDS MEETINGS ON HI-LINE PLAN. The [Great Falls \(MT\) Tribune](#) (5/6, Puckett, 25K) reports, "Five informational meetings on a proposed management plan that will direct energy development, conservation of wildlife habitat, recreation and livestock grazing on 2.4 million acres of public lands in northern Montana kick off this week." According to Stanley Jaynes, the field manager for the Bureau of Land Management's Have field office, "agency officials already are hearing from the public about the plans to protect unbroken prairie contained in the Hi-Line Draft Resource Management Plan and Environmental Impact Statement." The article notes that "key issues in the plan involve sage grouse protections, identifying lands with wilderness characteristics and documenting what lands will be available for oil and gas development."

NEBRASKA RANCHER FACES 149 ANIMAL CRUELTY COUNTS. The [High Plains Journal](#) (5/7) reports, "Morrill County Attorney Jean Rhodes has filed an amended complaint against a western Nebraska rancher, charging him with 149 felony counts of abandonment and cruel animal neglect resulting in injury or death." According to the article, "authorities last month found many of the 200 horses and several burros on the 3-Strikes Ranch emaciated and suffering from overgrown hooves and other ailments. Nearly 75 dead horses and burros have been documented." The article notes that "the ranch had been a sanctuary for wild horses adopted by the Bureau of Land Management."

ADDITIONAL COVERAGE OF POTENTIAL CLOSURE OF CASTLE ROCKS. Additional coverage of the potential closure of Castle Rocks was provided by the [Washington Post](#) (5/6, 489K), [Yahoo!](#) (5/7, Furfaro) , and [Yahoo! News Canada](#) (5/7).

Fish and Wildlife Service:

WOLVERINE PROPOSAL GENERATES STATES' OPPOSITION. The [San Jose Mercury News](#) (5/7, Brown, 539K) reports, "State officials in the Northern Rockies on Monday lined up against a federal proposal to give new protections to the carnivorous wolverine, as climate change threatens to melt the species' snowy mountain strongholds." According to the article, "Montana, Idaho and Wyoming officials insist federal protections aren't necessary for the estimated 250-300 wolverines that live across the West." But "biologists say warming temperatures could shrink the wolverine's mountain habitat in the Lower 48 by as much as 60 percent over the next 80 years."

Also reporting on the story is the Denver Post (5/7, Brown, 443K).

FWS SEEKS INPUT ON WHITE RIVER REFUGE EXPANSION. The Stuttgart (AR) Daily Leader (5/6, Morris, 2K) reports, "The US Fish and Wildlife Service (USFWS) is gathering input to increase the White River National Wildlife Refuge's acquisition boundary." According to Keith Weaver, the refuge's project leader, "the proposal would provide increased opportunities for willing sellers as well as conserve the southern end of the Big Woods of Arkansas for future generations, restore and enhance wildlife habitats for a diversity of migratory and resident species, improve water quality, and provide additional public access and wildlife-dependent recreation such as hunting, fishing and wildlife observation and photography."

ADDITIONAL COVERAGE OF GRIZZLY BEARS PROPOSAL. Additional coverage of the FWS grizzly bear management proposal was provided by Yahoo! (5/7, Ross).

Securing America's Energy Future:

Renewable Energy:

WYOMING'S HYDROPOWER POTENTIAL EXPLORED AS CONGRESS CONSIDERS BILLS. The Casper (WY) Star-Tribune (5/7, Voge, 22K) reports that the Idaho National Laboratory estimates Wyoming can be tapped for more than 500 megawatts of hydropower, while "another study, by the Bureau of Reclamation, and related to government-controlled properties only, adds another 23 megawatts to the picture." The paper says members of Wyoming's congressional delegation are pushing for the development of alternative energy sources in the state. A bill to "streamline the process needed to permit small hydropower generators in the West" was passed in the House in March. It was introduced in the Senate in April, and the Senate Energy and Natural Resources Committee "is scheduled to vote on the measure Wednesday."

WIND ENERGY GROUP EYES PLAN TO PRESENT TO CONGRESSIONAL PANELS. The Hill (5/7, Colman, 21K) reports in its "E2 Wire" blog that a "top wind trade group said Monday that it's crafting a long-term policy plan that it plans to take to tax-writing committees in the House and the Senate." Incoming American Wind Energy Association CEO Tom Kieman said AWEA officials will go "on a road show of sorts to get input from industry stakeholders before finalizing a proposal."

Bloomberg News (5/7, Martin) reports the US wind-power industry "is expecting" a major challenge in Congress in its efforts for "another extension of a federal tax credit that received a one-year renewal at the last minute in January." Bloomberg quotes Kieman as saying, "The political climate in Washington is getting tougher."

Onshore Energy Development:

ENVIRONMENTAL GROUP ASKS BLM TO RECONSIDER LEASE SUSPENSION FOR THOMPSON DIVIDE DRILLERS. The Grand Junction Daily Sentinel (5/7, Webb, 23K) reports, "A Carbondale-based conservation group asked Monday that the Colorado director of the Bureau of Land Management reconsider the agency's decision to prolong the duration of 25 oil and gas leases in the Thompson Divide area." According to the article, "the Wilderness Workshop appealed the lease suspension decision with the help of Earthjustice attorney Mike Freeman, who also led litigation resulting in the BLM reconsidering its leasing of some 55,000 acres for oil and gas development in the Roan Plateau area west of Rifle." The groups "are asking Helen Hankins, director of the Colorado state office of the BLM, to reverse a recent decision by Steve Bennett, director of the agency's Colorado River Valley Field Office in Silt."

BLM SEEKS FEEDBACK ON EXPANSION TO HORSESHOE BASIN OIL, GAS PROJECT. The Casper (WY) Star-Tribune (5/7, 22K) reports, "The federal Bureau of Land Management is seeking public input on a proposed oil and gas project that could include 20 wells." The agency "announced Monday that it is taking feedback on an expansion to the Horseshoe Basin oil and gas project, a Devon Energy proposal which would include two new wells drilled per year for a decade."

Tackling America's Water Challenges:

BAY DELTA CONSERVATION PLAN DIVIDES CALIFORNIA. In an editorial, the Pasadena (CA) Star-News (5/7) argues that the Bay Delta Conservation Plan will "protect what little of this important ecological resource is left." Rather than a "simple 'water grab' that would allow the spigot to be thrown open and more water transferred from north to south," the paper claims that "the delta plan is about is stabilizing water deliveries in the face of an uncertain climate when both snowpack and rainwater sources have become incredibly volatile." It concludes that "this huge, complex project has a multi-billion dollar cost, but it's an investment that should prove worthwhile - for all Californians."

In an editorial, the Los Angeles Daily News (5/7, 86K) notes that there is a divide in opinion on the Bay Delta Conservation Plan between northern California newspapers and southern California newspapers. It notes that southern California newspaper have "said the entire state needs the delta project and that the mendacious 'us vs. them' rhetoric used by opponents 'is destructive, obstructive and belies how desperately we need this.'" Meanwhile, the northern California papers "were opining that the 'Delta water plan deserves to go down the drain.'"

CHIPPEWA CREE BUSINESS COMMITTEE REFUTES CORRUPTION ALLEGATIONS. The Great Falls (MT) Tribune (5/6, Murray, 25K) reports, "The Chippewa Cree Business Committee, the Rocky Boy's Indian Reservation's highest representative body, issued a news release Monday refuting recent allegations that millions of federal dollars intended for a regional water development project are unaccounted for." The tribe's acting Chairman, Rick Morsette, said, "The numbers reported by the local newspapers don't match the facts. We spoke to representatives from the Bureau of Reclamation office who agreed that what they read in the paper was inaccurate. Extensive reviews have actually revealed that the Chippewa Cree Construction Corp. may have some outstanding reimbursements coming from the Bureau of Reclamation."

WATER RIGHTS EXPECTED TO SPARK CONFLICT BETWEEN KLAMATH RIVER FARMERS, TRIBES. The Los Angeles Times (5/7, Barboza, 692K) reports, "New water rights have given a group of Oregon Indian tribes an upper hand just as the region plunges into a severe drought." According to the article, "farmers and wildlife refuges could be soon cut off by the Klamath Tribes, which in March were granted the Upper Klamath Basin's oldest water rights to the lake and tributaries that feed the mighty river flowing from and southern Oregon to the foggy redwoods of the Northern California coast." The article notes that "within weeks, the 3,700-member tribes are poised to make use of their new rights to maintain water levels for endangered Lost River and Shortnose suckers, fish they traditionally harvested for food," and "under the 'first in time, first in right' water doctrine that governs the West, the Klamath Tribes can cut off other water users when the river runs low."

FULL SUPPLY EXPECTED FOR ALL YAKIMA BASIN IRRIGATORS. The Yakima (WA) Herald-Republic (5/7, 28K) reports, "A wet April provided a further boost to the summer water supply outlook for farmers and fish in the Yakima River Basin, the Bureau of Reclamation said this morning." The article notes that "all water users will have a full supply of water."

Also reporting on the story are the Ellensburg (WA) Daily Record (5/7, Johnston, 5K) and KNDO-TV Yakima, WA (5/7).

DEAL REACHED TO KEEP LAKE BERRYESSA'S MARKLEY COVE OPEN THROUGH 2014. The Napa Valley Register (5/7) reports, "The US Bureau of Reclamation has inked an interim contract to keep the Markley Cove Resort on the south end of Lake Berryessa open through December 2014." The agreement "is with the resort's current managers, John and Linda Frazier, and begins May 27." David Murillo, the regional director for Reclamation's Mid-Pacific Region, said in a news release, "Reclamation has enjoyed a positive and successful relationship with the Fraziers for many years, and we are pleased that this relationship will continue for this interim period."

CONTRACT AWARDED FOR FINAL PHASE OF WORK ON FOLSOM DAM SPILLWAY. The Sacramento (CA) Business Journal (5/6, Meer, Subscription Publication) reports, "The US Army Corps of Engineers Sacramento office has awarded a \$255.1 million contract for the last phase of work on a spillway at Folsom Dam." According to the corps, "Kiewit Infrastructure West Co. of Fairfield won the contract, which will allow work to begin July 1 and be finished by 2017." The article notes that "in addition to the corps, the US Bureau of Reclamation, Central

Valley Flood Protection Board and Sacramento Area Flood Control Agency are involved in the overall project."

Empowering Native American Communities:

NEW YORK TIMES STORY ON KEEPSEAGLE SETTLEMENT DISPUTED. The Indian Country Today Media Network (5/6, Capriccioso) reports, "The most respected newspaper in the country has pointed out the sour political undercurrent in the 2011 Keepseagle settlement that awarded \$760 million to Native American farmers for discriminatory practices they faced." However, "lawyers for those Indians say The New York Times is wrong." Cohen Milstein Sellers & Toll, which holds "the remaining \$460 million" of the settlement has "issued a background paper, offering a clarification and claiming that the firm was fighting the good fight."

CHEROKEES MAY WAIT UP TO 10 YEARS FOR COBELL LAND PURCHASES. The Cherokee (OK) Phoenix (5/7, Jackson) reports, "Cherokee Nation citizens who signed up for the Land Buy-Back Program under the \$3.4 billion Cobell Settlement may be waiting up to 10 years before selling their fractionated lands." According to the article, "within the CN, there are only 135 fractionated tracts containing purchasable interests and no highly fractionated tracts."

Top National News:

"WHISTLEBLOWERS" EXPECTED TO CONTRADICT OFFICIAL ACCOUNT OF BENGHAZI ATTACK. Ahead of Wednesday's House Oversight Committee hearing on allegations from so-called "whistleblowers" regarding the Administration's handling of the attack on the US consulate in Benghazi, media coverage of the surrounding controversy has increased substantially. NBC Nightly News (5/6, story 3, 2:40, Williams, 7.86M) devoted a full segment to Benghazi, and the CBS Evening News (5/6, story 5, 0:35, Pelley, 5.58M) briefly previewed Wednesday's hearing. However, the Benghazi narrative continues to be driven by conservative news outlets, particularly Fox News and the Weekly Standard, and, consequently, defenses of the State Department's actions are greatly outweighed by allegations of "politicization" from Congressional Republicans.

In a nod to that dynamic, Dana Bash, on CNN's Erin Burnett OutFront (5/6), reported that on Wednesday she anticipates "a lot of pushback from Democrats that were not really hearing from the State Department yet."

In an illustration of the partisan divide ahead of Wednesday's House hearing, Benghazi was the lead story on Fox News' Special Report (5/6), Fox News' The O'Reilly Factor (5/6) and Fox News' Hannity (5/6). On the other hand, the terror attack was not a topic of discussion on MSNBC's Hardball, MSNBC's Politics Nation with Al Sharpton, MSNBC's All In, MSNBC's The Rachel Maddow Show or MSNBC's The Last Word. Also, the New York Times does not have an article on Benghazi in this morning's paper.

Preview coverage of Wednesday's hearing on Benghazi was the lead story on CNN's Erin Burnett OutFront (5/6), which devoted nearly 10 minutes of air time to the story.

Representative of Fox's Benghazi coverage Monday was Sean Hannity's allegation, at the opening of Fox News' Hannity (5/6), that "evidence is mounting to prove what we have been saying...for months," which is, according to Hannity, that the White House "engaged in a widespread cover-up in the immediate aftermath of the Benghazi terror attack and they did it simply to win the election." Hannity added, "Remember, Watergate was about lying and covering-up."

Notably, Brian Stelter, in an article for Monday's New York Times (5/5, Stelter, Subscription Publication, 1.68M) on Jonathan Alter's new book, "The Center Holds: Obama and His Enemies," noted that Alter writes that between September 11 of last year and the presidential election, Fox News President Roger Ailes "covered the Benghazi story as if it were Watergate just before Nixon's resignation, with almost wall-to-wall coverage."

On NBC Nightly News (5/6, story 3, 2:40, Williams, 7.86M), Andrea Mitchell reported that at Wednesday's hearing, Republicans, who have, "for months...charged cover-up," plan to "undercut Hillary Clinton's explanation of what went wrong," and claim to have "State Department witnesses who can prove Clinton covered up." House Oversight Committee chairman Rep. Darrell Issa (R-CA) was shown saying, "Clinton is no longer Secretary of State, but there are many people still at State Department who were involved in this at the highest levels who

continue to keep their jobs." Mitchell added that "there is an obvious political undercurrent" since House Republicans are "taking direct aim at Hillary Clinton, the country's most popular Democrat and a possible presidential contender."

Monday evening, Wolf Blitzer, on CNN's The Situation Room (5/6), reported that "another whistleblower who now says the Benghazi consulate attack seemed like a terrorist attack from the get go." CNN's Dana Bash went on to suggest that "whistleblowers" will contradict statements made about Benghazi by Clinton in testimony before a Senate panel in January, testimony that generated nearly universally positive coverage at the time.

Politico (5/6, Cirilli, 25K) reports that in an appearance on Fox News' Fox And Friends (5/6) on Monday, Rep. Jason Chaffetz (R-UT) alleged that former Secretary of State Clinton "put politics above security," and is quoted as saying, "What boggles my mind is 4½ months after the fact, Secretary Clinton still had the gall to come here and perpetuate things that we know...are simply not true." Appearing on Fox News' Hannity (5/6), Chaffetz called the alleged decision not to send military assistance to Benghazi on September 11 "as sickening and depressing and disgusting as anything I have seen."

In a brief, 35-second item for the CBS Evening News (5/6, story 5, 0:35, Pelley, 5.58M), Scott Pelley reported that "career diplomat" Greg Hicks is "raising new questions about a possible cover-up" following the attack on the US consulate in Benghazi. Pelley added that Hicks "has already told congressional investigators" that he "repeatedly asked if the Pentagon could scramble jets to scare the attackers away," but was "told that that wouldn't be possible."

According to the AP (5/6, Cassata), Hicks, identified as a "former top diplomat in Libya," has said that a "team of U.S. special forces" was prepared to try to save the Americans under attack in Benghazi on September 11, but they were "told to stand down." Bloomberg News (5/7, Rowley) also reported that Hicks will testify that he "sought in vain for fighter jets to fly over Benghazi to scare off the terrorist attackers who killed the ambassador and three other Americans."

The Washington Post (5/7, A1, Londoño, 489K), in an article titled, "Special Ops Halted From Responding To Benghazi Attacks, US Diplomat Says," reports that Congressional Republicans are alleging that the Administration "could have saved lives with a nimbler, more assertive response." The Post goes on to give a paraphrase of the Administration's account of the attack and its aftermath, but does not reference any specific State Department officials until 13 paragraphs in, when it reports that State Department spokesman Patrick Ventrell asserted Monday that "the Republican-led inquiry appears to be politicized," and reiterated that the State Department is "not seeking to suppress the accounts of whistleblowers." Ventrell is quoted as saying, "We have always encouraged any State Department employee who wants to share their story and tell the truth."

USA Today (5/7, Dorell, 1.71M) reports that Wednesday's House Oversight Committee hearing "will explore why the State Department never activated its Foreign Emergency Support Team," which "specialize[s] in responding to crises." USA Today adds that Chaffetz, a member of the panel, "believes the reason is that activating the team...would have labeled the attack 'a terrorist activity,'" which, according to Chaffetz, the State Department "did not want to do." However, USA Today also reported that in a statement released by the State Department, Daniel Benjamin, "who ran the State counterterrorism bureau that headed the Foreign Emergency Support Team at the time of the attack," said, "I can say now with certainty...that this charge is simply untrue."

The Washington Times (5/7, Crabtree, 76K) reports that when asked about the new allegations Monday, White House press secretary Jay Carney "repeatedly touted the credentials" of retired Ambassador Thomas Pickering and Admiral Michael Mullen, former chairman of the Joint Chiefs of Staff, who led the State Department's Accountability Review Board. Carney is quoted as saying, "There was an accountability review board led by two men of unimpeachable expertise and credibility, who oversaw a process that was rigorous and unsparing, that was highly critical in some areas and that produced a series of recommendations that have all been acted on by the State Department, as the president insisted be the case."

At the opening of Fox News' Special Report (5/6), Brett Baier said the House hearing on Benghazi on Wednesday is "shaping up as a direct assault on the Obama Administration's handling of the crisis." Correspondent James Rosen went on to report that a "State Department whistleblower" - later identified as Mark Thompson, a "former Marine and long-time senior officer in State's counter-terrorism bureau" - will testify that

immediately after the Benghazi attack, Secretary Clinton and Patrick Kennedy, the State Department's Under Secretary of State for Management, "tried to cut the department's own counter-terrorism bureau out of the chain of reporting and decision-making." Chairman Issa was shown saying, "If you wanted it to seem like it wasn't terrorism, keeping them out of room allows to you play with this false truth that somehow it was a 'video'...which, of course, from the get-go, everyone knew just wasn't true." Rosen reported that State Department spokesman Ventrell "agreed" with Rep. Elijah Cummings (D-MD) that Issa's "motivations appear 'political.'"

Marc Thiessen, in his column for the Washington Post (5/7, 489K), says Thompson "will testify that the circumstances" of the Benghazi attack "have been 'purposefully misrepresented' by the administration and that 'all their public statements...were false, and they knew it.'" Thiessen also claims that last week, Ventrell "dismissed the whistleblowers, declaring there has already been a thorough investigation into the attack 'that should be enough.'"

Conservatives Liken Benghazi "Scandal" To Watergate. The Washington Times (5/6, McLaughlin, 76K) reported that in a radio interview Monday, Sen. Lindsey Graham predicted that on Wednesday, witnesses will describe "political manipulation seven weeks before an election," as well as "people asleep at the switch when it comes to the State Department, including Hillary Clinton." Graham went on to say that the Benghazi "cover-up" is "every bit as damaging as Watergate."

On Fox News' Special Report (5/6), Brit Hume claimed that it is now "clear that the State Department, CIA and White House deliberately concocted a Benghazi cover story that was false in every nearly every particular." However, according to Hume, if Benghazi is to "become the scandal it surely deserves to be," there will have to be "relentless news coverage of the kind the media typically avoid when the subject is someone, or some cause, they favor."

In an indication of the expansiveness of the claims being made about the aftermath of the Benghazi attack by conservative critics of the Administration, Victor Davis Hanson highlighted new developments in a post for National Review (5/7, Hanson, 193K) under the headline: "Is Benghazi Becoming A Watergate, Or Iran-Contra, Or Both?"

Politico (5/6, Weinger, 25K) reported that on his radio show Monday, Mike Huckabee "predicted" that President Obama "won't finish out his second term in light of the 'cover-up'" of the circumstances surrounding the attack in Benghazi, and "called the affair 'more serious than Watergate.'"

The Weekly Standard's Stephen Hayes, also appearing on Fox News' Special Report (5/6), cautioned "Republicans" not to "race ahead of the evidence in front of you" regarding Benghazi, and listed some instances where he thought Republicans had made unsubstantiated allegations against the Administration.

Much of the Benghazi coverage from right-leaning outlets is based on reporting from Hayes in a piece for the May 13 issue of the Weekly Standard (5/6, 83K) titled, "The Benghazi Talking Points." Hayes claims that "top Obama administration officials" were aware that the US consulate in Benghazi was "likely being attacked by al Qaeda-affiliated terrorists" while the "fighting was taking place" on September 11, and on September 12, a cable sent by "the CIA station chief in Libya" reported that "eyewitnesses confirmed the participation of Islamic militants" in the "terrorist attack." Hayes goes on to report that "talking points" regarding the attack that mentioned "Islamic extremists with ties to al Qaeda" were subsequently modified after State Department spokesperson Victoria Nuland expressed concern that "members of Congress would use the talking points to criticize the State Department for 'not paying attention to Agency warnings.'" Hayes also discusses his Benghazi reporting in a Weekly Standard podcast (5/7, 83K) released late Monday afternoon.

BIDEN SAYS GUN CONTROL WILL HAVE TO WAIT FOR IMMIGRATION. Politico (5/7, Epstein, 25K) reports that Vice President Joe Biden told a meeting of about 20 representatives from faith-based organizations at the White House on Monday that gun control will now have to take a back seat to efforts to pass immigration reform. Biden told the leaders that "gun control won't happen until after the Senate completes an immigration reform package." Politico notes that this is the first time the White House "has revealed such a timeline" and adds that Biden's comments "echo the sentiment from the major gun control groups and Senate aides working closely on the issue."

Senate Democrats Have More Votes For Expanded Background Checks. The Huffington Post (5/6, Stein) reports that in the wake of the "political backlash" from constituents faced by members who opposed expanding background checks for gun buyers, Senate Democrats believe "they have several new votes in favor" of the measure. However, the new votes would still leave the measure short of the 60 it needs for passage, and "tellingly, no one boasting of growing support would reveal the names of those lawmakers ready to flip." Nonetheless, the "bullish talk from Democrats" is "yet another indication that the party feels good about the fallout from the failed gun vote and is increasingly eager to try again." The Post notes that Senate Majority Leader Harry Reid "prompted the latest round of legislative speculation," when he told The Las Vegas Review Journal that bill sponsor Sen. Joe Manchin "thinks he has a couple more votes" and, "I may be able to get another Democrat or two. That would get us up to 57."

Despite Recent Victories, NRA Allies Worry About Long-Term Challenges. The Washington Post (5/6, Hamburger, 489K) reports that while the NRA celebrated the defeat of the White House-backed package of gun control bills at its convention in Houston last weekend, and while the "group seems stronger than ever," some of its allies "are uneasy, saying publicly and privately that the organization is facing long-term - and even short-term - challenges that on a scale it has not faced before." Among them: the growing willingness "of gun state lawmakers, particularly Democrats, to buck the NRA; and the rise of an organized and well-funded gun-control movement." The Post notes a "continued debate over whether the NRA and gun rights advocates made a mistake by pugnaciously opposing all of this year's major gun-control proposals."

Inhofe: Administration Buying Ammunition So People Can't. The Daily Caller (5/6) reports that Sen. James Inhofe said in a radio interview his weekend that the Obama Administration is buying up ammunition in an effort "to bypass the Second Amendment so gun-owners 'can't even buy ammunition because government is purchasing so much.'" Speaking on Aaron Klein's weekend show on New York City's WABC radio, Inhofe said that the President "has been doing everything he could to stop the private ownership of guns in America," adding, "And so my feeling is that he's doing this to buy up [ammunition] so that we can't buy: Honest, law-abiding citizens here in the United States, like my son, can't even buy ammunition because government is purchasing so much." Inhofe said he is planning to introduce the Ammunition Management for More Obtainability (AMMO) bill to "limit 'non-defense, armed federal agencies to pre-Obama levels of ammunition.'"

Newtown Educators Posthumously Awarded The Citizen Honors Medal. NBC Nightly News (5/6, story 6, 0:45, Williams, 7.86M) reported that in a ceremony in Newtown, Connecticut on Monday, the six educators who were killed in the Sandy Hook shootings were posthumously awarded the Citizen Honors Medal, which is "the highest civilian honor for valor given out" by the Congressional Medal of Honor Society.

ECONOMISTS EXPECT GDP GROWTH TO SLOW THIS YEAR. In a sharply negative story on the economy, USA Today (5/7, Mullaney, Hansen, Today, 1.71M) reports that last Friday's "upbeat" employment report "changed few experts' minds about the likelihood of an economic slowdown in mid-2013," according to a USA Today survey of economists. In the survey, only four of 37 economists said the report "reduced their fears that growth will suffer a sharp slowdown" in the second and third quarters of this year. In addition, "More than half say that hadn't been a concern of theirs before the report." The piece quotes a number of economists, who generally expect the economy to slow from its 2.5% Q1 GDP growth rate later in the year.

Fed Survey Finds Banks Easing Business Lending Standards. Bloomberg News (5/6, Zumbrun) reports that according to a new Fed survey, US banks "eased standards and terms on loans to businesses as commercial lending led a credit thaw." In its quarterly survey of top loan officers released on Monday, the Fed said, "Domestic banks, on balance, reported having eased their lending standards and having experienced stronger demand in several loan categories over the past three months." Bloomberg says that the portion of banks easing lending standards was "relatively large."

Analysis: Employment At Start-Ups Down Sharply. In an op-ed in USA Today (5/6, Reynolds, 1.71M), Glenn Harlan Reynolds, a professor and blogger, writes that the "latest data" show that new business start-ups are becoming "rarer," not "more common" as they did during the "dreaded Jimmy Carter era." Reynolds says that a new report from JPMorgan economists Mike Feroli says that employment at start-ups is "plunging." He adds that new jobs "tend to come from new businesses," but there are fewer of them, which "doesn't bode well" and suggests that the US is starting to look more like Europe.

Editorial Wrap-Up:

NEW YORK TIMES. "Corruption in Albany." In an editorial, the New York Times (5/7, Subscription Publication, 1.68M) says that the multiple indictments of top New York political officials raises questions about how to reform the political system. The Times suggests the public funding of campaigns "in order to provide competition for those entrenched in state office." The paper also encourages prosecutors to "keep probing."

"Mr. Watt, Fannie Mae, And Freddie Mac." An editorial in the New York Times (5/7, Times, Subscription Publication, 1.68M) supports the nomination of Rep Mel Watt to serve as director of the Federal Housing Finance Agency, noting that he has "long been a champion of homeownership and credit availability," and is "aware of the needs and demands of banks." The Times argues that Watt "has what it takes to explain and carry out policies to help revive credit and provide long overdue assistance to homeowners - if only the Senate will give him the chance."

"A Carbon Trading System Worth Saving." An editorial in the New York Times (5/7, Subscription Publication, 1.68M) praises the EU's cap-and-trade system, but notes concern from analysts that "technical mistakes, Europe's prolonged recession and the failure of policy makers to strengthen the system is undermining its effectiveness." The Times says Europe "has made real progress in dealing with climate change," and calls on the EU to put its cap-and-trade system "on a sounder footing to make sure it doesn't undo the real progress it has made."

WASHINGTON POST. "Concocting A Cure." The Washington Post (5/7, 489K) praises the efforts of members of the Senate Health, Education, Labor and Pensions Committee who are moving to "fix the government's oversight of the obscure world of compounding pharmacies." The Post suggests some refinements to the bill's language and calls on the Senate to "pass some version of this bill" and the House to "get to work" on a measure.

"Immigration Distortion." The Washington Post (5/7, 489K), in an editorial, claims a Heritage Foundation study on the Senate immigration bill is "chock-full of assumptions that most economists dispute," and describes it as a "blatant attempt to twist the immigration debate."

"Give New Education Law A Chance."

WALL STREET JOURNAL. "The Non-Intervention War." An editorial in the Wall Street Journal (5/7, Subscription Publication, 2.29M) argues for US intervention in Syria. the Journal says the President should go against his political character and make a case to the American people for intervention and then commit himself to removing Assad from power and helping to shape what follows. Failure to intervene, the Journal argues, will make a wider war more likely.

"Florida Flips Back." An editorial in the Wall Street Journal (5/7, Subscription Publication, 2.29M) praises Republican lawmakers in Florida for opposing Gov. Rick Scott's effort to expand the state's Medicaid program.

"Backroom Internet Tax Ambush." In an editorial, the Wall Street Journal (5/7, A16, Journal, Subscription Publication, 2.29M) takes issue with a claim from the Senate online tax bill, Sen. Mike Enzi's (R) that only a single tax collector per state will be allowed to audit an online retailer. However, the Journal says that due to backroom maneuvering pushed by Senate Majority Leader Harry Reid, the definition of "state" was expanded to include US territories and possessions, along with "any tribal organization," potentially allowing hundred of separate jurisdictions to audit online retailers. The Journal says it asked Enzi's office how many auditors there could be, but he didn't know.

Washington Schedule:

TODAY'S EVENTS IN WASHINGTON.

White House:

PRESIDENT OBAMA -Receives the Presidential Daily Briefing with the Vice President, Oval Office, closed press; holds a bilateral meeting with President Park Geun-hye of the Republic of Korea with the Vice President, Oval Office, pool spray at the top; hosts President Park Geun-hye of the Republic of Korea for lunch, the Vice President also attends, Cabinet Room, closed press; holds a joint press conference with President Park Geun-hye of the Republic of Korea, East Room, open press; meets with senior advisors, Oval Office, closed press; meets with the Vice President and Secretary Hagel, Oval Office, closed press; attends a DNC event, St. Regis Hotel, Washington, DC, closed press.

VICE PRESIDENT BIDEN -Attends the Presidential Daily Briefing, Oval Office, closed press; attends the President's meeting with President Park Geun-hye of the Republic of Korea, Oval Office, pool spray at the top; attends the President's lunch with President Park Geun-hye of the Republic of Korea, Cabinet Room, closed press; attends President's meeting with Secretary of Defense Hagel, Oval Office, closed press; delivers remarks at the 2013 Annual Gala Dinner of the Joint Center for Political and Economic Studies, Mandarin Oriental, open press.

FIRST LADY MICHELLE OBAMA - Signs copies of her book 'American Grown: The Story of the White House Kitchen Garden and Gardens Across America', Politics & Prose bookstore.

US Senate: 10:45 a.m. EVERY CHILD DESERVES A FAMILY ACT - Press conference held by the lead House and Senate sponsors of the Every Child Deserves a Family Act, which would preclude Federal funding for foster care or adoption programs that discriminate against potential foster and adoptive families due to marital status, gender identity, and sexual orientation, or the sexual orientation or gender identity of the adoptive child. Participants include: Senator Kirsten Gillibrand (D-NY). Reps. John Lewis (D-GA), and Ileana Ros-Lehtinen (R-FL); Mary Keane and daughter (New York, NY). Location: S 120 , The Hugh Scott Room, U.S. Capitol.

FLOOR SCHEDULE 10 a.m. - The Senate convenes and begins a period of morning business. At 11:00 a.m., Senators will proceed to executive session to consider the nomination of David Medine to be Chairman and Member of the Privacy and Civil Liberties Oversight Board. Thereafter, the Senate begins consideration of S.601, the Water Resources Development Act.

9:30 a.m. APPROPRIATIONS - Legislative Branch Subcommittee FY 2014 Budget Request for the Library of Congress and the Open World Leadership Center. Witnesses: James H. Billington, Librarian of Congress, The Library of Congress; Ambassador John O'Keefe, Executive Director, Open World Leadership Center, The Library of Congress. Location: 138 Dirksen.

9:30 a.m. ARMED SERVICES - Hearings to examine the Department of the Air Force in review of the Defense Authorization Request for fiscal year 2014 and the Future Years Defense Program. Witnesses include Air Force Secretary Michael B. Donley; General Mark A. Welsh III, USAF, Chief of Staff of the Air Force. Location: 216 Hart.

9:30 a.m. ENERGY AND NATURAL RESOURCES - privatization of the Federal helium reserve in a competitive market fashion that ensures stability in the helium markets while protecting the interests of American taxpayers. Location: 366 Dirksen.

9:30 a.m. JOINT ECONOMIC COMMITTEE - Hearing on Immigration Reform - Immigration and Its Contribution to Our Economic Strength. Panel one: Grover Norquist, President, Americans for Tax Reform; Dr. Adriana Kugler, Professor, Georgetown Public Policy Institute, Georgetown University. Panel two: Madeline Zavodny, Professor of Economics, Agnes Scott College, Decatur, GA; Dr. Steven A. Camarota, Director of Research, Center for Immigration Studies. Location: 562 Dirksen.

10 a.m. BANKING, HOUSING, AND URBAN AFFAIRS - The Full Committee will consider the nomination of Fred P. Hochberg to be President of the Export-Import Bank of the United States. Location: 538 Dirksen.

10 a.m. FOREIGN RELATIONS - Nominations hearing. Hearings to examine the nominations of James Knight, of Alabama, to be Ambassador to the Republic of Chad, and Deborah Kay Jones, of New Mexico, to be Ambassador to Libya, both of the Department of State. Location: 419 Dirksen.

10:15 a.m. APPROPRIATIONS - State, Foreign Operations Subcommittee hearing on Fiscal Year 2014 Budget Request for the United States Agency for International Development with Dr. Rajiv Shah, Administrator, United States Agency for International Development. Location: 192 Dirksen.

10:30 a.m. APPROPRIATIONS - Interior, Environment Subcommittee hearing on Fiscal Year 2014 Budget Request for the Department of the Interior. Witnesses: Sally Jewell, Secretary, Department of the Interior; David Hayes, Deputy Secretary, Department of the Interior; Rhea Suh, Assistant Secretary - Policy, Management and Budget, Department of the Interior; Pam K. Haze, Deputy Assistant Secretary, Office of Budget, Finance, Performance and Acquisition, Department of the Interior. Location: 124 Dirksen.

10:30 a.m. HOMELAND SECURITY AND GOVERNMENTAL AFFAIRS - Hearing on Border Security: Examining Provisions in the Border Security, Economic Opportunity, and Immigration Modernization Act (S. 744). Witnesses: DHS Assistant Secretary for Policy David Heyman, U.S. Customs and Border Protection (CBP) Acting Deputy Commissioner Kevin McAleenan, CBP Border Patrol Chief Michael Fisher, ICE Deputy Director Dan Ragsdale and DHS Assistant Inspector General Anne Richards. Location: 342 Dirksen.

12:30 p.m. - 1:30 p.m. COMMERCE, SCIENCE, AND TRANSPORTATION - The Committee will stream a NASA briefing direct from the International Space Station (ISS). Via a live downlink, NASA Astronaut Tom Marshburn will discuss the opportunities provided by the station's unique microgravity environment.
<http://www.commerce.senate.gov/public/>

2 p.m. JOINT ECONOMIC COMMITTEE - Hearing on Immigration and Its Contribution to Our Economic Strength Part two: Dr. Madeline Zavodny, Professor of Economics, Agnes Scott College, Decatur, GA; Dr. Steven A. Camarota, Director of Research, Center for Immigration Studies. Location: 216 Hart.

2:30 p.m. ARMED SERVICES - The Subcommittee on Strategic Forces will receive testimony on National Nuclear Security Administration management of its National Security Laboratories in review of the Defense Authorization Request for Fiscal Year 2014 and the Future Years Defense Program. Location: 222 Russell.

2:30 p.m. COMMERCE, SCIENCE, AND TRANSPORTATION - Subcommittee on Consumer Protection, Product Safety, and Insurance Hearing, Credit Reports: What Accuracy and Errors Mean For Consumers. Location: 253 Russell.

2:30 p.m. INTELLIGENCE - Closed Hearing: Intelligence Matters. Location: 219 Hart.

US House: 10 a.m. PUBLIC SKIN CANCER SCREENINGS - CAPITOL HILL - In an effort to increase skin cancer awareness and commemorate Melanoma/Skin Cancer Detection and Prevention Month(r), the American Academy of Dermatology Association (AADA) will hold a skin cancer screening for legislators, their staff and the general public. Briefing at 10 followed by screenings until 1:30 p.m. Speakers include: Brett Coldiron, MD - President-Elect, American Academy of Dermatology Association; Rep. Carolyn Maloney (D-NY) and Rep. Charlie Dent (R-PA) - sponsors of the Tanning Bed Cancer Control Act; Sen. Jack Reed (D-RI) - skin cancer prevention advocate; Sen. Johnny Isakson (R-GA) - skin cancer survivor; RADM Boris D. Lushniak, MD, MPH - Deputy Surgeon General and a dermatologist; Alyson Fuller, Ph.D. - former indoor tanner and melanoma skin cancer survivor; Johnny Bench - Baseball Hall of Famer and skin cancer survivor. Location: 345 Cannon Caucus Room on Capitol Hill.

10 a.m. REPUBLICAN LEADERSHIP STAKEOUT - Speaker John Boehner (R-OH); Majority Leader Eric Cantor (R-VA); Majority Whip Kevin McCarthy (R-CA); Conference Chair Cathy McMorris Rodgers (R-WA); Representative Martha Roby (R-AL). Location: RNC Lobby.

11 a.m. HOYER PEN AND PAD - House Democratic Whip Steny Hoyer will hold a pen and pad briefing in his U.S. Capitol office (H-144).

2 p.m. CHC - PEREZ CONFIRMATION - Congressional Hispanic Caucus (CHC) Chairman Ruben Hinojosa (TX-15), Chairman of the House Democratic Caucus Xavier Becerra (CA-34), and members of the Congressional Hispanic Caucus will hold a press conference with community leaders from the National Hispanic Leadership Agenda (NHLA), to urge the Senate confirmation of Thomas Perez as Secretary of Labor. Location: 234 Cannon.

FLOOR SCHEDULE 10 a.m. - The House will meet for Morning Hour debate and 12:00 p.m. for legislative business.

9:30 a.m. APPROPRIATIONS - Subcommittee on Interior, Environment, and Related Agencies hearing on Bureau of Land Management. Location: B-308 Rayburn.

10 a.m. APPROPRIATIONS - Subcommittee on Defense hearing on Navy and Marine Corps. Witnesses: Ray Mabus, Secretary, United States Navy; Admiral Jonathan W. Greenert, Chief, Naval Operations; General James F. Amos, Commandant, Marine Corps. Location: H-140 Capitol.

10 a.m. APPROPRIATIONS - Subcommittee on Health hearing on Chairman Brady Announces Hearing on Developing a Viable Medicare Physician Payment Policy. Location: 1100 Longworth.

10 a.m. EDUCATION AND WORKFORCE - Raising the Bar: Exploring State and Local Efforts to Improve Accountability. Location: 2175 Rayburn.

10 a.m. ENERGY & COMMERCE - Subcommittee on Energy and Power hearing entitled U.S. Energy Abundance: Exports and the Changing Global Energy Landscape. Location: 2123 Rayburn.

10 a.m. FINANCIAL SERVICES - Markup pending bipartisan legislation related to Title VII of the Dodd-Frank Act and the JOBS Act. The Subcommittee on Capital Markets & Government Sponsored Enterprises held a hearing on these bipartisan proposals last month. Location: 2128 Rayburn.

10 a.m. FOREIGN AFFAIRS - Hearing on Local and Private Sector Initiatives to Combat International Human Trafficking. Witnesses: Don Knabe, Supervisor, Fourth District, Los Angeles County Board of Supervisors; Bradley Myles, Executive Director and Chief Executive Officer, Polaris Project; Shawn MacDonald, Ph.D., Director of Programs and Research, Veriti. Location: 2172 Rayburn.

10 a.m. JUDICIARY - Markup: Resolution, To Create an Over-Criminalization Task Force; H.R. 180, and H.Res. ____, Supporting the Sixth Amendment to the United States Constitution, the right to counsel. Location: 2141 Rayburn.

10 a.m. NATURAL RESOURCES - Subcommittee on Public Lands and Environmental Regulation Oversight Hearing on Impediments to Public Recreation on Public Lands. Location: 1324 Longworth.

10 a.m. OVERSIGHT AND GOVERNMENT REFORM / JUDICIARY - Judiciary Subcommittee on the Constitution and Civil Justice and Oversight and Government Reform Subcommittee on Economic Growth, Job Creation and Regulatory Affairs hold joint hearing on DOJ's Quid Pro Quo with St. Paul: A Whistleblower's Perspective. Location: 2154 Rayburn.

10 a.m. SCIENCE, SPACE AND TECHNOLOGY - Joint subcommittee hearing Subcommittee on Energy and Subcommittee on Environment hearing: Keystone XL Pipeline: Examination of Scientific and Environmental Issues. Witnesses: Lynn Helms, Director, Department of Mineral Resources, North Dakota Industrial Commission; Brigham A. McCown, Principal and Managing Director, United Transportation Advisors LLC; Paul Chip Knappenberger, Assistant Director, Center for the Study of Science, Cato Institute; Anthony Swift, Attorney, International Program, Natural Resources Defense Council. Location: 2318 Rayburn.

10 a.m. WAYS AND MEANS - Subcommittee on Health will hold a hearing examining options for repealing the Sustainable Growth Rate (SGR) formula and reforming the Medicare physician payment system to reward quality and value. Witnesses: V David Hoyt, MD, Executive Director, American College of Surgeons; Kim Allan Williams, MD, Past President, American Society of Nuclear Cardiology; Charles Cutler, MD, Chair, Board of Regents, American College of Physicians; Frank G. Opelka, MD, Vice-Chair, Consensus Standards Approval Committee, National Quality Forum; Patrick Coumeya, MD, Medical Director, HealthPartners Health Plan. Location: 1100 Longworth.

10:30 a.m. ENERGY & COMMERCE - Subcommittee on Commerce, Manufacturing, and Trade hearing entitled

Vacation Nation: How Tourism Benefits Our Economy. Witnesses include: Roger Dow, President & CEO, U.S. Travel Association; Kathleen Matthews, Executive Vice President and Chief Global Communications and Public Affairs Officer, Marriott International, Inc.; others. Location: 2322 Rayburn.

2 p.m. **APPROPRIATIONS** - Financial Services and General Government hearing on Securities Exchange Commission. Witness: Mary Jo White, Chairman, Securities Exchange Commission. Location: 2359 Rayburn.

2 p.m. **FOREIGN AFFAIRS** - Subcommittee on Africa, Global Health, Global Human Rights, and International Organizations hearing on Increasing American Jobs through Greater Exports to Africa - Exporting U.S. goods to Africa. Location: 2172 Rayburn.

2 p.m. **NATURAL RESOURCES** - Subcommittee on Public Lands and Environmental Regulation will hold an oversight hearing on Impediments to Public Recreation on Public Lands. Location: 1334 Longworth.

2 p.m. **VETERAN'S AFFAIRS** - Subcommittee on Oversight & Investigations hearing on VA Construction Policy: Failed Plans Result In Plans That Fail. Location: 334 Cannon.

3 p.m. **RULES** - Meets on H.R. 807, the Full Faith and Credit Act. Location: H-313.

4 p.m. **ENERGY & COMMERCE** - Subcommittee on Health Markup of H.R. 1407 and a bill to amend the Federal Food, Drug, and Cosmetic Act with respect to the pharmaceutical distribution supply chain (Opening Statements Only). Location: 2123 Rayburn.

Other: **SOUTH KOREAN PRESIDENT PARK GEUN-HYE Highlights:** South Korean President Park Geun-hye is scheduled to meet with President Barack Obama.

UMD - DALAI LAMA - The 14th Dalai Lama will be visiting the University of Maryland for two separate events: delivery of the prestigious Sadat Lecture and a dialogue with scholars of Sufism, a mystical Islamic tradition. Highlights: 10 a.m. - 11:30 a.m. In the morning, the Dalai Lama will join world leaders to deliver the Sadat Lecture, Peace Through Compassion: Connecting a Multi-Faith World. Before an audience of 15,000 at Comcast Center, the Dalai Lama will speak in English for about 45 minutes, answering questions submitted by the audience. 1:45 p.m. - 3 p.m. The Dalai Lama will meet in a smaller venue for dialogue on two religious traditions: Islam's Sufi tradition and Tibetan Buddhism. UMD's Roshan Institute of Persian Studies organized the event. Note: Media space is more limited at this venue. Location: Both events will take place on the campus of the University of Maryland, College Park, MD.

PEDIATRIC ACADEMIC SOCIETIES - Holds its annual meeting. Location: Walter Washington Convention Center, 801 Mt. Vernon Place, NW.

HUMANS TO MARS SUMMIT - The George Washington University Space Policy Institute and Explore Mars present The Humans to Mars Summit, which will address the major technical, scientific, and policy-related challenges that need to be overcome to send humans to Mars by 2030. Astronaut Buzz Aldrin will deliver a keynote address on the final day of the conference. Location: The George Washington University, Lisner Auditorium, 730 21st St., NW.

IDB - ROAD SAFETY - Road Safety events as part of a this Months IDB-Supported Road Safety Events. Highlights: 6 p.m. - 8 p.m. Road safety reception. Location: Inter-American Development Bank Headquarters, 1300 New York Ave. NW.

PETERSON FOUNDATIONS ANNUAL FISCAL SUMMIT - CLINTON - GATES - 9 a.m. - 3 p.m. The Peterson Foundation hosts their fourth annual Fiscal Summit - Facing the Future. Participants include former President Bill Clinton and Bill Gates. Location: Mellon Auditorium, 1301 Constitution Avenue NW.

CAP - EARLY CHILDHOOD EDUCATION - 9 a.m. - 10:30 a.m. The Center for American Progress hosts discussion on Honoring Our Nations Mothers and Children through Investments in Early Childhood Education. Location: Center for American Progress, 1333 H St. NW, 10th Floor.

ITIF - COMPETES ACT - 9 a.m. - 10:30 a.m. The Information Technology and Innovation Foundation will host a

panel of experts for a Capitol Hill briefing on the past, present and future of the America COMPETES Act.

Location: 253 Russell.

BROOKINGS - PREPARING DISADVANTAGED STUDENTS FOR COLLEGE - 9 a.m. - 11 a.m. A Future of Children event: Is There a Better Way to Prepare Disadvantaged Students for College? Location: The Brookings Institution, Falk Auditorium, 1775 Massachusetts Ave, NW.

TACKLING THE COST CONUNDRUM - 9 a.m. - 12 p.m. Health Affairs briefing on the slowing growth of health care expenditures of late and examines whether it is a temporary or lasting phenomenon; and will examine major cost drivers and proposals for putting Medicare on a more sustainable path. Location: National Press Club, 529 14th Street NW.

NPC - ASHTON CARTER - 10 a.m. Deputy Secretary of Defense Dr. Ashton B. Carter on Managing the Pentagon in an Era of Fiscal Uncertainty. Location: National Press Club, Clubs First Amendment Lounge, 529 14th Street NW.

YOUNG ADULTS - MENTAL HEALTH AND SUBSTANCE USE CHALLENGES - 10 a.m. - 11 a.m. SAMHSA presents National Children's Mental Health Awareness Day 2013 press briefing. Remarks by HHS Secretary Kathleen Sebelius; singer, songwriter and actress Demi Lovato. Location: The University of the District of Columbia, Community College Auditorium, 4200 Connecticut Avenue, NW., Building 46.

AEI - AMERICAS NATURAL GAS - 10 a.m. - 12:30 p.m. Americas natural gas: Should exports be restricted? Location: AEI, Twelfth Floor, 1150 Seventeenth Street, NW.

TRUCK CRASH VICTIMS - 11 a.m. Families of truck crash victims and survivors join with members of Congress to address the disconnect between unacceptable increases in truck crash deaths and injuries and the industry-backed solutions promoted by Congress and DOT (Department of Transportation). Presented by the Truck Safety Coalition, this press conference caps a four-day conference, Sorrow to Strength, which itself is closed to press. Location: 253 Russell.

'SAVE VANISHING SPECIES' STAMP - 12 p.m. Representatives from Major League Baseball's Detroit Tigers will join U.S. Fish and Wildlife Service Director Dan Ashe and Members of Congress to celebrate the success of the Save Vanishing Species semipostal stamp. Participants include: Fish and Wildlife Service Director Dan Ashe; Dave Dombrowski, CEO, President and GM, Detroit Tigers; Max Scherzer, pitcher, Detroit Tigers; Erica May (fiancee of Scherzer), Pennies for Paws spokesperson. Location: B-369 Rayburn.

ACADEMIC MEDICINE AND TRAUMA CARE - 12 p.m. - 1 p.m. Triumph Over Tragedy: Academic Medicine's Vital Role in Providing and Advancing Trauma Care. The Association of American Medical Colleges hosts a congressional briefing exploring the irreplaceable role academic medical centers play in providing and advancing trauma care. Location: B-340 Rayburn.

WILSON CENTER - CLIMATE CHANGE - FARMER'S - 12 p.m. - 2 p.m. The Farmers Dilemma: Climate Change, Food Security, and Human Mobility. Location: Woodrow Wilson Center, 5th floor, Ronald Reagan Building, 1300 Pennsylvania Ave. NW.

API - GASOLINE REGULATIONS - 2:45 p.m. The American Petroleum Institute holds a press conference call previewing comments being submitted to EPA on the agency's new Tier 3 regulations for gasoline, which API contends would be extremely costly and would not provide measurable ozone air quality benefits. With Patrick Kelly, downstream senior policy advisor.

SAIS - INTERNATIONAL ENERGY FORUM - 4:30 p.m. International Energy Forum: Achievements and Prospects with Aldo Flores-Quiroga, secretary general for the International Energy Forum, and David Jhirad, director of the SAIS Energy, Resources and Environment Program. Location: Rome Building Auditorium, 1619 Massachusetts Ave., NW.

Last Laughs:

LATE NIGHT POLITICAL HUMOR.

Jay Leno: "Mexico's economy has been on the upswing the last couple of years. It's unbelievable. They're getting investors from companies all over the world. In fact, Mexico is now home to 11 million undocumented Americans. Did you know that?"

Jay Leno: "Over the weekend, President Obama gave the commencement speech at Ohio State University. He said, 'I dare you to do better.' That's what he told the students. 'I dare you to do better.' To which the students yelled back, 'No, we dare you to do better.'"

Jay Leno: "Well, according to the US Geological Survey, there are 7.4 billion barrels of recoverable oil in North Dakota. And today, Dick Cheney said if we had known how much oil they had, we would have invaded North Dakota years ago."

Conan O'Brien: "President Obama has changed his mind. He decided to support the morning after pill being available over the counter. Yeah. Yep. President Obama finally saw an episode of 'Teen Mom.'"

Conan O'Brien: "PETA is in the news. PETA is really upset at Chris Christie for killing a spider in front of a group of school children. Yeah. Governor Christie said, 'If PETA's upset by that they do not want to know what I had for lunch today.' Apparently Orb is missing."

Conan O'Brien: "George W. Bush's nephew George P. Bush is running for office in Texas. Yeah, he says the 'P' stands for 'Pretend you've never heard the name George W. Bush.'"

Conan O'Brien: "A company is coming out with a beer drone. A beer drone to deliver beer to attendees at music festivals. Yeah. And in a related story, everyone's now fine with drones."

Jimmy Fallon: "Yesterday, President Obama spoke at Ohio State's graduation and told their students that it's their responsibility to make the world a better place. Which got awkward when they were like, 'Wait, isn't that literally your responsibility?'"

Jimmy Fallon: "Some experts are saying that the 2016 Democratic presidential primary could come down to Hillary Clinton and Joe Biden. Biden is calling her 'a worthy opponent,' and Hillary's calling him 'practice.'"

Jimmy Fallon: "Joe Biden could be running against Hillary Clinton for the Democratic nomination. Even though the election is a few years off, we thought it would be helpful to show a side by side comparison to see some of their differences. Take a look. Hillary wants to bridge the gap between Democratic and Republican leaders. Biden wants to bridge the gap between Marvel and DC superheroes. Hillary has had to fight against a sexist political system. Biden has had to fight against the safety cap on his Flintstones vitamins. They're very tricky. You gotta push down and turn. Push down and tum. Forget it. Hillary has already imagined what it would be like to sit in the President's chair. Biden has already spent hours sitting in it and spinning around. Here's the last one. Hillary believes her greatest asset is her experience at dealing with complicated international issues. Biden just laughed at the word 'asset.'"

Stephen Colbert: "I hope you had a great weekend. I did. I spent it at the big annual NRA meeting in Houston, Texas. Not to be confused with the daily NRA meeting that is Houston, Texas. And this year's theme was accessories. Like pink assault rifles and bra holsters. Now, fellows can brag about getting to Second Amendment."

Stephen Colbert: "One thing I heard repeatedly down there this weekend is that Obama is coming for our guns. Now I'm not one to believe in far out conspiracy theories probably because the government implanted a chip in my brain that controls my thoughts. But, folks, I've had my eyes opened to some disturbing truths that raise troubling questions like, what did they know? When did they know it? And what am I talking about? Which brings me to my new segment exposing vast government conspiracies, 'Stephen Colbert's Bat[bleep] Serious.' Now, folks, I've wanted to do this segment for a long time. But I haven't. Why not? We'll look into that next time. But tonight's topic: Are they coming after our guns? No. They're coming after our bullets. ... Nation, follow me down

the rabbit hole. If it even is a rabbit and not a groundhog in a costume. The Federal government's suspicious ammo hoarding was first noticed by vigilant online conspiracy forums before it was picked up by conservative radio hosts and then eventually made its way out to the farthest fringe elements of our society - Congress."

Stephen Colbert: "Leading the congressional charge is Senator James Inhofe, if this is James Inhofe and not a groundhog in a costume. Senator Ground-hofe here recently introduced a bill that would ban Federal agencies from buying more ammunition if it currently possesses more than its monthly averages during the Bush Administration. Yes, not including the ammo that ended up in the faces of the friends of Dick Cheney."

Stephen Colbert: "Now, folks, a lot of news outlets including Fox News say that they have debunked the bullet conspiracy theory, but I say it's already started. Because out of fear of government hoarding, ammo sales have skyrocketed making it harder to find ammo which can only mean that the government is hoarding it which means we have to buy more ammo before the government gets it all but there's none left because we bought it. Oh, my God. It's too late. The feds already have us outgunned. Well, they're not going to take me alive. [bleep] I'm out of ammo. ... Well, that's it for tonight's 'Bat[bleep] Serious.' Join me next time when I ask the question, 'Did Big Foot help Lee Harvey Oswald build Stonehenge?'"

Secretary Vilsack Meeting

Shafroth, William <will_shafroth@ios.doi.gov>

Sat, May 11, 2013 at 1:13 PM

To: [REDACTED]@ios.doi.gov

Cc: Erin Walls <erin_walls@ios.doi.gov>, Laura Davis <laura_davis@ios.doi.gov>

Sally,

In anticipation of your dinner with Secretary Vilsack tomorrow night, I am sending this email to give you some background on the ways that DOI has worked with USDA on AGO and other conservation initiatives and what I believe the Secretary cares about.

(b)(5)

Here are a few examples of programs/policies that will be useful for you to be aware of going into your conversation with him.

1) Regulatory Certainty: One of the concerns that the agricultural community expresses is the need for certainty in the regulatory process. Two specific ways that farmers, ranchers and foresters can help advance public conservation/environmental goals where there regulatory requirements are water quality and endangered species. In our AGO meeting yesterday, we discussed the Working Lands for Wildlife program that USDA's Natural Resources Conservation Service (NRCS) has worked closely with the FWS to achieve the goals of conserving a species and keeping that species off of the Endangered Species list. What NRCS has done, particularly in critical habitat for the sage grouse and lesser prairie chicken, is to provide landowners with financial incentives for conserving and restoring habitat. In exchange for these investments and commitment to maintain the habitat, landowners receive assurance that if the sage grouse or lesser prairie chicken is later listed as threatened or endangered, they will be given relief from the regulations associated with the ESA. This partnership serves both agencies' interests and the substantial financial resources that NRCS brings to these efforts is the difference maker for them to have broad reach.

Another example relates to water quality. In places like the Chesapeake Bay, the future health of the Bay is very much dependent on reducing runoff of both soil and fertilizers from farms in the Bay watershed. Again, NRCS is working closely with landowners to minimize runoff from their fields which will go a long way towards meeting state and federal water quality goals for the Bay (these goals were set in the context of President Obama's 5/2009 Executive Order). By doing so, they receive some relief from water quality regulations from EPA and state regulators. DOI, especially FWS, benefits from this work as water quality is very connected to fish and wildlife health in the Chesapeake and other major water/bay systems.

2) Landscape Conservation: USDA has very much embraced the notion of landscape scale conservation and has been a very good partner to DOI (FWS and BLM) on many other large-scale conservation efforts around the country. The Forest Service has been a partner on the LWCF Collaborative Landscape Projects in both the Crown of the Continent and Long-leaf pine regions. In addition, USDA is a full partner with DOI on the AGO 5 demonstration landscapes that Tom Fry described yesterday in the Crown of the Continent, long leaf pine, southwest deserts, Dakota Grasslands, and northeastern forests projects. (b)(5)

(b)(5)

(b)(5)

Specific places where we've worked together include:

Northern Everglades: Using the Wetlands Reserve Program (WRP) NRCS has committed to investing >\$50 million to purchase conservation easements in this area that drains into Everglades National Park and has significant wildlife values. It is also the location of the recently established Everglades Headwaters National Wildlife Refuge. This refuge is a part of a new generation of refuges where some of the land within the refuge boundary is targeted for fee title acquisition and other areas will be protected through conservation easements.

Dakota Grasslands: This so-called "duck factory of the western hemisphere" is home to where most of the migratory waterfowl breed and have their young and therefore represents a very critical part of the hemispheric ecosystem. It's also a place where the land is being converted by landowners from natural wetlands to cropland because prices for corn, wheat and soybeans are high enough to make it more profitable to grow these crops than keep their land in natural habitat. The hunting and broader conservation communities agree that this region is a top priority for conservation and groups like Ducks Unlimited and The Nature Conservancy are putting large sums of money and effort into conservation of wetlands. The role of NRCS has been to target investment of additional farm bill program dollars to keep lands in this region in conservation use - ultimately about 1 million acres of land. Simultaneously, FWS, through the Migratory Bird Commission and the Duck Stamp Program, has dedicated about 70% of all of these funds into the Dakota Grasslands region. That amounts to about \$33 million per year.

3) **Recreation:** While the Forest Service provides significant recreation opportunities throughout the forests and grasslands it manages, most of what I've heard Secretary Vilsack resonate with relates to hunting and fishing. There are a number of voluntary access programs for hunters and anglers including "Open Fields" which gives landowners a financial payment for allowing the public to access their land during a hunting season. Groups like Pheasants Forever and Wild Turkey Federation are strong supporters of this program. Because of the FWS's role in wildlife management, it also supports these programs. Other Farm Bill programs like Conservation Reserve Program, Wetlands Reserve Program and Grasslands Reserve Program pay private landowners to revert their land to native habitat for a certain number of years. The result is an improvement in wildlife habitat and populations and more opportunities for hunters to do what they like to do.

4) **Urban:** USDA has a number of programs that focus in urban areas. They support the establishment of urban gardens and farmers markets as a way to connect people with their food and the farmers who grow it. They also are doing a number of projects in and around cities related to urban forestry and have taken on an increasingly larger role in the Federal Urban Waters Partnership that is led by EPA. They have been an important partner to DOI in a number of projects in urban areas, including Denver and Los Angeles.

Feel free to call me if you want to discuss any of this.

Have a great trip.

Rocky Barker: Fire story is different in forests and on range

Published: May 13, 2013

.....

Brand-new Interior Secretary Sally Jewell will make her first trip to the National Interagency Fire Center, joining Agriculture Secretary Tom Vilsack on a visit to the Boise agency Monday.

The two landlords for most of the public lands in the U.S. will meet with reporters to talk about the upcoming fire season. I expect them to tell us to expect another long, hot fire season in the American West.

It's already started in California, and Idaho has had several fires start from lightning in the Boise National Forest, along with a few range fires. Last year, 9.3 million acres of private, state and federal land, and more than 4,400 structures, burned in wildfires in the U.S.

That was the third-highest number of acres burned since at least 1960.

In 2012, 1.7 million acres of Idaho burned, costing the state and federal governments \$214 million. The biggest loss in the state, though, came in the death of 20-year-old Forest Service firefighter Anne Veseth.

If you would believe some critics, all of those burned acres represented a failure by the (mostly) federal land managers who oversee them. Remember, the interagency firefighting teams that are coordinated from Boise put out 98 percent of all fires that start.

A centurylong policy of suppression contributed to a buildup of forest fuels that gave us more than two decades of large fires in Idaho forests.

Shifting the balance back to even more suppression may lead to less safety and more deaths.

Add to the forest fuels the hotter, drier and longer fire seasons we have today because of the changing climate, and we have conditions across the West ripe for disaster. The Boise National Forest offers a model for the rest of the region in how to get through this.

When Lowman burned in 1989 and the huge Foothills fire burned in 1992, foresters feared for the health of the Boise National Forest and other southern Idaho forests. In 1995, the Forest Service put in place a policy where national forests developed fire plans to help managers decide which areas they could let burn safely.

Boise National Forest staff aggressively thinned and logged forests around communities like Idaho City and Garden Valley. These mechanical measures were followed with controlled burns on thousands of acres.

Between wildfire and intentional burns, more than 1 million acres of the 2.6 million-acre Boise Forest have burned at least once since 1989. Last year, the 148,000-acre Trinity Ridge Fire burned from August through October. It threatened Featherville and burned a few cabins. But it was largely controlled, because it burned in forests where previous fires had consumed built-up fuels.

The Trinity Ridge Fire filled in the gap left by earlier fires over the past 20 years. Like fires across the West in the past two decades, the Trinity Ridge Fire did not destroy the forest. More than 50 percent of the forest within the perimeter was either unburned or burned with low severity. Another 34 percent was only moderately burned.

Essentially, the Boise National Forest and most of the forests of southern Idaho are more resilient today than in 1985. Unfortunately, the story is very different in southern Idaho's sagebrush steppe desert lands.

"Megafires" like the 630,000-acre Murphy Hot Springs Fire have been destroying native bunchgrass and shrub habitat over the same two decades.

Briefing Materials - Wednesday, May 22

Walls, Erin <erin_walls@ios.doi.gov>

Tue, May 21, 2013 at 5:33 PM

To: **Sally Jewell** (b)(6)@ios.doi.gov, Laura Davis <laura_davis@ios.doi.gov>, Jennifer Sisk <jennifer_sisk@ios.doi.gov>

Sally,

Here are your briefing materials for Wednesday, May 22. These are also on Google drive. Let me know if you have any questions.

Erin

INFORMATION MEMORANDUM FOR THE SECRETARY

FROM: Michael Bean, Counselor to the Asst. Sec. for Fish and Wildlife and Parks

CC: Principal Deputy Assistant Secretary, FWP; Director, Fish and Wildlife Service

SUBJECT: Endangered Species Act Overview

BACKGROUND:

For the past forty years, the Endangered Species Act has been one of the key statutes administered by the Fish and Wildlife Service. It has helped bring many species back from the brink of extinction, including the American alligator, whooping crane, California condor, and the nation's symbol, the bald eagle. At the same time, however, it has also frequently been the subject of intense controversy, as its requirements have forced significant changes in the management of public and private lands, the allocation of scarce water supplies, and the use of other resources.

There are several high profile ESA actions on the horizon. This memo outlines a briefing that is intended to give you a context for those actions through a broad overview of the ESA and how it works. In addition, the briefing will include a more focused look at those particular parts of the law that are at issue in some of the current major controversies arising under the ESA.

AGENDA: We plan to cover the following key issues:

1. An overview of the ESA, including its history, accomplishments, and principal agency responsibilities
2. The listing (and de-listing) process and the role of outside parties in affecting that process (including a discussion of the "MDL settlement agreements" and pending decisions regarding lesser prairie chickens, sage grouse, and wolves)
3. Critical habitat and the vast gulf in perceptions of what it means (illustrated by a discussion of the recent northern spotted owl critical habitat designation)
4. The special duties of federal agencies to avoid jeopardy to species and adverse modification of critical habitat
5. How the ESA affects private landowners: the taking prohibition and the role of habitat conservation plans, safe harbor agreements, and candidate conservation agreements with assurances
6. Modernizing procedures and incentivizing conservation efforts (focusing on proposals to improve clarity and efficiency, and to encourage voluntary conservation efforts)

U.S. Department of the Interior News Briefing for Tuesday, May 28, 2013

Bulletin News <Interior-Editors@bulletinnews.com>

Tue, May 28, 2013 at 6:55 AM

To: Interior-Editors@bulletinnews.com

U.S. DEPARTMENT OF THE INTERIOR NEWS BRIEFING

Mobile version and searchable archives available at interior.bulletinnews.com.

DATE: TUESDAY, MAY 28, 2013 7:00 AM EDT

TODAY'S TABLE OF CONTENTS

DOI IN THE NEWS:

- + Federal Officials Call "Moving Forward" Meeting On Colorado River.
- + Senator, Police Commissioner Criticize NPS Security Plan For Statue Of Liberty.
- + Furloughs To End June 1 For National Park Service.
- + Interior Officials Open Public Comments On Proposed Fracking Rules.
- + BLM To Remove Wild Horses From Nevada Range.
- + St. Augustine 450th Commemoration Commission Hopeful For Government Sponsorship.
- + Student Conservation Association To Provide Stipends To Six Crews In California.
- + Jewell Encouraged To Visit Organ Mountains-Desert Peaks Region In Southern New Mexico.

AMERICA'S GREAT OUTDOORS:

National Park Service:

- + National, State Parks Feel Sequestration Effects.
- + NPS Reviews Report On Foundation Led By Brown v. Board Lead Plaintiff.
- + NPS Accepting Proposals To Operate Golf Course Within Delaware Water Gap National Recreation Area.
- + NPS Prepares For Battle Of Gettysburg Anniversary.
- + NPS Approves Houston Historic District.
- + Garbage Collection Agency Drops Plans To Build Landfill Near Joshua Tree National Park.
- + Handrails Installed For Half Dome Hikers In Yosemite National Park.

Bureau of Land Management:

- + "Spring Into Yellowstone" Event Dubbed A Success.
- + Proposed Electric Transmission Line Could Impact Newly Designated National Monument In New Mexico.

Fish and Wildlife Service:

- + BLM, FWS Grant Condor Exception To Terra-Gen Wind Project.
- + FWS Has Paid Nearly \$17 Million To Study, Restore Mexican Wolves.
- + Eastern Shore Wildlife Refuge Now Home To WWII Gun Barrel.

US Geological Survey:

- + USGS: Small Earthquakes Continue To Occur Near Morrilton.

SECURING AMERICA'S ENERGY FUTURE:

Renewable Energy:

- + Senators Unveil Bill For Energy-Storage Tax Incentives To Homeowners.
- + EU To Impose Tariffs On Chinese Solar Panel Equipment.

- + Minnesota Law Forces Utilities To Generate More Solar Power.
- + Kansas City Makes Big Solar Push.
- + Groups Criticize Efforts By Utility To Repeal Ohio's Energy Efficiency Laws.
- + California Lawmakers Eye Alternative To Gov. Brown's Clean Energy Plan.
- + Bill Aimed At Lowering Energy Bills For Maine Residents Wins Backing Of Panel.
- + Great Lakes Region Gets Ready For Makeover, New Mission.
- + Wind Storage Could Work In Northwest Study Finds.
- + WTimes Criticizes Wind Energy Policy Of Government.

Onshore Energy Development:

- + Oil And Gas Companies, Environmental Groups Says New Proposal Will Make Fracking Safer.
- + Texas Railroad Commission Approves New Oil, Gas Well Rules.
- + GE Investing In Fracking As It Moves Into Oil, Gas Sector.
- + New Interest In Arctic Exploration, Drilling Noted.
- + Utah Congressman Urges Greater Access To Public Lands For Oil, Gas.
- + NYTimes Wants Obama To Continue Resisting Pressure From "Oil Extremists."

Offshore Energy Development:

- + Sen. Kaine Remains Optimistic About His Offshore Drilling Bill.

TACKLING AMERICA'S WATER CHALLENGES:

- + Lawmakers Seek To End Restrictions On Hydro-Power Generation.
- + Federal Government To Help Finance Water Pipeline To Coombsville.
- + Land Buyers Seek Answers About Selling Water.
- + Author Says Finding Solutions To Arizona Water Problem Remains Challenging.

EMPOWERING NATIVE AMERICAN COMMUNITIES:

- + Federal Government Seeks Changes To Land Transfer Process.
- + American Indians Seek Recognition For Services To Nation.
- + Some Educators Express Concern Over Common Core State Standards.
- + Military Service Of American Indians Recalled On Memorial Day.

TOP NATIONAL NEWS:

- + Obama Calls On Americans "To Be Worthy Of" Fallen Soldiers' Sacrifices.
- + Obama To Visit Jersey Shore Today.
- + Boehner: GOP Will Focus On Jobs Even While Probing Recent Scandals.

EDITORIAL WRAP-UP:

- + New York Times.
- + Washington Post.
- + Wall Street Journal.

BIG PICTURE:

- + Headlines From Today's Front Pages.

WASHINGTON SCHEDULE:

- + Today's Events In Washington.

DOI in the News:

FEDERAL OFFICIALS CALL "MOVING FORWARD" MEETING ON COLORADO RIVER. The Los Angeles Times (5/28, Perry, 692K) reports on a drought that is impacting the Colorado River, prompting "water agency officials, environmentalists, farmers and Indian tribal leaders from the seven states that depend on the river for survival...to gather Tuesday for a 'moving forward' meeting called by federal officials." Michael Connor, commissioner of the U.S. Department of the Interior's Bureau of Reclamation, commented, "Hydrologically, we're not going in the right direction." Meanwhile, the Times cites an Interior report released in December, "warning that

drought, climate change and population growth are fast outstripping the water supply from the Colorado River." Anne Castle, assistant interior secretary for water and science, said that "the December report and its 'call to action' cannot become 'a study that just sits on a shelf.'"

The AP (5/27, Press) quotes the Bureau of Reclamation's Connor, who said, "We're looking at a very significant chance of declaring a shortage in the Colorado River basin in 2016. We really need to get to specifics, technical liabilities and the political feasibility of projects." Interior's Castle "called Tuesday's conference at a U.S. Geological Survey office near San Diego International Airport the start of a 'next steps' process."

Also reporting this story are KSL-TV Salt Lake City (5/27, O'Donoghue) and the Yuma (AZ) Sun (5/27, Lobeck, 23K).

SENATOR, POLICE COMMISSIONER CRITICIZE NPS SECURITY PLAN FOR STATUE OF LIBERTY. The New York Times (5/28, A15, Feuer, Subscription Publication, 1.68M) reports that on Monday, Sen. Charles E. Schumer (D-NY) urged the National Park Service "to scrap what he called a dangerous new security plan for the Statue of Liberty, saying that it could leave visitors to the tourist attraction vulnerable to a terrorist attack." Police commissioner Raymond W. Kelly "said that he had written a personal letter to Sally Jewell, the secretary of the interior," and "that his department and the Park Service...had been discussing the new proposal for weeks but had been unable to reconcile their differences." Meanwhile, "Michael Litterst, a spokesman for the Park Service, said, 'Safety has been and will continue to be our No. 1 priority, and we are committed to implementing a plan that does not compromise the safety of our visitors or the security of these landmarks.'"

CNN (5/27, Gonzalez) quotes Schumer, who said, "It's sort of ridiculous. It's sort of saying we are going to screen people at airports after they get on the plane. They've made a serious mistake here, and we are asking them to rethink it, to change it and simply go back to the old procedure."

Also reporting this story are the New York Post (5/28, McNulty, 498K), Newsday (5/28, Kossov, 402K), and the New York Daily News (5/27, Tracy, 543K).

FURLOUGHS TO END JUNE 1 FOR NATIONAL PARK SERVICE. The AP (5/27, Cassata) reported on "furlough Friday," which impacted the Interior Department, who furloughed about 13,000 people, including all 767 US Park Police employees. The National Park Service said that "the furloughs had been expected to continue through the summer tourist season but will now end June 1, because the agency was able to find other savings to offset mandatory cuts." Interior Secretary Sally Jewell said that the cuts "are not sustainable, as these actions which are eroding our workforce, shrinking our summer field season and deferring important work cannot be continued in future years without further severe consequences to our mission."

The Washington Post (5/27, Rein, 489K) reported on building pressure "on Park Service Director Jon Jarvis to cut the unpaid days," which "came largely from the police officers themselves, who waged a scrappy public relations war against their boss to force his hand."

A separate Washington Post (5/25, Rein, 489K) story reported that in a statement, Ian Glick, president of the U.S. Park Police Fraternal Order of Police, said, "While this is encouraging news . . . the agency is still understaffed, poorly funded and lacks financial control of its own operations."

INTERIOR OFFICIALS OPEN PUBLIC COMMENTS ON PROPOSED FRACKING RULES. Gannett News Service (5/25, Berry) reported, "Administration officials began taking public comments Friday on proposed regulations for hydraulic fracturing on public lands," and "the agency expects to receive even more comments this year, said Richard McNeer, a senior attorney with the Interior Department's Division of Mineral Resources." Meanwhile, "Interior Secretary Sally Jewell called the revised rules 'common-sense updates.'"

BLM TO REMOVE WILD HORSES FROM NEVADA RANGE. The AP (5/27) reported from Reno, Nevada, that the Bureau of Land Management has said "the drought is prompting plans to remove an unspecified number of wild horses from a large swath of the range in northeastern Nevada," which is "two years after they removed some 1,400 mustangs from the same area." BLM spokeswoman Lesli Ellis said, "Our goal is just to leave the appropriate amount of horses on the range that can be sustained." Meanwhile, the American Wild Horse Preservation Campaign, who opposes the plan, "is collecting signatures for an open letter to new Interior

Secretary Sally Jewell," although "Jewell has said she won't act until after a National Academy of Science report on the issue comes out in June."

ST. AUGUSTINE 450TH COMMEMORATION COMMISSION HOPEFUL FOR GOVERNMENT SPONSORSHIP.

The Florida Times-Union (5/26, 100K) reported that the St. Augustine 450th Commemoration Commission "will probably never see a penny of the \$500,000 a year it was initially promised," although commission members said "that they haven't given up on getting the money or on making the 450th both a national and international event." Mayor Joe Boles "said the federal money was 'authorized but not appropriated' by the Department of the Interior." Boles commented, "Government sponsorship is not available until we hear from the secretary of the interior. Obviously, with no funding, we cannot initiate the context we've identified as important." But, the piece notes that "Boles remains positive and optimistic and says the federal commission will keep moving forward."

STUDENT CONSERVATION ASSOCIATION TO PROVIDE STIPENDS TO SIX CREWS IN CALIFORNIA. The Eureka (CA) Times Standard (5/27, 18K) reports, "The U.S. Department of the Interior announced this week that the Student Conservation Association, Inc. will provide stipends to six conservation crews working throughout the state to improve wildlife habitat in California." Field staff from the Bureau of Land Management, Bureau of Reclamation and SCA will mentor the crews.

JEWELL ENCOURAGED TO VISIT ORGAN MOUNTAINS-DESERT PEAKS REGION IN SOUTHERN NEW MEXICO. In the Albuquerque (NM) Journal (5/27, 83K), Rafael Gomez, Jr., a member of the Pueblo of Ysleta del Sur, and Joseph Suina, a Cochiti Tribal Council member, wrote that "when President Barack Obama designated Rio Grande del Norte as a national monument, it marked a historically significant and exciting moment for Native Americans living in New Mexico," although "we realize that work still needs to be done to protect additional public lands in New Mexico that highlight the long and storied contributions of Native Americans to the Land of Enchantment." Gomez and Suina note a recent trip to Washington, DC, where they invited Interior Secretary Sally Jewell "to visit southern New Mexico and see for herself why the Organ Mountains-Desert Peaks region is so special. We know that Jewell has a strong record in protecting public lands and is committed to strengthening the United States' relationship with Indian tribes. Showing her this sacred and diverse place in person is a great way to put it at the forefront of the conversation."

America's Great Outdoors:

National Park Service:

NATIONAL, STATE PARKS FEEL SEQUESTRATION EFFECTS. The AP (5/28) reports on how sequestration and budget cuts will impact national and state parks. The National Park Service "has instituted a hiring freeze that will leave 900 vacancies unfilled," and "the smaller workforce will result in less frequent mowing, sand-covered bike paths, messier restrooms and fewer interpretive programs." The AP notes that "after multiple years of budget cuts, National Park Service officials worry about greater impacts next year. 'Something will give. That is not a recipe for a healthy Park Service into the next century,' Park Service spokesman Jeffrey Olson said, referring to the park system's centennial in 2016."

NPS REVIEWS REPORT ON FOUNDATION LED BY BROWN V. BOARD LEAD PLAINTIFF. The AP (5/27, Hollingsworth) reported from Kansas City, Missouri, that the National Park Service is reviewing a report conducted by the Department of the Interior's Office of Inspector General "that could lead to penalties being levied against a foundation led by the daughter of the lead plaintiff in the landmark Brown v. Board of Education school desegregation case." On Friday, David Smith, superintendent of the Brown site, said "that the National Park Service was given the report April 29 and has been given 90 days to finish its review and determine what action it will take," while "options include everything from doing nothing to seeking reimbursement from the Brown foundation and its leader, Cheryl Brown Henderson."

NPS ACCEPTING PROPOSALS TO OPERATE GOLF COURSE WITHIN DELAWARE WATER GAP NATIONAL RECREATION AREA. The New Jersey Herald (5/26, Scruton, 17K) reported, "The National Park Service is accepting proposals to operate the nine-hole Cliff Park Golf Course within the Delaware Water Gap National Recreation Area with an eye toward reopening the course for public play this summer." Park Superintendent John Donahue said, "This amazing course is a jewel within Pike County. Its rolling hills

surrounded by lush upland forests make it a great place to play a round of golf while enjoying the beautiful scenery in an historic setting."

NPS PREPARES FOR BATTLE OF GETTYSBURG ANNIVERSARY. The AP (5/27, Press) reported on the 150th anniversary of the Battle of Gettysburg, noting that "the National Park Service and a cadre of community organizers are busily putting the finishing touches on preparations," as "tens of thousands of visitors are expected for a 10-day schedule of events that begin June 29."

NPS APPROVES HOUSTON HISTORIC DISTRICT. WTVA-TV Columbus, MS (5/27) reports, "A section of the city of Houston has been designated as a historic district. The National Park Service announced Friday they had approved the Houston Historic District during a meeting on May 14."

GARBAGE COLLECTION AGENCY DROPS PLANS TO BUILD LANDFILL NEAR JOSHUA TREE NATIONAL PARK. The AP (5/24) reported that "a regional garbage collection agency has tossed out plans to build a mega-landfill for Los Angeles' trash less than two miles from Joshua Tree National Park in the remote Southern California desert." The piece notes that "opponents argued the landfill and associated train and truck traffic around the dump would wreak havoc on the delicate desert ecosystem and attract scavengers like ravens, which snack on the hatchlings of desert tortoises, a federally threatened species."

HANDRAILS INSTALLED FOR HALF DOME HIKERS IN YOSEMITE NATIONAL PARK. The AP (5/24, Press) reported, "A summer rite of passage is underway at Yosemite National Park, where the handrails on Half Dome are in place and hikers began scaling the granite monolith Friday morning." Meanwhile, "park officials want to limit numbers to increase safety on Half Dome, where changing weather conditions can be challenging."

Bureau of Land Management:

"SPRING INTO YELLOWSTONE" EVENT DUBBED A SUCCESS. The AP (5/27, Mathers) reported that "the first 'Spring into Yellowstone: Cody Birding and Wildlife Festival' was so successful that the second annual event already is scheduled for next year." Mike Stewart, Cody field manager for the Bureau of Land Management, commented, "The Spring into Yellowstone event is a prime example of the public and non-governmental organizations working collaboratively with local, state and federal agencies to showcase this unique and important part of Wyoming and the Greater Yellowstone Area."

PROPOSED ELECTRIC TRANSMISSION LINE COULD IMPACT NEWLY DESIGNATED NATIONAL MONUMENT IN NEW MEXICO. The AP (5/27) reports that "a Colorado utility has reached out to leaders in northern New Mexico about the possibility of running an electric transmission line from a substation north of Alamosa, Colo., to a site somewhere west of Taos," although "the Tri-State Generation and Transmission Association's study area for the project overlies the newly designated Rio Grande del Norte National Monument, alarming those still celebrating its hard-won status." Sam DesGeorges, field manager for the BLM's Taos field office, said that "the national monument is an additional screen that we would use' in weighing whether to authorize the line. It is still a discretionary action, and by policy, our preference would be to avoid monument land."

Fish and Wildlife Service:

BLM, FWS GRANT CONDOR EXCEPTION TO TERRA-GEN WIND PROJECT. The Los Angeles Times (5/24, Sahagun, 692K) reports on Terra-Gen Power's 2,300-acre Alta Windpower Development project, which "will include equipment to detect incoming condors soon enough to switch off the company's massive wind turbines before they slice into one of the birds." This and other efforts that the company plans to take "is the chief reason that the U.S. Fish and Wildlife Service has granted the company a unique exception to the Endangered Species Act," where, "for the first time, a company will not be prosecuted if it accidentally kills a condor." Steve Henry, Fish and Wildlife deputy field supervisor in Ventura, explained that Terra-Gen "sets a new standard for wind energy facilities."

The New York Times (5/26, A17, Baringer, Subscription Publication, 1.68M) reports that BLM spokeswoman Amy Krause "said there had been no recorded instances of condor mortality associated with wind turbines."

Krause and FWS spokesman Paul McKim "said the wind farm's developers had planned multiple lines of defense — including electronic sensors and day-in, day-out sky monitoring by a biologist — to further reduce the slim chance of a condor striking a turbine."

EnergyWire (5/28, Subscription Publication) quotes Ren Lohofener, regional director of the Fish and Wildlife's Pacific Southwest Region, who "said he's confident the wind farm will have no major impact on the ongoing recovery of the California condors." In a statement, he said, "This is a positive step as we continue to support the conservation and recovery of condors. This project provides a basis for future consultations and an opportunity to engage other renewable energy companies and stakeholders with best practices that support condor recovery." BLM California State Director Jim Kenna added, "Not only does this project create good jobs and generate clean and reliable power, but we've also worked closely with the company and the U.S. Fish and Wildlife Service to ensure the protection of eagles and California Condors."

FWS HAS PAID NEARLY \$17 MILLION TO STUDY, RESTORE MEXICAN WOLVES. The Arizona Republic (5/26, Loomis, 308K) reports on Mexican gray wolves, "a rare native species that is struggling to regain a footing in the Southwest." The piece notes that "as of 2011, the federal, state and tribal agencies involved estimated they had spent about \$26 million studying, breeding and restoring Mexican wolves over about 20 years. The U.S. Fish and Wildlife Service paid the biggest share, nearly \$17 million. The Arizona Game and Fish Department paid \$2.5 million and used another \$3 million in federal funds."

EASTERN SHORE WILDLIFE REFUGE NOW HOME TO WWII GUN BARREL. The AP (5/25, Press) reports that the Eastern Shore of Virginia National Wildlife Refuge "is now home to a historic World War II gun barrel from the USS Missouri. ... The barrel adds more military history to the refuge that was transferred from the Air Force to the U.S. Fish and Wildlife Service in 1984."

US Geological Survey:

USGS: SMALL EARTHQUAKES CONTINUE TO OCCUR NEAR MORRILTON. The AP (5/27) reports, "The US Geological Survey says small earthquakes continue to occur in an area near Morrilton, about 50 miles west of Little Rock."

Securing America's Energy Future:

Renewable Energy:

SENATORS UNVEIL BILL FOR ENERGY-STORAGE TAX INCENTIVES TO HOMEOWNERS. Bloomberg News (5/24, Doom) reports four US Senators unveiled "legislation offering tax incentives to homeowners and companies that install energy-storage systems in an effort to boost investment in renewable power." The bill would "provide a 30 percent tax credit," with an upper limit of \$1 million per project, "to homeowners and businesses that use power-storage equipment," according to a statement from lawmakers including Sen. Ron Wyden, chairman of the energy and natural resources committee.

EU TO IMPOSE TARIFFS ON CHINESE SOLAR PANEL EQUIPMENT. The Wall Street Journal (5/28, Dalton, Subscription Publication, 2.29M) reports that EU trade authorities indicated Monday that they will move forward with plans to impose tariffs of up to 67.9% on Chinese-made solar panel equipment. This, despite intense lobbying by the Chinese government which appeared to be eroding support for the tariffs among EU member governments.

MINNESOTA LAW FORCES UTILITIES TO GENERATE MORE SOLAR POWER. The Minneapolis Star Tribune (5/28, Shaffer, 335K) reports large solar arrays could soon become the norm in Minnesota "after lawmakers required Xcel and other big utilities to get 1.5% of their power from the sun by 2020." The paper says the state's new solar standard, "signed into law Thursday by Gov. Mark Dayton, will force four investor-owned electric utilities to generate 30 times more solar power than they do today." The Tribune says "power companies had opposed the mandate, and remain wary of solar's cost, which they say can't compete with low-cost wind and natural gas-fired generation."

KANSAS CITY MAKES BIG SOLAR PUSH. The Kansas City (MO) Star (5/27, Everly, 197K) reports a deal has been signed by Kansas City "to install solar panels and equipment on 80 city buildings to meet part of their demand for electricity." Kansas City Power & Light and local solar installer Brightergy "will team up on the project" which is "expected to be completed by the end of the year." The city's chief environmental officer Dennis Murphey said, "Kansas City will very likely be one of the leading cities in the country in the number of buildings with solar electricity."

GROUPS CRITICIZE EFFORTS BY UTILITY TO REPEAL OHIO'S ENERGY EFFICIENCY LAWS. The AP (5/28) reports small business and consumer groups "say a utility is trying to eliminate Ohio's energy efficiency laws they say benefit everyone." Groups including the Small Business Majority are urging an end to "what they say are a FirstEnergy subsidiary's efforts to repeal Ohio's energy efficiency laws."

CALIFORNIA LAWMAKERS EYE ALTERNATIVE TO GOV. BROWN'S CLEAN ENERGY PLAN. The Los Angeles Times (5/23, Megerian, 692K) reports California lawmakers "are pushing an alternative to Gov. Jerry Brown's plan to use new revenue generated by Proposition 39, which changed the corporate tax code when voters approved it in November." The paper says Brown and Democrats in the Legislature "are at odds over how to distribute \$450 million to schools and community colleges for energy efficiency projects." The paper says the governor has said he is interested in allocating "the money based on student population, but that hasn't satisfied lawmakers who fear the funding won't get to where it's most needed."

BILL AIMED AT LOWERING ENERGY BILLS FOR MAINE RESIDENTS WINS BACKING OF PANEL. The AP (5/25) reports "a bill that seeks to lower Mainers' bills for electricity and heating has won a 12-1 vote of support in a legislative committee, enhancing its chances of passage by the House and Senate."

GREAT LAKES REGION GETS READY FOR MAKEOVER, NEW MISSION. The AP (5/28, Flesher) reports the Great Lakes region is getting "a makeover and a new mission." The AP says the region "will reopen this summer as a hive of business experimentation swarming with scientists, engineers and entrepreneurs." The AP says they "share a lab where new technologies can be tested". Office suites will host startup companies, including one devising a system "for cultivating algae as biofuel." The article says the center is a part of a broader plan to develop blue economy, which a network of "industries that develop products and services related to water, from pump and valve manufacturers to resorts offering vacations along redeveloped lakeshores."

WIND STORAGE COULD WORK IN NORTHWEST STUDY FINDS. In an article about the surplus power the Pacific Northwest has in the springtime due to its hydropower dams and wind power, the Seattle Times (5/28, Doughton, 236K) reports a new study determined "it should be technically feasible to capture surplus wind power and store it underground until it's needed." According to Pacific Northwest National Laboratory's Pete McGrail "enough energy to power 85,000 homes for a month could be locked up in porous basalt at one site on the Columbia Plateau." The next analyses will focus on the costs of such a facility. The Times notes, however, that "the approach itself, in which excess energy is used to pump air under pressure into a subterranean reservoir, has been used for decades at two facilities" in Germany and Alabama. Bonneville Power Administration's Steven Knudsen, who co-authored the study, said that "the technology hasn't been widely adopted because, until recently, there hasn't been much incentive to build such costly facilities."

WTIMES CRITICIZES WIND ENERGY POLICY OF GOVERNMENT. In an editorial, the Washington Times (5/24, 76K) criticizes the wind energy policies of the US government that has failed to protect wildlife, saying neither the Obama Administration nor the George W. Bush Administration "have prosecuted a single case against Big Wind." The paper writes, "Hundreds of America's greatest birds, many of them protected as endangered species, fall lifeless to the ground after slamming into cruel windmill blades powered by taxpayer dollars." On the other hand, providers of conventional energy sources have had to face the wrath of the government. Over the past few years, "the Justice Department extracted a \$600,000 settlement and \$3 million in compliance costs from Exxon-Mobil after 85 birds supposedly died from 'exposure to hydrocarbons,'" the paper reports.

Onshore Energy Development:

OIL AND GAS COMPANIES, ENVIRONMENTAL GROUPS SAYS NEW PROPOSAL WILL MAKE FRACKING SAFER. The Chicago Tribune (5/24, Wernau, 450K) reports that "oil and gas companies and environmental

groups have hashed out legislation they say would make Illinois a national leader in protecting public health and the environment from fracking." The Tribune reports that "the proposal... would empower the state Department of Natural Resources to handle drilling permits, monitor waterways, and require companies to disclose chemicals used along with massive amounts of water to extract oil and gas trapped in shale rock beneath farms and forests." However the Tribune points out that the proposed "health and environmental protections do little to address the impact an oil boom would have on residents' quality of life," due to the fact that unincorporated areas where fracking would most likely take place doesn't have zoning laws to protect them, which would allow companies to use those lands for drilling, regardless of what landowners have to say about it.

TEXAS RAILROAD COMMISSION APPROVES NEW OIL, GAS WELL RULES. The Houston Chronicle (5/24, Kever, 434K) reported that on Friday, the Texas Railroad Commission "adopted long-awaited changes to its rules for the construction of oil and gas wells," after months of discussion on ways to amend "a section of the state's regulations known as Rule 13." Changes include requiring operators of fracked wells to "pressure test well casings to the maximum pressure expected and to notify the commission of a failed test," mandating a suspension in operations "if monitoring indicates a potential down-hole casing leak," and updating requirements "for well control and blowout preventers."

GE INVESTING IN FRACKING AS IT MOVES INTO OIL, GAS SECTOR. The AP (5/27) reported that General Electric has decided to invest billions in fracking. The company will open a lab in Oklahoma and purchase fracking-related companies. Senior vice president Mark Little said, "We like the oil and gas base because we see the need for resources for a long time to come." He said the company 10 years ago had "almost nothing" invested in the sector, but in the past few years has spent "more than \$15 billion." Though the company "doesn't drill wells or produce oil or gas," Little said the fracking boom fits well with GE's "strengths."

NEW INTEREST IN ARCTIC EXPLORATION, DRILLING NOTED. Platts (5/28, Gentile) reports on the growing interest in Arctic drilling, noting that 10 years ago, "it seemed no one wanted to talk about a coordinated, multinational approach to managing the Arctic." However, "global warming" has led to greater interest in the region, with nations now sending their first ships "through the newly opened central route, linking Asia with markets in Europe, the US and beyond," and with companies including Shell, Rosneft, BP, and Exxon getting involved in operations there.

UTAH CONGRESSMAN URGES GREATER ACCESS TO PUBLIC LANDS FOR OIL, GAS. In an op-ed in Politico (5/28, Chaffetz, 25K) Rep. Jason Chaffetz (R-UT) wrote about his state's experiences with government land leases, as two-thirds of the state is owned by the Federal government. He said that currently only 12% of the Federal land in the state is used for drilling and exploration, and though "some lands should be protected," he argued that "wilderness and energy development can peacefully co-exist," and that local, state, and Federal governments can collaborate to create guidelines about "which lands are most suitable for which uses." However, he warned, "that won't happen if we rely on one-size-fits-all directives from Washington." He noted an effort by himself and Rep. Bishop "to proactively bring together conservation groups, the tourism industry, local governments and other stakeholders to come to an agreement about the designation of public lands," and urged others in Congress "to support this locally driven process and resist the urge to impose burdensome top-down designations on communities that may not make sense at the local level."

NYTIMES WANTS OBAMA TO CONTINUE RESISTING PRESSURE FROM "OIL EXTREMISTS." In an editorial, the New York Times (5/25, Subscription Publication, 1.68M) says a group of House Republicans, which it calls "oil extremists" ignores good news on energy use such as tapping of previously inaccessible deposits of oil and gas and a steady decline in gas consumption and instead sticks to scare tactics. The paper says last week one of the subcommittees of Doc Hastings, chairman of the House Natural Resources Committee, "held hearings on several bills that would destroy much of the balance between resource preservation and extraction that President Obama and Ken Salazar, former interior secretary, sought to achieve." The editorial wants President Obama to continue to resist such pressure.

Offshore Energy Development:

SEN. KAINE REMAINS OPTIMISTIC ABOUT HIS OFFSHORE DRILLING BILL. The Hill (5/24, Colman, 21K) reports in its "E2 Wire" blog that Sen. Tim Kaine (D-Va.) said that he's not "expecting that there will be a

challenge in the White House" to "his bill to authorize oil and gas drilling off Virginia's coast," even though "the White has given little impression that it intended to allow drilling in the Atlantic Ocean." The Hill adds that the challenge will be "getting Senate Democratic leadership to go along with such efforts, which is unlikely." However, Kaine said that if this "bill can get around that obstacle and make it to Obama's desk," it may be able to "push the President to reconsider his offshore leasing plan."

Tackling America's Water Challenges:

LAWMAKERS SEEK TO END RESTRICTIONS ON HYDRO-POWER GENERATION. The Missoulian (5/28, 26K) reports Federal lawmakers "are seeking to lift restrictions on hydropower development so more local irrigation districts could use water flowing through government-sponsored agricultural canals and pipelines to generate electricity." Bureau of Reclamation senior adviser Robert Quint "said during recent testimony before the House Natural Resources Committee that the agency wants to make sure it can review potential environmental impacts if warranted for any hydropower project proposed." Supporters of the measure say hundreds of irrigation systems, many of them in the Great Plains and Rocky Mountains, will be able to develop small power projects if the restrictions are lifted.

FEDERAL GOVERNMENT TO HELP FINANCE WATER PIPELINE TO COOMBSVILLE. The Napa Valley Register (5/27) reports the Federal government "will pump \$3.7 million into water-supply construction projects in Napa County, and partly fund a recycled water pipeline to the Coombsville area." The fund "will help pay for the Napa Sanitation District and Napa County to construct the approximately five-mile pipeline." The Bureau of Reclamation's "WaterSMART program is the source of funding," the Register notes.

LAND BUYERS SEEK ANSWERS ABOUT SELLING WATER. The Yuma (AZ) Sun (5/27, Davis, 23K) reports more longtime landowners are selling their land in the Yuma region. "Some buyers ask what the process is like to move and sell water, in essence saying that 'the water's pretty valuable, how do we maximize our investment using the water,'" said Elston Grubaugh, general manager of the Wellton-Mohawk Irrigation and Drainage District. WMIDD is part of the Bureau of Reclamation's Gila Project, "which permits diversion of Colorado River water to satisfy beneficial consumptive use of 300,000 acre-feet of water in each of two divisions."

AUTHOR SAYS FINDING SOLUTIONS TO ARIZONA WATER PROBLEM REMAINS CHALLENGING. In an opinion piece in the Arizona Republic (5/24, Glennon, 308K) Robert Glennon, a regents' professor at the University of Arizona, writes on the looming water problems in Arizona. Glennon, author of "Unquenchable: America's Water Crisis and What To Do About It," says in 2012, the US Bureau of Reclamation released a study of the river "that factored in climate change under various scenarios. By midcentury, the bureau expects annual demand to exceed supply by an average of 3.2 million acre-feet" in Arizona. The writer says "finding solutions to the imbalance between supply and demand is a daunting challenge. Some advocates remain committed to 'augmentation,' a euphemism for importing more water from someplace else."

Empowering Native American Communities:

FEDERAL GOVERNMENT SEEKS CHANGES TO LAND TRANSFER PROCESS. The AP (5/28) says the Federal government "is proposing changes to the process used to transfer land into trust for American Indian tribes." The AP reports officials say "the proposal will provide greater notice of land-into-trust decisions ... depending on whether the land is taken into trust by the assistant secretary for Indian Affairs or an official with the Bureau of Indian Affairs."

AMERICAN INDIANS SEEK RECOGNITION FOR SERVICES TO NATION. The AP (5/27, Bryan) reports on the lack of any monument for the American Indians in the National Mall in Washington, though "tens of thousands of American Indians have enlisted in the armed forces to serve their country." The AP says a "grass-roots effort is brewing among tribes across the country to change that," and Sen. Brian Schatz, Hawaii Democrat, "has introduced legislation that would clear the way for the National Museum of the American Indian to begin raising private funds for a memorial." John Garcia, deputy assistant secretary at the US Department of Veterans Affairs, "said he's been meeting with American Indian leaders and believes that a memorial 'is a real possibility,' if certain conditions are met."

SOME EDUCATORS EXPRESS CONCERN OVER COMMON CORE STATE STANDARDS. The Arizona Republic (5/21, Butrymowicz, 308K) reports schools in 45 states and the District of Columbia “are rolling out the Common Core State Standards, which will bring changes to how teachers teach and how students are tested on their knowledge and skills.” The paper says educators of Native American “students are waiting to see whether the changes will narrow the achievement gap between their students and White children.” The article notes that “some educators have expressed fear” that teachers’ focus on “standardized testing may ramp up with the launch of the Common Core,” and may neglect regular “teaching culture.”

MILITARY SERVICE OF AMERICAN INDIANS RECALLED ON MEMORIAL DAY. The Fresno (CA) Bee (5/26, Carlson, 113K) reports that on Sunday, American Indians’ military service “was honored at the Memorial Day ceremony at San Joaquin Valley National Cemetery.” The Bee says Allen B. Clark, a former assistant secretary of veteran affairs, “made his return to the national cemetery in western Merced County to deliver the keynote speech.” Clark said American Indians “have served admirably in the major conflicts,” including the “Navajo code talkers of World War II.”

Top National News:

OBAMA CALLS ON AMERICANS “TO BE WORTHY OF” FALLEN SOLDIERS’ SACRIFICES. Coverage of President Obama’s remarks at Arlington National Cemetery on Monday focused on his observation that, unlike previous generations, “most Americans are not directly touched by war,” and his reminder that US forces are still fighting a war in Afghanistan. A few outlets, including the New York Times (5/28, Stolberg, Subscription Publication, 1.68M), tied the President’s sentiments to his speech last Thursday on US counterterrorism strategy, but those were exceptions to what was generally straightforward nonpolitical coverage.

On the CBS Evening News (5/27, story 3, 2:15, Glor, 5.58M), Bob Orr said the President “reminded all Americans Memorial Day is not just a day off” and that “America is still at war in Afghanistan.” Likewise, in the lead story for NBC Nightly News (5/27, lead story, 2:35, Morales, 7.86M), Natalie Morales said the President “urged all Americans not to forget our nation is still at war.” Morales added that “while troop withdrawal is under way in Afghanistan...60,000 service members remain there still, risking their lives.” On ABC World News (5/27, story 7, 2:10, Muir, 7.43M), the President was shown saying, “And we are tasked, every single one of us, to honor the strength, and the resolve, and the love these brave Americans felt for each other and for our country.”

The AP (5/28, Superville) reports that the President “reflect[ed] on the personal toll of war,” and urged Americans “to be worthy of the sacrifice” made by US soldiers killed in war. According to the AP, the President suggested that those currently in the military “aren’t being fully appreciated in an era in which ‘most Americans are not directly touched by war.’”

USA Today (5/27, Jackson, 1.71M) notes that the President added, “as a consequence, not all Americans may always see or fully grasp the depth of sacrifice, the profound costs that are made in our name – right now, as we speak, every day.” USA Today goes on to report that the President also referenced the “winding down of the war in Afghanistan” when he said, “this time next year, we will mark the final Memorial Day of our war in Afghanistan.” USA Today also reports that the President and the First Lady “spent a half-hour in a section of the cemetery where troops who fought in Iraq and Afghanistan are buried.”

The New York Times (5/28, Stolberg, Subscription Publication, 1.68M) notes that the President was speaking just days after giving a speech last Thursday “on counterterrorism policy, in which he said he hoped to move the nation off a war footing.” According to the New York Times, on Monday, the President “made [a] glancing reference” to that speech “in what seemed to be an effort to tamp down...criticism” from Republicans who said he “had declared a premature end to the war on terrorism.” The President is quoted as saying, “As I said last week, America stands at a crossroads. But even as we turn a page on a decade of conflict, even as we look forward, let us never forget as we gather here today that our nation is still at war.”

Shannon Bream, at the opening of Fox News’ Special Report (5/27), described the President’s remarks as a “mix of both tradition and a departure from it.” Correspondent Wendell Goler went on to say that the President’s “critics” claim “it is he who has forgotten the nature of the war we are still fighting.” Sen. Lindsay Graham was shown saying, “I’ve never been more worried about our national security than I am right now.” Nevertheless, Niall

Stanage, in a piece for The Hill (5/28, Stanage, 21K), said, "as is customary," the President "steered away from contentious subject matter in his Arlington speech."

The Washington Post (5/28, George, 489K) reports that the President "recalled several recent deaths" of US soldiers in Afghanistan as well as "a mother's recent plea that those serving not fade from the public mind." Brad Knickerbocker, in a piece for the Christian Science Monitor (5/27, Knickerbocker, 47K), says that the President's "implied message" was that, "for better or for worse," in a democracy, "'their mission' is really 'our mission.'"

The Los Angeles Times (5/27, Pearce, 692K) reports that on Memorial Day last year, the President "focused on service members who died in Iraq," but, on Monday, he "praised and spoke briefly about Army Capt. Sara Cullen, Army Staff Sgt. Frankie Phillips and Marine Staff Sgt. Eric Christian, all of whom died in Afghanistan." Reuters (5/28, Mason) reports that the President said, "As we gather here today, at this very moment, more than 60,000 of our fellow Americans still serve far from home in Afghanistan."

According to Politico (5/28, Robillard, 25K), the President "contrasted the relative isolation of today's military families to his family's experience in World War II" when "service and sacrifice were spread throughout the American public." The Washington Times (5/28, Boyer, 76K) reports that earlier on Monday, the President "hosted a breakfast at the White House with 'Gold Star' families of service members who have been killed."

The CBS Evening News (5/27, story 13, 2:25, Glor, 5.58M) profiled a woman in Pennsylvania who organizes care packages for US troops in Afghanistan. And NBC Nightly News (5/27, story 8, 3:10, Morales, 7.86M) had a segment on the Honor Flight Network, which annually "send[s] more than 10,000 older veterans to the Washington memorials honoring their service and their sacrifice."

DeWayne Wickham, in his column for USA Today (5/27, Wickham, 1.71M), notes that the draft was ended "two years after Memorial Day became a national holiday in 1971." Wickham argues that the draft "made the defense of this nation the obligation of a broad cross section of Americans," and that its end "narrowed the population base from which this nation's military is drawn – and made military service a less democratic ideal."

VA PTSD Disability Claims Have Increased More Than 700% Since 2006. On Fox News' Special Report (5/28), correspondent Jennifer Griffin described the Department of Veterans' Affairs' disability claims backlog as "arguably the biggest scandal the Obama Administration is facing." According to Griffin, "the number of veterans waiting for their disability benefits has doubled in the last four years." Griffin featured several critics of VA Secretary Shinseki, but also added that, "in some cases, there are good reasons for some of the backlogs." Griffin noted that in 2009, Shinseki "removed obstacles for veterans to receive disability benefits for post-traumatic stress," and that "caused a surge in claims...from 27,000 to 196,000 from 2006 to 2012."

Former POWs Gather To Remember White House Event Hosted By Nixon. The CBS Evening News (5/27, story 12, 2:15, Glor, 5.58M) reported that over the weekend, "nearly 200 former prisoners of war gathered" at the Nixon Presidential Library to "mark...40 years since their release from North Vietnamese prisons and the heroes' welcome they received at the White House." Ben Tracy reported that President Nixon "held a dinner for all of the POWs on the South Lawn of the White House" that "remains the largest dinner ever held there." Nixon was shown saying: "Never has the White House been more proud than it is tonight because of the guests we have tonight."

Clinton And Cuomo March In The Same Small-Town Memorial Day Parade. The New York Daily News (5/28, Edelman, 543K) reports that New York Gov. Andrew Cuomo and former Secretary of State Hillary Clinton were both in the Westchester County town of New Castle on Monday for a Memorial Day parade that "could end up being a sneak peak at the candidates for the 2016 Democratic presidential nomination."

Obama To Survey Post-Sandy Rebuilding Effort In New Jersey Today. Bloomberg News (5/27, Goldman) reports that on Tuesday, the President will be in New Jersey "to survey the rebuilding and recovery efforts after Hurricane Sandy."

OBAMA TO VISIT JERSEY SHORE TODAY. The CBS Evening News (5/27, story 11, 0:15, Glor, 5.58M) reported that seven months after superstorm Sandy, the President "is heading back to the Jersey Shore tomorrow." While in New Jersey, the President will discuss recovery efforts with Gov. Chris Christie.

NBC Nightly News (5/27, story 2, 2:50, Gosk, 7.86M) reported on the recovery effort, noting that "22 of 23 boardwalks are open." NBC noted that the state has made "restoring boardwalks and businesses in time for the summer" its top priority.

BOEHNER: GOP WILL FOCUS ON JOBS EVEN WHILE PROBING RECENT SCANDALS. Politico (5/28, Allen, 25K) reports that House Speaker Boehner said Thursday that House Republicans will push "jobs as their public message" even as they "'get to the bottom' of an array of White House controversies." Boehner said in an interview, "The Congress has the responsibility to get to the truth. ... Whether it's Benghazi, the IRS scandal, the whole situation with the Associated Press, our committees are going to do their job to get to the bottom," adding, "But having said that...our No. 1 priority is jobs, and it's the issue Americans are most concerned about. ... We're going to continue to stay focused on jobs. It's the issue."

Analysis: Boehner's Power Seems To Be Diminishing. Politico (5/28, Vandehei, Allen, 25K) reports that Boehner's power seems to be diminishing. Boehner has "little ability to work his will with fellow House Republicans." He has abandoned "his solo efforts to craft a grand bargain on taxes and spending." And he has not initiated "a substantive conversation with President Barack Obama in this calendar year." In an interview, Boehner took a different view, noting, "I don't need to be out there beating the drum every day. My job as the leader is to build my team, encourage my members, help provide leadership to my members and committee chairs and let the institution work. It doesn't need the heavy hand of the speaker all over everything." So while Boehner "is a relatively weak speaker right now," it is not clear that "a more bullying or forceful leader would fare much better with this gang of Republicans or in this dysfunctional Congress."

Editorial Wrap-Up:

NEW YORK TIMES. "Border Injustice." An editorial in the New York Times (5/28, Subscription Publication, 1.68M) argues that immigration enforcement must be "recalibrated to spare noncriminal migrants the harshest consequences." The Times notes that while the Senate immigration bill would "improve the system in many ways," is also "makes some things worse," including the expansion of Operation Streamline, which the Times argues "should be abolished."

"Caution And The Common Core." An editorial in the New York Times (5/28, Subscription Publication, 1.68M) praises the "rigorous" Common Core learning standards, saying they "represent a once-in-a-generation opportunity" for the US to improve public schools "nationally, bringing math, science and literacy education up to levels achieved by high-performing nations abroad." The Education Department has "rightly pushed the states to jettison outmoded systems in exchange for a challenging, writing-intensive approach," but it will need to "give the states some flexibility so that teachers — who themselves are under pressure to meet evaluation standards — can adjust to the new curriculum."

"Keep The Clunkers Away From The Polls." In an editorial, the New York Times (5/28, Subscription Publication, 1.68M) says that the New York City Board of Elections has "complained for weeks" that the city's electronic voting machines can't handle the city's "tight primary elections schedule," prompting the board and the state legislature to consider "scrapping them" and replacing them with "the old metal clunkers." The Times says the "retreat is not necessary, and lawmakers in Albany should not let it happen."

"An Addiction To Zealotry." In an editorial, the New York Times (5/28, Subscription Publication, 1.68M) is highly critical of E.W. Jackson as the Virginia GOP's lieutenant gubernatorial candidate. The Times says that the GOP candidates in the race will be well financed, but Republicans "can't seem to resist a beguiling extremist who must face mainstream reality."

WASHINGTON POST. "Iran's Power Play." An editorial in the Washington Post (5/28, 489K) criticizes the Iranian regime for "barring two potentially serious but hardly radical candidates, former president Ali Akbar Hashemi Rafsanjani and [President Mahmoud] Ahmadinejad's aide Esfandiar Rahim Mashaei from running in the June 14 presidential election," leaving only eight candidates "notable mainly for their fealty to [Ayatollah Ali] Khamenei." The Post notes that the President has responded to the failure of negotiations over Iran's nuclear program with "a wait-and-see approach pending the June 14 election," and adds that since "victory for Mr.

Khamenei seems predetermined, it's time to start planning for the next phase."

"Seeds Of A Solution." An editorial in the Washington Post (5/28, 489K) focuses on the impact the immigration bill would have on US agriculture, noting that no one is served by saddling farmers and ranchers "with an unstable workforce and labor shortages that threaten the supply of domestically grown crops." the Post argues that the provisions of the bill dealing with agriculture "would go a good distance toward fixing that," and as a result, could "generate support for the bill from some rural lawmakers who would otherwise oppose it."

"Cleaning Up Maryland's Jails." In an editorial, the Washington Post (5/28, Board, 489K) says that Maryland Gov. Martin O'Malley's (D) response to the Baltimore jailhouse scandal has so far been "mixed." The Post says that O'Malley has failed to move strongly against the "code of workplace protections for corrections officers that the FBI says shielded crooked officers from being disciplined, transferred or fired at the Baltimore jail." He has also failed to order state police to replace corrections officers at the entrance to the Baltimore jail. The Post is also critical that few heads have "rolled" since the scandal broke.

WALL STREET JOURNAL. "Regulator For The World." In an editorial, the Wall Street Journal (5/28, Journal, Subscription Publication, 2.29M) is critical of CFTC Chairman Gary Gensler's assertion that, as the paper characterizes it, US banking law should apply in whatever nation a US bank does business in. The Journal says that despite widespread international opposition, the US media is praising the move. The Journal contrasts this with the negative reception to SEC Chairwoman Mary Jo White's argument that foreign regulators should be responsible for what happens within their own borders.

"Obama's Media Culpa." An editorial in the Wall Street Journal (5/28, A14, Journal, Subscription Publication, 2.29M) argues that Administration officials believe the government can determine what constitute legal reporting practices, a situation which would mean the end of the First Amendment because the reporters who are likely to face accusations of illegally soliciting leaks are the ones who are critical of Administration policy.

Washington Schedule:

TODAY'S EVENTS IN WASHINGTON.

White House:

PRESIDENT OBAMA — Departs the White House, South Lawn, open press; departs Joint Base Andrews, out-of-town travel pool; arrives New Jersey, Joint Base McGuire-Dix, open press; delivers remarks, Asbury Park Convention Hall, Asbury Park, New Jersey, open to pre-credentialed media; departs New Jersey, Joint Base McGuire-Dix, open press; arrives Joint Base Andrews, out-of-town travel pool; arrives at the White House, South Lawn, open press; meets with Secretary of Defense Hagel, Oval Office, closed press; delivers remarks, the East Room, pooled press.

VICE PRESIDENT BIDEN — Meets with President Anthony Carmona and Mrs. Reema Harrisingh-Carmona with Dr. Jill Biden, President's Residence, Trinidad, pool spray at the top; travels to the Diplomatic Center, open press; meets with Prime Minister Kamla Persad-Bissessar, pool spray at the top; meets with Presidents , Prime Ministers and other senior ministry officials from the Caribbean region. The meeting will focus on energy, economic integration, and citizen security, pool spray with welcoming remarks at the top of this meeting; attends lunch with Caribbean leaders, closed press; delivers statements with Prime Minister Persad-Bissessar, and President Martelly of Haiti on behalf of CARICOM, open press; departs Port of Spain, Trinidad and Tobago with Dr. Jill Biden en route Rio de Janeiro, Brazil; arrives in Rio de Janeiro, Rio de Janeiro-Galeão International Airport, open press.

FIRST LADY MICHELLE OBAMA – Joins school children from across the country to harvest the summer crop from the White House Kitchen Garden.

DR. JILL BIDEN – Visits Cocobel, a woman-owned chocolatier in Trinidad and Tobago, meets with the owner and founder as well as several women entrepreneurs who are developing gourmet exports. These women are working

to revive Trinidad and Tobago's cocoa industry; open press.

US Senate: No Scheduled Events

US House: 10 a.m. TRANSPORTATION AND INFRASTRUCTURE FIELD HEARING — The Subcommittee on Railroads, Pipelines, and Hazardous Materials, chaired by U.S. Representative Jeff Denham (R-CA), will examine the status of the California High Speed Rail project during an oversight field hearing in Madera, California next week. Location: Auditorium Room AM120, Madera Community College Center, Madera, CA.

Other: 2013 SOCIAL SECURITY TRUSTEES REPORT – FORUM — 8 a.m. – 10 a.m. The Committee for a Responsible Federal Budget hosts "Challenges Facing Social Security: A Discussion of the 2013 Trustees Report". Location: Hyatt Regency, 400 New Jersey Avenue, NW.

ANNUAL PHYSICIAN ASSISTANT CONFERENCE – SEBELIUS — 9 a.m. U.S. Health and Human Services Secretary Kathleen Sebelius is scheduled to deliver remarks at IMPACT 2013, the American Academy of Physician Assistants (AAPA) 41st Annual Physician Assistant Conference, to spotlight strategies for meeting the needs of millions of new patients entering the system under healthcare reform. Location: Walter E. Washington Convention Center, Hall D 801 Mt. Vernon Place, NW.

AMERICAN AIRLINE MECHANICS — 10 a.m. American Airlines mechanics from across the country will hold a press conference to make a "major announcement" concerning their ongoing organizing campaign to become Teamsters. Participants: American Airlines mechanics and related from Tulsa, Los Angeles, Fort Worth, Chicago and New York US Airways Mechanic; Capt. David Boume, Director, Teamsters Airline Division; Chris Moore, Chair of the Teamsters Aviation Mechanics Coalition. Also available as a teleconference: CALL-IN: (800) 230-1096 Code: 294507 Location: International Brotherhood of Teamsters, 25 Louisiana Ave., NW.

NATURALIZATION CEREMONY – HOLDER — 11 a.m. U.S. Citizenship and Immigration Services (USCIS) Director Alejandro Mayorkas will administer the Oath of Allegiance and U.S. Attorney General Eric Holder will deliver keynote remarks to 70 new citizens Tuesday during a special naturalization ceremony in the Department of Justice (DOJ) Great Hall. Location: The Department of Justice, Great Hall, 950 Pennsylvania Ave. NW.

DOD – CARTER – TUNISIA HONOR CORDON — 11:15 a.m. The Deputy Secretary of Defense Ashton B. Carter will host an honor cordon and meeting in honor of the Minister of Defense of Tunisia, His Excellency Rachid Sabbagh to the Pentagon. The cordon will be held on the steps of the Pentagon River Entrance.

NATIONAL GREATER SAGE-GROUSE — 11:30 a.m. – 1 p.m. Discussion on the Obama Administration initiation of a major land use planning process to conserve greater sage-grouse on more than 60 million acres of public lands. Location: Defenders of Wildlife main conference room, 1130 17th Street, NW.

INNOVATION IN EDUCATION SUMMIT — 1 p.m. – 3:30 p.m. Education leaders from across the country gather to discuss innovation in education at the Reimagining Education: Empowering Learners in a Connected World summit, co-hosted by the U.S. Department of Education and the John D. & Catherine T. MacArthur Foundation. Highlights: 1 p.m. Opening Remarks by Assistant Deputy Secretary for Innovation and Improvement Jim Shelton. 2:15 p.m. Discussion led by Education Secretary Arne Duncan and NBA All-Star and education advocate Chris Paul. 2:45 p.m. Secretary Duncan will participate in a one-on-one interview with NBC News Chief Foreign Affairs Correspondent Andrea Mitchell to discuss the Department's work to support technology in education, personalized learning and 21st century classrooms. Location: Knight Conference Center at the Newseum, 555 Pennsylvania Ave. NW.

NASA – SOYUZ LAUNCH — 4:31 p.m. NASA Television will provide extensive coverage of the launch and docking of the next crew members who will fly to the International Space Station.

SAIS – SOCIAL JUSTICE — 6 p.m. Social Justice in Sustainable Development with Mary David, a U.S. Department of State representative. Location: Rome Building Auditorium, 1619 Massachusetts Ave., NW.

SECRETARY JEWELL ANNOUNCES GRANTS TO SUPPORT PUBLIC LANDS PROJECTS FOR YOUTH. The Mesquite (NV) Citizen Journal (5/31) reports, "In response to President Obama's challenge to expand employment opportunities for youth, Secretary of the Interior Sally Jewell announced \$4.2 million in grants to support conservation employment and mentoring opportunities for more than 600 young people ages 15-25 on public lands across the country." According to the article, "the grants, which support the Obama Administration's efforts to develop a 21st Century Conservation Service Corps (21CSC), include \$1.27 million from the Bureau of Land Management (BLM) and the Bureau of Reclamation (Reclamation), which helped leverage \$2.65 million from the National Fish and Wildlife Foundation (NFWF) and \$275,000 from Wells Fargo." Jewell said, "This initiative is a model of how public-private partnerships can both conserve our land and provide opportunities for our young people to obtain jobs skills and broaden their horizons by connecting with the great outdoors. Through the 21CSC, we hope to expand these partnerships that foster economic opportunities and create a connection with nature for young people that lasts a lifetime."

Meanwhile, the Portland (OR) Monthly (5/31, Andersen) reports that "Jewell visited Portland May 23 to announce programs to get Portland's low-income, at-risk 16- to 19-year-olds to work." The article notes that "the five-week government- and privately-funded summer programs will employ 40 teens and young adults to work in forestry, preservation, and wildlife jobs."

NASA TRANSFERS OPERATIONAL CONTROL OF LANDSAT 8 SATELLITE TO USGS. The TMCNet (5/30) reports, "NASA transferred operational control Thursday of the Landsat 8 satellite (http://landsat.usgs.gov/about_idcm.php) to the US Geological Survey (USGS) in a ceremony in Sioux Falls, S.D." Interior Secretary Sally Jewell said, "We are very pleased to work with NASA for the good of science and the American people. The Landsat program allows us all to have a common, easily accessible view of our planet. We are especially proud that Landsat images have not only been the starting points for some of the world's best commercial innovations in earth imagery, but also are available free of charge."

The Spaceflight Now (5/31, Ray) reports, "The satellite, built by Orbital Sciences, will collect at least 400 scenes every day from around the world to be processed and archived at the USGS Earth Resources Observation and Science Center in Sioux Falls."

Also reporting on the story is the Directions Magazine (5/31, Campbell, 28K).

SIX CONGRESSMEN OPPOSE OFFSHORE OIL AND GAS EXPLORATION. The Washington Post (5/31, 489K) reports, "A half-dozen congressmen from the Carolinas and Virginia are urging Interior Secretary Sally Jewell to use 'extreme caution' when considering any proposals for oil and gas exploration in Atlantic waters." According to the article, "the letter is intended to counter appeals from Virginia Gov. Bob McDonnell and the governors from North Carolina and South Carolina." The article notes that "the congressmen are Virginia's Robert C. 'Bobby' Scott, Jim Moran and Gerald E. Connolly; South Carolina's James E. Clyburn; and North Carolina's David Price and Melvin L. Watt."

INTERIOR CONSOLIDATES EMAIL SYSTEM. The Federal Computer Week (5/30, Konkell, 90K) reports that as part of the Interior Department's "IT transformation initiative" the agency has consolidated "14 separate email systems" to "a single cloud-based email application called Bison Connect." According to "Bernie Mazer, one of several panelists to discuss cloud use cases in government at the Federal Cloud Computing Summit in Washington, D.C., on May 30," Bison, "powered by Google Apps for Government, allowed DOI to deploy cloud-based email, calendar services, chat, document creation and web development applications within 150 days." Mazer said, "We can now send out all-employee emails, which we couldn't do in the past. Cloud gave us the opportunity to maximize value of what we have. We want to eliminate wasteful IT spending and shift IT investments to more cloud-based IT investments and platforms."

INTERIOR PRESSED ON OIA PLANS. The Saipan Tribune (5/31) reports, "Former Federal Labor Ombudsman James J. Benedetto asked US Interior Secretary Sally Jewell and key US Congress members to keep the Federal Labor Ombudsman's Office in the CNMI open for another five years-'or at least until several important

issues are resolved' concerning alien workers in the CNMI." In addition, "besides an online petition launched by Florida-based human rights advocate and former CNMI teacher Wendy Doromal to keep the ombudsman's office open, there have been individual letters calling on US officials to reverse its decision, given the continued need to help foreign workers in the CNMI." The article notes that "David Cohen, former Interior deputy assistant secretary for insular affairs, was one of those who signed the online petition."

FOUNDERS DAY VISITORS OF DR. BOB'S HOME TO SEE NEW HISTORICAL MARKER. The West Side (OH) Leader (5/31, Folkerth, 47K) reports, "When hundreds of people visit Dr. Bob's Home during Founders' Day weekend June 7-9, they will get to see the latest honor bestowed on the property." The residence "at 855 Ardmore Ave. in Highland Square, where Alcoholics Anonymous co-founder Dr. Bob Smith lived, was designated a National Historic Landmark this past October by Secretary of the US Department of the Interior Ken Salazar." And "a plaque noting the designation was dedicated May 12, Mother's Day, in a special ceremony at the home, which is a museum."

UTAH SEEKS "GRAND BARGAIN" ON MANAGEMENT OF FEDERAL LANDS. The Outdoor Life Magazine (5/31, Haughey) reports, "For more than a quarter century, the Utah State Legislature has been in a contentious debate with the US Department of the Interior and its maze of subsidiary land-management agencies over how to preserve wilderness and other environmentally sensitive areas while opening up other federal lands to oil and gas drilling." The issue, "according to Rep. Rob Bishop (R-Utah) is these public lands are tax-exempt, leaving the state and local governments struggling 'to fund education and county services on limited revenues' while being forced by proximity to inadvertently subsidize management of federal lands." according to the article, "one way to address this burden on state and local governments in Utah – as well as many other western states – is to open more public land for energy development, while setting aside more land for preservation in what Bishop calls 'the grand bargain.'"

DIRECTOR OF INTERIOR'S CONGRESSIONAL AFFAIRS OFFICE CHOSEN. Politico (5/31, Guillen, 25K) reports, "The Interior Department has hired Sarah Neimeyer, a former senior aide to Sen. Dick Durbin, as director of its Department of Congressional and Legislative Affairs."

GOVERNMENT URGED TO BOLSTER FIREFIGHTING EFFORTS. In an op-ed for the Albuquerque (NM) Journal (5/31, Sullivan, 83K), Terry Sullivan, State Director of the Nature Conservancy in New Mexico, writes that "warmer weather and the ongoing severe drought have every level of government bracing for another big fire season." But "unfortunately, this forecast comes as Washington is proposing to severely cut 2014 programs that proactively reduce the risk of megafires, through thinning and controlled burns." Sullivan argues that "instead of passively waiting for fires to dictate the terms to us, we need to ask Washington now to invest in safer and cheaper proactive forest treatments through the Hazardous Fuels program."

America's Great Outdoors:

National Park Service:

BABY BOOMERS CONTINUE TO BE DEPENDABLE CONSTITUENCY OF NATIONAL PARKS. The New York Times (5/31, Nagourney, Subscription Publication, 1.68M) reports, "When it comes to supporting the national parks, few have been as reliable as baby boomers." The article notes that "the percentage of visitors to the parks who are boomer age (48 to 66) is up around 8 percent over about two decades ago, though park officials say this also reflects a decline of 5 percent in visits by people who are 16 to 30." However, "if boomers are a critical constituency for the National Park Service, they are also a graying one," and "with the Memorial Day weekend signaling the unofficial start of another summer, park officials are well aware that sooner or later, boomers are not going to be turning up in great numbers at the entrances of national parks and monuments," so "the question is: will younger people come in similar numbers?"

NPS SAYS POLICE FURLOUGHS NO LONGER NEEDED. The Baltimore Sun (5/30, 184K) reports, "The National Park Service has announced that it no longer needs to furlough US Park Police." The article notes that "the announcement came after Park Police officers — who patrol the Baltimore-Washington Parkway and several sites in Maryland — had served three of 14 planned furlough days." The NPS "said savings from those three unpaid days off, combined with other cost-cutting measures and a thorough review of the budget, have

'significantly improved' the agency's financial situation and made it possible to end the furloughs for the rest of the fiscal year." NPS Director Jonathan B. Jarvis said, "As a result of cost-cutting measures implemented earlier this year, and now armed with seven months of actual costs — versus projections — we are able to reduce the furlough to the three days already taken. This is good news for our employees, good news for our visitors ... and good news for the security of our nation's icons."

Also reporting on the story is the Fierce Government (5/31, McDermott).

In an op-ed for the Christian Science Monitor (5/30, Heitman, 47K), Danny Heitman, an adjunct professor at LSU'sanship School of Mass Communication, writes, "Economic necessity sometimes requires citizens to make difficult decisions about federal budget priorities, and in such a climate of austerity, even good programs might have to make do with less." However, "the sequester, which has placed fiscal stewardship on autopilot, doesn't seem like the best vehicle for debating what national missions most urgently require our attention." He argues that "such a discussion — when and if it happens — should acknowledge that America's wild places aren't just a decoration, but the core of our national character."

GETTYSBURG PREPARES FOR 150TH ANNIVERSARY. The Lansdale (PA) Reporter (5/30, 8K) reports, "Authorities are urging the public to trust their instincts and report any suspicious activity during celebrations commemorating the 150th anniversary of the Battle of Gettysburg." The NPS "and others are finalizing preparations for the commemoration of the pivotal battle of the American Civil War." The article notes that "tens of thousands of visitors are expected for 10 days of events, beginning June 29."

The East Valley (AZ) Tribune (5/31, 53K) reports that in a recent interview, Bob Kirby, superintendent of Gettysburg National Military Park, said, "I think we're ready. We're ready for what the world would like to see."

Also providing coverage were the San Jose Mercury News (5/31, Stansbury, 539K), the Frederick (MD) News-Post (5/31, Stoneback, 30K) and the PhillyBurbs.com (5/31).

NATIONAL TRAILS DAY TO BE CELEBRATED. The Cleveland Plain Dealer (5/31, Gomy, 315K) reports, "In honor of National Trails Day on June 1, the National Park Service and the Conservancy for Cuyahoga Valley National Park are looking for volunteers to participate in a trail sweep and other projects between 9:30 a.m. and 1:30 p.m. in the national park."

Also, the Tennessean (5/31, 120K) reports, "National Trails Day is Saturday, and lots of our local nature centers and almost every state park has free programs — hikes, cleanups, interpretive walks, nature classes and even a few history lessons."

NPS SAYS \$66M LAND DEAL WASN'T PAYOFF. The Pocono (PA) Record (5/31, Pierce, 14K) reports, "The National Park Service never agreed to accept financial compensation to buy additional property as a part of a quid pro quo for approval of a high-voltage power line upgrade across three national park units near Bushkill, government lawyers say." Instead, "the Park Service negotiated \$66 million in 'mitigation' from PPL Electric Utilities and PSE&G separately from evaluating the environmental and cultural impacts of crossing the Delaware Water Gap National Recreation Area, Delaware River and Appalachian Trail, they said in a legal filing." The NPS claims that "it was only after determining the utilities had legal rights to place taller towers and more powerful electric lines along a right of way predating the park, and imposing several conditions to protect wetlands, wildlife and the natural view, that park officials finalized financial compensation for the unavoidable impacts."

HOUSE COMMITTEE TO CONSIDER BILL FOR HARRIET TUBMAN NATIONAL HISTORICAL PARK. The Syracuse (NY) Post-Standard (5/31, Weiner, 82K) reports, "The effort to establish a Harriet Tubman National Historical Park in Auburn took a big step forward today when a House committee agreed to hold a hearing on the legislation next week." According to the article, "the House Committee on Natural Resources will hear testimony Thursday (June 6) from Central New York supporters of the bill introduced by Rep. Dan Maffei, D-DeWitt, in February."

SITE WHERE BRITISH GENERAL SURRENDERED DONATED TO NPS. The AP (5/31) reports, "The spot where a British general surrendered his sword after the Battles of Saratoga is being donated to the National Park Service." According to the article, "the Revolutionary War site is the newest section of Saratoga National

Historical Park," and "a memorial sculpture will officially be unveiled during a ceremony Saturday morning."

PINNACLES NATIONAL PARK DESIGNATION INCREASES VISITOR COUNT. USA Today (5/30, Clark, 1.71M) reports, "In January, Pinnacles National Monument, an otherworldly enclave of towering monoliths, twisted spires and massive boulder caves east of central California's verdant Salinas Valley, became Pinnacles National Park." According to the article, "since the name change, locals have detected an increase in traffic winding along narrow Highway 25 skirting the park's eastern edge."

CUYAHOGA VALLEY NATIONAL PARK SUPERINTENDENT MOVING ON TO LARGER ROLE. The Cleveland Plain Dealer (5/31, O'Malley, 315K) reports, "Stan Austin, superintendent of the Cuyahoga Valley National Park for the last three years, is leaving his position to take on a bigger role in the national park system." According to the article, "Austin, 54, of Shaker Heights, has been promoted to director of the National Park Service Southeast Region, overseeing 68 park sites from the Virgin Islands to the Florida Keys to the Great Smokey Mountains." He "begins his new job, based in Atlanta, in mid-July."

DEATH VALLEY NATIONAL PARK OFFICIALS INVESTIGATING THEFT OF ROCKS. The Los Angeles Times (5/30, Sahagun, 692K) reports, "Death Valley National Park officials are investigating the theft of several of the rocks that mysteriously roam across a remote ancient lake bed known as the Racetrack Playa." Death Valley spokesman Terry Baldino said, "We've had more instances of folks taking the rocks. They don't seem to understand that outside of the Racetrack, these marvelous rocks have no value."

NEW PHILADELPHIA SITE ADDED TO NATIONAL UNDERGROUND RAILROAD NETWORK TO FREEDOM. The Springfield (IL) State Journal Register (5/31, 41K) reports, "The National Park Service has added Illinois' New Philadelphia Town Site to its National Underground Railroad Network to Freedom."

Also reporting on the story is the Jacksonville (IL) Journal Courier (5/31, 12K).

MORE PORTIONS OF SANTA FE TRAIL ADDED TO NATIONAL REGISTER OF HISTORIC PLACES. The Wichita (KS) Eagle (5/30, Tanner, 68K) reports, "Six more Kansas properties along the Santa Fe Trail have been added to the National Register of Historic Places." According to the article, "the sites in Marion and Morton counties are the newest listings in an effort by both the National Trails System of the National Park Service and the Kansas Historical Society to document historic sites along the Santa Fe Trail."

GRAND CANYON PARK RANGER CRITICIZED FOR ENCOUNTER WITH HIKER. In an op-ed for the St. George (UT) News (5/30, Hyde), Bryan Hyde, a news commentator, criticizes a park ranger at Grand Canyon National Park for an encounter with a hiker. According to Hyde, Dennis Mitchell "and his group of fellow hikers had just completed a 24-mile hike and were driving back to their other vehicle when a park ranger pulled them over," and Mitchell was arrested after he opened the door to "stretch his legs." Hyde writes that Mitchell's "failure to submit and obey the commands of an indifferent park ranger ended up with him being treated like a criminal threat," and "his medical condition took a very distant second place to the ranger's desire for control."

Bureau of Land Management:

SUSPECTED DRUNKEN DRIVER ARRESTED AFTER RUNNING OVER BLM RANGER'S LEG. The Washington Post (5/30, 489K) reports, "A suspected drunken driver is facing charges after authorities say he ran over a federal officer's leg while trying to avoid arrest in Farmington, N.M." According to the article, "21-year-old Charles Palmer was arrested this week on suspicion of driving while intoxicated follow the encounter with a US Bureau of Land Management ranger." The BLM "hasn't decided if it will file federal charges against Palmer."

Also reporting on the story are the Minneapolis Star Tribune (5/31, 335K), the San Francisco Chronicle (5/31, 220K), and the Albuquerque (NM) Journal (5/30, 83K).

FEDERAL AGENCIES, OREGON RANCHERS SIGN SAGE GROUSE AGREEMENT. KTVZ-TV Bend, OR (5/31) reports, "The Bureau of Land Management, the US Fish and Wildlife Service and the Oregon Cattlemen's Association signed a Candidate Conservation Agreement Thursday as part of ongoing efforts toward Greater Sage-Grouse conservation." According to the article, "these voluntary 'step down' agreements, to be signed in the

future by the BLM, the Service and participating livestock grazing permittees, will identify specific measures to be taken based on existing conditions of a particular allotment." Jerome E. Perez, BLM state director for Oregon and Washington, said, "Sage-grouse conservation is a top priority for the agency. This agreement highlights our commitment, and our partners' commitment to a collaborative approach to multiple use management. This is a win-win, allowing for continued commercial activity important to rural Oregon while providing additional voluntary conservation measures for an at-risk species."

Meanwhile, in an op-ed for the Havre (MT) Daily News (5/30, Kavulla, 3K), Travis Kavulla, a commissioner on the Montana Public Service Commission, asks, "When did the sage grouse become a national priority surpassing energy independence, and does this fowl really require millions of acres of energy-rich land to survive?" According to Kavulla, the BLM's recent 812-page Resource Management Plan for the Hi-Line "is a good example of the unfortunate trend toward declaring Montana off-limits to development."

BLM PROMOTES WILD HORSE ADOPTION. The Deseret (UT) News (5/31, McKellar, 105K) reports, "Mustangs pulled from the wild could gain a better chance at a stable life than the one it left behind when a two-day auction gets underway Friday to place formerly wild horses with new owners." According to the article, "trainers plan to showcase the potential of the adoptable animals in the Wild Horse and Burro Festival's Trainers Challenge on Friday and Saturday, one of several events the BLM has organized to facilitate its primary means of managing wild horses and burros crowding holding facilities: adoption." However, "Paula King, director of communications for the Cloud Foundation — an organization devoted to the preservation of wild horses on public lands," argues "horses should not be taken from public lands in the first place to be kept in holding corrals," and "instead, reversible infertility drugs could be administered to the animals and protection of their wild predators like mountain lions could reduce the horse populations on public lands."

BLM PLANS TO REMOVE WILD HORSES IN NEVADA. KRNV-TV Reno, NV (5/31) reports, "Federal land managers say the drought is prompting plans to remove an unspecified number of wild horses from a large swath of the range in northeastern Nevada — two years after they removed some 1,400 mustangs from the same area." The BLM "has released the final environmental assessment for its plans cull the herd around the Triple B, Maverick and Antelope Valley herd management areas in Elko and White Pine counties." According to the article, "while they haven't said how many horses they plan to remove, BLM officials say the 1.8-million acre area they're targeting is home to roughly 1,500 wild horses but it can only sustain 548 to 1,015 mustangs."

COURT SIDES WITH RANCH FAMILY ON CATTLE TRESPASSING LAWSUIT. The Elko (NV) Daily Free Press (5/31, 7K) reports, "A federal district judge has ruled that federal employees 'entered into a literal, intentional conspiracy' in a decision related to a cattle trespassing lawsuit." According to the article, "in 2007, the US government filed a civil suit for trespass damages against the estate of the late Nevada rancher E. Wayne Hage," which "claimed the Hage family allowed cattle to trespass on Bureau of Land Management and US Forest Service land in the Battle Mountain District and Tonopah Ranger District, respectively." However, US District Judge Robert C. Jones "reprimanded those who perpetually battled with the Hages, and accused them of conspiring against the ranchers."

BLM REVISES PLAN FOR LOGGING, SPOTTED OWLS. The Coos Bay (OR) World (5/31, Thornton, 11K) reports, "Spotted owls are once again changing how Coos County harvests its timber." According to the article, "the federal government reduced total critical habitat for the spotted owl by 4.2 million acres in Washington, Oregon and California." However, "local BLM lands saw an increase in habitat for the species, said Megan Harper, public affairs specialist with the Bureau of Land Management's Coos Bay office."

BLM PROPOSES EXPANSION OF BLANCA WETLANDS. The Pueblo (CO) Chieftain (5/31, Hildner, 45K) reports, "The Bureau of Land Management is proposing to expand the boundaries of the Blanca Wetlands in the hope of qualifying for federal conservation dollars." According to the article, "the proposal would expand the area, which is managed as an Area of Critical Environmental Concern, from 9,714 acres to 122,762 acres." However, "the boundary expansion would not give the agency control over either land or water rights in the area that now sit in private hands."

SEQUESTRATION SHORTENS HOURS AT BLM CAMPGROUNDS. The Eugene (OR) Register-Guard (5/31, Woolington, 52K) reports, "The US Bureau of Land Management Eugene district campgrounds are now open for extended weekends — but only for weekends — because of decreased staffing tied to projected federal budget

cuts known as sequestration." BLM Eugene district spokesman Michael Mascari said, "We've had to shorten the hours to manage."

NEW RULES IMPLEMENTED IN PREY NATIONAL CONSERVATION AREA. The Emmett (ID) Messenger-Index (5/31, 7K) reports, "New rules designed to protect habitats for raptors and enhance public safety are now in effect in the Morley Nelson Snake River Birds of Prey National Conservation Area (NCA) southwest of Boise." The BLM "has issued final supplementary rules that enable full enforcement of a number of prohibited activities identified in the 2008 resource management plan (RMP) for the NCA."

MESQUITE CITY COUNCIL APPROVES LEASE OPTION. The St. George (UT) Spectrum (5/30, Worthington, 15K) reports, "The Mesquite City Council Tuesday unanimously voted to pursue a lease with the Bureau of Land Management of some 83 acres at the end of Mesquite Boulevard that would include a right-of-way lease and a flood berm built during the flooding of 2010."

Fish and Wildlife Service:

FWS DIRECTOR ASHE TO ATTEND PRAIRIE SUMMIT. The Minneapolis Star Tribune (5/31, Anderson, 335K) reports, "Almost faster than the losses can be documented, the nation's most important grasslands are disappearing, a sad fact that will bring scores of conservationists and important national policymakers to Bismarck, N.D., next week for a prairie 'summit' and a hunting heritage meeting." According to the article, "organized by Ducks Unlimited (DU), and co-sponsored by other wildlife groups, this gathering will be attended by about 80 conservationists, including high-level decisionmakers such as US Fish and Wildlife Service Director Dan Ashe."

US HELPS DEPLOY DRONES TO CATCH RHINO POACHERS. The Bend (OR) Bulletin (5/30, Bolstad, 31K) reports, "Helping African governments catch poachers also is a big deal to US authorities, who awarded \$10 million in grants from 2011 to 2012 to support such efforts across the continent." The article notes that "some of the grant money from the United States comes from seizing the assets of people who've been caught buying and selling rhino horns in the US" according to FWS Director Dan Ashe, "the forfeited assets include \$800,000 in cash, gold, jewelry and precious stones that will be turned over to the Multinational Species Conservation Fund."

US MAY CUT FLOWS ON RIO GRANDE DUE TO DROUGHT CONDITIONS. The AP (5/31) reports Federal officials may cut "flows on the Rio Grande in central New Mexico earlier than normal because of drought conditions." The AP says the Albuquerque Journal reported Fish and Wildlife officials "are reviewing a plan by the federal Bureau of Reclamation to reduce flows through Socorro County as early as this weekend."

Drought Threatens Rio Grande's Silvery Minnow. For the Albuquerque (NM) Journal (5/30, Fleck, 83K), John Fleck writes, "I've written for some time that when drought gets real on the Middle Rio Grande, the place where the crisis will show up first is a lack of water for legally mandated environmental flows – specifically, for the endangered Rio Grande silvery minnow." Now, "that moment seems to be upon us." He notes that "Jen Pelz of the Santa Fe-based environmental group WildEarth Guardians charged that the reduced flows mean extinction of minnows in the wild is 'a clear possibility this summer.'"

FWS TO PAY \$40,267 FOR UNWANTED TORTOISE DROP-OFF. The CNS News (5/31, Hunter) reports, "The US Fish and Wildlife Service (FWS) is planning to spend \$40,267 in taxpayer funds to provide the public with a centralized drop off location for pet tortoises and tortoises found in developed or urban areas and provide for their temporary care." Ted Cook, Nevada state supervisor for the agency, said, "We have a unique circumstance where we have a species that's protected under the Endangered Species Act but can also be kept as a pet domestically." He added, "After 20 years or more of this, we find every year there's hundreds of unwanted pet tortoises and folks looking for an opportunity to do something with them – give them away, get rid of them – and so The Animal Foundation has agreed to receive them and then try to adopt them back out again."

SCIENTISTS INVESTIGATING RAT POISON FOUND IN SPOTTED OWLS. KBOI-TV Boise, ID (5/31, Barnard) reports, "In the West Coast marijuana-growing region known as the Emerald Triangle, scientists want to know whether the rat poison spread around illegal pot plantations is killing northern spotted owls, a threatened species." According to Mourad Gabriel, a doctoral candidate at the University of California at Davis Veterinary

Genetics Laboratory, "they are testing 84 barred owls from Northern California killed in the course of research on whether removing them allows spotted owls to reclaim lost territories." The article notes that "the research is funded primarily by the US Fish and Wildlife Service."

US Geological Survey:

DROUGHT AFFECTS AQUIFERS. The EnergyWire (5/31, Massey, Subscription Publication) reports, "The recent drought that has gripped much of the Southwest for almost three years has thrown the issue into stark relief." The article notes that "a number of states and the US Geological Survey have issued reports in recent weeks highlighting sharp drops in regional water levels due to increased groundwater pumping." Also, "a recent study by USGS found that its rate of depletion accelerated sharply over the past decade with declines from 2001 to 2008 accounting for 32 percent of the cumulative depletion over the course of the entire 20th century."

Securing America's Energy Future:

Renewable Energy:

NYTIMES FACES CRITICISM FOR ALLEGEDLY MINIMIZING POTENTIAL RISK TO CONDOR DUE TO WIND PROJECT. KCET (5/31, Clarke) criticizes the New York Times coverage this week of the US Fish and Wildlife Service decision "to allow a Mojave wind facility to kill a condor, and among other problems the story contained a howler of a misstatement about wind development in the Mojave Desert." KCET argues the piece by reporter Felicity Barringer on May 25 seeks to minimize the threat to wildlife from the wind energy project.

"Misrepresentation like this ought to concern even die-hard advocates of wind power development. If we don't honestly account for the potential risk to wildlife of our energy development strategies, we will find ourselves facing serious regret over the choices we make today," notes the article.

INVESTIGATION INTO OCOTILLO WIND FARM TURBINE BREAK NEARLY DONE. U-T San Diego (5/30, Lee, 242K) updates the situation at the Ocotillo wind plant, which went offline after a Siemens wind turbine blade fell two weeks ago. The plant was still offline on Thursday, but a spokesman for the wind farm said the investigation into the incident was almost completed. From photographic evidence of the broken turbine, officials believe "the blade separated from where it attached to the rotor," and joints are one potential weak spot in turbines. However, the article notes that such an incident is rare among wind turbines. According to National Wind Technology Center director Ford Felker, "Thirty years ago having a blade separate from a turbine was not that uncommon, but there has just been tremendous improvements in the development process for wind turbines, both from our ability to analyze how the structures would behave using computer modeling, and in terms of the types of testing that's required now."

Onshore Energy Development:

FWS WARNS KEYSTONE XL PUTS ENDANGERED BEETLE AT RISK. Bloomberg News (5/31, Snyder) reports, "The US Fish & Wildlife Service this month said that Keystone's proposed route across Nebraska put the endangered American burying beetle at risk." The service "said the black and orange-spotted insect could be spared, and the project move forward, if proper procedure is followed." According to the article, "that means pipeline builder TransCanada Corp. (TRP) will have to trap and relocate the one-inch beetles, using frozen rats that have thawed for at least three days for maximum pungency, according to detailed protocols US authorities have drawn up to protect the burrowing bug."

INDUSTRY INSIDERS WORRY ABOUT BLM'S PROPOSED RULE COVERING HYDRAULIC FRACTURING.

The Moab (UT) Times-Independent (5/31, Kadelstaff) reports the Bureau of Land Management's "revised proposed rule covering hydraulic fracturing is raising concerns among industry representatives." One of the BLM proposal's key issues "centers on identifying chemicals used in the fracking process." The paper says the Western Energy Alliance "called the proposed rule an unnecessary layer of federal regulation." The alliance warns curbs on fracking "could hurt job creation and prevent productive resources from being developed for energy."

GROUP URGES BLM TO DISCLOSE TO PUBLIC NAMES OF ADDITIONAL GAS LEASE NOMINATORS.

KVNO-FM Omaha, NE (5/31, Durlin) reports that last week the Paonia-based Citizens for a Healthy Community and several other organizations "wrote to the Bureau of Land Management, requesting that the agency comply with a recent legal ruling and release the names of all lease parcel nominators to the public." CHC's Jim Ramey said BLM had provided the names of those who nominate parcels for lease to drill for oil and gas on public lands. However, the agency continues to withhold this information when requested from other groups or journalists. "So we've joined with this coalition of groups to say, hey BLM, follow the law, adjust your policy and provide this information to the public," CHC said in the report.

AUTHOR URGES BLM TO EXPAND DRILLING ON FEDERAL LANDS. In an opinion piece in the Wenatchee (WA) World (5/30, Bradley, 19K) Robert Bradley Jr., CEO of the Institute for Energy Research and author of energy books, says the US has massive reserves of oil that could last scores of years. He urges opening up more Federal lands for drilling, saying the move will generate "\$36 billion in annual new revenue (not to mention a \$127 billion boost to GDP) over the next seven years." The article says Sally Jewell was recently nominated to lead the Interior, "but in her new job, the question is whether she'll grow America's untapped energy resources."

SOME SAY FRACKING COULD HURT WATER SUPPLY. In an opinion piece in the Modesto (CA) Bee (5/30, 59K), Ed Bearden, a retired county social worker and current real estate agent who formerly served on the Empire school board, writes 12th District Assemblywoman Kristin Olsen has "trumpeted the exploitation of shale trapped oil found in large deposits from Kern County to the west side of Stanislaus." The Obama Administration, through the Bureau of Land Management, "has approved the lease of 2,700 acres in Fresno and Monterey counties to oil and gas drillers." The Bee highlights the dangers of the fracking process, which includes pumping water and toxic fluids like ethylene glycol and boric acid. The paper says once injected into the ground they can seep into ground water and poison drinking water.

COLUMNIST SAYS THERE ARE SIGNS OBAMA WON'T TAKE STRONG ACTION TO CURB FRACKING. In his column in the Washington Examiner (5/31, Camey, 93K), Timothy P. Carney says there are signs that the Obama Administration won't take any strong action to curb fracking. Carney says General Electric and the Administration have strong ties and GE "is investing billions of dollars" in fracking. The fact that GE is going long suggests that the Administration won't curb fracking, writes Carney.

Offshore Energy Development:

HASTINGS PROPOSES OFFSHORE DRILLING BILL. The "E2 Wire" blog of The Hill (5/31, Colman, 21K) reports a senior House Republican proposed legislation that would "extend offshore drilling to Atlantic and Pacific coastal regions President Obama excluded from his five-year oil and gas leasing plan." The bill from House Natural Resources Committee Chairman Doc Hastings (R-WA) "is similar to the one that passed the House last year, largely with Republican votes." The blog posting says that in addition to expanding drilling, the bill "would reshuffle the Interior Department's offshore energy agencies and award federal offshore drilling royalties to all coastal states."

COAST GUARD HEARING ON SHELL'S ANTARCTIC DRILLING PROBLEMS CONTINUES. The Anchorage Daily News (5/30, Demer, 42K) reports that on Thursday, Shell offshore marine manager Jonathan Wilson testified in the Coast Guard hearing over the grounding of Shell's Kulluk rig off Alaska's coast last winter. Wilson expressed surprise about prior testimony from "a Shell contractor, warranty surveyor Anthony Flynn of GL Noble Denton, an oil and gas technical consultant that was hired to verify the tow setup for insurance purposes." Wilson expressed surprise "to hear the scope of work didn't include the evaluation of operations and planning against Noble Denton guidelines." The Alaska Journal of Commerce (5/31, Bradner, 5K) also covers the story.

Tackling America's Water Challenges:

BAY DELTA CONSERVATION PLAN CRITICIZED. The Central Valley (CA) Business Times (5/31) reports, "Members of Congress from the Sacramento-San Joaquin Bay-Delta region say Gov. Jerry Brown's vaunted Bay Delta Conservation Plan will actually destroy the Delta it's supposed to save." Critics "say it ignores the concerns repeatedly raised by stakeholders in the Bay-Delta region."

The Lake County (CA) News (5/31) reports, "Rep. Mike Thompson (CA-5) said the proposed plan is not a

workable solution." Also, "Rep. John Garamendi (CA-3) said California's water system is under enormous stress from a growing population and climate change." In addition, "Rep. Doris Matsui (CA-6) said the state of California, in partnership with the federal government, is on the verge of recommending a plan for California's water future that does nothing to solve California's water problems and is a disaster for Northern California."

Additional coverage was provided by the Sierra (CA) Sun Times (5/31), the Fresno (CA) Bee (5/29, 113K), and the City Journal (5/31, Greenhut, 10K).

BOR ANNOUNCES WATERSMART GRANTS FOR YAKIMA VALLEY IRRIGATION DISTRICTS. The Yakima (WA) Herald-Republic (5/31, 28K) reports, "Two Yakima Valley irrigation districts will receive federal grants for projects to conserve water and energy." The BOR "announced the grants under the agency's WaterSMART program, a 3-year-old program to develop a sustainable water supply." According to the article, "the Roza Irrigation District will receive a \$300,000 grant to pipe more than seven miles of open ditches known as laterals in the Zillah area and install flow meters to better monitor water deliveries," and "the Kennewick Irrigation District will receive a \$1.5 million grant to line 14.6 miles of canal to conserve water and reduce power usage."

FLAMING GORGE DAM RELEASING MORE WATER TO SAVE ENDANGERED FISH. KSL-TV Salt Lake City (5/31, Liesik) reports that "Malcolm Wilson from the US Bureau of Reclamation says they have raised the water releases coming out of the Flaming Gorge Dam" in order to help the endangered razorback sucker. Wilson said, "(We started) beginning yesterday morning at about five or so, in several steps, pushing it up about 1,000 CFS yesterday morning and then another 2,000 CFS in several steps this morning."

INTERIOR TO SPEND NEARLY \$500,000 TO TEACH FISH SURVIVAL SKILLS. The Washington Free Beacon (5/31) reports a Department of Interior "grant will allocate \$472,150 to teach bonytails and sucker fish survival techniques, CNS News reports." The article says the "proposal builds upon the 2012 Bureau of Reclamation assistance agreement with the Arizona Game and Fish Department (AZGFD) tasked with investigating the potential for training" the fish "to recognize and avoid predators." The article says "the \$400,000 grant to train fish is hardly the only recent example of questionable tax dollar use by the federal government."

CALIFORNIA FARMERS TURN TO DRIP IRRIGATION DUE TO DROUGHT CONDITIONS. The Los Angeles Times (5/30, Green, 692K) reports drip tape is now used to irrigate "about a third of California's 9.4 million acres of irrigated crop land, holds the promise of growing more crops with less water." The paper says years of water rationing due to drought "have left farmers frustrated with unreliable allotments of scarce water resources each year, threatening the state's \$43.5-billion agricultural industry." The Times says that each year, the US Bureau of Reclamation "dictates how much water growers in each district will get for crops. Last year, for instance, growers in the Central Valley Project received 40% of the water they had requested, a sizable drop from the previous year's 80%."

Empowering Native American Communities:

MADISON COUNTY BOARD OF SUPERVISORS APPROVES DEAL OFFERED BY STATE, ONEIDA NATION. The Oneida (NY) Dispatch (5/30, Cleaver, 6K) reports, "The Madison County board of supervisors met Thursday to consider a deal announced less than two weeks ago that is intended to settle disputes on a number of issues between New York, the Oneida Nation and Madison and Oneida counties." According to the article, "after a meeting that lasted a little over an hour and a half, the Board of Supervisors, approved the resolution to accept the proposal."

Also, the Oneida (NY) Dispatch (5/30, 6K) reports, "On the heels of a Tuesday night, four-hour special meeting to consider a proposed settlement deal among Oneida and Madison counties, New York State and the Oneida Indian Nation, the Oneida County Board of Legislators accepted the agreement by a 16-13 margin."

ADDITIONAL COVERAGE OF REPORT ON INDIAN COUNTRY CASES. Additional coverage of the Justice Department's report on Indian Country cases was provided by the Washington Post (5/31, Kolpack, 489K), the Minneapolis Star Tribune (5/31, Fonseca, Kolpack), the Albany (OR) Tribune (5/31), the Kansas City (MO) Star (5/30, 197K), and the Mitchell (SD) Daily Republic (5/31, 12K).

NEWLY PROPOSED FEDERAL RULES COULD SPEED UP MASHPEE TRIBE'S CASINO PROJECT. The Cape Cod (MA) Times (5/30, Brennan) reports the Mashpee Wampanoag Tribe "hopes a proposed rule change by the federal Bureau of Indian Affairs will speed up the process of land trust applications and limit the threat of lawsuits." The paper says that on May 24, Assistant Secretary for Indian Affairs Kevin Washburn "filed the proposed change with the Federal Register, triggering a 30-day public comment period." Washburn said in a statement the rule change requires "that opponents exhaust remedies within the Department of the Interior ... before seeking judicial review."

Top National News:

AUTHORITIES INTERCEPT LETTER TO OBAMA WITH SIMILARITIES TO RICIN-LACED LETTERS SENT TO BLOOMBERG. The news that a suspicious letter similar to ricin-laced letters sent to New York Mayor Michael Bloomberg was sent to President Obama at the White House led two broadcast network newscasts and was carried by all three, but receives only some print coverage. The CBS Evening News (5/30, lead story, 2:20, Dubois, 5.58M) reported that while the letters "never got anywhere near" the President or Bloomberg, the threat is being taken "seriously." CBS focused its report on the search for the suspect, with Bob Orr saying the FBI "is doing forensic testing looking for clues that might identify who sent them." At the top of NBC Nightly News (5/30, lead story, 3:05, 7.86M), Brian Williams said the "first scare of its kind took place in those nervous and shaky days after 9/11," back when "very few of us ever dreamed someone would send any kind of substance through the mail designed to harm and threaten people. Now it's happened again." NBC's Pete Williams stated that "the President and the Mayor were never in any danger because their mail is routinely screened for hazards like this."

On ABC World News (5/30, story 2, 2:40, Sawyer, 7.43M), Brian Ross said that according to the Secret Service, the letter "was intercepted at a screening facility far from the White House. Officials said the threatening language was similar to that sent in the suspected ricin letters to New York Mayor Michael Bloomberg and the gun control lobby group in Washington that he started. ... A copy of the letter obtained by ABC News shows it was postmarked in Shreveport, Louisiana, on May 20 and the text includes this statement: 'What's in this letter is nothing compared to what I've got planned for you.'"

The New York Times (5/31, Goldstein, Subscription Publication, 1.68M) reports an "official with knowledge of the investigation" said the letter addressed to the White House "raised suspicions...because the postmark, the handwriting and the positioning of the handwriting on the envelope appeared similar to that of the ricin-laced letter that had been addressed to Mr. Bloomberg." The Wall Street Journal (5/31, Barrett, El-Ghobashy, Saul, Subscription Publication, 2.29M) says the letters to Bloomberg and Mark Glaze of the Bloomberg-founded Mayors Against Illegal Guns contained references to the push for gun control legislation.

The AP (5/30, Superville, Long) reports New York Police Commissioner Raymond Kelly said all three letters "apparently came from the same machine or computer and may be identical but referred specific questions to the FBI," which said in a statement "that field tests on the letters were consistent with the presence of a biological agent."

McClatchy (5/31, Gordon, Kumar) notes that these three letters "were the latest in a rash of letters mailed to politicians and government figures since April," including those sent to the President, Sen. Roger Wicker, and a Mississippi judge, and more recently to a Federal judge in Washington State. The Washington Times (5/31, Lengell, 76K) and Politico (5/31, Gerstein, 25K) also have reports.

HOLDER SAYS HE IS SEEKING TO BALANCE NATIONAL SECURITY, PRESS FREEDOM. Attorney General Holder's meeting Thursday evening with representatives from major media outlets generated a great deal of print and online coverage, but was not mentioned by any of the three network newscasts Thursday evening. Indeed, none of the so-called "scandal trifecta" controversies were covered by networks Thursday. On the other hand, either DOJ's handling of national security leaks or the IRS scandal were the lead story on every one of Fox News' prime-time programs Thursday night.

Due to the "off-the-record" nature of the meeting with Holder, this morning's papers lack much in the way of details regarding what was discussed, but several of the participants are quoted as saying that Holder is eager to strike a workable balance that respects the press's role while ensuring that national security is not compromised

by leaks. Earlier in the day, online coverage preceding the meeting focused on tallying which news organizations had accepted Holder's invitation and which declined due to the stipulation that the conversation would be off the record.

Arguably the most notable bit of commentary on the subject Thursday came from MSNBC's Chris Hayes, who appeared on MSNBC's *Now with Alex Wagner* (5/30) and predicted that "the other shoe to drop...is the Stuxnet leak" which generated a "big front-page story in the *New York Times* about this triumphant thing that the Administration did...this incredible virus that took out the [Iranian] nuclear program." According to Hayes, "It is very clear that information was classified, and it is very, very clear from the article that it was leaked by senior Administration officials – there's just no way it wasn't." Hayes continued, "So...if you're going to go after some low-lying guy in the State Department for leaking something, then you should be going after whoever those senior administration officials are."

Notably, Hayes did not mention the controversy over DOJ's prosecution of leaks on his own MSNBC program, *MSNBC's All In with Chris Hayes* (5/30), later Thursday. In fact, neither the leaks controversy, nor Holder's Thursday night meeting with journalists to ameliorate the situation was discussed on any of MSNBC's prime-time or early prime-time programs Thursday night.

Tucker Carlson, appearing on Fox News' *Special Report* (5/30), said the journalists at Thursday's meeting with Holder ought to have asked him: "Why was the *New York Times* not targeted as Fox and the AP were" even though the Times "leaked all kinds of details about Obama, all of which made him look good?" The *Daily Beast's* Kirsten Powers added sarcastically, "Not to be too cynical, but I think the stories that painted Obama in a positive light probably were sanctioned leaks. ... I'm just going to go out on a limb there."

Dylan Byers, in an article for *Politico* (5/30, 25K) that was published at 8:30 Thursday night titled "Eric Holder To Media: I Get It," provides some details of the off-the-record meeting Holder and Deputy Attorney General James Cole held Thursday evening with *Politico's* John Harris, the *Washington Post's* Martin Baron, the *Wall Street Journal's* Gerald Seib, the *New Yorker's* Jane Mayer and the *New York Daily News's* Jim Warren. Byers says that "according to those who were present," Holder "expressed concern...about how" DOJ "has handled recent media investigations" and "expressed a willingness to revise the guidelines for such investigations," but "stopped short of offering any concrete changes." Harris is quoted as saying that Holder and Cole "said they are reaching out to...strike what they called 'the balance' between protecting the flow of information and journalists' ability to do our jobs and what they described as national security damage."

According to the *Washington Post* (5/31, Horwitz, 489K), the journalists who met with Holder "reached an agreement with the Justice Department under which they could describe what occurred during the meeting in general terms." The *Post's* Baron is quoted as saying that Holder "completely endorsed the president's statement that reporters should not be at legal risk for doing their job," and "acknowledged...the need to have a more rigorous internal review."

The *New York Times* (5/31, Savage, Subscription Publication, 1.68M) reports that "several" of the participants "told the [DOJ] officials that leak investigations have had a chilling effect on both reporters and government officials." The journalists reportedly also "urged more rigorous procedures for internal review of subpoena requests, including the scope of any records sought and whether to provide advance notice."

Controversy surrounding the meeting with Holder was the lead story on Fox News' *Special Report* (5/30). Anchor Bret Baier described the decisions by various media outlets not to attend as a "boycott, of sorts." Correspondent Shannon Bream went on to report that "the clock is ticking toward the Wednesday deadline for Holder to reply to an extensive set of questions from Republicans on the House Judiciary Committee, who believe he may have misled them on during his testimony on May 15th" when he denied ever considering prosecuting journalists for revealing national security leaks. Bream added that "many on the left and right believe it's time for President Obama to ask for Holder's resignation."

Kim Strassel, in her column for the *Wall Street Journal* (5/31, Subscription Publication, 2.29M), makes the case that Holder is reaching out to the press because the White House believes the controversy over DOJ's prosecutions of leakers could potentially turn the White House press corps, and even some Congressional Democrats, against the Administration.

More News Organizations Decline Off-The-Record Meetings With Holder. Earlier Thursday, Politico (5/30, Weinger, 25K) reported “several news organizations” – including the New York Times, the AP, CNN, Fox News, CBS News, Reuters, NBC News, The Huffington Post and McClatchy – declined to attend “off the record meetings” with Holder regarding the Justice Department’s prosecution of leak cases. Among those who accepted invitations are Politico, The Washington Post, The Wall Street Journal, ABC News, Bloomberg News and USA Today. Politico editor in chief John Harris is quoted as saying, “I feel anyone – whether an official or ordinary reader – should be able to have an unguarded conversation with someone in a position of accountability for a news organization when there is good reason.” According to Politico, the meetings were initiated after President Obama “announced [a] review of the department’s existing guidelines governing investigations involving reporters.”

USA Today (5/31, Moore, 1.71M) reports that Deputy White House Press Secretary Josh Earnest “defended the decision to make the meeting private, saying that Holder wants to have a ‘constructive’ discussion with news organizations.” However, Jim Asher, McClatchy’s Washington bureau chief, said, “This seems to be something of a PR campaign to make nice with the press,” but “the Justice Department-slash-White House is saying, ‘Do it our way or don’t do it at all.’” The Huffington Post’s Ryan Grim adds, “A conversation specifically about the freedom of the press should be an open one. We have a responsibility not to betray that.” Anita Kumar, in a post for McClatchy (5/30, Kumar), quotes Earnest as saying, “We are hopeful that media organizations will take advantage of the opportunity to constructively contribute to this process.”

According to The Hill (5/31, Easley, Yager, 21K), the “rejected invitations are the latest setback for the embattled” Holder, who is “under fire from the left and the right.” The Hill notes that on MSNBC Thursday, Rep. Carolyn Maloney (D-NY) said she “has confidence in Holder,” but added that DOJ “needs to address its internal leak investigation processes with the public in addition to having conversations with members of the media.” Maloney is quoted as saying, “Let’s put all of the issues out on the table, not only in front of the press who’s going to these meetings, but the American people.”

The Huffington Post (5/30, Fung) reports that on Thursday, former NBC anchor Tom Brokaw, in a HuffPost Live appearance, said, “No news executive should go in there on an off-the-record session. ... It should be on the record.” Dylan Byers, in a post for Politico (5/30, Byers, 25K), noted that when Brokaw made that comment, NBC was “the last major news organization deliberating over whether or not to attend” the meeting with Holder, but later in the day, NBC News announced it has “declined to participate in the off-the-record meeting.”

The Washington Times (5/31, Lengell, 76K) reports that its executive editor said the Times “would not attend any such [off-the-record] meetings if it were invited.”

Pincus Dismisses Criticism Of DOJ From “Self-Involved” Washington Press. Dylan Byers, in a piece for Politico (5/30, Byers, 25K), says the Washington Post’s Walter Pincus is critical of “what he believes is the Washington press corps’ overheated and sanctimonious response to the Justice Department’s subpoenas of Associated Press reporters’ phone records.” Pincus argues that the DOJ’s tactics are “nothing new” and “not even close to Nixon.” Pincus adds that the “knee-jerk reaction” only “shows how self-involved the press has become.”

MARKETS, MEDIA SHRUG OFF NEGATIVE ECONOMIC REPORTS. Despite a slight downward revision, the media’s take on the new GDP estimates is at worst neutral. In general, reports attribute the drop to the decline in government spending, but expect that impact to be short-lived. The media similarly appears to be shrugging off reports of an increase in the weekly reading of first-time jobless claims.

Reuters (5/30) reports that the Department of Commerce issued its second look at first-quarter 2013 GDP on Thursday, estimating that it rose at a 2.4% annual rate during the period. That’s down slightly from the 2.5% rate estimated in Commerce’s first look at the data a month ago. Economists surveyed by Reuters had expected the initial reading to be unchanged.

Bloomberg News (5/30, Chandra) says the downward revision was due to “slower inventory building and cutbacks in government spending” which “overshadowed the biggest gain in consumer purchases since the end of 2010.” Bloomberg says that “resilient” consumer spending, additional improvements in the housing market, and an upward-trending job market will “help the expansion strengthen in the second half of the year as the fallout from

federal budget cuts dissipates."

The Wall Street Journal (5/31, Morath, Subscription Publication, 2.29M) runs a similar report, noting the impact of the drop in government spending, but says that consumer resiliency is keeping the economy on a growth path.

Jobless Claims Up 10,000 Last Week. The AP (5/31) reports that jobless claims rose 10,000 last week to 354,000, according to data released Thursday by the Department of Labor. The four-week moving average, a "less volatile" measure, rose 6,750 to 347,250. Still, the AP says, "the level of applications is consistent with steady hiring and remains near a five-year low."

Bloomberg News (5/31, Kowalski) says the data was difficult to assess, as "holiday closures prevented five states from completing a full count." Economists surveyed by Bloomberg expected claims to come in at 340,000.

Reuters (5/31, Mutikani), in its report, similar says that economists it surveyed expected claims to come in at 340,000. Reuters also said that the rise is not enough to indicate that the recent improvements in the job market are on the wane.

Job Prospects For Grads Better, But Not Great. The CBS Evening News (5/30, story 9, 2:00, Dubois, 5.58M) reported on the jobless claim numbers, and CBS (Reid) then examines the job prospects for the collegiate class of 2013. CBS (Reid) reports that a recent survey of employers "found they only plan to hire only two percent more of college graduates this year than in 2012," which is "down from a predicted 13% increase at the beginning of the school year."

Consumer Confidence Steady Last Week. Bloomberg News (5/30, Woellert) reports that consumer sentiment last week "hovered near a five-year high as more Americans said the economy was improving and their finances were mending." The Bloomberg Consumer Comfort Index stood at minus 29.7 for the period ending May 26, down slightly from 29.4 a week earlier. Bloomberg says that views on the state of the economy "matched a mid-April reading as the strongest since January 2008."

Mortgage Rates Rise To Highest In Year. Bloomberg News (5/31, Gopal) reports that mortgage rates "rose to their highest levels in a year" as reports "showed the housing market and economy strengthening," which signaled to bond investors that the Fed "may reduce efforts to push down borrowing costs." The average rate for a 30-year fixed mortgage rose to 3.81 percent this week from 3.59 percent the prior week, according to Freddie Mac. The average rate on a 15-year rate rose to 2.98 percent from 2.77 percent the prior week.

Stocks Rebound As Confidence In Fed Easy-Money Continuance Increases. Bloomberg News (5/31, Hwang) reports that stocks were up Thursday despite the jobless report and the GDP numbers being "weaker-than-expected," because the data "boosted speculation the Federal Reserve will maintain stimulus." The Dow Jones Industrial Average rose 21.73 points to 15,324.53, while the S&P 500 rose 0.4 percent to 1,654.41.

Reuters (5/31, Moon) similarly says that the rebound from Wednesday's losses was due to new confidence that Fed will continue its easy-money policy. Reuters also reports that the NASDAQ Composite Index rose 23.78 points to 3,491.30.

Americans Still Struggling To Regain Wealth Lost In Recession. In contrast to the stories noting consumer resilience, the Washington Post (5/30, Mui, 489K) reports that US households have "have rebuilt less than half of the wealth lost during the recession," which is "leaving them without the spending power to fuel a robust economic recovery," according to a new analysis from the Federal Reserve. In addition, the study showed that the majority of the improvement was "due to gains in the stock market, which primarily benefit wealthy families. That means the recovery for other households has been even weaker."

In a short piece, the CBS Evening News (5/30, story 8, 0:25, Dubois, 5.58M) reported, "A couple of months ago the Federal Reserve reported we've reached a milestone in the recovery from the recession. American households had, on average, recovered more than 90% of the wealth they'd lost. But today the Federal Reserve Bank of St. Louis said not so fast. Adjusted for inflation and other factors, wealth recovery is only 45%, so we do have a long way to go."

More Commentary On The Economy. In his column in the Wall Street Journal (5/31, Subscription Publication, 2.29M), David Wessel writes that bond prices are down lately, pushing the yields on 10-year Treasury Bills to above 2.1%, the highest level since April 2012. Wessel says there are a pair of narratives explaining the change, a good one and a bad one. The bad one says that the markets are addicted to the Fed's easy-money policy, and that when it ends, Treasury yields will jump sharply. The good one says that the US economy is now finally gaining momentum. Overall, Wessel says that other economic indicators suggest that the good narrative is more likely to be accurate.

In an op-ed for the Wall Street Journal (5/31, Subscription Publication, 2.29M), David Malpass, a former Treasury official and president of Encima Global, writes that the Fed's easy-money policy is a drag on the economy. Malpass says that the Fed's bond-buying policies probably helped during the 2008 financial crisis, but the economy after that would have been stronger without them.

Editorial Wrap-Up:

NEW YORK TIMES. "No Replacement For Corporate Taxes." The New York Times (5/31, Subscription Publication, 1.68M) editorializes, "Eliminating the corporate tax would not fix the broken tax system." It "would be a huge tax cut for the wealthy, which would ultimately result in even heavier burdens on everyone else or a government that is far too small to meet the nation's needs. The corporate income tax – which is projected to raise \$4.8 trillion in the next 10 years even with all the avoidance that is going on – falls most heavily on corporate shareholders, who tend to be wealthy."

"Attacks On Muslims In Myanmar." The New York Times (5/31, Subscription Publication, 1.68M) says in an editorial that "terrifying anti-Muslim violence" in Burma has exposed "deep ethnic and religious tensions that are undermining efforts to stabilize the country and move forward with political and economic reforms. ... All too often, police and security officials have been accused of failing to prevent attacks on minorities or being complicit in them." The Times says the US and other nations supporting Burma's transition, "as well as international companies eager to do business there" must urge the government to "control the deadly sectarianism gaining strength there."

"Hate Speech On Facebook."

WASHINGTON POST. "Grim Signals From Syria." In an editorial, the Washington Post (5/31, 489K) reports that the Administration has "gotten some grim signals" in response to its efforts to convince Syria's Bashar al-Assad to reconsider his determination to stay in power. Assad "said there had been 'a shift in the balance of power' in the country's civil war 'in favor of the armed forces' and that he had 'absolute confidence in our victory.'" The Post says that the "only hope for an acceptable political settlement in Syria lies in an intervention that would decisively shift the balance of Syria's war – through arms supplies to the rebels and airstrikes to eliminate the regime's air power."

"Restoration Of Rights." The Washington Post (5/31, 489K) editorializes that Virginia Gov. Robert McDonnell "nudged" the state "into the 21st century" on Wednesday by authorizing a new system to automatically restore voting rights to nonviolent felons who have served their time or paid their fine. Calling McDonnell's act "courageous and consequential," the Post notes that it "should enfranchise tens of thousands of ex-convicts." The Post notes that it would have preferred McDonnell to go farther by restoring voting rights to "those convicted of some drug crimes," but points out that McDonnell "is doing what's politically possible for now" and that he "deserves Virginians' admiration for that."

"Why Did The FBI Kill This Man?" The Washington Post (5/31, 489K) editorializes about the "tangle of conflicting reports from law enforcement sources about what happened" to Ibragim Todashev, and argues that "the last thing the U.S. government needs to do is fuel wild conspiracy theories by releasing too little information or investigating too slowly." The Post urges the Administration to "move heaven and earth to get to the bottom of what happened and make it public – quickly."

WALL STREET JOURNAL. "Obama's Student-Loan Props." The Wall Street Journal (5/31, Journal, Subscription Publication, 2.29M) says in an editorial that President Obama is ginning up an artificial fight with

congressional Republicans over the upcoming doubling of student loan interest rates, saying the President will today host students at the White House for a campaign-style event urging Congress to opt for his rate increase fix plan over one offered by House Education Chairman John Kline, even though the differences are small. The Journal says Obama would do better to work with Republicans on an agreement rather than making a political push.

"A Tax-Exempt IRS Primer." The Wall Street Journal (5/31, Subscription Publication, 2.29M), in an editorial, notes that while Democrats have been urging the IRS to scrutinize conservative 501(c)(4) groups' expenditures, they have not sought similar treatment for labor unions, who, according to the Journal, have spent \$4.4 billion on campaign since 2005. The Journal notes that while conservative groups like Crossroads GPS rely on donations, unions are spending their members' dues on political activities they may, or may not, agree with.

"Sacramento's Nonprofit Shakedown." The Wall Street Journal (5/31, Subscription Publication, 2.29M), in an editorial, criticizes the California legislature for voting to suspend the statute of limitations for child abuse cases after having previously approved a similar one-year suspension in 2003 that ended up costing the Catholic Church \$1.2 billion in damages. The Journal notes that in some cases, plaintiff attorneys got more than half of the settlements and suggests that the same attorneys are lobbying for another opportunity to share in a huge payout. The Journal also objects to the legislature's decision to maintain the statute of limitations for abuse that happened at the hands of a public employee, as well as for the individuals who are actually alleged to have committed the crimes. Only nonprofits would be held liable.

Washington Schedule:

TODAY'S EVENTS IN WASHINGTON.

White House:

PRESIDENT OBAMA — The President receives the Presidential Daily Briefing; the President delivers remarks on student loans, the Rose Garden, open press; the President meets with NATO Secretary General Anders Fogh Rasmussen, the Oval Office, pool spray at the bottom. Notes: Press Briefing by Principal Deputy Press Secretary Josh Earnest, 12:30 p.m.

VICE PRESIDENT BIDEN — In the morning, the Vice President will meet with President Dilma Rousseff. There will be a pool spray at the top of this meeting. Later in the morning, the Vice President will travel to the Ministry of External Relations. The Vice President's arrival to the Ministry of External Relations is open press. Vice President Biden will meet with Vice President Michel Temer. There will be a pool spray at the top of this meeting. Vice President Biden will meet with Vice President Michel Temer. There will be a pool spray at the top of this meeting. In the afternoon, the Vice President and Dr. Biden will depart Brasilia, Brazil, en route Washington, DC.

US Senate: No Scheduled Events.

US House: REP. MILLER – BANGLADESH TRIP — 11:30 a.m. Rep. George Miller (D-Calif.), the senior Democratic member of the Committee on Education & the Workforce, will hold a conference call on his recent trip to Bangladesh.

Other: NCHV ANNUAL CONFERENCE — May 29 – 31. The National Coalition for Homeless Veterans Conference. Department of Veterans Affairs (VA) Secretary Eric K. Shinseki and Department of Housing and Urban Development (HUD) Secretary Shaun Donovan will share keynote speaker honors during the opening session. <http://www.nchv.org/>. Location: Grand Hyatt Hotel, 1000 H St. NW.

LASA 2013 — May 29 – June 1. XXXI International Congress of the Latin American Studies Association. Theme: "Towards a New Social Contract?" <http://lasa.international.pitt.edu/eng/congress/>. Highlights: 8:30 a.m. – 10:15 a.m. Three panels involving the participation of the OAS will be held: a panel featuring OAS representatives on elections in the region, in the Marriott Ballroom Lincoln Room 3; a panel entitled "Constellations: Past, Present, and Future Directions at the Art Museum of the Americas, Organization of American States," in the Marriott Ballroom Salon 1; and a panel on teaching and learning OAS processes through the Model OAS program, in the Marriott Ballroom Congressional Room. 1 p.m. – 2:45 p.m. A Presidential Panel on United States-Latin American relations, jointly organized by the LASA Congress Program Committee and the Latin American Program of the Woodrow Wilson Center for International Scholars, will feature the former President of Uruguay Tabare Vazquez; the United States Assistant Secretary of State for Western Hemisphere Affairs, Roberta Jacobson; and the OAS Secretary for Political Affairs, Kevin Casas-Zamora. Marriott Ballroom Salon 2. Location: Marriott Wardman Park Hotel, 2660 Woodley Park Rd. NW (except where otherwise noted).

CUBAN FIVE MEETINGS — May 30 – June 5. Angela Davis, Danny Glover, Dolores Huerta, Ignacio Ramonet, Mighty Gabby and many others to join "5 Days for the Cuban 5 in Washington DC". Organized by the

International Committee for the Freedom of the Cuban 5. Various locations: <http://www.thecuban5.org/wordpress/2013/01/04/save-the-dates-5-days-for-the-cuban-5-in-dc/>. Highlights: 3 p.m. 3:00pm: Meeting of Cuban nationals and Cuban Americans who live in the US to plan new strategies among other issues, about the US campaign to free the Cuban 5 (by invitation only).

UNCONVENTIONAL SHALE GAS DEVELOPMENT — May 30 – 31. 8:30 a.m. – 5 p.m. The National Research Council will hold a two-day public workshop to discuss the risks related to unconventional shale gas development and management. Academics and field experts will speak about the operational risks of shale gas development as well as its potential effects on water, air, communities, ecosystems, climate change, and public health. MEDIA RSVP: 202-334-2138 or email news@nas.edu. For more information: http://sites.nationalacademies.org/DBASSE/BECS/CurrentProjects/DBASSE_069201. UaTHhUC1E0M. Location: Room 100 of the National Academies' Keck Center, 500 Fifth St., N.W.

AMNESTY INTERNATIONAL – ARMS TRADE TREATY — 9 a.m. Amnesty International USA, Arms Control Association, Oxfam America, and the Stimson Center will host a press breakfast to discuss why the United States "must be one of the first signatories" of the Arms Trade Treaty. Location: Old Ebbitt Grill (Cabinet Room), 675 15th Street NW.

PHILANTHROPY – PODESTA, WYSS — 9 a.m. On Philanthropy: A Conversation with Hansjrg Wyss and John Podesta. <http://press.org/events/philanthropy-conversation-hansj%C3%B6rg-wyss-and-john-podesta>

SOCIAL SECURITY AND MEDICARE TRUSTEES REPORTS — 11 a.m. Treasury Secretary and Managing Trustee Jacob J. Lew will be joined by members of the Social Security and Medicare Boards of Trustees – Health and Human Services Secretary Kathleen Sebelius, Acting Labor Secretary Seth D. Harris, Centers for Medicare and Medicaid Services Administrator Marilyn Tavenner, Acting Social Security Commissioner Carolyn W. Colvin, and Public Trustees Charles Blahous and Robert Reischauer – for a press briefing to discuss the release of the annual Trustees Reports. Location: Department of the Treasury Media Room (4121), 1500 Pennsylvania Ave. NW. Notes: Copies of report available at briefing. Live webcast at this link: www.treasury.gov/press-center/Video-Audio-Webcasts/Pages/Webcasts.aspx. Background briefing by senior officials following statements – pen and pad only – no cameras or recording devices. Media must RSVP by 4 p.m. May 30th to Ronda Buckmon, Ronda.Buckmon@treasury.gov. Press with camera equipment use Alexander Hamilton entrance (15th Street and Alexander Hamilton Avenue), proceed to the Moat entrance by 9:30 a.m.

HUDSON – FCC — 12 p.m. – 1:30 p.m. Former Commissioner and new Hudson Visiting Fellow Robert McDowell will discuss the past and future of the FCC with Hudson Institute Senior Fellow and Center Director Harold Furchtgott-Roth. Location: Betsy and Walter Stern Conference Center, Hudson Institute, 1015 15th St. NW, 6th Floor.

ALLIANCE FOR HEALTH CARE BRIEFING — 12:15 p.m. – 2 p.m. Worker Wellness Programs: Do They Work? Starting in 2014, employers will be allowed to charge their workers up to 30 percent more for health insurance premiums if they don't meet certain health goals, under the Patient Protection and Affordable Care Act (ACA). An Alliance for Health Reform briefing, "Worker Wellness Programs: Do They Work?" will explain the provisions in the law, and examine employer efforts to improve worker wellness, along with evidence about savings. Location: Columbus Club, Union Station.

CONGRESSWOMAN NORTON – SAME-SEX WEDDING — 4 p.m. Congresswoman Eleanor Holmes Norton (D-DC) will officiate a wedding between Dr. Stephen Johnson and Danis Kovanda, who have been together as a gay couple for 28 years. (Both men are currently Federal employees, Johnson at the Department of Defense, Defense POW/Missing Personnel Office, and Kovanda at the National Institutes of Health.) Location: Ulysses S. Grant Memorial on 1st St. NW, between Pennsylvania Ave. NW and Maryland Ave. SW.

INTERIOR UNVEILS PLANS FOR THREE RENEWABLE ENERGY PROJECTS,. The [Washington Post](#) (6/3, 489K) reports, "The Interior Department has approved three renewable energy projects in Nevada and Arizona that officials say will generate enough electricity to power nearly 200,000 homes." The article notes that "the projects will deliver a combined 520 megawatts to the electricity grid through solar plants in Nevada and Arizona and a geothermal plant in Nevada."

[Bloomberg News](#) (6/4, Herndon) reports, "Closely held SolarReserve LLC's 100-megawatt Quartzsite Solar Project is planned for a site in La Paz County, Arizona, and will use mirrors to focus sunlight on a boiler and generate steam to drive a turbine." Also, "closely held Terra-Gen Power LLC received approval for its 70-megawatt New York Canyon Geothermal Project planned for a site in Pershing County, Nevada, that will tap into underground heat to produce electricity." The Interior Department "also approved transmission facilities on federal lands as part of a solar project planned for private lands near Boulder City, Nevada." According to the article, "the

350-megawatt Midland project, proposed by a unit of Korea Electric Power Corp. (015760), will use conventional photovoltaic panels to produce power.”

Platts (6/4, Scheid) reports, “Jewell, who was sworn into office in April, said she would continue the push by Ken Salazar, her predecessor, to develop solar, wind and other renewable projects and stressed that the federal government would not be a ‘roadblock’ to these developments.” During a conference call, Jewell said, “In aggregate, these projects are helping to power our nation, strengthen our economy and diversify our energy portfolio. This is one of the most important things we can do at Interior as we work toward a clean energy future, a low carbon economy and addressing the risks of climate change.”

The Wyoming Public Media (6/4, Zhorov) reports that “Jewell emphasized her commitment to President Obama’s all-of-the-above energy strategy and said one of her top priorities was to continue the work started by her predecessor, Ken Salazar, to expand the nation’s renewable energy portfolio.” She said, “Interior has now approved a total of 45 renewable energy projects, including 25 utility scale solar facilities, 9 wind farms, and 11 geothermal plants, including associated transmission corridors and infrastructure to connect to established power grids. In aggregate, these projects are helping power our nation, strengthen our economy, and diversify our energy portfolio.”

The Arizona Republic (6/3, Randazzo, 308K) reports that BLM Principal Deputy Director Neil Komze said, “BLM is thrilled to see these projects moving forward.”

The Cronkite News (6/4, Bell) reports, “Environmental advocates in Arizona have some concerns about the Quartzsite plant but, ‘Overall, we’re glad to see more energy come from renewable energy resources,’ said Sandy Bahr, a spokeswoman for the Grand Canyon chapter of the Sierra Club.” Bahr “said the project will be put on land that is not disturbed, such as old agricultural or previously developed land.”

Also reporting on the story are the Minneapolis Star Tribune (6/4, 335K), the Oklahoman (6/4, 127K), the Modesto (CA) Bee (6/3, 59K), the Reno (NV) Gazette-Journal (6/4, 42K), the Federal News Radio (6/4), the Phoenix Business Journal (6/4, Subscription Publication), Yahoo! (6/4), the Global Times (6/4, 1.04M), the Energy Central (6/4), the Energy Matters (6/4), and the Greentech Media (6/3, Trabish).

INTERIOR TO UNVEIL DETAILS FOR OFFSHORE WIND LEASE SALE. In its “E2 Wire” blog, The Hill (6/4, Colman, 21K) reports, “The Interior Department will release details for the first federal offshore wind lease sale Tuesday, Interior Secretary Sally Jewell announced in a Monday media call.” The secretary “said the lease sale would be for a plot off the Atlantic coast, and said it could serve as a litmus test of industry demand for offshore wind.” Jewell said, “If there is good interest in this one, then I think you will have this happening on a consistent basis.”

Also, in its “E2 Wire” blog, The Hill (6/4, Colman, 21K) reports, “Jewell told reporters in a Monday call that ‘the demand is there’ for offshore wind.” Jewell “framed the upcoming auction as a bellwether for industry interest.”

SECRETARY JEWELL CELEBRATES NATIONAL FISHING AND BOATING WEEK. The Sacramento (CA) Bee (6/3, Graff, 202K) reports that Interior Secretary Sally Jewell marked National Fishing and Boating Week on Monday by “going fishing with more than 200 students from the surrounding metro area on Washington’s Anacostia River.” Jewell noted that while the popularity of fishing is growing in the US, “many youths haven’t experienced much time in nature.” Jewell said, “If you talk to a lot of these kids, they’ve been introduced by a parent if they’ve been in the outdoors before. For kids who don’t have adults in their life to introduce them to these activities, a day like this makes all the difference. They’ll remember this forever.”

Also reporting on the story are the Miami Herald (6/4, Graff, 139K), the Merced (CA) Sun-Star (6/3, Graff, 12K), the Bradenton (FL) Herald (6/3, Graff, 28K), the Fresno (CA) Bee (6/3, Graff, 113K), and the Boating World Magazine (6/4).

OFFICIALS SCRAP PLANS TO MOVE SCREENING FOR STATUE OF LIBERTY. WCBS-TV New York (6/3) reports, “Plans to change the security screening procedures for visitors to the Statue of Liberty have been scrapped.” According to the article, “in a statement announced late Monday afternoon. Sen. Charles Schumer (D-NY) said that the federal government will not go forward with plans to screen visitors once they arrive at Liberty

and Ellis islands,” and instead, the government will “screen them in Battery Park before they board the ferry.” In a statement, Interior Secretary Sally Jewell said, “I believe that establishing a temporary screening facility at Battery Park, including screening of passengers and bags with magnetometers and X-ray scanners, can address issues raised while we undertake an additional thorough review of the security procedures.”

The New York Times (6/4, Mcgeehan, Subscription Publication, 1.68M) reports, “On Monday, Sally Jewell, the secretary of the interior, notified Mayor Michael R. Bloomberg of the decision.” Jewell “said the Park Service would erect a temporary screening center containing X-ray machines and magnetometers in Battery Park, but might have to leave it there for several years before a permanent solution could be devised.” Also, “in a letter on Monday, Secretary Jewell asked Mr. Bloomberg to provide a letter rescinding a 2010 request he made to the Park Service to vacate Battery Park,” and “Mr. Bloomberg agreed.”

The New York Post (6/4, Earle, 498K) reports that Bloomberg said, “It’s the right decision, and an example of government agencies working together to achieve practical solutions.” He added, “We will do everything we can to assist in getting the screening procedures in place in time for the July 4th holiday and we look forward to continuing our work with the National Park Service to protect Lady Liberty and the millions of Americans who will visit her in the years to come.” Also, in a statement, Sen. Charles Schumer (D-NY) said, “This solution wisely avoids any trade-off between speed-of-opening and optimum security procedures. The Statue of Liberty is vital to maintaining our pre-eminence as the tourist capital of America, and with these procedures in place, it can continue to safely draw people from around the world.” He “went out of his way to thank the recently confirmed Jewell, the former R.E.I. exec, for her ‘consideration and quick work.’”

CNN (6/3, Gonzalez) reports, “In response to Jewell’s letter announcing the change, Schumer thanked the Interior Department for its quick decision in time for the July holiday weekend.”

The New York Daily News (6/4, 543K) editorializes that “Jewell has brought the National Park Service to its senses on security for the ferries to Liberty and Ellis Islands.”

Also reporting on the story are Politico (6/4, 25K), the USA Today (6/3, 1.71M), the Minneapolis Star Tribune (6/4, 335K), the New York Daily News (6/4, Straw, Beekman, 543K), the Tacoma (WA) News Tribune (6/3, 77K), and the Greenfield (IN) Daily Reporter (6/4, 9K).

SECRETARY JEWELL TO ATTEND 2013 COLORADO CAPITAL CONFERENCE. The Pagosa (CO) Daily Post (6/4) reports, “Senator Mark Udall, Colorado Mesa University President Tim Foster and University of Colorado Chancellor Philip P. DiStefano announced yesterday that the 2013 Colorado Capital Conference — a three-day event in Washington, D.C., aimed at connecting Coloradans with national leaders and influential public figures — will feature a bipartisan and diverse slate of distinguished speakers.” The article notes that “the conference, which 100 Coloradans from across the state will attend between June 5 and June 7, will feature Interior Secretary Sally Jewell; Treasury Secretary Jack Lew; Navy Secretary Ray Mabus; Energy Secretary Ernest Moniz; and many other federal agency heads, plus Maya MacGuineas, president of the Committee for a Responsible Federal Budget, along with Sen. Susan Collins (R-Maine), Sen. Heidi Heitkamp (D-N.D.), Sen. Lisa Murkowski (R-Alaska); and Former Sen. Timothy E. Wirth (D-Colo.)”

INTERIOR OFFICIALS ATTEND ANNUAL FORD’S THEATRE GALA. The Washingtonian (6/3, Joynt, 124K) reports that Interior Secretary Sally Jewell and NPS Director Jonathan Jarvis were among the attendants of the annual Ford’s Theatre gala.

AGENCIES SLOW TO REVEAL EMAIL ADDRESSES OF POLITICAL APPOINTEES. In an AP story about secret government email accounts pick up by the Minneapolis Star Tribune (6/4, Gillum, 335K), the AP notes that “most US agencies have failed to turn over lists of political appointees’ email addresses, which the AP sought under the Freedom of Information Act more than three months ago.” Notably, “the Interior Department gave the AP a list of about 100 government email addresses for political appointees who work there but none for the interior secretary at the time, Ken Salazar, who has since resigned.” The article notes that “spokeswoman Jessica Kershaw said Salazar maintained only one email address while serving as secretary but she would not disclose it.” Kershaw “said the AP should ask for it under the Freedom of Information Act, which would take months longer.”

ADDITIONAL COVERAGE OF ADDITIONS TO NATIONAL TRAILS SYSTEM. Additional coverage of the new additions to the National Trails System was provided by the Washington Post (6/3, 489K), the Wilkes Barre (PA) Times-Leader (6/4, 33K), the Farmington (NM) Daily Times (6/4, 14K), the Alabama Live (6/4, Doyle) , the Alabama Live (6/4, Gray), Yahoo! (6/4) , and Yahoo! News Canada (6/4).

NONPROFIT CRITICIZES PROPOSED FRACKING RULES. Writing in the "Congress Blog" for The Hill (6/4, 21K), Martin Hayden, vice president of policy and legislation at Earthjustice, criticizes the Obama Administration's proposed fracking rules on public lands, which he says "put the nation's water supply at risk of contamination with cancer-causing chemicals." Hayden says the Bureau of Land Management is "accepting public comment right now on proposed rules for fracking on public lands that are even weaker than a draft issued a year ago." One of the criticisms of the fracking rules is that the government won't "require fracking companies to disclose the chemicals they are using before pumping them into the ground." Earthjustice is a nonprofit public interest law organization.

CONTROL OVER PUBLIC LANDS URGED TO BE TURNED OVER TO COLORADO. In an op-ed for the Cortez (CO) Journal (6/3, Gill), Dexter Gill, a retired tribal and private forester, argues that the Federal government should "own up to its promises and comply with the Constitution and transfer title to all federal lands in Colorado back to the state, except for those legally authorized such as military bases and post offices, and federal office buildings authorized by the state Legislature." He writes that "the various counties, as entities of the state, can then exercise control and ensure proper resource management over those lands for the benefit of the people of the counties and the state as a whole."

America's Great Outdoors:

National Park Service:

HOUSE APPROVES EXPANSION OF SAN ANTONIO MISSIONS NATIONAL HISTORICAL. The San Antonio Express-News (6/4, Martin, 165K) reports, "A bill to expand the San Antonio Missions National Historical Park by 137 acres was approved on a voice vote by the full House of Representatives on Monday." The bill "passed with bipartisan support in the House, and San Antonio officials applauded the city's congressional delegation for spearheading the expansion to the missions park, one of the city's largest tourist attractions." The article notes that the NPS "has endorsed the expansion."

HOUSE SUBCOMMITTEE TO HOLD HEARING ON HARRIET TUBMAN NATIONAL HISTORICAL PARKS ACT. The Auburn (NY) Citizen (6/4, 9K) reports, "The House Committee on Natural Resources will hold a hearing next week on the Harriet Tubman National Historical Parks Act — legislation introduced by US Rep. Dan Maffei, D-DeWitt, that would create two national historical parks honoring the abolitionist, including one in Auburn." Maffei "said this is a major milestone for the legislation." He said, "It's huge. We've never gotten to a hearing before. It's an absolute necessity in terms of getting a bill through the House. We think we can do this the right way. The House and Senate bill and get them to come to an easy agreement on something that should have been done a long time ago."

BILL WOULD CREATE URBAN GREEN SPACE. The North Andover (MA) Eagle Tribune (6/4, 33K) reports, "Congresswoman Niki Tsongas yesterday announced new legislation to help urban communities turn blighted environments into public parks or other usable green spaces." According to the article, "the Groundwork USA Trust Act was developed in consultation with the non-profit group Groundwork Lawrence and would create a dedicated federal funding stream to ensure support for the 20 existing Groundwork programs nationwide, enabling other cities to launch similar initiatives." The article notes that "the current Groundworks USA system does not have a dedicated source of funding and is split between National Park Service (NPS) and the Environmental Protection Agency (EPA), limiting existing trusts from effective planning and preventing expansion into other communities," but "Tsongas' bill would provide stability by centralizing administration in the NPS and authorizing \$15 million for each fiscal year through 2017."

HISTORIC SITE MAY STAND IN WAY OF NEW LAUNCH SITE. The Daytona Beach (FL) News-Journal (6/3, Pulver, 65K) reports, "Opponents to the location Space Florida has chosen for a spaceport — south of Oak Hill near the Volusia/Brevard county line — hope a federal law designed to protect the nation's historic and

environmental resources will prevent construction in the proposed location." The News-Journal notes that "called the 4(f), it states agencies 'cannot approve the use of land from publicly owned parks, recreational areas, wildlife and waterfowl refuges, or public and private historical sites' unless there are no feasible or prudent alternatives and the action includes all possible planning to minimize harm." Meanwhile, "Space Florida officials say they are working with the seashore to avoid historic sites as they hone in on a specific location, but the list of historical resources on the NASA land is lengthy."

HUMPBACK CHUB DISCOVERED SPAWNING AT GRAND CANYON NATIONAL PARK. The Los Angeles Times (6/3, Cart, 692K) reports, "National Park Service biologists discovered good news in their efforts to recover the endangered humpback chub — for the first time the translocated fish were found spawning in Havasu Creek at Grand Canyon National Park." The article notes that "it marks the first time signs of humpback chub reproduction have been found in Havasu Creek, where scientist have attempted to establish the first chub population outside of the Little Colorado River in the park." According to the NPS, "indications of spawning activity were found on a fisheries monitoring trip two weeks ago."

SEARCH FOR YOSEMITE WATERFALL VICTIM SUSPENDED TEMPORARILY. CNN (6/3, Smith, Almasy) reports, "Park rangers suspended their search Monday afternoon for a teenage swimmer who was swept over a nearly 600-foot waterfall in California's Yosemite National Park over the weekend." Park spokeswoman Kari Cobb said, "We believe it's impossible to survive a fall like that."

The San Luis Obispo (CA) Tribune (6/3, 32K) reports that "Cobb said Monday that rangers on regular patrol continue to keep an eye on the stretch of river below the base of the 594-foot fall." However, "they will not be walking the banks."

Also covering the story are the Idaho Statesman (6/2, 49K) and the Washington Times (6/4, Chumley, 76K).

CLIMBER FROM LONDON HIT BY ROCK, DIES WHILE SCALING THE ICONIC EL CAPITAN IN YOSEMITE. The Columbus (IN) Republic (6/4, 21K) reports, "A 28-year-old climber from London has died after being hit by a falling rock on El Capitan, a signature attraction in Yosemite National Park." The NPS "says Felix Joseph Kiemann was climbing on the East Buttress of the granite monolith about 600 feet above the Yosemite Valley floor when a rock dislodged and struck him Sunday afternoon."

Also reporting on the story are the Los Angeles Times (6/4, Mather, 692K) and the BBC News (6/4).

MAN DIES AFTER BLUFF LEAP INTO BUFFALO RIVER. The Springfield (MO) News-Leader (6/3, Hocklander) reports that Stephen A. Carney's "body was recovered approximately one mile downstream from the Erbie Access." The article notes that "the weekend search operation was a joint effort between several agencies that also included Newton County Search and Rescue, the National Park Service, Newton County Sheriff's Office, Tri-County Search and Rescue, and BUFFSAR."

WALL BEING CONSTRUCTED TO PROTECT MALL FROM FLOODING. In an op-ed for Politico (6/4, Anderson, 25K), attorney Fred Anderson writes, "Taxpayers are paying for the construction of a new wall on the National Mall" to protect it from climate change. Anderson wonders why "the new wall on the Mall excited almost no comment" and suggests that "the planners and agencies involved, the Park Service, the Army Corps of Engineers, are too political themselves to state outright that they had to act on what they clearly believe is a credible climate-related threat to the capital."

COMMUNITY LEADERS WARN BUDGET CUTS WILL HURT LOCAL ECONOMY. In an op-ed for the Inland Valley (CA) Daily Bulletin (6/4, Soltes, Collins, Lowe, 52K), Eva Soltes, president of the Joshua Tree Chamber of Commerce, Jennifer Collins, president of the Yucca Valley Chamber of Commerce, and Karen Lowe, president of the Morongo Valley Chamber of Commerce, write, "In 2010, 1.4 million visitors to the Joshua Tree National Park contributed \$58 million to its gateway communities and we are greatly concerned about the impact that the National Park Service budget cuts, associated with the sequester, will have across the country as well as locally in Joshua Tree National Park, Death Valley National Park and the Mojave National Preserve." They claim that "these cuts will prove devastating not only to the parks themselves, but to the economies of their gateway communities." They conclude, "In the coming years our president and Congress should fight to preserve national park funding, not only to protect the fragile ecosystems and unique history, but also to protect the strength of our

national and local economies.”

NORTH CAROLINA LAWMAKERS URGED TO REJECT BILL AFFECTING CAPE HATTERAS NATIONAL SEASHORE. In an op-ed for the [Raleigh \(NC\) News & Observer](#) (6/3, Bennett, 130K), Betsy Bennett, the former director of the NC Museum of Natural Sciences, writes that “to help successfully manage the seashore, one of the nation’s most exceptional natural areas, the National Park Service developed a carefully balanced rule that allows responsible off-road vehicle use while protecting the needs of families, pedestrians and beach-nesting wildlife” at Cape Hatteras National Seashore. But “unfortunately, a new bill in the Senate (S486), due to be considered in committee this month, rescinds this carefully balanced plan.” She argues that “it ignores science, law, the will of the majority of the voting public and the increase in local tourism.”

Bureau of Land Management:

BLM SEEKS NEW ROUTES OF ACCESS TO RÍO GRANDE DEL NORTE NATIONAL MONUMENT. The [Taos \(NM\) News](#) (6/4, Van Buren, 10K) reports, “The Bureau of Land Management (BLM) is developing new routes into the Río Grande del Norte National Monument after procuring an adjacent acreage.” The article notes that “according to information from the Trust for Public Land, that organization bought 78 acres at the end of County Road 110 from the First National Bank of New Mexico and sold it to the BLM.” New Mexico State BLM Director Jesse Juen said, “We are thrilled with this latest acquisition, which adds a key parcel to one of our most cherished landscapes, the ‘Taos Valley Overlook.’ The parcel will also provide the public a future trailhead and wonderful access into a portion of the newly designated (National Monument).”

BLM TO STUDY NEW ROUTE FOR POMONA-VANTAGE POWER LINE. The [Yakima \(WA\) Herald-Republic](#) (6/4, 28K) reports, “A new alternate route for a proposed Pacific Power transmission line from Pomona near Selah to Vantage will be studied over the next several months, the federal Bureau of Land Management said Monday.” Janet Hutchison, a BLM realty specialist, said, “Some of the reasons we are doing this besides the rules changing are the comments we received during the scoping period and open houses. We are trying to look for another route that works for everyone.”

Fish and Wildlife Service:

FWS DIRECTOR ASHE DELIVERS KEYNOTE ADDRESS TO PRAIRIE SUMMIT. The [Bismarck \(ND\) Tribune](#) (6/4) reports that FWS Director Dan Ashe “gave the keynote address to” a “Prairie Summit” in Bismarck Monday “that will conclude today with a bus tour to western North Dakota.” According to the article, “the summit is looking at factors driving land use and value – from agricultural markets to oils and gas markets – to wetland drainage, grassland loss and fragmentation of wildlife habitat.” Ashe said that “North Dakota and the changes occurring now are a good example of what is happening on a global scale.”

FWS SEEKS PROPOSALS FOR WOLF-LIVESTOCK DEMONSTRATION GRANTS. The [AmmoLand.com](#) (6/4) reports, “The US Fish and Wildlife Service invites submission of grant proposals from eligible states and Native American tribes for demonstration projects intended to reduce and address the impact of wolves on livestock operations.” The service “will award approximately \$850,000 in two categories: Prevention Grants that assist livestock producers in undertaking proactive, non-lethal activities to reduce the risk of livestock loss due to predation by wolves, and Compensation Grants that reimburse livestock producers for livestock losses caused by wolves.” FWS Director Dan Ashe said, “The Wolf-Livestock Demonstration Project Grants Program is a tool for coordinating with state and tribal governments to reduce conflicts where gray wolves and livestock operations overlap. This program is an example of the kind of out-of-the-box thinking and strong, practical approach that has helped us conserve a host of imperiled species. It ensures that the livestock-rearing community is adequately equipped to prevent financial losses and compensated where losses are unavoidable.”

INLAND WATER AGENCIES SUE OVER SANTA ANA SUCKER. The [San Bernardino \(CA\) Sun](#) (6/4, Scauzillo, 53K) reports, “Twelve Inland Empire water agencies Monday asked the Ninth Circuit Court of Appeals to reverse a federal court decision and throw out a plan by the US Fish and Wildlife Service to add extensive protections for the Santa Ana sucker, a six-inch long federally threatened fish that inhabits portions of the 96-mile Santa Ana River.” According to the article, “the agencies contend that the previous ruling limits water they take from the river, which runs through San Bernardino and western Riverside counties, as well as Orange County.” And “if

forced to comply, the cost could exceed \$4 billion over several years mostly from the purchase of costly imported water from Northern California and the Colorado River that would be needed to make up the difference for more than five million customers."

The Riverside (CA) Press Enterprise (6/3, Zimmerman, 130K) reports, "The agencies are asking the appeals court to order the Fish and Wildlife Service to consider the impact of its decision on the human environment, to re-evaluate the needs of the fish using the best available science, and to cooperate and collaborate with state and local agencies on that evaluation." They "also have asked the appeals court to reconsider a previous opinion involving application of the National Environmental Policy Act to decisions made in regards to endangered species."

FWS PROPOSES DESIGNATING CRITICAL HABITAT FOR ENDANGERED TIGER BEETLE. The Omaha World-Herald (6/4, Hendee, 135K) reports, "The US Fish and Wildlife Service proposed Monday to designate 1,110 acres of critical habitat for the endangered Salt Creek tiger beetle in Lancaster and Saunders Counties." The article notes that "the federal decision contrasts with a 2005 recommendation by scientists that 36,000 acres of habitat needed to be protected to ensure the recovery of the beetle, according to environmental organizations." The FWS "is accepting public comments on its proposal for 60 days."

FWS PROPOSES PROTECTION FOR KENTUCKY GLADE CRESS. For the "Watchdog Earth" blog of the Louisville (KY) Courier-Journal (6/4, Bruggers, 150K), James Bruggers writes, "The US Fish and Wildlife Service has proposed the rare Kentucky Glade Cress for listing and protection under the Endangered Species Act."

GROUPS FILE LAWSUIT OVER "MCKITTRICK POLICY". The Courthouse News (6/3) reports, "An unpublished, illegal federal policy prevents prosecution of people who kill endangered species unless the government can prove the people knew what species they were killing, environmentalists claim in court." In a lawsuit filed against the US Department of Justice, WildEarth Guardians and the New Mexico Wildemess Alliance "claim the US Fish and Wildlife Service's ability to enforce the Endangered Species Act's 'prohibition on illegal killing of Mexican gray wolves – and other ESA-listed species – through criminal penalties has been hindered by a 1998 policy of the United States Department of Justice ('DOJ') which DOJ calls the 'McKittrick Policy.'"

US Geological Survey:

USGS RELEASE REPORT ON SAGE GROUSE. The Billings (MT) Gazette (6/4, 39K) reports, "The US Geological Survey has released its extensive report on the greater sage grouse, a document that will provide a consistent set of information about the bird to help guide the Bureau of Land Management and the US Forest Service in their joint efforts to conserve the species." Suzette Kimball, acting director of the USGS, said, "This report summarizes several decades of work on sage-grouse populations and sagebrush habitat. It will serve as a useful tool for land and wildlife managers and provides a needed range-wide perspective."

Securing America's Energy Future:

Offshore Energy Development:

HOUSE PANEL TO DISCUSS OFFSHORE DRILLING BILL. In its "E2 Wire" blog, The Hill (6/4, Colman, 21K) reports, "Members of the House Natural Resources Committee will meet on Thursday to discuss a draft bill that that would open parts of the Atlantic and Pacific oceans to offshore drilling." According to the article, "the draft bill from committee Chairman Doc Hastings (R-Wash.) would permit drilling off the coasts of South Carolina, Virginia and Southern California while reshuffling the Interior Department's offshore drilling branch." The legislation "will likely clear the House but is unlikely to see the light of day in the Senate."

DUNCAN SAYS SUPPORTS OFFSHORE DRILLING AGREEMENT WITH MEXICO. The Greenville (SC) News (6/2, Troyan, 56K) reports "that about 1.5 million acres along the U.S.-Mexico maritime border would open to oil and gas drilling under an agreement negotiated by the administration and championed by a conservative Republican from South Carolina." The paper says the US House "is expected to vote next month on legislation by Rep. Jeff Duncan, R-Laurens, that would implement the 2012 deal to allow offshore drilling in an area of the Gulf

of Mexico believed to hold up to 172 million barrels of oil and 304 billion cubic feet of natural gas." The US-Mexico Transboundary Hydrocarbon Agreement "would give congressional approval to the agreement signed in February 2012 by then-Secretary of State Hillary Rodham Clinton and then-Mexican Foreign Secretary Patricia Espinosa." The Interior Department supports the agreement.

Tackling America's Water Challenges:

FEDERAL AGENCIES ISSUE BIOLOGICAL OPINION FOR KLAMATH OPERATIONS. The Houston Chronicle (6/4, Barnard, 434K) reports, "A new plan for balancing scarce water in the Klamath Basin between fish and farms won't harm salmon or other fish protected by the Endangered Species Act, federal scientists said Monday." According to the article, "the NOAA Fisheries Service and US Fish and Wildlife Service issued what is called a biological opinion for operations on the Klamath Project, a federal irrigation project straddling the Oregon-California border." Laurie Sada, field supervisor for the Klamath office of Fish and Wildlife said that "the evaluation represents a 'landmark' level of coordination between the federal agencies, as well as integration of the needs of the different fish species, with an eye toward trying to keep the irrigation project supplied with water."

Also reporting on the story are The Oregonian (6/4, 237K), the Eugene (OR) Register-Guard (6/4, 52K), and the Columbus (IN) Republic (6/4, Barnard, 21K).

FISH FROM SACRAMENTO-SAN JOAQUIN DELTA HAVE HIGHEST MERCURY LEVELS. The AP (6/4) reports "sport fish from rivers and streams in the Sacramento-San Joaquin Delta have higher levels of mercury in their systems than fish taken from anywhere else in California," citing a new survey. Researchers for the State Water Resources Control Board "in 2011 surveyed 16 species from 63 locations." The study lists "Sacramento pikeminnow, smallmouth, largemouth and striped bass from the Delta watershed" as having the "highest concentrations of mercury."

Empowering Native American Communities:

MANY NATIVE AMERICAN TRIBES AWAIT OFFICIAL RECOGNITION FROM US. The Pasadena (CA) Star-News (6/4) reports "the Native American culture of Andy Salas' ancestors dominated the San Gabriel Valley long before Junipero Serra set foot in California, but to the U.S. government, Salas' tribe, the Gabrieleno, doesn't exist." Salas "has spent years gathering the necessary documents and criteria" for official recognition from the Federal government for his Kizh Nation of the Gabrieleno Band of Mission Indians. The paper says "and Salas is far from alone in his quest; the Kizh-Gabrieleno are among 79 tribal groups that have submitted petitions to the Bureau of Indian Affairs' Office of Federal Acknowledgment – and most of them are still waiting."

CALIFORNIA CITY LOOKING TO BLOCK TRIBE'S GAMING CASINO. The Petaluma (CA) Argus Courier (6/3, Wetzstein) reports local officials "are not ready to gamble on a 277-acre parcel of land just south of town owned by the Dry Creek Rancheria Band of Pomo Indians" and looking for "ways to prevent the tribe from building a gaming casino." The paper says that in 2005, the Dry Creek Tribe "applied to move its Kastania Road property along Highway 101 into federal trust in an attempt to build a class-three gaming facility on the land." The Bureau of Indian Affairs, which handles Federal trust applications, says the Dry Creek tribe "does not have any current applications on file to place the land into federal trust." But David Rabbitt, Petaluma's representative on the board of supervisors, said Tribe Chairman Harvey Hopkins has said the tribe is close to completing the application for filing with the BIA.

CALIFORNIA EASES PAYMENTS BY RED HAWK CASINO. The Sacramento (CA) Bee (5/31, Kaster, 202K) reports, "Red Hawk Casino, underperforming since the day it opened and struggling to pay its bills, moved a step closer Thursday toward gaining financial relief." According to the article, "Gov. Jerry Brown signed into law a new gambling compact that reduces the revenue the state will collect from Red Hawk and its owner, the Shingle Springs Band of Miwok Indians." But "despite the governor's signature, the Shingle Springs casino isn't out of financial trouble yet," because "the tribe has to restructure \$500 million in debt owed to private creditors before the new state compact takes effect."

ILLINOIS LAWMAKER SAYS WON'T PURSUE GAMBLING EXPANSION PLAN. The Janesville (WI) Gazette (6/1, 18K) reports "the sponsor of a bill that would have added five new casinos in Illinois will no longer be

pursuing the proposal. That decision essentially kills gambling expansion for now." The paper says Illinois State Rep. Robert Raita is the bill's sponsor. "His spokesman Ryan Keith told The Associated Press Friday that too many issues remain and a deal could not be negotiated," the paper notes. The article notes that "approval of a bill with the governor's signature" would have allowed Rockford, IL, "to begin development of a casino while the Ho-Chunk Nation awaits" approval from the Bureau of Indian Affairs for "its proposed casino in Beloit."

GAMING ALMANAC TALLIES NEW MEXICO'S SHARE OF MARKET. The New Mexico Business Weekly (5/31, Fogarty, Subscription Publication) reports, "A new global gaming almanac contains some recent numbers showing New Mexico's share of the United States gambling sector, and some of them are higher than might be expected given the small number of gaming locations in the state." According to the article, "the 2013 Casino City's Global Gaming Almanac, with numbers tabulated as of April, showed New Mexico with 0.2 percent of the gaming locations in the United States but with shares of some gaming activities ranging as high as 2.7 percent."

THUNDER VALLEY CASINO RESORT NAMES NEW GENERAL MANAGER. The Casino City Times (5/31) reports, "Thunder Valley Casino Resort announced today the appointment of Dawn Clayton as General Manager."

NORTHERN ARIZONA UNIVERSITY HOSTS MEETING TO IMPROVE NATIVE AMERICAN INDIAN EDUCATION. The AP (6/3) reports educators and language activists "are meeting in Flagstaff for a conference aimed at better serving American Indian students." The event is being organized by the Northern Arizona University.

Top National News:

WERFEL PLEDGES TO RESTORE PUBLIC'S TRUST IN THE IRS. Danny Werfel's first appearance before Congress as acting IRS commissioner generated a substantial amount of coverage, including the lead stories on the CBS Evening News (6/3, lead story, 3:20, Pelley, 5.58M) and Fox News' Special Report (6/4).

While most nonpartisan reports on the IRS scandal last night and this morning focus on Werfel's commitment to address the targeting of conservatives and the new revelations about inappropriate IRS conference spending, partisan outlets are now taking very different approaches to the story. For example, in his opening monologue for Fox News' The O'Reilly Factor (6/4), Bill O'Reilly asked rhetorically if the IRS scandal is "like Watergate." O'Reilly went on to say that so far, "there is no evidence" that the President was "involved" in the targeting of conservatives, but "there is evidence that his deputies are involved." Later (6/4), Karl Rove said, "We can't and will probably not find any evidence that President Obama picked up the telephone and called [former IRS commissioner Douglas] Shulman and said, 'go do this,' or called Lois Lerner, but I do hold the President responsible for setting the tone" by calling the Tea Party a "threat to democracy."

Meanwhile, The Huffington Post's Howard Fineman, appearing on MSNBC's Hardball (6/4) with David Axelrod, said, "David's brethren and sisters in the White House" will "use the jujitsu of spin and campaigning to make it about Darrell Issa, and not about what happened at the IRS." A laughing Chris Matthews interjected, "That's what I'm doing. I think it is about Darrell Issa." Issa, the chairman of the House Oversight Committee, has been accused of "overreach" in his probe of the IRS scandal by commentators from across the political spectrum, including the National Journal's (6/4, Subscription Publication, 12K) Ron Fournier.

Scott Pelley, in the lead story for the CBS Evening News (6/3, lead story, 3:20, Pelley, 5.58M), said Werfel "has one of the toughest jobs in America," and Nancy Cordes went on to report that on Monday, Werfel "assured Congress...that his first priority is to clear out the backlog of applications from Tea Party groups for tax-exempt status," which have been "held up for more than a year." Werfel was shown saying, "My primary mission is to restore that trust. But I think it has to start with a recognition that the trust has been violated and it has to start with a recognition that we have to get all the facts out." Cordes went to detail the recent allegations about improper IRS spending on conferences, including a 2010 event in Anaheim, California for which "some IRS managers stayed in lavish rooms" that cost "\$1,500 a night."

Brian Williams, on NBC Nightly News (6/3, story 6, 1:05, Williams, 7.86M), said that on Monday, Werfel "told Congress...what a lot of Americans might have been thinking already – that taxpayers no longer trust" the IRS "after a series of disclosures about IRS spending and the targeting of conservative political groups." Kelly

O'Donnell went on to report that Congress "has been unable to find out who ordered the targeting of conservatives for special scrutiny before the last presidential election." O'Donnell also briefly noted the IRS conference spending that "some call excessive."

USA Today (6/3, Korte, 1.71M) reports that in an appearance before the House Appropriations subcommittee on financial services and general government, Werfel "promised 'absolute transparency'" as he reviews the alleged improper targeting of conservatives, and said he has "already come to...[the] 'inescapable' conclusion" that "there was a 'fundamental failure' by IRS management." USA Today noted that J. Russell George, the Treasury Inspector General for Tax Administration who released an audit regarding the IRS scandal last month, also testified Monday. Asked to identify "who ordered the targeting and what motivated it," George answered, "During our audit, we did pose that question, and no one would acknowledge who gave that direction."

The Washington Post (6/3, Hicks, 489K) says that on Monday, Werfel's "presence changed the tenor of the questioning compared with previous rounds of inquiry, during which lawmakers...suggested" that Werfel's predecessors "had misled Congress." The Post goes on to report that on Monday, George "said again that his audit did not definitively determine whether the IRS's inappropriate behavior was politically motivated."

Under the headline, "New IRS Head Says Taxpayers No Longer Trust Agency," the AP (6/4, Ohlemacher) reports that Werfel "declared he was 'committed to restoring...trust,'" and is "conducting a thorough review of what went wrong and how to fix it." The AP goes on to report that Werfel "went to Capitol Hill to ask for a big budget increase" in order to fund the implementation of the Affordable Care Act, but, according to the AP, House Republicans "are not eager to increase funding for an agency that will play a central role in enforcing [ACA] compliance."

Lauren French, in a piece for Politico (6/4, French, 25K), noted that on Monday, Rep. Hal Rogers (R-KY), the chairman of the House Appropriations Committee, "said he was 'beginning to like' Werfel" because he said he "wouldn't immediately ask the committee for funding beyond levels requested by the Obama administration." French goes on to say that Werfel is promising "big changes," and has already "created an entirely new high-level position to rein in the agency's risks." French adds that Werfel has "even demonstrated some press savvy – a trait rarely associated with the IRS – by releasing a contrite statement last week" after news broke about questionable spending on IRS conferences.

Despite his praise for Werfel, Bloomberg News (6/4, Rubin) reports that Rogers indicated that Congress "may further restrict the IRS's funding with fresh constraints," and "questioned thousands of dollars of bonuses paid to IRS managers, including" Lois Lemer, the director of exempt organizations who has been accused of being involved in the targeting of conservatives. The Wall Street Journal (6/3, Hughes, Subscription Publication, 2.29M) quotes Rogers as saying, "We may want to consider putting conditions on your funding that allow us to monitor your agency's compliance with proper practices."

According to The Hill (6/4, Becker, Schroeder, 21K), on Monday, House Democrats "offered little cover to the IRS," but "sought to broaden the scope of the inquiry to reach beyond the years of the Obama administration." The Hill notes that Rep. Jose Serrano (D-NY) argued that "any probe of the IRS targeting should extend back into the administration of President George W. Bush," and contended that "complaints Tea Party groups are raising...echo those raised by groups that were opposed to the war in Iraq." The Daily Caller (6/3, Coglianesi) covered Werfel's appearance in a post titled, "Acting IRS Head: The IRS Has 'Betrayed The Trust Of The American People.'"

Dana Milbank, in his column for the Washington Post (6/4, Milbank, 489K), notes that before Monday's hearing, Rogers told a reporter: "Of course, the enemy's list out of the White House that IRS was engaged in shutting down or trying to shut down the conservative political viewpoint across the country – an enemy's list that rivals that of another president some time ago." Milbank adds that Rep. Ander Crenshaw (R-FL), who chaired Monday hearing, alleged earlier Monday that "instructions on who to target and how to target were coming from Washington without any debate."

Obama "Concerned By" IRS's "Excessive Spending" On Conferences. The Washington Times (6/4, Dinan, 76K) notes that Werfel "also said he has asked his agency for a review of lavish conference spending by IRS employees, which an audit this week is expected to detail." The AP (6/4) reports that White House press

secretary Jay Carney said Monday that President Barack Obama is "concerned by [the IRS's] excessive spending...on conferences and travel," and noted that the President "has taken already taken action to reduce spending." According to the AP, on Tuesday, an IG report will be released that "is expected to say the IRS spent about \$50 million to hold at least 220 conferences for employees between 2010 and 2012."

The Washington Times (6/4, Boyer, 76K) quotes Carney as saying the President is "concerned by – and has been – excessive spending by the IRS and other agencies when it comes to conferences and travel, and has taken action accordingly." Carney added, "The federal government's spending on travel, which includes conference activity, was reduced by more than \$1 billion in fiscal year 2012 as compared to fiscal year 2010."

Making a point about the potential impact of the revelations about the IRS conference spending, the New York Times' Jonathan Weisman, appearing on MSNBC's *Hardball* (6/4), said, "Remember...the Obama Administration has been saying the IRS needs more money, needs more money, needs more money. ... But it's very hard to ask for more money when these things happen."

Carney Declines To Respond To Issa's "Paid Liar" Jab. Politico (6/4, Epstein, 25K) reported that also on Monday, Carney was asked to respond to Rep. Darrell Issa's characterization of him as "paid liar." According to Politico, Carney answered "sarcastically" that he "hadn't heard that," before adding, "I'm not going to get into a back-and-forth with Chairman Issa." Politico added that Carney "declined to say whether he had spoken to President Obama about Issa's comments." In a very similar report, the Washington Times (6/4, Boyer, 76K) says Carney replied "sardonically" to the question about Issa.

Politico (6/4, Glueck, 25K) noted that on MSNBC's Morning Joe Monday, former White House press secretary Robert Gibbs said Issa "should call Jay Carney and apologize this morning." And the Huffington Post (6/3, Siddiqui) reported that in a radio interview Monday, Sen. Lindsey Graham "became the latest Republican to reject" Issa's characterization of Carney when he said, "You can go too far. ... Let's not make it personal. Jay Carney is not the issue here."

Fournier Blasts Issa's "Repugnant" Appearance On CNN Sunday. Ron Fournier, who has drawn a great deal of attention recently due to his harsh criticism of the Administration's treatment of the press, writes in his column for the National Journal (6/4, Subscription Publication, 12K) that "in one brief and repugnant interview," Issa "cherry-picked evidence, overstated his case, and violated the sacred American principle of presumed innocence." Fournier was referring to Issa's Sunday appearance on CNN's State of the Union (6/2, Crowley, 862K). Fournier goes on to make the case that the "demagogic" Issa has become "the best friend of a controversy-plagued Democratic White House."

Analysis: Camp Hopes IRS Scandal Will Prompt Tax Reform Push. Jonathan Weisman, in a piece for the New York Times (6/4, Weisman, Subscription Publication, 1.68M) titled, "Some Republicans See I.R.S. Troubles As Means To A Big Goal: Tax Overhaul," says that while most Republicans "see the cloud around the I.R.S. in the light of raw politic," Rep. Dave Camp (R-MI), chairman of the House Ways and Means Committee, has said that "spotlighting the tax-collecting agency — and stoking voter antipathy for it — are ways to build momentum for his plan to rewrite and simplify the entire tax code." Weisman goes on to say that "the first major overhaul of the tax code since 1986 has been a goal nurtured" by Camp "for years, but it may be slipping away." Weisman notes that Camp is unlikely to retain his chairmanship after 2014, and Sen. Max Baucus, the chairman of the Senate Finance Committee "and his partner in the venture," is not running for reelection next year.

USA Today: Big Donors To 501(c)(4)s Should Be Publicly Disclosed. USA Today (6/3, 1.71M), in an editorial, proposes that all 501(c)(4)s be "require[d]" to "publicly report donations of \$5,000 or more, the amount the IRS already requires them to report confidentially." However, in an accompanying op-ed for USA Today (6/3, Aviv, 1.71M), Diana Aviv, president and CEO of Independent Sector, contends that "we must not confuse the public's right to know who is funding partisan political activity with requiring disclosure of donors to charitable organizations." Aviv adds that the "right of individuals to anonymously support such efforts has long been protected by our legal system."

DOJ OFFICIAL CLAIMS HOLDER NEVER ACTUALLY CONSIDERED PROSECUTING ROSEN. Coverage of the continuing controversy of Attorney General Holder's role in leak prosecutions involving journalists was relatively light last night and this morning, and was not mentioned during any of the three network newscasts Monday

evening.

USA Today (6/3, Johnson, 1.71M) reports that on Monday, Principal Deputy Assistant Attorney General Peter Kadzik, in a letter to the House Judiciary Committee, "reasserted" that DOJ "never sought to prosecute" Fox News' James Rosen and that Attorney General Holder "testified truthfully about the matter" on May 15 when he denied having been ever "involved in" or "heard of" a prosecution of a journalist for being the recipient of leaks. It was revealed days later that Holder had personally approved of the decision to tell judges that Rosen was a "co-conspirator" in a State Department leak case and flight risk. Regarding that decision by Holder, Kadzik wrote: "Probable cause sufficient to justify a search warrant for evidence of a crime is far different from a decision to bring charges for that crime."

The New York Times (6/4, Peters, Subscription Publication, 1.68M) reports that Kadzik "noted that while a grand jury did charge a government employee with the unauthorized disclosure of classified information," Rosen "has not been charged with anything." According to Reuters (6/4, Holland, Ingram), Kadzik wrote: "At no time during the pendency of this matter – before or after seeking the search warrant – have prosecutors sought approval to bring criminal charges against the reporter."

The Hill (6/3, Yager, 21K) reports that Rep. Bob Goodlatte (R-VA), the chairman of the House Judiciary Committee, and its former chairman, Rep. Jim Sensenbrenner (R-WI), "slammed the DOJ's response...as grossly inadequate" and said they are "still expecting a response from Holder himself by Wednesday." Goodlatte wrote: "By having a subordinate send this response rather than Attorney General Holder himself, this response begs the question of whether Holder has something to hide. ... He can't outsource the responsibility for his actions to lower level staff – the buck stops with him."

Josh Gerstein, in a piece for Politico (6/4, Gerstein, 25K), says Kadzik's "new defense" of Holder "doesn't add much to the sum total of knowledge about why prosecutors named...Rosen as a co-conspirator in order to get a search warrant for his email."

Politico (6/4, Kopan, 25K) reported that Rep. Peter King (R-NY) "has joined the chorus calling for...Holder to explain recent congressional testimony, saying if he were Holder, he'd resign." In an appearance on Fox News, King said Holder "has an absolute obligation to Congress and the American people to explain what he said when he basically said that he was not involved in any criminal prosecution, when clearly James Rosen's name was put into an affidavit, he was basically called a co-conspirator in a criminal enterprise." King added, "If I were Eric Holder, I would resign. ... I don't see how he remains in office, though, very much longer, since he's lost so much credibility with Congress and the American people."

Goldberg: Media-Shield Law Would Benefit Journalists, Undermine First Amendment. National Review's Jonah Goldberg, in an op-ed for USA Today (6/3, Goldberg, 1.71M), says that "when James Madison wrote the First Amendment, he undoubtedly had in mind not just journalists but also the countless private, often anonymous, pamphleteers who often went after those in power." According to Goldberg, "Journalism isn't a priestly caste or professional guild with special rights" and so it is a mistake to give journalists more protections than ordinary Americans via a media-shield law.

OBAMA WILL NOMINATE THREE FOR DC FEDERAL APPEALS COURT TODAY. The AP (6/3, Pickler) reports that on Tuesday, President Obama will nominate Patricia Ann Millett, Cornelia Pillard and Robert Leon Wilkins "to fill all three vacancies on the federal appeals court in Washington," which, according to the AP, will spark a "battle with Republicans who say the influential court doesn't need more judges." The AP reports that Pillard is "a Georgetown University law professor," while Millet is "an appeals lawyer" and Wilkins serves as a "judge on the U.S. District Court in Washington." The AP also notes that Millet "worked in the George W. Bush administration," and Wilkins "was confirmed unanimously in Obama's first term."

USA Today (6/3, Jackson, 1.71M) notes that last week, Senate Minority Leader Mitch McConnell accused the President of trying to "to pack the D.C. Circuit with appointees."

Likewise, the Washington Post (6/4, 489K) reports that Sen. Charles Grassley "made it clear Monday that Obama's nominees will face serious resistance" when he released a statement reading: "It's hard to imagine the rationale for nominating three judges at once for this court given the many vacant emergency seats across the

country, unless your goal is to pack the court to advance a certain policy agenda." The Post covers the news of the pending nominations in an article titled, "Obama To Name Two Female Lawyers And An African American Federal Judge To U.S. Appeals Court In District Of Columbia."

According to the New York Times (6/3, Shear, Subscription Publication, 1.68M), "By announcing his choices in a group," the White House is "hoping to put more pressure on Republicans to confirm them." The Washington Times (6/4, Boyer, 76K) notes that the D.C. Circuit court "has six 'senior' judges, five of whom are Republican appointees, and the court has rejected some of the president's agenda," including the EPA's effort "to regulate air pollution across state lines."

Editorial Wrap-Up:

NEW YORK TIMES. "An Unnecessary Military Expense." The New York Times (6/4, Subscription Publication, 1.68M), in an editorial, criticizes those in Congress, including Rep. Buck McKeon, chairman of the House Armed Services Committee, "pushing for a new missile defense site, possibly on the East Coast, that could eventually cost at least \$3.6 billion." According to the Times, the proposed base "could actually harm America's national security by denying resources to other more urgently needed and more effective defense programs."

"A Smart Change In Iran Policy." In an editorial, the New York Times (6/4, Subscription Publication, 1.68M) reports that the Administration has "made a useful modification" to its Iran policy by "lifting sanctions on companies that want to sell cellphones, laptops, encryption software and other similar technology to ordinary Iranians." The Times says that the move should "improve the ability of Iranians to circumvent their government's unrelenting crackdown on dissenting opinion and communicate with each other and the outside world without reprisal."

"DNA And Suspicionless Searches." In an editorial, the New York Times (6/4, Board, Subscription Publication, 1.68M) argues that "the main reason law enforcement seeks DNA sampling is not to get an accurate name. It is to connect the suspect to other cases, unrelated to the arrest, by matching the DNA found at other, older crime scenes, when there is no reasonable suspicion to do so." The Times adds that the Supreme Court ruling on DNA collection "severely undermines fundamental Fourth Amendment principles that protect individuals against unjustified searches and incursions on privacy by law enforcement."

WASHINGTON POST. "Turkey's Authoritarianism." An editorial in the Washington Post (6/4, 489K) says Turkey's response to the protests "underlined that the country no longer has the robust free press found in Western nations." The Post says the Obama Administration should offer more than an expression of concern about "the excessive use of force" and supporting the right of free assembly." The Administration should tell Erdogan "that democracy consists of more than elections — and that he is offering unfortunate proof that it is possible to be both elected and authoritarian."

"Rohrabacher Misfires In Moscow." In an editorial, the Washington Post (6/4, 489K) criticizes Rep. Dana Rohrabacher, saying he "seems to have lost his way in Moscow after talks with Russian security officials about fighting terrorism." The Post notes Rohrabacher's claim that President Vladimir Putin Chechen strongman Ramzan Kadyrov "deserve more understanding and that 'we shouldn't be describing them as if they are Adolf Hitler or they're back to the old communism days,'" arguing he "displayed ignorance and naivete." The Post says the lessons of "the rise of fascism or communism of the 20th century," is "not to look the other way when human rights and democracy are trampled."

"D.C. Defends Jim Graham."

WALL STREET JOURNAL. "ObamaCare Bait And Switch." An editorial in the Wall Street Journal (6/4, Subscription Publication, 2.29M) notes that despite claims from liberals that the spike in insurance premiums under the ACA were figments of Republican and insurance company imaginations, in reality premiums will go up under the act. The Journal notes that liberals are now acknowledging that fact, but they say it is unfair to compare the current market with the market under the ACA because the Act provides more generous benefits.

"Discriminating Against Partnerships." In an editorial, the Wall Street Journal (6/4, Subscription Publication,

2.29M) is highly critical of the Equal Employment Opportunity Commission's Chicago office for its efforts to force PricewaterhouseCoopers to eliminate its mandatory retirement age of 60 for partners and principals. The Journal says that the law is clearly on PwC's side. The Journal says that the national office of the EEOC will now decide the case, and if they decide to sue, it would be a reflection of the Administration's anti-business attitude.

"Turkey Erupts." An editorial in the Wall Street Journal (6/4, Subscription Publication, 2.29M) says that Turkey's Prime Minister believes he is indispensable to Turkey's progress and argues that he should conclude from the protests that Turkey's middle class wants the checks and balances of a democracy.

Location: Hyatt Regency Capitol Hill, Regency Ballroom, 400 New Jersey Avenue, N.W.

Last Laughs:

LATE NIGHT POLITICAL HUMOR.

Jay Leno: "This latest California wildfire is getting pretty scary. You see all the smoke in the ash and the air here? It's very frightening. But Governor Jerry Brown, God bless him, he's got it under control. He said what he's going to do he's going to tax and regulate the fire until it gets fed up and moves to another state."

Jay Leno: "President Obama says he's renewing his efforts to close Guantanamo Bay. Guantanamo Bay? How about closing the IRS? Why don't we do that? In fact, how about shipping the IRS to Guantanamo Bay?"

Jay Leno: "Well, more problems with the IRS. A new report has found that they spent \$50 million on employee conferences and retreats in just two years. They would have investigated sooner, but it turns out, you know, they don't belong to any conservative groups so nobody really knows."

Jay Leno: "And two members of Congress have sent letters to the owner of the Washington Redskins asking them to change the name of the team because it's offensive. You really want to make it less offensive? Take out the word 'Washington.'"

Jay Leno: "You know actor Steven Seagal? He is now in Russia, meeting with Vladimir Putin. Is this what American foreign policy has come down to now? Dennis Rodman's in North Korea, Steven Seagal is in Russia. What is next? Are we air dropping Gary Busey into Syria? Maybe Snooki goes to Iraq?"

Jay Leno: "The Democratic Party suffered a real setback this past week when one of their leading vote getters decided to call it quits, but enough about Michele Bachmann."

Jay Leno: "You've probably heard Michele Bachmann has decided not to run for re-election in 2014. Well, with Sarah Palin and Michele Bachmann both gone, Republican leaders have no idea who's gonna drive their party off a cliff in the next election. This is going to be a big problem."

David Letterman: "Well, let's see, we got scandals going on and the IRS – now, the IRS apparently spent a lot of our tax dollars on lavish vacations and parties. Bunch of accountants going crazy. I don't have a problem with that. That's fine with me. There's a little box on your return there, you check the box if you want to spend a dollar so idiots can go dancing."

Conan O'Brien: "This week President Obama is going to be engaged in high-level talks with the President of China. That's big. Yes, President Obama's message to China is going to be, 'I swear we'll have the money for you by Tuesday.'"

Conan O'Brien: "It's being rumored that Scarlett Johansson is going to play a young Hillary Clinton in a movie about Hillary Clinton's life. Yeah. And as a result, the part of the young Bill Clinton will be played by Bill Clinton. He volunteered."

Conan O'Brien: "A new report says that Donald Trump has spent \$1 million trying to figure out if he should run for President in 2016. Yeah, \$1 million. Experts are already calling it the most expensive 'no.'"

Conan O'Brien: "A new study just came out. Found that KFC sells 25 pieces of fried chicken a second. Yes. It was 50 pieces a second, but then Chris Christie had his stomach stapled, so that's how it worked out."

Jimmy Fallon: "Some political news. During his trip to Brazil on Friday, Joe Biden said that he was having such a good time that he didn't want to go home. And that was just while he was riding on the baggage carousel at the airport."

Jimmy Fallon: "Many Republicans want President Obama to fire Attorney General Eric Holder after he seemed to contradict himself under oath. When asked if he was worried, Holder said, 'Yes. I mean, no.'"

Jon Stewart: "One beleaguered government bureau, the IRS, spent the week further mired in a scandal that stems from accusations that its agents particularly targeted right wing groups for scrutiny. Oh, no! Poor babies. The IRS facing scrutiny. People getting all up in their business, checking their books just because one small area of their business raised a couple of red flags. Now, everybody at the IRS has to stop their lives and prove their innocence. Excellent. Or perhaps we can put that in terms the IRS might understand themselves. It's our new segment, 'Where's Your Receipts, [bleep]hole?'"

Jon Stewart: "Sucks to get audited, doesn't it? Suddenly, actions that seem harmless can be painted in a nefarious light. Well, why don't we get started? ... Having the President to tell you to use the power of the IRS to destroy his political enemies on the right should really only take about one meeting, two tops. The first meeting will be like, 'Hey, why don't you target my political enemies?' then the next 156 you're like, 'Did you take care of that thing?'"

Jon Stewart: "Can't a government agency sit around the table picking names of seniors out of a hat to see who needs to die so that it can save enough money to give elementary school children their birth control, without everyone getting all 'What's going on in there?' Yeah, welcome to Audit World, IRS. By the way, Kevin Costner's

second worst movie. It is a time on earth. Man lives in a city of forms. It's a world drowning in paperwork. See, that's the problem with auditing IRS. You may have perfectly reasonable explanations for every action that you took. That doesn't mean we don't need you to go back home and dig through another couple of shoe boxes until we get one document that we really need to see before we can be okay. Why? [Bleep] you. That's why."

Stephen Colbert: "Nation, if you watch this show, you know that I will defend our Second Amendment right to keep and bear arms from all who would attack it and that includes guns. For too long they have demanded that in order for to use them, you have to know how to use them. Get this. Aim and pull the trigger at the same time? How is my hand supposed to know what my eye is seeing? It's tyranny. That's why I am as pumped as a 12 gauge about a breakthrough in skill-free killing. It's called the tracking point rifle, and it's got its own video. Wow! It's like you're a fighter pilot taking out Osama Bin Antelope."

Craig Ferguson: "A man in California received 11 pounds of marijuana in the mail by mistake. At least he did the right thing. He called the police and told them someone accidentally mailed him five pounds of marijuana."

DOI in the News:

OBAMA DISCUSSES BLACK FOREST FIRE WITH HICKENLOOPER. The AP (6/15, Elliott) reports President Obama "has reinforced his commitment to help Colorado as it battles the most destructive wildfire in state history." The President called Gov. John Hickenlooper "to get an update on conditions" and "gave his condolences to families who have lost relatives."

ABC World News (6/15, story 4, 1:40, Muir, 7.43M) says the Black Forest Fire is "the most destructive in Colorado's history. Tonight, at least two people are dead and a record 475 homes are now gone." On the CBS Evening News (6/15, lead story, 2:40, Axelrod, 5.58M), Manuel Bojorquez reported, "More than 300 firefighters were added to the front lines this weekend. For the first time this week, the fire did not assume more land or homes." The AP (6/15, Banda) says "crews gained the upper hand" on the wildfire Saturday. Incident commander Rich Harvey said Saturday evening that containment was up to 55% from 45% earlier in the day.

Additional coverage of wildfires was provided by the Wall Street Journal (6/17, Bryson, Campoy, Subscription Publication, 2.29M), the Rio Grande (NM) Sun (6/15, 11K), the Denver Post (6/17, Bunch, 443K), the Denver Post (6/17, Bunch, 443K), and the Pueblo (CO) Chieftain (6/17, Severance, 45K).

Sequester Reduces Forest Service Fire Response. On the CBS Evening News (6/15, story 2, 1:45, Axelrod, 5.58M), Carter Evans reported, "Fire season has exploded across the country. So far this year, more than 19,000 wildfires have scorched the equivalent of 700 square miles, forcing thousands out of their homes. Five firefighters have already died. ... But Federal firefighters are facing another challenge: a cut of \$50 million mandated by the budget sequester. That forced the Forest Service to cut 500 firefighters and 50 engines, just when they're needed most."

Sequester's Affect On Firefighting Efforts Examined. In an editorial, the Spokane (WA) Spokesman-Review (6/15, 69K) examines whether the sequester will affect firefighting efforts. The paper argues that battling blazes, "like treating disease, often indicates a failure to take prevention measures." It puts forth that the US must engage "forward thinking; not the kind that created the sequester."

OBAMA SAID TO FACE BALANCING ACT ON CLIMATE POLICY. The Washington Post (6/15, Eilperin, 489K) reports that President Obama is planning "to unveil a slate of major initiatives on global warming in late June or in July." According to sources, "the White House has asked agencies including the Environmental Protection Agency, the Interior Department and the Energy Department to draft plans on how to curb greenhouse gas emissions while also helping communities adapt to the impact of global warming."

NATIONAL INITIATIVE ON WATERWAYS DRAWING CRITICISM. The Springfield (MO) News-Leader (6/17, Shesgreen) reports that the National Blueways initiative "has taken an unexpected turn – becoming a flashpoint for controversy, conservative opposition and congressional uproar." At the center of the controversy "is Secretarial Order Number 3321," which was issued "last May" by "then-Interior Secretary Ken Salazar." The program is now being scrutinized "amid a barrage of criticism from some local conservative activists who fear the designation" of the White River "could lead to increased regulation and property-rights infringements."

BLM BEGINS PROCESSING MONEY FOR OREGON TIMBER COUNTIES. KMTR-TV Eugene, OR (6/17) reports that the BLM began "processing the \$1.9 million in payments to the so-called O&C counties on Thursday," according to Interior spokeswoman Jessica Kershaw. Kershaw "said earlier word that the payments would not be processed until the end of June had been a mistake."

REPORT FINDS INCREASE IN ASSAULTS AND THREATS AGAINST PUBLIC LAND WORKERS. The AP (6/16, Daly) reports that park rangers and wildlife refuge workers "experienced more assaults and threats from visitors last year than in 2011, according to a group that represents federal resource workers." The group says that "a total of 591 incidents were reported by six land and water agencies in 2012, up 38 percent from the previous year." According to the report by the advocacy group Public Employees for Environmental Responsibility, "more than one-quarter of the incidents involved some sort of violence against the employee or officer."

REP. HASTING PRESSES FOR ANSWERS ON MILAM-BLM LAND DEAL. The Las Vegas Review-Journal (6/17, Snel, 228K) reports that Rep. Doc Hastings is seeking "answers about former BLM chief Bob Abbey's role in the Chris Milam-BLM land deal in the city of Henderson – and expressed disappointment this week that he's

not getting any response from the Department of the Interior, which oversees the BLM." The "chairman of the House Committee on Natural Resources, wrote Interior Secretary Sally Jewell on Wednesday saying his panel has not received any answers about Abbey since the congressional panel first requested information in March." On Thursday, Hastings said, "Public officials must be held to the highest of standards. There are serious questions and the American people should be assured that administration officials are complying with federal ethics laws and not improperly benefiting for their position. It's unfortunate that the Interior Department has thus far not cooperated with our request for documents, but we will continue to seek answers."

INTERIOR OFFICIALS ATTEND MEETING ON WATER SCARCITY. The Imperial (CA) Valley Press (6/16, 13K) reports that Assistant Secretary for Water and Science Anne Castle and BOR Commissioner Michael L. Connor "met late last month in San Diego" to discuss water scarcity. The talks, "considered phase I of what some officials have called the 'moving forward' event, resulted in the creation of three workgroups: the healthy flows committee, the municipal and industrial conservation/reuse committee and the agricultural conservation/transfers committee."

POLICE POWERS ON PUBLIC LANDS AT CENTER OF DISPUTE BETWEEN FEDERAL GOVERNMENT, UTAH. The Salt Lake (UT) Tribune (6/17, 107K) reports that federal lawyers argue "in written arguments filed Friday that a new Utah law is unconstitutional because it attempts to stop federal officials from enforcing federal rules — which may happen to mirror state laws such as speed limits — on federal lands." However, Utah, "and allies from local counties and sheriffs, argue in briefs that HB155 stays within court precedents that assume 'the historic police powers of the states were not to be superseded' by federal law unless Congress clearly acts to invoke federal supremacy." The article notes that "a temporary resting order blocking the law from taking effect" has already been signed by a judge, "but attorneys from all sides have been filing arguments about whether he should issue a more permanent preliminary injunction as the case moves forward."

ADDITIONAL COVERAGE OF PILT PAYMENTS. Additional coverage of PILT payments was provided by the Columbus (IN) Republic (6/17, 21K), the Charleston (WV) Gazette (6/17, 34K), the Beckley (WV) Register-Herald (6/17, 20K), the Casper (WY) Star-Tribune (6/17, 22K), the Billings (MT) Gazette (6/17, 39K), the Jackson Hole (WY) News & Guide (6/17, Koshmrl), the Logan (UT) Herald Journal (6/17, 16K), the Farmington (NM) Daily Times (6/17, Gross, 14K), the Farmington (NM) Daily Times (6/17, Boetel, 14K), the Gardnerville (NV) Record Courier (6/17, 6K), the Lake Stevens (WA) Journal (6/17, 16K), the Traverse City (MI) Record-Eagle (6/17, Walton, 22K), KRNV-TV Reno, NV (6/17), KECI-TV Missoula, MT (6/17), WPBN-TV Traverse City, MI (6/17), and KGAB-AM Cheyenne, WY (6/17).

ENERGY PRODUCTION ON FEDERAL LANDS URGED. In an editorial, the Casper (WY) Star-Tribune (6/16, 22K) argues for opening up more federal lands for energy production. By doing so, the paper argues that the US could "be nearly energy self-sufficient" by 2035.

Meanwhile, in an op-ed for the Washington Times (6/14, Hanson, 76K), Victor Davis Hanson, a classicist and historian at the Hoover Institution at Stanford University, criticizes the Obama Administration's energy policy. He argues that the government "has frozen almost all new gas and oil leasing on America's vast public lands," so Hanson argues, that "despite, not because of," Obama's "efforts, production rose owing to a long history of protecting private property rights and ownership of subterranean resources."

ENVIRONMENTALIST URGES FOR COMPLETION OF INTERNATIONAL PARK PROJECT COMPLETION. In an op-ed for the El Paso (TX) Times (6/17, LoBello, 71K), environmentalist Rick LoBello urges for the completion of an "international park project that was first proposed in 1935." Finishing the Big Bend Rio Bravo International Park, argues LoBello, would help "ecotourism development."

America's Great Outdoors:

National Park Service:

BIPARTISAN LETTER URGES PROTECTION OF NATIONAL PARK BUDGET. The Casper (WY) Star-Tribune (6/17, 22K) reports that Sen. John Barrasso (R-WY) "has signed a bipartisan letter urging the Obama administration to revitalize National Park Service plans in time for the agency's 100th anniversary in 2016."

According to the article, 51 "senators and 171 representatives signed the letter and sent it to President Barack Obama on Tuesday." The letter said, "Past presidents and congresses have worked together at key times to repair, improve and enhance parks and facilities, to develop creative ways of connecting the American people with our national treasures and to better preserve our parks for future generations. The national park centennial provides an opportunity to reinvigorate the national parks for their second century of service. We look forward to working with you and your staff to build on momentum from the 100th anniversary of the National Parks System to find a sustainable path forward for our national parks."

HIGH-TECH METHODS USED TO CONSERVE CIVIL WAR GUNS. The AP (6/16) reports that preservationists are utilizing "high-tech methods to protect massive iron Civil War guns at a fort in South Carolina that fired on Fort Sumter to open the war in April 1861." According to the AP, "the sensors and modern rust-fighting epoxy coatings are being used to preserve historic siege and garrison guns, some of which were used to lob shells at Fort Sumter in Charleston Harbor when the war erupted." The AP notes that "ten massive guns from Fort Moultrie on Sullivans Island, which is part of the Fort Sumter National Monument, were recently conserved as part of an ongoing program to protect the historic pieces from the salty, humid air."

NPS TO USE MONTEREY BAY AQUARIUM'S SEAFOOD GUIDE. The Salinas Californian (6/14, 8K) reports that the NPS "will use the Monterey Bay Aquarium Seafood Watch program to guide purchasing decisions for more than 250 culinary operations in 75 national parks nationwide, the aquarium announced Friday." The "guidelines were released last week at a tasting event on the National Mall in Washington as part of a 'Healthy Parks, Healthy People' initiative that requires food service operators to begin offering healthy food options and to incorporate more sustainably-sourced ingredients from land and sea."

LAWSUIT CONTENTS NPS IGNORED FINDINGS FOR DELAWARE WATER GAP NATIONAL RECREATION AREA. The Pocono (PA) Record (6/16, Pierce, 14K) reports that the NPS "ignored its own findings that construction of a massive power line across federal lands near Bushkill would cause serious adverse environmental impacts, so that it could accept \$66 million in 'mitigation,' an environmental coalition says in a federal lawsuit." Lawyers "for the groups — including the Sierra Club — point to internal meeting minutes they say show clearly that the National Park Service originally designated a 'no build' alternative and an alternate route around the park as preferred actions."

NOROVIRUS OUTBREAK REPORTED AT YELLOWSTONE NATIONAL PARK. The Oregonian (6/17, 237K) reports that "an outbreak of norovirus" has been reported "in the Mammoth area of Yellowstone National Park this week." according to Yellowstone spokesman Al Nash, "the bug is thought to have been brought in by visitors on a couple of tour buses who were ill when they entered the park. Mammoth is on the northern end of Yellowstone near the Montana border."

NEW MEXICO OPPOSES LEGISLATION THAT WOULD TRANSFER VALLES CALDERA TO NPS. The Columbus (IN) Republic (6/17, 21K) reports that "the head of the New Mexico Game and Fish Department and members of the state Game Commission" oppose "the idea of turning over management of the Valles Caldera National Preserve to the National Park Service." The officials "met with representatives from US Sen. Tom Udall's office on Friday to discuss pending federal legislation concerning the 89,000-acre preserve in northern New Mexico." Jim Lane, director of the Game and Fish Department, said, "This was a positive step toward addressing the concerns of our agency and the sportsmen and women who care about wildlife, fishing and hunting on one of New Mexico's most precious pieces of public land. We are optimistic that Senator Udall will work with us to find a better plan for the preserve."

MAN RESCUED AFTER BEING FOUND FACEDOWN IN LITTLE RIVER. The Knoxville (TN) News Sentinel (6/14, 83K) reports that a man "is being treated at the University of Tennessee Medical Center after he was pulled from the Little River earlier this afternoon, officials said." Joseph Florek "was tubing with his family at about 3 p.m. when someone in a kayak found him floating facedown in the water and pulled him to the river bank to help him, according to Great Smoky Mountains National park spokeswoman Molly Schroer."

Also reporting on the story is the Maryville (TN) Daily Times (6/17, 21K).

HIKER RESCUED IN GREAT SMOKY MOUNTAINS. The Minneapolis Star Tribune (6/14, 335K) reports that a hiker "who was struck by a falling tree during a storm and has multiple injuries" was rescued by rangers in the

Great Smoky Mountains National Park.

Also reporting on the story is The [Knoxville \(TN\) News Sentinel](#) (6/14, Coleman, 83K).

STORM DAMAGE SHUTS SMOKIES TRAILS. The [Knoxville \(TN\) News Sentinel](#) (6/14, Ince, 83K) reports that some "trails in the Cosby and Big Creek areas of the Great Smoky Mountains National Park remained closed Friday due to wind and rain damage that occurred during a storm the day before." According to the article, "Gages Mountain Trail and Snake Den Trail in Cosby and Baxter Creek Trail and Big Creek Trail in Big Creek were closed."

LAKE POWELL DIVERS TURN UP 235 MUSSELS. The [Arizona Daily Sun](#) (6/17, Glasenapp, 11K) reports that the National Park Service says 235 quagga mussels were removed from Lake Powell in an effort that had participation from 11 agencies. The 36 divers found no colonies, proving that the lake is not infested and leaving officials hopeful that the effort eliminated the possibility of a reproducing population.

YELLOWSTONE NATIONAL PARK TO CONDUCT COMMERCIAL VEHICLE SAFETY INSPECTIONS THIS SUMMER. The [Columbus \(IN\) Republic](#) (6/17, 21K) reports that "safety evaluations of commercial vehicles and operators again this summer" at Yellowstone National Park. The program is "designed to ensure the safe operation and mechanical soundness of commercial buses and trucks on Yellowstone's roads."

YELLOWSTONE WINTER PLAN COMMENT DEADLINE APPROACHES. The [Casper \(WY\) Star-Tribune](#) (6/17, 22K) reports that "Monday is the deadline for people to comment on the" NPS' "latest proposal on the use of snowmachines in Yellowstone National Park." The agency's "winter management plan is based on limiting the collective noise and pollution of snowmobiles and snow coaches." It "would allow no more than 480 snowmobiles plus 60 multi-passenger snow coaches in a single day in Yellowstone."

ARCHES NATIONAL PARK MANAGEMENT PLAN AVAILABLE FOR PUBLIC INPUT. The [Deseret \(UT\) News](#) (6/17, 105K) reports that the NPS "has announced that its Climbing and Canyoneering Management Plan for Arches National Park is available for public review and comment."

AREA AROUND MCDONOUGH COUNTY COURTHOUSE ADDED TO NATIONAL REGISTER. [KHQA-TV](#) Quincy, IL (6/17) reports that the area around the McDonough County Courthouse has been added to the National Register of Historic Places.

THOMAS ROBERTS, WHO LED BATTLE TO SAVE FIRE ISLAND LIGHTHOUSE, DIES AT 75. The [New York Times](#) (6/15, Vitello, Subscription Publication, 1.68M) reports that "Thomas Roberts, a banker whose efforts to save the black-and-white-striped Fire Island Lighthouse in the early 1980s became a model for scores of lighthouse preservation campaigns around the country and yielded a popular tourist destination, died on Monday at his home in Bay Shore, NY."

DECISION NOT TO PRESS CHARGES AGAINST DENALI MOOSE SHOOTER SUPPORTED. In an editorial, the [Fairbanks \(AK\) News-Miner](#) (6/17, 12K) supports the NPS' decision to not press charges against a shooter who killed a moose in Denali National Park.

ADDITIONAL COVERAGE OF FUNDING FROM NPS FOR HISTORIC PRESERVATION. Additional coverage of the historic preservation grants to Native American tribes was provided by the [Columbus \(IN\) Republic](#) (6/17, 21K) and the [Farmington \(NM\) Daily Times](#) (6/17, Kane, 14K).

Bureau of Land Management:

COURT HOLDS BLM DOES NOT HAVE TO PROTECT MONUMENTS. The [Arizona Daily Sun](#) (6/17, 11K) reports that a federal appeals court has turned down "a bid by environmental groups to force the Bureau of Land Management to do more to protect two national monuments in Arizona." The 9th US Circuit Court of Appeals held that "there was nothing inherently wrong or illegal with BLM permitting 'moderate to minor damage' to some objects in the Grand Canyon-Parashant and Vermilion Cliffs national monuments." The court wrote, "BLM interpreted the proclamations to permit balancing the protection of monument objects with other uses, rather than

require absolute protection of each individual object. Giving the deference we owe to BLM's interpretation, we conclude that is a reasonable one."

WILD HORSES RELOCATED TO MONTANA RANCH. The AP (6/17) reports that "a herd of 710 wild horses relocated to" Montana's Spanish Q Ranch "is settling into its new quarters as workers erect new fences meant to reassure neighbors that their wandering days are over." BLM "officials monitoring the herd's new home say that the sterilized male horses were skittish at first about straying too far from the winter pasture where they'd been held since March." According to Pat Fosse, a BLM specialist, "the two-year-olds among the group had never been free, having been born in captivity, so they had to get accustomed to life on the open range."

COURT REJECTS BID TO TEMPORARILY BLOCK PAVING OF ROAD TO SKYWALK. The Columbus (IN) Republic (6/17, 21K) reports that US District Court Judge Neil Wake "has rejected a dude rancher's request to temporarily halt paving the road to the Grand Canyon Skywalk." But Wake held that "the US Department of Interior must demonstrate that it's complying with a settlement reached with Turner in 2007 over the paving project."

Fish and Wildlife Service:

FWS DIRECTOR ASHE ATTENDS PRAIRIE SUMMIT. The Grand Forks (ND) Herald (6/17, Dokken, 27K) reports on the "two-day Prairie Summit that Ducks Unlimited hosted last week in Bismarck." FWS Director Dan Ashe said, "The reality that's facing us here is we are asking a lot of that landscape. It's pretty clear that it can't provide everything to everybody. It provides food and fiber, now energy for the United States and continues to provide the bounty of waterfowl and wildlife that it has provided for thousands of years. If that's going to continue, we're going to have to make responsible choices."

EXTENSION OF LESSER PRAIRIE CHICKEN DECISION SOUGHT. The Portales (NM) News-Tribune (6/16, 2K) reports, Sen. Tom Udall (D-NM) is "leading a bipartisan call to extend a decision on whether to list the lesser prairie chicken as threatened under the Endangered Species Act." According to the article, "Udall and senators from the five states affected by a possible listing sent a letter to" FWS Director Dan Ashe, "requesting an additional six months in the listing decision process, as allowed by the Endangered Species Act."

Also reporting on the story is the Clovis News Journal (6/16, 7K).

COLORADO LAND MANAGERS WARY OF SAGE-GROUSE HABITAT. The Boulder (CO) Daily Camera (6/17, Krizansky, 40K) reports that should the FWS "rule later this year to designate approximately 1.7 million acres of critical habitat for Gunnison sage-grouse under the Endangered Species Act, as proposed on Jan. 11, federal, state and private land managers will have to prioritize the bird and the lands it calls or could call home." As a result, "the impending Gunnison sage-grouse endangered species listing is bringing attention to the small bird."

Also reporting on the story is the Denver Post (6/17, Krizansky, 443K).

SCIENTISTS TO HUNT FOR RABBIT HABITAT WITH DRONES. FOX News (6/16) reports that "scientists in Idaho will be flying military-style drone aircraft over the state's sagebrush sea" in order "to help locate the best habitat for one of West's smallest mammals, the pygmy rabbit." According to the article, "the flights, overseen by University of Idaho, Boise State University and University of Florida scientists, are meant to help determine whether aerial shots from small, unmanned planes can effectively locate the best areas to reintroduce captive-bred pygmy rabbits into the wild." The article notes that "so far, a pygmy rabbit population in Washington state has been declared endangered under federal law, though some groups have sought broader protections elsewhere across the West through lawsuits."

OFFICIALS DECIDE AGAINST LATEST ATTEMPT TO REINTRODUCE MEXICAN WOLVES TO THE WILD. The Los Angeles Times (6/14, Cart, 692K) reports that "a pair of Mexican wolves that had been waiting for their final release into the wild in Arizona are heading back to captivity after" FWS "officials determined that the alpha male of an existing pack behaved aggressively toward them." Authorities with the FWS "had pre-positioned the male and female in a temporary pen since they were removed in April from the Sevilleta National Wildlife Refuge in New Mexico." They "were waiting to be released but wildlife officials noticed another wolf pair acting

aggressively toward the penned wolves, indicating that they would defend their territory against the interlopers."

LATIMES SUPPORTS FWS DECISION TO PROTECT CHIMPS. In an editorial, the Los Angeles Times (6/16, 692K) supports the decision by the FWS to protect chimpanzees. The decision is called "a smart move, one that has been urged for years by respected wildlife advocates and experts, including the noted chimpanzee researcher Jane Goodall." It concludes that the proposal "should be applauded and adopted."

PAPER ARGUES SHILOH IS WRONG PLACE FOR SPACEPORT. In an editorial, the Daytona Beach (FL) News-Journal (6/16, 65K) argues "that Shiloh is the wrong place for Spaceport Florida."

Securing America's Energy Future:

Onshore Energy Development:

JUDGE SIDES WITH FEDS IN MONTANA OIL LEASE DISPUTE. The AP (6/17, Brown) reports that a US District Judge Sam Haddon dismissed a lawsuit from environmental groups who tried to block nearly 80,000 acres of oil and gas leases in Montana in a bid to force companies to reduce methane emissions. Haddon ruled that the emissions from future drilling would be only a fraction of 1 percent of total emissions within the state and thus not significant enough to warrant denial of the leases being sold by the Bureau of Land Management to oil companies. The American Petroleum Institute and Western Energy Alliance intervened in the case and were pleased with the ruling.

SALAZAR MAKES THE CASE FOR CONTROVERSIAL FRACKING. The Colorado Statesman (6/17, Marcus, 6K) reports former Interior Secretary Ken Salazar spoke favorably of hydraulic fracturing, suggesting that its use has led to less foreign oil imports and attested to the practice being "very much a part of our world." Salazar also called for transparency within the industry, with debates ongoing in Colorado as the technology moves to more densely populated areas. Salazar said "the future of renewable energy is bright," lauding accomplishments in the past four years.

FRACKING LEGISLATION BOOMING. The Houston Chronicle (6/17, Pickrell, 434K) reports that a Colorado State University study says state legislatures, mostly from the East Coast, have introduced around 50 bills targeting hydraulic fracturing for new regulations including bans, moratoriums and increased disclosure requirements in communities in which the industry has just arrived. The Obama Administration introduced a new proposal to tighten standards for drilling on Federal land under the Interior Department's control.

COAL INDUSTRY HOPES EXPORTS CAN RESCUE IT FROM SHRINKING US MARKET. The New York Times (6/14, Krauss, Subscription Publication, 1.68M) reports that "the nation's coal industry, hobbled by plummeting demand as Americans turn to cleaner natural gas," is hoping that expanding "what it sends to Asia and Europe" will save them. The Times reports that "cheap, abundant and cleaner natural gas produced in new shale fields has replaced much of the coal that American power plants once burned, and regulatory pressures are mounting to curb greenhouse gas emissions from coal combustion. That has left exports as the only sure growth engine for the declining American coal industry." However, "the \$40 billion industry is running into fierce opposition from environmental groups, who say pollution caused by burning coal should not be exported."

PROCEED WITH CAUTION ON FRACKING. The Huffington Post (6/14, Seligman) features a column by Naomi Seligman, president of Seligman Consulting, in "The Blog" saying that caution needs to be exercised as fracking is embraced in California. Full disclosure of chemicals and practices is necessary as fracking spreads of urban areas, potentially threatening drinking water. Federal vigilance is crucial too but unfortunately the Department of the Interior's proposed rules are insufficient given the myriad of health and environmental concerns around fracking. Nobody in California is currently monitoring, regulating or issuing permits for fracking— and that needs to change, now.

Offshore Energy Development:

COMPANIES AWAIT PERMITS FOR ALASKA ARCTIC SEISMIC EXPLORATION. The Alaska Dispatch (6/16) reports that "several major energy companies," including "Shell Oil, Norwegian geoscience company TGS, and

SAExploration have all submitted requests to the Bureau of Ocean and Energy Management to conduct seismic exploration projects this summer." The companies "awaiting permits from BOEM and approval from other federal organizations like U.S. Fish and Wildlife and the National Oceanic and Atmospheric Administration." According to the article, while the decisions are still pending, "all of these projects are slated to start in July should the permits be granted."

PROTECTING FUNDS FOR ARTIFICIAL REEFS WILL GO TO VOTERS, THANKS TO ALLAIN. The Daily Iberian (6/17, Shoopman, 13K) reports that Louisiana, state Sen. Bret Allain successfully amended the Louisiana Constitution to include the Artificial Reef Development Fund providing artificial reefs in the Gulf of Mexico in the form of sunken decommissioned iron rigs. The Rigs-to-Reef program, or Senate Bill 128, will be funded by oil companies paying \$2.5 million to the program sink their rings once they have been decommissioned. The issue will be voted on statewide November 14.

GULF COAST ENVIRONMENTALISTS QUESTION COAST GUARD DECISION TO END BP OIL CLEANING CREWS. The AP (6/17, Reeves) highlights concerns from Gulf Coast residents and environmental advocates about the Coast Guard's decision this month to end BP crew patrols on area beaches. While the government and BP say discoveries of tar balls on Alabama, Florida and Mississippi beaches due to the BP-related oil spill three years ago aren't "common enough to keep sending out the crews," the AP cites reports which "show that patches of tar balls are still being reported almost daily in or near popular spots." The AP notes that while the patrols have ended, the Coast Guard will revert back to the typical system for monitoring and responding to public reports of pollution through its National Response Center. The AP cites Coast Guard Lt. Cmdr. Natalie Murphy, who indicated only "minute amounts" of oil are being reported now compared to three years ago, justifying the end of the patrols.

Florida Town Settles Suit Against BP. WMBB-TV Panama City, FL (6/17) reported that officials with Panama City Beach, FL have settled "out of court" with BP. The city will receive \$11.2 million from BP in total. In 2011, it received \$1.2 million as compensation for "lost business tax revenue." The city will now get additional funds as compensation "for past and future losses" from the 2010 Deepwater Horizon spill.

BP SHAREHOLDERS SEEKING CLASS ACTION STATUS FOR DEEPWATER HORIZON SUIT. Bloomberg News (6/15, Calkins, Fisk) reported that some US investors in BP, led by Ohio and New York state's pension funds, have asked a Federal court to allow them to have their suit against the oil giant granted class action status. The investors have sued BP, claiming the company misled them following the 2010 Deepwater Horizon spill, and that BP "artificially inflated" its stocks due to misinformation about the spill.

EDITORIAL: SHAKING UP THE GULF DRILL DEBATE. The Northwest Florida Daily News (6/17, 39K) in, an editorial, reports that the Bureau of Ocean Energy Management is to develop an environmental impact statement to assess the effects of seismic surveying in the Gulf. Susan Forsyth of the environmental group Surfriider Foundation said that seismic surveying is a precursor to offshore drilling and Florida Petroleum Councilman said the data obtained are important for drilling. More area residents should be worried about the plans and the potential for another oil spill like that of 2010.

Tackling America's Water Challenges:

KLAMATH RULES HAVE CHANGED. The AP (6/17, Bamard) reports that because Klamath Tribes' water rights were formally recognized by the state Water Resources Department as the oldest, ranchers in the surrounding area cannot continue to irrigate pastureland during the drought but must stop to protect endangered fish the tribes hold sacred, forcing the relocation of cattle. Don Gentry, chairman of the Klamath Tribes, acknowledged the inconvenience but maintained that the tribes resources and water rights are protected.

PacifiCorp Proposes Water Sharing In Upper Klamath Basin To Help Farmers. The Oregonian (6/17, 237K) reports that PacifiCorp told the Bureau of Reclamation offering to make adjustments to provide an extra 20,000 acre-feet of water, as up to 400 ranchers and farmers see their irrigation cut off. The offering would supply a season's worth of water for roughly 80 farms.

Oregon Judge Won't Stop Klamath Irrigation Shut-off. The AP (6/15) reports that Klamath County Circuit

Judge Cameron Wogan has denied motions filed by upper basin ranchers to temporarily stop the state from enforcing Klamath Tribes' water rights. State lawyers argued that the law states that junior water rights must yield to senior water rights when water is in short supply, and that there is no provision for a judge to grant a temporary stay. Some ranchers seek to overturn the tribes' rights while others favor a negotiated settlement with the tribes.

KLAMATH PROJECT OPERATIONS PLAN RELEASED. The Red Bluff (CA) Daily News (6/17, 6K) reports that Bureau of Reclamation announced the release of the 2013 Operations Plan for the Klamath Project which will provide estimates on the water supply to be released and reserved in the region. Project irrigation supply from Upper Klamath Lake for the 2013 irrigation season is expected to be 289,125 acre-feet and demand reduction measures are currently in place to minimize involuntary water shortages for Project irrigators.

RECLAMATION TO HOST PUBLIC MEETINGS SEEKING GOOSE BAY MODERNIZATION INPUT . The Helena (MT) Independent Record (6/17, 12K) reports that the Bureau of Reclamation is hosting three open-house format public meetings on current progress with the Goose Bay Modernization Plan and to gather comments on proposed concession and recreation opportunities within the Goose Bay Planning Area.

ADDITIONAL COVERAGE OF BAY DELTA CONSERVATION PLAN. Additional coverage of the Bay Delta Conservation Plan was provided by the Lodi (CA) News-Sentinel (6/17, 15K), the Central Valley (CA) Business Times (6/17), the Modesto (CA) Bee (6/15, Leavenworth, 59K), the Modesto (CA) Bee (6/15, Nelson, 59K), and the Modesto (CA) Bee (6/15, Knell, 59K).

Empowering Native American Communities:

CHUKCHANSI TRIBE LEADERS' STYLES FUEL DISPUTE. The Fresno (CA) Bee (6/15, Lopez, 113K) reports that three leaders vying for control of the Picayune Rancheria of Chukchansi Indians and the \$9 million profits from its Madera county Highway 99 casino has led to charges of embezzlement which will bankrupt the casino within a year if not resolved. Because the tribe is a sovereign nation, the Bureau of Indian Affairs has been reluctant to intervene in a tribal election.

Top National News:

NSA PROBED JUST 300 PHONE CALLS LAST YEAR. On the Sunday morning news shows, bipartisan support for the NSA's surveillance programs heavily outweighed criticism of the newly disclosed data-monitoring activities. Moreover, both of Sunday evening's two network newscasts featured new disclosures from the DNI about the scope of the NSA's activities, indicating that reports of extraordinarily widespread eavesdropping were greatly exaggerated. This morning's coverage is also notable for the absence of defenses of Edward Snowden, who was described by Bob Schieffer, on CBS's Face The Nation (6/16), as a "narcissistic young man" and "no hero." Also on Sunday, former Vice President Dick Cheney, appearing on Fox News Sunday (6/16), labeled Snowden "a traitor."

Chip Reid, on the CBS Evening News (6/16, story 4, 1:50, Glor, 5.58M), reported that as "part of an effort by the Obama Administration to alleviate fears about the NSA surveillance programs," the NSA has revealed that although it "collects records on tens of millions of Americans...fewer than 300 people were identified through the program last year, and all of them were suspected of having ties to foreign terrorist organizations." CBS then played clips of White House chief of staff Denis McDonough defending the NSA's activities and noted that McDonough emphasized that "the NSA surveillance programs were supported by bipartisan majorities in Congress."

David Muir, on ABC World News (6/16, story 3, 1:45, Muir, 7.43M), also reported that the NSA says that "of the millions of phone numbers they have access to, they looked at just 300 numbers in the last year." ABC's Bob Woodruff added that the NSA claims that its "intelligence gathering prevented potential attacks in more than 20 countries."

The AP (6/17, Dozier) reports that apart from the approximate figure of "fewer than 300 phone numbers," the NSA did not release any "other new details about the plots or the countries involved," but officials are "working to

declassify the dozens of plots that" NSA director Gen. Keith Alexander has said "were disrupted."

The Hill (6/17, Mali, 21K) reported that the NSA also specifically denied claims in a CNET (6/15, McCullagh) article in which Rep. Jerrold Nadler (D-NY) says he "was told in a classified briefing that NSA analysts were allowed to listen to domestic phone calls without a prior warrant." On Sunday, the office of the DNI released a statement reading: "The statement that a single analyst can eavesdrop on domestic communications without proper legal authorization is incorrect. ... Members have been briefed on the implementation of Section 702, that it targets foreigners located overseas for a valid foreign intelligence purpose, and that it cannot be used to target Americans anywhere in the world."

The Hill (6/17, Geman, 21K) also reports that Nadler said Sunday that he is "pleased" by the DNI's explanation, adding, "I have always believed" that the NSA "cannot listen to the content of Americans' phone calls without a specific warrant."

According to the New York Post (6/17, Miller, 498K), McDonough, on Sunday, "stressed that the president 'does not' think NSA's gathering of vast amount of e-mail and phone data violates the privacy of Americans." Asked on CBS's Face The Nation (6/16) about the perception that President Obama is continuing the Bush Administration's surveillance policies, McDonough noted that James Comey, who was critical of some of the post-9/11 antiterrorism data-monitoring when served as deputy attorney general, is being "considered, among many other people, for a lead job by President Obama...potentially as FBI director." McDonough added, "It's precisely because of his views on things like surveillance that I think he's come to the President's attention." McDonough went on to say that upon taking office, the President "was pretty skeptical about the importance of these programs, so he took a very hard look at them, and, as a result, we changed many things about how we oversee those programs."

The Huffington Post (6/16, Bendery) noted that McDonough said that the President himself "will defend" the scope of the NSA's surveillance "in the coming days" although he has not "publicly discussed revelations of the NSA's activities since" Edward Snowden identified himself as the source of the NSA leaks. The Hill (6/17, Geman, 21K) quotes McDonough as saying, "I think you will hear the president talk about this in the days ahead. ... The president welcomes a public debate on these questions because he does say, and he will say again in the days ahead, that we have to find the right balance."

The Wall Street Journal (6/17, Subscription Publication, 2.29M), in an editorial titled, "Absent Commander-In-Chief," criticizes the President's failure to address the NSA controversy in public last week, and argues that he needs to personally defend his Administration's antiterrorism activities or risk them being undermined by privacy advocates in Congress.

Politico (6/17, Epstein, 25K) reported that McDonough "suggested he has some doubts about some of the claims Snowden made, including that he would have been able to access the president's personal accounts," and "without getting into specifics," McDonough "said it's 'surely my view that [Snowden] did' overstate what he was capable of doing."

On ABC World News (6/16, story 3, 1:45, Muir, 7.43M), Sen. Mark Udall was shown saying, "I don't think collecting millions and millions of Americans' phone calls is making us any safer, and I think it's perhaps a violation of the Fourth Amendment." On NBC's Meet The Press (6/16), Udall said that in regards to the "215 business records program for the NSA," he does not "think collecting millions and millions of Americans' phone calls...is making us any safer, and I think it's ultimately, perhaps, a violation of the 4th Amendment." Udall added, "I'm going to introduce a bill this week to narrow the reach of 215 to those who have a link to terrorism." According to Udall, "a similar amendment passed in 2005" and it "had support from people like Sen. Hagel, Sen. Durbin and Sen. Barack Obama." Reuters (6/17, Allen) quotes Udall as saying, "We owe it to the American people to have a fulsome debate in the open about the extent of these programs."

The AP (6/16, Braun) portrays Udall as aligned against many "current and former top U.S. officials," who on Sunday "defended the government's collection of phone and Internet data...saying the operations were essential in disrupting terrorist plots and did not infringe on Americans' civil liberties." The AP notes that former NSA and CIA director Michael Hayden said he is "worried that news reports about the programs have often provided erroneous information, 'much to the harm of a rational national debate.'"

On CNN's State of the Union (6/16), Rep. Mike Rogers (R-MI), who chairs the House Intelligence Committee, disputed Udall's contention that there is no evidence that the NSA's surveillance programs have helped thwart terrorist plots. Rogers added, "I can't tell you how strong we need to make this clear: the NSA is not listening to Americans' phone calls, and it is not monitoring their e-mails. If it did, it's illegal."

Politico (6/17, Kopan, 25K) quoted Rogers as saying, "As people get a better feeling that this is a lockbox with only phone numbers, no names, no addresses in it, we've used it sparingly, it is absolutely overseen by the legislature, the judicial branch and the executive branch, has lots of protections built in, if you can see just the number of cases where we've actually stopped the plot, I think Americans will come to a different conclusion than all the misleading rhetoric I've heard over the last few weeks."

Bloomberg News (6/16, Bykowicz) reported that on Fox News Sunday (6/16), former Vice President Cheney "defended the NSA programs, which began" during the Bush years, and added that he is "unaware of what, if anything," Obama "did to alter the surveillance techniques." Cheney is quoted as saying, "The program obviously from what's now been released, is still in operation. I think it's good. I think it has saved lives and kept us free from other attacks."

Calvin Woodward, in an analysis for the AP (6/16, Woodward), notes that Cheney "predicted at the dawn of Obama's presidency that the relentless campaign criticism of shadowed government would not come to much." Cheney is quoted as having said, "My guess is, once they get here and they're faced with the same problems we deal with every day, that they will appreciate some of the things we've put in place."

Snowden Docs: UK Spied On 2009 G20 Summit Participants. The Guardian (UK) (6/16, Macaskill, Davies, Hopkins, Borger, Ball, 286K) reported that documents provided by Edward Snowden suggest that "foreign politicians and officials who took part in two G20 summit meetings in London in 2009 had their computers monitored and their phone calls intercepted on the instructions of their British government hosts," and "some delegates were tricked into using internet cafes which had been set up by British intelligence agencies to read their email traffic." The Guardian noted that "the revelation comes as Britain prepares to host another summit on Monday – for the G8 nations, all of whom attended the 2009 meetings which were the object of the systematic spying."

The New York Times (6/17, A7, Shane, Somaiya, Subscription Publication, 1.68M) notes that the Guardian is reporting that Government Communications Headquarters, "the British eavesdropping agency...works closely with the N.S.A."

The Los Angeles Times (6/17, Lee, 692K) reports that this week's G8 summit in Northern Ireland "seem[s] set to provide the first test of how much" President Obama's "international agenda has been complicated by revelations of U.S. surveillance of telephone use and the Internet." The Times adds that on Friday, deputy national security advisor Ben Rhodes "acknowledged that the Europeans will have questions on American surveillance, given their interests in privacy and civil liberties," but added, "All of these countries at the G-8 are important counter-terrorism partners, and together, we've worked with them on an intelligence and security relationship to foil terrorist attacks in the United States and in Europe." The Times does not mention the Guardian's revelations about the 2009 G20 summit.

Snowden's Motive For Fleeing To Hong Kong Questioned. The Washington Times (6/17, Eldridge, Devaney, 76K) reports that in regards to Snowden, Rep. Mike Rogers (R-MI), the chairman of the House Intelligence Committee, said, "It goes beyond the bounds of him trying to claim that he's a whistleblower, which he is not. A whistleblower comes to the appropriate authorities...so that we can investigate any possible claim. He didn't do that. He grabbed up information, he made preparations to go to China, and then he collected it up, bolted to China." Rogers was speaking during an appearance on CNN's State of the Union (6/16). The Times adds that on Fox News Sunday (6/16), former Vice President Dick Cheney suggested that Snowden might have "had an ulterior motive in picking Hong Kong," saying, "I'm suspicious, of course. It's not a place where you would normally go if you are interested in freedom of speech." USA Today (6/17, Page, 1.71M) also covers Cheney's condemnation of Snowden.

The Christian Science Monitor (6/16, Ford, 47K) reports that a poll from an unidentified source using unspecified

methodology found that "49.9 percent of people" in Hong Kong said Snowden "should not be surrendered," while "another 17.6 percent said he should be turned over" and "a third of respondents had not made up their minds."

Schieffer: "Narcissistic" Snowden Is "No Hero." Bob Schieffer, on CBS's Face The Nation (6/16), said, "I don't know yet if the government has over-reached since 9/11 to reinforce our defenses, and we need to find out. What I do know, though, is that these procedures were put in place, and are being overseen by, officials we elected and we should hold them accountable. I think what we have in Edward Snowden is just a narcissistic young man who has decided he is smarter than the rest of us. I don't know what he is beyond that, but he is no hero." Asked, on Fox News Sunday (6/16), "what do you think of Edward Snowden," former Vice President Cheney, said, "I think he is a traitor. I think he has committed crimes."

More Commentary. In his column for the Wall Street Journal (6/17, Subscription Publication, 2.29M), L. Gordon Crovitz defends the use of technology in counterterrorism efforts, noting that technology, arguing that that while collecting data does not kill anyone, failing to do so and connect the dots that data provides, has already resulted in deaths.

In an op-ed for the Wall Street Journal (6/17, Subscription Publication, 2.29M), Seth Lipsky, editor of www.nysun.com, considers the high standard set forth by the founding fathers for the crime of treason. Lipsky writes that the high standard enables Americans to criticize our government during war without being deemed a traitor. Lipsky notes that he is not offering an opinion on whether anyone involved in the Snowden case is guilty of treason, but only that since the US is at war with al Qaeda, treason is possible during this time.

In his column for the New York Times (6/17, A17, Keller, Subscription Publication, 1.68M), Bill Keller argues that the real danger from the NSA's data-mining program "is the absence of rigorous, independent regulation and vigilant oversight to keep potential abuses of power from becoming a real menace to our freedom."

An editorial in the Washington Post (6/17, 489K) notes that President Policy Directive 20, which the President signed last October, "is still classified as top secret but was among the papers spilled into public view" by Snowden. According to the editorial, the directive makes clear that cyberconflicts are "a matter of 'national-level strategic objectives' to be decided by the president." As such, cyber-operations which "might result in 'significant consequences,' which include loss of life, serious levels of retaliation, damage to property, adverse foreign policy consequences or economic impact on the country," require presidential approval. The Post portrays the directive as a positive and notes that while the leak "must have pained the White House," it is "a good sign that the imponderables of fighting a cyberwar are being examined and clarified."

CONSERVATIVES TRY TO USE ACA TO DERAIL IMMIGRATION OVERHAUL. In a move the Washington Post (6/17, A1, Nakamura, Somashekhar, 489K) says "threatens to split open the emerging bipartisan coalitions that are crucial" to passing an immigration bill, conservatives in both chambers of Congress are attempting to use the ACA to derail the legislation. According to the Post, conservatives "are insisting on measures that would expand the denial of public health benefits to the nation's 11 million illegal immigrants beyond limits set in a comprehensive reform bill pending in the Senate." House Republicans "are considering proposals that would deny publicly subsidized emergency care to undocumented immigrants and force them to purchase private health insurance plans, without access to federal subsidies, as a requirement for earning permanent legal residency." Meanwhile, in the Senate, Sen. Marco Rubio has endorsed an amendment "that would deny health benefits to immigrants for five years after they become legal residents."

Rubio Emphasizes His Support For Tighter Border Security. Asked by Jonathan Karl, on ABC's This Week (6/16), "Do you support your own [immigration reform] bill?" Rubio replied, "Obviously, I think it's an excellent starting point, and I think 95, 96 percent of the bill is in perfect shape and ready to go." However, Rubio added that he acknowledged that "there are elements that need to be improved," including "the border security element," because, according to Rubio, the "vast majority of Americans" will "support immigration reform...only if we can ensure that we're not going to have another wave of illegal immigration in the future."

An analysis piece in Politico (6/17, Burns, Haberman, 25K) reports that Rubio advisers are concerned that the senator, who is "neck deep in the muck of immigration reform talks," risks being labeled a Washington insider. Politico notes that "at a moment when the Republican Party's most ambitious leaders in Washington have largely eschewed the challenges of negotiation and compromise, Rubio made a starkly different choice – and the

consequences are starting to show." Rubio's advisers "said they're confident that a victory on immigration will ultimately vindicate all these messy efforts." If the measure fails, "they say Rubio went in with open eyes about the political and legislative dangers of trying to be a genuine leader for the GOP, rather than a merely a camera-ready symbol of Republican diversity."

A second analysis piece in Politico (6/17, Raju, Brown, 25K) notes that Rubio has not appeared in public with the Gang of Eight since late April, "nixing requests for press conferences after the Senate Judiciary Committee approved the immigration bill, according to Democrats, and most recently, for a joint interview on Univision." Politico reports that Rubio's "public absences from his partners show the difficult line he is walking on immigration — trying to woo conservative activists wary of the bill while keeping the Gang of Eight bill moving." As with the previous analysis piece, Politico notes that the success or failure of the immigration bill "will largely determine whether his efforts are seen as the shrewd mechanisms of a kingmaker or the political naiveté of a third-year senator."

Graham Predicts "Overwhelming" Senate Passage. Sen. Lindsey Graham on Sunday "predicted overwhelming congressional passage" of the immigration bill, The Hill (6/17, Wasson, 21K) reports.

The AP (6/16, Elliott) reports that Graham also said the Republican Party is "in a demographic death spiral" and "will fail in their effort to win the presidency if the party blocks an immigration overhaul." Graham "said conservatives who are trying to block the measure will doom the party and all but guarantee a Democrat will remain in the White House after 2016's election."

On NBC's Meet The Press (6/16), Graham said, "I think we're going to have a political breakthrough, that Congress is going to pass immigration reform. I think we're going to get plus 70 votes. I've never been more optimistic about it." Graham added, "If we don't pass immigration reform, if we don't get it off the table in a reasonable, practical way, it doesn't matter who [the GOP] run in 2016."

Senate Bill "Peppered With Benefits" For Specific Industries, Groups. USA Today (6/16, Schouten, 1.71M) reports that the Senate immigration bill is "peppered with benefits" for "specific industries and immigrant groups." USA Today notes that even before the measure reached the Senate floor, it "included provisions long the focus of intense lobbying by an array of interests groups." Among them: more visas for engineers, programmers and other high-skilled workers, which were sought by the tech industry, a provision "granting foreign retirees 55 and older a three-year, renewable visas if they invest \$500,000 in U.S. real estate," and a measure to allow "older Canadians to remain in the United States for up to eight months each year," among others.

Sessions Blasts Senate Immigration Bill. The Daily Caller (6/16, Stafford) reports that in an exclusive interview to be broadcast on its website Monday, Sen. Jeff Sessions "savages the comprehensive immigration bill currently being debated by Congress," arguing that he is not "against immigrants or against immigration, but rather that he is against this bill on its merits." Sessions says, "People want to vote for a bill that fixes immigration," Sessions told TheDC. "They want so desperately to have that to happen. ... The error was that a group of Senators basically turned this over to secret meetings and special interest groups and they didn't understand the bill fully either."

Fight Against Illegal Border Crossings Shifts From Arizona To Texas. The New York Times (6/17, A1, Lipton, Preston, Subscription Publication, 1.68M) reports in a front-page story that for the first time in more than a decade, the "battle against illegal crossings from Mexico" has shifted "away from Arizona to the Rio Grande Valley of South Texas." The Rio Grande Valley "has displaced the Tucson enforcement zone as the hot spot, with makeshift rafts crossing the river in increasing numbers, high-speed car chases occurring along rural roads and a growing number of dead bodies turning up on ranchers' land, according to local officials." The upswing in Texas comes as the Obama Administration "says it has achieved unprecedented control over the border with Mexico."

Goodlatte: "Sizable" House GOP Majority Needed To Pass Immigration Bill. USA Today (6/15, Page, 1.71M) reports that House Judiciary Chairman Bob Goodlatte said in an interview with "Capital Download," the paper's weekly video newsmaker series, that any immigration bill in the House "would have to win a 'sizable majority' of Republican votes — not rely on solid Democratic support with just enough GOP backers to pass it." Goodlatte said relying solely on Democratic support "would be a very bad idea," adding, "I'm very much a believer

in following regular order and in following the principle that the majority party should have a sizable majority of its members supporting major legislative initiatives going through the Congress, and immigration is the most major legislative initiative we've had in several years."

The Wall Street Journal (6/17, Hook, Subscription Publication, 2.29M) reports that Goodlatte opposes the Senate immigration bill and intends to move a series of narrowly focused measures instead. Goodlatte's committee will meet Tuesday to begin work on the measures. On Tuesday, the panel will hold votes on a tough enforcement measure which the Journal says will move the debate to the right. The Journal notes that critics have expressed concern that Goodlatte's approach could bury the immigration debate; however, Goodlatte defends the approach, saying it will allow for more careful legislating on the complicated issue.

IRS OFFICIAL: LIBERAL GROUPS WERE ALSO TARGETED IN "TEA PARTY" PROBES. USA Today (6/16, Korte, 1.71M) reports that in testimony given to House Oversight Committee investigators on May 21, Holly Paz, identified as the "highest-ranking IRS official with knowledge of the targeting to thus far cooperate with the congressional investigation," claimed that "when front-line tax agents in Cincinnati used the term 'tea party,' they didn't just mean conservative groups." Paz testified: "I was aware of...other cases at that time that were working their way through the D.C. office that involved proposed denials of exemption to liberal organizations that supported the Democratic Party. So I had no indication that we were not being balanced in what we were doing." USA Today goes on to report that, based on its own analysis, "dozens of liberal groups received tax-exempt approval in the 27 months that Tea Party groups sat in limbo, even though the liberal groups were engaging in similar kinds of activity."

According to the AP (6/16, Ohlemacher), Paz acknowledged being "personally involved in scrutinizing some of the earliest applications from tea party groups seeking tax-exempt status," which "contradicts initial claims by the agency that a small group of agents working in an office in Cincinnati were solely responsible for mishandling the applications."

The Wall Street Journal (6/17, Mckinnon, Subscription Publication, 2.29M), in an article titled, "IRS Inquiry Finds Problems, Puzzles," reports that, so far, the objective facts unearthed by investigators indicate that the targeting of Administration critics was not limited to an IRS office in Cincinnati, as IRS officials initially claimed. However, according to the Journal, there is also no evidence that the targeting can be tied to any Administration officials. The Journal also notes that Paz donated \$4000 to the 2008 Obama campaign.

Politico (6/17, Bade, 25K) reports that Republicans believe Paz's testimony "plays right into what they've been arguing all along: that Washington orchestrated the conservative group targeting." On the other hand, Rep. Elijah Cummings (D-MD), the ranking Democrat on the House Oversight Committee, released a statement reading: "Another week, another leak from Chairman [Darrell] Issa of cherry-picked excerpts that show no White House involvement whatsoever in the identification and screening of these cases."

The New York Times (6/17, Subscription Publication, 1.68M), in an editorial that does not mention Paz's testimony, contends that "there isn't the slightest bit of public evidence that the White House or the leadership of the I.R.S. ordered low-level Cincinnati employees to make life difficult for Tea Party groups." The Times adds, "In fact, there is growing evidence that they didn't."

Editorial Wrap-Up:

NEW YORK TIMES. "The Forgotten 50,000." An editorial in the New York Times (6/17, Subscription Publication, 1.68M) notes that New York City has more homeless people now than when Mayor Michael Bloomberg took office in 2002 and argues that the "next mayor will have to do better by them than Mr. Bloomberg." The Times argues that the Bloomberg Administration "is meeting its legal obligation by filling the city's shelters to bursting" but has "failed to keep its promises to significantly shrink the shelter population by giving people the means to live independently and enough paths to permanent housing."

"Release The Facts About The I.R.S. Scandal." The New York Times (6/17, Subscription Publication, 1.68M), in an editorial, contends that "there isn't the slightest bit of public evidence that the White House or the leadership of the I.R.S. ordered low-level Cincinnati employees to make life difficult for Tea Party groups." The

Times adds, "In fact, there is growing evidence that they didn't."

"The Extra Hurdle At The Airport." An editorial in the New York Times (6/17, Subscription Publication, 1.68M) notes that a report from DHS's inspector general questions whether the Screening of Passengers by Observation Techniques program "is objective or worth the \$878 million spent so far." The Times notes that TSA Officials have defended the program and said that since the IG's inspection, it has "carried out needed improvements, like using clearer performance measurements." The Times argues that while extra scrutiny "can have security value, provided it is professional and thorough," screening that is "erratic and subjective" is a waste of "time and money" and can be "a pretext for illegal profiling."

WASHINGTON POST. "Getting Ready For Cyberwar." An editorial in the Washington Post (6/17, 489K) notes that President Policy Directive 20, which the President signed last October, "is still classified as top secret but was among the papers spilled into public view" by Edward Snowden. According to the editorial, the directive makes clear that cyberconflicts are "a matter of 'national-level strategic objectives' to be decided by the president." As such, cyber-operations which "might result in 'significant consequences,' which include loss of life, serious levels of retaliation, damage to property, adverse foreign policy consequences or economic impact on the country," require presidential approval. The Post portrays the directive as a positive and notes that while the leak "must have pained the White House," it is "a good sign that the imponderables of fighting a cyberwar are being examined and clarified."

"What To Do About Climate Change." In an editorial, the Washington Post (6/17, 489K) notes that IEA's announcement last week that "global carbon dioxide emissions in 2012 were the highest ever." According to the Post, the IEA "had some useful, if modest, suggestions" that world leaders could implement to keep their commitment "to limiting warming to no more than 2 degrees Celsius" over the next hundred years. The Post calls on policymakers in Washington to follow through on their efforts to address climate change and to "pressure other nations to follow."

"Above The Law?" The Washington Post (6/17, 489K) editorializes about DC Councilman Marion Barry, who "accepted nearly \$7,000 in gifts from two city contractors, with some of the money going to pay for personal expenses," in apparent violation of DC ethics standards. The Post contends that Barry "thinks he can act with impunity; after all, he has retained office, influence and popularity despite his serial scrapes with the law and previous ethical transgressions."

WALL STREET JOURNAL. "The Absent Commander In Chief." The Wall Street Journal (6/17, Subscription Publication, 2.29M), in an editorial, criticizes the President's failure to address the NSA controversy in public last week, and argues that he needs to personally defend his Administration's antiterrorism activities or risk them being undermined by privacy advocates in Congress.

"An Iranian Unicorn." An editorial in the Wall Street Journal (6/17, Subscription Publication, 2.29M) says that the search for a moderate Iranian leader, which has been the goal of every US president since the 1979 revolution, appears to be staring anew with reports that Hassan Rohani has been elected Iran's next president. The Journal argues, however, that Iranian policy is not likely to change much under Rohani, and predicts that while the new leader is likely to go along with talks aimed at reaching a deal on Iran's nuclear program, he will do so only to lighten Western sanctions and to buy more time for the nuclear program.

"Motown's Best Hope." An editorial in the Wall Street Journal (6/17, Subscription Publication, 2.29M) calls Detroit emergency manager Kewyn Orr's debt restructuring plan the city's best hope at revival and notes that if Orr cannot get unions to accept the plan, bankruptcy is Detroit's only other remedy.

Last Laughs:

LATE NIGHT POLITICAL HUMOR.

Jay Leno: "And yesterday, President Obama spoke at an LGBT pride month celebration at the White House. He promised that as long as he is president, all Americans, regardless of their sexual orientation, will be spied on equally. I think that's good to see."

Jay Leno: "And Edward Snowden, he's the 29-year-old guy behind this NSA spy scandal. He said in a new interview that he is not in hiding. Which would have carried a lot more weight if he hadn't made the announcement from an undisclosed secret location."

Jay Leno: "And today, Sarah Palin said there should be a full investigation of both the San Antonio Spurs and the Miami Heat. And then, somebody told her, 'No, it's the NSA. Not the NBA.' So she got a little confused."

Jay Leno: "And I think this is a good idea. Instead of having the government looking into terrorists, why don't we hire the paparazzi? Think about this. If the paparazzi stalked terrorists the way they stalk the Kardashians, we'd catch them all by the time Spago closes. You realize that?"

Jay Leno: "And the Taliban is now recruiting women to become suicide bombers. And it's not easy to qualify. The women must be able to push a car loaded with explosives because, as you know, they're not allowed to drive over there."

Jimmy Fallon: "Here's what people are talking about. President Obama is traveling to Africa later this month, and people are upset. People are mad. People are upset because the trip is expected to cost taxpayers more than \$60 million. To go to Africa, yeah. Mostly for security, hotel accommodations and Biden wants a giraffe."

Jimmy Fallon: "More political news. Yesterday, Hillary Clinton said that she will spend the next few years focusing on economic issues. When asked what she planned on doing after that, Clinton was like, 'Come on.'"

Jimmy Fallon: "Check this out. Ever since the government's spying scandal was exposed, sales of the novel '1984,' have jumped 6,000% on Amazon. Yeah. '1984' shows how scary it would be if a society tracked everything you did. And if you want to read it, you just buy it on a website that tracks everything you do."

EVENT MEMORANDUM FOR THE SECRETARY

GOVERNOR BRIAN SANDOVAL (NV) CONFERENCE CALL

DATE: June 20, 2013
LOCATION: Office of the Secretary, Governor Sandoval will call YOU
TIME: 12:00 – 12:15 EST
FROM: Gail Adams, Director, Office of Intergovernmental and External Affairs

I. Purpose of the meeting

YOU will participate on a conference call with Nevada Governor Brian Sandoval. The purpose of the call is a brief introduction to the Governor in advance of your participation at WGA on June 28th.

II. Participants

- YOU
- Governor Brian Sandoval (no staff will be on the call)

III. Hot Topics

Governor Sandoval does not plan to address any specific issues on the call. However, the following issues are important to him, and he may raise them at WGA. Briefing papers are being prepared on these issues for the WGA conference:

- Sage grouse
- Wildfire funding/response/restoration
- Wild horses
- Mining permits

IV. Talking Points

- I look forward to seeing you at WGA next week, Governor. I know we have a packed agenda but I hope we are able to say 'hello' during the conference. (See attached agenda)
- *If he asks for a separate meeting at WGA to discuss specific topics:* Unfortunately my schedule is packed with events and travel, however, when you are in DC next time, I'd be happy to tell my staff to find a time that is amenable to both of our schedules, or we can arrange .
- I know you had a very good working relationship with former Secretary Salazar; I can assure you that I am committed to partnering with you to address issues such as sage grouse, energy, wild horses, and wildfires.
- You and Governor Herbert can be great allies.
- I also want to mention that I will be in Reno next week for the NCAI Conference.

V. Background

Governor Sandoval met YOU in Cle Elum, WA prior to your confirmation as Secretary of the Interior. He has no major agenda, but would like to have substantive conversations at WGA if needed. The Governor is looking forward to working with YOU, and the Department on several issues (e.g., sage grouse, wildfire, wild horses, etc.).

Biography of Governor Brian Sandoval (R-NV)

Brian Sandoval was elected Governor of Nevada on November 2, 2010. A member of the National Governors Association and the Western Governors Association, Sandoval serves as Vice-Chair of the NGA Health and Homeland Security Committee. Sandoval is a member of the Republican Governors Association and the Hispanic Leadership Network.

Prior to becoming Governor, he was appointed United States District Judge for the District of Nevada by President George W. Bush in 2005, becoming the state's first Hispanic federal judge. He was elected Attorney General of Nevada in 2002. Prior to his election as Attorney General, Sandoval served as a member and chairman of the Nevada Gaming Commission. Sandoval served two terms in the Nevada.

EVENT MEMORANDUM FOR THE SECRETARY

INFORMAL DISCUSSION WITH WESTERN GOVERNORS

DATE: Friday, June 28, 2013
LOCATION: Montage Deer Valley, Grand Terrace
TIME: 9:30 AM – 10:30 AM
FROM: Gail Adams, Director of Intergovernmental & External Affairs

I. Purpose of the Meeting

YOU are participating in an informal discussion with Governors on their respective state issues. Dan Ashe and Neil Kornze will be in attendance to assist with responses. Sage grouse issues are addressed at your luncheon and water issues at the Basin States meeting later in the day (See the briefing memos on both of these topics). You may also refer to the Issues briefing papers for more detailed information the issues in this memo.

II. Participants

- YOU
- Dan Ashe
- Neil Kornze
- Nikki Buffa
- Kate Kelly
- Francisco Carrillo
- Gary Herbert (UT) – WGA Chairman
- John Hickenlooper (CO) – WGA Vice Chairman
- Butch Otter (ID)
- Steve Bullock (MT)
- Brian Sandoval (NV)
- Dennis Daugaard (SD)
- Lolo Moliga (America Samoa)
- Alison Redford, Premier of Alberta
- Gregory Selinger, Premier of Manitoba

III. Agenda/Sequence of Events

- Governor Herbert will start the meeting with comments and introduce you to make brief remarks
- YOU will make brief remarks: This is also an excellent opportunity for YOU to outline your priorities and express your commitment to having successful working relationships with each state in in working through their issues. You may also want to talk about some of your recent western states visits and activities such as your visit to the National Fire Training Center, Nevada for energy development, and Oregon to establish the Pacific Northwest Regional Infrastructure Team, etc. You should also reference your very successful in-person meeting with Governor Herbert and your call with Governor

Sandoval. You will hand the meeting back over to Governor Herbert to begin the discussion.

- Governor Herbert will go around the table and allow each of the Governors to talk about their issues. You will then have the opportunity to respond.
- Wrap-up and Next Steps: Governor Herbert and YOU

IV. Background

On February 24, 2013, the Department hosted the Western Governors' Association Breakfast Meeting. Secretaries Salazar, Vilsack and Chair Sutley participated in the breakfast. Several key issues raised by the Governors included: seeking a more robust partnership with states with regard to endangered species using the model underway for sage grouse and other species to prevent listing, land exchanges, energy transmission, renewables, fire, drought, water issues, and wild horses and burros.

V. Top Issues by State

1. Gary Herbert (UT) – WGA Chairman: Gov. Herbert is in his first term (ending January 2017). He is very concerned about public land management (specifically related to wild fires) and land exchanges as he expressed in your in-person meeting. He looks forward to discussing permitting for energy development and fracking.
2. John Hickenlooper (CO) – WGA Vice Chairman: Gov. Hickenlooper will become the WGA Chairman at the end of this year's meeting. His concerns are fire and forest health – developing a comprehensive package to promote forest management to reduce fire threats, identification of lands for exchange and developing a federal legislative package of a grand swap of state trust land inholdings in federal public lands, and water issues.
3. Butch Otter (ID) - Gov. Otter is in his second term. His priority issues are energy development and sage grouse listing prevention. He created the Office of Energy Resources in 2007 to address development, transmission and innovation. Other issues of concern are management of species under ESA. Gov. Otter followed Gov. Mead's example and developed a draft state plan to protect sage grouse in Idaho. As an FYI, in partnership with the BOR and others (featured on the BOR website), Gov. Otter is the host of a series of canal and water safety public service announcements airing during Idaho's 2013 irrigation season.
4. Steve Bullock (MT) – Gov. Bullock is in his first term. He is interested in having states more involved in ESA listing decisions. He is also concerned about the amount of time it takes for land exchanges, particularly when “there is not opposition.”
5. Brian Sandoval (NV) – Gov. Sandoval is in first term which expires in 2014. Sage grouse is one of his top priorities. The state recent allocated nearly \$2M in funding to develop an updated map of critical habitat in Nevada, forming the basis for assessing potential impacts and the state's to approach impacts and improvement efforts in a science-based manner. Other concerns are wildfire response and restoration, energy development/transmission and wild horses. He would also like to mining permits. Mining jobs employ highly skilled workers at high wages and serve as an important economic driver in many parts of the state.
6. Dennis Daugaard (SD) – Gov. Daugaard is serving his first term. Drought and wildfires are of major concern to the Governor and create a Drought Task Force last year.

Environment and the health and well-being of the state's children are among the Governor's priorities. He recently wrote an article about the state's ability to enjoy business and industry while reducing air pollution and promoting "a healthy, clean environment for all." He is also interested in outdoor heritage preservation, saying, "We invest in the outdoors and create assets that will be passed on to future generations."

7. Lolo Moliga (American Samoa) – Gov. Moliga is in his first term. Economic development, essential air service and cabotage, and education are his top three priorities. (See talking points below).
8. Alison Redford, Premier of Alberta – Premier Redford is Cross-border cooperation on issues such as energy
9. Gregory Selinger, Premier of Manitoba – Cross-border cooperation on the Red River Watershed, climate change and energy.

VI. Attachments

- Governors' Profiles
- American Samoa Talking Points

ATTACHMENT: Governor Moliga (AS) Issues Talking Points

Economic Development

- The Office of Insular Affairs (OIA) supports the goal of promoting economic development within American Samoa. OIA will review any proposals for technical assistance submitted by the American Samoa Government (ASG). To date, OIA has not received any proposals.

Essential Air Service (EAS) and Cabotage

- The main response of USDOT and the FAA, which have jurisdiction on these issues, has been that this is a market driven reality. While there is only one airline servicing the territory to Hawaii, there is no existing law stopping other domestic airlines from competing for the same route.
- The issue with cabotage is allowing foreign airlines to compete on the same route, though 30 day exemptions to this policy have been permitted in emergency circumstances, such as in March of this year to allow Inter Island Airways to conduct flights between Tutuila and Manu'a for emergency medical transportation. OIA has funded the American Samoa Department of Commerce to conduct an air transport market study.

Education

- The Department eagerly looks forward to the product of an education summit that ASG may hold.
- State of Chuuk, in the Federated States of Micronesia (FSM): DOI is working to help improve its Education system. OIA has conducted high level meetings where we have reached out to President Mori of the FSM, Governor Elimo of Chuuk, its legislative leaders, regional education folks and the department itself to focus on realistic reforms.

ATTACHMENT: PROFILES OF ATTENDING GOVERNORS WGA

Governor Lolo Matalasi Moliga (I-AS)

Prior to being elected in 2012, Governor Moliga was appointed as President of the Development Bank of American Samoa. He served in the House of Representatives for four terms. He later became a Senator within the American Samoa Senate, where he served as the body's Senate President. Lolo is a High Talking Chief from the village of Sili, Manu'a.

Governor John Hickenlooper (D-CO): WGA VICE-CHAIR

Governor Hickenlooper describes himself as a “recovering geologist now on loan to public service.” Elected in 2010, his priorities include making Colorado the model for energy policy by promoting an “all-the-above” energy policy that develops Colorado’s traditional and renewable resources in a balanced way, and with the highest ethical and public safety standards and making Colorado the healthiest state. Governor Hickenlooper serves in leadership positions with the National Governors Association and the Western Governors’ Association. He also serves as the Vice Chair of the Democratic Governors Association.

Governor Butch Otter (R-ID)

Governor Otter has been Governor of Idaho since January 2007. He previously served three terms in Congress representing Idaho’s 1st District from 2001 through 2006. Otter was the longest serving Lieutenant Governor of Idaho, holding office from 1987–2001. He is the first Idahoan since statehood to win elections as both a United States Representative and as governor.

Governor Steve Bullock (D - MT)

Steve Bullock, Montana's former attorney general, was elected governor in 2012. Since becoming Governor, Bullock has approved a request from Yellowstone National Park to move bison from a holding facility in the park, to an Animal and Plant Health Inspection Service facility for research and quarantine. He also supported the creation of the “Native Language Preservation Program,” a partnership between the State of Montana and tribal governments to preserve the languages of Montana’s Indian tribes and enhance the educational opportunities students have on Montana’s reservations, while protecting American Indians’ cultural heritage.

Governor Dennis Daugaard (R-SD)

(pronounced DEW-guard)

Governor Daugaard took office January 2011. As Governor, he emphasizes job creation, sound fiscal management, and efficient government operation. Before becoming Governor, he served as Lieutenant Governor, a position he held from 2003 to 2011. He promotes South Dakota as a great place to expand existing businesses and to locate new businesses.

Governor Matt Mead (R-WY)

Governor Mead took office January 2011. He serves on the Council of Governors, a group of 10 governors chosen by the President to advise top federal officials on matters related to the National Guard and civil support missions. He also serves on the U.S. Homeland Security Advisory Council. In the National Governors Association, he is a member of the Natural Resources Committee. He is co-chair of the State and Federal Sage Grouse Task Force, which brings together federal officials and representatives of 11 western states for a regional conservation effort.

Governor Brian Sandoval (R-NV)

Brian Sandoval took office January 2011. He is a member of the Western Governors Association, National Governors Association, Republican Governors Association and the Hispanic Leadership Network. Governor Sandoval also serves as Vice-Chair of the NGA Health and Homeland Security Committee. He was recently appointed Chair-elect of the Education Commission of the States. Prior to becoming Governor, he served as a federal judge, and as the Nevada Attorney General. Sandoval was also the first Hispanic candidate elected to statewide office in Nevada.

Governor Gary Herbert (R-UT): WGA CHAIR

Gary Herbert became Utah's Governor in 2009. Before assuming the governor's office, he served as Utah's sixteenth Lieutenant Governor. Governor Herbert's priorities are education, energy, jobs and self-determination. The Governor currently serves as the Chair of the WGA and is a leading voice on energy issues in the West. He has made it a priority for the WGA to advocate for increased energy development on public lands.

Premier Gregory Selinger (New Democratic Party – Manitoba)

Premier Selinger was elected to head the New Democratic Party of Manitoba in 2009. Manitoba is one of four Canadian provinces that are partners with seven US states in the Western Climate Initiative (WCI) which commits them to engage in cooperative action to address climate change and implement a joint strategy to reduce greenhouse gas emissions. As part of the WCI the Manitoba Department of Conservation is currently seeking input on how to implement a regional cap-and-trade regime to cut down on greenhouse gas emissions.

Premier Alison Redford (progressive Conservative Party - Alberta)

Alison Redford was elected leader of the Alberta Progressive Conservative Party in 2011. She is the first female premier in the province's history and the eighth woman to serve as a premier in the history of Canada. Alberta Premier Alison Redford says the United States and Canada share political and environmental values and must work together to become energy independent of those who do not. Redford, speaking to the Foreign Policy Association on June 19th in New York, said until recently North American energy independence was wishful thinking.

EVENT MEMORANDUM FOR THE SECRETARY
LUNCH DISCUSSION WITH GOVERNORS ON SAGE GROUSE

DATE: June 28, 2013
LOCATION: Montage Deer Valley
TIME: 12:00 PM
FROM: Michael J. Bean, Counselor to the Assistant Secretary for Fish and Wildlife and Parks
Cc: Rachel Jacobson, Neil Kornze, & Dan Ashe

I. Purpose of the meeting

The purpose of this meeting is to affirm your commitment to work with the states to conserve the greater sage-grouse, encourage and engage Governors to get the Sage Grouse rules in place to mitigate listing, and to listen to the Governors' concerns.

II. Participants

- SRJ
- Governors:
 - Gov. John Hickenlooper (CO)
 - Gov. Butch Otter (ID)
 - Gov. Gary Herbert (UT)
 - Gov. Brian Sandoval (NV)
 - Gov. Dennis Daugaard (SD)
 - Gov. Steve Bullock (MT)
 - Gov. Lolo Moliga (American Samoa)
 - Alison Redford (Premier of Alberta)
 - Greg Selinger (Premier of Manitoba)

III. Talking Points

- As one who has lived for many years in the Pacific Northwest, I understand the consequences for local economies and local communities if leaders do not provide the support and vision for sustainable economic growth.
- Because of that background, I understand very clearly that the range-wide decline of the greater sage-grouse is a harbinger of looming problems for the economies and communities of the eleven Western states where this bird lives. As leaders, we must recognize and face this challenge
- I am fully committed to the efforts begun by Secretary Salazar to work with the States and others to put in place conservation measures that will minimize the likelihood of an Endangered Species Act listing.
- The deadline for deciding whether to propose to list the greater sage-grouse is September 2015, only two years away.
- We will only reach our goal if we work together constructively, through the Sage-grouse Task Force, to complete our planning and put in place meaningful, science-based conservation. That means getting past the disagreements that unavoidably arise when doing such difficult and unprecedented work.

- Concerning the Sage-grouse Task Force, I want to express my thanks to Governors Mead and Hickenlooper for their leadership as Task Force co-chairs.

IV. Background

Putting the greater sage-grouse listing decision in context.

There are three separate sage-grouse listing decisions in the offing, but by far the most consequential of these is the Fish and Wildlife Service's decision due in 2015 whether to propose the greater sage-grouse for listing as an endangered or threatened species throughout its eleven state range. That decision is described below. However, there are two more immediate sage-grouse decisions that Western states may regard as precursors of the 2015 decision.

The first of these concerns the Gunnison sage-grouse, a separate species that occurs only in southwestern Colorado and eastern Utah. It was proposed for listing as endangered, with critical habitat, last December. A final decision is due September 30, although FWS has sought court approval for a six-month extension. The second imminent decision concerns whether to propose for listing the "bi-state population" of greater sage-grouse that straddles the Nevada-California border. Because this population constitutes a "distinct population segment," it may be separately listed under the ESA. The decision whether to propose it for listing must be made by September 30, and is likely to be announced in August.

A final related decision that is being closely watched for its implications for the greater sage-grouse is the pending proposal to list the lesser-prairie chicken as a threatened species throughout its five-state range (CO, KS, NM, OK, and TX). That proposal was published in December and a final decision is due by September 30 (although FWS plans to announce that the deadline will be extended by six months).

Developing a Sage-Grouse Conservation Strategy

In 2010, the FWS determined that a proposal to list the greater sage-grouse was warranted, but precluded by higher priority listing determinations. Subsequently, the Multi-District Litigation settlement agreement set a deadline of September 30, 2015, either to propose to list the species or to determine that it no longer warrants a listing proposal. If the greater sage-grouse is listed, a wide range of economic activities, including oil and gas development, wind energy development, transmission, mining, and others, may be subject to ESA consultation or permit requirements. For that reason, the states are highly motivated to implement conservation actions that would preclude the need to list the species.

Wyoming, which has more sage-grouse than any other state, was particularly motivated. Its response to the prospect of a federal listing was to develop a "core area" strategy that identified and provided special protection to those parts of the state that were most important to the well-being of the sage-grouse. Secretary Salazar sought to encourage other states to take responsible actions as well. To that end, he and Governor Mead convened a meeting of all the sage-grouse states in Cheyenne in December 2011. From that meeting came the establishment of a "Sage-grouse Task Force" co-chaired by the Governors of Wyoming and Colorado and the Director of BLM. The Task Force, with representatives of eleven states and four federal agencies, meets regularly and serves as a forum for discussing the progress of efforts to develop and implement a conservation strategy for the sage-grouse.

To provide as much clarity as possible as to what was likely to be needed in order to avoid a listing of the sage-grouse, the Fish and Wildlife Service established a "Conservation Objectives Team" (COT). The COT issued a peer-reviewed report in early 2013 that identified "Primary Areas for Conservation" (PACs) based largely on state assessments of core areas and similar designations. The COT report also identifies the principal threats in the various PACs and describes the extent to which those threats need to be alleviated to achieve a secure future for the greater sage-grouse. The COT report was responsive to the clearly expressed desire of the states to clarify the objectives to be attained without prescribing the means by which those objectives must be attained.

More than half of the remaining sage grouse habitat is on BLM land. Thus, how land uses are managed on BLM lands will have a major impact on the success or failure of efforts to avoid the need to list the grouse. When FWS determined in 2010 that the sage-grouse warranted a proposed listing, that determination was based in large part on the inadequacy of regulatory measures to address the threats to the species. To provide those needed regulatory measures, BLM is undertaking to revise or amend 68 resource management plans. The U.S. Forest Service (FS), who manages about 9% of the remaining sage grouse habitat, has also joined BLM in undertaking the amendment of applicable forest plans.

As part of its Greater sage-grouse conservation efforts, the BLM convened a National Technical Team (NTT). The NTT was comprised of scientists from four federal agencies and five state fish and game agencies (CO, ID, NV, OR, and UT) who were charged with producing a report containing range-wide conservation objectives to guide the planning, based on best available science. BLM has directed that those measures be included in at least one of the alternatives considered in that planning process. The report and its associated conservation measures are not intended to create a standard for Greater sage-grouse management. Rather, the goal of the report is to provide a resource for BLM and Forest Service field personnel to use, as appropriate, in addressing on-the-ground conditions through the planning process.

Finally, mention should be made of the singular efforts of a sister agency at USDA, the Natural Resources Conservation Service (NRCS). Through its Sage-grouse Initiative, NRCS has invested over \$140 million in conservation easements and cost-sharing assistance to implement conservation practices beneficial to sage-grouse. This Initiative has focused on a number of practical, on-the-ground measures such as removal of encroaching junipers, which significantly degrade sage-grouse habitat, and the removal or marking of fences in sensitive areas to reduce grouse mortality from collisions with fences.

V. Hot Topics

BLM Interim Management v. State Plans

- Pending completion of that planning process, BLM and FS are applying certain interim measures to minimize loss of priority habitat. In lieu of these interim measures, BLM written policy allows them to instead implement alternative state-developed regulatory measures in which FWS has concurred.
- FWS has been pressed by some of the states, especially Idaho, to approve state-developed plans so that their regulatory measures can take the place of BLM's interim measures. In turn, the States would like BLM to adopt these same state-developed plans through its resource planning process. FWS has reviewed state plans when asked to do so and, in

appropriate circumstances, has been willing to concur with elements of those plans for purposes of interim management. However, FWS is not able to make any definitive determination now as to the adequacy of state plans for purposes of the listing decision that must be made in 2015. Similarly, certain elements of state plans may be adopted by BLM as interim guidance, but BLM is unable to commit to the outcome of its resource planning process at this time.

- *If asked whether you will live up to Secretary Salazar's (perceived) commitment that if state's developed plans like WY, the Department would accept them and it would be enough to avoid listing:*
 - I commit that the our people will continue to be at the table with your people ensuring that we develop the best plans, using the best science, that will conserve the Greater sage grouse. If we do that, it will increase the likelihood that the FWS can make a defensible decision a listing is not necessary. And if you become aware of problems or road blocks, pick up the phone and call me and I'll address it.

National Technical Team Report

- Governors have expressed concern that the BLM's Technical Team Report recommended interim management measures are too strict and overstep BLM's authority and intrude into FWS's sphere. Idaho also has the concern that while the FWS has approved parts of its plan, the BLM has not accepted those parts as interim management guidelines. Governor Otter has raised this concern in correspondence with YOU and Senator Risch made this an issue in your confirmation.
- *If asked whether the FWS or the BLM will make the determination whether state conservation standards are sufficient to protect the greater sage-grouse:*
 - The FWS will make the determination whether there are enough conservation and regulatory protections in place to address the threats facing the species and support a decision that a listing is not necessary. But when evaluating state plans, each agency has a role. The FWS determines whether they are sufficient for sage grouse conservation given the latest science, but it is up to the BLM to evaluate whether those plans meet the BLM's statutory obligations and can be practically implemented before approving them as management standards.

Postponing the 2015 Deadline

- Although still more than two years away, the September 2015 deadline for deciding whether to propose the sage-grouse for listing leaves little room to spare for completing scores of BLM plans and putting in place the other measures that may be needed. As a result, some of the states would like to secure an extension of the 2015 deadline, which would take either relief from the court or congressional action.
- *If asked whether you are willing to seek an extension of the 2015 deadline:*
 - I do not support any extension. I know that much remains to be done in the two-plus years that remain. I believe that all of our energies should be devoted to continuing the cooperative work that is now underway. I think we should continue to focus on the goal we have set and not divert any of our energy from that goal. I think we can get there. My belief is buttressed by the fact that FWS was able to put in place commitments that precluded the need to list the dunes

sagebrush lizard last year, even after FWS had proposed it for listing as an endangered species.

Fire

- Part of any strategy to conserve sage grouse is dealing with rangeland fire. Particularly in the more westerly areas, a major threat to sage-grouse habitat is the alteration of the fire cycle as a result of non-native cheat grass. While fire is natural in sagebrush habitats, what is unnatural is the combination of repeated fire followed by the invasion of cheat grass, which operate together to convert vast areas of high quality sage-grouse habitat into inhospitable monocultures of cheat grass. Breaking this cycle is critically important to the success of sage-grouse conservation efforts. As a result, the Sage-grouse Task Force is devoting considerable attention to fire policy matters.
- *If asked whether FWS will hold the states harmless in its listing decision if otherwise sound conservation programs are undercut by fires:*
 - The Service and the Department will continue to work with the states to responsibly address all the threats to sage grouse, including fire. Although fire is inherently more difficult to address than other types of threats over which we have more control, fire is a threat that must be addressed in order to minimize the likelihood of a listing. I know that the Sage Grouse Task Force is devoting considerable attention to the threat of fire and the policy initiatives that could reduce that threat. That is as it should be, as the Service will have to take all threats into account in its listing decision.

The ESA Generally

- There are many other ESA-issues that are of concern to Western Governors, such as the Bay-Delta Conservation Plan in California, Oregon forest management issues, the Klamath controversy, endangered fish in the Rio Grande, and others. A general concern, however, may focus on the Multi-district litigation settlement agreement, and the possibility that it will lead to the listing of hundreds of additional species in the next few years.
- *If asked whether you will agree not to settle new listing-related lawsuits in the future without engaging the states:*
 - No, you cannot agree to that, but you can stress that we are committed to state engagement in listing decisions. The multidistrict settlement agreement only committed the FWS to a timetable for making certain listing determinations. When making a decision whether to list any species for protection under the ESA, the FWS will actively engage the affected states and will base its decisions, as the law requires it to do, on the basis of the best scientific information available.

Thursday, June 27th 2013
Reno, NV → Salt Lake City, UT

- 12:07pm PST: Wheels-Up Reno-Tahoe Airport en route Salt Lake City, UT**
Flight: DL 2419
Flight Time: 1 hour 20 minutes
SRJ Seat: (b)(6), (b)(7)(C)
Manifest: SRJ
Nikki Buffa
Kate Kelly
Ride Along: Sgt. (b)(6), (b)(7)(C)
- 2:27pm MDT: Wheels-Down Salt Lake City, UT Airport**
Location: 776 North Terminal Dr
Salt Lake City, UT 84116
- 2:45pm MDT: Depart Salt Lake City Airport en route BLM State Office**
(b)(6), (b)(7)(C), (b)(7)(E)
Drive time: 8.1 miles; 13 minutes (to downtown)
Note: Snacks will be provided in vehicle
- 3:00pm MDT: Arrive BLM State Office**
Location: 440 West 200 South
Salt Lake City, UT
Advance POC: Juan Palma, BLM State Director
(801) 440-5411 (cell)
Notes: SRJ's vehicle will arrive on level P2 underground;
group will take elevator to 5th floor
SRJ will be greeted by Juan Palma, Susan Palma
(wife), and Acting State Fire Management Officer
Todd Richardson
- 3:00pm MDT: Meeting with Regional DOI Leadership**
Location: BLM State Director's Conference Room
Participants: **SRJ**
Juan Palma, BLM State Director
Larry Waikoviak, BOR Regional Director
John Hiscock, NPS Acting State Coordinator
Larry Crist, FWS State Field Supervisor
Staff: Nikki Buffa, Kate Kelly, Kelly Rigby (Photographer)
Advance: Francis Iacobucci
Press: Closed
Set-up: Square table with seats surrounding
Format:

- Juan Palma will introduce SRJ to other DOI Leadership for a meet and greet setting
- SRJ and Juan will move down the hallway to the Monument Conference Room

3:20pm MDT

All-Hands Employee Meeting

Location: Monument Conference Room
Participants: **SRJ**
Juan Palma, BLM State Director
Staff: Nikki Buffa, Kate Kelly, Kelly Rigby (Photographer)
Advance: Francis Iacobucci
Press: Closed
Attendees: 200 + DOI State Employees
Set-up: Podium with microphone facing rows of seated attendees; flags behind podium; wireless microphones will be available for questions from the audience

Format:

- Juan Palma will give welcoming remarks and introduce SRJ
- SRJ will make remarks to the employees and take questions
- Juan Palma will then ask one BLM employee, Vic Dunn, with over 40 years of Federal service to come to the podium for a picture with the Secretary
- Juan Palma will then recognize the Utah Partners for Conservation and Development for their work in restoring one million acres of lands through the Watershed Restoration Initiative (BLM will provide briefing material). SRJ will present the Partners with an award
- Juan Palma will thank the Secretary and SRJ will depart

4:25pm MDT:

Depart BLM Office en route Salt Lake Tribune (Walking)

Walk Time: 3-4 minutes

4:27pm MDT:

Arrive Salt Lake Tribune

Location: 900 S 400 W
Salt Lake City, UT
Advance POC: Vern Anderson
(801) 673-0074
Note: Vern Anderson will greet the Secretary upon arrival and escort to the 6th Floor Conference Room

4:30pm MDT:

Salt Lake Tribune Editorial Board Meet and Greet

Location: Conference Room
Participants: **SRJ**
Vern Anderson, Editorial and Opinion Editor
George Pyle, Editorial Writer
Marilyn McKinnon, Editorial Writer
Staff: Nikki Buffa, Kate Kelly
Advance: Francis Iacobucci

Press: Open
Set-up: Round Conference Table

Format:

- SRJ will meet with members of the Salt Lake Tribune Editorial Board

5:00pm MDT: Depart Salt Lake Tribune en route Depository (Walking)
Walk time: 3-4 minute

5:05pm MDT: Tour of Vault of Recovered Artifacts
Location: Artifact Storage Facility
Participants: **SRJ**
Juan Palma, BLM State Director
Shelly Smith, Deputy State Director for Resources
Dan Love, BLM Law Enforcement
Staff: Nikki Buffa, Kate Kelly, Kelly Rigby (Photographer)
Advance: Francis Iacobucci
Press: Closed
Set-up: Walking Tour of stored artifacts

6:00pm MDT: Depart Storage Facility en route RON
(b)(6), (b)(7)(C), (b)(7)(E)
Drive time: 1 miles; 5 minutes
Note: **(b)(6), (b)(7)(C), (b)(7)(E)**

6:05pm MDT: Arrive RON // Downtime

6:50pm MDT: Depart RON en route Red Iguana Restaurant
(b)(6), (b)(7)(C), (b)(7)(E)
Drive time: 2 miles; 10 minutes
Note: Bob and Lori will meet rest of party at Restaurant;
Mike will taxi from airport

7:00pm MDT: Dinner with Anne Castle, Mike Connor, Lori Caramanian and Bob Snow
Location: Red Iguana
736 W North Temple
Salt Lake City, UT

8:30pm MDT: Depart Red Iguana en route RON
(b)(6), (b)(7)(C), (b)(7)(E)

Drive time: 2 miles; 10 minutes

8:45pm MDT:

RON

Location: DoubleTree Suites
110 West 600 South
Salt Lake City, UT

Dan Ashe RON's at the Silver Baron Lodge in Park City

11:20pm MDT:

Neil Kornze and Ted Boling Wheels down Salt Lake City, UT

11:45pm MDT:

Neil Kornze and Ted Boling RON's at DoubleTree Suites, Salt Lake City, UT

Friday, June 28th 2013

Salt Lake City, UT → Park City, UT → Salt Lake City, UT

6:30am MDT:

Breakfast Meeting with Staff

Location: Downstairs in the hotel restaurant area – there is a breakfast buffet starting at 6:00am

Note: This meeting is to quickly go over the day's events

Participants: SRJ, Nikki Buffa, Kate Kelly, Francis Iacobucci, Anne Castle, Mike Connor, Neil Kornze, Bob Snow and Lori Caramanian, Ted Boling

7:10am MDT:

Depart RON en route Salt Lake Chamber of Commerce

(b) (6), (b) (7)(C), (b)(7)(E)
[REDACTED]

Drive time: 1.3 miles; 5 minutes

7:20am MDT:

Arrive Salt Lake Chamber of Commerce

Location: 175 E 400 S Suite #600
Salt Lake City, UT

Advance POC: Marty
(b)(6) (cell)

7:20am MDT:

Courtesy Meeting with Mayor Ralph Becker, Salt Lake City

Location: Hold Room next to Main Conference Room

Participants: **SRJ**

Mayor Becker

Staff: Nikki Buffa, Francisco Carrillo, Chad Douglas
(Photographer)

Advance: Francis Iacobucci

Set-up: Small table

Format:

- Informal introductory meet and greet with Mayor Becker

7:30am MDT:

**Economic Case for Immigration Reform – Business Leaders
Roundtable**

Location: Main Conference Room

Participants: **SRJ**

Mayor Ralph Becker

Clark Ivory, Executive Board Member, Salt Lake
City Chamber of Commerce

Attendees: Approximately 35 members of the Salt Lake business
community (please see briefing for details attendees
list)

Staff: Nikki Buffa, Francisco Carrillo, Kate Kelly, Chad
Douglas (Photographer)

Advance: Francis Iacobucci

Press: Closed

Set-up: Horse shoe shaped tables that seat close to 30-40
people; microphone will be available if needed

Format:

- Clark Ivory will welcome and introduce the Mayor
- Mayor Becker will give brief opening remarks
- Clark Ivory will then introduce SRJ
- SRJ will make remarks
- Clark Ivory will then open the floor for discussion
- Last question will be at 8:25am

8:30am MDT:

Interview with the Salt Lake Chamber of Commerce

Location: Studio (just down the hall from the main conference
room)

Participants: **SRJ**

Marty Carpenter, Salt Lake Chamber of Commerce

Staff: Nikki Buffa, Kate Kelly

Format:

- SRJ will record a brief video for the Chamber of Commerce

INDEPENDENT STAFF MOVEMENT

8:00am MDT: *Anne Castle, Mike Connor, Lori Caramanian, and Bob Snow will depart RON en route Montage Deer Valley, Park City*

8:35am MDT: **Depart Salt Lake City of Commerce en route Montage Deer Valley**

(b)(6), (b)(7)(C), (b)(7)(E)

Drive Time: 36 miles; 40 minutes

9:15am MDT: **Arrive Montage Deer Valley**

Location: 9100 Marsac Ave
Park City, UT
Advance POC: Sarah Olson, Meeting Planner
(b)(6) (Cell)

9:15am MDT: **Informal Discussion with Western Governors**

Location: Gallery Ballroom I
Participants: **SRJ**
Governor Gary Herbert, Utah
Governor Butch Otter, Idaho
Governor Brian Sandavol, Nevada
Governor Steve Bullock, Montana
Governor Lolo Letalu Matalasi Moliga, America Samoa
Greg Selinger, Premier of Manitoba
Staff: Francisco Carrillo, Dan Ashe, Neil Kornze, Anne Castle, Mike Connor, Chad Douglas (photographer) – Please note that all staff will be behind the principals; **ONLY** the Secretary and Governor’s will sit at the main table
Advance: Francis Iacobucci
Press: Closed
Set-up: Horse shoe table – staff seated behind

Format:

- Governor Herbert will welcome SRJ
- SRJ will have an opportunity to give brief opening remarks
- Governor Herbert will then allow each Governor to speak briefly and open the floor for discussion

10:00am MDT: **Down Time // Briefing Time**

Location: Room 660

11:30am MDT: Meeting with Congressman Rob Bishop

Location: Room 660
Staff: Neil Kornze, Nikki Buffa
Press: Closed
Advance POC: Pete Jenkins
(b)(6) (cell)

12:00pm MDT: Private Lunch with Governors

Location: Apex Restaurant
Staff: Dan Ashe, Neil Kornze, Nikki Buffa
Press: Closed
Participants: **SRJ**
Governor Gary Herbert, Utah
Governor John Hickenlooper, Colorado
Governor Butch Otter, Idaho
Governor Brian Sandavol, Nevada
Governor Steve Bullock, Montana
Governor Lolo Letalu Matalasi Moliga, American Samoa

Greg Selinger, Premier of Manitoba
Set-up: Buffet style lunch; One large conference style table to seat 20-25 attendees; There will be a projector and screen for a powerpoint Governor Herbert would like to show the Secretary

Format

- The Secretary will have an opportunity to give brief remarks, providing her an opportunity to lay out her stance on Sage Grouse
- Governor Herbert will thank the Secretary for her comments, and open the floor for discussion on the issue

Notes: The Governor's and Premier's will be allowed to have one staff in the room with them for this conversation

1:15pm MDT: Down Time

Location: Room 660

1:45pm MDT: Keynote Address at the WGA's Roundtable on Public Lands

Location: Grand Ballroom I
Staff: Francisco Carrillo, Kate Kelly, Nikki Buffa, Dan Ashe, Chad Douglas (photographer)
Press: Open
Advance: Francis Iacobucci
Panel Participants: **Neil Kornze**, BLM Acting Director
Congressman Rob Bishop
Jamie Williams, President, The Wilderness Society
Ronald W. Jibson, Chairman, President & CEO, Questar Corporation

Attendees: 320+
Set up: Risen stage with tables lined across (head table); SRJ will speak from a podium with presidential blue pipe and drape, and American flags behind her; table microphones will be placed in front of Governors; the audience and media will be facing the head table in lined rows of chairs

Format:

- Governor Herbert will welcome and introduce the Secretary
- SRJ will then give the keynote address prior to the panel discussion
- Following the address, the Secretary will take 2-3 questions from the audience
- The Secretary will then depart and not stay for the panel discussion; Neil Kornze will represent the Department for the remainder of the panel discussion

2:15pm MDT:

Press Availability

Location: Montage Terrance – directly across from the Grand Ballroom I (outside)
Staff: Kate Kelly, Chad Douglas (photographer)

2:30pm MDT:

Meeting with the Basin States Representatives

Location: Gallery Ballroom I
Staff: Anne Castle, Mike Connor, Lori Caramanian, Bob Snow, Nikki Buffa, Larry Walkoviak, Terry Fulp
Press: Closed
Advance: Francis Iacobucci
Participants: **SRJ**
Sandy Fabritz-Whitney, Director, Arizona Department of Water Resources
Bart Fisher, Jr., Chairman, Colorado River Board of California
Tanya Trujillo, Executive Director, Colorado River Board of California
John McClow, Colorado Water Conservation Board
Jim Lochhead, CEO/Manager, Denver Water
Jayne Harkins, Executive Director, Colorado River Commission of Nevada
Pat Mulroy, General Manager, Southern Nevada Water Authority
Dennis Strong, Director, Utah Division of Water Resources, Utah Interstate Stream Commissioner
Robert King, Utah Division of Water Resources
Patrick Tyrrell, State Engineer, State of Wyoming
Don Ostler, Executive Director, Upper Colorado River Commission

Format:

- Anne Castle will welcome and introduce the Secretary
- The Secretary will give brief remarks and ask each representative to introduce themselves
- Following introductions, the Basin States will give an overview of their work
- The conversation will open to general discussion

INDEPENDENT STAFF MOVEMENT

3:30pm MDT: *Parker Wicks and Chad Douglas will depart Montage en route Salt Lake City (they are done for the day)*

4:30pm MDT: *Anne Castle, Mike Connor, Bob Snow, Lori Caramanian will depart Montage en route RON*

3:30pm MDT: **Downtime // Explore Park City**

6:00pm MDT: **Get-together with Danielle Gray**

Location: High West Distillery and Saloon
703 Park Ave
Park City, UT

7:00pm MDT: **Depart Basin States Meeting en route RON**

(b)(6), (b)(7)(C), (b)(7)(E)

Drive time: 40 minutes

7:45pm MDT: **Arrive RON**

Saturday, June 29th 2-13

Salt Lake City, UT → Las Vegas, NV

INDEPENDENT STAFF MOVEMENT

5:55am MDT: *Booch will depart RON en route Trailhead – he will wait for caravan to arrive and hop in one off road vehicle*

6:15am MDT: **Depart RON en route Pass Canyon Trailhead**

(b)(6), (b)(7)(C), (b)(7)(E)

Drive time: 45 minutes

- Note: The group will be traveling in off road SUVs
Note: It's going to be hot; wear long pants and lots of sunscreen and bring a lot of water (water will also be provided along the hike)
Note: Booch will provide fruit and power bars for breakfast as the hotel restaurant does not open until 7:00am on Saturdays

7:00am MDT: Hike up Barney's Peak (BLM land)

- Participants:** SRJ
Mike Connor
Juan Palma, BLM State Director
Todd Richardson, BLM
Jenna Whitlock, BLM
Roxanne Tea, BLM
Kevin Oliver, BLM
Mike Nelson, BLM
LJ Brown, BLM
Kate Kelly
Nikki Buffa (will need to depart early for airport)
Booch (will need to depart early for airport)
(b)(6), (b)(7)(C)
Brian Maffly from the Salt Lake Tribune
Photographer from Salt Lake Tribune

INDEPENDENT STAFF MOVEMENT

- 11:00am MDT: Nikki Buffa and Booch will depart early en route RON*
12:30pm MDT: Nikki Buff and Booch depart RON en route Airport

11:30am MDT: Depart Pass Canyon Trailhead en route RON

(b)(6), (b)(7)(C), (b)(7)(E)

Drive time: 45 minutes

12:15pm MDT: Downtime // Opportunity to Clean up prior to Wheels up

1:00pm MDT: Depart RON en route Salt Lake City Airport

(b)(6), (b)(7)(C), (b)(7)(E)

Drive time: 15 minutes

1:55pm MDT: Wheels-Up Salt Lake City Airport en route Las Vegas, NV

**EVENT MEMORANDUM FOR THE SECRETARY
GENERAL WGA MEETING INFORMATION**

DATE: June 28, 2013
LOCATION: Montage Deer Valley - Park City, Utah
TIME: Secretary Jewell's First Event is June 28th at 1:45 PM
FROM: Gail Adams, Director, Office of Intergovernmental and External Affairs

I. Purpose of the meeting

YOU will attend the WGA Annual Meeting on June 28th in Park City, Utah. YOU will participate in the Governors' Luncheon sage grouse discussion (a separate Luncheon Briefing Memo is prepared for you) and be the Keynote Speaker kicking off the Public Lands Roundtable. You will also participate in an informal morning discussion with Governors on their respective issues (briefing papers have been prepared for those issues as well). Approximately 320 people are attending this year's conference.

II. Participants

- YOU
- Governors Attending the Conference
 - Lolo Moliga (AS)
 - John Hickenlooper (CO)
 - Butch Otter (ID) – arriving on Sunday
 - Steve Bullock (MT)
 - Brian Sandoval (NV)
 - Dennis Daugaard (SD)
 - Matt Mead (WY)
 - Gary Herbert (UT)
 - Alison Redford, Premier of Alberta
 - Gregory Selinger, Premier of Manitoba
- DOI
 - Anne Castle, Assistant Secretary, Office of Water and Science
 - Lori Carmanian, Deputy Assistant Secretary, Office of Water and Science
 - Neil Kornze, Principal Deputy Director, Bureau of Land Management
 - Dan Ashe, US Fish and Wildlife Service Director
 - Mike Connor, Commissioner, Bureau of Reclamation
- USG Attendees:
 - Bob Perciasepe, Acting Administrator, US EPA
 - Samuel Rauch, Acting Assistant Administrator for Fisheries, Department of Commerce, National Marine Fisheries Service
 - Shaun McGrath, Regional Administrator, US EPA, Region 8
- Other Attendees Representing DOI Interests
 - Energy (solar, wind, natural gas, copper, petroleum, coal, and transmission interests typically attend.)
 - Conservation - (Theodore Roosevelt conservation Partnership, The Wilderness Society, National Wildlife Federation, National Association of

Conservation Districts, The Nature Conservancy, North American Grouse Partnership, and the Western States Water Council)

III. **WGA Agenda for June 28th** (all of the meetings below will take place in TBD rooms at the Montage Deer Valley)

- | | |
|-------------------|--|
| 9:30am – 10:30am | Informal Discussion with Governors (See briefing memo for more detail) |
| 11:30am – 12:00pm | Meeting with Congressman Rob Bishop (See briefing memo for more detail) |
| 12:00pm – 1:00pm | Governor's Lunch and Sage Grouse Discussion (See briefing memo for more detail) |
| 1:45pm - 2:00pm | Keynote Speech to kick off the Public Lands Roundtable (See briefing memo for more detail) |
| 2:30pm – 3:30pm | Basin States Briefing (See briefing memo for more detail) |
| 7:00pm – 9:00pm | WGA Dinner |

IV. **Background**

The Western Governors' Association was established in 1984 and is an independent, nonprofit organization representing the Governors of 19 states and three US-Flag Pacific islands. Through their Association, the Governors identify and address key policy and governance issues that include natural resources, the environment, human services, economic development, intergovernmental relations and international relations. The current chairman of the Western Governors' Association is Utah Governor Gary Herbert, who was elected in June of 2012.

Current initiatives of the Association are energy generation; regional transmission expansion; weather and climate risk; water: supply, transfers, and drought; forest health; outdoor recreation and tourism; and wildlife corridors and crucial habitat.

Governor Herbert has expressed his excitement that you and so many of your high-level staff are participating in this year's conference.

V. **Attachments**

- Profiles of Attending Governors (below)
- WGA Public Agenda
- Memo describing various issues that may be brought up at WGA

ATTACHMENT: PROFILES OF ATTENDING GOVERNORS WGA

Governor Lolo Matalasi Moliga (I-AS)

Prior to being elected in 2012, Governor Moliga was appointed as President of the Development Bank of American Samoa. He served in the House of Representatives for four terms. He later became a Senator within the American Samoa Senate, where he served as the body's Senate President. Lolo is a High Talking Chief from the village of Sili, Manu'a.

Governor John Hickenlooper (D-CO): WGA VICE-CHAIR

Governor Hickenlooper describes himself as a “recovering geologist now on loan to public service.” Elected in 2010, his priorities include making Colorado the model for energy policy by promoting an “all-the-above” energy policy that develops Colorado’s traditional and renewable resources in a balanced way, and with the highest ethical and public safety standards and making Colorado the healthiest state. Governor Hickenlooper serves in leadership positions with the National Governors Association and the Western Governors’ Association. He also serves as the Vice Chair of the Democratic Governors Association.

Governor Butch Otter (R-ID)

Governor Otter has been Governor of Idaho since January 2007. He previously served three terms in Congress representing Idaho's 1st District from 2001 through 2006. Otter was the longest serving Lieutenant Governor of Idaho, holding office from 1987–2001. He is the first Idahoan since statehood to win elections as both a United States Representative and as governor.

Governor Steve Bullock (D - MT)

Steve Bullock, Montana's former attorney general, was elected governor in 2012. Since becoming Governor, Bullock has approved a request from Yellowstone National Park to move bison from a holding facility in the park, to an Animal and Plant Health Inspection Service facility for research and quarantine. He also supported the creation of the “Native Language Preservation Program,” a partnership between the State of Montana and tribal governments to preserve the languages of Montana’s Indian tribes and enhance the educational opportunities students have on Montana’s reservations, while protecting American Indians’ cultural heritage.

Governor Dennis Daugaard (R-SD) (pronounced DEW-guard)

Governor Daugaard took office January 2011. As Governor, he emphasizes job creation, sound fiscal management, and efficient government operation. Before becoming Governor, he served as Lieutenant Governor, a position he held from 2003 to 2011. He

promotes South Dakota as a great place to expand existing businesses and to locate new businesses.

Governor Matt Mead (R-WY)

Governor Mead took office January 2011. He serves on the Council of Governors, a group of 10 governors chosen by the President to advise top federal officials on matters related to the National Guard and civil support missions. He also serves on the U.S. Homeland Security Advisory Council. In the National Governors Association, he is a member of the Natural Resources Committee. He is co-chair of the State and Federal Sage Grouse Task Force, which brings together federal officials and representatives of 11 western states for a regional conservation effort.

Governor Brian Sandoval (R-NV)

Brian Sandoval took office January 2011. He is a member of the Western Governors Association, National Governors Association, Republican Governors Association and the Hispanic Leadership Network. Governor Sandoval also serves as Vice-Chair of the NGA Health and Homeland Security Committee. He was recently appointed Chair-elect of the Education Commission of the States. Prior to becoming Governor, he served as a federal judge, and as the Nevada Attorney General. Sandoval was also the first Hispanic candidate elected to statewide office in Nevada.

Governor Gary Herbert (R-UT): WGA CHAIR

Gary Herbert became Utah's Governor in 2009. Before assuming the governor's office, he served as Utah's sixteenth Lieutenant Governor. Governor Herbert's priorities are education, energy, jobs and self-determination. The Governor currently serves as the Chair of the WGA and is a leading voice on energy issues in the West. He has made it a priority for the WGA to advocate for increased energy development on public lands.

Premier Gregory Selinger (New Democratic Party – Manitoba)

Premier Selinger was elected to head the New Democratic Party of Manitoba in 2009. Manitoba is one of four Canadian provinces that are partners with seven US states in the Western Climate Initiative (WCI) which commits them to engage in cooperative action to address climate change and implement a joint strategy to reduce greenhouse gas emissions. As part of the WCI the Manitoba Department of Conservation is currently seeking input on how to implement a regional cap-and-trade regime to cut down on greenhouse gas emissions.

Premier Alison Redford (progressive Conservative Party - Alberta)

Alison Redford was elected leader of the Alberta Progressive Conservative Party in 2011. She is the first female premier in the province's history and the eighth woman to serve as a premier in the history of Canada. Alberta Premier Alison Redford says the United States and Canada share political and environmental values and must work together to become energy independent of those who do not. Redford, speaking to the Foreign Policy Association on June 19th in New York, said until recently North American energy independence was wishful thinking.

INFORMATION MEMORANDUM FOR THE SECRETARY
WESTERN GOVERNORS ASSOCIATION ISSUES OF INTEREST

DATE: June 28, 2013
FROM: Gail Adams, OIEA; Michael Bean, AS-FWP office; Gary Frazer, FWS; Pam Haze, AS-PMB; Betsy Hildebrandt, FWS; Amy Holley, PMB; Neil Kornze, BLM; Liz Klein, OS; Janet Lin, BLM; Isra Pananon, OS; Ruchi Sadhir, OS; Rhea Suh, AS-PMB, Sarah Greenberger, Senior Advisor
CC: Hilary C. Tompkins, Solicitor

ADDITIONS & REVISIONS:

-MINERAL ROYALTIES – Addition
-ESA REFORM - Revisions
-MDL SETTLEMENT – Edits
-LAND EXCHANGES: Utah Recreational Land Exchange – Addition
-DROUGHT: New Mexico – Addition
-CENTRAL UTAH PROJECT COMPLETION ACT (CUPCA) PROGRAM
CONSOLIDATION & FUNDING CUTS – Addition
-TRANSMISSION (Gateway West) – Addition

I. TRANSMISSION PERMITTING AND SITING PROCESS

Background:

- Since 2009, the BLM has approved more than 75 high voltage transmission projects (100 kV and greater) totaling 2,300 miles (1,300 miles on BLM managed lands).
- Currently, the BLM has 25 pending applications with routes that span over 4,900 miles, affecting 58 BLM field offices in 11 western states.
- BLM was the lead agency for four of the seven **Rapid Response Transmission Team (RRTT)** priority pilot projects, now BLM is the lead for all four of the remaining pilot projects: (1) Boardman to Hemingway (Idaho Power Company) in Oregon and Idaho; (2) Gateway West (Rocky Mountain Power & Idaho Power Company joint project) in Wyoming and Idaho; (3) Transwest Express (Transwest Express LLC) in Wyoming, Colorado, Utah, & Nevada; and (4) SunZia (SunZia LLC) in New Mexico and Arizona.
- Although the siting and permitting of transmission lines are generally in the purview of states, Federal agencies become heavily involved transmission siting and permitting in the West because of the vast amount of public land that may need to be crossed or National Parks and sensitive species habitat that is largely avoided. BLM prefers to site major linear infrastructure projects within energy corridors such as those designated pursuant to FLPMA or established through Section 368 of the Energy Policy Act.
 - The corridors established by BLM, Forest Service, and Department of Energy in 2009 were subsequently litigated and settled last year. The settlement agreement requires those three agencies to consider “corridors of concern” (due to species habitat and cultural resource sensitivities) and develop a plan and study to add, delete, or revise the corridors periodically with necessary outreach to Tribes, states, and NGOs.

- The President signed a **Presidential Memorandum – “Transforming our Nation’s Electric Grid Through Improved Siting, Permitting, and Review”** on June 7, 2013, that directed all heads of agencies, including the Department of the Interior, to:
 - Establish energy corridors through robust collaboration with State, local, and Tribal governments regarding segments of corridors on non-Federal lands so that corridors can connect effectively between Federal lands
 - Develop an integrated, interagency pre-application process for significant electric transmission projects requiring federal approvals to provide more regulatory certainty by identifying potential conflicts earlier in the process.
- **Executive Order 13604** (March 2012) on infrastructure siting and permitting specifically includes the President’s order to agency heads, including DOI, to collaborate with states and ensure timely permit reviews for transmission and renewable energy (among other sectors).
- YOU signed an agreement with Governor Kitzhaber (OR) and Governor Inslee (WA) to create the **Pacific Northwest Regional Infrastructure Team** in May 2013 to ensure: (1) forward progress on the siting and permitting of priority infrastructure projects, (2) proactive, cross-agency, and cross-jurisdictional solutions to help remove perceived or real barriers to infrastructure development, and (3) realizing ecologically effective mitigation opportunities.

Policy Issues – Early Coordination & Permitting Timeframes:

- State and local governments want early and effective engagement during the pre-application process as well as effective coordination throughout the permitting process.
- State governments want to maintain authority over siting within their states, and local governments prefer siting on public lands versus private lands.
- DOI and BLM have taken great strides in developing partnerships with states to address issues related to early and effective engagement and coordination:
 - DOI’s partnership with CA since 2009 in the **Renewable Energy Policy Group** includes transmission projects needed for renewable energy generation.
 - BLM has an MOU with NV to coordinate renewable energy and transmission projects.
 - DOI is applying these effective principles of robust coordination across agencies and with states in the Pacific Northwest through the **pilot Pacific Northwest Regional Infrastructure Team**, with a charge that includes timely forward progress on transmission projects that are identified as a priority to the states.
- Governor Otter (ID) may be interested in joining this team to help spur forward movement on important transmission and energy development in Idaho, such as the Gateway West transmission line project in WY and ID, proposed by PacifiCorps/Rocky Mountain Power and Idaho Power Company. It would be helpful for you to encourage Idaho’s participation and reiterate an invitation to Governor Otter to join the regional team.

II. RENEWABLE ENERGY

Background:

- **Secretarial Order 3285**, issued March 11, 2009, established the development of environmentally responsible renewable energy as a priority for the Department.

- BLM met and exceeded its goal of 10,000 megawatts (MWs) by the end of 2012, by approving 12,862 MWs [Note: 2005 Energy Policy Act established a goal of 10,000 MWs by 2015]
- Today, permits for over 13,000 MWs have been approved, which could provide power for more than 4.4 million homes if built.

Policy Issues – Revenue Share with States:

- State and local governments want to share in revenues from wind and solar authorizations on the public lands, which currently go to the Treasury.
- Congressional action would be required to share in this revenue since there is no authority under FLPMA for wind and solar revenue sharing. [Note: geothermal leasing is conducted under the authority of the Geothermal Steam Act, which directs that are shared 50 percent to State, 25 percent to county, and 25 percent to Treasury.]
- Encourage states to set more robust renewable portfolio standards (RPS). DOI has seen the effects of robust renewable portfolio standards with an increase of renewable energy project permit applications, leading to development and job creation.

III. GOVERNOR HERBERT'S WGA 10 YEAR ENERGY VISION

Background

- Recognizing that the energy industry in Utah is the second largest component of state gross domestic product and revenue from energy development is the backbone of Utah's economy, Gov. Gary Herbert and the State of Utah released an ambitious 10-year strategic energy plan in 2011. The plan was developed by a task force appointed by the governor and with the help of subcommittees and input from numerous private and public individuals, officials, and organizations.
- The plan aims to provide a framework for responsibly developing traditional, alternative, and renewable energy resources to create jobs and foster economic development in conjunction with the preservation of the natural beauty and quality of life that draws people to live and recreate in Utah.
- The plan outlines a number of strategies designed to support development of all energy resources in the state. One strategy speaks directly to energy development on public lands in Utah: by working collaboratively with Federal agencies to navigate the balance between economic growth and environmental sustainability, the plan recommends coordinating with local governments, agencies and interest groups to identify potential issues and work toward solutions, as well as leveraging regional support with other western states for land rights.
- The BLM strives to facilitate responsible energy development in Utah by providing efficient access to the state's valuable mineral resources. As you may know, the BLM-Utah Vernal Field Office continues to be the Bureau's busiest oil and gas office in terms of Applications for Permit to Drill (APDs)—both received and approved. [Thus far in FY2013, the Vernal Field Office has received 796 APDs, 24% of the national total, and approved 961 APDs, 31% of the national total.]

IV. FRACKING

- Current regulations related to fracking are more than 30-years old.
- BLM issued a proposed rule for fracking on public lands in May 2012. A year later, in May 2013, BLM issued a Supplemental Notice of Proposed Rulemaking to revise its draft proposal to reflect input received from 177,000 public comments on the previous proposal. Both the BLM's originally proposed rule and the revised proposed rule require BLM approval of all new hydraulic fracturing activities on federal and Indian lands, and address three substantive topics:
 - (1) disclosure to the public of chemicals used in hydraulic fracturing on public and Indian lands;
 - (2) confirmation that wells used in fracturing operations meet appropriate construction standards (such as encasement); and
 - (3) a requirement that well operators put in place appropriate plans for managing "flowback" water that returns to the surface.
- In some circumstances, the revised proposed rule would allow well operators to seek a variance to follow state or tribal regulations in lieu of federal regulations.
- The BLM has extended the comment period until August 23, 2013.

Positions of Key Interest Groups:

- Industry groups continue their opposition to the rule, asserting that the States are the appropriate regulators of hydraulic fracturing and that Federal regulation is unnecessary.
- Environmental groups argue that the BLM is not doing enough to protect sensitive areas, require pre-disclosure of all chemicals, and mandate all flowback fluids be recovered in closed tanks, among other topics.
- States and Tribes continue to believe that the rule is not necessary, and that they have the standards and measures in place to assure sound operations. Tribes are especially concerned about losing future leasing and development of their minerals.

V. SEQUESTER/MINERAL ROYALTIES

- Your team is working on a response to a letter received from Utah Governor Gary Herbert, in his role as the Chairman of the Western Governors' Association. His letter requested an explanation for the legal basis for sequestration of mineral royalties and asked if sequester reductions were applied equitably.

A response with the following answers will go to the Governor this week ahead of Friday's meeting.

- "What is the precise legal basis justifying the DOI's action in sequestering FY 2012 state mineral royalties?"
Answer: The Balanced Budget Enforcement and Emergency Deficit Control Act of 1985 (BBEDCA), as amended by the Budget Control Act of 2011 and the Pay-As-You-Go Act of 2010 are the basis for sequester implementation. Sections 255 and 256 of BBEDCA are the determinants of the accounts that are exempt or not exempt from sequester. The BBEDCA defines sequestration as "the cancellation of budgetary resources provided by discretionary appropriations or direct spending law" and thus allows sequester of accounts that are direct spending including the Mineral Leasing Act authorized revenue payments to States.

- “Is this sequestration of state mineral royalties being applied with equal force to all States receiving mineral royalties? If not, why not?”

Answer: Sequester reductions are being applied in the same manner to all States.

- “If the DOI is determined to go through with such a questionable action, why does it not apply its action equitably? Should not the federal share of royalties be reduced by a like margin? What is the legal justification for treating states different than the federal government treats itself?”

Answer: The payments to States from the Mineral Leasing and Associated Payments account are considered direct spending and thus subject to sequester . The deposits into the Treasury from the collection of mineral leasing activities represent the corpus of revenues from which payments to States are made. No payments are made with the Federal revenues that are retained in the Treasury of the United States. Payments out of the Treasury to States based on the Mineral Leasing Act are considered direct spending and therefore are subject to sequester.

- “Will the amounts sequestered in 2013 be available in 2014?”

Answer: Yes, the Mineral Leasing Act revenues will become available in 2014. [Note on background: (b) (5)]

This answer will be NEWS. (b) (5)

Background

- In April 2013, the Office of Management and Budget issued new guidance in calculating sequester reductions. The new method of calculation results in modified sequester amounts for some accounts. We will be notifying States of modifications to revenue distributions beginning with the Mineral Leasing Act revenues on June 27.
- Mineral Leasing Revenues: On June 27, the Office of Natural Resource Revenue will issue monthly allocations of energy and mineral revenues to States reflecting, for the first time, the change in the method of calculation. Included in the payments will be adjusted amounts of Mineral Leasing Act revenues.
- The changes to the revenue calculations will impact each State differently, with most States seeing less withheld under the new guidance. The States are acclimated to seeing adjustments in their monthly payments because of changes in prior reporting periods, adjudication of challenges to transportation and processing deductions, and for other reasons.
- However, given strong frustration that these revenues are sequestered in the first place, there will likely be a high level of scrutiny and questions about the adjustments.
- The payments made on June 27 will be preceded by a letter to recipients regarding the adjustments and process going forward. DOI will also ensure that affected congressional delegations are notified and OMB is kept informed.
- Interior received a letter from WGA Chairman Herbert and OMB Director Burwell received two letters on this matter, one from 21 Senators and Members of Congress and one from three State legislators. In addition to raising their concerns about the sequester, they ask if

the mineral revenues sequestered in 2013 would become available in 2014. The Solicitor has helped DOI to determine, and OMB has concurred, that the Mineral Leasing Act payment amounts that are sequestered and withheld from States in FY 2013 are available for distribution to States in FY 2014.

VI. ENDANGERED SPECIES ACT (ESA) REFORM

Background: ESA Reform Drivers

- In response to Executive Order 13563 on “Improving Regulation and Regulatory Review,” the Department of the Interior prepared a Plan for Retrospective Regulatory Review in 2011. As part of that Plan, the Department (in cooperation with NOAA) committed to “revise and update ... ESA implementing regulations and policies to improve conservation effectiveness, reduce administrative burden, enhance clarity and consistency ... and encourage partnerships, innovation, and cooperation.” Several specific regulatory improvement proposals are, or will very soon be, ready for publication.
- A subsequent set of regulatory improvement proposals, focused on expanding or refining voluntary landowner tools, is expected to be ready for public review and comment this summer.

Completed ESA Reform Action in Interior’s EO 13563 Plan

- Of the several ESA regulatory improvement proposals identified in the Department’s Plan for Retrospective Regulatory Review, only one has been completed to date. On May 1, 2012, the Service and NOAA jointly published a final rule that minimizes requirements for written descriptions of critical habitat boundaries in favor of map- and internet-based descriptions, which are clearer, more accessible, and less costly. This regulatory improvement was non-controversial and elicited few public comments.
- In addition to the foregoing, on August 24, 2012, the Service and NOAA jointly published a proposed rule to require that economic analyses of proposed critical habitat designations be made available concurrently with the proposed designation. This proposal was in response to the President’s memorandum of February 28, 2012. At the request of several states and Members of Congress, the public comment period was extended through February 6, 2013. The final rule is expected to clear OMB and be sent to the Federal Register for publication in early July.

Status of Remaining ESA Reform Actions in Interior’s EO 13563 Plan (Not public information yet):

- *Clarifying the scope and content of incidental take statements (permitting “take” when it’s incidental to the purpose of the action), particularly with regard to programmatic actions or other actions where direct measurement is difficult.* The proposed rule is expected to clear OMB and be sent to the Federal Register for publication in early July.
- *Designing a more efficient, defensible and consistent process for designating critical habitat.* The proposal makes minor edits clarifying the scope and purpose of critical habitat, adds needed definitions, and clarifies the criteria for designating critical habitat. We hope to send it to the Federal Register for publication by mid-July.
- *Revising the definition of “destruction or adverse modification” of critical habitat.* Section 7 of the ESA requires federal agencies to ensure that their actions are not likely to result in

the destruction or adverse modification of critical habitat. The existing regulatory definition has been found by several appellate courts to be deficient because it only gave weight to survival of the species but not recovery (a higher bar) of the species. We hope to send it to the Federal Register for publication by mid-July.

- *Clarifying policy with respect to the exclusion of particular areas from critical habitat.* We hope to send it to the Federal Register for publication by mid-July.

Recent ESA Reform Efforts

- On March 15, 2012, the Service published an advance notice of proposed rulemaking soliciting suggestions for regulatory changes to incentivize conservation efforts by landowners and others for candidate species (i.e., species not currently listed as endangered or threatened, but that may become so in the future). In response, the Service received strongly supportive comments from environmental, economic, and governmental interests. Specific proposals to expand or refine voluntary landowner tools are expected to be ready for publication later in 2013.
- The Services are working with state agency representatives of the State/Federal Joint Task Force on ESA Policy to screen the comments and identify those that most clearly warrant further consideration. Based on our initial review, we expect that, at a minimum, we will be exploring ways to:
 - streamline our Habitat Conservation Planning and other permitting processes,
 - give credit to pre-listing mitigation efforts if a candidate species is ultimately listed, and
 - refine and update our conservation banking policy.

Positions of Stakeholders

- With respect to all the matters described above, environmental interests can be expected to argue for changes that will make the ESA more effective in conserving species, while regulated interests can be expected to argue for changes that will make it less onerous for those subject to the ESA.
- Due to the high level of stakeholder interest anticipated regarding the proposed actions, the Service will be engaging in enhanced public engagement efforts, including forums, webinars, and online engagement opportunities aimed at key stakeholders and the interested public. The goal of the Service is to move forward a set of regulatory improvements that accomplish both objectives and stake out a defensible middle ground.

Talking Points: ESA Reform and Cooperation with States

General Messages on ESA and States:

- Partnership with States is key to successful **conservation across the nation.**
- We are actively **looking for ways to strengthen and expand that partnership.**
- Our priority is to work with states to address threats to **species before they require ESA protection.**
- We're dedicated to recovering species on the list and **returning management control to state agencies.**

- I'm proud that we are now in a position to return management of the gray wolf to state agencies across its range.

What do you think the role of states is under the ESA?

- States have **primary management authority over most of the imperiled species in this country.**
- You have the presence and capacity to deliver conservation in more places than we can.
- State wildlife agencies are **trusted and valued partners**, and I support FWS service efforts to **increase collaboration** to protect species and preserve working landscapes.
- We can't recover listed species – or prevent species from being listed – without the support of states, private landowners and industry.
- States have consistently been a **positive force for innovation and change**, helping us to improve the flexibility of the ESA and provide real solutions for landowners.

What changes to the ESA would you like to see that would better enhance that state/federal partnership? What action needs to be taken to make these changes?

- The Department is **pursuing regulatory changes to improve the flexibility of the ESA, increase state and stakeholder involvement, and provide expanded incentives** for private lands conservation.
- We're seeking regulatory changes that require ESA petitioners to **include the views of state wildlife agencies** in the information they provide to us – giving us more scientific information and **providing states a stronger voice early in the process.**

MDL Settlement

The Department entered into two long-term settlements in 2011 that resolved approximately 20 consolidated cases filed by environmental groups. The settlements set forth a schedule for FWS to make determinations whether to list species or designate critical habitat for approximately 251 species no later than September 2016. One court of appeals has rejected an attack on the settlements by Safari Club and another brought by Nat'l Homebuilders Association remains pending.

Significant deadlines include the Gunnison Sage Grouse in Sept 2013 (we are seeking a 6-mos. extension from the court until March, 2014); Lesser Prairie Chicken due Sept 2013 (FWS will announce this Wed the issuance of a 6 month extension as permitted by statute until March, 2014. Western Senators have asked us to modify the settlements to extend the deadline even further until June 11, 2014); and Greater Sage Grouse in Sept, 2015.

- *If asked whether you will agree not to settle new listing-related lawsuits in the future without engaging the states:*

No, you cannot agree to that, but you can stress that we are committed to state engagement in listing decisions. The multidistrict settlement agreement only committed the FWS to a timetable for making certain listing determinations. When making a decision whether to list any species for protection under the ESA, the FWS will actively engage the affected states and will base its decisions, as the law requires it to do, on the basis of the best scientific information available.

VII. LAND EXCHANGES

- **Draft Appraisal Report for Utah Recreational Land Exchange:** The Utah Recreational Land Exchange Act of 2009 (Public Law 111-53) directs the equal value exchange of State of Utah lands and BLM lands in eastern Utah. In addition to consolidating Federal and state ownership patterns, the exchange would provide the Federal government with valuable recreation and conservation lands and the state with lands that have a high potential for energy development. Due to moderate media attention, the public has been made aware of preliminary appraisal numbers for the proposed Utah Recreational Land Exchange between the BLM and State of Utah. The draft appraisal report, which is undergoing final review and approval by the Office of Valuation Services, indicates a \$14 million value gap that could require the removal of some state acreage from the exchange. The proposed exchange currently includes 46,000 acres of state lands and 36,000 acres of BLM lands in Uintah, Grand, and San Juan Counties. The exchange legislation sunsets on Aug. 18, 2014, but the BLM Utah is on track to finalize the exchange by the end of the calendar year; however, discussions with the state regarding how to equalize land values could complicate the process and result in delays.

RESPONSE: We're driving hard finalize the exchange by December, and we'll be working with the state to make the best possible exchange that stays within the appraised values.

- The Grand Teton National Park Land Exchange Act (P.L. 108-32; June 17, 2003) authorized the Secretary of the Interior to acquire approximately 1,406 acres of State of Wyoming lands within Grand Teton National Park by donation, purchase or the equal value exchange of Federal lands in the State of Wyoming. In October 2010, the Department and the State of Wyoming entered into an agreement that described the terms and conditions under which the NPS intends to purchase the inholdings using appropriated funds.
 - The four parcels included in the agreement total 1,406 acres with a total appraised value of \$107 million and the agreement specifies the order in which the parcels are to be acquired and timeframes for the acquisition of each parcel. NPS has been able to acquire the first two parcels and two parcels remain. The cost for the remaining purchases is \$91 million with deadlines for purchase of January 5, 2014 and January 5, 2015.
- If the NPS fails to meet the timeframe for the looming January 5, 2014 parcel, the State may terminate the agreement and proceed to sell the remaining two parcels at public auction. The sums required to make the remaining payments to the state would constitute a large portion of NPS's LWCF budget (the FY14 President's Budget requested \$90 million for NPS acquisition). Dedicating the required sums out of the Service's LWCF budget would preclude the service from completing many other critical acquisitions in FY14 and FY15.
- NPS therefore is seeking alternatives to complete the acquisitions. In a 2006 Report to Congress pursuant to the 2003 Act, several options were identified by the Bureau of Land Management (BLM), including the transfer of federal royalties from coal. Congressional action would be needed to authorize such alternative methods. According to the terms of the 2003 Act, Congressional action would also be needed to approve an equal-value land exchange involving any lands not identified for disposal as of the date of enactment. The State of Wyoming, working closely with NPS, has put forward a proposal for a land exchange that would divest BLM of lands that are producing or have potential for oil and gas production in exchange for the Grand Teton NP inholdings and a 640 acre parcel located within the Fortification Creek Wilderness Study Area identified for oil and gas development

and a set of parcels (totaling approximately 2,800 acres) adjacent to the Lander Slope ACEC and the Red Canyon ACEC identified for phosphate development.

- Discussions are underway among NPS, BLM and PMB about how to resource the project and a memorandum seeking Secretarial input has been sent forward.

VIII. DROUGHT

Background

- Reclamation addresses drought as part of its core mission – it was established at the turn of the last century to provide water to the arid West and its network of dams and reservoirs were built as a bulwark against hydrologic volatility and drought. Droughts and dry weather are not new. Dealing with drought conditions was then and continues to be a significant part of Reclamation's mission.
- Today, Reclamation has refined and supplemented its operations to better address drought through the use of enhanced water management that helps guard against, and to a limited extent, mitigate the devastating effects of drought, for example, through water conservation.
- The wise use of water enables water users to optimize their finite supplies in every year. The Department's WaterSMART (Sustain and Manage America's Resources for Tomorrow) program provides the foundation for Reclamation's efforts, in partnership with water users, to achieve a more sustainable water supply for this country. WaterSMART includes funding locally cost-shared water management improvements that today are saving significant amounts of water. And, WaterSMART Basin Studies are critical to addressing water supply and demand imbalances in the western United States, including consideration of the impacts of climate change, record droughts, and population increases. Since 2009, when the Basin Study Program was initiated, Reclamation has provided cost-shared funding on a competitive basis for 17 Basin Studies in western states.
- All but one of the seventeen western states are currently experiencing at least a moderate level of drought, with eleven experiencing extreme or exceptional drought. Looking ahead, warmer and drier conditions are expected in parts of the west, with significant increases in temperatures in Colorado, Utah, Arizona and New Mexico. This will intensify fire and range concerns in those states, parts of which are currently under red flag fire warnings. More intense drought conditions are also creeping westward into Nevada and Idaho.
- Colorado: Colorado is experiencing a persistent and prolonged drought. In western Colorado, the worst conditions on record are being experienced on the Dolores River. All of southwestern Colorado, including Mesa County, is under a red flag warning for dangerous fire conditions due to high temperatures, dry fuels, and windy conditions. Precipitation has been below normal and current reservoir storage below normal with no sign of improvement from the national drought map in the near future.
- Idaho: In southern Idaho, spring runoff and precipitation were below to well below average resulting in earlier drafting of reservoirs which means some projects will be very low by the end of the summer, even as irrigation districts are conserving water to stretch their supplies for a full growing season.
- Montana: Montana showed overall above average precipitation, with the exception of the southwestern part of the state which is experiencing abnormally dry to extreme drought conditions. Expansion of drought in south central and in southern portions west of the

continental divide is possible over next few months based on current drought outlook projections.

- Nevada: Southern Nevada (Las Vegas metropolitan area) receives approx. 90% of its water from Lake Mead. The current drought has significantly impacted Lake Mead water levels, reducing storage by nearly half since 1999. If the drought persists, Lake Mead will continue to decline triggering reductions to southern Nevada water users as early as 2015.
- South Dakota: Above-average precipitation fell across the majority of South Dakota last month. The continuation of cooler and wetter conditions has brought some improvement to the dry to severe drought areas along the Missouri River corridor including southeastern South Dakota.
- Utah: The Upper Colorado Region (which includes Utah) has been experiencing extreme drought this year. Residential water users in Utah are being restricted and some water users have the lowest allotments in 75 years.
- New Mexico: Amid the worst drought on record and low carryover storage, the Middle Rio Grande Conservancy District (MRGCD) anticipates running out of water by early July 2013. The only stored water left in the system will be Reclamation water held for ESA purposes and a small supply for the Middle Rio Grande Pueblos. Reclamation leased 66,000 acre feet of water to supplement the Rio Grande flows but it was not enough to meet flow requirements set by the 2003 ESA Biological Opinion. Reclamation began a controlled recession of water flows on June 3, yielding estimated water savings of up to 12,600 acre feet. Additional water savings are expected later in the summer. Implementation of this plan required more transparency and daily coordination among all of the water managers, including the Pueblos, and the Fish and Wildlife Service. It also required increased monitoring of the hydrology and biology as Reclamation tries alternative options for keeping certain reaches of the river wet.
- Elsewhere, in the California Central Valley Project (CVP), January through May 2013 was the driest on record. Reclamation is working with the State and other parties to take a number of actions within the CVP to supplement low contract water allocations in certain areas of the project. These actions include rescheduling available storage, acquiring supplies from willing sellers, diversifying supplies to wildlife refuges, and constructing a new inter-tie between the CVP and the State Water Project that has provided tens of thousands of acre-feet of additional water supply to the project.
- Manitoba transboundary issue: The Northwest Area Water Supply Project is a municipal and rural water project. When complete, the project would deliver water from the Missouri River to communities and rural water systems in North Dakota located in the Hudson Bay Basin. This transboundary diversion is opposed by the province of Manitoba due to risks of a project-related transfer of non-native species from the Missouri River Basin into the Hudson Bay Basin. A supplemental EIS on impacts of the project is expected in the Fall of 2013 pursuant to requirements established in litigation. Manitoba has the same concerns about the proposed Red River Valley Water Project, which would import water from the Missouri River basin for release into the Red River in North Dakota, which drains into Canada.

IX. WILDFIRE RESPONSE AND RESTORATION

Season Outlook

- Continued drought and other conditions will make this a challenging season.
- Nationally we started out slow, with wet, cool conditions in the South and East. But, as you know, things are picking up in the West and Alaska
- Our Predictive Services outlooks focus on the west coast as the areas of highest probability and risk for above normal conditions – but as we have seen in Colorado in the past couple of weeks major fires can occur whenever and wherever we get hot, dry, windy conditions

Readiness for the Fire Season

- The Department of the Interior, along with our colleagues in the Forest Service, are well prepared with the firefighting assets we have. We have skilled and well trained personnel; we have equipment; we have information about where fires are likely to occur; and we have a national system to move resources and assets quickly to the areas that need them.
- Like all agencies, we have been affected by the Sequester and related budget reductions. We estimate we have around 250 fewer personnel, including 100 seasonal employees, this year. We have managed our hiring, reduced our travel and training, and taken other actions to ensure we focus on highest risk areas in 2013.
- I continue to have concerns that our short-term reductions in personnel, training, and so on will have long term consequences for the health of our fire management program – a well-equipped, staffed, and trained workforce – and am working with my fire management leadership to develop strategies for the future.
- The Administration (DOI, FS, OMB) is currently looking at a number of ways we can strengthen and improve our fire budgeting process to ensure we have adequate funding for our programs.

Hazardous Fuels

- One of the programs that has been most affected by the federal budget situation is hazardous fuels. All of us are concerned about the long term consequences of reducing our investment in actions that will reduce risks to communities, improve the health of our forests and watersheds, and reduce the likelihood and consequences of catastrophic fire.
- I am a strong advocate for the fuels program, but I recognize we have not been completely successful in telling our stories and measuring our progress. We need better ways to measure effectiveness and focus on highest priority objectives.
- Another area that the Administration is actively working on is reviewing our overall approach to fuels programs to come up with a more holistic, integrated, and effective approach.

Post-Fire

- Many fires create significant problems for us after the fires are out: silting of reservoirs, invasive species, loss of important habitat, lost economic value. As part of our review of fire budgets and programs we are paying attention to how we can better manage post-fire activities.

- Sage grouse in the Great Basin is of particular concern; not only do we need to take good pro-active measures through fuels treatments and appropriate, timely response, we need to look at what we can do after the fires to begin to restore lost habitat.
- Partnerships
- The cornerstone of fire management is partnerships, within the federal government and with the states, tribes, and local governments.
- Traditionally these partnerships have focused on fire readiness and fire response. Through the National Wildland Fire Cohesive Strategy we are building partnerships to address fire resilient communities and fire adapted landscapes as well. The WGA is a strong partner in the Cohesive Strategy. We are fully committed to completing the planning work and implementing it in the coming months and years. We look forward to a long and lasting partnership with the WGA.

X. WILD HORSES AND BURROS MANAGEMENT

- National Academy of Sciences (NAS) issued its report June 5. The BLM is reviewing the findings and recommendations for improved estimates of wild horse and burro populations and increased fertility control. The BLM is currently prioritizing gathers for the upcoming summer/fall season.
 - 37,300 horses and burros on the range (2012)
 - 49,272 animals in short- and long- term holding facilities (total capacity 53,000)
 - Holding costs accounted for nearly 60 percent of the BLM's \$75 million budget for Fiscal Year 2012.

XI. SAGE GROUSE

See Sage Grouse Lunch Meeting Memo.

XII. CENTRAL UTAH PROJECT COMPLETION ACT (CUPCA) PROGRAM CONSOLIDATION & FUNDING CUTS

Issue:

Governor Gary Herbert (UT) sent a letter on May 29 to the Energy and Water Development Appropriations Subcommittees requesting that construction funding for the Central Utah Project (CUP) be reinstated. Similarly, Congressman Jim Matheson (D-UT 4th) sent a letter to the House Appropriations Subcommittee on May 14, 2013, requesting restoration of a minimum of \$16 million to continue construction of the CUP. The FY 2014 President's Budget proposed \$3.5 million for CUPCA for administration and conservation, but eliminated all funding for further construction of the CUP facilities.

Background:

The CUP was originally authorized in 1956 as a participating project of the Colorado River Storage Project. CUPCA was passed in 1992 and authorized the Central Utah Water Conservancy District to construct the remaining features of the CUP. CUPCA also removed the CUP from Reclamation's control, putting it directly under the Secretary of the Interior.

The Utah Lake System is the final component of the CUP, and when complete, will deliver 60,000 acre-feet of Municipal and Industrial water to Salt Lake and Utah Counties. CUPCA also established the Utah Reclamation Mitigation and Conservation Commission to implement mitigation and conservation activities authorized by CUPCA. CUPCA anticipates that construction, mitigation and conservation projects must make coordinated progress. CUPCA also included provisions intended to support a final settlement of the reserved water rights claims of the Ute Tribe.

The FY 2013 President's Budget proposed a substantial cut to CUP construction funding, and FY 2014 eliminates construction funding altogether. The proposed elimination of construction funding is based largely on the difficult choices made necessary by reduced overall funding levels for the Department. Secretary Salazar also expressed some concern, however, that the remaining components of the CUP, serving municipal and industrial water needs, should not be subsidized by the Federal government to the extent of a 65% cost share, even though that funding would ultimately be repaid. It is unclear whether the Central Utah Water Conservancy District will be able to continue the construction program without Federal funds; the District has already advanced more than its required 35 percent cost share for current construction. As of September 2012, the work authorized by CUPCA is 72 percent complete; the Utah Lake System is 50.2 percent complete

The FY 2014 budget includes \$1.3 million to carry out program administration and related Interior responsibilities; \$1.2 million for endangered species recovery and fish and wildlife conservation programs; and \$1.0 million for the Utah Reclamation Mitigation and Conservation Commission.

In FY 2013 and again in the FY 2014 President's Budget, Interior also proposed to consolidate the CUPCA program into the Bureau of Reclamation to implement "good government" solutions, ensure consistent treatment of federal water projects, consolidate activities, and reduce duplication. This proposal greatly irritated the Utah delegation. The House and Senate markups for FY 2013 did not incorporate consolidation of the CUPCA Program into Reclamation as proposed in the President's Budget.

XIII. TRANSMISSION

Background

The proposed Gateway West Transmission project (*see map on page 17*) involves the construction of nearly 990 miles of high-voltage transmission lines across southern Wyoming and southern Idaho to add 1,500-3,000 megawatts of capacity. The project includes 10 transmission line segments, crossing approximately 500 miles of BLM public lands, including 300 miles in Idaho and 200 miles in Wyoming. The BLM's preferred alternative route contains certain segments that would cross private land and three areas of the Morley Nelson Snake River Birds of Prey National Conservation Area (NCA) and lie adjacent to, but outside of, preliminary priority habitat for the Greater Sage Grouse. As alternatives for the project were being considered, several Idaho counties and other stakeholders formed a task force with the intent of agreeing upon alternatives for certain controversial segments. The task force identified routes that had substantial crossings of the NCA.

The BLM's preferred alternative in the final EIS for segments 8 and 9 was selected to minimize impacts to Greater Sage Grouse habitat on public lands, minimize mileage on private lands, and conform to the enabling legislation for the NCA (Public Law 103-64, 1993), which requires any authorized use in the NCA to benefit and enhance the values for which it was designated (raptor populations, cultural resources, educational opportunities, *etc.*). The legislation established the NCA to conserve, protect, and enhance raptor populations and habitats, the natural and environmental resources associated with them. The legislation directs the Secretary to allow only such uses of the NCA as the Secretary determines will further the purposes for which the NCA was established. The BLM determined that the three crossings of the NCA in the preferred alternatives, if packaged with effective off-site mitigation actions, would conform to Public Law 103-64; however other route alternatives, including the task force routes, were determined to be not be in conformance with the enabling legislation, even with off-site mitigation actions. Additionally, the BLM recently issued policy to avoid granting rights-of-way in National Conservation Areas (BLM Manual Section 6220 §1.6(E)).

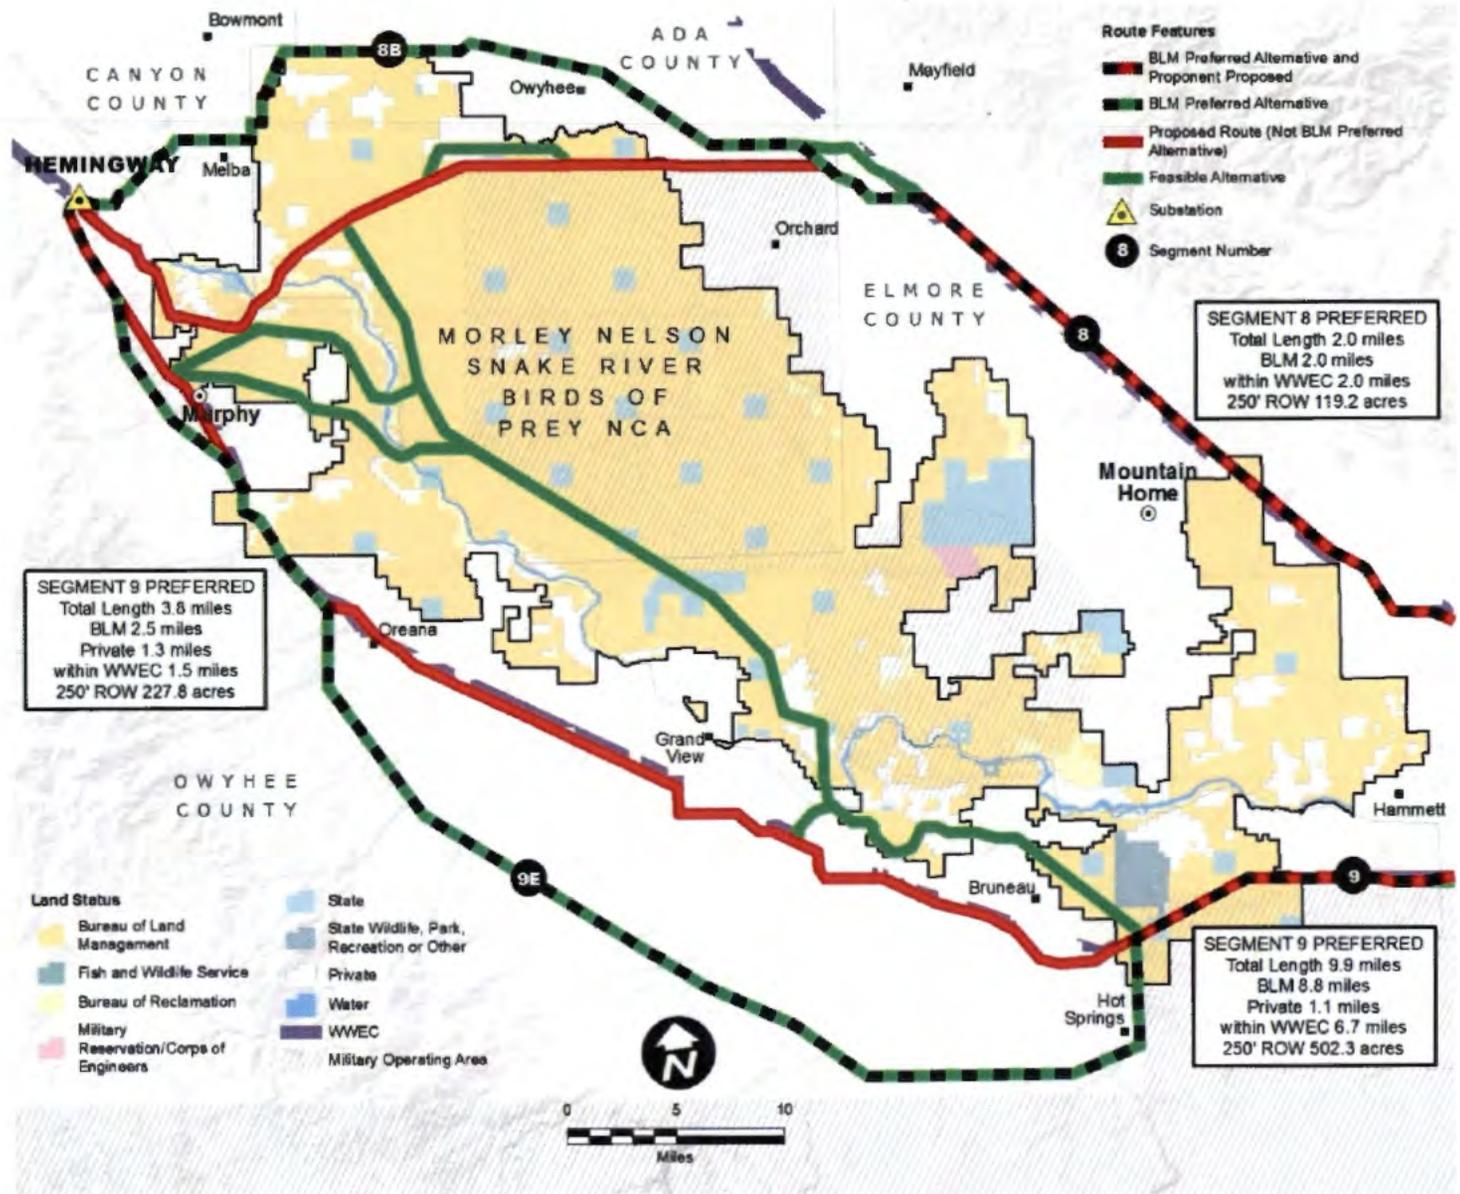

In addition to conforming to the enabling legislation and BLM policy on rights-of-way in NCAs, the rationale for selecting the preferred alternative for segment 9 including minimizing impacts to Greater Sage Grouse habitat on public lands and minimizing mileage on private lands.. The preferred alternatives for segments 8 and 9 are controversial locally because they cross additional private land and do not incorporate the routes through the NCA that were identified by the line sighting task force during collaborative meetings.

In an October 10, 2012, letter from Governor Otter to Secretary Ken Salazar, Governor Otter expressed concerns about the preferred alternatives for segments 8 and 9 that were included in the draft EIS. Additional letters were sent by Idaho Congressional Representative Raul Labrador, the Owyhee County Commissioners, the City of Kuna, Idaho, and the BLM Boise District RAC, all expressing concern about the preferred alternative. Public comment on the final EIS closes June 28, 2013. In February 2013, then BLM Acting Director Mike Pool and then Senior Counselor to the Secretary Steve Black met with Governor Otter in Idaho to discuss the issue and to determine a path forward to a final decision.

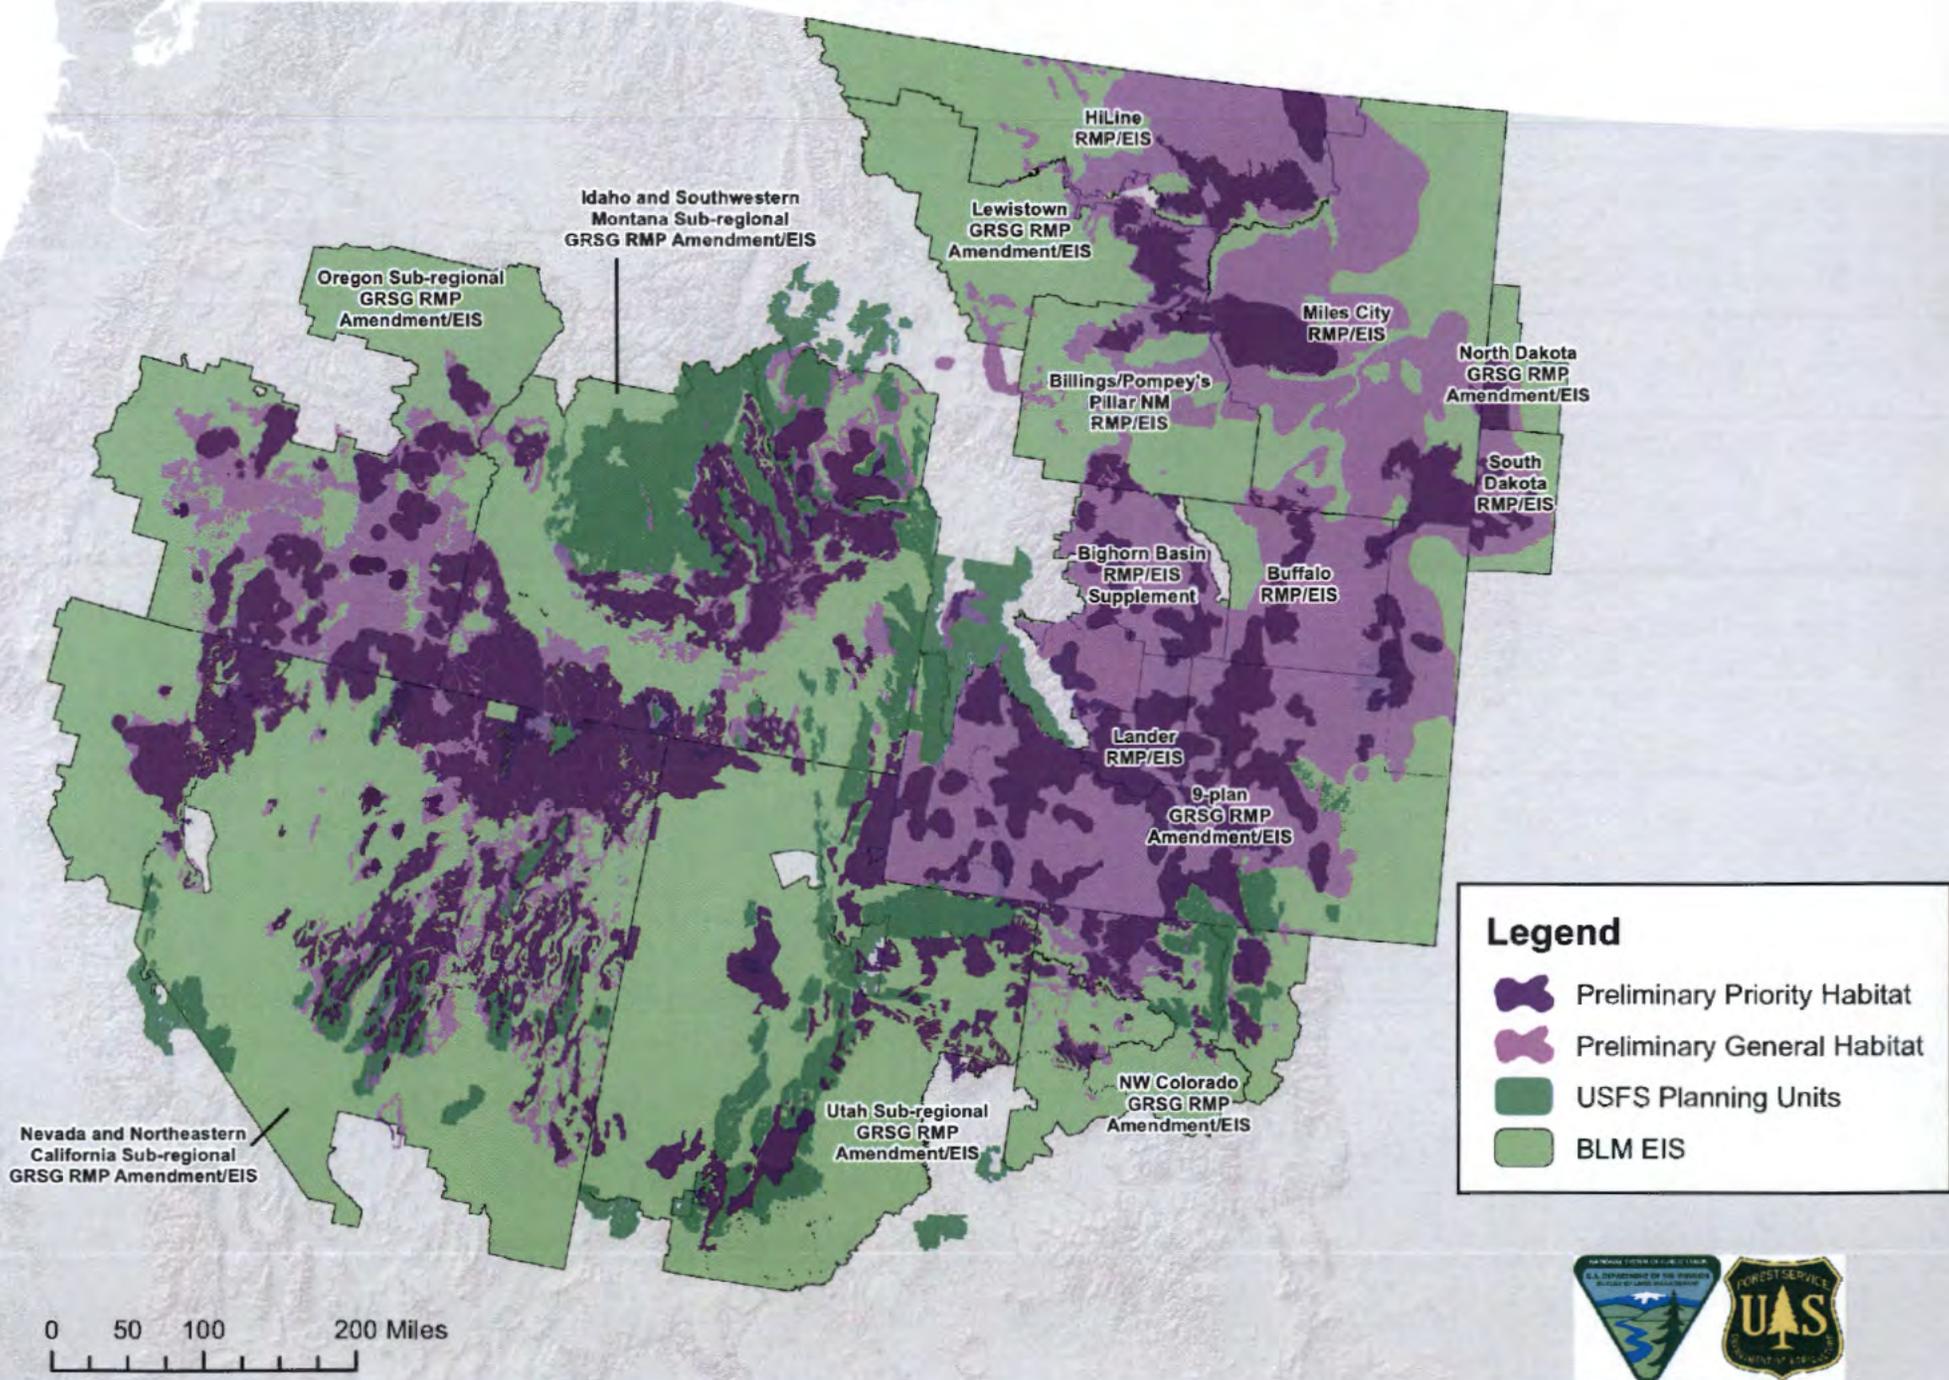

Suggested Message

- The BLM looks forward to continuing to work with the State of Idaho, the proponent, and other stakeholders in moving forward with the Gateway Transmission project, the development of the resource management plan (RMP) amendment for the conservation of Greater sage grouse and habitat within Idaho.
- The BLM has worked closely with the State of Idaho regarding Gateway West siting issues. As a result of the February meeting between BLM and DOI officials and Governor Otter, the BLM agreed to include, as part of its potential decision on the ROW application, the possibility of approving non-controversial segments of the transmission line in Wyoming and Idaho that have independent utility while seeking further public comment on the remaining segments.
- The final EIS explains that the BLM is considering a phased decision for the project – approving certain segments while deferring a decision on others to give agencies and stakeholders additional time to collaborate further on final siting for deferred segments.

- A phased decision means that the BLM could issue ROW grants for certain segments of the project while providing an opportunity for various Federal, State and local permitting agencies to collaborate on final siting for one or more other segments. Segments 8 and 9 are the most controversial segments that the BLM might withhold from issuing a decision on the first phase.

- + Headlines From Today's Front Pages.

WASHINGTON SCHEDULE:

- + Today's Events In Washington.

LAST LAUGHS:

- + Late Night Political Humor.

DOI in the News:

SECRETARY JEWELL SPEAKS BEFORE GATHERING OF WESTERN GOVERNORS. The Columbus (IN) Republic (6/28, Foy, 21K) reports that Interior Secretary Sally Jewell spoke before "a gathering of Western governors who complained about federal control of public lands that make up much of the West and Alaska" on Friday. She "devoted much of her prepared remarks to the importance of outdoor recreation as a major economic driver, even as many of the governors put their priority on energy development." Also, according to Colorado Gov. John Hickenlooper, "Jewell pledged to collaborate with Western governors on every major federal decision affecting public lands."

The Deseret (UT) News (7/1, 105K) reports that Jewell "told the Western Governors Association on Friday there's a need to get away from seeing federally managed lands as bad and state control over resources as good." She "called for a balanced approach to using public lands in the West, pledging the federal government will be a partner in identifying what local communities 'want from a grass-roots level,' whether that's preserving or developing the land."

The Salt Lake (UT) Tribune (7/1, 107K) reports that Utah Gov. Gary Herbert asked, "How do you define balance? Seventy percent of the land in Utah is owned by the federal government. To some people that's balanced. ... But balance is in the eye of the beholder." Jewell answered, "Defining balance begins by understanding each other." But, according to the article, "balance, in Jewell's opinion, apparently does not include complying with Utah's demands to hand over title to federal lands in the state."

Also reporting on the story are the Cache Valley (UT) Daily (7/1), the Franklin (IN) Daily Journal (7/1, 16K), the Provo (UT) Daily Herald (7/1, 25K), the Fort Mill (SC) Times (6/28, 18K), and the San Antonio Express-News (7/1, 165K).

Poneman Addresses Western Governors Association Meeting. In an article about the Western Governors Association meeting over the weekend in Utah, the Deseret (UT) News (7/1, Roche, 105K) reports that the annual meeting explored "the future of the region's role as a leader in providing both traditional and new sources of energy to the rest of the nation." Daniel Poneman, deputy secretary of energy, said at the event that President Barack Obama "has already met past goals to double renewable energy production using the federal government's loan guarantee authority and expects a similar increase by 2020."

Judge Blocks Utah Law Limiting Federal Authority On Public Lands. The Salt Lake (UT) Tribune (7/1, 107K) reports that on Friday, a federal judge "blocked Utah's latest anti-federal law, saying HB155 appears to impose the state's will on federal land management and 'creates irreparable harm to the constitutional order.'" US District Judge David Nuffer "issued a preliminary injunction pending a final ruling at trial." He said, "There is a strong public interest in the enforcement of law on public lands. We do not want to leave federal lands without clear boundaries of law enforcement. Nothing in my ruling will prevent Utah from enforcing state law on federal land."

Also reporting on the story are the Houston Chronicle (6/28, 434K) and the Deseret (UT) News (7/1, 105K).

Utah Preparing For Legal Battle Over Roads. The Deseret (UT) News (7/1, 105K) reports that "a legal team from Utah is traveling to remote areas throughout the state, recording testimony from aging witnesses and filming panoramic views of roads that snake through canyons or cross sagebrush-peppered lands" to prepare for the "state's legal fight against the federal government in which it filed 22 lawsuits in 2012 that have since been consolidated into one case." Negotiations with the Interior Department "over title to the roads have lingered for years, finally propelling contentious legal battles in which Utah has alternately been victorious and suffered defeat."

SECRETARY JEWELL ANNOUNCES APPROVAL OF WIND ENERGY PROJECT IN ARIZONA. The Columbus (IN) Republic (6/29, 21K) reports that "the approval of a wind energy project in northwestern Arizona" was announced by Interior Secretary Sally Jewell.

The Cronkite News (7/1, Chen) reports that the project "calls for 243 wind turbines that could ultimately generate up to 500 megawatts of electricity, enough to power about 175,000 homes, according to the Interior Department." It "was scaled back from previous plans because to address concerns about neighbors and wildlife in the area."

Also reporting on the story are the Seymour (IN) Times Tribune (7/1, 8K), the Las Vegas Review-Journal (7/1,

228K), the Havasupai (AZ) News-Herald (7/1, 9K), and the Penn Energy (7/1).

SUPPORT FOR WHITE RIVER'S BLUEWAY DESIGNATION DWINDLES AMID BACKLASH. The Columbus (IN) Republic (7/1, 21K) reports that in the face of "a public backlash, several conservation groups and state agencies no longer want the White River to be part of a new federal program that recognizes conservation and recreation efforts along waterways." They claim that "concerns that the National Blueway designation...could lead to new regulations are unfounded, but still plan to send letters this coming week to the Interior Department asking that it be taken away." In an email, Interior Department spokeswoman Jessica Kershaw said "that the agency was aware that the agencies and groups that nominated the White River intend to ask that the Blueway designation be stripped." She wrote, "If that request is received, Interior will act expeditiously upon it."

Also reporting on the story are the San Antonio Express-News (7/1, 165K), the Franklin (IN) Daily Journal (7/1, 16K), the Jefferson City News Tribune (6/30, 16K), the Arkansas Business (7/1), the Baxter (AR) Bulletin (6/28, 8K), the St. Louis Post-Dispatch (7/1, 196K), the Wayne County (MO) Journal-Banner (7/1, 3K), the Ozark County (MO) Times (7/1), and the Springfield (MO) News-Leader (6/28).

OBAMA URGES SUPPORTERS TO LINK CLIMATE CHANGE TO FUTURE VOTES. The AP (6/29, Lederman) reports President Obama "is trying to frame climate change as a make-or-break political issue, urging Americans to vote only for those who will protect the country from environmental harm." In his weekly address, recorded before he departed for Africa, the President said, "If you agree with me, I'll need you to act. Remind everyone who represents you, at every level of government, that there is no contradiction between a sound environment and a strong economy – and that sheltering future generations against the ravages of climate change is a prerequisite for your vote."

CNN (6/29) reports on its website that opponents have criticized "his sweeping proposals, arguing the new regulations on carbon-fueled power plants...will cause a surge in costs and burn holes in Americans' pockets." The Hill (6/29, Geman, 21K) says "while the White House plan doesn't rely on Congress, Obama's Saturday's address underscores administration efforts to win public buy-in as Republicans allege the plan will hurt the economy."

The CBS News (6/29) and Voice of America (6/29) websites also report on the President's remarks.

In the Detroit Free Press (6/30, Op-ed for the Detroit (MI), Press, 280K), President Obama writes that on Tuesday, he "unveiled a new national plan to confront climate change" that will, if implemented, accomplish three things: "reduce carbon pollution to prevent the worst effects of climate change, prepare our country for the effects we can't stop and lead the world in combating the growing threat of a changing climate." Throughout his op-ed, Obama encourages businesses to improve through the use of clean energy and asks citizens to educate themselves and others about climate change and take an active approach to it.

Scientists Debate Irrigating Giant Sequoias. The AP (6/29, Cone) reported that at the core of the climate change debate is whether, if they are causing global warming, do humans have an obligation "under the laws of the National Park Service to try to counteract those effects?" asked Nate Stephenson, a research ecologist with the U.S. Geological Survey. Stephenson presented this question in light of the debate raging over whether to irrigate the 65 groves of giant sequoias growing in the southern Sierra Nevada region, which are dying out at twice their historic rate in part because of a warmer and dryer climate and also due to what some scientists believe are the fact that the trees are having a harder time taking root. Nevertheless, because the trees are dying in record numbers and exist only in a very small region, many wonder how much longer the trees will be able to survive a climate that is warming at a rapid rate.

More Analysis Of Obama's Climate Change Plan. In a separate article, the AP (6/29, 41K) tries to answer some of the questions surrounding Obama's climate change plan, including one about the reactions the plan is getting from industry officials and another about how the Keystone XL pipeline relates to the plan. According to two industry officials that the AP interviewed, many in the industry are looking forward to working with the Obama Administration on the plan and they have no problem improving their businesses with more environmental-friendly upgrades, as long as they have time to do so. As far as the Keystone XL pipeline is concerned, "the White House has insisted that the State Department is making the decision independently, but Obama said Tuesday he's instructing the department to approve it only if the project won't increase overall net emissions of greenhouse

gases.”

Aside from the general analysis that Minneapolis Star Tribune (6/30, Editorial by the Minneapolis (MN), Tribune, 335K) provided in its article on Obama's climate change proposal, the paper also provided localized analysis on how the plan is related to what Minnesota, as a state, is already doing. The Star Tribune writes that “Obama's course of action...builds upon the farsighted work done already in Minnesota, which put in place renewable energy standards in 2007 and augmented them this year with a new state solar energy standard.”

Meanwhile, in an op-ed for the [Minneapolis Star Tribune](#) (7/1, Blomstrom, 335K), Keith Blomstrom, vice chair of the Minnesota Conservation Federation, writes that climate change is “altering and destroying habitats that migratory birds have spent thousands of years developing.”

Detroit Free Press: Obama Is Taking A “Bold” Step Forward On Climate Change. In an editorial the Detroit Free Press (6/30, 280K) describes Obama's climate change plan as “a bold proposal” that “is sure to impact the way Americans live — or at least the way we pay bills.” The Free Press writes that “it won't be easy to turn the nation from habits we've indulged for decades” and for that reason, as well as some who still don't believe in the scientific aspect climate change to begin with, “the President is unlikely to find support in the US Congress for the path we believe he must pursue.” This is why, according to the Free Press, “Obama's willingness to circumnavigate Congress is a regrettable necessity.”

SENATORS URGE OBAMA ADMINISTRATION NOT TO CUT WILDFIRE PREVENTION FUNDS. The [Washington Post](#) (6/28, 489K) reports that on Friday, “a bipartisan group of Western US senators” called on “the Obama administration to focus more on preventing wildfires rather than taking money from programs that clear potentially hazardous dead trees and brush to fund efforts to fight the increasingly destructive blazes.” It “is proposing a 31 percent cut in funding for the government's central fire prevention program one year after record blazes burned 9.3 million acres.” Sens. Ron Wyden, Mark Udall, Lisa Murkowski, and James Risch (R-Idaho) sent “a letter to Obama's budget director and the secretaries of agriculture and the Interior,” in which they “contended that approach is ‘nonsensical and further increases wildfire costs.’”

Also reporting on the story is the [Huffington Post](#) (6/28).

INTERIOR “HAS TOTALLY FIGURED OUT” INSTAGRAM. The [Mashable](#) (6/29) reports that the Interior Department has “has totally figured out Instagram.” Director of Digital Strategy Tim Fullerton said, “We launched our Instagram just basically to show the public all of the amazing lands that we have across the country.” He added “If we've seen some really striking amazing images, we've emailed asking for permission. We're always sure to give full credit on Instagram.”

TIMBER POINT DESIGNATED AS PART OF NATIONAL TRAILS SYSTEM. The [York County \(ME\) Journal-Tribune](#) (6/29, Mendros, 8K) reports that the Timber Point Trail in the Rachel Carson National Wildlife Refuge is part of the National Trails System.

REMOVAL OF VEAZIE DAM TO BEGIN JULY 22. The [Bangor \(ME\) Daily News](#) (6/30, 45K) reports that the removal of the Veazie Dam has been “set for July 22.” The “project is a joint effort of the Penobscot Indian Nation, the Penobscot River Restoration Trust, six other nongovernmental organizations, the state of Maine, the US Department of the Interior, the National Oceanic and Atmospheric Administration and hydropower companies.”

NATIONAL HISTORIC LANDMARK STATUS SOUGHT FOR CESAR CHAVEZ SITE IN SAN JOSE. The [San Jose Mercury News](#) (7/1, Seipel, 539K) reports that a National Historic Landmark designation is being sought for “McDonnell Hall, a humble wood-frame building in East San Jose closely associated with the life of civil rights leader Cesar Chavez.”

NATIONAL HISTORIC LANDMARK STATUS SOUGHT FOR MAITLAND'S ART CENTER. The [Orlando \(FL\) Sentinel](#) (6/30, Dickinson, 181K) reports that Maitland “is seeking National Historic Landmark status for the Art Center, and to that end,” and supporters are putting the “finishing touches on a nomination that will be presented to reviewers at the National Park Service and the Department of Interior later this year.”

ADDITIONAL COVERAGE OF SECRETARY JEWELL'S PLEDGE TO NATIVE AMERICANS. Additional

coverage of Interior Secretary Sally Jewell's pledge "to help right past wrongs against Native Americans" was provided by the Reno (NV) Gazette-Journal (6/27, 42K), the Mitchell (SD) Daily Republic (7/1, 12K), the Tulsa (OK) World (7/1, 101K), and the Marin (CA) Independent Journal (7/1, 27K),

ADDITIONAL COVERAGE OF NEW COUNCIL FOR NATIVE AMERICANS. Additional coverage of the establishment of a White House Council on Native American Affairs was provided by the Hanover (PA) Evening Sun (7/1, 19K) and WBOY-TV Clarksburg, WV (7/1).

ADDITIONAL COVERAGE OF INSPECTOR GENERAL REPORT ON PARK POLICE FIREARMS. Additional coverage of a Inspector General report that found that "US Park Police couldn't account for hundreds of weapons in its inventory" was provided by the New York Times (6/28, 1.68M), Politico (7/1, Kopan, 25K), the Washington Examiner (7/1, Cohen, 93K), FOX News (7/1), the DCist (7/1), the US News & World Report (6/28, Bidwell, 1.13M), the Atlantic Wire (7/1), CBS News (7/1), CBS (6/28), and the Washington Times (6/28, Chumley, 76K),

ADDITIONAL COVERAGE OF STUDY ON GULF COAST FOR CARBON SEQUESTRATION. Additional coverage of the study on carbon sequestration was provided by the Midland (TX) Reporter-Telegram (7/1, 14K),

ADDITIONAL COVERAGE OF DRAKES BAY OYSTER FARM. Additional coverage of the Drakes Bay Oyster Co. was provided by FOX News (7/1).

INTERIOR OVERSIGHT OF DEPARTMENT OF HAWAIIAN HOME LANDS SUPPORTED. In an editorial, the Honolulu Star-Advertiser (7/1, 112K) supports the Interior Department's oversight of the Department of Hawaiian Home Lands.

PROTECTION OF PUBLIC LANDS URGED TO HELP VETERANS. In an op-ed for the U-T San Diego (6/28, Roney, 242K), Scott Roney, a behavioral health provider at Naval Hospital Camp Pendleton, writes about "the value of public lands" for veterans. He argues that "there is a deep healing influence that spending time in a beautiful, tranquil and soothing natural setting can have."

POLICY ANALYSTS: ENSURE CLEAN ENERGY FUTURE THROUGH MORE DRILLING. In an Op-Ed posted on The Hill (7/1, 21K) in its "Congress Blog" blog, Matthew Stepp, Information Technology and Innovation Foundation senior policy analyst, and Megan Nicholson, Information Technology and Innovation Foundation policy analyst, said that Washington's "underfunded support for clean energy, perpetual bickering over drilling policy, and rising concentrations of greenhouse gases" has resulted in an energy policy that "is at odds with reality." Although they cited both President Obama's and Sen. Lisa Murkowski's (R-AK) efforts to support clean energy as "a good start," they cited the need to go farther and proposed an across-the-aisle compromise through which Republicans would agree to raise revenue to fully fund the DOE's ARPA-E budget each year in exchange Democrats' agreeing to opening Federal lands to exploration, so long as such exploration included provisions for state-buy ins and environmental safety. They said their proposal will "guarantee consistent investment in the nation's energy future and is a clear-cut way for Congress to proceed beyond the status quo."

America's Great Outdoors:

National Park Service:

ANALYSIS: ADMINISTRATION EXAGGERATED SEQUESTER CUTS' IMPACT. The Washington Post (7/1, Fahrenthold, Rein, 489K), in an article titled, "They Said The Sequester Would Be Scary. Mostly, They Were Wrong," reports that the Administration's "alarming" and "specific" claims about the likely impact of the sequestered budget cuts implemented on March 1 turned out to be inaccurate, and the "widespread breakdowns in crucial government services" that Administration officials "predicted" has not happened. The Post reports that Administration officials insist that they "didn't exaggerate sequestration's effects on purpose," and quotes one anonymous "administration official" as saying, "Subsequent to those estimates, Congress took action that changed a number of things." Nevertheless, the Post adds that the Administration "still gives credence to estimates that sequestration might cost the country up to 750,000 jobs."

GETTYSBURG CELEBRATES 150TH ANNIVERSARY. CNN (6/28, Gast) reports that beginning this past

weekend “and through July 7, between 200,000 and 300,000 visitors – more than the number of combatants – will flock to the town and fields of Gettysburg National Military Park to mark the 150th anniversary of the three-day clash, which cost an incredible 51,000 casualties.” According to officials, “the 150th commemoration of the battle will tell a wider story than previous observances.” Carl Whitehill, media relations manager for the Gettysburg Convention & Visitors Bureau, said, “For decades, people came here for military and black powder. Now they want to know about the civilians and what they endured during and after the battle.”

Also reporting on Gettysburg are the [Washington Post](#) (6/30, 489K), the [Washington Post](#) (6/28, 489K), the [Washington Post](#) (6/30, Ruane, 489K), the [Minneapolis Star Tribune](#) (7/1, Armas, 335K), [ABC News](#) (7/1), the [Los Angeles Times](#) (6/28, Kelly, 692K), the [Rochester \(MN\) Post-Bulletin](#) (7/1, 40K), the [New York Daily News](#) (7/1, Edelman, 543K), the [York \(PA\) Daily Record](#) (7/1, 63K), and the [Pittsburgh Tribune-Review](#) (7/1, 194K).

GOVERNMENT AGENCIES ADAPT TO BUDGET CUTS . The [Washington Post](#) (7/1, Fahrenthold, Rein, 489K) reports that the sequester “has caused real reductions in many federal programs that people depend on,” but “it has not produced what the Obama administration predicted: widespread breakdowns in crucial government services.” Notably, “US Park Police officers were supposed to have 12 days of furloughs,” but “they took three.” and the NPS “found \$4 million in savings in its budget.”

WEBSITE INFORMS VISITORS OF YOSEMITE NATIONAL PARK’S ANNIVERSARY. The [Washington Post](#) (6/28, 489K) reports that Yosemite National Park officials “are getting a head start on next year’s 150th anniversary with a new website that will contain information about celebrations, events and projects.” The website “allows visitors to share their Yosemite stories and read about the park’s rich history,” and “it will guide visitors to celebrations in the park and in surrounding communities.”

Also reporting on the story is the [Merced \(CA\) Sun-Star](#) (6/29, 12K).

OLYMPIC NATIONAL PARK CELEBRATES 75TH ANNIVERSARY. The [Everett \(WA\) Herald](#) (6/28, 46K) reports Olympic National Park celebrated its 75th anniversary on Saturday.

CUYAHOGA VALLEY NATIONAL PARK WARNS OF RISE IN TICK POPULATION. The [Willoughby \(OH\) News-Herald](#) (6/30, 36K) reports that with “Ohio’s tick population...reportedly on the rise,” Cuyahoga Valley National Park “has posted warnings about what park officials say is the worst level of the blood-sucking pests there in years.”

GLACIER NATIONAL PARK OFFICIALS IDENTIFY MAN WHO DIED IN FALL ON CLOSED TRAIL. The [AP](#) (7/1) reports that Glacier National Park officials “have released the name of a Washington state man who died in a fall on a closed trail.” According to park spokeswoman Denise Germann, “64-year-old Charles Fred Huseman of Packwood, Wash., died Wednesday afternoon from trauma suffered in a fall from the Highline Trail, which is closed due to snow.”

STATUE OF LIBERTY TO REOPEN JULY 4. The [New York Daily News](#) (7/1, Brown, 543K) reports that the Statue of Liberty will reopen on Independence Day.

JOSEPH HENRY MOSER BARN AND PETER & BERTHA SODERBERG HOUSE ADDED TO NATIONAL REGISTER. The [Salem \(OR\) Statesman Journal](#) (6/28, 35K) reports that the Joseph Henry Moser Barn and the Peter & Bertha Soderberg House have been added to the National Register of Historic Places.

Bureau of Land Management:

APPEALS BOARD UPHOLDS BLM’S PERMIT FOR CHRISTO’S OVER THE RIVER PROJECT. The [Washington Post](#) (6/28, Tsai, 489K) reports that “an appeals board is upholding” the BLM’s “decision to grant the artist Christo a permit for his Over the River project.” On Friday, the Interior Board of Land Appeals “rejected arguments that the BLM didn’t fully consider impacts of Over the River before granting the permit.” Meanwhile, the article notes, “two lawsuits challenging Over the River in state and federal courts are still pending.”

Also reporting on the story are the [Denver Post](#) (7/1, 443K) and the [Huffington Post](#) (6/28, Tsai).

BLM STUDYING TIMBER RULING. The [Medford \(OR\) Mail Tribune](#) (6/28, Fattig, 21K) reports the BLM "continues to pore over a federal court decision that the timber industry believes will more than double the harvest on the agency's Medford District." District spokesman Jim Whittington said, "We are working with our partner agencies in analyzing the impacts of this ruling."

BLM WORKING ON WESTERN OREGON PLAN REVISION. The [Salem \(OR\) Statesman Journal](#) (6/30, 35K) reports that the BLM is "working on a kinder and gentler approach" after the Western Oregon Plan Revision was "withdrawn by the Obama administration in 2009." According to the article, "in a preliminary planning document released this month, the BLM's state director, Jerome E. Perez, said the new approach will be based on what the public wants, science, the law and on the goals of healthy forests, not board feet of timber." He wrote, "These 2.5 million acres have an important role to the social, economic and ecological wellbeing of Western Oregon, as well as to the greater American public. In an effort to try to change the dialogue, besides changing how we engage the public, I want to focus our discussions around outcomes, not outputs."

SEN. BARRASSO ENDORSES HELIUM STEWARDSHIP ACT OF 2013. The [Casper \(WY\) Star-Tribune](#) (7/1, 22K) reports that Sen. John Barrasso is supporting the Helium Stewardship Act of 2013, which "would require the Bureau of Land Management to sell off nearly all of its Amarillo, Texas-based helium reserves during the next 10 years, rather than by its current deadline of January 2015." According to Barrasso, "the deadline extension would keep the world's helium supply stable." The article notes that "BLM officials testified in support of both the Senate and House versions of the helium legislation recently."

Fish and Wildlife Service:

FWS PUSHES BACK DECISION ON LESSER PRAIRIE CHICKEN. The [Midland \(TX\) Reporter-Telegram](#) (7/1, 14K) reports that FWS Director Dan Ashe "wrote to several senators, including John Cornyn and Ted Cruz, of Texas; Tom Udall, of New Mexico; Jim Inhofe and Tom Coburn, of Oklahoma; and Pat Roberts and Jerry Moran, of Kansas, announcing a delay on a decision" to list the lesser prairie chicken "until March 30, 2014." Ashe said the extra time "would give the service time to fully consider the comments received, along with implementation of the conservation plan being crafted by the Western Association of Fish and Wildlife Agencies, which includes the agencies from the five states." According to FWS spokeswoman Charna Lefton, "the extension came in part because 'several of the comments said we may not have the most recent science available.'"

Also reporting on the story is the [Topeka \(KS\) Capital-Journal](#) (6/27, 33K).

ADDITIONAL COVERAGE OF GRANTS TO FIGHT BAT DISEASE. Additional coverage of the grants awarded by the FWS to fight white-nose syndrome was provided by the [Columbus \(IN\) Republic](#) (7/1, 21K), the [Franklin \(IN\) Daily Journal](#) (7/1, 16K), the [Hendersonville \(NC\) Times-News](#) (6/28, 12K), the [Knoxville \(TN\) News Sentinel](#) (6/29, Simmons, 83K), the [Cedar Rapids \(IA\) Gazette](#) (6/27, 47K), and the [Mississippi Business Journal](#) (6/28).

ADDITIONAL COVERAGE OF STUDY ON SAGE GROUSE. Additional coverage of the study conducted by The Nature Conservancy on sage grouse habitat in Wyoming was provided by the [Great Falls \(MT\) Tribune](#) (6/28, Puckett, 25K).

ENDANGERED SPECIES ACT SUPPORTED. In his column for the [Lincoln \(NE\) Journal Star](#) (7/1, 49K), Buffalo Bruce McIntosh writes about the Endangered Species Act's "remarkable record of preventing extinction and helping plant and animal species recover." McIntosh claims that "the plight of the Salt Creek tiger beetle here in Lancaster County is a stark reminder that the success of the act over the next four decades, and beyond, is limited to our willingness to follow the best available science rather than the most expedient politics." He argues that "it's clear only with the help of citizens can the Endangered Species Act continue its unequalled record of success: In its first four decades, the law has prevented the extinction of 99 percent of the more than 1,400 plants and animals it protects."

US Geological Survey:

USGS SHUTS DOWN STREAMGAUGES DUE TO SEQUESTRATION. The [Picayune \(MS\) Item](#) (7/1, 6K)

reports that the USGS "has shut down 375 streamgauges nationwide, including the streamgauge on the Jourdan River at Kiln in Hancock County." The action "is due to sequestration that went into effect in April."

Securing America's Energy Future:

Renewable Energy:

PAPER: BLM MUST RECONSIDER SUNZIA LINE. The Albuquerque (NM) Journal (6/30, 83K) editorializes that SunZia's proposed \$1 billion high-voltage transmission line from wind and solar farms in Lincoln County to southeastern Arizona is "looking more like a pipe dream." In addition to opposition from the DOD, which charges that the transmission line may interfere with the mission of the Northern Extension of the White Sands Missile Range if it were to cross that area, environmental groups, "which tend to favor renewable energy, question how much green energy the line is likely to transmit and worry about the project's impact on the delicate ecosystem of Arizona's San Pedro River Valley." Critics are also alleging that "the promise of jobs is overstated and the marketability of the power exaggerated." The editorial board demands that the BLM not run the risk of foregoing the economic contributions that White Sands makes to the state's economy in favor of "what is looking like a questionable green energy boondoggle."

Onshore Energy Development:

BLM PLANS TO MOVE FORWARD WITH MESA VERDE LEASE SALE. The EnergyWire (6/28, Streater, Subscription Publication) reported that despite environmental concerns expressed by area residents as well as the NPS, the BLM is moving ahead with its plans to offer eight parcels near southwest Colorado's Mesa Verde National Park for an oil and natural gas lease sale in November. The parcels are eight of the 12 that were initially offered for lease sale in February, a sale that was later deferred after similar environmental concerns were voiced at that time. Although the BLM said it and the NPS "have resolved most of the Park Service's concerns over air quality and natural resource impacts, as well as potential noise and aesthetic impacts to the park" and thus is confident about the sale moving forward, NPS officials said they were not quite "ready to say that allowing drilling near the park is a good idea."

BLM SEEKS PUBLIC COMMENT ON FREMONT COUNTY WELL PROPOSAL. The Riverton (WY) Ranger (6/30) reports that the BLM is asking for public comments on International Petroleum Exploration Operating Company's application for a permit to drill the International Petroleum Green Mountain Federal No. 1 Gas Well in Fremont County. The project is anticipated to last nearly 20 years and will be located in the existing Found Soldier Unit, which has been operating since 2004.

BLM APPROVES EXPLORATORY COAL WELLS IN COLORADO. The Denver Business Journal (6/28, Proctor, Subscription Publication) reported in its "Earth To Power" blog that the BLM has approved the Sunset Trail Area Coal Exploration Plan, which calls for drilling 10 exploratory wells during 2013 and 2014 in western Colorado by subsidiaries of Arch Coal, Inc., the second-largest US coal miner. While the operation will take place nearly 11 miles from Arch's West Elk Mine, which contains coal reserves that the BLM forecasts will last up to 11 years, environmental groups have ripped the project as a threat to the forest as well as elk and black bear habitats in the area. Meanwhile, the BLM pointed to the fact that "coal production on Federally owned lands overseen by the BLM generated \$918.1 million to the economy, including \$57.7 million in royalties, and 5,719 jobs."

Offshore Energy Development:

HOUSE PASSES OFFSHORE ENERGY AND JOBS ACT. The Hill (6/28, Kasperowicz, 21K) reports in its "Floor Action" blog in a 235-186 vote, the House passed the Offshore Energy and Jobs Act, which will "require the Obama administration to develop a new five-year plan allowing offshore oil-and-gas leases in coastal waters with the most promise for energy development." The Hill reports that this "bill is similar to GOP legislation passed by the House last year, and responds to a five-year oil and gas lease sales plan that Republicans say shuts out potentially productive areas off the Atlantic and Pacific coastline." The Hill adds that "Obama has warned he would veto the bill and the Democratic Senate is not expected to touch it."
