PORTIONS OF BARANOF ISLAND IN UNIT 4 CLOSED TO THE HARVEST OF MOUNTAIN GOATS

SPECIAL ACTION: FEDERAL SUBSISTENCE BOARD

Under authority of: 36 CFR §242.10 and .19
50 CFR §100.10 and .19

Special Action No: 13-MG-01-19

Issued at: Sitka Alaska, July 26, 2019

Effective Date: 11:59 p.m. Wednesday, July 31, 2019

Expiration Date: 11:59 p.m. Tuesday, December 31, 2019 unless superseded by subsequent special action

EXPLANATION:

This Temporary Special Action closes the Necker Bay and South Baranof Zones on Baranof Island near Sitka, Alaska to the harvest of mountain goats.

REGULATION: 36 CFR §242.26(n)(4) and 50 CFR §100.26(n)(4) are amended to read:

Unit 4 – Mountain Goat

1 goat by State registration permit only.

Aug. 1 - Dec. 31

Necker Bay – The peninsulas west of Small Arm Whale Bay/Creek, west of Benzeman Lake and southeast of Crawfish Inlet, but excluding Aspid Cape.

Closed

South Baranof - Drainages south of Gut Bay and the east branch of Great Arm Whale Bay and their respective inlet streams; and north of the divide between Larch Bay and Port Conclusion.

Closed

Federal Subsistence Board by delegation to /s/Perry Edwards

Perry Edwards
District Ranger
Sitka Ranger District
July 26, 2019

JUSTIFICATION:

Data from collared goats near Sitka documented that goats have high fidelity to small home ranges and are slow to recolonize vacant habitat. That finding combined with high localized harvest in more accessible areas lead managers to develop an updated management strategy for mountain goats on Baranof Island beginning with the 2017 season. Baranof Island was divided into 34 small hunt zones. Dividing Baranof Island into more zones allows biologists to manage at the subpopulation level, affording hunters more opportunities and reducing the possibility of localized overharvest. Under the previous management strategy, quotas were based on larger geographical areas, which sometimes included several subpopulations. The quota for a large zone could be reached after several goats were taken from a single access point. That resulted in the large area being closed while additional harvest opportunity remained in more remote portions of that larger zone. This new strategy of subdividing large zones is providing more opportunity for hunters by allowing more remote zones to stay open after zones with easier access close.

Based on aerial surveys during 2017 and 2018, biologists documented mountain goat population levels in each of the hunt zones and assigned corresponding quotas. Zones closed by this Special Action did not have high enough population levels to allow harvest without jeopardizing the long term health of those subpopulations.

A public hearing to discuss the 2019 Baranof Island mountain goat management strategy was held on July 25, 2019 in Sitka, Alaska. Members of the public who attended were supportive of conserving mountain goats on Baranof Island through closures guided by the management strategy. The 2019 strategy is similar to the 2018 strategy with distinct male and female guideline harvest levels by zone. Female harvest is more restrictive than male harvest when applied to the guideline harvest levels. As the guideline harvest levels in each of the zones are reached, those zones will be closed to mountain goat harvest.

The remainder of Baranof Island will remain open for goat hunting unless closed by future special action. Future special actions may also be issued to reopen zones if it is determined that those subpopulations could withstand harvest.
